
A Dictionary of Practical Materia Medica

By John Henry CLARKE, M.D.

A DICTIONARY OF PRACTICAL

MATERIA MEDICA

By John Henry CLARKE, M.D.

Presented by Médi-T ®

PREFACE

IN the preface to the fourth edition of my *Prescriber*, which appeared in 1893, I mentioned that I was then engaged in writing a "Materia Medica," and I stated that it was to take the form of a *Materia Medica Companion to the Prescriber*. Such, indeed, was the original idea with which I started the work, soon after the first edition of the *Prescriber* was published in 1885. But as the materials accumulated, the scope of the work developed beyond the original intention, and it became apparent that to produce anything short of a complete Materia Medica would only be to add to the number of condensed and abridged Materia Medicas, of which there is already a sufficiency of excellent examples. I therefore determined to include in the new work all the remedies of which definite use had been recorded in homśopathic literature. If some are inclined to object that I have inserted too many, I reply that my work is a *Dictionary*, and I have never yet found a dictionary that explained too many words. Under the name of each remedy will be found all practical information regarding that remedy that I have been able to bring together, so arranged that every part of it is at once accessible, the information about one remedy in no way interfering with the information about any other. In Farrington's classical work, *A Clinical Materia Medica*, to which I am very deeply indebted, the matter is so arranged that in order to find all the author has to tell about a single remedy, search must be made under a large number of different headings; in the case of Ipecacuanha, for example, twelve other remedies must be consulted. The plan on which the *Dictionary* is based obviates this result.

NAME OF THE WORK.

I have named this work a Dictionary of "Materia Medica" because no other name would have been intelligible. But the name, nevertheless, in homśopathy, is somewhat of a misnomer. We are dealing with forces which, though derived from materials, are anything but "material" in the common acceptation of the word. Our agents are forces of a higher order than any known to Old Physic, and it is important that homśopathists should know them as such. Homśopathy is from first to last an art of individualising. We have to individualise patients, and individualise remedies. However convenient it is to think of remedies in connection with the diseases in the treatment of which they are most frequently

called for, it must never be forgotten that this is a convenience and nothing more. To allow our conception of our remedies to be limited by any list of nosological terms is to accept again the mental fetters of old-school therapeutics. To understand and utilise our remedies to the fullest extent, we must know them as powers ready to serve us in any case, no matter what the name of the disease may be, when the indications for them come to the front. And we must be prepared to find these powers hidden in common articles of food and drink, which we are constantly taking into our bodies in large quantities with complete impunity; and even in the tissues and secretions, morbid and healthy, of our bodies themselves. My object in the *Dictionary* has been to so present the picture of each remedy that it may be at once recognised and distinguished from any other by those who consult its pages. In doing this I have considered first those points which seem to me to have a *practical* bearing; points which have seemed of academic interest only I have left in the main to other works.

THE SCHEMA.

The body of every homśopathic Materia Medica must consist of a *Schematised list of the Symptoms* belonging to each remedy. This is known, in brief, as "The Schema." In the *Dictionary* it comprises all that portion given under the heading, SYMPTOMS.

Abridged Materia Medicas and lists of keynotes, though of very great value, cannot take the place of a full Schema. The prescriber is constantly requiring to know the exact symptoms produced or cured by a drug, and very often these are not to be found among the recognised keynotes. Again, when a prescriber has found his correspondence in some leading symptom, he may wish to test the correspondence in other particulars. For these purposes nothing short of a detailed list of symptoms in each section of the Schema is of any service, My work in no way lessens the value of the abridged works; on the contrary, it very greatly enhances it, by providing the necessary complement to their usefulness.

The Schema arrangement adopted by Hahnemann was a necessary evolution of his method. Day-to-day records of provings, though of much interest, are of little use in practice, from the impossibility of finding individual symptoms in them. The Schema adopted by me is arranged under 27 numbered headings: 1, Mind; 2, Head (including sensorium and scalp); 3, Eyes; 4, Ears; 5, Nose; 6, Face; 7, Teeth; 8, Mouth; 9, Throat; 10, Appetite; 11, Stomach; 12, Abdomen; 13, Stool and Anus; 14, Urinary Organs; 15, Male Sexual Organs; 16, Female Sexual Organs; 17, Respiratory Organs; 18, Chest; 19, Heart; 20, Neck and Back; 21, Limbs (in general); 22, Upper Limbs; 23, Lower Limbs; 24, Generalities; 25, Skin; 26, Sleep;

27, Fever. The sources from which the Schema is compiled are mainly, Timothy Field Allen's *Encyclopćdia of Pure Materia Medica*, and Constantine Hering's *Guiding Symptoms*. Without these two monumental works my work would have been scarcely possible. Allen includes all the symptoms of Hahnemann's *Materia Medica Pura* and *Chronic Diseases*, with all the later provings up to the date of his work's completion (1879). Hering's *Guiding Symptoms* includes, in addition to the chief symptoms of the older works, many clinical additions and glosses. Hale's *New Remedies*, 2nd and 5th editions, have rendered me services scarcely less important. In my Schema I have sometimes indicated when symptoms are of clinical origin but not always, as the distinction is more academical than practical. I have also sometimes inserted in the Schema names of diseases. These will be taken as clinical suggestions depending for their value on the appropriateness of the remedy in other respects.

CLINICAL SYMPTOMS.

In regard to the inclusion of *Clinical Symptoms* without always distinguishing them, my reasons are these: I *know* that symptoms removed by a remedy in a patient who is taking it are an indication of the remedy's power, even though the remedy may not have produced those symptoms in a prover. I *know* that many of the best indications we possess for different remedies were found out during the provings by the disappearance of symptoms from which the provers themselves were at the time suffering. I *know* that a remedy when being taken by a patient will often produce some new symptoms of its own whilst removing the others. I *know* that these new symptoms are available for practice; and what is more than this, I *know* that the practitioner who cannot recognise drug symptoms in his patients loses the best materia medica teacher he is ever likely to find, and will spoil many of his cases by supposing them worse when they are really doing well on the right medicine and only require to have the medicine suspended or partially antidoted. Those who have scruples about prescribing on clinically observed symptoms have the *Cyclopedia of Drug Pathogenesy* at their disposal. It is a work which has rendered me excellent service in compiling much of my *Dictionary*; but it seems to me to need digesting and schematising if it is to be of much use in daily practice. Those again, who like to know the authority for every symptom, have Allen's *Encyclopedia* to supply their want so far as the vast bulk of the materia medica is concerned. In the case of the less well known remedies, I have named the authorities; in regard to the old-established remedies, I take for granted that the authorities for these are known.

AUTHORITIES.

Dr. James Compton Burnett

Dr. Robert Thomas Cooper

In addition to the works of Allen and Hering and the *Cyclopedia of Drug Pathogenesy*, Dr. Curie's edition of Jahr's *Materia Medica*, the *Materia Medicas* of Lippe and Guernsey, Cowperthwaite's well-known Text-Book, and many others have been consulted. But the account of many of the remedies in the *Dictionary* has been compiled from sources inaccessible to the general reader, being scattered up and down the periodical literature of Homśopathy, and throughout the writings of original workers, among whom I may name **Dr. Compton Burnett** and **Dr. Robert T. Cooper** as pre-eminent, each in a line of his own. Throughout the *Dictionary* will be found accredited to these authorities many guiding symptoms of their observation, some already recorded in their published works, very many communicated to me in private conversations, and verified by myself in practice. And I am no less indebted to **Dr. Thomas Skinner** for generous help in materia medica studies. Years ago when I was making a special investigation into the action of the high attenuations, Dr. Skinner gave me the greatest possible assistance. We went over a large part of the materia medica together, and the notes I then made have been of great service in compiling this work, especially the introductory sections.

Dr. Thomas Skinner

Dr. John Henry Clarke

THE INTRODUCTORY SECTIONS.

Whilst the Schema is the essential feature of the materia medica, it is of great assistance in the understanding and using of it, to have, in addition, some introductory guide. This I have supplied in each instance, and the combination of the two is one of the main objects of this work. Hitherto narrative accounts of remedies have been provided independently in works like Dr. Hughes's classic *Pharmaco-dynamics*; and through no fault of their authors, practitioners have endeavoured to make these works do service for a complete materia medica, dispensing with the use of both schema and repertory. I think my method will obviate this risk.

NAMES AND PREPARATIONS OF THE REMEDIES.

Under the name of each remedy I have given the synonyms, mentioned its place in nature and the preparations of it that have been used. In regard to the last, I wish it to be understood that I give the actual preparations used in the experiments or in practice. I offer no opinion as to whether these may be the best or not. Some contend that acetic acid is a better solvent of the native alkaloids of plants than is alcohol. When acetic preparations have been used I have mentioned the fact. Dr. Cooper has used fresh-plant tinctures, made from young shoots, with other actively growing parts of plants, in the case of remedies of which the usual preparations are made from roots or dried specimens; and he

maintains that in such cases the fresh-plant tinctures are superior. The same may be said of animal preparations. I have used a preparation of Sepia made from the fresh ink-bag, given me by Dr. R. Swallow, of Ningpo, and I can confirm his opinion that it is a better preparation than that made from the ordinary dried ink.

"CLINICAL."

Next, under the head, CLINICAL, I have given an alphabetical list of the diseases in relation to which the remedy has manifested, or seems likely to manifest, some curative power. This list is of no independent authority, many of the items being merely suggestions of my own. It is not to be regarded either as inclusive or exclusive, but rather as suggestive. But the list serves further purposes; and first, it enables me to save space. If I were to describe the sphere of a remedy in each of the diseases in which it has been used, I should be obliged to repeat the same indications many times over in slightly varied form. The main indications of a remedy are the same in any disease, and the fine indications will be found on referring to the headings under which they occur in the Schema. Further, the list enables me to relate the *Dictionary* to the *Prescriber*. A number of the names of diseases in the list will be found printed in italics. This does not mean that the medicine is more indicated in these diseases than in the others; it is merely to indicate that under that particular heading the drug will be found mentioned in the *Prescriber*, and that there its special indications are given and compared with those of other remedies. For example, under ATROPINUM is the following list: "Blepharospasm. Convulsions. Enuresis. Epilepsy. Eyes, affections of. *Gastric ulcer*. Locomotor ataxy. Mania. Neuralgia. *Pancreatitis*. Spinal irritation. Tetanus. Vision, disorders of." On referring to the Prescriber, under GASTRIC ULCER and PANCREATITIS, Atropinum will be found mentioned along with other remedies. Finally, the lists will afford a convenient basis for compiling a clinical index.

"CHARACTERISTICS."

Following the heading CLINICAL, comes one which I have named CHARACTERISTICS. Under this I have endeavoured to bring together the leading individual features of each remedy, sketching its outlines with as firm a hand as I can command. It is not a bare list of keynote symptoms, although it includes all of these that are known to me. But it is written in a more or less connected, narrative form, so that it will not have the effect of a catalogue on the reader's mind. This part will contain an account of the leading *Conditions* of aggravation and amelioration which characterise the remedy;–an essential portion of a

practical knowledge and understanding of homśopathic remedies. In indicating these I have made use of the signs "**<**" (aggravation) and "**>**" (amelioration), for the double reason that they readily catch the eye, and, at the same time, save space. These and other signs and abbreviations are explained more fully on section "*explanation of abbreviations and signs*". This section, more especially, I intend to supply a kind of introduction and guide to the Schema.

"RELATIONS."

Following this section is another headed RELATIONS. Under this will be found an account of the chief allies of each remedy. The older homśopaths appreciated the value of this knowledge much more than do the moderns; and a very great assistance it often is in prescribing. When a remedy (*e.g.,* Belladonna) has done all that it can in a case, it is of very great use to know of a remedy (*e. g.,* Mercurius) that is likely to follow out and complete its action, where both are related to the case. When this relationship is very close the two related remedies are said to be *complementary* to one another, as is the case with Iodine and Lycopodium. On the other hand some remedies have a very injurious effect on each other's action when one is given immediately after the other. I have known a chronic case which was doing well on Calcarea, irretrievably spoiled by a prescription of Bryonia immediately following. Further, it is necessary to know the antidotal relations of remedies in order to be able to control the over-action of any remedy administered. I once experienced very disagreeable symptoms from a dose of Natrum mur. in potency, and suffered for some days before I realised the cause. As soon as I did, I looked up Jahr, and found that smelling Sweet Nitre was one of the antidotes. I put it to the test, and the magical way in which the symptoms were wiped out was a revelation to me of the importance of this branch of homśopathic knowledge. In this section I have also pointed out many of the characteristic differences distinguishing between medicines that have symptoms in common.

"CAUSATION."

Under the further heading CAUSATION I have mentioned (when such relation is known to exist), the conditions to the effects of which the action of a remedy is particularly suited. For it not unfrequently happens that the *cause* of any state is the keynote indication. A case of Rheumatism, for example, supervening on a wetting, will probably not be cured by the same remedy which would have cured if exposure to *dry* cold had been the cause. The effects of over-eating may

resemble the effects of over-drinking, but a different remedy will probably be needed in each case. Shock due to physical injury will probably need Arnica; if due to fright, Opium will most likely be called for. I have often, in practice, wished for a tabulated list of 46 causes," and I think this section will be found of value.

TYPE.

It will possibly be remarked that I have seldom indicated the relative importance of symptoms by difference of type. My reason is this: while not denying the utility of emphasising by conspicuous type symptoms of proved characteristic value, this can only be done at the cost of apparently depreciating symptoms not so marked. I have so often found my indications in symptoms not distinguished by special type at all, that I hesitate to put any under this ban. My arrangement, however, meets the difficulty to a great extent. If it is considered that, in a general way, all the symptoms I have mentioned under the heading CHARACTERISTICS are deserving of heavy type, and that the symptoms mentioned only in the Schema are worthy of italics, a very fair estimate of their value will be obtained.

GRADES OF HOMŚOPATHY.

Having had experience of every grade of homśopathic practice, and knowing the possibilities that lie in all, I have sought in this work to supply the materials needful for the application of the Law of Similars in any of its modes. It is possible to obtain the needed correspondence in a great variety of ways and degrees, and one practitioner will find it in one way and another in another. Homśopathy uses phenomena as guides to reach the unseen activities operating below the surface. Keeping my attention steadily on the plane of phenomena, and disregarding all the hypothetical and ever-changing explanations of pathology and physiology, I have endeavoured to portray every feature of drug-activity that is likely to find its correspondence in the manifestations of disease. It may be in organ-affinity; it may be in coarse tissue changes; it may be in the finest sensations: my object has been to supply the practitioner of every grade with sufficient data for practice.

REPERTORIES.

If time serves, I may in the future provide a special Repertory to this work. In the meantime all the fuller repertories now in use will be available. It is impossible to practise homśopathy as it should be practised without the aid of repertories, and the best repertory is the fullest.

THE TEST OF A HOMŚOPATH.

Complaints are not unfrequently made that the homśopathic materia medica is too vast for practical utility; that the schematised lists of symptoms are unprofitable, if not impossible reading. I do not think so. Indeed, I think that the test of a genuine homśopath might not unfairly be said to lie in his capacity to read through a Schema with both profit and *enjoyment*–because of the possibilities it reveals of dealing with cases occurring every day in practice. Again and again in the course of my work I have come across symptoms in the Schemas of remedies reminding me of cases in the past which I might have cured had I but known the remedies then. And many a time a case has turned up in my practice calling for a particular remedy at the very time I have been working upon it, and a cure has resulted, when, but for my study of the Schema, I might more than likely have failed to find what was wanted. I think that the introductory sections preceding each Schema will make the study of the Schema profitable and enjoyable to some who have hitherto only found it dry. And when we consider that the Materia Medica is the very "*raison d'ętre*" of the homśopathist, and that in it he must live and move and have his being, it is not too much to expect of him that he shall at least give as much mind to its cultivation as is required for maintaining high proficiency, say, in billiards, or in golf.

EVERY HOMŚOPATH HIS OWN MATERIA MEDICA MAKER.

And now I have a final word to my readers. Every homśopath, in the last resort, must make his own materia medica for himself. It is not alone what an author offers to a reader, it is what the reader can get out of his author that tells. I have done my best to put the matter in an orderly and tangible shape, but nothing short of hard work can make a proficient homśopath, no matter how handy his tools maybe. I have selected paper for the book which will take ink, so that any reader may make annotations, corrections, or additions, as his experience or reading may suggest. If I had chosen to wait a few more years before publishing, I have no doubt I could have improved my work; but if I had waited till doomsday I

could not have made it perfect. In the meantime I want it every day for my own use; and if I could have found any one else co do the work for me I should most gladly have spared myself the task.

ACKNOWLEDGMENTS.

I have already named some of the authorities whose labours have been freely drawn upon, but there are many others to whom my acknowledgments are also due. Among these must be mentioned that therapeutic genius only recently departed from us, Alphonse Teste, whose *Homśopathic Materia Medica Arranged Systematically and Practically*, I have largely quoted from. Whenever Teste's name is mentioned in the *Dictionary*, this is the work in which the reference will be found. I have used C. J. Hempel's translation. To Dr. E. B. Nash's *Leaders in Therapeutics* and *Leaders in Typhoid* I am indebted for many illustrations of remedial action. When not otherwise specified, all references to "Nash" will be found in the *Leaders in Therapeutics*. Dr. Oscar Hansen's *Rare Homśopathic Remedies* has supplied me with useful information regarding some of the less well-known remedies. Dr. H. C. Allen's *Keynotes of Leading Remedies*, his *Intermittent Fever*, and the pages of his journal, the *Medical Advance*, have been constantly drawn upon. Lastly, I must express my indebtedness in numberless ways to Dr. Dudgeon, whose unique knowledge of the Materia Medica has time and again stood me in good stead at the bedside; and whose original works and translations of Hahnemann's writings have become part of the daily bread of modern homśopathy.

JOHN HENRY CLARKE.

30, CLARGES STREET, LONDON, W.,

PREFATORY NOTE TO VOL. II

I CANNOT allow this volume to go to the world without an allusion to the grievous loss therapeutic Art and Science have sustained since the appearance of its predecessor. By the death of James Compton Burnett the world loses one of the greatest therapeutic lights of his generation. To his intimates Burnett was this and he was something more–a whole–hearted friend, a resourceful help in the face of difficulty, and the most inspiring of comrades. It is thus a singularly bitter disappointment to me that he did not live to see completed a work in which he took a keen interest, and in which is embodied so much that is his own.

Reviewers of Burnett's works have sometimes complained that he used outlandish remedies, concerning which there was no information accessible. In view of these strictures, I once said to Burnett, now a good many years ago, that I had a great mind to write a materia medica dealing entirely with the remedies he had either introduced or used in original ways. "And a very good thing, too!" was his rejoinder. The project was not destined to take actual shape, but in the present work something better has been done. So far as Burnett's work is known to me, through his writings and from conversations, the special knowledge he possessed of different remedies will be found presented, not in an isolated setting, but in its proper place, together with all related knowledge at my command. References to Burnett's name will be found in profusion throughout this work–I may mention the articles on *Quercus*, *Urtica*, *Scirrhinum*, and *Thuja* as a few examples–and it is no small consolation to me to feel that his influence will live in my pages as well as in his own books.

Dr. Cooper's share in the present volume is more direct. When the first volume appeared Cooper signified his approval of it in a variety of ways, and, among others, by offering to read the proofs of the second. As he is my authority for much new matter, I very gladly availed myself of the offer, which has been carried out in no perfunctory fashion. Cooper has opened up his notebooks, and has spared no pains to give me the fruits of his reading and experience, which last is of especial value since much of his practice is with single doses of remedies. His additions I have treated in the same way as published documents, and have incorporated them in the text, distinguished, for the most part, with his name or initials (R. T. C). Cured symptoms which he has given me I have enclosed in brackets in the Schema, unless the wording of the symptom shows the fact. Symptoms produced or aggravated are named as such in the text.

Submitting my proofs to Cooper in this way was, in effect, putting my work to a severe test. There are few things more difficult to accomplish than to condense another person's writings in such a way as to satisfy the author whose writing is

condensed. I take it as a satisfactory evidence of my general accuracy that of all the material I have taken from Cooper's writings or oral communications, he has not found it necessary to make alterations in any essential particular.

Bracketed symptoms, as a rule, mean cured symptoms, as also, do symptoms with the name of a disease in brackets at the close. But I have not undertaken in this volume, any more than I did in Vol. I., to distinguish all cured symptoms from pathogenetic ones. Some passages will be found in square brackets with the initials "H. N. G." at the close. These passages are quotations from Henry N. Guernsey's *Materia Medica*.

In compiling Vol. I–*(A...H)*, before I had ascertained the amount of space which I should have at my disposal, I did not always repeat in the Schema all the symptoms mentioned under the heading of CHARACTERISTICS. This omission can be easily made good by writing such symptoms in the margin of the Schema; but in Vol. II.–*(I...Z)* I have treated myself with more liberality in the matter of space, and have sought, as far as possible, to avoid this necessity. One consequence of this has been that the volume has grown too large for binding conveniently within one pair of covers, and I have therefore decided to bind it in two parts. No change will be made in the published price of the work on this account, though it means a heavy expense to me.

A few additional abbreviations will be found in Vol. II., as "h." for hour and "d." for day; but these will always be obvious to the reader. "B. J. H." means *British Journal of Homœopathy*; "M. H. R.," *Monthly Homœopathic Review*; "B. M. J.," *British Medical Journal*; "Med. Adv." I have further shortened to "M. A."; and "Amer. Hom." to "A. H."

Now that the MATERIA MEDICA is complete, my attention will be given to the compilation of a Clinical Repertory and Concordium. In the MATERIA MEDICA each remedy is provided with a Clinical Index under its "CLINICAL" heading: in the Repertory I propose to provide a general index to all these headings. In addition there will be an index to CAUSES (given under the CAUSATION heading) and to temperaments and constitutions. I propose to add a Concordium, or table, showing the relations in nature of the different remedies, *e.g.,* the natural orders in the case of plants and animals.

h. -hour.
d. -day.

signs.

< means "aggravation," "worse," or "increase."

> means "amelioration,", "better," or "decrease."

These signs are used in the sense indicated, either as nouns, verbs (present or past tense), or adjectives. For instance "Pain < by rest" may be translated "Pain *aggravated* by rest," or "Pain *worse* by rest." Here the sign is used in the

adjective way. "< By rest" means that there is "*aggravation* by rest." Here < takes, the place of a noun. "Motion < pain" means "Motion *aggravates* or *increases* pain." Here it is a verb. The idea is the same in all cases, and the sense obvious. "> By rest" means *amelioration* or *relief* by rest. "Motion > pain" means Motion *relieves* or *decreases* pain." "Toothache > by cold" means "Toothache *relieved, ameliorated*, or *lessened* by cold." Sometimes the particle is omitted, but the sense is the same. "> Rest" means "Relief by rest." "Rest >" means "Rest relieves." "Kali bi. has blindness with headache; blindness > as headache <." This means that the blindness of the *Kali bi*. headache *becomes better* as the headache *becomes worse*. I think the utility of these signs will be generally recognised, and the sense cannot be in doubt in passages where they occur.

Another sign which I have often found useful in my private notes I have introduced occasionally into the *Dictionary*. I mean the equation sign "=" in the sense of causation. "Causation" and "aggravation" are not always identical, though the influences which set up a morbid condition will generally aggravate the condition if existing already. I have used "=" as an indeclinable verb: "Motion = vomiting" means "Motion *causes* vomiting." "Heat = all eruptions to itch intolerably," means "Heat *causes* all eruptions to itch intolerably."

A DICTIONARY OF PRACTICAL

MATERIA MEDICA

By John Henry CLARKE, M.D.

Abies Canadensis.

Pinus canadensis. Hemlock Spruce. Canada Pitch. N. O. Coniferæ. Tincture of fresh bark and young buds.

Clinical.—Indigestion. Liver disorder. Uterine displacement.

Characteristics.—*Abies can*. has been only imperfectly proved, but it has marked symptoms which will serve to indicate it in any case of disease in which they may be prominent: Great appetite, tendency to over-eat; gnawing, hungry, faint feeling in epigastrium. According to Hale it has cured: "A light-headed feeling, attended with a gnawing, hungry, faint feeling at epigastrium, craving hunger which, if gratified, was followed by distension of the stomach and hard beating of the heart." Among the peculiar sensations are: A feeling as if the right lung and liver were small and hard; pain beneath right scapula. The patient lies with the legs drawn up. Shivering as if the blood turned to cold water.

Relations.—*Compare*: Abies nig., Sabina, Thuja, and other Conifers, Nux vom.

SYMPTOMS.

1. Mind.—Quiet, careless, but easily fretted.

2. Head.—Tipsy feeling, a swimming of the head; light-headed.

3. Eyes.—Sensation as of a stye in outer canthus of l. eye.

8. Mouth.—Dryness of the mouth.

10. Appetite.—Gnawing, hungry, faint feeling at the epigastrium.—Craving for meat, pickles, and other coarse food.—Some thirst.—A tendency to eat far beyond the capacity for digestion.

11. Stomach.—Distension of the stomach and epigastrium; burning.

12. Abdomen.—Sick feeling in the bowels.—Rumbling in the bowels after eating, with great appetite.—Sensation as if the liver were small and hard; as if bile were deficient.

13. Stool and Anus.—Burning in rectum.—Constipation.

14. Urinary Organs.—Urinates frequently day and night; urine straw-coloured.

16. Female Sexual Organs.—Thinks the womb is soft and feeble (thinks would cause abortion).—Sore feeling at the fundus of uterus; > by pressing.

17. Respiratory Organs.—Breathing laboured.—Sensation as if the right lung were small and hard.

19. Heart.—Action of the heart laboured.—Increased action of the heart with distension of the stomach.

20. Neck and Back.—Pain behind the right shoulder-blade.—Weak feeling in sacral region.—Feeling as of cold water between the shoulders.

24. Generalities.—Hands cold, shrunken.—Skin cold and clammy.—Lies with the legs drawn up.—Great prostration, wants to lie down all the time.—Very faint, as if top of head were congested.—Twitching of the muscles.

26. Sleep.—Gaping, drowsy.—Great restlessness at night, with tossing from side to side.

27. Fever.—Cold shivering all, over as if blood turned to ice-water.—Chills down back.

Abies Nigra.

Black or Double Spruce. (Northern part of North America.) N. O. Coniferæ. Tincture of the gum.

Clinical.—Constipation. *Cough*. *Dyspepsia*. *Eructations*. Hæmorrhages. Hypochondriasis. Malarial fevers. Tea, effects of. Tobacco, effects of.

Characteristics.—The grand characteristic of *Abies nig*. is a sensation in the cardiac end of the stomach or in the œsophagus where it enters the stomach, as if a hard body, as a hard-boiled egg, had lodged there. (*China* has the lump under the sternum, but higher up. Feeling in the epigastrium as if food were lying there, *Pul*., *Bry*.) Where, this symptom is present, whether in dyspepsia, lung disease (when the sensation is as if there was a hard substance to be coughed up) with or without hæmoptysis, constipation, &c. *Ab. n*. will be, the most likely remedy. The dyspepsias caused by abuse of tea or tobacco have been cured by it. Wakeful at night with hunger. Distress in the head, with flushed cheeks, often accompanies the dyspeptic symptoms of this remedy. In one patient to whom I gave it chilliness round stomach was removed and general chilliness greatly

lessened. < After eating. "Pain in the stomach always comes after eating," says Guernsey.

Relations.—*Compare*: Abies can., Cupressus, Thuja, Sabina (all have painful indigestion), and other Conifers; Nux v., Bry., Puls., Kali c., Nat. m.; (effects of tea) Thuja.

Causation.—Tea. Tobacco.

SYMPTOMS.

1. Mind.—Very low-spirited and melancholy.—Nervousness.—Unable to think or study.

2. Head.—Dizziness.—Bad feeling in head.—Dull headache; severe.—Head hot, with flushed cheeks.

4. Ear.—Pain in l. external meatus.

9. Throat.—Choking sensation in throat.—Sensation of something sticking in œsophagus toward its lower end.

10. Appetite.—Hungry and wakeful at night.—Total loss of appetite in the morning, but great craving for food at noon and night.

11. Stomach.—Pain in the stomach always comes after eating.—Painful sensation as if something were lodged in chest, mostly on r. side of sternum, which had to be coughed up, though nothing comes, after taking food that disagreed.—Frequent eructations.—Continual distressing sensation about stomach as if everything was knotted up; worse whenever debilitated.—Sensation of an undigested hard-boiled egg in the stomach.

13. Stool.—Constipation.

16. Female Sexual Organs.—Menstruation delayed three months.

17. Respiratory Organs.—Easily gets out of breath.

19. Heart.—Heavy, slow beating of heart; sharp, cutting pains.

20. Back.—Pain in small of back.

24. Generalities.—Rheumatic pains, and aching in the bones.—Alternate heat and cold.

26. Sleep.–Sleepy during the day, but wakeful and restless at night.—Very bad dreams.

Abrotanum.

Artemisia abrotanum. Lady's Love. Southernwood. (Southern Europe.) N. O. Compositæ. Tincture of fresh leaves and stems.

Clinical.—Boils. Chilblains. Epilepsy. Gout. Hæmorrhoids. Hectic fever. Hydrocele. Indigestion. Lienteria. Marasmus. Myelitis, chronic. Nose-bleed. Paralysis. Rheumatism. Umbilicus, oozing from. Worms.

Characteristics.—The most prominent symptom of *Abrot.* is the wasting it causes, most marked in lower extremities. It has also an intense indigestion and morbid appetite. There are burning, gnawing, constricting pains, and sometimes vomiting of offensive matters. A peculiar sensation is as if the stomach were hanging or swimming its water. After a checked diarrhœa, rheumatism may ensue. Another great characteristic of *Abrot.* is metastasis; metastatic rheumatism. Metastasis of rheumatism from joints to heart; to spine. There is a sudden aching pain in back > by motion. Symptoms are < at night and in cold air. The face is wrinkled, pale, old-looking; feels cold; blue rings round eyes. It is suited to affections of newborn children, and especially little boys; hydrocele; epistaxis; emaciation. Oozing of blood and moisture from navel of newborn. I have cured with it indigestion with vomiting of large quantities of offensive fluid in a middle-aged woman.

Relations.—*Compare*: Absinth., Cham., Cina, Gnaphal., and other Compositæ; Nux and Agar. (chilblains); Bry., Bar. c. *Follows well*: Acon. and Bry. (pleurisy); Hep. (boils).

SYMPTOMS.

1. Mind.—Great anxiety and depression.—Child cross, depressed, very peevish.—Feels she would like to do something cruel; no humanity.—Thinking difficult.—Feels as if brain softening.—Excited, loquacious, like shouting, good-humoured, happy (secondary, after ceasing the drug).

2. Head.—Cannot hold the head up.—The l. brain seems esp. weak, easily tired by conversation or mental effort.—Sensation as of creeping chills along the convolutions of the brain, accompanied by prickling sensation.—Scalp sore, esp. l. side; itching.

3. Eyes.—Blue rings around dull-looking eyes.

5. Nose.—Nose dry.—Nose-bleed with boys.

6. Face.—Face wrinkled, as if old.—Comedones, with emaciation.

8. Mouth.—Slimy taste; acid.

10. Appetite.—Gnawing hunger, craves bread boiled in milk.—Ravenous appetite, and all the while emaciating.—Gastralgia with loss of appetite.

11. Stomach.—Sensation as if stomach were hanging or swimming in water, with coldness.—Pains cutting, gnawing, burning; < at night.

12. Abdomen.—Great distension of abdomen.—Weak, sinking feeling in bowels.—Hard lumps in different parts of abdomen.

13. Stool and Anus.—Food passes undigested.—Rheumatism after suddenly checked diarrhœa.—Alternate diarrhœa and constipation.—Protruding piles, with burning, from touch or when pressing.—Piles appeared, and became worse as rheumatic pains abated, with frequent inclination to stool, hardly anything but blood being passed.—Destroys worms, esp. ascarides.

15. Male Sexual Organs.—Hydrocele of children.

16. Female Sexual Organs.—Darting pain in left ovary.—Twitching in both ovarian regions, seems to extend to back.—Blood and moisture oozing from navel of newborn.

17. Respiratory Organs.—Cold air causes a raw feeling in respiratory tract.—In pleurisy when a pressing sensation remains in affected side, impeding free breathing (after *Acon*. and *Bry*.).

19. Heart and Pulse.—Pain across chest sharp and severe in region of heart; rheumatism.—Metastasis of rheumatism to heart.—Pulse weak and small.

20. Back.—Pains in sacrum.

21. Limbs.—Inability to move.—Marasmus of lower extremities only.—Soreness and lameness; worse mornings.—Chilblains itch; frost-bitten limbs.—Gout in wrists and ankles.—Inflammatory rheumatism before swelling begins.

24. Generalities.—Weak, sickly feeling when excited, trembling.—Lame and sore all over.—Weak and prostrated after influenza.—Inability to move.—Numbness.

25. Skin.—Flabby; hangs loose; marasmus.—Furunculus; after *Hep. s*.

26. Sleep.—Restless; frightful dreams.

27. Fever.—High fever (rheumatism).—Hectic fever, with chilliness, very weakening; (marasmus).

Jequirity.

Abrus precatorius. Indian Liquorice. N. O. Leguminosć. Tincture or trituration of the seeds.

Clinical.—Epithelioma. Granular lids. Lupus. Ophthalmia. Ulcers.

Characteristics.—*Abrus precatorius* is a climbing plant, a native of India, but has been introduced to the Western tropics, and its use as an eye remedy was discovered by the natives of Brazil, who gave it the name *Jequirity*. It has "small nearly globose seeds, which are of a brilliant scarlet colour, with a black scar indicating where they were attached to the pods" (*Treas. of Bot.*). These are used for necklaces; and as a standard of weight under the name of Raté. The roots are used in the same manner as liquorice roots. The method of its employment in eye affections is as follows: Thirty-two grains of the powdered seeds are allowed to soak for twenty-four hours in a thousand grammes of water. The patient (with granular ophthalmia) bathes his eyes with the filtered product thrice daily for three days, at the end of which time he has become the subject of a severe conjunctivitis, which may be either purulent or more allied to the diphtheritic form. By the fifteenth day the inflammation ceases and the granulations are found to be much diminished in size or even destroyed (*B. J. H.*, xli. 280). The intensity of the inflammation may be regulated by the strength of the solution. Sometimes the inflammation does not confine itself to the eyes but affects the lids with an intense inflammation which spreads to the face, neck, and chest. Sattler propounded a theory that there was a specific bacillus in the *Jequirity* infusion, but Klein (*H. W.*, xix. 220) and later Benson (*H. W.*, xix. 286) conclusively disproved this by showing that the effect was produced equally well with powdered seeds, infusion freshly made and infusion in all stages of bacterial decomposition. In the old school *Jeq.* has been used instead of blenorrhagic infection for the cure of granular lids. Whilst allopaths adopt this crude bit of Homśopathy from the Brazilian natives there is no reason why homśopaths should not use *Jeq.* in the attenuations. A further use has been made of it by Shoemaker of Philadelphia (*Lancet*, August 2, 1884-*H. W.*, xx. 427) in affections of the skin showing great cell proliferation, lupoid conditions, epithelioma, sloughing ulcers. The preparation he used was made as follows: Two hundred grains of the beans are decorticated by being slightly bruised and crushed in a mortar, the red hulls being carefully picked from the cotyledons; the latter are put in a bottle and covered with distilled water. They are thus macerated twenty-four hours, then transferred to a mortar and thoroughly triturated to a smooth paste. Sufficient water is then added to make the whole weigh 800 grains. Prepared in this way it is like an emulsion and is applied to the

surface to be treated with a large camel-hair pencil or mop. The application of this emulsion to ulcerated surfaces is almost painless, but soon (often within an hour) there is much irritation and inflammation, the edges become red and infiltrated, surrounding tissues śdematous and shining. In the course of from six to twelve hours a desiccated cuirass-like crust has formed which cracks in twenty-four hours more, and the discharge escapes freely. This goes on for five or six days, the quantity of discharge diminishing. The crust then separates or is removed by water dressing and discloses healthy granulations. If any unhealthy granulations are left the application is repeated. Shoemaker says of the result of this treatment, that it exercises a destructive tendency on unhealthy granulated conditions followed by a constructive change, promoting under the protective cover of the exudation which it causes, a rapid development of healthy tissue. But it must be used with caution, for "it may give rise to erysipelatous inflammation, and if used on weak and irritable patients, to great constitutional disturbances." Shoemaker gives a series of striking cures with the remedy, but the constitutional effects are of more importance to homśopaths. They are: headache, pain in the limbs, fever, high pulse. In a case of ulcerative lupus of both sides of the nose which was cured by five applications, the first was *followed by:* an enormous amount of inflammation, accompanied by malaise, febrile exacerbation (103° F.), which lasted till the crust began to dry.—*Abrus Precatorius* was the plant employed by Professor Nowack to determine meteorological and telluric forecasts owing to the extreme sensitiveness of its leaves to atmospheric disturbances.

Relations.—*Compare:* In ophthalmia, Ipec.

SYMPTOMS.

2. Head.—Headache.

3. Eyes.—Purulent or diphtheritic inflammation of the conjunctiva; at times affecting lids with intense inflammation spreading to face, neck, and chest.—Cures granular ophthalmia after the inflammation subsides.

21. Limbs.—Pains in extremities.

24. Generalities.—Malaise.

25. Skin.—Erysipelatous inflammation of skin.—Lupus.—Indolent ulcers.

27. Fever.—High temperature and high pulse.

Absinthium.

Artemisia absinthium, Linn. Common Wormwood. (Europe.) Not to be confounded with Artemisia vulgaris, which is also called Wormwood. N. O. Compositæ. Tincture of fresh young leaves and flowers.

Clinical.—Brain, congestion of. Chlorosis. Dyspepsia. Epilepsy. Nervousness. Otorrhœa. Restlessness. Sleeplessness. Spine, congestion of. Typhoid.

Characteristics.—*Absinthium* has been proved, but a number of the symptoms are taken from observations made on absinthe drinkers. The convulsions of *Absinth*. are preceded by trembling; the patient makes grimaces; bites tongue; foams. Halbert regards *Absinth*. as of especial service in cases of minor epilepsy, where consciousness is not entirely lost. The characteristic is "a peculiar vertigo on rising, with a tendency to fall backward." In a case of epileptoid vertigo, signs of constant cerebral and spinal congestion; nausea and tendency to frequent vomiting, persistent tremors; epileptoid attacks of hysterical character and opisthotonos, *Absinth*. first in Ø, and later in 3, completely cured. Tremor is a marked feature of the remedy: tremor of tongue; of heart. Magnan, who has studied absinthism, says the characteristic symptoms of absinthe are: Sudden and severe giddiness, epileptiform seizures, delirium with hallucinations, and loss of consciousness. For some time after the attack there is loss of memory. The giddiness and epileptiform attacks are the most important of the symptoms. He adds that those who take absinthe are liable to hysterical manifestations. There is exhilaration followed by horrible delirium (*Bell*.); patient obliged to walk about (*Artem*., *Cham*., *Cin*. have > moving about). Patient walks about in distress, seeing all sorts of demons. Sleeplessness; typhoid with congestion of base of brain. It corresponds to nervousness, excitement, and sleeplessness in children.

Relations.—*Compare*: Artem. vulg., Abrot., Cicut., Hyosc., Bell., Stram. Strong urine, Benz. ac., Nit. ac.

SYMPTOMS.

1. Mind.—After recovery has no recollection of taking the poison, nor of the cause of his doing so.—Forgets what has recently happened.—Insane; idiotic; brutal.—Idiotic manner, doesn't care whether she dies or not.—Wants nothing to do with anybody.—Frightful visions and terrifying hallucinations.—Stupor alternating with dangerous violence.—Insensible with the convulsions.

2. Head.—Vertigo; when she rises up; tendency to fall backward.—Confusion in head.—Headache.—Wants to lie with the head low.—Congestion of the brain and spinal cord.

3. Eyes.—Injected conjunctiva.—Pain in the eyes.—Itching.—Lids heavy.

4. Ears.—Otorrhœa; esp. after hemicrania.

6. Face.—Foolish look.—Rush of blood to the face.—Makes grimaces, and foams at the mouth in epilepsy.

8. Mouth.—Jaws firmly fixed.—Bites his tongue in epilepsy.—Tongue thick, protruding; can scarcely talk.—Tongue trembling; feels paralysed.

9. Throat.—Scalded feeling in the throat.

11. Stomach.—Loss of appetite; loathing of food.—Food lies heavy.—Stomach feels cold and oppressed.—Eructations; nausea; vomiting.—Nausea, apparently in region of gall bladder.—Uncomfortable, irritated feeling of stomach.

12. Abdomen.—Liver feels swollen.—Pain in spleen; it feels swollen.—Bloated around waist and in abdomen, as after ague.—Immense accumulation of flatulence in abdomen; wind colic.

14. Urinary Organs.—Constant desire to urinate.—Urine deep orange, of a strong smell, like horse's urine.

16. Female Sexual Organs.—Pains in uterus.—Darting pain in right ovary.—Chlorosis.—Promotes menses.

17. Respiratory Organs.—Cough with liver complaint.

19. Heart.—Tremor of the heart felt toward the back.—Heart thumps; can be heard in scapular region.

24. Generalities.—Feet very cold.—Falling down, as in epilepsy, unconscious, with distortion of the features, followed by spasms of the body and limbs, bloody foam at mouth, and biting of the tongue; stupidity and loss of memory afterward.—Opisthotonos; grinding teeth; followed by stupor.—Paralysis of inner organs.—(Horses kick with hind legs towards the belly.—Ascarides.)

Acalypha Indica.

Cupameni. Indian acalypha. (East Indies.) N. O. Euphorbiaceæ. Tincture of fresh plant.

Clinical.—Cough. Diarrhœa. Flatulence. Hæmoptysis.

Characteristics.—The chief employment of this Euphorbian has been in violent dry cough followed by bloody expectoration. Expectoration of pure blood in the morning, and dark clotted blood in the evening. Cough most violent at night. Dulness of chest on percussion; constant severe pain in chest. Progressive emaciation. A proving by several Indian physicians has brought out a number of symptoms in the alimentary tracts characterised by: burning, sense of weight at stomach, flatulence, and sputtering diarrhœa.

Relations.—*Compare*: Mercurialis ann., Mancin., and other Euphorbians. Ham., Ipec., Millefol., Phos., Aco.

Antifebrinum.

Acetanilid (formed from aniline). CH_3 CO NH C_6 H_5. *Exalgine* is a derivative from this, Methylacetanilid, and has almost identical action. Solution and trituration.

Clinical.—Asthma. Cyanosis. Fainting. Head, enlarged sensation. Palpitation. Thrombosis.

Characteristics.—Given as remedies for migraine and in order to reduce fever, *Antifeb*. and *Exalg*. have produced symptoms of collapse and cyanosis, in some instances fatal, with great rapidity. One patient experienced from *Exalgine* a sensation that his head was so large that it seemed to occupy the whole room. Respiration was most difficult as in a bad attack of asthma, he seized and clenched the hands of those around him. He was not an asthmatic subject. He felt as if the diaphragm had ceased working and he must go on breathing on his own account at any cost. Several cases of thrombosis of the lower extremities from heart weakness have followed its use.

Relations.—*Compare:* Antipyr., Anilinum, Glon., &c.

Aceticum Acidum.

Glacial Acetic Acid. HC_2 H_3 O_2. (Distilled water is used for attenuations 1x and 1; very dilute spirit for 3x and up to 4; rectified spirit for 5 and higher.)

Clinical.—Anæmia. Anæsthetics, antidote to. Ascarides. Burns. Corns. Croup. Debility. Diabetes. Diphtheria. Dropsies. Fevers. Hydrophobia. Nævi. Narcotics, antidote to. Phthisis. Sausage-poisoning, antidote to. Scalds. Stings. Stomach, cancer of. Varicosis. Warts.

Characteristics.—The leading features of acetic acid are excessive wasting and debility; anæmia with waxy pallor of face; intense thirst; burning in throat; nausea, retching, and sour rising as met with in cases of cancer and debility. There are gnawing, ulcerative pains in stomach; pain and burning in abdomen. Profuse, exhausting diarrhœa. It has been used in diabetes. It corresponds to putrid and hectic fevers with night sweats; hæmorrhages, varicose swellings, and dropsies. As a type of vinegar effects may be mentioned the following: A plump and blooming young woman took a small glass daily to reduce size. Soon lost flesh and colour. In a month cough set in with white concocted phlegm, fever, dyspnœa, night sweats, anorexia, dropsy, diarrhœa, death. Lungs after death were found stuffed with non-suppurating tubercles. A young German, after working twelve months in a vinegar factory, was obliged to leave from indigestion, dyspnœa, and ready fatigue. It is suited to children and old people; to lax, pale, lean persons. (Equal parts of vinegar and hot water make a refreshing sponge-down for many conditions of fever, with or without perspiration.)

Relations.—*Compare:* Apis, Ars. (but Acet. ac. has more preponderant gastric symptoms than either); Carbol. ac., Lac. defl., Lact. ac., Uran. nit. Large doses of Acet. ac. are best *antidoted by* Magnesia or Calcarea either as fluid magnesia or as lime-water. Antidotes to potencies are: For depressing, agonising feeling, Tabac., Acon.; for gastric, pulmonary and febrile symptoms, Nat. m., and afterwards Sep. *It antidotes:* Anæsthetics, Acon., Asar., Coffea, Euphorb., Ignat., Opium, Plumb. (colic), Sep., Stram., Tabac. *It counteracts* sausage-poisoning. *It aggravates* the effects of Bell., Merc., Arn., Lach. *Disagrees* when given after Borax, Caust., Nux v., Ran. b., Sars.: Scilla, Colch., and Sang. have more effect in curing some diseases when prepared with Acet. ac. than with Alcohol.

SYMPTOMS.

1. Mind.—Very dull and low-spirited; irritable.—Alternate stupor and delirium.—Confusion of ideas.—Grieves much; sighs often.—Horrible attacks of anxiety with difficult breathing.—Vertigo with feebleness and fainting.

2. Head.—Heaviness and dull pains in forehead and vertex.—Headache from abuse of tobacco, opium, coffee, or alcohol.

5. Nose.—Liable to frequent catarrhal attacks.—Nose-bleed, esp. from a fall or a blow.

6. Face.—Expression wild, pupils dilated.—Face pale, waxen, emaciated.—Left cheek (esp.) very red during fever.—Bright red flush on both cheeks.—Sweat on forehead in spots.

8. Mouth.—Teeth feel dull, breath foul.—Scorbutic ulcers; toothache.—Taste sour.—Epithelium of mouth quite white.—Tongue pale and flabby.

9. Throat.—Children thirsty, but swallow with difficulty even a teaspoonful of water.—White false membranes in throat.

11. Stomach.—Insatiable burning thirst.—Shrieks for water at night.—Intense thirst; nausea, and frequent vomiting.—Disgust for salted things and cold victuals.—Cold drinks lie heavy.—Vegetables, except potatoes, disagree, also bread and butter still more.—Contents of stomach feel as if in a ferment; violent burning pain in stomach and in chest, followed by coldness of the skin and cold sweat on forehead.—Indurations in stomach.—Scirrhus of pylorus.

12. Abdomen.—Distension of the abdomen; colicky pains.—Ascites.—Abdomen feels as if sunken in when lying on his back.

13. Stool and Anus.—Diarrhœa, with great thirst, drinking large quantities with apparent impunity.—Diarrhœa, with swelling of legs and feet (phthisical subjects).—Diarrhœa, with colic pains and tenderness of the abdomen.—Hæmorrhage from bowels.—Chronic constipation.—Ascarides.—Chronic diarrhœa of children with great emaciation.—Constipation, with great thirst and excess of pale urine.

14. Urinary Organs.—Urine increased in quantity; pale; phosphatic; diabetes, with intense, burning, unending and unquenchable thirst and great debility.

15. Male Sexual Organs.—Weakening emissions; semen passes at stool.—Prepuce thickened, fissured, can't be retracted and itches fearfully.—Sexual passion, but feeble erection.

16. Female Sexual Organs.—Metrorrhagia; after parturition, with great thirst.

17. Respiratory Organs.—Hoarse, with laryngeal irritation.—Lining membrane of larynx and trachea covered with a fibrinous exudation as in true croup.—Hissing respiration, with rattling in the throat.—Croup-like cough; a hollow sound with each inhalation.—Hæmoptysis.

20. Back.—Myelitis, with profuse urine; the pain in the back relieved only by lying on the abdomen.

21. Limbs.—Œdematous swelling of the feet and legs.

24. Generalities.—Convulsions.—Jumps out of bed like a madman, and crawls on the ground, howling with pain.—Great emaciation.—Skin pale and waxen.—General anasarca and dropsical affections.—Burning in inner and outer parts.

25. Skin.—Sugillations.—Tetter-like eruptions.—Nævi; warts; corns.

26. Sleep.—Sleepless.

27. Fever.—Skin cold.—Slow fever with night sweats.—Profuse perspiration.—Hectic.—Putrid and typhous fevers.

Aconitinum.

Aconitine. Aconitia. C_{33} H_{45} NO_{12}. An alkaloid obtained from the roots and stems of Aconitum napellus. It is contained in all species of Aconite except A. lycoctonum.

[German Aconitine is amorphous; French Aconitine is crystalline, and 170 times stronger than the German. Morson's "English Aconitine" is a secret preparation believed to be made from A. Ferox. The alkaloid in A. Ferox differs somewhat from ordinary Aconitine chemically, and is called pseudo-Aconitine. Aconitine of T. H. Smith, of Edinburgh, is probably identical with Morson's. Symptoms from Morson's are marked (M) in the Schema.]

Clinical.—Blindness. Chill. Convulsions. Deafness. Dyspnœa. Ears, noises in. Hemicrania. Hydrophobia. Landry's paralysis. Liver, enlargement of. Neuralgia. Œsophagus, spasms of. Spasms. Spleen, enlargement of. Tetanus. Tongue, affections of. Trismus. Vomiting.

Characteristics.—Our knowledge of this alkaloid is chiefly derived from cases of poisoning and over-dosing. The numbness, tingling, prickling and heat of the *Aconite* provings are produced by the alkaloid, but with increased intensity. On local application, first there is sensation of warmth, then of burning with sharp pains and itching; finally numbness and anæsthesia. The symptoms often proceed from below upwards: "A tingling, prickling sensation, running up leg to spine and head, and tingling of fingers." "Ice-cold sensation creeps up from his feet." Fear of death, anguish, intense chilliness; feeling of sickness; constricting burning sensation, extending from mouth to stomach. Twitchings and spasms over whole body, especially in face. All symptoms are > by vomiting. In one poisoning case "vomiting recurred every two or three minutes, and was performed by a sudden jerking action of abdominal muscles, accompanied by a loud shout, probably dependent on a sudden contraction of the diaphragm. Every attempt to swallow was followed by the spasmodic contractions So characteristic of hydrophobia, but they were not renewed by the sight of water. The slightest touch renewed the spasms." *Aconitine* should be helpful in cases of hydrophobia, whether of the convulsive or the paralytic kind. The senses are disordered or lost-sight, hearing, smell. In one poisoning case the blindness was coincident with sudden dilatation of the pupils, and sight partially returned as the pupils contracted. A heavy feeling as of lead all over the body. All parts except head and stomach feel as if filled with lead. Neuralgia of 5th nerve. Creeping on face with feeling of swelling and tension. Pains in supraorbital nerve were especially prominent. Post-mortem examinations

show the spleen very much enlarged; posterior part of liver dark and almost black. Kidneys hyperæmic.

The symptoms of *Aconitine* set in with great rapidity, and develop with extreme intensity. If recovery occurs it is rapid and complete. There is relaxation of the limbs and every exertion < the symptoms. < By mental exertion; by agitation. < By touch. Erect position = nausea (M)

Relations.—See Acon. n. Hydrophobia symptoms, Bell., Canth., Hyo., Lach., Fagus.

SYMPTOMS.

1. Mind.—Anguish; fear of death.—Intellect perfect, even vivid.—Flow of ideas sluggish, long reflection impossible, power of attention impaired.—Feels like one sleeping and dreaming.—Forgetfulness and trembling of limbs.

2. Head.—Vertigo and confusion, with ringing in ears; falls almost immediately.—With giddiness, dimness of vision, and muscular weakness (M).—Fulness in the head, with noises in the ears.—Head and faceache; often darting pains in face, sometimes accompanied by vomiting.—(Hemicrania cured).—Weight about head; unable to hold it up.

3. Eyes.—Strained feeling in eyes.—Pupils dilated (both from internal and external use).—Complete blindness; accompanying dilatation of pupils, sight returning when pupils contract.—Vision hazy, with giddiness and nausea (M).—Pupils insensible to light.

4. Ears.—Sense of pressure in ears.—Roaring in ears.—Complete deafness.

6. Face.—Fulness in cheeks and temples gradually changing to painful sense of tension, formication, and prickling.—Face tense and swollen.—Creepings in face and forearms.—Peculiar drawing, stretching, pressing sensation in cheeks, upper jaws, forehead—in short, through whole tract of trigeminus, increasing by degrees in intensity, alternating with actual pain, which, at first occasional and fugitive, finally became steady and severe.—Pain at temple and along course of supraorbital nerve.—Darting pains in face accompanied by vomiting.—Beginning in fingers, then in face, tonic contractions, trismus; after a while clonic convulsions over whole body.—Eyes closed, lips dry and fissured, tongue stiff; felt chilly and as if dying; breathing became rattling, moaning, quick.—Facies hippocratica.

8. Mouth.—Burning on tip of tongue and lips.—Burning, constricting, acrid, dry sensation in mouth and fauces.—Tongue stiff.—Taste disagreeable and disgustingly bitter.—Taste completely lost.—Taste impaired; teeth more sensitive when biting.—Salivation.

9. Throat.—Burning anguish in throat.—Constriction and burning from mouth to stomach.—Every attempt to swallow followed by spasms like hydrophobia but not renewed by sight of water.—Difficulty of swallowing and a pain in back of neck and behind jaws in parotid region, so that in eating he had to press back of neck with hand (M).—Burning in gullet as if a hot coal were there (M).

11. Stomach.—Eructations immediately.—Severe vomiting, which recurred every two or three minutes and was performed by a sudden, jerking action of abdominal muscles accompanied by a loud shout.—Nausea induced by erect position (M).—Vomiting relieves all symptoms.—Warmth most marked in region of stomach.

12. Abdomen.—Rumbling in bowels (immediately in one case, two hours after dose in another).—Sudden contraction of diaphragm.—Liver and spleen greatly enlarged.

14. Urinary Organs.—Copious diuresis.—Difficulty in voiding urine (M).—Dysuria and occasionally retention with hypogastric pain (M).

15. Male Sexual Organs.—Nocturnal pollutions (unusual to prover).

17. Respiratory Organs.—Respiration difficult.—Oppressive anguish in precordial region.—Sighing breathing.

19. Heart.—Pulse at first, on entering a warm room, more frequent, then sinks far below normal, small, weak, intermittent.—Sounds of heart only heard at apex.

21. Limbs.—Weakness, trembling, burning, creeping, tingling, numbness of limbs.

24. Generalities.—Malaise; feebleness; muscular prostration.—Twitchings and convulsions over whole body.—Heaviness as of lead all over body.

25. Skin.—General formication.

26. Sleep.—Somnolence.—Sleep disturbed.—Throws himself continually around in bed.

27. Fever.—Surface cold, sweating, and quite pale.—Intense coldness.—Head and face became suddenly warm; warmth extended over rest of body, was more intense in region of stomach, and was accompanied by sweat.

Aconitum Cammarum.

A. cammarum, Linn. (includes A. neomontanum, Willd.; A. intermedium, D. C., and A. stoerckianum, Reich.). N. O. Ranunculaceæ. Tincture of root.

Clinical.—Catalepsy. Eruption. Headache. Neuralgia. Pollutions. Salivation. Tongue, paralysis of. Vomiting.

Characteristics.—The main symptoms, of *Aconitine* are reproduced in *A. camm*. Formication begins on tongue and lips and spreads to face and thence over whole body; with this are distortion of features and dry skin. There is headache < by bending body forward; and faceache accompanied by tinnitus aurium and vertigo. Walking causes weariness and, if continued, causes pains in elbows, knees, and hips. Violent eructations; inclination to vomit without vomiting; spasmodic contraction of stomach and abdominal muscles. Great sensitiveness to light. Erections and pollutions without voluptuous dreams. On lower extremities small papules and vesicles, filled with serous fluid, very painful. Memory weakened; sense of touch diminished.

A. neomont. produced: Peculiar sharp taste followed by violent shooting pains from lips to stomach. The eructations and rumbling in bowels of the alkaloid were reproduced, but in addition the mucous membrane of the mouth was red, studded with small whitish yellow vesicles surrounded with bright red areola; salivation came on. Pupils, at first mobile, became persistently dilated; vision dim; unable to look at highly illuminated objects without winking; near and distant objects seem to swim. Extreme restlessness; it seems as if it were a tickling which impels him to constant movement; > in equable temperature, < on entering warm air from cold and *vice versâ*. Apathetic, indifferent to all the world. Sleep disturbed or impossible. Vomiting > all symptoms.

SYMPTOMS.

1. Mind.—Rage.—Fear.—Apathy and indifference.—Thought and power of concentration disturbed.—Memory weak.

6. Face.—Blackish blue colour of face; blue swollen lips.—Most remarkable sensation of contraction of face.

8. Mouth.—Paralysis of tongue.—Salivation.—Fuzzy sensation where the crawling was.—Taste and sensation diminished.

12. Abdomen.—Burning in abdomen and sensation of ants crawling round in it.

17. Respiratory Organs.—Voice hoarse and rough.—Respiration slow, difficult, with sensation as if chest and throat constricted.

19. Heart.—Pulse frequent; afterwards depressed; slow; irregular; intermittent.

24. Generalities.—Subsultus tendinum.—Twitchings.—Catalepsy.

Aconitum Ferox.

A. ferox, Wall. A. virosum, Don. Bisch, or Bikh, Ativisha. (The most poisonous species known, containing greatest proportion of Aconitine; from the Himalaya Mountains.) N. O. Ranunculaceæ. Tincture of root.

Clinical.—Burning pains. Cheyne-Stokes breathing. Chill. Dyspnœa. Gastralgia. Neuralgia. Numbness.

Characteristics.—*A. ferox* was proved by Dworzack, who also proved *Aconitine*. The Ferox developed burning pains in greater intensity than the alkaloid; more intense mental activity followed by greater depression. The *Aconite* note of unendurability of suffering was marked. Anxiety and fear of suffocation from paralysis of respiratory muscles; obliged to breathe half-sitting up with head resting on palms of hands. Cold drinks >; sitting up >; warm food <; coffee >.

Relations.—*Compare:* Curare and Phosph. (respiratory paralysis; Cheyne-Stokes breathing).

SYMPTOMS.

1. Mind.—Mind very active; sequence of ideas rapid; talked constantly, remembered easily the minutest circumstances of his former experiment, compared them with present one, and readily drew conclusions (6 h.). In intervals of relief from distressing symptoms laughed and joked about his very comical condition; but when the dyspnœa, anxiety, &c., returned, he could not seem to endure them, and abused heartily Aconite and toxicology in general (4 to 6 h.).—Incapable of any mental work, even the simplest addition; comprehension and understanding confused (2nd day).

8. Mouth.—Tongue almost insensible; feels like a piece of raw leather in mouth (6 h.).—Tongue covered with a thick yellowish-white fur.—Violent burning in mouth (in two minutes), renewed by eating (2nd day); > by drinking cold water.

9. Throat.—Violent burning in pharynx.

11. Stomach.—Pressure in stomach with pain.—Warmth in stomach.—Violent drawing pain in region of stomach and sacral region, soon spreading over whole

abdomen; < by pressure on epigastrium.—On pressing in stomach, an internal, dull pressing pain.

12. Abdomen.—Rumbling in bowels (5 m.); constant gurgling (4 h.).

13. Stool.—Two half-watery, dark, not copious stools (2nd d.).

14. Urinary Organs.—Frequent and copious evacuations of urine.

17. Respiratory Organs.—Dyspnœa increased to such a degree that he was obliged to breathe half-sitting up, with head resting on palms of hands; constantly feared suffocation from respiratory paralysis.

21. Limbs.—Gait tottering; remarkable weakness in lower extremities, esp. r.

24. Generalities.–Formication spread over whole body, least noticeable on parts that had been cold; <, or excited by, change of temperature or motion. Having changed from one nerve to another, reached its greatest severity from 7 to 7.30 p.m. It caused a painful unrest so that he could not possibly lie quietly more than a few minutes. Getting up set up all the train of symptoms, which were > immediately on lying down.—Benumbed sensation, as if he had on gloves; on pinching cheeks no pain felt; seemed to walk on woollen carpets (2nd, 3rd, and 4th d.).

26. Sleep.—Sleeplessness.—On waking, violent burning in mouth and throat, warmth in stomach, dull sensation in head.

27. Fever.—Icy coldness of body (4 h.), objective and subjective, no amount of wraps and external warmth relieved. Desire to get warm drove him to get out of bed and sit near stove. Tottered to stove and warmth was pleasant, but vertigo, trembling, oppression, and nausea ensued and compelled him to return to bed. This experience was repeated.—Fierce heat (calor mordax) on forehead, cheek, and hands, with sensation as if numerous glowing hot wires were stuck into him: > by perspiration (4 to 6 h.).

Aconitum Lycoctonum.

A. lycoctonum, Linn. A. telyphonum, Reich. Wolfsbane. N. O. Ranunculaceæ. Tincture of fresh plant when coming into bloom. (The only aconite which does not contain Aconitine.)

Clinical.—Breasts, inflammation of. Constipation. Diarrhœa. Glands, enlargement of. Hodgkin's disease. Liver, disorders of. Pork, effects of. Strangury.

Characteristics.—The symptoms of *A. lycoct*., whilst resembling those of the other aconites in some respects, show a marked absence of the cutaneous-nerve affections so prominent in their provings. The most notable symptoms are swelling of the cervical, axillary, and mammary glands. I have used it with good effect in cases of scrofulous glands, and even where Hodgkin's disease has been suspected. Diarrhœa after eating pork. Itching is prominent in the proving: of eyes, nose, anus, vulva. The skin of the nose is cracked. There is a cough leaving a taste of blood in the mouth. The symptoms are < in afternoon (like *Lycop*.); < from mental exertion; < during digestion, especially of pork, onions, and after wine.

Relations.—*Compare:* Cistus, Lap. alb., Con., Iod., Spo., Lyc., Carb. an.; Puls. (effects of pork).

SYMPTOMS.

1. Mind.—Mania.—Ferocity.—Laughter.—Distraction.—Instability of ideas.—Dread of work.

2. Head.—Vertigo with nausea.—Lancinating pain in head extending across eyes.—Sensation as if a nail were driven into head when moving it.—Hammering in temples.—Pain like rheumatism in scalp < by touch.

3. Eyes.—Lancinating pain in eyes from without inward.—Painfulness of lids.—Itching in lids.—Pressure on lids and difficulty of raising them.—Smarting in canthi; dryness at inner canthus.

4. Ears.—Purulent discharge from ears; redness behind them.

5. Nose.—Itching on nose; sensitiveness; lancinations.—Compression at root of nose.—Skin of nose cracked.—Muco-purulent discharge from nose.

6. Face.—Face pale; shining.—Pain of excoriation round mouth.—Pain in facial bones.—Tension in facial muscles.—Hard tuberculous pimples on face.—Pimples on lips.—Skin of face becomes light brown.—Numbness of jaw, like incipient paralysis, > by compression and by drinking wine.

7. Teeth.—Burning pain in upper teeth.—Pressing in teeth.—Tearing in lower teeth when opening mouth.—Gums bluish; ulcerated.

8. Mouth.—Taste, clayey; astringent.

10. Appetite.—Strong relish for dainties, fruits, cabbage.—Increased relish for tobacco in a smoker.—Aversion to food in general esp. fatty things and milk; they cause uneasiness.—Keen hunger very soon satisfied.—Constant thirst even when drinking.—Burning thirst.—Thirst at night.

11. Stomach.—Risings: rancid; like rotten eggs, acid with weight on stomach.—Painful eructations.—Hiccough.—Inclination to vomit after eating; with shivering; with vertigo.—Vomiting: of mucus on getting out of bed; yellowish after drinking; with copious urination.

12. Abdomen.—R. hypochondrium: bruised pain; tearing pain; starting.—When breathing both hypochondria feel bruised. Sensation of compression referred to diaphragm.—Anxiety; beatings in abdomen.—Lancinating pain after milk.

13. Stool.—Constipation; anus feels as if strongly contracted.—Diarrhœa, with violent cutting after eating pork.—Whitish stools.—After stool, pain in anus as if there was a crack there; shivering.—Cramp at anus.—Itching at anus.—Tenesmus during night.

14. Urinary Organs.—Desire to urinate with copious emissions.—Urging with ineffectual efforts.—Urine: hot; turbid, depositing a white sediment.

16. Female Sexual Organs.—Itching at vulva.—Menstrual blood fetid.—Excoriation of bend of thigh after menses.—Leucorrhœa: viscid.

17. Respiratory Organs.—Difficult respiration.—Slight cough with watery expectoration.—After a slight chill, cough leaving a taste of, blood in the mouth.

18. Chest.—Swelling of the mammary glands.

20. Neck and Back.—Swelling of the cervical glands.—The neck seems to grow larger.—Swelling of the neck on one side only.—Pressing pain at the nape of the neck.—Shivering in the back.—Jerking in the region of the kidneys.

22. Upper Limbs.—Swelling of axillary glands.—Pressure; lancinating pains in shoulder joints.—Tearing pain in elbow joints.—Stiffness in elbows and wrists.—Sensation of fulness in hands.—Sweat on hands.

23. Lower Limbs.—On stretching legs ham-muscles feel as if much shortened.—Jerking in legs.—Itching at ankles in evening.—Lancinating pain at instep when standing.—Eruption of hot, red, slightly painful spots on legs and toes.

26. Sleep.—Drowsiness; he sleeps too long.—Aberration of hearing during sleep.—During sleep, numbness of the parts he lies on.

27. Fever.—Horripilation.—Chilliness of one side only as soon as he is uncovered.—In morning external coldness with feeling of heat.—Coldness alternating with heat, succeeded by sweat.—During heat, pale face, strong appetite, thirst, pain in bowels, restlessness.—Sweat continues after fever.

Aconitum Napellus.

Common Aconite. Monkshood. Wolfsbane. (Moist pastures and waste places in mountainous districts, Central and Southern Europe, Russia, Scandinavia, and Central Asia.) N. O. Ranunculaceć. Tincture of whole plant with root when beginning to flower.

Clinical.—*Amaurosis*. *Anger*. *Apoplexy*. *Asthma*. Blindness, sudden. *Bronchitis.* Catalepsy. Catheter fever. *Chest, affections of*. Chicken-pox. Cholera. *Cholera infantum*. *Cold*. *Coldness*. *Consumption*. Convulsions. *Cough*. *Croup*. Cystitis. *Dengue fever*. *Dentition*. Diarrhśa. *Dropsy*. Dysentery. Dysmenorrhśa. *Ear, affections of*. Enteritis. *Erythema nodosum*. *Excitement*. *Eye, affections of*. Face, flushing of. *Fear, effects of*. *Fever*. *Fright, effects of*. Glands swollen. Glossitis. Gonorrhśa. Hćmorrhages. *Hćmorrhoids; strangulated*. *Headache*. *Heart, affections of*. *Hip-joint, diseased*. *Hodgkin's disease*. *Hyperpyrexia*. *Influenza*. Jaundice. *Joints, affections of*. *Labour*. *Lactation*. *Laryngitis*. Liver, inflammation of. *Lumbago*. *Lungs, affections of*. *Mania*. *Measles*. *Meningitis*. *Menstruation, disorders of*. *Miliaria*. *Miscarriage*. *Mumps*. *Myalgia*. *Myelitis*. Nephritis. *Neuralgia*. *Numbness*. Śsophagus, inflammation of. *Paralysis. Peritonitis. Phlegmasia alba dolens. Pleurisy. Pleurodynia, Pneumonia. Pregnancy. Puerperal fever. Purpura. Quinsy. Remittent fever. Roseola. Scarlatina. Shivering. Sleeplessness. Smell, disorders of. Stiff-neck. Testicles, affections of. Tetanus*. Tetany. *Thirst. Throat, affections of. Tongue, affections of*. Toothache. *Traumatic fever. Urethra, spasmodic stricture of*. Urethral fever. *Urine, suppression of*. Uterus, prolapsus of. *Vaccination, effects of. Vertigo. Whooping-cough. Yawning. Yellow fever*.

Characteristics.—The *Wolfsbane* "grows in the damp and covered parts of almost every mountainous country in north or middle of Europe, especially in the Jura, Switzerland, Germany, and Sweden." Teste mentions that it has the reputation of being much more poisonous to carnivorous animals than to the herbivora. This he partly endorses, and it has recently been apparently confirmed by a vain attempt to poison an elephant with *Aconitine* in this country. A carrot was scraped out and enough *Aconitine* to poison 2,000 men was put in. The elephant ate it readily, but nothing at all happened, and three hours later a large dose of prussic-acid had to be administered, which proved fatal in a short time.

Before Hahnemann's time *Aconite* had a reputation as a sudorific, and in cases of rheumatism, sciatica, and tumours, but it was not till Hahnemann proved it that its properties were really, understood. Aconite is more closely associated with the rise and progress of homśopathy than any other member of the materia medica. If *Cinchona* was the "Newton's apple" of the homśopathic discovery, *Aconite* was the remedy by means of which Hahnemann was able to meet most of the conditions which in his day were treated by blood-letting. It was *Aconite* more than

any other remedy which paved the way for the disappearance of blood-letting from general medical practice. One of the deadliest and most rapidly acting of poisons, through Hahnemann's discoveries has been turned into the best friend of the nursery. *Aconite* in potencies above the 3rd is a perfectly safe medicine for any age. Sensitive patients complain of its depressing action when repeated, and I have known instances in which the characteristic prostration of mind and body has occurred after *Aconite* had been given in the potencies. But such cases are exceptions, and are not attended with danger when they do occur. The great majority of patients to whom *Aconite* is given in the potencies experience nothing of the kind.

The rapidity of action of *Aconite* determines its appropriateness for conditions in which the symptoms set in with great intensity, such as Asiatic cholera, certain fevers, and acute inflammations. To this list may be added attacks of sudden blindness. But it must not be supposed that the sphere of *Aconite* is limited to acute cases. When the symptoms correspond it will cure cases of great chronicity─for example, cases of indurated glands.

Dr. Hughes has acutely remarked that the condition to which *Aconite* is homśopathic is one of *tension*; and this word gives the best idea of the action and sphere of *Aconite*. There is emotional and mental tension, as shown in fright or fear and its consequences, anxiety, and fear of death; tension of the systemic vessels, as in the effects of a chill, Asiatic cholera, and hćmorrhages; muscular tension, as in tetanus; tension of involuntary muscles, as in heart spasms, and tension of the semi-involuntary muscular apparatus of respiration, as in asthma; and finally tension of the special senses in heightened sensation and heightened sensitiveness to pain; in a feeling of numbness in parts, as if bound tightly, and also a sensation of being tightly bound in the limbs and in other parts. Hence it is that *Aconite* in its therapeutic action corresponds to the effects of a number of conditions which excite a state of tension. Plethora may be classed under this head. Plethoric persons of a lively character, bilious and nervous constitutions, high colour, brown or black hair, are specially suited to *Acon*. Active, sanguineous congestions of all kinds, especially those following chill. Guernsey puts it in another way: "The pure and fully developed blood globule, in its most perfect type, when diseased, has a great affinity for *Acon*. When the blood globules are disorganised it is seldom indicated. We think of *Acon*. in sudden inflammation, especially if caused by cold, *dry air*, suppressing exhalations of the body." Teste relates a remarkable case of an Englishman who had been obliged to take a long sleigh journey in North Russia in midwinter, who suffered thereafter for two years from violent paroxysms of palpitation and acute stitching pains in the heart region, threatening cerebral apoplexy. Aneurism had been diagnosed by leading physicians in England and on the Continent. Teste localised the affection to neurosis or spasm of the pectoralis major muscle, and proved his diagnosis by promptly curing it with *Acon*. The keen, cutting winds of the mountains amongst which the plant flourishes give the signature of this remedial action.

There are not many drugs which have causation so strongly marked among their characteristics. Chill, fright, injury, or surgical operation—the effects of these will be met in large majority of cases by *Acon*., the timely administration of which will ward off serious results.

The reaction from the primary effect of chill gives another characteristic of *Acon*.—that of fever. With the *Acon*. fever there are: Restlessness and tossing about, and the tension state is evidenced still in the anxiety with which it is accompanied, sometimes amounting to fear of death. The mental exaltation sometimes goes so far as to the predicting of the day and hour of death. Clairvoyance. Extreme sensitiveness to light and sound and all sensations including pain. When the sickness is borne with calmness and patience *Acon*. is not likely to be required. It was the feverish restlessness of the *Acon*. provings that led Hahnemann to infer its homśopathicity to so many fever states; and it is the presence of this restlessness, anxiety, fear, and exalted sensibility which are its leading indications in cases of all kinds.

Some characteristics of *Acon*. are the following: Active hćmorrhages in stout, plethoric people. Passes almost pure blood by stool. In hćmoptysis the blood comes up with great ease by hemming and coughing, bright red in large quantities, from cold, dry winds, with great fear, anxiety, and palpitation. Every inspiration increases the cough. After the cough tingling sensation in chest. Unquenchable thirst: everything tastes bitter, except water (*Chi*. everything, *including* water). In croup the child grasps the throat with every coughing fit. Coldness, numbness, and tingling characterise the paralyses and neuroses of *Acon*. Facial paralysis from exposure to cold, dry winds. The fear and apprehension of *Acon*. is shown in dread of crossing streets. There is intolerance of music. Some curious symptoms are: Imagines some part of body is deformed. Imagine they do all their thinking from the stomach. Predicts the hour of death (clairvoyance).

Acon. is one of the great *pain* remedies, vying with *Cham*. and *Coffea* in the intensity of the pain it causes. Pains are intolerable, driving to desperation. The pains of *Acon*. are tearing, cutting; are attended with restlessness; accompanied by numbness, tingling, or formication. *Acon*. cannot bear the pain, cannot bear to be touched, cannot bear to be covered. The toothache of *Acon*. is one-sided, with red cheek on same side.

Guernsey gives the following excellent directions: "If a child is suffering from a watery diarrhśa, is crying and complaining very much, biting his fists and is sleepless, *Acon*. will usually settle this trouble in a short time. The disturbed condition of the mind will cease and quiet sleep will follow. The mother will now remark: "Doctor, he is all right, except his bowels, and they are as bad as ever." Now, do not give another remedy, but wait and see if *Acon*. will not complete the cure by itself." Again: Scanty, red, and hot urine, arising from taking cold, especially in children. The child screams and appears to be in great pain because it

cannot urinate. *Acon*. will ease the pain, quiet the child, and the urine will flow some time after. In adults, incontinence of urine will sometimes be relieved by *Acon*.

There is a great and sudden sinking of strength; fainting on attempting to get up; with anxiety, restlessness, numbness, tingling, formication.

Acon. has a very wide sphere of usefulness in affections of the eye. Inflammation, of many kinds, from cold, injury, dust, surgical operations, scrofulous inflammation with enlarged glands, all come within its range. Some remarkable cases of sudden blindness have been cured by it. Hirsch of Prague records two such cases, one in a man of thirty, who went to bed well, having walked home in rough and stormy weather after spending the evening in a hot room. *Acon*. 3 was given, and the following night he perspired freely, and in the morning his sight was thoroughly restored. Hirsch himself suddenly lost his sight whilst bathing in hot weather. He took *Acon*. 3 in water as he had given it to his patient. In two hours he began to perspire, and after a six-hours' sleep awoke well. Lippe has recorded the case of a lady whom he found much distressed, anxious, fearing paralysis. In her usual, health she had taken a full dinner, and when reading afterwards, the letters danced before her eyes, and the print became blurred; then face and nose became numb; pulse small, 120 a minute. One dose *Acon*. c.m. (Fincke) was given. The numbness disappeared in half an hour; Pulse 72; the sight was perfect when she closed either eye, but everything looked indistinct when she kept both open. This symptom disappeared next morning; a slight lightness of the head remaining that day.

The time of the aggravation of *Acon*. symptoms is chiefly night and about midnight. *Heat*, as well as *cold*, is injurious to the *Acon*. patient; sunstroke is among the conditions which call for it; and *Acon*. will cure many headaches caused by exposure to the sun, and also sun-erythema. Headaches are generally > in open air, < in warm room; toothache and cough < in open air. > From uncovering. Warm room < chill; in fever, the bed is intolerable; he wants to uncover. Sweat on affected or covered parts. There is < from wine or stimulants; < from drinking (any kind of liquid). *Rest* > the symptoms generally, but during the night the pains are intolerable, limbs feel tired and rigors are worse. Lying relieves headache and vertigo, and aggravates other complaints. Lying on back > cough and stitches in chest; lying on side < stitches in chest and cough: the cheek lain on sweats. Rising from a seat = vertigo. Vertigo, pallor, faintness on sitting up in bed. Bending double > colic and dysmenorrhśa pain. Motion < pains in muscles, joints, and stiffness.

Relations.—Aconitum napellus is related in its action to the other Aconites and to Aconitinum, and also to the Ranunculaceć, Actća rac., Actća spic., Pćon., Podoph., Ranunculus, Staph. Teste places in the Aconite group: Coccul., Cham., Dulc., Cannab. i., Con. But he admits that the relationship is not close, and that Acon. is

really without analogues. *It is antidoted by:* Acet. ac., Alcohol, Paris. *It antidotes:* Bell., Cham., Coff., Nux v., Pet., Sep., Spo., Sul. *It is often indicated after:* Arn., Coff., Sul., Verat. *It is complementary to:* Coff. (in fever, sleeplessness, intolerance of pain); Arn. (bruises, injury to eye); Sul. *It relieves ailments from:* Act. rac., Cham., Coff., Nux v., Pet., Sep., Sul. Abuse of Acon. calls for Sul. Acon. should be compared with Stram. and Op. in effects of fright; and with Sul. in most of its symptoms. Sul. is the chronic of Acon.; it will often complete an action that Acon. begins, and will cure cases in which Acon. is apparently indicated but fails to relieve. *Compare also:* Pul., Lyc., Sec., and Camph. (> from uncovering). Hep. and Coff. (intolerance of pain). Chi. (white stool). Gels. (effects of bad news, fright, anger). Nux and Bry. (diarrhśa from anger). Bry. (effects of cold, dry winds).

Causation.—Fear. Fright. Chill. Cold, dry winds. Heat; especially of sun. Injury. Surgical operation. Shock.

SYMPTOMS.

1. Mind.—Great agitation and tossing of the body with anguish, inconsolable irritability, cries, tears, groans, complaints, and reproaches.—Sensitive irritability.—Fearful anticipations of approaching death; predicts the day he is to die.—Sadness.—Presentiments, as if in a state of clairvoyance.—Anthropophobia and misanthropy; has no affection for anybody.—Maliciousness.—A strong disposition to be angry, to be frightened, and to quarrel.—The least noise, even music, appears insupportable.—Humour changeable; at one time sad, depressed, irritable, and despairing; at another time gay, excited, full of hope, and disposed to sing and dance.—Vexed at trifles; takes every joke in bad part.—Dislike to talk; answers laconically.—Alternate paroxysms of laughter and tears.—Great, inconsolable anxiety.—Anxiety respecting one's malady, and despair of a cure.—Fear of spectres.—Fear of the dark.—Disposition to run away from one's bed.—Mind, as it were, paralysed, with incapability of reflection, and a sensation as if all the intellectual functions were performed in the region of the stomach.—Paroxysms of folly and madness.—Unsteadiness of ideas.—In the delirium is unhappiness, worry, despair and raving, with expression of fear upon the countenance; but there is rarely unconsciousness.—Delirium, chiefly at night; with ecstasy.—Weakness of memory.—Ailments from fear, fright, vexation.

2. Head.—Head affected, as if the brain was nailed up, principally in the heat of a room.—Vertigo, particularly on rising from bed, or else on getting up from one's seat, on stooping, on moving or shaking the head, and often with a sensation of intoxication or dizziness in the head, loss of consciousness, dimness of the eyes; nausea, and sensation of weakness at the pit of the stomach.—Vertigo, with inclination to fall to r. side.—Vanishing of sight; bleeding of the nose.—Sensation, as though the brain were rolling loosely id the skull; increased by the least motion, and even by speaking and drinking.—Pain in the head, with inclination to vomit,

also vomiting.—Head, as if bruised, with sensation of bruising in the limbs.—Stupefying pain in the head with sensation of compression and drawing together as from cramp, principally in the forehead and at root of the nose.—Weight and fulness in the forehead and in the temples, with expansive pressure, as if everything was going to issue forth through them, chiefly on stooping forward.—Feeling as of a board before forehead.—Shooting, blows and beatings in the head.—Drawing cephalalgia, sometimes semi-lateral.—Sensation as if a ball were mounting in the head, and spreading a coolness over it.—Congestion of blood in the head, with heat and redness of face, or with a sensation of heat in the brain, sweat on a shrivelled skin, and paleness in the face.—Sensation of heat in the head, which perspires, with pale face.—Inflammation of the brain.—Sensation of fulness and heaviness in the forehead, with the sensation as if the whole brain would start out of the eyes, with nausea and giddiness, aggravated by talking and from motion.—Heat and ebullition in the head, as if there were boiling water in the brain.—A roaring and cracking in the head.—Sensation in the vertex, as if dragged by the hair.—Sensation as if the hair were standing on end all over the head.—Pain in the head, as if in consequence of cold or suppressed perspiration, with a buzzing in the ears, cold in the head and colic.—Aggravation of the pains in the head by movement, by speaking, by rising from a recumbent position, and by drinking; relief experienced in the open air.

3. Eyes.—Eyes red and inflamed, with deep redness of the vessels, and intolerable pains.—Profuse lachrymation.—Heat and burning in the eyes, with pressive and shooting pains, esp. on moving the balls.—Swelling of the eyes.—Dilated pupils.—Lids feel dry, hard, heavy; sensitive to air.—Red, hard swelling of the lids.—Eyes sparkling, convulsed, and prominent.—Look fixed.—Cannot bear the reflection of the sun from the snow; it causes specks, sparks, and scintillations to dance before the eyes.—Excessive photophobia; or a strong desire for light.—Black spots and mist before the eyes.—Disturbed by flickering; fears he may touch others passing by.—Vision as if through a veil; difficult to distinguish faces; with anxiety and vertigo.—Sudden attacks of blindness.—A sensation of drawing in the eyelids with drowsiness.—Ophthalmia, very painful, with blear-eyedness, or from foreign bodies having come into the eyes (dust, sparks); from operations.

4. Ears.—Tingling and buzzing in the ears.—Tickling and sharp pain in the ears.—Sensation as if something was placed before the ears.—Excessive sensibility of hearing; all noise is intolerable.—Music goes through every limb; makes her sad.—Tearing (l. ear). Roaring in the ears.

5. Nose.—Stunning compression or cramp at the root of the nose.—Bleeding at the nose; bright red; esp. in plethoric persons.—Excessive sensibility of smelling, esp. for unpleasant odours.—Violent sneezing, with pain in the abdomen, and in the l. side.—Coryza, with catarrh, pain in the head, buzzing in the ears and colic.—Coryza caused by cold, dry winds.—Checked coryza with headache; > in open air, < from

talking.—Fluent coryza, frequent sneezing; dripping of a clear, hot water; fluent mornings.

6. Face.—Anxious expression; frightened.—Face bloated, hot, and red, or bluish; or alternately red and pale; yellow.—On rising, the face, previously red, assumes a deadly paleness; afterwards becomes red.—Red and pale alternately.—Redness of one cheek, with paleness of the other, or red spots on both cheeks.—Sweat on the forehead, upper lip, and on the cheek which has pressed the pillow.—Distortion of features.—Crawling pain and sensation of swelling in the cheeks.—Tense drawing in trigeminus nerve, then shooting, wandering, intermittent, then constant pain, sometimes pressure.—Pain, as of ulceration, in the cheek-bones.—Semi-lateral prosopalgia, with swelling of the lower jaw.—Lips black and dry, peeling off.—Tingling in the cheeks.—Burning, tingling, and shooting pains, with successive drawing in the jaws.—Dropping of jaws.—Trismus.

7. Teeth.—Lancinating shocks or throbbing pains in the teeth, often with congestion of blood towards the head, and heat in the face.—Toothache from cold, with throbbing in one side of the face, intense redness of the cheek, and great restlessness.—Grinding teeth.

8. Mouth.—Sensation of dryness, or dryness in the mouth and on the tongue.—Tongue white.—Coated, or thick yellow-white.—Itching, prickings and burning sensation in the tongue; with accumulation of saliva in the mouth.—Paralysis of the tongue.—Numbness of tongue; also about lips.—Speech tremulous and stammering.—Pain, as of excoriation, in the orifices of the salivary ducts, as if they were ulcerated.—Trismus, with salivation.—Uvula feels elongated and coming in contact with tongue.

9. Throat.—Pain in the throat, with deep redness of the parts affected, and difficult deglutition.—Tingling in the śsophagus.—Scraping, tingling sensation of strangling, burning and pricking in the throat, chiefly in swallowing.—Acute inflammation of the throat (palate, tonsils and fauces) with high fever, dark redness of the parts, burning and stinging in the fauces.—Burning and numbness in throat; throat almost insensible.—Pricking, burning in throat and along Eustachian tubes, compelling swallowing.—Sensation of contraction in the throat, as if caused by acrid substances.—Stinging in the throat when swallowing and coughing.—Almost entire inability to swallow, with hoarseness.

10. Appetite.—Taste in the mouth bitter; or putrid.—All kinds of food and liquids, except water, tasting bitter.—Burning and unquenchable thirst; sometimes with a desire for beer. Excessive hunger and thirst, but eats slowly.—Generally < from drinking.—Gastric catarrh from drinking ice-water when over-heated.—Generally > from cold drink, esp. anxiety.—Loss of appetite and a distaste for food.—Beer lies heavy on the stomach.—Desires: wine; brandy; beer; bitter drinks.—Wine generally >.

11. Stomach.—Hiccough.—Eructations of wind, and abortive risings in the throat.—Flow of water from the stomach, as in water-brash, with nausea.—Inclination to vomit, as after having eaten something sweetish or fat.—Bilious vomitings, greenish, or mucous and bloody.—Vomiting of pure blood.—Vomiting of bloody mucus, or of what has been drunk, followed by thirst.—Gagging and retching.—Vomiting of lumbrices.—Vomiting, with nausea and thirst, heat, profuse perspiration and increased micturition.—Pains in the stomach after eating or drinking.—Sensation of swelling, tension, and pressure as of a weight in the precordial region and in the stomach, sometimes with difficult respiration.—Pressure in the stomach and pit of the stomach, as from a hard stone.—Pit of stomach sore to touch and meteorismic.—Sensation of contraction in stomach, as is from acrid substances.

12. Abdomen.—Constriction, tension and pressure in the hypochondriac region, sometimes with fulness and a sensation of weight.—Burning pain, shootings, stinging and pressure in the hepatic region, with difficult respiration.—Painful sensibility to touch in the region of the liver.—Inflammation and sensation of soreness in the liver.—Pressure in the region of the liver, with obstruction of breathing.—Jaundice: of newborn; from fright; from chill.—Drawing pains in the abdomen while in a crouching posture (as when at stool).—Constriction, pinchings and burning in the umbilical region, sometimes with retraction of the navel.—Unbearable cutting pains in the morning while in bed.—Tension and painful throbbing in the abdomen, principally in the epigastrium.—Swelling of the abdomen as in ascites.—Painful sensibility of the abdomen to the touch, and to the least movement.—Flatulent colic, chiefly at night, and pressure, tension, and borborygmus, with rumbling in the abdomen.

13. Stool and Anus.—Suppression of stools.—Frequent, soft, small stools, with tenesmus.—Loose, watery stools.—Stools like chopped spinach.—White stools, with dark red urine.—Choleraic discharges with collapse, deathly anxiety, and restlessness.—Involuntary stools, from paralysis of the anus.—Constipation; clay-coloured stools.—Nausea and sweating before and after loose stools.—Pains in the rectum.—Violent pain in rectum, with chill and fever, inflammation, tenesmus, bloody discharges (dysentery).—Pressure and pricking in the anus.—Bleeding piles, with heat and sharp stitches; blood bright.—Diarrhśa, with flux of urine and colic.—Sensation as of a warm fluid escaping from anus.

14. Urinary Organs.—Suppression of urine, with pressure in the bladder and pains in the loins.—A frequent desire to discharge urine, accompanied by anxiety and pain.—Flow of urine, with sweat, diarrhśa, and colic.—Involuntary emission of urine, from relaxation of the neck of the bladder.—Enuresis, with thirst.—Urine scanty, burning, deep red, and with a sediment of a brick colour (arising from taking cold, esp. in children); suppression of, from cold.—Bloody sediment in the urine.—Scanty, red, hot urine, without sediment.—Heat and tenesmus in the neck of the bladder.

15. Male Sexual Organs.—Venereal inclination alternately increased and diminished.—Amorous paroxysms.—Smarting in the parts.—Contusion like pains in the testicles.—Testicles feel swollen, hard, as if surcharged with semen.—Orchitis.—Gonorrhśa, first stage.—Itching in the prepuce.—Shootings and pinchings in the glans when making water.

16. Female Sexual Organs.—Menses too abundant and too protracted.—Suppressed menstruation from fright; from cold feet.—After-pains too painful and too protracted.—Milk fever (with delirium).—Puerperal peritonitis.—Maniacal fury on the appearance of the menses.—Stitching pains move to r. of fundus uteri; sharp shooting pains, abdomen exceedingly sensitive.—Ovaritis from suddenly checked menstrual flow.—Labour-like pressing in womb (dysmenorrhśa).—Uterine hćmorrhage; active, much excitability; giddy, cannot sit up; fear of death.—Vagina dry, hot, sensitive.—Leucorrhśa, copious, tenacious, yellow.—Increase of milk in breasts.

17. Respiratory Organs.—Sensation of numbness in the trachea.—Attacks of paralysis in the epiglottis, with a tendency to choking.—Pain in the larynx.—Larynx sensitive to touch and to the inspired air, as if denuded.—Laryngeal complaints after straining the voice.—A croaking voice.—A constant desire to cough, produced by an irritation or a tickling in the larynx.—Inflammation of larynx and bronchia.—Cough from having drunk or smoked.—Short and dry cough, principally at night.—A convulsive cough, hoarse or croaking, sometimes with danger of suffocation, and constriction of the larynx.—Angina membranacea, with dry cough and quick breathing.—Croup.—Expectoration of thick and whitish matter, or of bloody mucus, or spitting of blood while coughing.—Shootings and pains in the chest on coughing.—Cough, with stitches in the chest or small of the back.—Cough: < after eating or drinking; when lying; evening; night, more after 12; during sleep; from tobacco smoke; from vexation, esp., fright; when over-heated; from dry, cold winds; from walking in open air; assuming upright position; from deep inspiration; from speaking.

18. Chest.—Short breathing, chiefly during sleep, and on getting up.—Breathing painful, anxious, and attended with groans, rapid and superficial, or full, noisy, and with the mouth open.—Breathing slow during sleep.—Breath hot.—Breath fetid.—Constriction and anxious oppression of the chest, with difficulty of breathing.—Asthma of Millar.—Attack of suffocation, with anxiety.—Sensation of heaviness and of compression at the chest.—Painful pricking in the chest, chiefly when breathing, coughing, and moving (even the arms).—Stitches through the chest and side, esp. when breathing and coughing.—Prickings in the side, with a lachrymose and plaintive humour, soothed, in some degree, by lying on the back. Pleurisy and pneumonia, esp. with great heat, much thirst, dry cough and great nervous excitability, only somewhat relieved when lying on the back.—Itching in the chest.—Pains as of a bruise in the sternum and in the sides.—Sensation of anguish in the chest, which interrupts respiration.

19. Heart.—Palpitation of the heart, with great anxiety, heat of body, chiefly in the face, and great weariness in the limbs.—Shootings in the region of the heart when moving or going upstairs.—Sensation of compression and blows in the region of the heart.—Inflammation of the heart.—Chronic diseases of the heart, with continuous pressure in the l. side of the chest, oppressed breathing when moving fast and ascending steps, stitches in the region of the heart, congestions to the head; attacks of fainting and tingling in the fingers.—Fainting with tingling.—Pulse full, strong, hard; slow, feeble; threadlike with anxiety; quick, hard, small.

20. Neck and Back.—Weakness and pain, as from a bruise in the nape of the neck.—Pain, as if from a bruise, in the back and loins.—Painful stiffness in the nape of the neck, the loins, and the hip joints.—Pain, as of boring in the back and in the loins, tingling, and of pricking in the back.

22. Upper Limbs.—Pain, as from a bruise, and weakness in the arms, principally in the shoulders, with swelling.—Heaviness in the arms, with numbness in the fingers.—Numbness of the left arm; he can scarcely move the hand.—Paralytic weakness of the arm and hand, esp. in writing.—A sensation of drawing in the arms.—Hands dead.—Swelling of the hands.—Heat in the hands with cold in the feet.—Cool sweat on the palms of the hands.—Icy coldness of the hands.—Tingling in the fingers, particularly when writing.—Inflammatory swelling of the elbow, with numbness, and a paralytic state of the fingers.

23. Lower Limbs.—Pain, as from a bruise in the hip joints, esp. after having slept, or having lain down for some time.—A sensation of drawing with paralytic weakness in the legs.—Shooting pain in the hip joint, even to the knee; pain which forces a cry at every step.—Want of strength and of stability in the joints of the hip and of the knee.—Drawing, tearing pains in the knee-joint.—Inflammatory swelling of the knee, with shining redness, shooting pains, stiffness, and great sensibility to touch.—Sensation of stiffness in the legs on moving them.—Pain in the insteps, with despair and fear of death.—Numbness in the legs.—Heaviness of the feet.—Cold in the feet, chiefly in the toes, and sweat on the soles of the feet.—Tingling, commencing in feet and spreading upwards.

24. Generalities.—Shooting, or rheumatic pains, which are reproduced by wine or other stimulants.—Sufferings which, particularly at night, seem unbearable, and which generally disappear in a sitting posture.—Attacks of pain with thirst and redness of the cheeks.—Distressing sensibility of body, and esp. of the parts affected, on every movement, and on the slightest touch.—Pain as from a bruise, and sensation of heaviness in all the limbs.—A sensation of drawing with paralytic weakness in the arms and legs.—Failure of strength and stability, pains and cracking in the joints, principally of the legs.—Rapid and general decay of strength.—Fainting, esp. when rising, with paleness of the cheeks, which were red when lying.—Attacks of fainting, chiefly on rising from a recumbent posture, and sometimes with congestion of blood in the head, buzzing in the ears, deadly

paleness of countenance, and shuddering.—Congestions (head, chest, heart).—Uneasiness, as if from suppressed perspiration, or in consequence of a chill, with pain in the head, buzzing in the ears, colic and cold in the head.—Sensation of cold and of stagnation of blood in all the vessels.—Shaking in the limbs.—Cataleptic attack, with cries, grinding of the teeth, and hiccough; rigor of the body and loud lamentations.—Tetanus.—Swelling of the whole body, which assumes a blackish colour.

25. Skin.—Crawling sensation in the skin, with itching and desquamation, principally in the parts affected.—Skin dry and burning.—Swelling and burning heat of wounded parts.—Yellow face.—Yellowish colour of the skin.—Red, hot, swollen and shining skin with violent pain.—Shootings, with a sensation of excoriation here and there.—Spots similar to flea-bites on the hands, on the body, &c.—Small pimples, red and broad, attended by itching.—Morbilli.—Rash of children.—Purpura miliaris.

26. Sleep.—Great desire to sleep, even while walking, and principally after dinner.—Drowsiness, with anxious thoughts and rapid respiration.—Confused reveries, in which the eyes are closed, without sleeping.—Sleeplessness from anxiety, with constant agitation and tossing.—Sleeplessness, with restlessness (eyes closed) and constant tossing about.—Startings in sleep.—Anxious dreams, with nightmare.—Anxious dreams, with much talking and moving while sleeping.—Dreams with a sort of clairvoyance.—Light sleep.—Impossibility of lying on the side.—During sleep, lying on the back, with the hand under the head; or in a sitting posture, with the head inclined forward.

27. Fever.—Dry, burning heat, with extreme thirst, sometimes (esp. at the beginning of the disease), preceded by shiverings, with trembling.—Heat, chiefly in the head and face, with redness of the cheeks, shuddering over the entire body, oppressive headache, temper lachrymose, disposed to complaining and to contradiction; or, a sensation of heat in the whole body, with redness of the cheeks, pain in the head on turning the eyes, and levity of mind.—Shivering, if uncovered in the least while the heat exists.—Cold over the whole body with internal heat, forehead cold, and tips of the ears hot; or with redness of cheeks and pains in the limbs; or with stiffness of the whole body, heat and redness of one cheek, and coldness and paleness of the other; eyes open and fixed, pupils contracted, and dilating with difficulty.—Sensation of coldness in the blood vessels.—Cold and shivering in the fingers, followed by cramps in the calves of the legs and in the soles of the feet.—Heat of face, with mournful and despairing thoughts, and an inclination to vomit, preceded by cold and shiverings in the feet and hands.—Shuddering runs up from the feet to the chest.—Frequent shudderings, with burning heat and dryness of the skin.—Inflammatory fevers and inflammations, with much heat, dry, burning skin, violent thirst, red face, or alternate red and pale face, nervous excitability, groaning and agonised tossing about, shortness of breath, and congestion to the head.—Continual sweat, esp. on parts that are

covered.—Sour sweat.—Pulse hard, frequent, and accelerated; full, sometimes intermitting; when slow, almost imperceptible (threadlike).

Actæa Racemosa.

Cimicifuga racemosa. Actæa monogynia. C. serpentaria. Macrotys racemosa. Botroflus serpentaria. Black snake root. Black Cohosh. (Canada, Georgia, Western States of America.) N. O. Ranunculaceæ. Tincture of the root. Trituration of the resinoid, Macrotyn.

Clinical.—Abortion, tendency to. *Angina pectoris. Appetite, disordered. Back pains. Breast, affections of*. Cerebro-spinal meningitis. *Change of life. Chest, pains in. Chorea*. Delirium Tremens. *Diaphragm, rheumatism of*. Dyspepsia. *Epilepsy. Faintness. Headache. Heart, affections of. Hyperpyrexia. Hypochondriasis*. Hysteria. *Lumbago. Melancholia. Meningitis. Menstruation, disorders of. Myalgia*. Neuralgia. *Ovaries, affections of. Perichondritis. Pleurodynia. Pregnancy, disorders of. Puerperal mania. Rheumatic gout. Rheumatism*. Sciatica. *Side, pain in. Sinking sensation. Sleeplessness. Spinal irritation. Stiff-neck*. Tinnitus aurium. *Tremors. Uterus, affections of. Vomiting of pregnancy*.

Characteristics.—One of the most marked symptoms of *Actæa rac*. is found in the mental sphere: a sense of gloom and dejection, as if there was a black pall over everything; showing the appropriateness of the remedy in hysteria and hypochondriasis. There is also fear of death, as with *Acon*. Incessant talking, changing from one subject to another, as in delirium tremens. I have greatly relieved an inveterate case of epilepsy in which the aura was a "waving sensation in the brain," which is a leading symptom of the remedy. Many symptoms appear in the head and eyes. Feeling as if going crazy with headache. Headache reflected from pelvic organs. The headache is frontal, vertical, or occipital, and is accompanied by great pain in eyeballs > pressure; < slightest motion. *Peculiar sensations* are: as of lifting up of skull; as if top of head would fly off; as of a bolt through from base of skull to vertex. Inspired air seems to penetrate skull and into brain, causing a cold sensation. Intense pain in and around eyes (lancinating), < moving head or eyes. In cases of tinnitus aurium it has proved curative in old-school practice, in 15 to 30 drops of the tincture, whether due to direct or reflex irritation (*L'Art Méd*., July, 1898). In the face there is malar neuralgia, ceasing at night. There are many symptoms of disordered digestion, bad taste and breath and coated tongue; sticky saliva, viscid mucus in throat. Sinking at epigastrium is very marked. The generative organs in the female are particularly affected by *Actæa*. Uterine and ovarian pains are very marked. Infra-mammary pains. Tenderness of uterine region. Pains fly across hypogastrium, extending from one side to the other. Painful and irregular menstruation. Leucorrhœa, with feeling of weight in uterus. Labour-like pains. Left ovarian

pains. Given before term it renders labours easier; cures sickness of pregnancy, and prevents after-pains and over-sensitiveness. According to Lippe a characteristic indication is: "The recently delivered uterus becomes actually jammed in the pelvis with great pain." Puerperal mania has been cured by it. It has also ensured living births in women who have previously borne only dead children, from no discoverable cause, given in daily doses of 1x for two months before term. In the respiratory sphere a dry, teasing cough, < at night, and < on every attempt to speak, is the most characteristic feature. The rheumatic action of the drug is shown in chest and heart pains and pains in the joints and limbs. I have found a pain at the nape of the neck very characteristic. Rheumatism affecting the vertebral joints and especially in the neck. Cerebro-spinal meningitis; head and neck retracted. There are sharp pains in chest, especially in heart region and down left arm, which is numb (*Aco., Puls., Rhus*) as if bound to the side. Palpitation from least motion. Heart ceases suddenly. A patient who was taking 6-drop doses of the Ø tincture complained of a feeling "as if his heart had stopped." The pains of *Act. r.* are like electric shocks here and there: sharp, lancinating in various parts; chest and uterine pains shoot from side to side. There is a general bruised feeling all over as if sore; < by touch. Rest >, motion < Cold air seems to penetrate the system; is very sensitive to it. But headache is > in open air; < in warm room. The symptoms are < at night (malar neuralgia > at night); in the morning. Pains in arms and tendo Achillis, < as evening approaches. < During the menses. Eating >. It is suited to the climacteric period; to nervous persons; to children during dentition.

Relations.—It is allied to Act. spi. and the other Ranunculaceæ.
Acon. *antidotes* the sleeplessness, and Bapt. relieved the headache and nausea of the drug. It is like Acon. in fear of death and restlessness; Bry. and Puls. in rheumatism; Cauloph. in uterine affections, also Sep., Nat. m., Lil. t., Ign., Gels. (uterine headache); Lyc. (pains go from side to side); Ars. (fears to be alone); Calc. (visions of rats and mice). In a case of Tansy Poisoning (taken by a pregnant woman in fifth month to procure abortion), with high fever, rheumatic pains, bearing-down sensation, and abdominal soreness, Act. r. promptly relieved after failure of Acon. and Bry. Pregnancy went to term.

The resinoid of Act. r., Macrotyn., has been used in the lower triturations in preference to the tincture, in cases of lumbago more especially.

Causation.—Anxiety. Fright. Disappointed love. Business failure. Over-exertion. Child-bearing.

SYMPTOMS.

1. Mind.—In all mental symptoms there is a want of natural coherence.—Thinks she is going crazy; with headache on vertex.—Miserable, dejected feeling.—Gloom as if a black pall over everything.—Feels grieved and troubled, with sighing.—Mania following disappearance of neuralgia.—Puerperal

mania.—Suicidal.—Incessant talking, changing from one subject to another.—Visions of rats, &c.—Fear of death.—Not disposed to fix the attention on anything.—Irritable.—Indifferent, taciturn.—Feels faint at epigastrium when meeting a friend.—Effects of fright; disappointed love; business failures.

2. Head.—Vertigo, fulness, and dull aching in vertex.—Waving sensation in brain.—When sleeping head swims.—Rush of blood to the head; brain feels too large for the cranium.—Head dull and heavy as after a debauch.—Dull aching, particularly in occiput, during afternoon and evening; < indoors > in the open air.—Headache through the whole brain, with distinct sense of soreness in occipital region.—Sensation of a bolt through from base of brain to vertex.—Constant dull pain in occiput extending to vertex.—Severe pain in head and eyeballs increased on slightest motion.—Excruciating pain in right side of head, back of orbit.—Top of head feels as if it would fly off.—Headache > in the open air.—Headache of students.—Sensation as if vertex opened and let in cold air.

3. Eyes.—Intense aching pains in the eyeballs; > by pressure, < by slightest motion.—Pain over eyes, extending to occiput.—Ciliary neuralgia; acute pains in eyeballs or in temples, extending to eyes, so severe, esp. at night, it seemed as if patient would go crazy.—Dilated pupils, with dark spots before the eyes.—Peculiar wild look out of eyes.

4. Ears.—Sensitive to least noise.—Singing in l., later in both ears.—(Tinnitus from irritation of auditory nerve, direct or reflex.)

6. Face.—Pale, eyes large, sunken, surrounded by dark rings.—Forehead feels cold; deadly pale.—Neuralgia affecting malar bone; pain goes off at night and reappears next day.—Frequent flushes of heat; wants to be in the open air.—Lips dry; lower lip cracked as if bitten.

8. Mouth.—Breath offensive.—Mouth and tongue feel warm and dry.—Thick mucus on teeth.—Spitting of thick, sticky saliva.—Tongue swollen.

9. Throat.—Viscid mucus in throat; hawking.—Dry spot in throat, causing cough; dryness of pharynx, with constant desire to swallow; fulness in pharynx: mouth and palate swollen; neck stiff.—Inflamed throat; pains wake him at night.

11. Stomach.—Nausea, eructations, headache, and tremor (more in women).—Nausea with uterine affections.—Sharp pains across the hypogastrium.—Sinking or goneness in the epigastrium.

12. Abdomen.—Periodical colicky pains, better bending double and after stool.—Excruciating pains in the bowels, small of back, and limbs.—Abdominal muscles sore.—Sharp pains across hypogastrium.

13. Stool.—Alternate diarrhœa and constipation.—Frequent, thin, dark, offensive stools.

14. Urinary Organs.—Incessant flow of urine.—Urine frequent and quantity increased.—Pressing in region of kidneys and small of back.

16. Female Sexual Organs.—Menses profuse, early; dark, coagulated; scanty, irregular, delayed, or suppressed.—Hysterical or epileptical spasms at time of menses.—Feels strange, talks incoherently, screams, tries to injure herself.—Pains in uterine region shoot from side to side.—Pains in ovarian region shoot upward.—Bearing-down in uterine region and small of back; limbs feel heavy, torpid.—Severe pain in lower part of abdomen.—Rheumatic dysmenorrhœa.—Leucorrhœa, with sensation of weight in the uterus.—During pregnancy: nausea; false labour-like pains; sharp pains across abdomen; sleeplessness.—During parturition "shivers," first stage; pains too strong; spasmodic cardiac neuralgia; lochia suppressed (by cold or emotions); rigid os; Puerperal mania.—Tendency to abort at third month.—Infra-mammary pains, worst on l. side.—Burning in the mammæ.

17. Respiratory Organs.—Night cough, dry, constant, short, < on every attempt to speak.—Tickling in throat, with violent cough.—Pains in (r.) side of chest, < from motion, extorting cries.—(Rheumatism of diaphragm.—Pleurodynia.)

19. Heart.—Pain in region of heart, followed by palpitation; pains extend down l. arm, which is numb as if bound to side.—Pulse weak and irregular; or quick and full.—Palpitation from least motion.

20. Neck and Back.—Severe pain in nape of neck (rheumatic fever; cerebro-spinal meningitis).—Rheumatic pain in the muscles of the neck and back; a feeling of stiffness and retraction.—Violent lightning-like pains in posterior spinal sclerosis.—Stiff-neck from cold air, from moving even the hands.—Sensitiveness of the spine; esp. in the cervical and upper dorsal regions.—Severe aching pain in the lumbar and sacral regions; down the thighs and through the hips, with heavy pressing down.—Head and neck retracted (in spotted fever).

21. Limbs.—Rheumatic pains in the joints, with heat and swelling.—Aching in the limbs.—Excessive muscular soreness.—Rheumatism affecting the bellies of the muscles.—Trembling of the fingers when writing.—Trembling in the limbs, is scarcely able to walk.—Uneasy feeling in limbs, causing restlessness.

22. Upper Limbs.—Pains down arms with numbness as if a nerve compressed.—L. arm feels as if bound to side (chorea).—Constant irregular motion of l. arm; is useless (chorea).—Cold sweat on hands.—Trembling of fingers, esp. when writing.

23. Lower Limbs.—Aching in sacrum, lumbar region, and down l. leg.—Pressure round hips with pain in sacrum.—Towards evening soreness, aching, and stiffness in region of tendo Achillis.—Dull, aching, burning in second joint of r. great toe, extending up the limb.

24. Generalities.—Rheumatism.—Weakness, trembling, and spasmodic action of the muscles.—Nervous shuddering; tremor all over the body.—Alternate tonic and clonic spasms.—Epileptic and hysterical convulsions.—Sharp, lancinating pains in various parts, associated with ovarian or uterine irritation.—Affects the l. side most.—Pains come on suddenly.—Pains like electric shocks here and there.—Chorea.—General bruised feeling of the whole body, as if sore.

26. Sleep.—Obstinate insomnia.—Sleepless, cannot rest, must change position, jerking of limbs.—Unpleasant dreams of being in trouble.—Restless sleep.

Actæa Spicata.

Baneberry. Herb Christopher. (Europe and Asia.) N. O. Ranunculaceae.
Tincture of root obtained in autumn.

Clinical.—Cancer of stomach Fright, effects of, Hepatitis. Pleurisy. Rheumatism. Toothache.

Characteristics.—This is a rheumatic remedy like the other Actæa, but affecting more prominently the small joints and wrists. I have several times cured wrist-rheumatism with it. The joints swell after slight fatigue. The pains are tearing, drawing. The right arm and right wrist are specially affected; and there are pains like rheumatism in face. Pains are of a violent, tearing, drawing character, < by touch or movement. Pains of this kind running from decayed tooth to temples. Swelling of the joints from slight fatigue may be regarded as very characteristic. It is especially suited to men (Act. r. to women). < From motion; from change of temperature; cold air.

Relations.—*It follows well:* Nux v. *Compare:* Other Ranunculaceæ; Arn., Bry., Caulo. (rheumatism of fingers), Lyc., Rhus t., Salic. ac., and Sticta (small joints).

Causation.—Fright. Fatigue.

SYMPTOMS.

1. Mind.—Fear of death, esp. at night in bed.—Furious delirium; also during the fever.—Effects of exertion of mind; fright mental anxiety.

2. Head.—A kind of drunkenness.—Dizziness; forehead feels empty when stooping.—Twitching in temples; pain from a decayed tooth to temples.—Pressure in forehead after having been in sun.—Head symptoms < at night; from walking; return periodically; also after fever.—Warm sweat on head.—Small pimples on scalp.

3. Eyes.—Objects seem coloured blue.—Sharp pains through eyes into head.

4. Ears.—Twitching pain in ears when blowing nose or sneezing.

6. Face.—Pains as of rheumatism in face; violent tearing and drawing pains in the upper jaw; pulling, tearing from a decayed tooth to temples; < from slightest touch or movement of the muscles.—The cheek he lies on sweats.—Yellow round mouth.-Lips chapped.—Submaxillary glands hurt when chewing.

8. Mouth.—Increased salivation.—Fetid odour.

9. Throat.—Throat sore when speaking; when breathing cold air.

11. Stomach.—After drinking, shuddering.—Sour vomiting.—Tearing, darting pain in epigastric region with vomiting.—Cancer of the stomach, with characteristic pains—tearing, drawing, &c.

12. Abdomen.—Pain and tenderness in liver region.

14. Urinary Organs.—Throbbing in region of kidneys.—Urine deposits a white sediment.—Urinary calculi.

16. Female Sexual Organs.—Menses suppressed by fright; by cold.

17. Respiratory Organs.–Difficult inspiration; stitches in epigastrium during deep breathing or a painful shock; or pain in the hip.

19. Heart.—Urging sensation in heart towards abdomen and region of liver, with great anxiety at night.—Pulse 120.

21. Limbs.—Swelling of joints after slight fatigue (after walking).—Rheumatism of small joints (ankle, toe-joints, and esp. joints of hands).—Pain as from paralytic weakness of hands.-Lameness of r. arm.-R. wrist pains intolerably, swollen, red, touch intolerable; motion impossible; pressure on palm intolerable.

27. Fever.—Shuddering after drinking.—Belching during the chill.—Shuddering followed by heat, during which vomiting supervenes.

Adonis.

Adonis vernalis. N. O. Ranunculaceæ. Infusion or tincture of fresh plant; an extract, Adonidin.

Clinical.—Albuminuria. Dropsy. Heart, affections of.

Characteristics.—Like *Convallaria*, *Adonis* is a popular heart remedy in Russia. It has not been proved, but the indications for its use have been defined by experience as follows: Rapid and feeble action of the heart; dropsy; scanty urine with albumen and casts. Valvular disease and cardiac asthma. There is no record of its use in the potencies. Cash gave great relief to "a water-logged patient of seventy-four" with mitral regurgitation, with one-grain doses of *Adonidin* at eight-hour intervals, after failure of *Arsenicum* and *Digitalis*. Urinary secretion rose from half a pint to 2 1/2 pints in twenty-four hours. Breathing was relieved; sleep returned.

Relations.—*Compare:* Digit., Conval., Stroph.

Adrenalin.

Extract of supra-renal bodies. A Sarcode. Tincture or trituration.

Clinical.—Addison's disease. Adrenal neuralgia. Bronzed skin. Debility. Hæmaturia. Hyperæmia. Palpitation. Tachycardia.

Characteristics.—*Adrenalin* has cured a number of cases of Addison's disease and has arrested others. The leading features of this affection may be taken as guides for its use: Bronzing of skin; loss of strength; wasting; exceedingly rapid pulse. It has cured a case of hæmaturia accompanied by pain in the adrenal region. It has been used locally in cases of hyperæmia of the conjunctiva, dissipating it almost immediately, and thus rendering operations possible. It appears to possess a very powerful local action over dilated blood-vessels. When injected into the circulation blood pressure rises, the arteries being contracted. The general muscular system is affected, a slight stimulus producing prolonged contraction.

Æsculus Glabra.

Fetid or Ohio Buckeye. (States of North America watered by Ohio River.) N. O. Sapindaceæ. Part employed, whole ripe fruit.

Clinical.—Constipation. Cough. Cramp in stomach. Hæmorrhoids. Meningitis. Paralysis. Speech, thick. Vertigo. Wry-neck.

Characteristics.—*Æsculus glabra*, like the Horse-chestnut, has a marked action on the rectum. It produces hard, knotty stools; very painful. Dark purple hæmorrhoidal tumours, with lame back and lower limbs. Hale gives the indication: "Very painful external tumours, dark purple, with constipation and vertigo; weakness of sacrum and lower limbs." At the same time there is fulness and heaviness of the head without pain; the sight may be dim or lost; eyes fixed and expressionless. The speech is thick and the tongue as if lame. In cattle it produces wry-neck and paresis of hind limbs. There is a cough produced by sudden irritation of throat, sensation as of a feather tickling the throat, causing hawking and raising of mucus finally streaked with blood.

Relations.—*Compare:* Æsc. hipp., Alo., Collins., Ign., Nux v.

SYMPTOMS.

1. Mind.—Confusion, with vertigo, often followed by stupefaction and coma.

2. Head.—Vertigo, with staggering, reeling, unconsciousness.—Vertigo, with full, heavy head, dim sight; thick speech, nausea and vomiting; faintness; towards evening.

3. Eyes.—Eyes fixed and dead; expressionless.—Sight dim or lost.

8. Mouth.—Speech thick, and tongue as if lame.

11. Stomach.—Nausea, with loathing of food and vomiting.—Distension (in cattle).—Full sensation.—Cramp-like pain.

13. Stool and Anus.—Hard, knotty stools; constipation.—Very painful, dark purple, hæmorrhoidal tumours, with lame back and lower limbs.

17. Respiratory Organs.—Sudden irritation of the throat; a sensation of a feather tickling the throat causing hacking and raising of mucus, finally streaked with blood.

20. Neck and Back.—Wry-neck (cattle).—Great lameness and weakness of back.

23. Lower Limbs.—Trembling of lower limbs.—Hind limbs lame; paralysis.—Strong tendency to contraction of legs.

24. Generalities.—Spasms and convulsions, followed by lameness.—Trembling.

Æsculus Hippocastanum.

Hippocastanum vulgaris. Horse-chestnut. (Northern India and North America.) N. O. Sapindaceæ. Tincture of ripe kernel; trituration of dry kernel. Tincture of fruit with capsule (according to Hering, this is the best).

Clinical.—*Anus, affections of. Back, affections of. Constipation. Cough. Hæmorrhoids*. Headache. *Hernia*. Intermittents. Jaundice. Liver, affections of. *Lumbago*. Prostate gland, affections of. *Sacrum, pain in. Taste, altered. Throat, affections of. Tongue, affections of*. Uterus, prolapse of.

Characteristics.—*Æscul. hip*. is a great pile remedy. In some districts it is a popular custom to carry a chestnut in the pocket as a preventive. It produces many symptoms of disordered liver: Malaise; dulness of head and mind; fulness at root of nose. Follicular pharyngitis with dryness; burning; roughness; contraction in throat, as in follicular pharyngitis. There is soreness and fulness in liver region; the abdomen is sore to touch. There is jaundice with bileless stools. Throbbing in abdomen, especially hypogastrium.

The most intense action is on the lower bowel and pelvic organs. There are hæmorrhoids, blind or bleeding; if they bleed it gives relief. Feeling of dryness in rectum as if little sticks or splinters were pricking the folds of mucous membrane; with weak feeling in sacro-iliac joints, as if legs would give way. (*Arg. n*. has also pain in sacro-iliac joints and sensation as if the bones were loose.) Constipation, stools large, hard, followed by feeling of prolapse of rectum. General aching in lumbar and sacral regions, with stiffness in the back, almost impossible to walk. Tearing in the small of the back and hips.

Poisoning with the green rind of horse-chestnut has produced the following symptoms in a boy: Pupils widely dilated in bright light. Face flushed; pulse full. Drowsy and apparently slept, but the sleep was interrupted at short intervals by sudden awakenings and screams. Great terror as from a dreadful dream, or apparition on opening his eyes. Questioning failed to elicit the cause of his terror.

Æsc. h. patients are, as a rule, despondent and irritable. Walking greatly < all symptoms. Cold air and cold seasons <; nose and throat very sensitive when inhaling; < after washing. > Summer; < winter (hæmorrhoids).

Relations.—*Compare:* Æsc. gl., Alo., Collins., Merc., Nux v., Pod., Sul. Nux v. *antidotes* the pile symptoms. *It follows well:* Collins, Nux v., Sul. *Compare also:* Kali bi. (throat; but Æsc. h. has not the stringy mucus); Phytolacca (follicular pharyngitis).

SYMPTOMS.

1. Mind.—Depressed; gloomy; low-spirited; irritable.—Loses temper easily, regains it slowly.—Unable to fix his attention.

2. Head.—Dull pressure in forehead; slight nausea in stomach, followed at once by stitches in right hypochondrium.—Severe lancinating headache at base of brain, as if too full; tympany; tongue white.—Confused feeling, with giddiness; < rising from a seat.—Frequent flying pains through the temples.—Flushes of heat over the occiput, neck, and shoulders.—Head too heavy to hold up without balancing; all head symptoms accompanied by hæmorrhoidal, rectal, or sacral symptoms.

3. Eyes.—Weight in the eyes; they feel heavy and dull.—Eyes feel heavy and hot; balls sore.—Painful aching over l. eye.—Flickering before the eyes.

5. Nose.—Stinging and burning in posterior nares and soft palate.—Dryness of posterior nares and throat; sneezing, followed by severe coryza.—Pain in r. nasal bone; soreness in l.

6. Face.—Pale, miserable appearance.—Flying heat and redness of l. side of face.—Face swells enormously after washing in water.

8. Mouth.—Tongue coated white or yellow.—Thick yellow phlegm in the mouth.—Taste sweet; bitter; metallic (coppery, with salivation).—Tongue feels as if it had been scalded.

9. Throat.—Pricking, formication, burning and stinging in fauces; shooting in l. side.—Feeling as if something had lodged in fauces causing constant inclination to swallow.—Feeling of dryness and roughness (or rawness and burning) in throat, as from taking cold.—Constrictive feeling in fauces.—Neuralgic pains in fauces.—Dark congested fauces with a full feeling and irritation.—Sore throat, chronic, with hæmorrhoidal difficulty.

11. Stomach.—Belching, nausea, vomiting.—Violent vomiting; great burning distress in the stomach.—Heartburn and gulping up of food after eating.—Pressure as from a stone in pit of stomach.—Eructations of wind; empty.

12. Abdomen.—Tenderness in the right hypochondrium.—Much distress in liver and epigastrium.—Fulness in liver and abdomen.—Constant severe aching from pit of stomach to r. lobe of liver.—Abdomen and liver region tender to touch.—Sensation of fulness, flatulency, and colicky pains; hæmorrhoidal colic.—Emission of fetid flatus; rumbling in bowels.—Cutting in r. inguinal region (hernia).

13. Stool and Anus.—Dry, uncomfortable feeling in rectum as if it were filled with small sticks.—Soreness, burning, itching, raw feeling, and fulness at anus.—Pain like a knife sawing backwards and forwards through anus.—Hæmorrhoids like ground nuts, purple; painful sensation of burning; generally blind; aching and lameness or shooting in the back.—Hæmorrhoids blind and painful; rarely bleeding; < standing or walking.—Stool hard, dry, and passed with difficulty.—Sensation of rigid hardness before stool.—Stools hard and black; natural consistence and white.—Backache after a difficult, large, and hard stool.—Prolapsus ani after stool.—Several large piles which seem to block up the rectum, little or no bleeding, great suffering, constipation.—Chronic diarrhœa, with characteristic backache or hæmorrhoids.—Piles develop and become particularly troublesome in climacteric years.

14. Urinary Organs.—Pain in region of l. kidney.—Frequent scanty urination.—Urine dark and muddy; dark-brown sediment; yellow, with thick mucous sediment.—Urine hot.

15. Male Sexual Organs.—Discharge of prostatic fluid at every stool, and at micturition; seminal loss during sleep.—A variety of suffering about the generative organs.

16. Female Sexual Organs.—Inflamed cervix uteri, retroversion, prolapsus, enlargement and induration, when characterised by great tenderness heat and throbbing.—Old cases of leucorrhœa, of a dark yellow colour, thick and sticky, worse after menstrual period, increased by walking, corrodes the labia, with aching in the sacrum and knees.—Uterine soreness with throbbing in hypogastrium.—During pregnancy sacro-iliac symphysis gives out while she walks; must sit down; feels best lying.

17. Respiratory Organs.—Short cough, increased by swallowing and breathing deeply.—Hoarseness.—Raw feeling in chest.—Tightness in chest.—Abundant raising of mucus in morning.—Cough, with sensation of stiffness in the throat and suffocation in the upper chest.—Oppression, stitches, soreness and other troubles of chest.—Catarrhal affections causing hoarseness and cough.

19. Heart.—Twitching over region of heart.—Stitches and neuralgic pains in region of heart, esp. apex; and forehead.—Functional disturbances of the heart from hæmorrhoidal complaints.

20. Back.—Constant backache affecting the sacrum and hips, very much aggravated by walking and stooping forward; almost impossible to rise after sitting down.—Back gives out when walking.—Aching between the shoulders.—Spine feels weak.—The sacrum, back, neck, head, chest, heart, and abdomen, all seem in remarkable sympathy with the rectum and its vessels.

22. Upper Limbs.—Rheumatic pains in r. scapula and r. side of chest; worse during inspiration.—Shooting, drawing, and tearing pains in shoulders, arms, hands, and fingers.—Paralytic feeling in arms, legs, and spine.

23. Lower Limbs.—Legs so weak she can hardly walk.—L. knee swollen, painful, stiff; cannot bear slightest pressure.—Tendo Achillis sore.

24. Generalities.—Paralytic feeling in arms, legs, and spine.—Feels faint, weak, and weary.—Disposition to stretch and yawn.—Fulness in various organs, as if they contained too much blood.—Mucous dry, swollen; burn and feel raw.

27. Fever.—Chill at 4 p.m.; fever from 7 to 12 p.m.—During fever no thirst, bursting headache, photophobia, profuse hot sweat, heart beats violently.

Æthiops Antimonialis.

Made by triturating two parts of sulphuret of antimony with one of quicksilver. (Berliner, *Zeit. f. Hom. Ærzte*., vol. ii. *Hom. Recorder*, 1894, p. 28.) Trituration.

Clinical.—Ophthalmia. Otorrhœa. Scrofula. Skin, affections of. Syphilis.

Characteristics.—This remedy has not been proved, but it has been used with signal success in scrofulous, herpetic, eczematous eruptions and discharges. Favus-like eruptions. Eruptions from fright. Painful, irritating, scabby eruptions of face. Scrofulous ophthalmia. Scrofulous otorrhœa, offensive. Hereditary syphilis. It seems to combine the powers of its various components. I have confirmed its utility in many aggravated skin affections.

Æthusa.

Æthusa cynapium. Fool's Parsley. (Europe.) N. O. Umbelliferæ. Tincture of whole flowering plant.

Clinical.—*Brain-fag. Cholera infantum. Convulsions*. Cough. Delirium. Diarrhœa. Dyspepsia. Ear, discharge from. Epilepsy. *Excoriation*. Eyes, affections of. Glands, affections of. *Headache*. Herpes. *Hiccough*. Idiocy. Infantile paralysis. Mind, weakness of. Sleeplessness. Stomach, disorders of. Trismus. *Vomiting*.

Characteristics.—The symptoms of *Æthusa* are particularly clearly defined, in fact *violence* is one of the notes of its action—violent vomiting, violent

convulsions, violent pains, violent delirium. On the other hand there is prostration and somnolence. "Fool's parsley" has not received its name for nothing—it is indeed a medicine for "fools." There is great weakness of mind or body. One very characteristic symptom is: *Inability to think or fix the attention*. Guided by this symptom I once gave it to an undergraduate preparing for an examination, with complete success. He had been compelled to give up his studies, but was able to resume them, and passed a brilliant examination. To a little waif in an orphan home who suffered from severe headaches and inability to fix his attention on his lessons I sent single doses of *Æthus*. at rare intervals, with very great relief. The little boy asked for the medicine himself subsequently on a return of the old symptoms. Other mental symptoms are: Idiocy; in some cases alternating with furor. Hallucinations. Delirium; sees cats and dogs; wants to jump out of bed, or out of the window. Irritability, especially in open air. Guernsey says: "The mental symptoms peculiar to children, and frequently of adults, are, great anguish and crying. As the disease progresses the patient becomes more and more retired in his disposition, and more inclined to weep." Somnolence. Dotage. Another marked characteristic is: Intolerance of milk; vomiting of everything taken, especially milk, which is ejected in yellowish or greenish curds. There is great weakness and exhaustion after vomiting; the child is so exhausted it *falls asleep at once*. It awakens hungry, eats, and vomits again. "Hungry after vomiting" is the keynote here. There is also griping, with diarrhœa, vomiting, crying. For adults who complain of regurgitation of food an hour after it has been taken *Æthus*., says Guernsey, is invaluable. Also copious vomiting in adults, with a great feeling of distress; can't tell what the distress is about but still it exists. Adults complain of a sensation as though the stomach was turned upside down, accompanied by a burning feeling up to the chest. Tearing pains in stomach extending into œsophagus; abdomen tense, inflated, sensitive. There is an herpetic eruption on tip of nose. Along with the gastric symptoms there is a peculiar expression of great anxiety and pain (*Linea nasalis*), a surface of pearly whiteness on upper lip bounded by distinct lines from wings of nose to angles of mouth. Other symptoms are: Sensation of swelling in head and face on entering a room. Sunken cornea. Eyeballs convulsed and directed downwards. Sleep after attacks. Sensation of swelling in hands after walking. Convulsions, with cold limbs. The pains are lancinating. Swelling of mammary or axillary glands, with lancinating pains. Prostration; stupid. All symptoms < 3 to 4 a.m. Heat = all eruptions to itch intolerably. As with *Bovist*. and *Aster. r*. symptoms are < by coffee, wine, drunkenness, cold water, and warmth of bed; > by a walk in the open air, and by conversation. > In open air (except mental symptoms). The remedy is suited to teething-children and choleraic affections in old age.

Relations.—*Compare:* Cicut.; Coni.; Œnan. croc.; Ant. crud. and Calc. c. (vomiting of milk); Ars.; Asar.; Cupr.; Ipec.; Op. *It antidotes* Opium; and is *antidoted by* vegetable acids. Teste places Æthus. in the Sulphur group with Cicuta, Con., Aster., Bov., Lobel., Merc., Kreas.

SYMPTOMS.

1. Mind.—Incapacity to think; confused.—Loss of comprehension; as if a barrier between the senses and external objects.—Idiocy, in some cases alternating with furor.—Great anxiety and restlessness, followed by violent pains in head and abdomen.—Bad humour; irritability.—Irritability, esp. in the afternoon, and in the open air.—Delirium: sees cats and dogs; tries to jump out of the window.—Loquacious gaiety.

2. Head.—Head confused; brain feels bound up.—Vertigo, with sleepiness, can't raise the head.—Headache in whole front part of head.—Heaviness in the forehead.—Sensation, as if both sides of the head were in a vice.—Distressing pains in the occiput, down nape of neck, and spine.—Heat rises to the head; the body becomes warmer; the face becomes red and the giddiness ceases.—Stitches and pulsations in the head.—Can't hold head up, or sit up.—Sensation as if constantly pulled by the hair.—The head symptoms are > by expelling flatus.

3. Eyes.—Looking up < headache and vertigo.—Dilated pupils.—Pupils dilated but sensitive to light.—Eyes brilliant and prominent.—Cornea sunken.—Pustules on cornea.—Scrofulous ophthalmia; edges of lids inflamed and agglutinated at night; swelling of Meibomian glands.—Chronic photophobia.

4. Ears.—Stitches in the ears, esp. in the r. ear, as if something hot were streaming from it.—Yellow discharge from r. ear, with stitching pains.—There is great > by inserting the finger and drawing the parts asunder.

5. Nose.—Herpetic eruption at tip.

6. Face.—A drawn condition beginning at the alæ nasi, and extending to the angles of the mouth, giving the face an expression of great anxiety and pain.—Tearing in the face, in the malar bones.—Jaws spasmodically fixed.—Face pale, puffed, and spotted red.—Chin and corners of mouth feel cold.

8. Mouth.—Sticking and tearing in gums.—Taste: bitter; like cheese; like onions sweetish in morning when awaking.—Tongue: moist; white coat; black feels too long.—Speech slow; embarrassed.—Aphtæ in mouth and throat.—Copious salivation which > poisoning symptoms.

9. Throat.—Sensation of constriction, preventing deglutition.—Stinging in the throat, between the acts of deglutition.—Soft palate red, swollen.—Pungent heat in mouth and throat.—While eating, sudden heaviness in forehead.—Spasmodic hiccough.

11. Stomach.—Intolerance of milk; it is forcibly ejected almost as soon as swallowed; then weakness causes drowsiness; in nursing children.—Violent

vomiting of curdled milk and cheesy matter.—Violent vomiting of a frothy matter, white as milk. This we may find in men, children, or pregnant women.—Violent vomiting of green mucus.—Violent vomiting, with diarrhœa, of green mucus, or (in children) bloody substances.—After vomiting, cold and clammy.

12. Abdomen.—Coldness of the abdomen and lower limbs, esp. l., with aching in bowels; > by warm wet applications.—Sensation of coldness in the abdomen.—Swollen and tense abdomen.—Cutting, with distension.—Cutting, with violent vomiting.—Black-bluish swelling of the abdomen.—Colic, followed by vomiting, vertigo, and weakness.

13. Stool.—Diarrhœa: stools bright yellow, or greenish, watery, and slimy, with violent tenesmus.—Undigested stool or partly so.—Loose stools, preceded by cutting in the abdomen, with tenesmus in the morning, after rising.—Diarrhœa: discharges green, thin, bilious, with violent tenesmus.—Bloody stools.—Most obstinate constipation, with feeling as if all action of the bowels had been lost.

17. Respiratory Organs.—Sufferings of patient render him almost speechless.—Respiration very difficult and short.—Sensation as if chest were encircled by a band, causing difficult breathing.—Stitches in l. side of chest.—Cough, producing stunning pain in head.

19. Heart and Pulse.—Violent palpitation of the heart, with headache.—Pulse full and rapid; hard, small, and rapid; small and frequent; irregular; imperceptible.

20. Neck and Back.—Distressing pain in occiput and nape of neck, extending down the spine, > by friction with hot whisky.—Swelling of glands round neck like a string of beads.—Sensation as if the small of the back were in a vice.—A feeling as if pain in back could be > by straightening out and bending stiffly backward.

21. Limbs.—Eruption round the joints, esp. knee, elbow, and ankle.—Axillary glands swollen.—Stiffness of elbow joints.—Swelling of forearms and hands.—Thumb and fingers bent inwards.—Excoriations of thighs from walking.—Paralytic pains in lower extremities; formication in feet.

24. Generalities.—Epileptiform spasms, with clenched thumbs; red face; eyes turned downward; dilated, staring, immovable pupils; foam at the mouth; teeth set; pulse small, hard, accelerated.—Spasms, with stupor and delirium.—Cold limbs and body convulsed.—Great weakness; children cannot stand; cannot hold up their heads.

25. Skin.—Tettary eruptions, which bleed easily.—Black and blue spots, sometimes like ecchymoses all over body.—The whole body may be of bluish-black colour.—Anasarca.

26. Sleep.—Dozing of child after vomiting spells, or after the stool.—On falling asleep, rolling of the eyes, or slight convulsions.—Sleepiness all day; sometimes > in open air.—Sleep prevented by pains in limbs.

27. Fever.—Complete absence of thirst, though there is great heat.—Cannot bear to be uncovered during the sweat.—Fever, esp. in morning, with shuddering; shuddering, weariness in extremities, internal coldness with hot and flushed face; malaise; disposition to delirium during cold stage; sweat, after the breaking out of which the previous symptoms disappear.—Sweat on least exertion.

Agaricus Emeticus.

A small acrid species, found in woods in Europe. N. O. Fungi. Tincture of fresh fungus.

Clinical.—Gastritis. Vertigo.

Characteristics.—The symptoms of *Agar. emet*. resemble those of the other Agarics, but they have this characteristic, that whilst *cold water* < the symptoms of *Agar. musc*. it *speedily and permanently relieves* those of *Agar. emet*. Violent burning pains are caused in the stomach. There is sudden and violent longing for ice-cold water (during the worst attacks of anxiety), which causes gradual relief; violent vomiting, with anxious sensation, as if the stomach hung on threads which would be momentarily torn in two, with ice-cold sweat of face, and faintness < by moving head; < by smelling vinegar, which is unbearable. Most marked is the vertigo, which is so severe one must be carried to bed; is not able to sit or stand.

Relations.—Anxiety partially > by cold drinks, Acon., Sul. < From vinegar, Ant. c., Ars., Bell., Brom., Fer., Sep., Sul.

Agaricus Muscarius.

Amanita muscaria. Agaricus muscarius. Fly Agaric. Bug Agaric. Champignon fou. (Europe, Asia, and America; in dry places, especially in dry pine woods.) N. O. Fungi. Trituration of the carefully dried-up cap (pileus); or tincture of the fresh fungus.

Clinical.—*Acne rosacea*. Blepharospasm. *Brain, softening of*. Bunion. *Chilblains. Chorea. Coldness. Cough. Cramp*. Delirium tremens. Dysmenorrhœa. *Enteric fever*. Epilepsy (with great exertion of strength). Gangrene. General paralysis. *Hyperpyrexia*. Itching. Jaundice. Lachrymal fistula. Lichen. *Lumbago*.

Meningitis. Myopia. Neuralgia. Numbness. Nystagmus. Phthisis. Rheumatism. *Sacrum, pains in*. Sebaceous tumours. Sexual excess, effects of. *Spinal Irritation. Spleen, affections of. Starting*. Stitch in side. Tic Convulsif. Toothache. *Tremors. Typhoid fever. Typhus.*

Characteristics.—As *Agaricus* is used in many parts for making an intoxicating drink, we find in alcoholism a sphere for its action, and also in all states of delirium, mania, and even idiocy. A peculiarity of the delirium is to make verses and prophesy; also silly merriness, and incoherent talk, with mania; kisses companions. Talcott considers *Agaric*. gives the nearest approach to general paralysis of all remedies; exalted notions of grandeur and power, hilarity, and excitement followed by depression, confusion, imbecility. Accompanying bodily symptoms are vertigo (marked and persistent), with constant impulse to fall backward; twitching about eyes and face, redness without heat, puffy and distorted. Ravenous appetite, with bolting of food. Sexual appetite enormous and enthusiastic, with relaxed penis and impotence. Throughout the body there are spasmodic twitchings, followed by waning tremulousness; finally relaxation and exhaustion. In all these respects the drug accurately corresponds with the disease. Typhoid states often call for it, and also epilepsy. Rolling of the head is a leading indication for it in brain affections and fever. Peculiar headaches are: "Throbbing headache, with sensation of stiffness of muscles of face." "Dull, drawing headache in the morning, extending into root of nose, with nose-bleed or thick mucous discharge." "Pain as from a nail in right side of head." One of the most characteristic of the *Agaricus* effects is the muscular jerking and twitching it sets up. This renders it appropriate in large numbers of cases of chorea. Twitchings are especially marked in the eyes, eyelids, and facial muscles; and *Agaricus* has cured many cases of blepharospasm and *tic convulsif*. Pain as if touched or pierced by needles of ice is very characteristic. Belonging to a low order of vegetation *Agar*. produces fetidity of breath, eructations, and stools. Sweat may be oily but is not offensive. *Agar*. is a spleen medicine, causing stitch in the side, and it has cured stitch in runners, enabling them to run further. The symptoms of *Agaricus* are apt to appear at the same time on opposite sides of the body but diagonally (right upper and left lower, or *vice versâ*). The nervous patients requiring *Agar*. pass little urine (opp. *Ign*.), though the bladder may be irritable.

Mushrooms are among the articles of diet forbidden by Grauvogl to persons having the "hydrogenoid constitution," as described by him, in which the patients are exceedingly sensitive to cold and damp. Agreebly with this we find in the provings of *Agaricus* great sensitiveness to cold air. All symptoms are < in cold weather, especially headache. Looking out of an open window causes toothache and pains in the limbs. Drinking cold water < Symptoms are < before a thunderstorm. At the same time many symptoms of intense coldness are produced: cold and blue; sensations as if touched with ice, or ice-cold needles. All the symptoms of frostbite and chilblains (itching, redness, and burning). Somewhat allied to chilblains is bunion, for which *Agar*. has been found specific by many practitioners. Many

symptoms appear when walking in the open air; this is a very general and characteristic aggravation. On the other hand, all symptoms are < indoors and at rest, except vertigo, which may be either < or > in a room. Conversely to sensitiveness to cold there is sensitiveness to the rays of the sun, and sunstroke is within the curative range of *Agaric*. < After moving, and by pressure from without.

Relations.—*Compare:* Bovista; Sticta pulmon.; Act. r.; Can. ind.; Op.; Stram. (alcoholism, chorea); Coff. (ecstasy); Cicut. (spasm of eyes); Codein (spasm of eyelids); Mygale; Tarent.; Verat. alb. (icy-cold feeling in head); Ars. (*hot* needles; Agar. ice-cold needles) Agar. stands between Stram. and Lach. *It is antidoted by:* Charcoal; coffee; wine; brandy; camphor; fat or oil (relieves stomach); Calc. c. (relieves icy coldness); Puls.; Rhus (nightly backache). *It follows well:* Bell., Calc. c., Merc., Op., Puls., Rhus, Sil. *Is followed by:* Tarent. (typhoid with "rolling of the head"). Teste includes Agar. in his Belladonna group.

Causation.—Coitus, subjective symptoms arising after. Frost. Sun. Fright. Mental application or excitement. Over-exertion. Sexual excess. Alcoholism. Blood poisoning.

SYMPTOMS.

1. Mind.—Aversion to conversation.—Indisposed to perform any kind of labour, esp. mental.—Exuberant fancy.—Ecstasy.—Inclination to make verses and to prophesy.—Mania, timid, or furious, with great display of strength.—Embraces companions and kisses their hands; alternately with vexation.—Silly merriness.—Great loquacity; sings, talks, but does not answer questions.—Delirium, tries to get out of bed.—Delirium constant, knows no one, throws things at the nurse.—Delirium tremens.—Morose, self-willed, stubborn, slow in learning to walk and talk.

2. Head.—Dizziness, as from intoxication, principally in the open air, in the morning, and on reflecting.—Vertigo, with impulse to fall backward.—The bright light of the sun instantly produces a dizziness, so as to occasion falling.—Piercing pains in the head when seated.—Dull pain, chiefly in the forehead, with drawing of the eyelids.—Drawing pains in the head, extending to the eyes and root of nose, principally on waking in the morning.—Pain, as if a nail were driven into the head; < when sitting quietly; > by slowly moving about.—Digging pain and sensation as from a bruise in the brain.—Semilateral cephalalgia; pulling and pressing with confusion in the head.—Beating in the vertex, with almost furious despair.—Pressure in the head to the bottom of the brain, increased by pressure or contact of the hair, and accompanied by a complete loss of energy.—Sensation of icy coldness in the head; on the scalp, r. side of frontal bone.—A jerking sensation in the forehead and in the temple.—Great sensitiveness of the scalp, as from subcutaneous ulceration.—Itching of the hairy scalp, esp. early in the morning.

3. Eyes.—Itching in the eyes.—Burning sensation in the internal corners of the eyelids, which are painful on being touched.—Pressure in the eyes.—Humour in the corners of the eyes, and agglutination of the lids.—Twitching of the eyelids and eyeballs.—The cleft of the eyelids growing narrower.—Canthi itch, burn, are red; < from touch; stick together (lachrymal fistula).—A viscid yellow humour glues the eyelids together.—Weakness and confusion of vision, as from a mist before the eyes.—Brownish spots (like flies) before the eyes.—Black motes before the eyes.—Myopia.—Diplopia. Muscular asthenopia; nystagmus; squint.—Clonic spasms.

4. Ears.—Otalgia excited and aggravated on the admission of free air.—Itching in the ears, with redness and burning pain, as from chilblains.—Buzzing in the ears.

5. Nose.—Excoriation and inflammation of the nostrils, with painful sensibility.—Itching in the interior and on the exterior of the nose.—Blood on blowing the nose, and bleeding at the nose.—Increased acuteness of smell.—Frequent sneezing without coryza. Dryness of the nose.—Flow of clear water from the nose, without coryza.

6. Face.—Tearing in the face and jaw bones.—Twitching in the (r.) cheek.—On waking, pain in l. jaw-joint, so violent, he can scarcely open his mouth.—Itching, redness, and burning in the cheeks, as if from chilblains.—Palpitations and pulsations in the cheeks.—Bluish lips.—Burning fissures in the upper lip.—Herpetic eruption, principally on upper lip.—Spasmodic drawing in the chin and in the lower jaw.—Needle-like prickings in chin; chin covered with minute blisters.

7. Teeth.—Tearing pains in the teeth, aggravated by cold.—Tearing in the lower molar teeth, < from cold air.—Shooting from r. lower teeth up to r. side of head.—Gums swollen, painful, and readily bleeding.

8. Mouth.—Pain, as from excoriation in the mouth and in the palate.—Excoriation of the tongue.—Tongue, after a meal, covered with aphthæ of a dirty yellow, with a sensation as if the skin were being taken off.—Tongue coated white.—Neuralgic splinter-like pains in tongue with salivation.—Ulcer on the frænum of the tongue.—Offensive smell of the mouth, as after eating horse-radish.—Foam about the mouth.—Flow of bitter saliva.—Speech inarticulate.

9. Throat.—Dry fauces and pharynx, causing contraction and difficulty of swallowing; with ravenous appetite.—Pressure in fauces as though a foreign body stuck there which could not be removed by swallowing.—Induration of tonsils.—Tension in thyroid gland; < towards evening; feels cravat too tight.—Throws up small floculi or solid lumps of phlegm almost without any cough.

10. Appetite.—Insipid and fetid taste in the mouth.—Want of appetite for bread.—Hunger, with want of appetite.—Attacks of bulimy, chiefly in the evening.—After a meal, pressure in the stomach and the abdomen, with fulness.—Very drowsy after dinner.

11. Stomach.—Eructations alternately with hiccough.—Eructations, with the taste of the food that has been taken.—Frequent empty eructations; or with the taste of apples; or with the taste of rotten eggs.—Nausea, with cutting pains.—Inclination to vomit immediately after a meal.—Pressure on the stomach, and in the precordial region, after a meal.—Pain resembling cramp and oppressive heaviness in the stomach.

12. Abdomen.—Shootings (sharp needle-like pains) in the hepatic region.—Prickings in the region of the spleen during and after inspiration.—Stitch in side from running.—Cutting and pinching pains in the abdomen as from diarrhœa.—Moving about and rumbling noise in the abdomen.—Abundant expulsion of flatulency of a fetid odour, like that of garlic.

13. Stool and Anus.—Hard stools of a dark colour after a period of constipation.—Loose stools in the form of pap, with flatulency and severe colic.—Loose stools, a painful drawing in the stomach and in the abdomen.—Tingling in the anus.—Itching in the anus, as from worms.—Dysenteric flux.—Diarrhœa of children, with grass-green, bilious stools.—Fetid stools.

14. Urinary Organs.—Urine scanty and infrequent.—Urine clear, and of a yellow (lemon) colour.—Flow of viscous mucus from the urethra.

15. Male Sexual Organs.—Increase of sexual desire, with flaccidity of the penis.—Scanty emission in coition.—After coition great weakness and nocturnal sweat.—Itching in the genitals.—A sensation of drawing in the testes.

16. Female Sexual Organs.—Awfully bearing-down pains almost intolerable.—Menses too profuse and early, with tearing, pressive pains in back and abdomen.—Itching and irritation of the parts with strong desire for an embrace.—During menses: headache, toothache, pain and itching in l. ear, > by boring; labour-like pains; pains in l. arm; itching; palpitation; salivation.—Leucorrhœa, with much itching internally and externally.

17. Respiratory Organs.—Expectoration of small globules of mucus, almost without cough.—Spasmodic, convulsive, nervous cough, which may provoke secondary hæmorrhage.

18. Chest.—Respiration short and laboured, with difficulty of walking, even slowly.—Respiration difficult, as if the chest were full of blood.—Oppressive constriction of the chest, with a necessity for frequent and deep inspirations. Pain

principally in the lower part of the chest, as if its contents were compressed.—Prickings in the chest.—Copious nocturnal sweat upon the chest.—Itching of the nipples.

19. Heart.—Stitches; burning, shooting pains in region of heart, extending to l. shoulder-blade; < by coughing, sneezing, or deep inspiration.—Oppression in cardiac region as if thorax narrowed.—Painful palpitations of the heart.—With heart symptoms, paralysed feeling in l. arm and hand.—Pulse weak, dicrotic, intermittent.

20. Neck and Back.—Pain as from fatigue and dislocation in the back, at the nape of the neck and in the loins, esp. when sitting or lying down.—Painful weakness in the muscles of the back.—Sensation of soreness and great weakness in the back.—Paralytic pain in the loins, increased by walking or by standing.

21. Limbs.—Limbs affected diagonally; l. forearm, r. thigh; r. knee, l. hand.—Tearing in limbs, < in rest or sitting, > moving.—Cracking in joints.—Subsultus tendinum.—Feels as if her limbs did not belong to her.

22. Upper Limbs.—Arms weak and without vigour.—Burning pain in the arms, followed by an eruption of small pimples with scaling of the epidermis.—Irregular and hurried movements of arm.—Upper arms shaken as from an electric shock.—Prostration, weariness, and paralytic feeling in l. arm.—Tearing in both hands; on l. wrist.—Trembling of hands; and coldness.—Tearing in the fingers.—Cramp-like pain in the thumb.—Paleness and numbness of the fingers, which are, at the same time, very sensitive to cold.—Itching, burning pain, and redness in the fingers, as if from chilblains.

23. Lower Limbs.—Legs heavy and fatigued, esp. in the thighs.—Twitching, quicksilver sensation, in gluteal muscles.—Pains in legs like electric shocks.—On crossing thighs feels a violent pain in them.—Drawing in the legs, as if in the interior of the bone, esp. when sitting or standing, > by motion.—Painful sensation in the hip on walking.—Drawing in the legs.—Darting pain in the feet and in the toes.—Drawing pressure in the malleolæ.—Burning itching and redness in the toes, as if from chilblains.—Bunion.

24. Generalities.—Painful cramps in the muscles when seated.—Sensation of tearing in the limbs, principally during repose, whether seated or standing, and which disappears on movement.—Twitchings in the eyeballs, eyelids, cheeks, posteriorly in the chest, in the abdomen.—Symptoms which exhibit themselves transversely (for instance, in the r. arm and in the l. leg), > by walking slowly.—Great sensibility in the whole body; the softest pressure produces continued pains.—Pains, as from a bruise in the limbs and in all the joints, after even moderate exercise.—Soreness and sensation of rawness (nose and mouth).—Piercing pains in different parts of the body, chiefly in the head, with desire for sleep, and faintness when seated.—Tearing pains (face, legs) continuous

while at rest, disappearing While moving about.—Great weakness and heaviness in all the limbs.—Trembling.—Convulsions.—Epileptic fits.—Epilepsy (with great exertions of strength).—Great sensibility to cool air.—Great sensitiveness of the body to pressure and cold air.

25. Skin.—Itching and titillation, which force the sufferer to scratch himself.—Itching, burning pain, and redness as from chilblains in different parts of the body.—Miliary eruption, whitish and close-grained, with excessive itching.

26. Sleep.—Desire to sleep in the day, particularly after a meal.—Violent yawning, followed by dizziness.—In the morning, a sense of dizziness, and great difficulty in rising.—As a rule sleeps badly and unrefreshingly.

27. Fever.—Disposition exceedingly chilly, and shiverings in the open air, or on raising the bed-clothes, although the limbs may be warm.—Shivering through the body from above downwards.—Easy chilliness on slight movement.—Violent shivering and trembling over the whole body, with heat in the face and cold in the hands.—Sweat from even a moderate walk and slight exertion.

Agaricus Phalloides.

A. bulbosus. Amanita bulbosa. (A small stinking fungus common in Europe and U.S.) N. O. Fungi. Tincture of fresh fungus.

Clinical.—Cholera. Chorea. Cramps. Diarrhœa. Gastritis. Trismus. Urine, suppression of. Vomiting.

Characteristics.—Symptoms observed in poisoning cases give a complete picture of Asiatic cholera. There is extreme prostration and chilliness; the sweat is cold; the hippocratic face is marked; the tongue is cold; and there is violent thirst. Very frequent bilious vomiting. *Incessant cramps* in stomach. Hard, tense abdomen. Frequent whitish watery stools; or bilious, bloody stools. The urine is suppressed; the voice is hoarse. Pulse small, intermittent, hardly perceptible. The extremities are cold, and there are violent cramps in legs, feet, and calves. Convulsions are another prominent feature. There is mental excitement, which has in some cases lasted for three days. Sometimes there is stupor, at other times consciousness remains till death.

The effects do not come on till ten or twelve hours after taking the drug (in this it is like *Colchicum*). At times the development of choleraic symptoms saves the patient. General cholera symptoms are developed as with *A. muscarius*. Chilliness also predominates. *Agaric. Phal*. is a poison of great intensity and fatality.

SYMPTOMS.

2. Head.—Vertigo always on rising up.—Frightful pains in head.

3. Eyes.—Pupils much dilated.—Eyes sunken, weak, and lustreless.

6. Face.—Deathlike pallor; face sunken; cyanotic.—Anxious countenance, hippocratic.—Nose and mouth dry.—Tetanic closure of jaws, with at times grating of the teeth.

8. Mouth.—Teeth and gums black.—Cold tongue.—Breath cold.—Trismus.—Speech slow, difficult.—Stammering.

9. Throat.—Dry throat.

11, 12. Stomach and Abdomen.—Violent thirst; nausea; vomiting; then diarrhœa.—Very frequent mucous and bilious vomiting.—Vomiting of an offensive greenish-coloured fluid; of blood.—Pains in stomach and hypogastrium followed by anxiety and vomiting.—Incessant cramps of stomach.—Violent pains in epigastrium, which spread rapidly over the whole abdomen; greatly < by pressure.—Abdomen tense; swollen; painful.—Unendurable pain in hypogastrium and lumbar region.

13. Stool and Anus.—Anus inflamed.—Stools: frequent, bilious; whitish as in Asiatic cholera; frequent, watery; bloody.

14. Urinary Organs.—Suppression of urine.

17. Respiratory Organs.—Voice hoarse.—Respirations short.

19. Heart and Pulse.—Pulse: small and intermittent; hardly perceptible; slow and somewhat irregular; hard and frequent.—Pulse full and rapid (later action).

21. Limbs.—Cold extremities.—Skin of extremities lost its elasticity.—Upper extremities swell and become livid; finger-tips livid.—Cramps of the legs; of the calves; of the feet with drawing back of the limbs.

24. Generalities.—Violent convulsions.—Slight convulsive motions in the legs and arms, which generally extend to the muscles of the trunk and cause irregular distortions of the whole body.—Constant restlessness.—Debility; prostration.—Malaise.—Staggers as if intoxicated, and, with odd gesticulations, labours to express his sufferings but cannot articulate a syllable.

25. Skin.—Body covered with livid spots.

26. Sleep.—Somnolence.

27. Fever.—Marked chilliness.—Sweat cold.—Skin cool, afterwards hot.

Agave Americana.

American Aloe. Century plant. N. O. Amaryllidaceæ. Tincture of fresh-chopped leaves.

Clinical.—Gonorrhœa. Hydrophobia. Scurvy. Stomacace.

Characteristics.—*Agave* is an unproved remedy. The juice of it fermented is the Mexican intoxicating beverage called "Pulque." The plant has a local reputation as a remedy for hydrophobia. A striking case is quoted by the *H. Recorder* from *El Siglo Medico*. A boy developed the classical symptoms of hydrophobia four and a half months after being bitten: Quarrelsomeness, excitement, fright, inability to swallow, small frequent pulse, great anxiety. Finally swallowing was impossible, restraint had to be used to prevent him biting his nurses in the hospital, when, as a last resource, a piece of *Agave* was offered to the boy by the doctor in attendance, cut from a hedge of the plant with which the hospital grounds were fenced. To the astonishment of all, the boy reached for it and ate it greedily, almost without chewing. By evening a decrease in the violence of the nervous attacks was manifest, though they remained as frequent as before. The improvement was slow but continued. On the fourth day he took some nourishment, but also continued chewing *Agave* and swallowing the juice. On the fifth day he recovered consciousness by still demanded *Agave*. On the eighth day he said he did not want any more as "it tasted too bitter and caused a burning in the mouth." He had no further symptoms of the disease. According to Hansen *Agave* is indicated in scurvy, stomacace, and painful erections in gonorrhœa.

Relations.—*Compare:* Lyssin, Fagus, Lach., Aloe, and other Liliaceous plants.

Agnus Castus.

Verbena verticillata. Vitex agnus castus (Linn.). The Chaste Tree. (Shores of Mediterranean, Provence, and Greece.) N. O. Verbenaceæ. Tincture of ripe berries.

Clinical.—Agalactia. Anus, excoriation and chaps of. Ascites. Dislocations, Gonorrhœa, secondary. Gouty joints. Gums, ulcerated. Impotence. Knees, coldness of. Leucorrhœa. Mouth, ulcers in. Rheumatic nodes. Spleen, swelling of; induration of. Sprains. Sterility. Testicles, swelling of; induration of. Toothache.

Characteristics.—As its name implies, *Agnus Castus* produces its chief effects in the sexual sphere, causing depression of function. General debility and depression of vital power are marked. There ire very characteristic symptoms in the mental sphere. Great sadness with a fixed idea of approaching death. This fear is not of *immediate* death as with *Aconite*, but the patient thinks it is sure to come after a while, and there is no use in doing anything. When this mental state is found after confinement and the milk fails to appear, *Agn. c*. is the remedy. Absent-mindedness. Drowsiness. It corresponds to lymphatic constitutions. Premature old age, with apathy and melancholy, self-contempt from sexual abuse. Nervous debility in unmarried persons. Impotence and gleet in old offenders. Among other peculiar symptoms are: Illusion of smell as of herrings; or musk; ulcers in mouth and on gums. Tearing pain in lower jaw. Toothache from hot food or drink. Swelling and induration of spleen. Rumbling of flatus during sleep. Discharge of prostatic fluid whilst straining at stool. Suppressed menses with abdominal pain. Leucorrhœa staining yellow. Sterility. Deficiency of milk, with despair of recovery. Pain as if dislocated in joints. Joints easily twisted. Rheumatic and gouty nodosities on joints.

Relations.—Agnus is the only proved member of the Verbena family, though the Labiatæ or Mint family are closely allied. *It is antidoted by:* Camphor, Nat. mur. (headache); strong solutions of table-salt. *It is followed well by:* Ars., Bry., Ign., Lyc., Pul., Sul., Selen. *Compare:* (Leucorrhœa staining yellow), Nux, Chel., Carb. an., Kreas. Teste groups it with Mur. ac. and Hyo.

Causation.—Sexual excesses. Repeated attacks of gonorrhœa or gleet. Sprains or over-lifting.

SYMPTOMS.

1. Mind.—Extreme absence of mind; unable to recollect things; finds it difficult to read or keep up the train of thought.—Despairing sadness; low-spirited; fears of death; keeps repeating that she will soon die.

2. Head.—Tearing pain, with pressure in the temples and forehead (in the brain); < during motion.—Pain in the temple, as from a blow.—Heaviness in the head, and pressure, as if the head would fall forward.—Pain in the vertex, as from staying in a room filled with a thick and smoky atmosphere.—Tension and chilliness in the scalp, which is warm to the touch.

3. Eyes.—Corrosive itching or gnawing itching over and on the eyebrows, on the eyelids and under the eyes; > by scratching, but it soon returns.—Dilated pupils (and photophobia).

4. Ears.—Roaring in the ears.—Hardness of hearing.

5. Nose.—Odour before the nose, like herrings or musk.—Hard, aching pressure on the dorsum of the nose; > by pressure.

6. Face.—Corrosive itching of the cheeks, under the eyes, and on the chin.—Formication in the cheeks.—Rending, tearing pain under the alveoli of the r. lower jaw.

8. Mouth.—Ulcers in the mouth and on the gums.—The teeth are painful when touched by warm food or drink.

10. Appetite and Taste.—Thirstlessness and aversion to drink.—Metallic, coppery taste.

11. Stomach.—Nausea in pit of stomach when standing; later in the abdomen, with a sensation as if the intestines were pressing downwards; constant inclination to support bowels with the hands.

12. Abdomen.—Abdomen sore to touch.—Swelling and induration of the spleen, esp. after intermittent fevers.—Ascites.—Rumbling of flatulence during sleep.—Fear as if entrails were sinking down; constantly wants to support bowels with hands.

13. Stool and Anus.—Difficulty of passing soft stools.—When pressing at stool, discharge of prostatic fluid.—Sensation as of subcutaneous ulceration near the anus, only when walking.—Corrosive itching of the perineum.—Rhagades at the anus.—Deep fissures of the anus, often giving pain when walking.

14. Urinary Organs.—Frequent micturition.

15. Male Sexual Organs.—Diminution of sexual power.—The penis is small and flaccid; so relaxed that voluptuous fancies excite no erection.—Feeble erections without sexual desire.—The testicles are cold, swollen, hard, and painful.—Impotence, with gleet (esp. with those who have frequently had gonorrhœa).—Gleet, without sexual desire or erections.—Emission of prostatic fluid when straining at stool; during micturition.—Drawing along the spermatic

cords.—Pollutions from irritable weakness with prostatorrhœa.—Itching of the genital organs.—Yellow discharges from the urethra.—Gonorrhœa, with suppressed sexual desire.

16. Female Sexual Organs.—Transparent leucorrhœa; parts very relaxed.—Leucorrhœa spotting linen yellow.—Sterility, with suppressed menses, and want of sexual desire.—Milk scanty or entirely suppressed.—Deficient, secretion of milk in lying-in women.—Swelling and inflammation of the uterus.—Retained placenta.

18. Chest.—Hard pressure in the region of the sternum, esp. during a deep inspiration.—Cough in the evening in bed, before going to sleep.

22. Upper Limbs.—Hard pressure in right axilla and upper arm; worse from touch and motion.—Swelling of the finger joints, with arthritic, tearing pains.

23. Lower Limbs.—Lancinating pain in the right hip-joint.—Heaviness of right foot, as from a weight.—Stitches in the legs (left big toes).—Tearing pain in joints of toes; worse when walking.

24. Generalities.—Great debility.—Inflammatory, rheumatic swelling of the joints.—Gouty nodosities.—Sprains, bad results from lifting too much.—Feet turn under when walking.

25. Skin.—Corrosive itching on different parts of the body, > by scratching, but it soon returns.—Itching around the ulcers, in the evening.

27. Fever.—Pulse small, slow, imperceptible.—Chilliness, internal with trembling, the external skin is warm.—Much chilliness, with cold hands.—Flushes of burning heat, principally in the face, with cold knees in the evening in bed.—Perspiration almost only on the hands, when walking in the open air.

Agraphis Nutans.

Bluebell. Wild Hyacinth. Scilla nutans. N. O. Liliaceæ. Tincture of fresh plant and growing shoots.

Clinical.—Adenoids. Catarrh. Deafness. Diarrhœa.

Characteristics.—*Agraphis* is one of the remedies introduced by Dr. Cooper. It partakes of the characters of the lilies and corresponds to catarrhal conditions. Obstruction of the nostrils, especially from adenoids, and throat deafness I have frequently seen relieved by the remedy. The action of it is felt towards the root of

the nose. The plant grows in sheltered places, and Dr. Cooper gives > from shelter as a leading indication. It also corresponds to chill from cold winds, and is very like *Silica* in this. I regard it as one of the leading remedies in cases of adenoids. Dr. Cooper gives: "Adenoids with enlarged tonsils; frequently accompanying dentition." He has cured with it mucous diarrhœa following a suppressed cold.

Relations.—*Compare:* All. cap., All. sat., Scilla, &c.

Agrostema Githago.

Lychnis garbage. Corn-cockle. N. O. Caryophyllaceć. Trituration of the seeds, which are poisonous and contain Saponine. Preparations of an active principle Githargin.

Clinical.—Gastritis. Paralysis. Tenesmus.

Characteristics.—Our knowledge of this plant is derived almost entirely from cases of poisoning in persons who have eaten bread containing the seeds. Sensations of burning predominate. There is also vertigo and headache and in some cases coma. Locomotion is impaired, and there is difficulty in remaining erect.

Relations.—*Compare:* Lathyrus, Secale.

SYMPTOMS.

2. Head.—Vertigo.—Headache.—Sensation of heat and burning rises into vertex from l. lower jaw; almost makes her crazy.

8. Mouth.—Mouth dry and hot.—Palate has a red margin.—Burning on palate in a short time (Githargin).

11. Stomach.—Nausea and vomiting.—Burning from stomach along śsophagus to throat and in chest.—Knife-like pains in stomach at times.

13. Stool and Rectum.—Constipation with tenesmus.—Diarrhśa with tenesmus.—Burning in bowels and rectum.

20. Back.—Tearing along spine.

24. Generalities.—Difficult to remain erect.—Locomotion impaired.

Ailanthus Glandulosa.

The Tree of Heaven. (Eastern Asia; cultivated as a shade-tree in North America.) N. O. Simarubaceæ. Tincture from flowers beginning to open.

Clinical.—Acne. Cerebro-spinal meningitis. Chancre. Coryza. Diphtheria. Headache. Mumps. Puerperal fever. Rheumatic fever. *Scarlatina*. Syphilis. Typhoid fever. Typhus fever.

Characteristics.—Corresponds to conditions characterised by certain livid or purpled appearances of the skin. Rash coming out in patches. Eruptions which are slow in appearing. Low adynamic forms of disease with extreme prostration, torpor, vomiting. Prostration at the outset of a disease is a leading indication for it. The patient is stupid, dull, delirious, weak. It has proved of signal service in cases of malignant and suppressed scarlatina. The head is burning hot, with piercing pains. The parotid glands are sensitive and enlarged. The attacks are characterised by fulness of head with heat; pains burning, darting in temples and occiput; vertigo and nausea. The rash of *Ailanth*. often returns annually. A feeling of fulness everywhere, and a sensation of passage of electric current from head into limbs are prominent in the provings. With the low fever of *Ailanth*. there is stupor or indifference with sighing. There is constant frontal headache of a neuralgic character. Paroxysmal headache with drowsiness during day, confused mind, depression. The throat is severely affected: thick, œdematous, dry, choky feeling. Dry, rough, scrapy, < morning. Livid, swollen, with ulcers oozing a fetid discharge.

The symptoms are > lying on right side (bronchial affections). Sitting up = vomiting, dizziness. Motion = staggering. Walking about > toothache.

It is suited to nervous, sensitive persons. Bilious temperament. Stout and robust.

Relations.—Ailanth. is *related botanically to*: Ptelea and the Xanthoxyleæ. *It is antidoted by:* Alcohol, Rhus t., Nux. *Compare:* Am. c., Arn., Arum tr., Aloe (dull frontal headache), Bap., Bry., Gels., Hyo., Lach., Nit. ac., Nux v., Phytol., Hydrocy. ac., Rhus t., Stram., Echin. a.

SYMPTOMS.

1. Mind.—Anxiety and restlessness.—Low-spirited; continually sighing.—Extreme irritability.—Semi-conscious, cannot comprehend what is said to him.—Stupor, delirium, and insensibility.—Constant muttering delirium, with sleeplessness and restlessness.—Since the poisoning all antecedents are forgotten; or remembered as matters belonging to another, or read about.—Raging delirium with brilliant eyes.

2. Head.—Severe headache, delirium, with fever and anxiety.—Severe headache, with dizziness, and red, hot face; cannot sit up.—Dizzy when rising up.—Dull, heavy pressing in forehead; disinclined to think or act.—Darting through temples and occiput, with confusion of ideas.—Head burning hot with piercing pains.

3. Eyes.—Eyes suffused and congested; startled look when aroused; pupils dilated and sluggish.—Photophobia.—Conjunctivitis; smarting, aching, lachrymation, purulent discharge.

4. Ears.—Pain in ear when swallowing.—Parotid gland sensitive and enlarged.

5. Nose.—Copious, thin, ichorous, and bloody discharge from the nose.—Nostrils congested.—Nose dry; secretion suppressed.—Coryza, with rawness in nostrils; sneezing.—Loss of smell.

6. Face.—Face sallow, jaundiced; blue circles round eyes.—Face red and hot, covered with a rash.—Face mahogany-coloured.—Great prostration, and countenance indicative of much distress.—Purplish face.—Irregular spots.—Lips swollen, cracked; ulcers near commissures.

8. Mouth.—Teeth covered with sordes.—Tearing in teeth (l.) and face < lying down, > walking about, and by external pressure.—Tongue dry, parched, cracked.—Tongue moist; furred white; tip and edges livid.

9. Throat.—Throat tender and sore on swallowing, or on admission of air.—Throat sore on swallowing, hawks up a greenish purulent matter.—Diphtheria, with extreme prostration.—Throat livid, almost purple; swollen; tonsils prominent, and studded with many deep, angry-looking ulcers, oozing a scanty, fetid discharge; external neck swollen and sensitive.—Irritability of the throat, and hawking up of mucus; puruloid; hard white lumps.—Thick, œdematous and dry choky feeling in throat.—Throat dry, rough and scrapy; < in morning.

11. Stomach.—Vomits food speedily during the chill; suddenly and violently when sitting up; with stupor.—Thirst for cold drinks; for brandy.—Peculiar feeling of emptiness in stomach.

12. Abdomen.—Tenderness over liver region.—Burning in stomach and bowels.—Tympanites.

13. Stool.—Thin, watery, offensive diarrhœa, passing involuntarily with the urine.—Stools frequent, watery, forcibly expelled.—Tapeworm.

14. Urinary Organs.—Scanty or suppressed urine passed unconsciously; acid.

15. Male Sexual Organs.—Sore on prepuce, looking like incipient chancre.

16. Female Sexual Organs.—Malignant puerperal fever.—Vomiting of pregnancy.

17. Respiratory Organs.—Breathing hurried, irregular, heavy.—Cough deep, exhausting, dry, hacking: in violent fits, before retiring or on rising, until sputum is raised.—Sputa: blood-mixed; yellow; bitter; < morning.—Aphonia.—Croupy choking.

18. Chest.—Stitching and aching in chest.—Lungs sore and tender.—Tired feeling in lungs, almost too much exertion to breathe.—Burning in r. lung; contracted feeling in l.—Chest feels strapped; or as if air-cells stuck together.

19. Heart.—Rapid, small pulse, weak, frequent, and irregular.—Dull pain and contracted feeling in region of base of heart and through centre of l. lung.

20. Neck and Back.—Neck tender, and very much swollen.—Constant sharp pains through small of back and hips.

24. Generalities.—In low adynamic forms of disease, with extreme prostration, torpor, vomiting, pulse small and rapid, purplish appearance of the skin.—Prostration at very onset of the disease.—Stupid, dull, delirious, weak.—Puerperal fever characterised as above.

25. Skin.—Skin cold, dry, livid.—Eruption scanty with sore throat; of a bluish tint; livid; forehead and face of a purplish colour.—Body and limbs covered with an irregular patchy eruption of a livid colour disappearing on pressure, returning very slowly.—Large blisters filled with dark serum.—Eruptions of miliary rash in patches of dark, almost livid colour; most on forehead and face.

26. Sleep.—Drowsy, restless, soon passes into insensibility.

Aletris Farinosa.

Star Grass Blazing Grass. Colic Root. Unicorn Root. (United States.) N. O. Hæmodoraceæ. Tincture of root.

Clinical.—Abortion. Anæmia. Colic. Constipation. Convulsions. Debility. Dysmenorrhœa. Dysuria. Endometritis. Fever. Hæmorrhoids. Hysteric colic. Indigestion. Leucorrhœa. Menorrhagia. Myalgia. Pregnancy, vomiting of. Sterility. Uterus, pain in; prolapse of.

Characteristics.—*Alet. far.* is said to be the most bitter of all plants. It is characterised by weariness of body and mind. Want of appetite, especially in connection with Uterine disorders. The least food distends the stomach. There are

fainting attacks with vertigo. Emaciation is marked in some cases. Disgust for food, nausea; constipation. Obstinate vomiting of pregnancy. Many symptoms appear in the uterine sphere: uterine atony, menses profuse and premature with labour-like pains or amenorrhœa, debility, from loss of fluids, protracted illness. Menorrhagia, black clots, fulness and weight. Leucorrhœa, with debility. Sterility. Habitual tendency to abortion. Sensation of weight in uterine region and tendency to prolapse. Sensation of weight in occiput as if it would draw the head back. It is most suited for chlorotic girls and pregnant women. Weak, emaciated people.

Relations.—*Compare:* Helonias dioica ("False" Unicorn, not to be confounded with Alet. f.), Chin., Hydrast., Sabin., Senec., Puls., Caulo.; Dioscor. (colic < bending forward); Caust., Puls., Fer., (discharge of urine during cough); Alumina (constipation; grasps the seat tightly, despairs of having a stool. During stool terrible pains as if a passage were being forced, Al. f.).

SYMPTOMS.

1. Mind.—Weariness of body and mind.

2. Head.—Vertigo, with sleepiness, vomiting, purging; even stupefaction.—As if head in a vice.—Weight in occiput; as if it would draw the head backward.

3. Eyes.—Eyes feel sore and look dim.

4. Ears.—Ears feel as if open through from one to the other.—Deaf in l. ear with stuffed feeling.

10. Appetite.—Appetite lost; with weakness.

11. Stomach.—Least food distresses the stomach; fainting attacks with vertigo; sleepy, emaciated; disgust for food, nausea; obstinate indigestion.—Vomiting during pregnancy.—Eructations of food in evening with burning in throat.—All-gone feeling in morning on rising, > by eating.—Nausea is > by coffee; is > by dinner, but returns with gagging at sight or thought of grease.—Nausea, with pressure in forehead.

12. Abdomen.—Cramps.—Griping.—Pain all through abdomen, settling into lower part, > passing flatus and scanty diarrhœic stool; pain < bending forward, > bending backward, then the pain increased and it seemed as if all the insides had settled into lower abdomen and were cut with knives; > scanty diarrhœic stool.—Aching in hypogastrium and across back of hips.—Hysteric colic.

13. Stool and Anus.—Scanty diarrhœic stool; tenesmus during and after stool, with feeling as if lower part of rectum closed.—Fearful pains in rectum and anus, during a movement terrible pain as if forcing a passage.—Inveturate constipation as from

rectal atony.—Frequent ineffectual urgings.—Stool: loose, painful, offensive, frequent; thin with hard lumps in it; hard, delayed, small, scanty, difficult.—Hæmorrhoids.

14. Urinary Organs.—Micturition rare.—Incontinence, < walking fast or sneezing.—Urine scanty, phosphatic.

16. Female Sexual Organs.—Premature profuse menses with labour-like pains.—Amenorrhœa or delayed menses from atony; weariness of mind and body; abdomen distended, bearing-down.—Menses too soon with colic, light-coloured.—Menorrhagia, profuse, black with coagula; fulness and weight.—Leucorrhœa, white stringy.—Prolapsus.—Sterility.—Habitual tendency to abort; sensation of weight in uterine region; tendency to prolapse.—Myalgic pains like "false pains.".—Before menses: cough.

17. Respiratory Organs.—Raises a good deal of froth, feels as if wanted to cough and couldn't.—Tickling, short, dry, hard cough on waking, becoming spasmodic, < by talking; = discharge of urine.—Later, cough incessant, like whooping-cough; loses breath; cyanotic; > suddenly on occurrence of menses eight days too soon.

18. Chest.—Pain in l. breast as if a knife ran into it.—Pain in l. breast, then extending through into back to l. of lower part of r. scapula.—Pulse irregular and intermittent.

20. Neck and Back.—Pain in centre of nape, running into l. shoulder; then pain in nape moved up to occiput, and remained there all evening.—Sharp pain from point of l. scapula through to l. breast.—Sensation as if back would break just above waist; afterwards same pain higher up.—Backache with dragging in sacral regions, and string, colourless leucorrhœa, beginning when walking.

21. Limbs.—Sharp pain in r. shoulder joint, streaked down arm, then into l. chest, settling above nipple.—Knees painful sitting.—R. leg feels paralysed below knee, numb, could not bear weight on it.

25. Skin.—Itching papillary eruption across chest and back, < by scratching, > by rubbing.

26. Sleep.—Restless fore part of night.

27. Fever.—Chilly, face flushed.—Limbs cold, head and face hot and flushed.

Allium Cepa.

Cepa. Common Red Onion. N. O. Liliaceæ. Tincture of the onion; or of whole fresh plant gathered from July to August.

Clinical.—Anus, fissure of. Ascites. Catarrh. *Cold. Coryza*. Cough. Diarrhœa. Facial paralysis. Feet, easily galled. Hay-fever. Hernia. Influenza. Laryngitis. Panaritium. Pneumonia. Trauma. Whitlow. Whooping-cough. Yellow fever.

Characteristics.—*Allium cepa* covers more symptoms of common cold than any other remedy, as the well-known effect of onions in producing tears would suggest. It will cure a large proportion of cases of cold in the head, but the conditions which most particularly indicate it are: Cough, or cold, or headache < in warm room, > in open air, < again on returning to warm room. It causes burning of eyelids, nose, mouth, throat, bladder, skin. Inflammation and increased secretion of mucous membranes: neuralgic pains like a *long thread*; in face, head, neck, and elsewhere; < evening; towards ear from deep within head. The toothache of *Cepa* is > by cold air or cold washing. It is suited to traumatic neuritis. Hurts do not heal. The feet are easily galled by walking. It was recommended by Dioscorides as a remedy for this condition, and homœopathy has confirmed his observation. Desire for raw onions is an indication for it. Thread-like pains are common in various parts and are characteristic of *Cepa*. Thread-like pains in face. Left-side facial paralysis has been cured by *Cepa*. The cough of *Cepa* is caused by tickling in larynx; constant inclination to hack in order to relieve it. It has cured violent catarrhal laryngitis; hoarse cough with feeling as if it would split and tear the larynx, causing watering of eyes. Cough from inhaling cold air. *Cepa* has yawning and drowsiness. A raw onion eaten just before going to bed is a popular remedy for sleeplessness. *Cepa* is a left-side medicine primarily. Symptoms go from left to right. Left eye; left facial paralysis; left inguinal ring. Rest <; motion >. < Afternoon and evening; when lying down. Damp cold wind and weather = colds and toothache. But cold water and open air >; warm room < Picking or sucking teeth > toothache. Eyes sensitive to touch.

Relations.—*Compare:* Al. sat., Alo., Conval., Lil. tig, Scilla (botan.); *Antidoted by:* Arn. (toothache); Cham. (abdominal pains); Nux v. (coryza recurring in August); Verat. (colic, with despondency); Thuja (offensive breath and diarrhœa after eating onions). Roasted coffee will remove onion breath. Followed by Calc. c. and Silic. in polypus. *Incompatible:* All. sat., Alo., Scilla. *Complementary:* Phos., Puls., Sars., Thuj. *Compare also:* Aco., Chlorum, Ipec.; Lach. (left to right).

Causation.—Effects of exposure to damp cold winds and weather. Colds of spring; hay-fever of August; epidemics of spasmodic cough in autumn. Wet feet. Eating spoiled fish. Injuries. Surgical operations (fine shooting pains after).

SYMPTOMS.

1. Mind.—Very melancholy.—Fears pains will become unbearable.—Often very anxious, with catarrh, dulness of intellect.

2. Head.—Dulness.—Dull headache, with coryza, < in the evening; > in the open air; but < when returning to a warm room.—Pains in temples, most in right; aggravated by winking; extending over forehead, worse on l. side.—Pain in occiput and down the neck.

3. Eyes.—Flow of (mild) tears.—Excessive non-excoriating lachrymation; l. eye worse, with redness of the eyeball; sensitive to light; worse evenings.—Sensation as if eye were hanging by a string or torn.—Itching, biting, burning in the eyes.—Dulness of the eyes, with aversion to light, and coryza.—Letters appear smaller.—Near objects seem distant with yawning.—Swelling around the eyes.

4. Ears.—Earache.—Discharge of pus from the ear.—Hardness of hearing.

5. Nose.—Profuse watery discharge from the nose, with sneezing, acrid burning, excoriating the nose and upper lip.—Fluent coryza, with running of water from the eyes, headache, heat, thirst, cough, trembling of the hands; < in evening and in a room; > in the open air.—Ichor oozing out of nose; second stage of scarlatina.—Bleeding of the nose.—A sort of hay-fever every August, morning coryza, violent sneezing, sensitive to the odour of flowers and skin of peaches.—Nasal polypi.

6. Face.—Paralysis of l. half of face, also in limbs of same side.

9. Throat.—Sensation as of a lump in the throat.—Expectoration of a lumpy mucus through the posterior nares.—Pain in throat extending to the ear.—Bad odour from the mouth and throat.

11. Stomach.—Canine hunger.—Appetite, increased or diminished.—Strong craving for raw onions; cannot take any other nourishment.—Pressure in stomach.—Pain in region of pylorus.—Thirst, with heat and coryza.—Nausea, coming from stomach up the throat into the fauces.—Weak, empty feeling in stomach.—Sour eructations.

12. Abdomen.—Rumbling in bowels.—Very offensive flatus.—Belching, with rumbling in and puffing up of the abdomen.—Violent cutting pain in the left lower abdomen, with frequent desire to micturate, and burning micturition.—Pains in hepatic region, spreading into the abdomen.—Violent pains in l. hypogastrium, with urging to urinate, urine scalding.—(Strangulated hernia has been known to follow the eating abundantly of cooked onions.).—Abdomen distended, rumbling, urging, and finally diarrhœa.

13. Stool and Anus.—Diarrhœa after midnight and in the morning.—Flatus very, offensive.—Hæmorrhoids, tearing, jerking pains in anus.—Stitches in the rectum.—Rhagades at the anus.—Itching at the anus (worms).

14. Urinary Organs.—Strangury after wet feet.—Dribbling or spouting of urine in old people.—Frequent and copious urination.—Urine red, with much urging and burning in urethra.—Pressure and other pains in the region of the bladder.—Sensation of weakness in the bladder and urethra.

17. Respiratory Organs.—Oppressed breathing, from pressure in the middle of the chest; worse in the evening.—Cough when inhaling cold air.—Catarrhal hoarseness.—Acute bronchitis going from l. to r.—Tickling in throat, with aching in larynx.—Constant inclination to hack.—Hacking cough from inhaling cold air.—Violent catarrhal laryngitis; the hoarse cough seemed to split and tear the larynx.—Much sneezing; he inflates the lungs, raises himself on his toes, then gives a hearty sneeze.

20. Neck and Back.—Intense pain in nape of neck.—Chilly crawls run down the back, most at night, with frequent urination, followed by heat and thirst.

22. Upper Limbs.—Much pain under r. shoulder-blade.—Sore, tired feeling of the limbs, esp. arms.—Trembling of the r. hand.—Panaritium.—Painful affections of the fingers about the nails, red streaks running up the arm.

23. Lower Limbs.—Soreness; the skin is rubbed off by the shoes, esp. on the heel.—Pain on most external soft part of r. big toe and l. middle finger.

24. Generalities.—Stitches and burnings; aching.—Stitches (head, eyes, ears, rectum, skin).—Burning (eyelids, throat, nose, mouth, bladder, skin).—Bad effects from wet feet.—Phlegmasia alba dolens.—Traumatic neuritis, pains violent and continuous, wearing out patient.—Inflammation and increased secretions of the mucous membranes.—Senile gangrene.—Trismus after injuries.—Weak and tired; has to lie down.—Aching throughout the body.—Neuralgia from old injuries.—Neuralgic pains, like a long thread, in face, head, neck, and elsewhere; < evenings.

25. Skin.—Pricking as from pins.—Redness; nettle-rash, measles, scarlatina, when the complaints are characterised by the characteristic catarrhal symptoms.—Panaritia of lying-in females, red streaks running up arm, very painful.

26. Sleep.—Yawning; with headache and cramp in stomach; with sleepiness near objects seem distant.—Gaping in deep sleep.—Wakes 2 a.m.—Dreams of being near water; of battles, precipices, deep wells; of storms, high waves; annoying in convalescents.

27. Fever.—Pulse full and accelerated.—Heat, with rumbling in the abdomen, coryza, and thirst.—Flitting heat over whole body, and thirst.—Coldness alternates with heat during catarrh.—Sweats easily and copiously.

Allium Sativum.

Garlic. N. O. Liliaceć. Tincture of fresh bulb.

Clinical.—Alopecia. Asthma, periodical. Bronchitis. Catarrhs. Colic. Constipation. Cough. Coxalgia. Dandriff. Diabetes. Diarrhśa. Dypepsia. Fevers. Headache. Hip, rheumatism of. Hoarseness. Menorrhagia. Menses, disorders of. Ophthalmia. Rheumatism. Salivation. Scurvy. Skin, affections of. Sprains. Whitlow. Worms.

Characteristics.—Teste places *All. sat*. in the *Bryonia* group along with *Lyc., Digit., Nux v., Coloc., Ign*., all of which act with much power on carnivorous animals and hardly at all on herbivora. All are suited to persons who are disposed to excesses at table, have strong constitutions, dark complexions, firm flesh, though occasionally disposed to obesity. The *All. sat*. patient is rather a gourmand than a glutton. It suits persons who eat a great deal more than they drink. In the mental sphere there is anxiety and impatience. Fears he won't recover; that he won't be able to bear any medicine; fear of being poisoned. Teste has cured with it, chronic dyspepsia in old, fleshy persons, whose bowels were deranged by the least irregularity of diet; chronic bronchial catarrh with profuse mucous expectoration; periodical asthma; a case of permanent dyspnśa; rheumatism of hip; swelling of breasts after weaning. He also greatly relieved with it cases of diabetes mellitus. The pains of *All. s*. are mostly pressive from within outward (*i.e*., distensive, like those of *Bry*.); stinging, or stinging and burning; or stinging with paralytic weakness; or tearing and crampy. Sometimes they increase gradually to a high point and then decrease gradually (like *Sul*. and *Stan*.). Garlic has been used as a condiment from ancient times, and also as a remedy against worms and fevers. Though closely related to *All. cep*. it is incompatible with it, and not very like it in action. It produces headache in connection with digestive troubles and also with menstruation. Heavy headache, can hardly open eyes, > onset of menses, < after. Catarrhal ophthalmia returning every night on trying to read. Coryza, moist, dry, thin, fluent, with pressive pains above root of nose. Scurvy gums; sore mouth. *All. sat*. is one of the remedies for "hair" sensation: Sensation of hair on tongue < reading. (Many of the pains of *Cepa* are *thread-like*.) Copious sweetish saliva. The digestion is disordered by slightest irregularities in diet. Pressure in epigastrium and transverse colon > by pressure and sitting bent. The menses are

profuse. During menses there is soreness of vulva and thighs, mammć swollen and painful to touch. There are some characteristic respiratory symptoms. Bronchial catarrh with gelatinous, difficult expectoration. Cough, giving rise to most fetid breath like *Capsicum*. Cough when smoking. The hip is the seat of many rheumatic pains. Tearing in hip. Pain in psoas and iliac muscles < least movement, though he can lift the limb with the hands. The skin is sensitive, dry, shrivelled. Herpetic itching, burning, red or whitish spots on swollen surface. Baldness; scurf, skin peels off hand. The skin over joints is tight.

It is suited to fleshy people and those used to high living. Change of temperature <. Open air < chest complaints. Moist heat < pains in limbs. Damp cold weather = tearing and stinging in different parts of body. Reading < eye and mouth symptoms. Aggravation from reading is noteworthy. It is found also under *Cina*. The vertigo of *All. sat*. is brought on by looking long and steadily at anything: this is probably, in essence, the same modality as < by reading. Many symptoms are < in evening and night; also in the morning on waking. Sitting bent >; pressure < pains in abdomen. Every step = excruciating pain in intestines. Walking < pains in limbs.

Relations.—*Compare:* All. cep. (*which see*). Ornithogalum umbellatum (stomach affections); Bry., Caps. (fetid breath with cough), Coloc. (colic; hip-pain); Ign.; Kali bi. (ropy expectoration; hair on tongue); Rhus and Hyo. (fear of being poisoned); Lyc., Nux v., Seneg. *Antidoted by:* Lyc. *Complementary:* Ars. *Incompatible:* Alo., All. cep., Scilla.

Causation.—Drinking bad water. Gluttony.

SYMPTOMS.

1. Mind.—Sadness.—Weeping during sleep.—Fears he will never get well; fears he cannot bear any medicine; fear of being poisoned.—Sensitive.—Impatient.—Impulse to run away.

2. Head.—Vertigo on looking steadily at anything for a long time.—Short-lasting vertigo, and only on rising from a chair.—Heaviness in forehead, almost preventing him from opening his eyes.—Dull pain in occiput in morning, while lying on the back.—Headache: with mucus in the throat; before menses, ceasing when they occur and returning after; in dyspeptic subjects.

3. Eyes.—Catarrhal ophthalmia at night; smarting, burning lachrymation; agglutination; returns every night when he tries to read.—Tarsi sore with irritation.

4. Ears.—Catarrhal deafness.—Hardened ear-wax and crusts.

5. Nose.—Coryza rather dry than fluent, with pressive pain from above the root of the nose.—Smarting at junction of alć nasi and face.—Blowing blood from the nose in the night.

6. Face.—Lancinations on one side of the face.—Dry lips.

8. Mouth.—Tickling sensation in the lower teeth.—Swelling of lower gums.—During night, and in the morning, troublesome feeling as of a hair on her tongue; renewed on waking.—Tongue pale-red with effaced papillć.—Dryness of palate.—Very copious flow of sweetish saliva into the mouth in the forenoon, after meals; more esp. after supper and during the night.—Hot taste in mouth, proceeding from throat, strongly reminding him of garlic, immediately after taking the medicine, and returning after breakfast to such a degree as to cause a flow of saliva.—The symptoms of the mouth are < by reading.

9. Throat.—Sensation as of something cold rising in throat.—Sensation as of a hot and smarting vapour rising in the throat.—Mucous accumulations in the throat, in the morning, with heavy head.—Sticky feeling in throat with dryness, tickling, heat, and raw feeling in larynx.

10, 11. Appetite and Stomach.—Voracious appetite.—Great hunger from weakness of stomach without appetite.—Desire for butter.—Thirst; preventing sleep.—Burning eructations, after a meal.—Eructations exciting copious salivation.—The slightest deviation in diet disturbs the bowels and digestion.—Complaints from bad water; from gluttony.—Chest complaints < after eating.—Burning in stomach, which is not painful when not touched, but is very sensitive to the least pressure.—Lancinations.—Weight in stomach which prevents sleep.—Pressure inward as from a stone in epigastrium.—Pressure in upper abdomen; > by sitting bent and pressing with both hands; pain became unendurable on walking out.

12. Abdomen.—Wind colic; twistings and pinchings round navel.—Incomplete (as if interrupted) emission of fetid flatus.—Every step on the pavement caused excruciating pain as if the intestines would be torn apart, > by lying down.—Everything seemed to drag downward.—Weight in hypogastrium, immediately after a meal, without urging to stool or urinate.

13. Stool and Anus.—Expels flatus.—Stool first fecal, then watery and hot.—Involuntary stools.—Diarrhśic stool, 3 a.m., preceded, accompanied, and followed by cuttings in abdomen and loins.—Normal stool immediately after a meal.—Stool delayed from morning until after dinner, great urging; with stool heat in rectum.—Constipation with almost constant dull pain in bowels.—Hćmorrhoids.—Prolapsus ani.—Worms.

14. Urinary Organs.—Urine increased.—Whitish very abundant urine, becoming cloudy from nitric acid.—A kind of diabetes.—Dark brown with copious sediment.—Lessened urine.

16. Female Sexual Organs.—Menses too early; headache and dizziness lessen as the flow becomes established.—Suppurating pimples on vulva.—Suppurating pimples on vulva during menses.—During menses extensive excoriations of skin of internal portions of thighs.—Bright red spots, with itching and smarting on the inside of the labia majora and at entrance of vagina.—(Said to be injurious during pregnancy and nursing.).—Retained placenta.—Dull stitches in r. mamma.—Breasts swell after weaning.—Swelling of breasts, sensitive to touch.—Eruption of red blotches between the breasts and around the nipples.

17. Respiratory Organs.—Difficult respiration as if sternum compressed.—Periodic asthma.—Painful irritation of windpipe when coughing.—Scraping in larynx exciting dry cough.—Almost continuous mucous râles in bronchi.—Cough seeming to come from stomach.—Cough giving rise to perceptible fetid smell.—Dry cough after eating.—Morning cough, after leaving his bedroom, with extremely copious mucous expectoration.—Sudden paroxysms of hard, dry cough while smoking, compelling him to desist.—Great difficulty in expectorating a glutinous mucus.—Expectoration of thin, yellowish, purulent-looking blood-streaked mucus of putrid odour.—Cough < bending head; after eating; by open air.

18. Chest.—Pain in l. chest with dark urine.—Darting pain in the chest which prevents sleep.

19. Heart.—Leaping beats of the heart.

20. Back.—Red spots like ringworm on the back.—Itching between shoulders.—Tearing pain in sacrum.—Cutting pain in sacrum in morning.—Simple pain in coccyx.

22. Upper Limbs.—Painful feeling of contraction in arm.—Pain in forearm; seems as if paralysed.—Burning, then moisture in palms.—Some red spots appear on hands.—Skin peels off the hands.—Tearing pains in fingers extending below the nails.

23. Lower Limbs.—Rheumatism of hip.—Tearing pain in hip.—Intolerable pain in common tendon of psoas and iliacus muscles; < from least movement; trying to cross legs causes him to cry out; but this causes no pain if he lifts the limb gently with his hand; < 8 p.m. in bed, cannot then change his position or sleep.—Weakness in lower limbs; painful weariness in the thighs.—Legs do not grow as rapidly as the rest of the body.—Pain as from a sprain in ankle-joint; in toe-

joints.—Tingling in feet; burning in soles; stiffness in feet.—Pains < by changes of temperature.

25. Skin.—Skin sensitive.—Loose; dry; wilted skin.—Swelling with itching and burning.—Red spots; on hands, on chest, on back.—Herpetic itching burning, red or whitish spots on a swollen surface.

26. Sleep.—Drowsiness after a meal.—Muscles twitch on falling asleep.—Sleep prevented by: stitches on chest; weight on stomach; thirst.—Coldness felt in sleep and awakening him frequently.—Dreams: of water and storms; of rapid transit from place to place; anxious; continuing after waking.

27. Fever.—Chilliness on one side only.—Shivering before midday and in evening.—During coldness, redness of face.—Vomiting during the fever.—Sweat in afternoon.—Sweat: acrid; causing itching; fetid.

Alnus.

Alnus rubra, Tag Alder; and Alnus glutinosa, Common Alder of Europe. N. O. Cupuliferæ. (Not to be confounded with certain of the Rhamnaceæ, which are also popularly called "Alders.") Tinctures of the bark, and of the young shoots.

Clinical.—Amenorrhœa. Glands, enlarged. Gleet. Hæmorrhage. Herpes. Impetigo. Leucorrhœa. Prurigo. Psora. Rheumatism. Scrofula. Syphilis.

Characteristics.—*Alnus* is an unproved remedy. The bark-tincture of *Alnus rubra* is used by eclectics as an "alterative" in scrofulous conditions, in chronic skin affections, rheumatism, syphilis, gravel, and gleet. The plant grows in swamps and marshes. Among its indications are: Leucorrhœa with erosions which bleed easily; amenorrhœa with burning pains from back to pubis. Hæmaturia. Cooper, who has used a fresh plant tincture of *A. glutinosa*, gives: "Pain in rectum after stool"; and "heaviness in head as after being drunk the night before" as having been produced by it. Hale gives as particularly indicating it: "Eruptions on the skin alternating with diseased conditions of mucous membrane."

Relations.—*Compare:* Hamam., Stilling., Phytol., Kali i., Merc., Nux v., Bapt. Alternating conditions, Alo., Pod., Kali bi.

Aloe.

Aloe socotrina. Common Aloes. N. O. Liliaceæ. Trituration or solution in spirit of the gum.

Clinical.—Abdomen, plethora of. Anus, affections of. Bronchitis. Colic. Constipation. Cough. *Diarrhœa. Dysentery*. Gleet. Gonorrhœa. *Hæmorrhoids*. Hysteria. Lumbago. Onanism, effects of. Phthisis. Proctitis. Prolapsus uteri. Prostate, affections of. Sacrum, pain in. Tenesmus.

Characteristics.—*Aloe* is one of the oldest and most famous drugs. It is in worldwide use as a purgative at the present day, and forms a leading ingredient in a large number of patent medicines for regulating the bowels and menstrual functions. The habitual use of these medicines leads to all kinds of pelvic ailments, and the fact that *Sulphur* antidotes *Aloe* accounts for the success of *Sul*. as a medicine to commence with in many chronic cases where purgatives have been used. *Aloe* resembles *All. s*. somewhat closely. It causes congestion of various parts, especially abdomen, pelvic organs, and head. A periodicity enters into many of its complaints. There is a periodic headache which alternates with lumbago. As winter approaches each year itch manifests itself. *Aloe* has the antipsoric property of throwing out internal complaints to the skin. Among the leading mental symptoms are: Bad humour, especially in cloudy weather. Dissatisfied and angry with himself < when constipated. Aversion to labour. Lassitude alternating with great mental activity. Among the other head symptoms are: Darting pains in left temple < every step. Carroll Dunham cured a heavy frontal incapacitating headache in an old man occurring in winter and alternating with a diarrhœa which occurred in summer when he was free from headache. A peculiar dull, heavy, pressing pain in forehead, but which indisposes to, or incapacitates for, all exertion, especially intellectual. Heaviness in the eyes as with *All. s*. Pressure in vertex and forehead as from a weight. Compelled to make the eyes small during pain in forehead. There are yellow rings moving before eyes. As there are illusions of sight, so there are cracklings in the ears. One symptom is very peculiar: just after getting into bed, sudden explosion and clashing in left ear, as from breaking of glass; the clink of the glass was heard at the bottom of the head and extended thence toward the right ear. *Aloe* exerts its most marked influence on the abdominal and pelvic organs. It causes uneasiness and pains in liver region. Fulness, heaviness, heat and inflammation. The whole abdomen is painfully sensitive to touch. Rumbling. Feeling as of a plug wedged in between pelvis and coccyx. Sudden and continued desire to go to stool. Desire for stool after each meal (*Ars., Chin., Lyc., Pod., Trombid.; while* eating, *Fer.*). Rumbling and cramp in abdomen before and during stool. The hard stool falls out without being noticed, urging to stool whilst passing water; every time on passing water feeling as if stool would pass. A hard stool may be passed involuntarily. A child, constipated from birth, screams all the time he is being held to stool, cannot pass it, even after

enema; yet when not trying passes solid pieces in bed without knowing. Cured with *Alo*. 200 (Nash). Involuntary soft stool while passing wind. With the diarrhœa, flatulency, pinching in abdomen, pain in back and rectum and chilliness. Flatus offensive, burning, copious; much flatus with small stool. Burning in anus with passing of flatus. Stools like mush, bright yellow, grey, hot, undigested. Mucus and blood in fæces. Profuse with jelly-like lumps. Watery stools < standing or walking. Watery stool containing lumps "like frog-spawn." Bilious yellow fæcal, bright yellow diarrhœa, great rumbling in bowels and escape of much wind, < morning; evening; in damp weather; from overheating; after cold taken in damp room; after chagrin. Diarrhœa driving one out of bed very early in morning (*Sul*). Diarrhœa with sense of insecurity (*Phos*.) Faintness after stool; with cold sweat. Griping may (*Nux v*.) or may not (*Merc*.) cease after stool. Heaviness, heat, pressing, burning in rectum. Itching, burning in rectum. Itching, burning, pulsating as from fissures at anus. After stool: cutting feeling as if more would come protruding piles. Hæmorrhoids: protrude like a bunch of grapes constant bearing-down in rectum bleeding; sore; tender, hot; > by cold water. Carroll Dunham has cured incontinence of urine in an old man with enlarged prostate with the *Aloe* diarrhœa. Increased sexual desire in males, with erections. Penis shrunk and testicles cold. In females pain in hypogastrium as if menses coming on. Labour-like pains drawing into legs. Menses too early and too profuse. During menstruation: headache > by application of cold water; earache; pain in small of back; pressing down in rectum. Fulness in pelvis. Leucorrhœa of bloody mucus preceded by colic. Pain in small of back, < sitting or awaking at night, > moving about. Lumbago alternating with headache. There is < in afternoon, especially of symptoms of mucous membranes. Many symptoms, again, appear in the evening < yawning, or masticating. There is a diarrhœa < in the early morning (like *Sulph*). Diarrhœa < immediately after eating; < walking (*Æsc., Thuj.*), or standing (*Sul*.). Like *Phos*., it has feeling of insecurity on passing wind or before stool. Symptoms are < from heat; in hot, damp weather; > from cold applications; in cold weather. > From passing flatus. *It is suited to*: old people; to women of relaxed phlegmatic habit; to persons of lymphatic or hypochondriac temperament.

Relations.—Aloe is related to: All. cep., All. s., Agave, Scilla, Colch. *It is antidoted by:* Sul., Mustard, Camph. relieves for a while, Lyc., and Nux v. relieve the earache. *It resembles:* Sul. in many symptoms, and is of equal importance with Sul. in chronic diseases with abdominal plethora; Ailanth. (dull, frontal headache); Gambog. (diarrhœa); Ammon. mur. (abdominal and diarrhœic symptoms); Nux v. (gastric, abdominal and uterine troubles: bad effects of sedentary habits); Æsc. (hæmorrhoids); Merc. (dysentery); Pod. (alternations between head symptoms and abdominal symptoms).

Causation.—Sedentary habits.

SYMPTOMS.

1. Mind.—Anxiety and ebullition of the blood.—Restlessness, fear, fear of man.—Bad humour, esp. in cloudy weather.—He is dissatisfied and angry about himself; more so when he is constipated or when he suffers from pain; better in the open air.—Suffering makes her frantic, often loses consciousness.—Seems to have a presentiment of approaching death.—Angry, revengeful, wishes to destroy the object of her wrath.—Aversion to labour.—Great disinclination to mental labour; it fatigues him.—Disinclined to move.—Exhaustion, alternating with activity.—Children much enlivened, chat and laugh.—Annoying amorous thoughts present themselves.

2. Head.—Giddiness and starting.—Giddiness, with anxiety when moving; he feels as if he were sitting too high (after dinner).—Dulness in the forehead with chilliness.—Dull headache across the forehead, with heaviness in the eyes, and nausea.—Pressure in the forehead and vertex, as from a weight (and in occiput).—Pressing pain above the eyes.—Congestions to the head, compelling one to sit up.—Headaches are worse from heat and better from cold applications.—Stitches above the eyebrows.—Pressing out of the temples, with flickering before the eyes and heat in the face.—Stitches in the temples at every step.—Headache after pain in the abdomen; after (an insufficient) stool; worse from heat, better from cold.—Sensitiveness of the scalp (in small spots).—With the pain in the forehead the eyes become small; patient compelled to close them.

3. Eyes.—Congestion to the eyes; pressure in the orbits.—Lachrymation.—Pain deep in the orbits, as if in the muscles; worse r. side.—Occasional attacks of twitching of l. eyelids during the day, spasmodic jerk of whole body on failing asleep at night.—Flickering before eyes, with heat of the face.—Yellow rings moving before the eyes.—Compelled to make the eyes small, with pain in forehead; heaviness of eyes, and nausea.

4. Ears.—Hates musical sounds and noises, they set her all in a tremor.—Earache.—Stitches in the ears; first in the l. ear, afterwards in the r.—Internal and external heat of the ears.—Cracking in the ears when reading aloud or moving jaws.—Just after getting into bed, sudden explosion and clashing in l. ear, as from breaking of glass; the clink of the glass was heard at the bottom of the head and extended thence towards r. ear.

5. Nose.—Redness of the nose in the open, cold air.—Coldness of the point of the nose.—Bleeding of the nose in bed after awaking.—Dryness of the nose in the morning in bed.

6. Face.—Heat of the face when excited, or during headache.—Face pale during cloudy weather.—Lips dry; cracked; swollen; pustular; sore at corners.

7. Teeth.—Great sensitiveness of a decayed molar tooth (lower) r. side.—Teeth yellow.

8. Mouth.—Concave edges of teeth seem sharp, and hurt the tongue.—Metallic taste, with dry, irritative hacking.—Lips dry, peeling off, cracked, bleeding.—Yellow spots in mouth; yellow ulcers on the tongue.—Tongue painful.—When moving the tongue, stitches from below to the tip.—Dry tongue and mouth; with increased thirst and greater redness of the lips.—Tongue red and dry.—Accumulation of saliva in mouth.

9. Throat.—Throat rough, scraped, hot, as if burnt.—Pain, when yawning, masticating solid food; worse in the evening and in the morning, when awaking.—Thick lumps of tough jelly-like mucus in the throat and posterior nares.

10. Appetite and Taste.—Taste bitter, sour, like ink.—Aversion to meat; desire for juicy things (fruits); for salt food.—Hunger unusually keen in the evening.—Thirst while eating, after eating, and during the night.—After eating, flatulency, pulsations in the rectum, and sexual irritation.—As soon as he eats anything, must hurry to stool.—Sweats after drinking.

11. Stomach.—Pain in the stomach after drinking water.—Sour things disagree with him.—Vomiting of blood.—Eructations; tasteless, bitter, sour.—Pain in the pit of the stomach from a mis-step.—Painful pressure under the sternum.

12. Abdomen.—Tension in the region of the liver.—Uneasiness, heat, pressure, and tension in the region of the liver.—Pain in the liver, < on standing, so that he bends forward.—Stitches in the liver, when drawing a long breath.—Congestion to the abdomen.—Sensation of fulness, heaviness, heat and inflammation.—The whole abdomen is painfully sensitive to the touch.—Abdominal muscles pain when touched, when pressing at stool, or on rising from a recumbent position.—Bloated abdomen, more on the left side, or along the colon, worse after eating.—Distension of the abdomen, esp. the epigastrium; with flatus moving about.—Pulsation in the region of the navel.—Pain around the navel, worse from pressure.—Rumbling in the abdomen.—Discharge of much flatulency, burning, smelling offensive, relieving the pain in the abdomen; after each meal, in the evening and morning, before stools.—Much soreness in the whole abdominal cavity, so that a false step hurts clear to the pit of the stomach.—Cutting in the abdomen with disinclination to go into the open air, which relieves the pain.—Heaviness, fulness, and pressing down in the pelvis.—Sensation of a plug wedged in between symphysis pubis and coccyx; with urging.

13. Stool and Anus.—Sudden or continued urging to stool; < immediately after eating; feeling of fulness and weight in pelvis; only flatus passes.—Desire for a stool after each meal.—Rumbling and cramp in the abdomen, before and during stool.—The hard stool falls without being noticed.—Involuntary soft stool, while

passing wind.—With the diarrhœa, flatulency, pinching in the abdomen, pain in the back and rectum, and chilliness.—Diarrhœa very early in morning, driving him out of bed.—Stools like mush; thin, bright, yellow, grey, hot, undigested.—Frequent stools of bloody water: violent tenesmus; fainting; passing of mucus in jelly-like lumps, much flatus.—During the stool, congestion to the head and red face, or hunger.—Heaviness, heat, pressing, burning in the rectum.—Want of confidence in sphincter ani; rectum seems full of fluid which feels heavy, as if it would fall out.—When passing wind, feeling as if stool would escape with it.—Itching, burning, pulsations, pain as from fissures, at the anus; preventing sleep.—Hæmorrhoidal tumours, protrude like bunches of grapes, very painful, sore, tender, hot, relieved by cold water.—Fulness and pressing out in anus.

14. Urinary Organs.—Increased secretion of urine, esp. at night.—Frequent urging; burning when urinating.—Every time on passing urine feeling as if some thin stool would escape with it.

15. Male Sexual Organs.—Sexual desire increased; < after awaking; after eating; in the evening.—Erections in the morning, and after passing water.—Involuntary emissions during the siesta; towards morning; followed by sexual excitement, micturition, and stool, and restless sleep.—Penis shrunk, and testicles cold.

16. Female Sexual Organs.—Pain in the hypogastrium, as if menses were coming on.—Fulness and heaviness in the uterine region, with labour-like pains in the loins and groins; worse standing.—Labour-like pains drawing into the legs.—Catamenia too early, and too profuse.—During menstruation, headache, which is relieved by the application of cold water; earache; pain in the small of the back; dragging down in the rectum; fulness in the pelvis.—Fluor albus.—Leucorrhœa of bloody mucus, preceded by colic.—Prolapsus uteri with the above symptoms.—Uterine hæmorrhage about the change of life.

18. Chest.—Congestion to the chest.—Breathing impeded by stitches in the 1. side of the chest.—Expectoration of blood.

20. Neck and Back.—Lumbago, alternating with headache.—Pain in the small of the back, < sitting, or when awaking at night; > moving about.

21. Limbs.—Cold hands with warm feet.—Lameness in all the limbs.—Pricking, dull twitching, drawing pain in the joints (fingers, knees, elbows).—Sensation of weakness in the joints of the hands and feet.—Pains of short duration, as if bruised or dislocated (l. forearm, r. shoulder-blade, l. ribs).

24. Generalities.—Great weakness, and weak pulse after vomiting.—Bad effects from sedentary habits.—Esp. suitable for persons of a lymphatic or hypochondriac temperament.

25. Skin.—Itching, esp. of legs.—Spots which, when scratched, pain and become sensitive.

26. Sleep.—Cannot get to sleep for a long time, thoughts crowd upon him and keep him awake.

27. Fever.—Chills, with coryza, in the cold open air; at stool, shivering. Heat in spots, on scalp or face. Sweat: smells strong; offensive on genitals; at night, after drinking.

Alstonia Constricta.

Bitter Bark. Native Quinine Bark. (New South Wales and Queensland. A. scholaris, growing in India and Malabar, is probably identical in effects.) N. O. Apocynaceæ. Tincture of the bark.

Clinical.—Debility. Diarrhœa. Dysentery. Fevers. Lactation, excessive, effects of. Leucorrhœa. Lienteria. Palpitation. Pregnancy, vomiting of Uterus, debility of.

Characteristics.—*Alstonia* was proved by Dr. Cathcart, of Australia, who found it produce great debility and prostration, or low fever, often with diarrhœa. It is exceedingly bitter. Dr. Dietz, who has tested it clinically, gives the following as leading indications: Debility from lack of digestive power in the stomach or general assimilative power. Tongue generally has a dirty white coat, especially at base; though it may be clean. It has no relation to purely nervous debility. The nausea is < morning, before breakfast, or at irregular times, especially when depending on reflex irritation from disturbance of pelvic organs. An empty, gone feeling in stomach or whole abdomen at irregular times; generally with tearing, dragging-down sensation in hypogastrium, as if everything would escape from the vulva. Pale face, flushing on least excitement. Food seems to remain in stomach a long time undigested. Diarrhœa of undigested food immediately after eating; has to leave table before finishing a meal. (This symptom was cured by *Alston. c*. 1x in a patient who had taken much iron, after the failure of *Puls., Sep., Sul., Sil., Nat. m*.) Leucorrhœa and bearing-down < by walking. Swollen feeling in right ovarian region. Sharp shooting pain from left side of stomach through to back (spleen). At the moment she falls asleep, wakes up suddenly, becoming wide awake, with violent palpitation of the heart and throbbing in blood-vessels, accompanied by a numb sensation of the tongue. < By exertion. > Lying down.

Relations.—*Compare:* Alet. f., Lil. t., Helon., Cedron, Ceanoth., China, Fer.

Alumen.

Potassic-Aluminic Sulphate. Potash Alum. $K_2 SO_4 Al_2 S0_4 24H_2O$, Trituration of the pure crystals.

Clinical.—Alcohol, effects of. *Anus, affections of*. Bronchitis. Catarrh. Cancer. Chilblains. *Colic*. Constipation. Cough. Diabetes. Diarrhœa. Dysentery. *Eczema. Eyes, affections of*. Eyes, operations on. Gleet. Gonorrhœa. Hæmorrhages. Hoarseness. *Lead colic*. Leucorrhœa. *Locomotor ataxy*. Noma. Œsophagus, stricture of. *Paralysis*. Polypus. Pruritus. Scurvy. Skin, rough. Strabismus. Teeth, operations on. Throat, affections of. Typhoid, hæmorrhage in. Ulcers. Uterus, affections of. Uvula, relaxed. Vaginismus.

Characteristics.—The well-known astringent action of *Alum*. gives a leading indication for its use in practice. Sensations of dryness and contraction are prominent in various parts. I have frequently removed with it constipation of the most aggravated kind, as in cases of cancer of uterus and rectum. Stools as hard as stones is the leading indication. No desire for stool for days. Contractive sensation in abdomen and pelvis, and retraction of abdomen as in lead colic. Paralytic states with the sensation as if bound with a tight band. On the other hand, it is equally available for the states of relaxation, which corresponds with its secondary action: sluggish action of muscles; hæmorrhages of various kinds; large clots in typhoid; relaxed mucous membranes; relaxed uvula; hoarseness and bronchial affections; diarrhœa. Catarrhal conditions prevail throughout the remedy. The *Alum*. patient is very sensitive to cold; exposure to air roughens and chaps the skin. Slight scratches bleed. Bleeding after tooth extraction. There is a tendency to indurations whenever inflammations occur, hence: scirrhous indurations; indurated glands. Pains are insupportable. Attacks come and go suddenly; periodic. Many complaints come on during sleep. There is nightmare. Turning on r. side > vertigo. Lying on r. side brings on palpitation. There is sensitiveness to all sorts of weather changes, and especially to cold. W. P. Wesselhœft has cured bronchitis characterised by scraping from upper sternum to throat, with free expectoration of thick, yellow mucus, paroxysmal cough, morning cough with gagging, aching in chest and in the lower part of the back in region of lower ribs. A peculiarity was the profuse expectoration with the scraping, for scraping coughs are usually dry. *Cepa* had helped the preliminary sneezing and coryza.

Relations.—*Antidoted by:* Cham. (cramps in abdomen); Nux v., Ipec. (nausea and vomiting); Sul. *Antidote to:* Lead poisoning; calomel and other mercurials; Aloe (vomiting blood). *Similar to:* Alumina, Aluminium; Alo. (rectum); Caps. (long uvula); Fer. (relaxed abdominal walls, prolapsed uterus); Kali bi. (stringy discharges); Merc. (prolapsed uterus, vagina, rectum; tenesmus); Merc. cor., Mur. ac., Nit. ac., Nux v., Op., Plat. (lead poisoning); Plumb., Rhatan., Stan., Sul., Sul. ac., Zinc (eyes).

Causation.—Bad news. Operations on eyes; on teeth.

SYMPTOMS.

1. Mind.—Unpleasant news cause nervous tremors.—Lectophile.

2. Head.—Vertigo, lying on his back, with weakness in pit of stomach, > opening eyes, > turning on r. side.—Headache > drinking cold water.—Burning pain and weight on vertex > ice-cold cloths pressed on the part.

3. Eyes.—R. eye squints towards nose.—Prolapse of iris after cataract operation.—Sees double by candle-light.

4. Ears.—Purulent otorrhœa.

5. Nose.—Nasal polypus l. side with rough skin all over the face and body and neuralgic headache.—Lupus or cancer on rose.

8. Mouth.—Teeth loose.—Gums swollen, inflamed, spongy.—Teeth and gums rather scorbutic.—Profuse hæmorrhage after extraction of tooth.—Tongue dry (black); burning in evening; sour feeling; stitches < at tip (scirrhus of tongue).—Spreading ulcers in mouth; noma.—Profuse ptyalism.

9. Throat.—Tonsils inflamed.—Uvula elongated, relaxed.—Spasm of œsophagus, liquids can scarcely be swallowed.—Prickly sensation both sides of throat and great dryness with constant desire to drink.—Scraping in throat with cough.—Throat covered with mucus, causing cough.—Spitting up of a coagulated lump of blood morning after rising.—Enlarged indurated tonsils from frequent colds.

11. Stomach.—Vomits large quantities of glairy mucus or tough, colourless slime, and often everything he eats; blood; habitual hæmatemesis in hard drinkers.—Sinking sensation > by eating.—Burning heat > by drinking cold water.—The pain is > by pressing on stomach.

12. Abdomen.—Colic < by walking, with fulness and heaviness. (Potter's colic, lead colic.).—Abdomen retracted, > from pressure.

13. Stool and Anus.—No desire for stool for days.—Violent, ineffectual urging to stool.—Stool hard as stones.—Difficult stool, with some blood and subsequent beating in anus.—Diarrhœa ichorous, mixed with blood of an offensive odour, great exhaustion.—Very exhausting diarrhœa.—Masses of coagulated blood in typhus.—Putrid dysentery.—Pains from rectum going down thighs.—After stool: scarcely endurable pain with scirrhous induration in rectum.—Itching in anus all evening.

14. Urinary Organs.—Urine voided with difficulty.—(Diabetes mellitus.).—Oily iridescent film on urine.

15. Male Sexual Organs.—Erections while at dinner.—Frequent emissions.—Gonorrhœa; gleet.—Shooting pain from middle line of belly, as along a thread, down into penis.—Cutting pain in l. side of penis.

16. Female Sexual Organs.–Affections of l. ovary (with constipation), insupportable pain.—Weight and prolapse of uterus.—Indurations, ulcerations, of uterus, even scirrhus.—Copious leucorrhœa.—Leucorrhœa and emaciation, with yellow complexion.—Menses scanty, watery.—During menses hands weak.—Vagina very sensitive, and narrowed by swellings of various size (vaginismus).—Pruritus.—Flooding after childbirth; sore, inflamed nipples; cancer of the breasts.

17. Respiratory Organs.—Hoarseness < from talking.—Aphonia.—Croup and bronchitis.—Cough from tickling in larynx caused by talking.—Scraping from upper sternum to larynx, thick, yellow sputa, paroxysmal cough.—Ropy sputa.—Atonic hæmoptysis.

19. Heart.—Pain from heart to lower part of r. lung.—Strong pulsation through whole body.

25. Skin.—Proud flesh; chilblains; indolent ulcers.—(This remedy is particularly applicable to old people.)

27. Fever.—Slow pulse.—Furious delirium.

Alumina.

Argilla. Oxide of Aluminium. Pure Clay. $AL_2 O_3 3H_2O$. Trituration.

Clinical.—*Anus, affections of*. Boils. Bubo. Catarrh. Chlorosis. *Constipation*. Constipation of nursing infants. *Cough*. Disappointments, effects of. Dysentery. Dyspepsia. Eczema. Eyes, affections of. Fissures. Fistula. Headache. Hernia. Irritation. Leucorrhśa. Locomotor ataxy. *Nails, affections of*. Otorrhśa. Ozćna. Paralysis. Pregnancy, constipation of. Pregnancy, toothache of. Prostatorrhśa. Rhagades. Scrofula. Strabismus. Taste, disordered. Tetters, moist and itching. Throat, affections of. Trismus. Typhus.

Characteristics.—Like its relative *Alumen, Alumina* produces irritation of mucous membranes with dryness or extreme secretion and paralysis of involuntary muscles, as those of the rectum and of the nervous and muscular systems

generally. *Alumina* paralyses the bowels in the same way as lead, to which it is an antidote. Even small and soft stools are passed with great difficulty. Pregnant women and children are liable to this kind of constipation. A very prominent characteristic is that a person must *strain at stool* in order to *urinate*. Teste groups *Alumina* with *Sepia* and *Copaiva*. He considers it the chronic of *Sepia* as *Silic*. is of *Puls*. Paralysis of the internal rectus muscle of the eye, causing squint. Also ptosis. Drawing, pains appear in the limbs; a sensation of constriction in several organs. Several painful symptoms show themselves after the midday meal, and continue till evening, when they disappear or are replaced by others which begin only then. On the other hand the pains which appear in the morning or in the evening are abated after eating. Trembling, convulsive movements of the limbs and head; spasms, with tears and laughter alternately. There is exaltation of the whole nervous system. Trembling of the whole body with desire to lie down, which, however, < the fatigue. Great general fatigue, even after a short walk, but chiefly after speaking. Frequent stretching while sitting. The nates go to sleep while sitting. Drags legs (especially left). Many of the symptoms of locomotor ataxy are reproduced by *Alumina*, and it is one of the most useful remedies in that disease. Bśnninghausen cured a case with *Aluminium*. Sluggishness of action is characteristic of this medicine; urine is slow in passing; great straining to pass even a soft stool; can only evacuate bowels when standing; has to strain as if abdomen and rectum were paralysed. (*Caust*. has defecation only when standing; but the straining is less.) Sensations are slow in being transmitted to the centres. In the mental sphere there is confusion. "When he says anything he feels as if another person had said it, and when he sees anything, as if another person had seen it, or as if he could transfer himself into another, and only then could see." A feeling of hurry follows, things do not move fast enough. Impulses. Suicidal tendency, a sudden impulse from seeing blood on a knife. Sad; apprehensive; wants to getaway; fears going crazy. Mental symptoms mostly come on in the morning on waking. Vertigo on closing eyes. Catarrh is a very general feature. Catarrh with dryness of mucous membranes. The throat looks parched and glazed. The nose is stopped, feels dry, and the point of it is cracked. *Alm*. has the fish-bone sensation in the throat on swallowing. There is profuse leucorrhśa running down to the heels, sometimes excoriating. As with the mucous membrane so with the skin: itching eruptions < from warmth of bed. Eruptions of all kinds, indurations, ulcers. Granular eyelids. Hairs fall out all over body. The skin of the face feels as if covered with dried white of egg, or as if a cobweb was on it. Fissures. *Alumina* has some curious symptoms in the digestive sphere. There is a craving for dry rice and dry food. It has < from starch, especially the starch of potatoes. < From salt, wine, vinegar, spirits. Burning pains in the back are very characteristic, and especially a sensation as if a hot iron were forced through the lower vertebrć.

There are pulsations in various parts. The pains go upward. Upper left; lower right affected (opposite of Lyc.).

The symptoms are < on alternate days; periodically. Guernsey describes a characteristic periodicity thus: "Patient gets along nicely for a time, then, from no apparent cause, gets worse for a time, then better, and soon a relapse may be worse than the original illness, another relapse not so bad, and so on with longer intervals between." In afternoons; at new or full moon; < in the morning on waking. < After coitus. < In cold air, out of doors; in dry weather. They are > by cold washing; by moistening the part; by warm food or drink; by warmth generally.

Alumina is *suited* to persons of sedentary habits who suffer from chronic ailments; to constitutions with diminished animal heat. Psoric persons. The action of *Alumina* is slow in developing, and the remedy must not be changed quickly.

Relations.—*Compare:* Aluminium (which has been used on indications taken from the proving of Alumina). *Antidote to:* Lead. *Antidoted by:* Bry., Camph., Cham., Ipec. *Complementary:* Bry. *Follows well:* Bry., Lach., Sul. *Similar to:* Alumen; Arg. nit. (clergyman's sore throat, paralysis); Bar. c. (hypochondriasis of aged; constipation); Bry., Calc.; Cham. (useful as an intermediate remedy); Con. (old people; squint) Ferrum (chlorosis; relaxed abdomen; disgust for meat, &c.) Fer. iod. (profuse transparent leucorrhśa); Graphit. (chlorosis, skin rough, chapped, itching nails; blepharitis, &c.); Ipec.; Kali bi. (clergyman's sore throat) Lach. (sad on waking; climaxis); Lyc. (clergyman's sore throat) Pic. ac., Plumb. (colic, constipation) Puls. (tearful, peevish; head, &c., > in open air; ozćna; taste lost averse to meat; scanty menses complaints at puberty; lack of animal heat; soles of feet sore, < walking; toes red, itching, &c.); Ruta (loss of power of internal recti); Sepia (irritable, tearful; ozćna; scanty menses; puberty prolapsus uteri; inactive rectum weakness in urinary organs, &c.); Sil., Sul., Zinc. (inner canthus granular lids; < from wine).

Causation.—Anger. Disappointments. Lifting. Bodily exertion.

SYMPTOMS.

1. Mind.—Humour morose, sad, with despair of cure.—Involuntary tears.—Anguish and anxiety as if one were threatened with some fatal accident, or had committed some crime.—Time passes too slowly; intolerable ennui; an hour seems half a day.—Seeing blood on a knife she has horrid ideas of killing herself, though she abhors the idea.—Apprehensions.—Disposition to be frightened.—Air sorrowful and morose.—Ill-humour, with unfitness for labour.—Disposition to be angry.—Obstinate, and contradictory humour.—Taking everything in bad part.—Humour changeable; at one time bold, at another timid.—Weakness of memory.—Distraction, inadvertence, and incapability of following up an idea.—Absence of ideas.—Blunders in speaking.—Great vivacity of apprehension, alternately with inadvertence, and deprivation of sight and hearing.—Sensation, as if self-consciousness were outside the body.

2. Head.—Dizziness, whirling sensation, everything turns in a circle, most frequently so as to cause falling; sometimes with nausea, or tension in the nape of the neck; < before breakfast; on opening eyes; when closing eyes.—Easily made drunk.—Vertigo, with white stars before the eyes.—State of intoxication after smoking tobacco, or after having taken the weakest spirituous drink, and principally in the morning.—Headache, as if one were dragged by the hair; or smart shootings in the brain, with inclination to vomit.—Stitches in the brain with nausea.—Heaviness of the head, with paleness of face, and fatigue.—Compressive cephalalgia.—Headache with constipation.—Headache from chronic catarrhs in the head.—Beatings and pulsations in the head.—Congestion of blood towards the eyes and nose, with pressure in the forehead and epistaxis, with a chill when walking in the open air; better after lying or eating.—Headache < while walking in the open air; > lying down, the head being softly supported.—Itching in the forehead.—Pain, as from excoriation, in the scalp.—(Moist crusts on the temples.).—Dryness of the hair.—Itching in the scalp, with profuse desquamation.

3. Eyes.—Pressure on the eyes, which renders it impossible to open them.—Pressure, as from a grain of sand, in the corner of the eye, in the evening.—Sensation of burning in the eyes, with nocturnal agglutination of the lids, and diurnal lachrymation.—Sensation of coldness in the eyes and eyelids on walking in open air.—Swelling of the eyelids.—Paralysis of the upper lid.—Hordeolum.—Eyelashes fall out.—Inclination to stare.—Spasmodic drawing of the lids at night, with pain in the eyes on opening them.—Stitches in the eyes.—Photophobia.—Confusion of sight, as from a mist, and sparkling before the eyes.—Yellow aspect of all objects.—Coloured reflection round the candle in the evening.—Strabismus of both eyes; esp. loss of power of internal rectus.—Glittering before the eyes on shutting them.—Far sight.

4. Ears.—Shooting pains in the ears, principally in the evening, or at night.—Stitches in the (l.) ear (evening).—Itching and sensation of burning in the ears.—Frequently, in the evening, heat and redness of one ear.—Purulent discharge from the ears.—Crackling noise and buzzing in the ears, chiefly when chewing, but also on swallowing.

5. Nose.—Pain in the root of the nose and in the forehead.—Pain, swelling, and redness of the nose.—Soreness and scabs in the nose, with discharge of thick yellow mucus.—Discharge of solid, yellow, greenish substances from the nose.—Accumulation and flow of a thick and yellowish matter from the nose.—Nostrils ulcerated.—Furunculus in the nose.—Ozćna.—Blood from the nose when blown.—Epistaxis.—Sour smell in the nose.—Smell either exceedingly delicate or weak.—Coryza, with defluxion from one nostril, with stoppage of the other.—Coryza, alternately dry and flowing.—Stoppage of the nose.

6. Face.—Aspect gloomy, morose.—Rapid alternation of redness and paleness of countenance.—Copper-like redness of the cheeks, as in drunkards.—Tingling on the

face, and tension of the skin, as if it were covered with white of egg dried.—Sensation of swelling, and of heaviness of countenance.—Bulbous swellings and blood-boils on the face and nose.—Red painful spot on the cheek.—Roughness of the skin of the face, esp. over the forehead.—Heat and redness.—Itching and eruption of small pimples over the face.—Moist scabs on the temples.—Shooting and drawing sensation in the cheek-bones.—Transient heat of face.—Furunculus in the cheeks.—Leprous tubercles in the face.—Lips dry, and cracked, with exfoliation of the skin.—Swelling of the lips.—Pimples and scabby eruptions on the lips.—Swelling of the jaws, with tensive pain on opening the mouth, and on chewing.—Shortening of the lower jaw.—Involuntary spasmodic twitching of lower jaw.—Trismus.

7. Teeth.—Pains in the teeth on chewing, or in the evening, in bed.—Tearing in the teeth, extending to other parts, as far as the zygomatic bone, and in the forehead and temples.—Piercing pain in the carious teeth.—Ulceration of the roots of the teeth.—Ulcer on the gums.—Swelling of the gums, which have a tendency to bleed.—Sensation as though the teeth were elongated.—Odontalgia, with nervous irritation, as after a chill, or after the use of Chamomilla.

8. Mouth.—Pain as of excoriation in the mouth, palate, tongue, and gums, which almost prevents eating.—Small ulcers in the mouth.—Dryness of the mouth, chiefly on waking.—Accumulation of a sweetish or sour saliva in the mouth, like actual salivation.—Musty or putrid smell from the mouth.—Tongue loaded with a black or yellowish coating.—Expectoration of bloody mucus.

9. Throat.—Sore throat, which is aggravated in the evening and at night, but which is ameliorated on taking anything warm, and which is less painful in the morning.—Contractive, or shooting pains in the throat, chiefly on swallowing.—Difficult deglutition, as if the gullet were contracted.—Cramp-like pressure and squeezing in the śsophagus.—Sensation, as if the śsophagus were contracted when swallowing a small morsel of food; it is felt until it enters into the stomach.—Pains in throat < evening and night.—Swelling of the tonsils.—Great dryness in the throat.—Accumulation of a thick and viscous mucus in the throat, with difficult expectoration.—Painful ulcers in the fauces, secreting a brown, badly-smelling pus.—Sensation of a splinter in the throat.

10. Appetite.—Sweetish taste, or a taste of blood in the mouth.—Rough taste, astringent, or bitter and insipid.—Bulimy.—Irregular appetite; at one time too strong, at another too weak.—Food appears insipid, esp. in the evening, and principally bread and meat.—Distaste for animal food.—Craving, with want of appetite.—Appetite for dry foods; for starch; chalk; clean white rags; charcoal; cloves; acids; coffee or tea grounds; dry rice.—Desire for hot drinks.—Desire for vegetables, for fruits, and spoon meats.—After having eaten, and chiefly in the evening, hiccough, pressure in the stomach and abdomen, distaste, nausea, and

lassitude.—Potatoes excite nausea and bitter eructations.—All irritating things immediately start cough.

11. Stomach.—Eructations, sour and acrid, and pyrosis.—Chronic tendency to eructation.—Frequent eructations.—Nausea, with faintness.—Frequent nausea and inclination to vomit, chiefly when speaking, when re-entering the room after walking, and in the morning.—Pressure in the stomach, chiefly in the evening and after eating.—Contraction and constriction in the region of the stomach, often as far as the throat and breast, and sometimes with difficult respiration.—Pain, as from excoriation, in the pit of the stomach and in the hypochondria, principally on turning the body in bed, or on stooping.

12. Abdomen.—Painful sensibility of the liver on stooping, followed sometimes by shooting pains.—Colic whenever the body is exposed to a chill.—Colic with drawing pains, principally in the evening, or at night, or after dinner.—Cutting pains, chiefly in the morning.—Flatulent colic.—The colic is ameliorated by heat applied externally.—Painter's colic.—Protrusion and incarceration of inguinal hernia.

13. Stool and Anus.—Stools hard, unfrequent, and scanty, sometimes with pain in the anus.—Constipation and obstruction of the abdomen.—Difficult stool, from inactivity of the intestines.—Difficult evacuations from want of peristaltic motion of the intestines; even the soft stool can only be passed by great pressing.—Constipation of pregnant women, children, and painters.—No desire for, and no ability to pass stool, until there is a large accumulation.—Hard, knotty stools, covered with mucus.—Small stools, sometimes like pipe stems (also Phosphor.).—Voiding of much slimy matter with the stool, during the continuance of colic.—Loose stools with pain in the belly and tenesmus.—Green stools in summer complaints.—Loss of blood during and after the stools.—Burning and itching in the anus.—Blind piles protrude, become moist, with lancinating pain; are hard and itch.—Pressure and shooting pain in the perinćum.

14. Urinary Organs.—Pain in the kidneys, principally when walking or stooping.—Sensation of weakness in the bladder and in the genital parts.—Eager desire to make water, with increased aqueous evacuation, accompanied sometimes by a sensation of burning.—Frequent ineffectual desire to urinate: the urine can only be passed during a stool.—Urine less copious, with red and sandy sediment.—Nocturnal urination.—Urine turbid, white, as if chalk had been put into it.—Thick whitish sediment in the urine.

15. Male Sexual Organs.—Sexual desire increased; or suppressed.—Frequent pollutions and nocturnal erections.—Copious secretion behind the glans.—Excoriation of the prepuce.—Contractive pain in the spermatic cord, with contraction of the testicle.—Hardness and painful sensibility in one of the testes.—Flowing of prostate fluid during difficult stools.—Pains in the perinćum,

during coition, and while the erection continues.—Increase of suffering after pollution.—Sweat on perinćum at beginning of erection or during coition.

16. Female Sexual Organs.—Menstruation scanty, too early, and of short duration; blood pale.—Menses too copious, with inflation of the abdomen.—During the period of menstruation, sleep agitated, with many dreams, great activity in the circulation, heat in the face, headache, and palpitation of the heart.—Before and during menstruation, colics, headaches, and other painful affections.—After the menses great fatigue.—Corrosive leucorrhśa, with smarting in the genital parts.—Leucorrhśa before or after the menses, and often with trembling, fatigue, and colic.—Leucorrhśa flesh-coloured, or aqueous, and causing stiffness of the linen; transparent mucus before and after menstruation.

17. Respiratory Organs.—Dry cough, principally in the morning, sometimes, at a later period, followed by expectoration.—Short, dry cough.—Dry, short cough, esp. in the morning, with dyspnśa.—All irritating foods immediately start cough.—Cough with impeded respiration, or with pains in the head and at the nape of the neck.—Catarrh of the larynx and of the bronchi, with scraping sensation in the throat.—Sudden taking cold, with loss of voice, morning and evening.

18. Chest.—Oppression at the chest.—Dyspnśa when seated.—Nocturnal pressure in the chest.—Sensation of constriction in the chest, chiefly when seated in a bending attitude, or while stooping.—Pain, as of excoriation, in the chest and in the pit of the stomach, sometimes with cough.—Pain in the sternum on touching it.

19. Heart.—Palpitation and shocks at the heart.—Palpitation every morning on waking; irregular beats.—Wakes 4 to 5 a.m. with anxiety at heart, > immediately after rising.

20. Neck and Back.—Itching of nape of neck and throat.—Stitches in nape.—Pain in the loins during repose.—Pain like that of a bruise in the loins and in the back.—Shooting pains in the back.—Sensation in the back as if it were pierced with a hot iron; through the lower vertebrć.

22. Upper Limbs.—Pains in the arms while kept hanging down or extended on the bed.—Tearing in the arms from the shoulder to the fingers.—Pain, as if burned by a hot iron, in the elbows and the fingers.—Paralytic weight in the arms.—Swelling of the arm and the fingers.—Tetters and moist scabs on the forearms.—Mealy desquamation of the hands.—Fissures in the hands, which readily bleed.—Gnawing pain under the nails, sometimes with tingling in the arm.—The nails have a tendency to break when they are cut.—Panaris.

23. Lower Limbs.—Stiffness, numbness, and insensibility of the legs at night.—Sensation of tearing in almost all parts of the lower limbs.—Great heaviness and weakness of the legs, chiefly in the hips.—When sitting, the nates go to

sleep.—Drawing pain in the knees when going upstairs.—Tension in the calves when walking, and cramps on crossing the legs and on resting the toes on the ground.—Pain as from fatigue in the joints of the feet when seated.—Pains in the soles of the feet when walking.—Cold in the feet.—Itching and redness in the toes, as if from chilblains.—Sensation of burning under the toes.

24. Generalities.—Pulling pains in the limbs.—Sensation of constriction in internal organs (śsophagus, stomach, rectum, bladder).—Aggravation of suffering from potatoes, and often on alternate days.—Several painful symptoms show themselves after dinner, and continue till evening, when they disappear, or are replaced by others, which begin only then.—The pains which appear in the morning, or in the evening, are abated after eating.—Suffering in consequence of disappointments.—Trembling and convulsive movements of the limbs, and even of the head.—Great heaviness in the legs and arms.—Spasms, with tears and laughter alternately.—Exaltation of the whole nervous system.—Illusive sensations; some parts of the body feel as if they had become larger.—Trembling of the whole body, with desire to lie down, which, however, increases the fatigue.—Great general fatigue, even after a short walk, but principally after speaking.—Frequent stretching while sitting.—Want of vital heat.

25. Skin.—Miliary eruption in the arms and legs, with much itching and serous bleeding after having scratched.—Chapped skin and bulbous eruptions.—Boils or itching exanthemata on perinćum.—The slightest injuries of the skin smart, and become inflamed.—Leprous pimples.—Scurf and tetters, which itch or become moist chiefly in the evening.—Renewal of cutaneous symptoms at every new or full moon.—Rhagades.—Brittle nails.

26. Sleep.—Sleep tardy, and wakefulness before midnight.—Restless sleep, always awakening with palpitation of the heart.—Nocturnal sleep too light, agitated, with frequent starts.—Deep sleep, not refreshing, with a desire in the morning to sleep more.—Frequent waking in the night.—Dreams frequent, anxious, with talking, laughter, tears, lamentations, groans, and somnambulism.—Dreams of horses, of quarrels, and of vexations, of fire, of marriages, of spectres, of death, of robbers.—Dreams, with fear of death after waking.—Nightmare.—During the night, anxiety, agitation, and tossing about; or heat, toothache, headache, spasms, and oppression of the chest, or diarrhśa, with pains in the stomach, and shiverings.—After sleep, on waking in the morning, mind weighed down by vexatious ideas, or nausea, with insipidity in the stomach, and feverish movements.

27. Fever.—Pulse full and accelerated.—Shivering, even when near a fire, and at night, in bed, not able to warm oneself.—Fever towards the evening, with predominant chilliness.—Sensation of cold immediately after taking soup at midday.—During the day chill; during the night, fever.—Heat in the evening which spreads from the face; at times only over the r. side of the body.—Perspiration at

night, or more towards morning, in bed; mostly in the face, or on one side of the face.—Inability to perspire.

Ambra Grisea.

Ambergris. Most probably a morbid product found in the Sperm Whale or floating in the sea. (Not to be confounded with Amber-Succinum.) Trituration and tincture.

Clinical.—*Anus, irritation of*. Asthma. Bashfulness. Brain, softening of. Cardiac asthma. Convulsions. *Cough. Deafness*. Emaciation. Epistaxis. *Face, pimples on*. Hysteria. Jaundice. *Menstrual irregularity*. Music, intolerance of. Nervousness. Nymphomania. Pruritus vulvæ. Puerperal convulsions. Ranula. Reaction defective. Spleen, pain in. Tympanites.

Characteristics.—*Ambra* produces faintness (*Moschus*), nervousness, jerks, and twitches. Reflex action is increased. The patient has an embarrassed air; the bashful state is very characteristic in certain connections. Embarrassed in company. Cough worse when many people are present. As if in a dream. Forgetful. There is defective reaction in nervous patients. Sensation of icy coldness in abdomen. The pelvic organs are painfully influenced. There is voluptuous itching on the scrotum and some rawness below the thighs in the male. In the female there is discharge of blood between the periods at every little accident, as straining at stool or extra work. Severe itching on pudenda. During urination, itching, tickling, burning of vulva and urethra. Nymphomania, with discharge of bluish white mucus. In childbed, obstinate constipation and tenesmus with bashfulness; cannot make the attempt to stool if any one is present, even the nurse. There is a tickling, spasmodic cough. Cough excited by speaking. Night cough. Cough followed by copious belching. Itching in chest. The limbs go to sleep easily. Finger nails are brittle. Sweat on slightest exertion. Sleepless from worry; retires tired, wakeful as soon as touches pillows. < Warmth; > cold; < from overlifting. Suited to excitable, nervous children. Nervous persons. Lean persons. Old persons. Nervous bilious temperament. "Dried-up" nervous persons. "Thin, scrawny women."

Relations.—*Compare:* Moschus (faintness; hysteric asthma); Castor., Asaf., Pso. and Valer. (defective reaction); Coca (bashfulness); Kali bro., Nux v. (increased reflexes); Calc., Nat. c. (coldness in abdomen); Act. r. (night cough); Nux v. (thin, nervous persons); Ars. (Asthma); Phos. (asthma, nervous excitability; "irritable weakness"; slender build); Bov. (flow of blood between the periods); Lach. and Sep. (< from overlifting); Coff., Chi., Ign., Sul., Puls., Staph.; Sec. (scrawny women). *Antidoted by:* Camph., Coff., Nux v., Puls., Staph. *Antidote to:* Staph. (especially the voluptuous itching of scrotum); Nux v.

SYMPTOMS.

1. Mind.—Great restlessness.—Hastiness and nervous excitement when talking.—Memory impaired.—Slow of comprehension, has to read a sentence over and over again, and then does not understand; thinking powers are quite impaired.—Melancholy.—Inconsolable sadness.—Anxiety, esp. in the evening.—Timidity.—Despair, and disgust of life.—Repugnance to laughter and conversation.—Excitement, agitation, and precipitation, chiefly during intellectual labours.—Imagination occupied with grinning faces and wanton images.—Absence of ideas.—Difficult conception.—Embarrassed manner in society; bashful.

2. Head.—Attack of dizziness, esp. on walking in the open air.—Vertigo, which compels the patient to lie down, with a sensation of weakness in the stomach.—In the morning, headache as after a nocturnal debauch.—Sensation of weakness in the head, with external shivering.—Pressive pain in the head, every two days, with heat in the head, burning in the eyes, and paleness in the face.—Pressure in the forehead, with fear of losing one's reason.—Pressing pain in the forehead and vertex, with heat in the head, with pale face on alternate days, with fear of losing his senses.—Pressive squeezing, with perplexity, principally in the forehead and occiput.—Congestion of blood in the head, esp. on hearing music.—Acute sensation of drawing in the head, with ulcers on the scalp.—Dartings in the head.—Pain in the head, as if caused by a strain from lifting a weight.—Pain in the scalp on its being touched, with falling off of the hair.—The scalp feels sore in the morning, when awaking: this is followed by a sensation of numbness, extending over the whole body.

3. Eyes.—Pressure on the eyes, with heaviness, and a sensation as if the eyes were too deep in the head, with a difficulty of opening them in the morning.—Insufferable tickling round the eyes.—Itching in the eyelid, as if a sty were being formed.—Inflammatory redness of the sclerotica, with injection of the vessels.—Confusion of sight, like a mist, and obscurity before the eyes.

4. Ears.—Acute sensation of drawing in the ears.—Tension in the ears.—Crawling and tickling in the interior of the ears.—Tinkling and buzzing before the ears.—Increasing deafness; deaf in one ear, roaring and whistling in the ear.

5. Nose.—Spasms in the alæ nasi.—Nasal hæmorrhage, principally in the morning.—Clots or dry blood in the nose.—Frequent sneezing.—Dryness and stoppage of the nose, with pain, as of excoriation.—Dry coryza.—Chronic suppression of the nasal mucus.

6. Face.—Redness and heat, sometimes transient, of the face.—Jaundiced face.—Convulsive movements in the muscles of the face.—Tickling and itching titillation in the face, with eruption of pimples; the same in the forehead, and in the

region of the whiskers.—Red spot on the cheeks, cramps in the lips.—Cramp of the lower lip.—Hot lips.

7. Teeth.—Drawing, shooting pains, chiefly in the teeth that are carious, and esp. in the open air; increased by taking anything hot.—Drawing toothache, sometimes on one side and then on the other.—Bleeding of the gums.—Painful swelling of the gums.

8. Mouth.—In the morning, on waking, dryness and sensation of numbness in the mouth, in the tongue, and in the lips.—Itching and smarting in the mouth.—Vesicles in the mouth, with burning pain.—Nodosities, with pain, like excoriation, below the tongue.—Tongue coated white, or greyish yellow.—Offensive smell in the mouth (in the morning).—Ranula.

9. Throat.—Sensation as of a plug in the throat, with difficulty of swallowing.—Strangling in the pharynx on swallowing food.—Gnawing and scratching in the throat.—Accumulation of greyish mucus in the throat, with inclination to vomit, and vomiting when hawking.—In the morning, hawking up of mucus.—Asthma in lean and delicate old people.

10. Appetite.—Insipid or rancid taste.—Want of appetite.—Sourness in the mouth after taking milk.—After eating, pressure at the pit of the throat, as if a piece had stopped there.—After eating, cough and gaping, and a feeling as if food did not go down into the stomach.—Entire thirstlessness.

11. Stomach.—Imperfect eructations.—Frequent eructations, often sour, or with the taste of the food which may have been taken.—Hiccough after having smoked tobacco.—Pyrosis principally in the evening, or on walking in the open air.—Nausea and vomiting.—Pressure and cramp-like pain in the stomach.—Sensation of burning in the stomach and in the precordial region.—Heartburn from drinking milk.

12. Abdomen.—Hepatic pains, most frequently pressive.—Pressive pain in the epigastrium and in the abdomen.—Heaviness in the belly.—Tension and inflation of the belly, principally after eating and drinking.—Compression in the belly, sometimes in the morning.—Cutting pains in the evening, after midnight, and in bed in the morning with diarrhœa.—Pain, as from a wound in the abdominal muscles, on coughing and on turning the body.—Pain in the spleen, as if something were torn off.—Sensation of coldness in abdomen, sometimes on one side only.—In the evening sensation of drawing in the abdominal muscles.—Incarcerated flatus.—Flatulent colic in the night.

13. Stool and Anus.—Constipation and tardy stools.—Fruitless desire to go to stool, with anxiety, and incapability of enduring the approach of any person.—Irregular intermittent stools, often only every two days.—Soft, loose,

clear-brown stools.—After the stool, pressure in the abdomen.—Flowing of blood with the stool.—Hæmorrhoidal excrescences in the anus.—Itching and tingling in the anus and in the rectum.—Itching, smarting, and stinging at the anus.

14. Urinary Organs.—In the morning, after getting up, an urgent desire to make water.—Increased secretion of urine, chiefly at night and in the morning.—Increased secretion of urine, much more than the amount of the fluid drunk.—Urine of a yellowish-brown, and turbid, with brown sediment.—Reddish cloud in the urine.—Urine tinged with blood.—Acid smell from the urine.—Burning in the orifice of the urethra.

15. Male Sexual Organs.—Voluptuous excitement of, and itching in, the genital parts, without external cause.—Burning in the region of the spermatic vesicles.—Erections in the morning, with numbness of the genital parts.—Sore rawness between thighs.—Violent erections in the morning, without sexual desire, with numbness of the parts.

16. Female Sexual Organs.—Menses too early; and too profuse.—Discharge of blood between the periods.—During menstruation, increased swelling of varicose veins, with pressure in the legs.—Leucorrhœa thick, slimy, preceded by shooting pains in the vagina.—Running of white-bluish matter from the vagina.—The leucorrhœa more abundant at night.—Burning, pain of excoriation, and itching, in the sexual parts.—Violent itching, with swelling of the external parts.

17. Respiratory Organs.—Cough, with coryza, and expectoration of a whitish and salt mucus.—Nocturnal cough, excited by excessive tickling in the gullet, cough in the evening, with pain in the l. side, as if something were torn away.—Spasmodic cough from tickling in the throat with expectoration of yellowish, or greyish-white mucus, tasting salt or sour, in the morning; with expectoration in the evening.—Convulsive cough, with eructations and hoarseness.—On coughing, pressive headache in the temples.—Voice hoarse, harsh, with an accumulation of thick mucus in the air ducts.—Hoarseness and roughness of the voice, with accumulation of thick, tough mucus, easily thrown off by coughing.—Cough < by music.

18. Chest.—Breathing short.—Oppression in breathing.—Oppression felt in the chest, and between the scapulæ.—Breath fetid in the morning after waking.—Wheezing in the chest.—Painful oppression in the chest and in the back.—Pressure in the chest, chiefly in the region of the heart.—Sensation of rawness in the chest.—Itching in the chest, and in the thyroid gland.—Asthma of old people, and of children.—At night, trembling in the breast.—Palpitation of the heart, frequently when walking in the open air, with paleness of face, and pressure in the chest as if a lump were lodged there or as if the chest were obstructed.—Rheumatic pain, as from a bruise in the chest.

20. Neck and Back.—Pressive drawing pain in the nape of the neck, and in the back.—Shooting pain in the loins.—Stiffness in the loins after sitting long.—Heaviness in the back, with pain in the belly, as if the intestines were compressed.

22. Upper Limbs.—The arms become easily numbed, whether they are leant upon or used to carry something, or even in the night, with sensation of torpor.—Paralytic drawing, as from dislocation, in the shoulder-joints, in the elbows, in the fore part of the arms, and in the hands.—Trembling of the arms.—Pain in the bone of the elbow when touched.—Cramp in the hands on taking hold of anything.—Prolonged coldness of the hands.—Contraction of the fingers.—In the evening, attack of trembling in the thumb.—In the morning, the skin at the extremity of the fingers is wrinkled.—Nocturnal weakness of the fingers.—Itchy tetter between the fingers.—Itching in the palms of the hands.

23. Lower Limbs.—Sensation of torpor in the legs, with an unsteady walk.—Sensation of contraction in the (r) thigh, the limb seems to be shortened.—Nervousness of the legs.—Heaviness, stiffness, and weakness of the legs.—Cramps in the legs, and at night in the calves of the legs.—Acute drawing pain in the legs, from the os sacrum to the feet, with incapability of supporting the foot on the ground: the affected leg seems shorter than the other.—Excoriation in the hams, with pain, principally in the evening.—Tingling in the calves of the legs and in the feet.—Arthritic pains in the joints of the feet and in the great toes.—Tightness in the joints of the feet.—Pain, as of ulceration, in the soles of the feet when walking.—Burning in the soles of the feet.—Itching of the inside of the soles of the feet.—Swelling of the feet.—Shooting pains in chilblains on the toes.—Pain, as of excoriation, in the corns.

24. Generalities.—Infantile or other spasms.—Cramps and sensation of drawing in the muscles.—Tearing pains, chiefly in the joints, and often on one side only (from the small of the back through the r. leg).—Spasms and twitches in the muscular parts.—Susceptibility to numbness in various parts.—Many of the symptoms appear during sleep, and diminish after rising.—Many of the pains are mitigated by walking in the open air, or when lying on the part affected.—In the evening, and in a warm temperature, many of the symptoms are aggravated.—Sensation of drawing throughout the body.—Incisive pain in the hands and feet.—Inflation and pulsation over the whole body, with great weakness after walking in the open air.—Ebullitions and pulsations in the whole body, esp. after walking in the open air.—After having talked much, agitation and trembling all over the body, with restlessness.—Fatigue, esp. in the morning, in bed, and at night on waking.—Sensation of numbness and of torpor over the whole surface of the body, chiefly in the morning.

25. Skin.—Dry, itching burning.—Burning herpes.—Suppressed eruptions.—Itching, and sensation of burning in several parts of the skin, as from the itch.—Tetters and

itchy eruptions appear during the use of this medicine.—Dryness of the skin.—Burning tetters.

26. Sleep.—Inclination to sleep during the day.—Restlessness at night.—Worriment from business embarrassments.—Agitated sleep, in consequence of cold in the body, and a sensation of drawing in the limbs.—Sleep, with anxious dreams and reveries.—On sleeping, startings with fright.

27. Fever.—Pulse accelerated with ebullitions.—Chill in the forenoon, with weakness and sleepiness, better after eating.—Flushes of heat, returning every fifteen minutes, worse towards evening.—Feverish shivering in different parts, followed by heat in the face.—Transient heat, sometimes with anxiety at the heart.—Perspiration from slight exertion, esp. on the abdomen and on the thighs.—Nocturnal sweat, particularly on the diseased side, after midnight.

Ambrosia Artemisiæfolia.

Ragweed. Roman Wormwood. Hogweed. (America.) N. O. Compositæ.
Tincture of fresh flower heads and young shoots.

Clinical.—Coryza. Hay-fever.

Characteristics.—Dr. E. T. Marsh and another experimenter suffered severely from symptoms of coryza and hay-fever whilst observing the pollen of this plant. It should therefore be of service in similar affections.

Ammoniacum.

Gum-ammoniac, obtained from Dorema ammoniacum. N. O. Umbelliferæ.
Trituration of the gum.

Clinical.—Appendicitis. Asthenopia. Asthma. Bronchitis. Eyes, affections of. Glands, affections of. Heart, affections of. Hydrocele. Panaritium.

Characteristics.—Ill-humour is the prevailing mental feature of *Ammoniac*. It acts prominently on mucous membranes, causing first diminished and then increased secretion. There are stars and fiery points before the sight. Sees smoke in circles. Dim sight from a blow on the head. Dim sight from reading. Hydrocele. Heart beat too strong, < lying on left side. Great accumulations of mucus. Stitches are prominent in the provings. Stitches in the cæcum at 7 p.m., alternating with pains elsewhere. This should make it appropriate in some cases of appendicitis. There

are many rheumatic pains in the limbs and loins. There is marked sensitiveness to cold and < in cold weather. It is suited to bronchial affections in old people brought on by cold weather.

Relations.—*Compare:* Asaf., Coni., Cicut. (botanical relations); Ambra, Aur.; Arn. (effects of blow); Puls. (< lying on left side); Bell. and Ruta (eyes). *Antidoted by:* Arn., Bry.

SYMPTOMS.

1. Mind.—Temper sombre and taciturn; repugnance to everything; ill-humour, which induces discontent with everything that is done; incapacity for mental application.

2. Head.—Head confused, with incapability of mental labour; heaviness in the head.—Violent pains in the head.—A semi-lateral pressure in the forehead; pressure over the eyebrows.—A sense of confusion in the forehead, with dimness of sight; tearing sensation in the right side.—Pressure in the occipital region.—Pricking in the scalp.—Sensation of swelling at the occiput.—Itching, enforcing scratching of the parts affected, and tingling; pimples at the roots of the hair.

3. Eyes.—A sense of pressure, with tickling at the upper part of the globe of the eye; throbbing and tingling at the upper part of l. eye, followed by a sense of pressure.—Feeling of dryness in the eyes, and as of some foreign body under the upper lid of the l. eye.—Stars and fiery points floating before sight.—Sees smoke before him (amblyopia from a blow).—Dimness of sight at night, and chiefly in the morning, immediately on rising, with burning heat in the eyes.—Reading impracticable, at least without considerable effort.—Photophobia, although the weather may be cloudy.

4. Ears.—Tearing sensation at the exterior of r. auditory passage.—Gurgling in l. ear, on scratching the occiput. Roaring in the ears, with difficulty in hearing.

5. Nose.—Painful dryness in the nose on rising in the morning.—Increase of nasal mucus.—Sneezing, followed by an abundant flow of mucus from the nose.—Constant motion of alæ nasi.

6. Face.—Paleness of the face, with a sensation of uneasiness, preceded by frequent change of colour.—Drawing sensation in l. cheek-bone, towards the temple.—Throbbing in the inferior maxillary region, extending into the mouth.

8, 9. Mouth and Throat.—Dryness of the mouth and throat in the morning, on awaking.—Sensation of fulness in the back of the throat and gullet, accompanied by nausea.—Sensation, as of a foreign body in the throat, which incites efforts to swallow it.—Scraping and burning in the gullet and œsophagus.

11. Stomach.—Frequent risings.—Nausea, with inclination to vomit.—Taste clammy, insipid, or sweetish in the morning, bitter in the gullet, with loss of taste at end of tongue.

12. Abdomen.—Borborygmi, with sensation of confusion in the forehead.—Pinching pains.—Violent abdominal pains.—Painful pressure in the region of the pubis.

13. Stool and Anus.—Stools scanty; none until evening, or during two or three days.—Stool relaxed, of the consistence of pap; like pap after a meal.—Soft, with much wind, and preceded by borborygmi in the belly.—Mucous stools, sometimes preceded by shivering, and colicky pains which occasion writhing.—Liquid stools.—Diarrhœa, with mucous evacuations.—Pressure on the rectum.

14. Urinary Organs.—Urine profuse, containing much lactate of urea.—Burning in the urethra.—Passing drops of urine, after having micturated.

15. Male Sexual Organs.—Shooting pains in the right spermatic cord, and in its immediate neighbourhood.—Drawings internally.—Shooting pains at the root of the penis.—Itching in the pubic region.—Hydrocele.

17. Respiratory Organs.—Roughness of the orifice of the throat.—Constant tickling, without inclination to cough.—Bronchial affections of old people in cold weather.

18. Chest.—Respiration short, with heaving of the chest, and anxiety; quickened.—During inspiration, a sense of oppression, with lancinating pains in the l. side of the chest.—Pressure in the side.—Great uneasiness at the bottom of the chest, towards the back, on r. side, followed by pressure in the deepest part of the chest.

20. Back.—Weight and pressure in the lumbar vertebræ.—Darting pains in the loins, chiefly during inspiration.—Rheumatic pains at the l. of the pelvis.

22. Upper Limbs.—Shooting and tearing pains in the shoulder-joint.—Sense of weakness in l. arm.—Rheumatic pain.—A sensation of breaking, chiefly in the elbow and l. wrist; sometimes with a tearing pain in r. hand.—Swelling of the fingers.—Dragging sensation in the middle finger of r. hand.—Rheumatic pain in the forefinger of the r. hand.—Panaritium.

23. Lower Limbs.—Darting pains about the hips while walking, which induce limping; also in r. hip joint, on being seated.—Weakness in the legs.—Jerking pain in l. thigh, along the crural nerve.—Violent pain above the knee while walking.—Sensation of swelling in the knee, at night, on being seated, with pinching pains in the popliteal space.—Shooting pains in r. knee.—Stiffness of the

joint while walking.—Darting and pressive pains in the l. tibia.—Tearing pains in the joints of the foot.—Sense of pressure above r. ankle.—Cracking of the joints on moving.—Tearing, burning pains, in the metatarsal bones.—Heaviness in r. foot.—A tendency to stumble on going up stairs.—Pinching, burning, tearing, and drawing in l. foot.—Tingling in r. foot.—Swelling of the toes.—Burning and shooting pains in the great toe.—Drawing in the middle toe.

24. Generalities.—Swelling of the joints of the upper and lower extremities.—Neuralgia.—Lassitude after the least exertion.—Physical dulness and lassitude, with mental depression.—Inclination to sleep during the day, sometimes even on rising in the morning, with listlessness; yawning from emptiness of stomach, sometimes attended by weeping; sleep unquiet during the night, disturbed by dreams, unrefreshing; sleep delayed; numerous and sometimes painful dreams.—Coldness and shivering, tendency to perspire.—Pulse small, wiry, rapid, and hard.

Ammonium Aceticum.

Ammonia acetate. Spiritus Mindereri. $C_2 H_3 O_2 NH_4$. Aqueous solution.

Clinical.—Diabetes. Fever. Sweat.

Characteristics.—This is a very old medicine in great use in old-school practice for "fever mixtures." It has been experimented with by Wibmer, who experienced the following symptoms: "Scraping in throat. Increased warmth in abdomen; in the skin, especially of face. Heaviness in the head." It causes profuse flow of urine, said to contain sugar. "Bathed in sweat" is a leading indication.

Ammonium Benzoicum.

Benzoate of Ammonia. $NH_4 C_7 H_5 O_2$. Solution in distilled water.

Clinical.—Albuminuria. Dropsy. Gout. Indigestion. Ranula. Rheumatism.

Characteristics.—The chief symptoms of this salt (which has been proved) are: Head heavy, stupid. Urine scanty; smoky. Pight kidney sensitive to pressure. Gout with fluid in great toe-joint or with lithates. The right side is most affected.

Relations.—It is *similar* in its action to the Ammonias and to Benzoic acid. Also to Gnaphal. (gouty concretions), Caustic., Tereb., Urtica.

SYMPTOMS.

3. Eyes.—Feeling of swelling and soreness, apparently in the puncta and saccus lachrymalis.—Lids swollen.

8. Tongue.—Swelling under tongue, r. side, like ranula.

11. Stomach.—Eructation of food without acidity, with apparent weakness of digestion, or acid eructations.—Increased warmth in stomach.

14. Urinary Organs.—Sensation of internal soreness on pressure in leaning the back against the cushioned back of a carriage in region of r. kidney.—Bloated face, eyelids swollen, head heavy, stupid; urine scanty smoky.—(Albuminuria.).—Urine smoky-looking, scanty, strong-smelling.

17. Respiratory Organs.—Increased mucus in larynx causes frequent hawking and spitting.

20. Back.—Pains across sacrum, with urgency to stool.

Ammonium Bromatum.

Bromide of Ammonium. (NH_4 Br.) Solution in distilled water.

Clinical.—Ciliary neuralgia. Corpulency. Coryza. Cough. Epilepsy. Kidney, pain in. Larynx, catarrh of. Nails, biting. Ophthalmia, scrofulous. Ovaries, affections of. Pharyngitis. Pterygium. Whooping-cough.

Characteristics.—This salt has been well proved by A. M. Cushing. The eyes and ovaries are markedly affected. In the morning the eyes are red and sore, with mucus in corners (< left eye). There is pain in left ovary, dull, with hard swelling. Chronic laryngeal catarrh of speakers. A sudden desire to cough—so sudden it causes strangling. Sudden short cough when rising in morning, from accumulation of mucus in throat. Cough at 3 a.m. The mucus of *Am. bro*. is apt to be stringy. It is indicated in epilepsy when the aura begins with a fainting or suffocating sensation at epigastrium, rising up both sides of sternum to throat. There is an irritable feeling under linger nails, > only by biting them The known conditions are: > warmth, warm drinks; < in open air, cold air. Many symptoms occur on waking, 3 a.m. Must walk about for fear of suffocation.

Relations.—*Compare:* Kali bro., Arg. n., Caust., Bufo, Cepa (coryza < in warm room); Lach. (< after sleep). Cough from accumulation of mucus in throat, Æsc. h., Atrop., Grat., Kre., Seneg.

SYMPTOMS.

1. Mind.—Feared he might die (with stomach symptoms).—Timid, discouraged; lack of self-confidence.—While writing mis-spelled words or numbers.

2. Head.—Sensation of band round head pressing hardest just above ears.—Pain in side of head (l.) near eye; as if a nail driven in.—R.—sided headache < by coughing.

3. Eyes.—In evening eyes (esp. r.) feet large, with constant blur before them.—Eyes as if sand in them.—R. eye feels as if bathed in hot water; stringy mucus in it.—Pterygium.—Eyes red and sore in morning, with white mucus in corners.—Lids swollen; droop, difficult and painful to raise; adhere.—Pains round eyes into head.—In evening, difficult vision and hemiopia.

5. Nose.—Sneezing on moving about in cold room, or on raising arms; thin discharge from r. nostril (next day thicker).—Sneezing on going into warm room; stoppage of nose in warm room.

8. Mouth.—Mouth and tongue smart severely as if just burned; morning.—Must hold mouth open when walking on account of heat in throat and lungs.—Stringy, tasteless mucus in mouth.—Tastes food eaten several hours before.

9. Throat.—During day filled with white sticky mucus, streaked with blood.—Throat sore, mottled look.—Preparing to swallow is painful, the act is not.—Sensation of hot air passing up throat, r. side, though stomach feels cold.—Fauces and tongue feel scalded.—Stinging and irritation in fauces with inclination to cough > by sneezing.

11. Stomach.—Belching > faint stomach.—Dyspnœa, with distress in upper epigastrium.

12. Abdomen.—Sharp twisting pain just above crest of r. ilium.

13. Stool and Anus.—Sudden urgent desire with loose stool.—Transient return of old hæmorrhoid.

14. Urinary Organs.—Feeling over r. kidney as if something were pressed hard against it; > by pressure, but leaving a pulling sensation.

16. Female Sexual Organs.—Dull, constant pain and hard swelling in l. ovary.

17. Respiratory Organs.—An almost continuous cough for hours, > lying down at night; sensation of tickling irritation with heat and burning.—Sudden desire to cough, coming on so suddenly it strangles one.—Sudden short cough when rising from bed in morning, from sensation of mucus in throat.—Tickling in trachea and

bronchial tubes, attended by cough and slight scraping in throat while coughing.—Waked 3 a.m. with cough.

18. Chest.—Waked 3 a.m. with pain from sternum to spine, > by changing position.

19. Heart.—After fatiguing walk, late in evening, irregular action of heart.

24. Generalities.—Malaise and fatigue < lying down, < after emission of flatus while urinating.—Nervous restlessness.—Pains in legs at intervals, < after motion.

27. Fever.—Chilly feeling in back of chest and nape of neck.

Ammonium Carbonicum.

Sal volatile. Sesqui carbonate of Ammonia. $_2[(NH_4)_2\ C0_3\ CO_2$. Solution in distilled water.

Clinical.—Asthma Bronchitis. *Cough*. Dislocations, pains from. Emphysema. Enuresis. Erysipelas. Gums, sensitive. Hæmorrhoids. Hysteria. Lungs, œdema of. Measles. Miliary eruptions. Nose affections. Parotitis. Rickets. Scarlatina. Spotted fever. Sprains. Sternum, pain on. Toothache. Uræmia. Whitlow.

Characteristics.—*Ammon. carb*. is a right-side medicine and a venous medicine. A condition of under-oxygenation underlies a large proportion of symptoms. Consequently it is a chilly medicine with great sensitiveness to cold open air, < in wet, stormy weather; from washing; from wet poultice; > by warmth. It is suited to stout women who readily take cold in winter. < At night: 3 a.m. It is also hæmorrhagic. There is the scorbutic condition of bleeding gums. Bleeding from the nose, especially in the morning on washing; after a meal. Bleeding piles; at every menstrual period bleeding from rectum. The menses are premature and copious, the blood being dark (colic and pains in loins, or toothache accompanying). Somnolence accompanies many conditions. Bloody expectoration accompanying the cough. Tickling cough. Asthma. Cough from 2 to 5 a.m. Anguish at heart: palpitation and faintness. Pain as from fatigue (hip-joint; legs, thighs). Pains as from dislocation or sprain (wrist, great toe). Pain as of contraction of tendons. Numbness and stiffness of arms and hands. The pains are ulcerative; shooting, digging. Miliary eruption. Swelling of glands. Headache < in morning; with nausea. Hammering, pressing, bursting; as if contents would start through forehead. Feeling of looseness of brain—as if it fell from side to side, whichever way the head was moved. Burning in eyes; dryness; black spots; sparks; myopia; cataract; catarrh. Muscular asthenopia from prolonged use of the eyes, with appearance of yellow spots on looking at white objects. Pterygium, A curious

symptom is: Inability to blow the nose, in children. Dry, stuffed coryza, < at night, breathes with mouth open. Boil on the tip of the nose. Skin of face tight, as if swollen. Foul breath. Toothache, pulling or starting (during catamenia). Sore throat, as of something sticking in it; scraping; spasm; difficult swallowing. Nausea, vomiting, fulness, water-brash, < after eating. Flatulence. Slow, hard evacuations in small pieces. Piles during menstrual period. Miliary eruptions. Dry tetters; excoriations; ulcerations, phagedenic. Restlessness; paralytic weakness. Great prostration, with falling temperature. Gout in great toe. Heel painful on standing. The venous under-oxygenated condition of the medicine again appears in the excessive sleepiness produced in the daytime. In the night there are dreams of spectres of death and attacks of anguish. The mental faculties are slow; weak memory; heedlessness, absence of mind. Sadness, disposition to weep. Timidity. Apprehensive. Ill-humour. Desperate and unruly. Dr. Gallavardin has cured uncleanness in bodily habits with *Ammon. carb*. The remedy is suited to scrofulous children, stout and sedentary women (most of the carbonates are suited to states of corpulency), women who are always having recourse to the swelling-bottle. Among the ameliorations there are > lying on stomach (*Nit. ac*.). > Lying on right side; on painful side. > From external pressure; in warm room; in dry air. There is < on bending down. Nose-bleed comes on when washing the face.

Relations.—Compare the Ammonias, Ant. t., Ars.; Aur. (crushing weight on sternum, but Aur. has less somnolence and less venous congestion) Lach. (to which Am. c. is *inimical*); Phos., Pul., Sul. *It antidotes* Rhus and stings of insects, poisoning from charcoal fumes. *Is antidoted by:* Arn., Camph., Hep., Vegetable acids, Fixed oils.

SYMPTOMS.

1. Mind.—Sadness, with disposition to weep, apprehensions and anguish, which often disappear towards the evening.—Fretting in the evening.—Anxiety with weakness and nightmare.—Timidity of character.—Disgust with life.—Ill-humour in the morning, and when it is bad weather.—Morose and passionate humour.—Character disobedient and unruly.—Excessive gaiety.—Heedlessness.—Great absence of mind and weakness of memory.—Tendency to make mistakes in speaking, in writing, or in calculating.—Impairment of the intellectual faculties.

2. Head.—Vertigo, on reading in a sitting posture, in the morning or in the evening; sometimes with nausea.—Obstinate headache.—Headache with nausea.—The headache often appears in the evening, after walking in the open air, or in the morning, or after a meal.—Pain, as of ulceration in the head, chiefly on moving the head, or on pressing it.—Hammering, pressure, and beatings in the head, with sensation as if its contents were going to start through the forehead, or the head were on the point of bursting; < after eating and while walking in the open air; > from external pressure and in the warm room; heaviness and beating in the

forehead after dinner.—Shootings at the base of the brain.—Headache, as if from carbonic acid gas.—Sensation as if the brain moved loosely in the skull.—Soreness of the scalp and of the hair.—Itching in the head.—Falling off of the hair.

3. Eyes.—Burning in the eyes, principally in the evening, or in the morning, with photophobia.—Sensation of cold in the eyes.—Hordeolum.—Nocturnal agglutination of the eyelids.—Dry excretion in the eyelids.—Affections from over-straining the eyes.—Muscæ volitantes.—Eyes weak and watery after reading or using them at fine work.—Yellow spots before the eyes on looking at white objects.—Inability to move the eyes.—Confused sight, with sparks before the eyes.—Double vision.—Myopia.—Cataract.—Black spots and bright bands before the eyes.—Weeping.

4. Ears.—Buzzing in the ears, particularly at night.—Roaring and tingling in the ears.—Hardness of hearing, with suppuration and itching of the ears.—Hard swelling of the glands of the neck, and of the parotid glands.

5. Nose.—Heaviness in the extremity of the nose on stooping, as if from congestion of blood.—Itching and purulent pimples in the nose.—Furunculus at the extremity of the nose.—Swelling, sensation of excoriation and painful sensibility of the nostrils.—Discharge of sharp, burning water from the nose.—Discharge of pus from the nose.—Excretion of sanguineous mucus.—Bleeding of the nose, particularly in the morning on washing, or after a meal.—Obstinate dryness of the nose.—Obstinate coryza.—Dry coryza and stoppage of the nose, chiefly at night, with danger of suffocation.—With long-continued coryza, he can only breathe through the mouth.

6. Face.—Face pale and bloated, with nausea and fatigue of body and mind.—Sickly complexion.—Heat in the face during intellectual labour.—Tension and acute dragging pains, with shootings in the right side of the face.—Tightness in the skin of the face, as if the face were swollen.—Hard swelling of the (r.) parotid gland.—Distortion of the features.—Eruptions on the face, with itching.—Furunculi on the cheeks.—Ephelides.—Tetter-like eruptions, with desquamation of the skin, on the cheeks, round the mouth, and on the chin.—Lips dry, cracked, burning, and bleeding.—The corners of the mouth and lips are sore, cracked, and burn.—Painful swelling of the sub-maxillary glands.—Itching eruptions, with soreness of the sub-maxillary glands.

7. Teeth.—Toothache on compressing the teeth, or after lying down in the evening, or when the air has penetrated to them, or during catamenia; the pains are, for the most part, drawing or starting, or shooting, or like those of ulceration, and they frequently extend into the cheeks and ears.—Aggravation from warm fluids, during the menses.—Pricking pain, esp. in the molar teeth; worse when masticating or touching the decayed tooth with the tongue.—Obstinate shooting pain in the teeth.—Caries, elongation, and chronic looseness of the teeth; rapid decay of the

teeth.—The edges of the teeth feel dull.—Inflammatory swelling, suppuration, and easy bleeding of the gums.

8. Mouth.—Redness, inflammation, pain as from excoriation, and sensation of swelling in the interior of the mouth; esp. the inside of the cheeks.—Eruption of vesicles in the mouth and on the tongue.—Vesicles on the tongue, at the tip, on the borders, burning, hindering eating and speaking.—Difficulty of speech, as if from weakness of the organs.—Great dryness of the mouth and throat, chiefly at night.—Accumulation of saliva in the mouth, and constant spitting.—Offensive smell from the mouth, perceptible to the patient.

9. Throat.—When swallowing, sensation as of a foreign body in the throat.—Sore throat, as if something were sticking in it, principally in the morning and evening.—Pain, as from excoriation and scraping in the throat.—Swelling of the tonsils, with difficulty in swallowing (tonsils bluish, much offensive mucus there).—Spasmodic contraction of the anterior muscles of the neck after drinking.—Putrid sore throat.

10. Appetite.—Taste of blood in the mouth.—Bitter taste, chiefly after eating, or after waking in the morning.—Acid taste of food and after having taken milk.—Metallic taste of food.—Much thirst.—Constant thirst.—Inability to eat without drinking.—Great craving and appetite.—Want of appetite in the morning.—When eating, one is soon satiated.—Repugnance to milk.—Excessive desire for sugar.—Dizzy vertigo, and heat in the face when eating.—After a meal, pyrosis, with scraping in the throat, and drowsiness.

11. Stomach.—Sour, or empty, or abortive risings.—Risings, with taste of food taken.—Pyrosis.—Risings, and vomiting.—Pain as from constriction in the stomach, with nausea, water-brash and chilliness > by pressure and by lying down).—Nausea and vomiting after eating, with pressure in the pit of the stomach.—Sensitive painfulness of the stomach, even to the clothing.—Violent sanguineous vomiting.—Fulness in the stomach, chiefly after a meal, with nausea, and great tenderness at the pit of the stomach.—Gastralgia.—Contractive pain in the pit of the stomach, when stretching.—Heat and sensation of burning in the stomach.—Heartburn after eating.

12. Abdomen.—Pressure, pain as from excoriation and burning in the hepatic region.—Piercing shootings in the liver, when seated in the evening.—Pain in the abdomen, with diarrhœa.—Contractive spasmodic colics, with nausea, and accumulation of water in the mouth.—Pain, as from commotion in the abdomen, when walking.—Noise in the abdomen.—Elastic swelling in the groin, like flatulent hernia.—Flatulent, painful colic.

13. Stool and Anus.—Constipation.—Difficult evacuations.—Slow, hard evacuations, in small pieces.—Stool difficult, hard, knotty.—Soft or loose slimy

evacuations, followed or preceded by cutting pains.—After and during an evacuation, discharge of blood from the anus. Hæmorrhoids in the anus, sometimes bleeding, with smarting pains.—Protrusion of hæmorrhoids from the rectum during the evacuation, with much pain afterwards.—Hæmorrhoidal tumours protruding before, during, and after stool.—Nocturnal burning and itching in the anus.—Excoriation between the legs and at the anus.

14. Urinary Organs.—Constant inclination to make water, even at night, with scanty emission.—Frequent desire to urinate, with continued pressure on the bladder.—Frequent and copious micturition, esp. in the evening.—Passing water at night, during sleep (morning).—Wetting the bed.—White, sandy urine.—Reddish urine, like water mixed with blood.—Emission of blood from the urethra.

15. Male Sexual Organs.—Excessive sexual desire, without lascivious ideas or erections; or want of sexual desire and repugnance to the other sex.—Frequent pollutions, and a sense of contracting, dragging, and heaviness in the testes.—Discharge of prostatic fluid, after a difficult evacuation.

16. Female Sexual Organs.—Swelling, itching, and burning in the (external) genital parts of the female.—Excoriation of the skin in the parts, and in the anus.—Premature and too copious menses, with emission of black and acrid blood.—Before and during the catamenia, colic and pains in the loins.—During the catamenia, toothache, pressure on the matrix, cuttings, acute drawings in the back and in the genital parts, desire to lie down, paleness of the face, shivering, coryza, and sadness.—Discharge of serum from the matrix.—Great weakness during the menstrual flow; hæmorrhoids < during.—Acrid, corrosive, or burning leucorrhœa, or watery.

17. Respiratory Organs.—Roughness and hoarseness, with difficulty of speech.—Inability to speak a loud word.—Catarrh, with hardness of hearing, and burning in the stomach.—Cough, with hoarseness.—Dry cough, as if from a feather in the throat.—Cough, with asthmatic oppression, particularly when in bed in the evening.—Tickling cough, with expectoration.—Cough only at night, or only by day, or in the evening, before going to sleep, or in the morning towards three or four o'clock; dry from tickling in the throat, as of dust.—Cough, with spitting of blood, with previous sweet taste and with great dyspnœa.—Cough, with stitches in the small of the back.—When coughing, shootings in the loins, in the sternum, or in the pit of the stomach.—Cough, with mucous and sanguineous expectoration, shortness of breath, and sensation of a weight in the chest.—Expectoration of pure blood, produced by coughing.

18. Chest.—Short breath, with choking, principally on going upstairs.—Asthmatic respiration, and dyspnœa, chiefly in the heat of a room, as well as after any exertion, sometimes with palpitation of the heart.—Nocturnal dyspnœa.—Painful sensation of spasmodic asthma, with short and dull cough.—Shootings in the chest

and in the sides, particularly when breathing, singing, stooping, walking, or at night, with inability to lie for any time on the side affected.—Feeling of fatigue in the chest.—Congestion towards the chest.—Heaviness in the chest, as from congestion of blood to the chest.—Burning in the chest.—Stitch in the heart, frequently.—Palpitation of the heart, chiefly after exertion, and sometimes with retraction of the epigastrium, and weakness in the pit of the stomach.—Shootings in the integuments of the chest.—Purple miliary eruptions and furunculi on the chest.

20. Neck and Back.—Pains in the lumbar region, and pains in the nape of the neck, mostly of a dragging nature.—Acute draggings from the side to the scapulary joint.—Painful swelling of the glands of the neck and of the axillary glands.—Goître.—Drawing tension in the back and in the loins.

22. Upper Limbs.—Arms and fingers dead and stiff at night, as well as in the morning, and when grasping anything.—Heaviness and paralytic weakness of the arms.—Acute pulling in the joints of the arms, of the hands, and of the fingers, > by the heat of the bed.—Pain, as from a sprain in the wrist.—Attack of trembling in the hands.—Swollen veins and bluish colour of the hands, after having washed them in cold water.—Exfoliation of the skin of the hands.—The skin of the hands becomes hard and cracked.—Cramps in the fingers.—Numbness of the fingers.—Swelling of the hands when the arms are suffered to fall down.—Swelling of the joints of the fingers.

23. Lower Limbs.—Tightness in the legs, as if the tendons were too short.—Jerking and contracting of the legs.—Great fatigue in the legs.—Pain, as from fatigue, in the coxo-femoral joint, and the thighs, particularly in bed in the morning; > by walking.—Pain, as if bruised in the thighs.—Cramps in the feet, in the calves of the legs, and in the tibiæ.—Jerking of the knees and legs.—Drawing pain in the legs, when seated.—Acute dragging in the joints of the feet, > by the heat of the bed.—Pain, as of ulceration, and shootings in the heels.—Sensation of burning in the feet.—Swelling of the feet.—Sweating of the feet.—Cold and shivering in the feet, chiefly on going to bed in the evening.—Pain (as from dislocation) in the great toe, principally in bed at night, on moving it.—Redness, heat, and swelling of the great toe, in the evening, as if from chilblains.

24. Generalities.—Pain, as from subcutaneous ulceration.—Pains, as of ulceration in different parts, or shootings and acute dragging, mitigated by the heat of the bed.—Pains, as of dislocation, drawing and tension of the joints, as if from contraction of the tendons.—The right side of the body appears to be more affected than the left side.—The pains for the most part appear either in the evening or at night, or in the morning.—General restlessness in the body in the evening.—Inclination to stretch out the arms and the legs.—Great fatigue felt from speaking much and from listening to another.—Weariness, bruise-like pain and great weakness in the limbs, chiefly when walking in the open air, or in the evening, sometimes with an inclination to lie down.—Repugnance to

exercise.—Convulsions.—Local inflammations.—Tetanus.—Scorbutic dyscrasia.—Tendency of the blood to decomposition.—Emaciation.—Great sensibility to cold.

25. Skin.—Violent itching here and there, with burning vesicles and pimples after scratching.—Miliary, chronic eruptions.—Redness like scarlatina on all the upper part of the body.—Scarlatina (malignant), dark red, sore throat, parotids and cervical glands much swollen, stertorous breathing, involuntary stools, vomiting.—Freckles.—Burning, acute shootings and drawings in the corns.—Excoriation of the skin (between the legs, and in the anus, and in the genital parts).—Desquamation of the skin (palms of the hands).—(Ganglia.).—Swelling of the glands.—Rachitis.

26. Sleep.—Sleepiness in the daytime.—Sleeplessness, and sleep delayed, esp. after going late to bed.—Sleeplessness till 4 a.m., and when falling asleep, perspiration.—Nightmare when falling asleep.—Frequent waking, with fright (great fear afterwards), and difficulty in going to sleep again.—Sleep full of dreams, both anxious and romantic, historical and lascivious.—Dreams of spectres, of death, of vermin, and of quarrels.—Disturbed and unrefreshing sleep.—At night, attacks of anguish, vertigo, congestion of blood in the head, cephalalgia, toothache, nausea, gastralgia, colic, inclination to make water, spitting of slimy matter, pains in the great toes and in the ganglia, shocks in the body, pains in the limbs, itching and pricking in the skin, restlessness, ebullition of the blood, dry heat, sweat, esp. in the legs, shivering and cold.

27. Fever.—Pulse hard, tense, and frequent.—Attacks of shivering in the evening.—Violent shivering with trembling, before going to sleep.—Feverish heat in the head, with cold in the feet.—Sweats, every night and towards the morning.—Perspiration in the morning and during the day, mostly on the joints.

Ammonium Causticum.

Ammonia. Spirits of Hartshorn. NH_4 OH. Solution in water.

Clinical.—Aphonia. Nephritis. Œsophagitis. Rheumatism. Sloughing. Thirst. Timidity. Ulcerations. Vomiting.

Characteristics.—The symptoms of caustic ammonia closely resemble those of the carbonate. The caustic nature of the drug is exemplified in the burning sensations experienced, especially in throat, gullet, and rectum. White patches on tongue and inner side of cheeks. There is intense thirst, and excessively violent ejection of stomach contents. Voice low, weak. Speech broken. Aphonia, with debility; or with burning rawness in throat. (A good all-round remedy in aphonia.) Great

oppression of breathing; the patient gasps for breath. As with the carbonate there is timidity—great tendency to take fright. Shiverings. In a case of poisoning in a man who took a mouthful of a strong solution of "household ammonia" by mistake there was great swelling of mucous membrane of mouth and throat, stertorous breathing, voice muffled and husky; later, cough with blood-stained expectoration. One night there was headache and delirium, and at the same time the urine contained albumen and hyaline casts. It has been used in muscular rheumatism of the shoulders and thighs. Hæmorrhages occur from mucous surfaces. Great excitement in evening.—< After eating or drinking.

Relations.—Compare the Ammonias, especially Amm. carb. *Antidoted by:* Vinegar and vegetable acids.

SYMPTOMS.

1. Mind.—Timidity.

2. Head.—Sensation as if brain protruded at centre, forward, and on both sides, and the skull was quartered, but without pain and without confusion of the head.

5. Nose.—Peculiar redness of skin over nose and frontal sinuses.—Nose stopped.—Watery coryza.

6. Face.—Extremely pale face, expressive of the greatest suffering.—Lower lip swollen three times its size; black coating in centre.—Mucous membrane of lips and nose destroyed.—Glands under angle of jaw, each side, swollen.

8. Mouth.—Profuse bloody salivation.—Burning and scraping at root of tongue and back of gullet.—Lips, gums, and tongue swollen.

9. Throat.—Burning and dryness of œsophagus; great difficulty in swallowing.—Uvula retracted, covered with white membrane.—Tonsils swallowing.—Uvula elongated and swollen.

11. Stomach.—Intense thirst.—Vomiting of mucus and blood and great tenderness over epigastric region.—Violent ejection of stomach contents by nose, and mouth.—Burning in track of œsophagus, none in stomach.

12. Abdomen.—Pains, tenderness, distension.—Borborygmi.

13. Stool and Rectum.—Copious bloody stools.—Tenesmus.

14. Urinary Organs.—Urine red, alkaline.—Albuminuria, hyaline casts.

16. Female Sexual Organs.—Menses fifteen days too early and very profuse.

17. Respiratory Organs.—Bronchitis, with profuse expectoration; blood-stained.—Voice deep, weak, or absent.—Great difficulty in breathing.—Gasping for breath.

22. Upper Limbs.—Convulsive twitches of r. arm.—Muscular rheumatism of shoulders.

24. Generalities.—Bleedings from all orifices, which cause faintness.—Affection of the mucous membranes and organs of the chest; contraction of the flexor muscles; contraction of the œsophagus and of the colon.—Great exhaustion and muscular weakness; weakness which hardly admits of an upright posture; great trembling on making the slightest exertion.—Skin hot and dry, afterwards moist, perspiration supervening.—Disturbed sleep.—Shiverings; fever towards evening; pulse, at first feeble and rather accelerated, afterwards quicker from hour to hour.—Great tendency to take fright.

Ammonium Muriaticum.

Sal ammoniac. Ammonium chloride. NH_4 Cl.

Clinical.—*Anosmia*. Bronchitis. Constipation. Coryza. Cough. Diarrhœa. *Eyes, inflammation of*. Feet, pains in. Glands, enlarged. *Hæmorrhoids. Liver, affections of*. Melancholia. Menstruation, disorders during. Pneumonia. Sciatica. Scurvy. Spleen, pains in. Sprains. Stumps, neuralgia in. Tonsils, swelling of. Ulcers.

Characteristics.—*Am. mur*. is less prominently a right-side medicine than *Am. c*.; Guernsey regards it as rather left-sided. It acts specially also on the forehead. It causes ulceration and ulcerative pains; also dislocation-like pains and tension as if tendons were contracted. Both cause paralytic weakness; both are < in open air. *Am. mur.* has > from warm bath. *Am. carb*. has greater sensibility to cold and to damp weather than the muriate. Both have itching eruptions of all kinds; drowsiness by day with indolence; shivering in the evening. The mental state is very similar in the two. The muriate has perhaps more melancholy and disposition to tears than the other, and it has peculiar to itself "antipathy to certain persons." *Am. mur*. has fear of darkness, like *Stram*., which is not noted under *Am. carb*. The muriate has fulness in head; weight in forehead. Burning in eyes in twilight or in morning with photophobia. Keratitis. Ulceration in corners of mouth. Sensation in stomach as if fasting, which nevertheless feels full; < after breakfast. Intermittent pains in both hypochondria. Stitches and burning in liver region, stitches in spleen < sitting. Tension in either groin. Shootings in scapula and ice-cold sensation between scapulæ, unrelieved by external wraps. In the fever chilliness predominates. Choudhury cured with it a case of intermittent characterised by absence of thirst in all stages. Constipation and piles with

bleeding at stool. Sore, smarting hæmorrhoids. Hard stool covered with mucus; mucous secretions generally increased. Menses too early and too copious (*Am. c.*), with pains in loins. Vomiting, diarrhœa, and neuralgic pains in feet during period. Coryza, acrid, watery; scalding hot; with cold feeling between shoulders. Loss of smell. Cough and asthmatic symptom < evening and at night and < in open air. Pain as from ulceration at tips of fingers. Neuralgic pains in stumps of amputated limbs (*Al. cep.*). Ulcerative pains in heels (ulcers from friction *Al. cep.*). (Panaris.) Sciatic pain as if tendons were too short. < Sitting or walking. Tension in legs on lying. Large buttocks. Fatty tumours. Obesity. Body fat; legs thin (*Am. c.*, fat all over). There is > walking crooked, < on walking erect. Most symptoms are < at night and from two to four a.m.

Relations.—*Compare:* Mag. mur., Nat. mur.; Val. and Ac. mur. (pains in feet and heels); Rhus (sprains; < sitting); Seneg. (fat people); Sep., Sul. In "aversion to darkness" *compare:* Calc., Carb. an., stron., Val., and Stram. A hot bath relieves aggravation caused by Am. m. *Antidotes to* Am. m.: Bitter almonds; Coffea; Nux v.

SYMPTOMS.

1. Mind.—Great anguish, and melancholy state as from vexation or cares, with inclination to shed tears.—Full of grief, but can't weep.—Morose, apathetic humour, with repugnance to conversation.—Irritability and disposition to be angry.—Antipathy to certain persons.

2. Head.—Dizziness and vertigo (flushed face and enlarged veins), which mostly disappear in the open air.—Sensation of fulness in the head and weight over the forehead, chiefly in the morning on rising.—Pressure in the forehead towards the root of the nose, with a sensation as if the brain were bruised.—Acute semi-lateral sensation of pulling in the head and in the face.—Congestion of blood in the head, with internal heat.—Itching in the scalp, which forces to scratch constantly.—The hair falls out; often with dandriff.

3. Eyes.—Burning in the eyes, and in the corners of the eyes, in the evening, in the twilight, or in the morning, with photophobia.—Palpitation in the eyelids.—Confused sight, as from a mist.—Fluttering spots and points before the eyes, in the day, and in the evening by candle-light.—Yellow spots before the eyes on looking steadfastly at any object; while sewing.

4. Ears.—Shooting in the ears from the inside outwards, esp. in the open air.—Drawing and piercing sensation in the ears.—Eruption in the ears.—Running from the ears.—Hardness of hearing.—Tingling and buzzing before the ears.—Affection of the r. ear commencing in the throat, as if the throat and the ear were connected.

5. Nose.—Swelling of the nose, and painful sensibility to the touch, with pain of ulceration and bloody crusts in the nostrils.—Sneezing, with shooting in the nape of the neck, and as far as the shoulders, and crawling in the throat.—Coryza, with stoppage of the nose (and tenderness of the nose) and loss of smell.—Flow of clear corrosive water during the coryza, corroding the lips.

6. Face.—Acute sensation of tearing, violent in the zygomatic bones.—Burning heat in the face in the room.—Eruptions in the face.—Ulcerations in the corners of the mouth, and in the upper lip.—Lips shining, as from grease.—Lips dry, wrinkled, chapped, and excoriated with burning heat, with blotches of the skin, peeling off; the face burns with an eruption which requires cold applications for relief.—Tensive pain in the articulation of the lower jaw on chewing, and on opening the mouth.—Swelling of the sub-maxillary glands, with throbbing pain.

7. Teeth.—Acute sensation of tearing in the teeth.—Swelling of the gums, with shooting pain.

8. Mouth.—Burning blisters on the point of the tongue.—Shooting pain in the throat on swallowing.—Tenacious mucus in the throat, chiefly in the morning.—Swelling of tonsils so he can scarcely swallow after taking, cold.

10. Appetite.—Bitter taste in the mouth, chiefly in the morning, with bitter eructations and anxiety.—Absence of hunger and of appetite.—Much thirst, chiefly in the evening.—After every meal, nausea, flow of water from the mouth, with shuddering, diarrhœa with colic and pains in the limbs, and sometimes with throbbing in the chest, heat in the face, and restlessness.

11. Stomach.—Eructations, mostly bitter or imperfect.—Regurgitation of what has been taken, or of a bitter and acid water.—Frequent violent hiccough, often with shootings in the chest.—Water-brash.—Drawing or gnawing pains in the stomach, as if from worms.—Sensation of burning in the stomach and in the precordial region.

12. Abdomen.—Shooting pains in the region of the spleen, chiefly in the morning on waking, with dyspnœa, which causes the assumption of an erect position.—Inflation of the abdomen.—Pinching in the abdomen.—Tension and swelling in the groins.—Sensation of swelling and pain, as of ulceration in the groins, on their being touched.

13. Stool and Anus.—Constipation.—Hard stools, or frequent and soft.—Hard, crumbly stool, or covered with glairy mucus.—Diarrhœa with pain, as if caused by excoriation, or by a bruise in the belly.—Loose, slimy, greenish stools.—Before the stool, pain in the belly round the navel.—Discharge of blood with the stool.—During stool, stitches in anus.—Pustules form beside the anus, with itching and soreness.—Stool often varies in colour at every evacuation, no two being

alike.—Pain, as from excoriation in the rectum when sitting; during and after the expulsion of stool, severe burning and smarting.—Pain in the perinæum when walking.—Hæmorrhoids: burning, stinging, smarting, soreness.

14. Urinary Organs.—Evacuation of urine increased, principally in the night.—Reddish, clear urine, without sediment.—Diminished secretion, of urine.—Slow flow of urine; more abundant during stool.—Frequent urination, esp. towards morning.—Sediment, like clay.—Urine smells strongly of ammonia; sometimes musty odour.

15. Male Sexual Organs.—Shootings and throbbings in the spermatic cord.—Frequent erections.

16. Female Sexual Organs.—Menses too early and too copious, with pain in the abdomen, loins, and pains, compressive or drawing, in the back; continuing during the night, when the menstrual discharge is more profuse.—During the menses, vomiting and diarrhœa, drawing in the feet, or discharge of blood on going to stool.—Leucorrhœa, with inflation of the belly; or like the white of an egg, preceded by pinchings round the navel; or slimy and brown, discharged after making water.

17. Respiratory Organs.—Hoarseness, with sensation of burning in the larynx.—Violent cough, chiefly in the evening and at night, when lying on the back.—Frequent hawking, with expectoration of mucus.—Dry cough in the morning (with tickling of the throat), with expectoration of whitish and thick matter.—The cough is aggravated after a meal, as well as after a cold drink, and when lying with the head low.—Cough on breathing deeply, esp. when lying on the r. side.—When coughing, shootings in the chest and in the hypochondria.—Spitting of blood, preceded by tickling in the throat.—When breathing, stitches in the shoulder-blades.

18. Chest.—Asthmatic state on moving the arms up and down.—Weight and oppression of the chest, with difficulty of breathing, chiefly in the open air, or at night.—Pressure and shootings in the chest.—Pressure, heaviness, and stitches in the chest, sensation as if a swallowed morsel had lodged in the chest.—Throbbing in the chest when standing.—Burning in small spots in the chest, lungs feel sore and as if paralysed.—Tension and pain, as from fatigue, in the exterior of the chest.—Eruption and red spots, burning and itching on the chest.

20. Neck and Back.—Acute drawings in the sides of the neck and in the collar-bone.—A fatty swelling on nape of neck, extending from ear to ear.—Stiffness of the neck, with pain on moving it, from the nape of the neck to the shoulders.—Coldness in the back, esp. between the shoulders (which nothing warms).—Pain in small of back as if beaten and shattered.—Pain in coccyx, when sitting, < when sleeping.—Pains, as from fatigue in the loins, principally at night,

when lying down, when walking, or after stooping.—Painful stiffness in the loins, which forces one to stoop in walking.—Shootings in the shoulder-blades, esp. on breathing.

22. Upper Limbs.—Heavy and stiff, as if paralysed.—Tearing in bone of l. upper arm, and afterwards in r. thigh from above downwards.—During the night, acute tearing in the arms, as if it were in the bones.—Swelling and hardness of the axillary glands.—The r. arm is heavy and stiff.—Tearing in the shoulders.—Swelling of the wrists with tearing pain.—Blisters on the wrists, which form crusts.—Pain, as from dislocation, in the wrist.—Sudden jerks, tearings, or shootings, throbbing, tingling and pain as from ulceration at the tips of the fingers.—Exfoliation of the skin between the fingers (and on wrists).

23. Lower Limbs.—Tension in the hips and the hams.—Shootings, pain of dislocation (l. hip is painful, as if the tendons were too short, causing limping), and pulling in the hip.—When sitting, gnawing pain in the bone.—Contraction of the tendons of the hams (the muscles under the knee feel too short when walking), and stiffness in the joint of the knee.—At night, acute pulling in the legs, as if in the bone.—Shooting pain in the calves of the legs, after having walked long.—Legs dead and insensible.—Pain of ulceration and pulling in the heels.—Cold feet, esp. in evening, in bed.—Fetid sweat in the feet.—Sudden jerks, pullings, or shootings, throbbing and tingling in the extremity of the toes.—Ebullitions, with anxiety and weakness, as if paralysed.—Tension in the joints, as from shortening of the muscles.—Burning, stinging, throbbing, as from a boil.—Sensation of soreness in different parts of the body.—Very severe ulcerative pain in the heel, > by rubbing.—The feet get very cold in the evening in bed.

24. Generalities.—Pains, as from ulceration in different parts of the body.—Tension in the joints, as by contraction of the tendons.—The r. side of the body appears to be more affected than the l.—Pains in the head and chest, which increase principally towards morning; gastric and abdominal pains after dinner, and pains in the limbs; cutaneous affections; also febrile symptoms, which present themselves in the evening and at night.—Ebullition of the blood with anxiety.—Paralytic weakness and fatigue, chiefly of the lower extremities, sometimes with giddiness, or with tension and dragging of the legs.—Scorbutic cachexia.—Tendency of the blood to decomposition.—Acute dragging pains in the bones, nightly.

25. Skin.—Itching and titillation, giving an impulse to scratch, followed by eruption of pimples.—Miliary eruption.—Vesicular eruptions which form scurf.—Exfoliation of the skin in several places.

26. Sleep.—Diurnal drowsiness, with indolence and dread of exertion.—Early in the evening, inclination to sleep.—Restlessness before midnight.—Sleeplessness after midnight, from cutting pain in the abdomen, at two a.m.; or from sneezing; pain in

small of back.—Waking too early.—Many dreams, anxious, terrific, or lascivious.—At night, colicky pains, frequent sneezing, crawling in the throat, weight and pressure on the chest (nightmare?), violent suffering in the veins, and pains in the trunk and in the limbs, cold feet, heat in the head, shivering, and itching in the skin.

27. Fever.—Cold shivering, most frequently in the evening, about six o'clock; without thirst.—All stages of fever without thirst.—Shivering after lying down in bed, evening, and as often as she wakes.—Cold feeling between shoulders.—Heat with thirst, and face bloated.—Nocturnal sweat, after midnight.—Sweat increased by every motion.

Ammonium Phosphoricum.

Ammoniæ phosphas. Hydro-diammonic phosphate $(NH_4)_2$ HPO_4 Solution.

Clinical.—Facial paralysis. Gout. Joints, concretions on.

Characteristics.—This salt has been used in cases of chronic gout with nodes of urate of soda on the joints. C. Voigt took three grains of *Am. Phos*., with this result: In about an hour, attacked by a sense of tightness in the precordia and around the chest; nausea; thirst; a hard, small, frequent pulse; and a collapsed state of the circulation. Afterwards, fulness and tension in head; heaviness in limbs; unsteady, tottering gait. Allen says it has been used with success in some cases of facial paralysis.

Ammonium Picricum.

Picrate of Ammonia. C_6 H_2 $(NO_2)_3$ ONH_3.

Clinical.—Headache. Neuralgia. Whooping-cough.

Characteristics.—*Picric acid* and its combinations are very powerful medicinal substances of the nitric acid group. Allen gives this indication for *Amm. pic*. (which has had only a fragmentary proving): Periodical neuralgia in right side of occiput, boring extending to the ear, orbit and jaw; vertigo on rising, especially in irregular menstruation. Hale, who introduced the remedy to homśopathy, commends it in congestion of brain and spinal cord. Heavy, pressive pains in occiput and mastoid region; on sides of head to temples and eyes. Face darkly flushed. Mind obtuse, disinclined to labour. Periodic bilious headache like that of *Sang*., and *Act. r*. One case he cured had these symptoms: Middle-aged woman,

short, stout, florid, every six or eight days would wake in morning with violent pain in occipital region, heaviness of head, vertigo on rising. Pain < on getting up; extended over sides of head to temples and eyes. In afternoon nausea and vomiting of sour bilious matter. Another case was that of a doctor who had been thrown from his carriage and injured about the back of his head. He seemed more frightened than hurt, but in a few days he noticed that on turning in bed, or stooping, or on any sudden motion, he would be seized with a "wild feeling" in the occiput, trembling beating of heart with intermission, and great alarm. *Am. pic*. completely relieved him after other medicines had been given in vain. *Am. pic* is intensely bitter, and like *Pic. ac*. and other picrates has a strong action on the liver. *Pic. ac*., like *Am. pic*., has occipital headache, proceeding down the spine; and also a pain travelling the reverse way. I gave great relief with *Pic. ac*. in a case of spinal paresis in which a pain rising up the spine into the head was complained of. I think it is the *Pic. ac*. element in this ammonia salt that accounts for its action in these cases of Hale's.

Relations.—*Compare:* Calc. pic., Fer. pic., Pic. ac., Act. r., Sang.

Ampelopsis.

Ampelopsis quinquefolia. Virginia Creeper. American Ivy. N. O. Vitaceæ. Tincture of plant. Decoction of chopped inner bark.

Clinical.—Cholera. Dropsy. Hoarseness. Hydrocele.

Characteristics.—Our pathogenetic knowledge of *Ampelopsis* is due to observations on two children poisoned by chewing the leaves. They were quickly seized with violent vomiting and purging, with considerable tenesmus; then collapse, sweating, and faint pulse; then deep sleep for two hours, from which they were aroused by return of vomiting and purging. There was dilatation of pupil for hours after commencement of attack.

Hansen gives as an indication: "Chronic hoarseness inpatients who were scrofulous in their youth." S. M. Worthington has cured with it renal dropsies that had resisted other treatment and a case of hydrocele. He found the decoction the most efficient preparation.

Relations.—*Compare:* Vitex agnus castus (botan.); Æthus. cyn.

Amphisbæna.

Amphisbæna vermicularis. N. O. Lacertilia. The jaw containing the poison is removed and triturated.

Clinical.—Constipation. Cramps. Headache. Hernia. Jaw, pains in. Toothache.

Characteristics.—*Amphisbæna* is a snake-like lizard, without limbs, and progressing (as its name implies) either backwards or forwards. Mure is the authority for its effects. It is prepared from the jaw as well as the poison of the animal, and has symptoms indicating action on bone like that of *Sil*. It acts most markedly on the jaws, causing swelling and pain, especially in the right jaw, < by air and dampness. Many kinds of severe headaches are complained of, one with a sensation "as if the feet were in the head." Lancinating pains are frequent. Eruptions of vesicles and pimples. It is a right-side medicine. There is generally < from motion.

Relations.—*Compare:* Heloderma, Silica.

SYMPTOMS.

1. Mind.—Ennui.—Sadness and lassitude in the morning.—Impatience.

2. Head.—Vertigo.—Tendency to fall to one side and then to the other; < when turning round.—Horrible headache, with sensation as if the feet were in the brain.—Beating as if from hailstones r. side of forehead.—Lancination and pain all through r. side of head.—Sweat about head.

3. Eyes.—Constriction of r. eye, as if strung together with a cord.—Constant twitching of upper eyelids, esp. l.

4. Ears.—Pain in meatus auditorius, as if air were rushing in.

6. Face.—Painful large pimple l. side of upper lip, suppurating.—Pains in r. lower jaw with swelling < by air and dampness.

8. Mouth.—Teeth feel elongated and set on edge, esp. r. lower molars.—Toothache < afternoon and evening.—Chewing is painful, but not contact with liquids.

11. Stomach.—Chilliness and pains at epigastrium.

12. Abdomen.—Protrusion of umbilical hernia.—Tearing pain at navel; lancination as from stiletto.—Suppuration of inguinal hernia.—Hernia is painful and air is felt in it.

13. Stool and Anus.—Constipation.

20. Neck and Back.—Violent pain in whole of vertebral column, < walking, moving arms, or stooping.

22. Upper Limbs.—Breaking out of little pimples, esp. on forearm.—Painful swelling of arm.

23. Lower Limbs.—Painless drawing up of the legs.—Cramp in l. leg; it remains behind in walking, as if paralysed.

26. Sleep.—Wakes at midnight for ten consecutive nights.

Amygdalæ Amaræ Aqua.

Amygdalus communis. Bitter Almond. N. O. Rosaceæ. An ounce of alcohol is added to a pound of bitter almonds; then add six pounds of water-and distil down to three pounds. (Hydrocyanic acid is formed by the action of water oil the amygdaloids.)

Clinical.—Asthma. Coma. Diphtheria. Epilepsy. Headache. Syncope. Tetanus. Urticaria.

Characteristics.—The symptoms of *Amygdala* are not very distinguishable from those of *Hydrocyanic acid*, but these may be taken as indicating its use: An excessively brilliant appearance of the eyes without corresponding mental expression. Heaviness in forehead (also *Lauro*.). Dulness of l. half of the head (*Hydro. ac*., right). Head drawn backward. Eyes drawn to left side. Burning heat in laringo-pharyngeal region. Lancinating pains through tonsils (Farrington). Palate end fauces dark reel. Swallowing impossible. Vomiting of undigested food and bile. Convulsive and at intervals very short respiration, with fear of suffocation.—Jerking, hesitating speech: "What's—the mat—matter with me?" Cough with soreness of chest extending down to stomach. Stitches under left nipple, going deep in, making exhalations more difficult. Opisthotonos. Snoring. Surface cold, clammy, pallid or blue. Urticaria.

Relations.—*Compare:* The Prunæ and Pomæ of the Rosaceæ; Laurocerasus, Ac. hydrocy., Opi. (spasms, stertor, slow pulse, stupor), Stram., Tabac., Ant. t., Lach., Naja (heart). *Antidoted by:* Opi. (convulsions); strong coffee; cold water poured over head.

Amylenum Nitrosum.

Nitrite of Amyl. C_5 H_{11} NO_2. Dilution with alcohol.

Clinical.—*Angina pectoris*. Blushing. Chorea. Climacteric flushing. Epilepsy. Exophthalmos. Flushings. Headache. Heart, affections of. Hysteria. Sea-seakness. Sunstroke.

Characteristics.—The *Nitrite of Amyl* was introduced into medicine by the old school as a remedy for angina pectoris, and was supposed to act by lessening arterial tension. Dr. G. W. Balfour has, however, shown that this cannot always be the case, since samples which have been kept for a time in imperfectly sealed bottles, whilst retaining their power to relax tension, have none over the pain. Homœopathic provings have shown that in some cases at any rate *Amyl nit*. has a specific action. The most striking action of the drug is the deep facial flushing it causes and the pulsation all over the body. The specific heart symptoms are: Sensation of swelling of front of chest as if convex, with a feeling as if the lower end of the sternum made a deep depression bent in towards the spine. Precordial anxiety. Accelerated, intensified beating at the heart. Oppression and tumultuous action. Constriction (relieved by *Cactus*) and aching pain. Strong, full pulse. Other prominent symptoms are: Anxiety as if something might happen; must have fresh air. Throbbing in head. Bursting-out feeling in ears. Smacking of lips as if in act of tasting. Munching movement of lower jaw as if chewing. Constriction of throat and heart from actual fright ran to window for air. Intense fulness in head sensation of rushing to vertex. Eyes protruding, staring. Exophthalmic goître from grief. Flushing of face. Flushing on least emotion. Nash has cured with it "chronic blushing on least excitement mental or physical." Heat, redness, turgidity. Choking feeling; collar feels tight. Tremor and weakness of limbs. > Open-air exercise; cold water and cold air. < In warm room.

Relations.—*Compare:* Glon., Aco., Ether., Cact., Nit. dulc. spir., Laches., Coca (flushing when excited, as in company); Bell. *It antidotes:* Chloroform (failure of respirations); Strychnine (convulsions). *Antidoted by:* Cactus (cardiac constriction).

SYMPTOMS.

1. Mind.—Anxiety, as if something might happen; cannot sit still; must have fresh air.—Mental confusion, and a trance-like state.

2. Head.—Great confusion of the head, with vertigo and drowsiness.—Convulsions with piercing shrieks.—Heat and throbbing in the head, with feeling of intense fulness to bursting.—Beating, throbbing, bursting sensation in the head and ears, with constriction of the throat and heart.—Visible pulsating throbbing in the temples, with sense of tension in the temples.—Sensation of something rushing

upward, and throbbing in the vertex.—Sick-headache; < l. side.—Crushing on head, threatening to cause unconsciousness.

3. Eyes.—Objects appear pea-green or yellow.—Protruding, staring eyes; conjunctiva injected.—Ciliary neuralgia; eye injected; face or cheek suffused.—Sight blurred, wavering.—Arteries of optic disc small, but the veins enlarged and tortuous.—Aching eyes in sunlight, trembling and wavering of objects, lachrymation and sneezing.

4. Ears.—Throbbing in the ears; bursting; burning.

6. Face.—Flushing of the face; face scarlet, afterward paler than usual.—Neuralgia of fifth pair of nerves.—Flushing of the face, followed by turgidity of the facial veins.—Surging of blood to face and head; heat and redness of the face; feels as if the blood would start through the skin, with lachrymation.—Smacking of lips as if tasting.—Munching, chewing movement of lower jaw.

9. Throat.—Choking feeling in throat on each side of the trachea, along the carotids; feeling of constriction.—The collar seems too tight; desires to loosen it.

11. Stomach.—Hiccough.—Nausea; with dryness of throat.—Crampy pains in epigastrium.—Fulness and pressure with belching.—Cadialgia.—Hot, burning sensation in stomach.

12. Abdomen.—Oppression near liver.—Crampy, colicy pains; rumbling.

16. Female Sexual Organs.—Contraction of muscles of lower abdomen over uterus.—During menses, violent l.—side headache, beginning morning; most violent at noon; lasting till evening with frequent vomiting.—Neuralgia during menses.—Climacteric blushing.—Convulsions immediately after delivery.

17. Respiratory Organs.—The feeling of constriction in throat extended to the chest, and produced dyspnœa and asthmatic feeling in larynx and trachea, with desire to eructate.—Asthma.—Hastens and deepens breathing.—Suffocation and cough in paroxysms of several minutes.

18. Chest.—Feeling as if a weight on sternum.—Sensation of swelling of front of chest, with a feeling as if lower end of sternum made a deep depression.

19. Heart and Pulse.—Precordial anxiety.—Violent beating of the heart and carotids (is felt up into the ears); with sense of constriction.—Accelerated heart action.—Fluttering of heart on least excitement.—Cardiac oppression and tumultuous heart action.—The heart has an irregular, rumbling sort of sound.—Aching pain and constriction around the heart.—Pulse accelerated, full,

hard; quickened in a very variable degree; irregular, jerking.—Angina pectoris, with great agony.—Precordial pain extending to r. arm.

21. Limbs.—Tired feeling of limbs.—Veins dilate.

22. Upper Limbs.—The right shoulder, scapula, and arm seem to sympathise with the region of the heart very much.—The hands of children in convulsions tremble and grasp at imaginary objects; much trembling and sense of numbness in the hands.

24. Generalities.—General relaxed, weak feeling over the whole body.—In chorea every muscle in the body seems in Motion.—Succession of spasms, coming more and more rapidly, till, finally, no sooner does one end than another begins.—After an extensive burn, trismus, with horrid tetanic grin, marked opisthotonos and interrupted deglutition, was cured by inhalation.—Can't endure warmth, must throw off all covering, and open the doors and windows, even in cold weather.—In convulsions, muscles become rigid.—Cures some forms of sea-sickness.

26. Sleep.—In coma, during an unconscious state, profound, and repeated yawning.—Waking with frequent starts, and feels unrefreshed in the morning.

27. Fever.—Chilliness and crawlings repeatedly, face pale all day.—Much flushing of heat, whilst some parts of the body feel burning hot.—Sometimes after the flushings the skin becomes cold and clammy.—Heats are often followed by profuse sweatings.—Throbbing throughout the whole body often attends these heats, which are followed by much prostration.

Anacardium Occidentale.

Cashew Nut. (West Indies.) N. O. Anacardiaceæ. Tincture of the black juice between outer and inner shell. (This nut is kidney-shaped, that of *Anac. orient.* is heart-shaped.)

Clinical.—Corns. Erysipelas. Imbecility. Itching. Paralysis. Rhus poisoning. Ringworm. Small-pox. Warts.

Characteristics.—The effects of the Cashew nut are known through instances of poisoning. It acts powerfully on the skin, causing erysipelas, blisters, and swelling, and has been used as an antidote to *Rhus* poisoning. The juice has been used locally as an applications to corns, warts, hard excrescences, ringworms, and obstinate ulcers. It causes weakness of memory and mind like *A. orient*. General paralytic state. Tongue painfully swollen. Vesicular eruption, on face especially. Itching almost intolerable; umbilicated vesicles as in small-pox. The erysipelas

spreads from left to right, and it cures erysipelas spreading from right to left; *Rhus t*. cures cases spreading left to right.

Relations.—*Compare:* Anac. orient., Rhus, Canth., Mez., Crot. t. *Antidoted by:* Rhus, Iodine locally.

Anacardium Orientale.

Semecarpus anacardium. Marking Nut. N. O. Anacardiaceć. (East Indies.)
Preparation: layer of nut between shell and kernel triturated.

Clinical.—Alcoholism. Apoplexy. *Brain-fag*. Constipation. Cough. *Debility*. Dysmenorrhśa. *Dyspepsia*. Eczema. *Elephantiasis*. Examination funk. Hćmorrhoids. Headache. Heart, affections of. Hypochondriasis. Hysteria. Insanity. *Memory, loss of. Mental weakness*. Nervous ailments. Palpitation. Paralysis. Pemphigus. Rheumatism. *Self-abuse*. Skin, diseases of. Smell, illusions of. Spine, affections of. Stiff-neck. Vomiting of pregnancy. Whooping-cough. Warts. Writer's cramp.

Characteristics.—*Anacardium* has many features in common with its botanical relatives, the different species of *Rhus*, especially in its action on the skin, muscles, and joints, but it has also very distinct features of its own. A very characteristic sensation is a pressing or penetrating pain as from a *plug*, which may occur in any locality in connection with neuralgias and ear affection, piles, &c., and whenever present *Anacardium* will probably be the remedy. Sensation of a hoop or band around the body or about any part is a leading symptom. It has been used with success in diseases of the spinal cord with this sensation and the feeling of a plug in the spine, < by any motion which causes a pain as if the plug were sticking still further in. Paralysed feeling in knees. Sensation as if knees were bandaged.

The nut is heart-shaped (hence its name), and perhaps this may be taken as the "sign" of its courage-imparting properties. It has at any rate won for itself a reputation in "examination funk" and allied conditions. Brain-fag. Loss of memory is very marked. Deafness with loss of memory. Headache < by mental exertion; > by eating. The *Anacard*. patient has many mental aberrations; is clairaudient, hearing voices of persons far away, or dead; voices behind her. Seems to have two wills. Is as if in a dream. A curious symptom is a great propensity to swear and blaspheme in persons not usually addicted thereto. Irritability. There is also a tendency to suicide by shooting (*Ant. crud*.). Fixed ideas of various kinds: that mind and body are separated; that he is double; that a demon sits on his neck telling him most offensive things; that he sees everybody's face in a glass except his own. The senses are either too weak or too acute, and there ire sense illusions: a light has a halo; optical illusions in dark colours; illusions of hearing; illusions of

smell: burning tinder, pigeon's dung. I cured with it a man who had a smell of burning wood in his nose, remaining after influenza. There is a headache proceeding from before backward. Stiffness in nape of neck. Stiff-neck < beginning to move. Whooping-cough with gaping and drowsiness after the cough. Morning sickness of pregnancy > by eating, but returns soon after. The *Anacard*. indigestion contrasts with that of *Nux* in a striking way. With *Nux* the pain is worst for two or three hours after a meal, *during* stomach-digestion, and is > when that is over; whereas with *Anac*. it is just then (when digestion is complete) that the pain is worst, and it lasts until the next meal, which again > for a time.

E. S. Breyfogle narrates a striking case (an involuntary proving illustrating the nerve and skin effects of the remedy. Acting on Bayes' indications, "funk before examination," "nerve-exhaustion from over-study," "nervous prostration from seminal emissions," or sexual excess, Breyfogle had used the remedy with much success. To a patient, for excessive nervousness, he gave the 1st dilution in discs. He took two discs every four hours till eight were taken. Then a sore mouth suddenly developed, mucous membrane inflamed, burning, and acutely sensitive. Vesicles appeared on roof of mouth, and a dirty membrane peeled off easily. Gums were next affected. Mouth dry, taste offensive: at the same time a papular eruption on wrists and ankles, later on inside-arms and legs, chest, neck, back, especially defined in bends of knees and elbows, and worst of all about anus. Scratching < but was compelled to scratch all the same. Water as *hot* as could be borne > instantly. Simultaneously the nervousness disappeared. "I haven't had a nerve since. It has made a profound impression on my nervous system." Later came a sudden sense of complete prostration: knees gave way; had to keep a flask of whisky by him to relieve it. Later: cold chills ran over body at least exposure, even putting arms out of bed; feared he was going to be ill, slept with hot bottles on chest all night. As eruption in mouth disappeared salivary flow increased; it ran from his mouth on pillow during sleep. "Feels as if a particle of food were in śsophagus; swallows constantly to get rid of it."

There is not the same < by rest and > by motion as with *Rhus*, but many symptoms are < by commencing motion (stiff-neck). Headache is > lying down. Piano-playing caused heaviness and fulness of the whole body. Like *Rhus, Anac*. has chilliness, liability to take cold, sensitiveness to draughts, and > from warmth. The symptoms are < morning, and again evening to midnight. 4 p.m.: heat daily. The cough of *Anac*. is > by eating. Symptoms generally > by eating; recur two hours after.

There is intermittence in the symptoms of *Anac*. "The attacks ceased for one or two days, and then continued again for a couple of days." Guided by this indication alone, Custis cured with *Anac*. 200 a case of sleeplessness in a pregnant woman: "Spells of sleeplessness lasting for several nights." *Anac*. is suited to affections of the palms of the hands. There are warts even on the palms.

Relations.—*Compare:* Comocl., Rhus t., Rhus ven. (botan.); Ant. t., Apis, Coriar. rusc., Fer., Iod., Jug. c., Lyc., Nit. ac., Nux v., Phos. ac., Plat., Urt. ur., Puls., Nat. m., Caust., Thuj. (fixed ideas). It *is an antidote* to Rhus if there are gastric symptoms, or symptoms going from r. to l. *Antidoted by:* Coffea, Juglans cin. *Follows well:* Lyc., Puls., Plat. *Followed well by:* Lyc., Puls., Plat.

Causation.—Checked eruptions. Examinations.

SYMPTOMS.

1. Mind.—Hypochondriacal sadness, and melancholy ideas.—Anthropophobia.—Anxiety, apprehension, and fear of approaching death.—Fear and mistrust of the future, with discouragement and despair.—Disposition to take everything amiss, to contradict, and to fly into a rage.—Frequently screams loudly, as if to call some one; so furious has to be restrained.—Manners awkward, silly.—Disposition to laugh at serious things, and to maintain a serious demeanour when anything laughable occurs.—State as if there were two wills, one of which rejects what the other requires.—Fixed ideas: that he is double; that there is no reality in anything, all appears like a dream; that a stranger is constantly by his side, one to the r., the other to the l.; her husband is not her husband, her child is not hers; fondles, then pushes them away.—Want of moral sentiment (wickedness, impiety, hardness of heart, cruelty).—Irresistible desire to blaspheme, and to swear.—Sensation as if the mind were separated from the body.—Weakness of mind and of memory.—Loss of memory.—Soon forgets everything; consciousness of forgetfulness takes away appetite.—Weakness of all the senses.—Absence of ideas.

2. Head.—Head confused.—Fits of giddiness.—Vertigo on walking, as if all objects were too distant, or undulating.—Whirling dizziness, with obscuration of the eyes on stooping.—Headache from noise, and at every (false) step.—Headache with giddiness and vertigo, aggravated by movement.—Digging and throbbing r. side of head, and along border of orbit; > entirely when eating, and when lying down in bed at night and when about falling asleep; < during motion and work.—Headache in consequence of intellectual labour, with pain as from a bruise in the brain, or tractive pressure in the forehead.—Congestion of blood to the head, with pain in the cerebellum.—Pressive pains, principally in the temples.—Pressive pain in the temple, as from a nail; < after eating, in the cold air, and from exertions of the mind.—Constrictive pains in the head.—Sensation of tearing in the head, chiefly on the right side, and often as far as the face and neck, followed by buzzing in the ears.—In the evening, sensation of digging in the head, disappearing with sleep.—Stitches in the head.—Itching in the scalp.

3. Eyes.—Painful pressure on the eyes.—Pressure in the eyes as from a plug.—Objects appear too far off.—Photophobia.—Contraction of the

pupils.—Weakness and confusion of sight.—Myopia.—Threads and black spots appear before the eyes.—A nimbus round the candle in the evening.

4. Ears.—Shooting and tearing otalgia.—Painful pressure in the ears.—Pain, as of ulceration, in the ears, principally on pressing the teeth close, and on swallowing.—Imagines whispers of blasphemy in his ears.—Discharge (of a browish colour) from the ears.—Itching in the ears.—Tingling in r. ear.—Hardness of hearing.—Buzzing and roaring in the ears.

5. Nose.—Epistaxis.—Diminution of the sense of smell.—Anosmia.—The sense of smell is too acute or illusory.—Constant smell before the nose, as of pigeon's dung or burning tinder.—Stoppage of the nose, with sensation of dryness in the nostrils.—Coryza (sneezing and lachrymation), and discharge of mucus from the nose, both chronic.—Violent coryza, with catarrhal fever, tension in the calves of the legs and in the legs, and palpitation of the heart.

6. Face.—Look wild, childish, expressionless; may be red or pale.—Pale, sickly face, with hollow eyes, sunk, and encircled by dark rings; by blue ridges.—Pressure on the eyeballs.—Rough spots, scurfy and mealy, round the mouth and on the cheeks, with crawling-like itching.—Burning sensation round the chin.—Eczema of face and neck, with eruption of small blisters, intensely itching.

7. Teeth.—Tearing, jerking odontalgia, principally on taking anything very warm into the mouth.—Tensive, cramp-like pains in the teeth, as far as the ears, most frequently in the evening towards ten o'clock.—Swelling of the gums, which bleed easily.

8. Mouth.—Offensive taste in the mouth and also of the food.—Painful vesicles in the mouth; speaks with much difficulty.—Offensive smell from the mouth, not observed by the patient.—Heaviness and swelling of the tongue, with difficulty of speech.—Tongue white and rough.—Accumulation of water in the mouth; sometimes it provokes vomiting.—Dryness in the mouth and in the throat.—Taste lost.

10. Appetite.—All kinds of food appear insipid.—Bitter taste with dryness of the mouth and throat.—Fetid taste in the mouth.—Violent and constant thirst, with sensation as of suffocation when drinking.—Want of appetite.—Weakness of digestion.—After a meal, hypochondriacal humour, heat of face, pressure and tension in the precordial region, in the stomach, and in the belly, inclination to vomit or to go to stool, repugnance to exertion, great fatigue and desire to sleep.—Symptoms disappear after dinner; but begin again in two hours.

11. Stomach.—In the evening, water-brash and vomiting, followed by acidity in the mouth.—Morning sickness.—Pressure in the stomach, chiefly after a meal, as well as when engaged in thought and mental exertion.—In the morning, on waking,

pressure in the precordial region.—Shootings in the pit of the stomach, chiefly on breathing.—Great thirst, with arrest of breathing while drinking.—Vomiting of the ingesta, which gives relief.—Clucking noise and fermentation in the pit of the stomach.—After a meal, commotion in the precordial region at every step.—Painful sensation in cardiac end of stomach on walking fast.

12. Abdomen.—Weak digestion, with fulness and distension of the abdomen and hypochondriacal humour.—Pressure in the liver.—Colic in the umbilical region, mostly pressive, or dull and shooting, aggravated by respiration; cough and external pressure.—Pain, as if a blunt plug were pressed into the intestines.—Hardness of the abdomen.—Flatulent colic with pinching, and borborygmi in the abdomen, and an inclination to go to stool.

13. Stool and Anus.—Fruitless inclination to go to stool.—Urgent desire which passes away with effort to expel.—Difficult evacuation even of soft stools, from inactivity of the rectum.—Stools of a pale colour.—Evacuation of blood with the stools.—Painful piles (both blind and bleeding) in the anus.—Itching in the anus.—Oozing of moisture from the rectum.—Fissures of the rectum.

14. Urinary Organs.—Frequent discharge of clear, watery urine.—Making water at night.—Sensation of burning in the glans, during the evacuation of urine and afterwards.—Turbid, clay-coloured urine.

15. Male Sexual Organs.—Erections without excitation during the day.—Pollutions.—Voluptuous itching in the scrotum.—Increased or inexcitable sexual desire.—Want of enjoyment during coition.—Flowing of prostate fluid while at stool and after having made water.—Semen passes during a hard stool.

16. Female Sexual Organs.—Leucorrhśa, with itching and excoriation in the parts.—Frequent but scanty menses, sometimes with spasmodic pains in abdomen.—Nausea during pregnancy, > whilst eating.

17. Respiratory Organs.—Hoarseness and sensation of excoriation in the throat, principally after a meal.—Cough, with tickling in the throat and choking.—Cough after meals (with loss of smell and taste) with vomiting of what has been taken, or in the evening, in bed, with congestion of blood to the head.—Shaking cough, like whooping-cough, chiefly at night, or after much speaking.—Violent convulsive cough (whooping-cough), caused by tickling in the pharynx; worse at night, and after eating; after the attacks, yawning and sleepiness.—Cough (short) with purulent expectoration.—Expectoration of blood with the cough.—On coughing, pain in the head.—Yawning after a violent fit of coughing.

18. Chest.—Breath short, and respiration asthmatic.—Oppression of the chest, with internal heat and anguish, which causes the patient to seek the open air.—Pressure and sensation of excoriation in the chest.—Pressure in the chest (r. side) as from a

dull plug.—Prickings in the region of the heart.—Rattling in the trachća when lying on the l. side.

19. Heart.—Uneasiness in the heart.—Piercing pains (stitches) through the region of the heart, quickly succeeding each other, sometimes they extend to the small of the back.

20. Neck and Back.—Stiffness at the nape of the neck.—Pains in the back and between the shoulder-blades, for the most part drawing and shooting, or pressive.—Dull stitches in the left shoulder-blade.—Tingling between the shoulder-blades. Pressure upon the shoulder, as if from a weight.

22. Upper Limbs.—Weakness and tensive pains in the arms.—A very painful thumping on the middle of the l. upper arm.—Trembling of the hand and of the arm.—Trembling of the r. hand.—Pressive pains in the muscles and in the bones of the arms, with a feeling of fatigue.—Shooting and heaviness in the forearm.—Cramp-like pains in the bones and in the joints of the hands and of the fingers.—Sensation of dryness in the hands and in the fingers.—Clammy sweat in the palms of the hands.—Torpor in the fingers.

23. Lower Limbs.—Stiffness of the legs, as if they were bandaged, with agitation.—Trembling, drawing, and jerking in the knees and in the thighs, as if the legs were fatigued by walking.—Quivering pressure in the thighs.—Sensation of paralysis in the knees.—Itchy eruption round the knee, as far as the calves of the legs.—Jerking and cramp-like pressure in the calves of the legs, and in the legs.—Tensive pain in the calves of the legs during the day, on walking, and at night in bed, with sleeplessness.—Burning in the soles of the feet, and in the legs.—Cold in the feet when walking, particularly in the morning.—Chilblains.

24. Generalities.—Pressive pains, as from a plug in several places.—Sufferings appear for the most part periodically.—The majority of sufferings disappear during dinner; but a short time afterwards they return, and many others make their appearance with them.—The least movement occasions much fatigue.—Great fatigue, trembling and extreme weakness in the limbs, principally in the knees, increasing even to paralysis.—Great weariness on walking, and on going upstairs.—Strong disposition to chilliness, and great sensibility to cold and currents of air.—Diminution of the senses (smell, sight, hearing.).—Sensation, as of a hoop or band around the parts.—Cramp-like pains in the muscles.—Contraction of the joints.—Wounded tendons.

25. Skin.—Burning itching, increased by scratching.—Covered with blisters, from the size of a pin's head to a pea, often scarlet red, and sometimes sense of burning.—Skin not easily excited by irritants.—Pain, as from an abscess, in the parts affected.—Herpes.—Pemphigus.—Warts.

26. Sleep.—Comatose somnolency, night and day.—Inclination to sleep at an early hour, with disturbed sleep in the night.—Goes to sleep late.—Heavy sleep till 9 a.m.—Anxious dreams, disgusting or horrible, with cries, lively dreams, with meditation and activity of mind, followed by a pain, as from a bruise, in the head after waking.—Dreams of projects, of fire, of diseases, of deaths, and of dangers.—At night, toothache; pains in the limbs and in the bones, diarrhśa, cramps in the calves of the legs, and twitching of the mouth and of the fingers during sleep.

27. Fever.—Pulse accelerated, with beating in the veins.—Chilliness, esp. in the open air, relieved in the sunshine.—Heat of the upper part of the body, with cold feet; internal chilliness and hot breath.—Strong disposition to shivering, and constant shudderings even in the heat of a room.—Cold and trembling, with sensation of pulling in the head, ill-humour and agitation, every second day.—Internal cold with external heat.—Heat in the face, every afternoon, towards four o'clock, with nausea and fatigue.—Sweat during the day when sitting.—Perspiration in the evening, on the head, abdomen, and back, even when sitting still.—Nocturnal sweat.

Anagallis Arvensis.

Scarlet Pimpernel. Weather-glass. Red Chickweed. N. O. Primulaceæ.
Tincture of whole fresh plant.

Clinical.—Amblyopia. Cataract. Constipation. Dropsy. Epilepsy. Epistaxis. Gonorrhœa. Gout. Hæmorrhoids. Headache. Hypochondriasis. Hysteria. Mania. Neuralgia. Rheumatism. Ringworm. Skin, unhealthy. Snake-bites. Syphilis. Tetters. Ulcers, ill-conditioned. Wounds.

Characteristics.—Like the *Primula obconca, Anagallis* has a marked action on the skin. Skin itches all over; becomes dry and rough; has bran-like tetters in rings; ulcers and swellings on joints. Ill-conditioned ulcers. It favours expulsion of splinters. Has been used for snake-bites and hydrophobia. It produces great exhilaration and activity of mind: thinks of everything. Great hilarity. (The Greek name of the plant means to laugh out loud.) Tickling and itching in left ear. Bran-like, ring-shaped tetters on face. Dull pains in gums accompanied by very hard stools. Sensation on tongue as if something cold were placed on it. Dryness and scraping in throat. Scraping, scratching of larynx and trachea with hoarseness; < after eating. Tickling prickling along urethra; orifice agglutinated. Tearing in spermatic cord. Syphilis with nose-bleed, deranged mind, pain in small of back, and itching skin. Soreness on chest with pain. Eruption on chest. Tensive

drawing ascending from left shoulder to nape of neck (*Eupat. perf*). Skin of hands dry, sticky, and dirty-looking. Tetters. Vesicles in groups. Pain and tightness in bend of left knee. It is a vulnerary of some importance. Symptoms are < by touch; < after eating.

Relations.—*Compare:* Prim. obc. and Cyclamen. (bot.); Coff. (joyous; excited); Lith. c. (rough skin, ringworm); Sep., Tellur. (ringworm); Puls. (chilly, catarrh); Rhus t.

SYMPTOMS.

1. Mind.—Exhilarated, mind active, thinks of everything.—Cannot collect his thoughts whilst listening to sermon on account of jovial feelings.—Great hilarity for several days; everything gives him pleasure.—Despondency.—After mental exertion great prostration.

2. Head.—Heat rising to head, slight sweat on forehead, followed by pressing stitching in eyeballs, and a tickling, pricking in urethra, inclining him to coition.—Headache just over supra-orbital ridges with eructations and rumbling in the bowels.—Spasmodic lancinations in both temples, extending to eyes.—Pressive aching in forehead and occiput from a current of air blowing on him.—Intense headache and nausea with pains throughout the body.—Occiput: dull or tearing pains and inclination to vomit; violent headache, with hard, knotty stools; knocking pain in l. side; dull pain all night.—Headache > by coffee.—Skin of forehead feels too tight.

3. Eyes.—Things seem to float to and fro, he cannot write.—Glittering before l. eye.—Pressing in eyes after headache.—Stitches in temples extending into eyes.—Pain in r. eyeball < on touching lids.—Itching of lids.

4. Ears.—Obstruction and pain in r. ear following the pressure in eyes.—Stitches in r. ear.—Tickling and itching in l. ear.

5. Nose.—Nose-bleed (syphilis).—Unpleasant tickling on top of nose, with violent sneezing.—Copious secretion of yellow mucus.

6. Face.—Neuralgic pains in r. cheek-bone, extending to supra-orbital region; during the night.—Pains in facial muscles.—Bran-like, ring-shaped tetters on face.—Itching on cheekbones.—Itching and tickling stitches on l. corner of mouth and lower lip, just under the border.

7. Teeth.—Dull pain in a hollow tooth with trembling of the heart.—Dull pain in upper molars and tearing pain in r. cheek-bone.—Teeth pain as from cold; < from touch; chilly sensation in teeth.—Dull pain in gums accompanied by very hard stools.

8. Mouth.—Sensation on tongue as if something cold were placed upon it; also near frænum.—Viscid saliva in mouth, raised by coughing.—Collection of water in mouth, with slight tearing in molars.

9. Throat.—Sensation of dryness in throat with scraping.—Tickling at soft palate at night, as from touch of something cold.

11. Stomach.—Eructations, nausea, inclination to vomit, and rumbling in bowels with headache.—Causes inflammation of the stomach in horses.

12. Abdomen.—Hepatitis and induration of liver.—Abdomen distended with wind.—Visceral obstructions.

13. Stool and Anus.—Inflammation of rectum in horses.—Itching in rectum; pressure in sacrum; piles.—Passes offensive flatus.—Stools: watery; soft and pappy; hard like stones; knotty.—Itching at anus after stool.

14. Urinary Organs.—Burning in urethra when urinating, mostly in the morning.—Orifice agglutinated; presses to urinate; stream divided.—Tickling prickling along urethra inclining to coitus.

15. Male Sexual Organs.—The burning in urethra before and during erection ceases during coitus.—Drawing pains in r. testicle and cord.—Tearing pains in spermatic cords.—Tickling in symphysis pubis.

17. Respiratory Organs.—Scratching and scraping in throat, esp. after meals.—Hoarseness proceeding from the trachea.—Cough dry, with a scratching sensation when reading aloud; with yellow phlegm from the nose; with spitting of saliva.

18. Chest.—A kind of restlessness in chest.—Soreness on the chest with fever.—Pressure in r. lung after a meal or when walking fast.—Suddenly a feeling internally in chest as if struck with a cushion full of pins.—Itching on l. side of chest, principally on nipple.—Eruption on chest.

19. Heart.—Violent trembling of heart, with general trembling and weakness, preceded by aching in a carious tooth and anxiety in chest in evening in bed.—Palpitation.

20. Neck.—Tensive drawing from l. shoulder up to neck; returns when lifting or stretching the arm.—Trembling of muscles of neck (horses).

22. Upper Limbs.—Pains in muscles of upper arm, outside, near shoulder.—Pains in forearm; in carpal and metacarpal bones.—Gouty swellings on joints of fingers.—Skin of hands and fingers very dry, sticky and dirty-looking.—Tetter on hands; moist or dry and hairlike.

23. Lower Limbs.—Pain in hip.—Tickling pains in r. leg and at the os ilium.—Drawing pains in muscles of l. leg; tearing during night.—Weakness and lameness in r. leg, as if it was too short.—Pains in bend of l. knee; sensation of tightness as if something swollen or sore.—Pains in shin bones; < when extending the leg.—Cramps.—Pains in metatarsus and sole (l.), in concave part of l. sole and near toes.

24. Generalities.—A chilly trembling.—Exhausted and drowsy.

25. Skin.—Itches all over; rough, dry.—Dry bran-like tetters in rings.—Ulcers and swellings on joints.—Ill-conditioned ulcers.—Promotes expulsion of splinters.

26. Sleep.—Falls asleep late; sleep restless; awakens early; feeling unrefreshed.

Anatherum.

Anatherum muricatum. Andropogon muricatus. Andropogon squarrosus. Cuscus grass. Vetiver or Viti-vayr. A medicinal grass cultivated in the Markarentas Islands (E. Ind.). (Houat.) N. O. Gramineæ. Tincture of root.

Clinical.—Abscesses. Aphonia. Boils. Cancer. Erysipelas. Glandular inflammation. Hydrophobia. Sycosis. Syphilis. Tic convulsif. Tic douloureux. Tumours. Ulcers.

Characteristics.—*Anatherum* produces a state of drunkenness. Severe neuralgic headache; as if balls moved about in head; as of steel arrows from forehead to nape. Pains in facial bones as if crushed or ulcerated. Convulsive tic. Ulcers at labial commissures (syphilis). Swelling of tonsils, constriction of throat, inability to swallow. Plugged sensation. Burning and stitches. Thirsty but cannot drink. Burning heat alternating with icy coldness in gullet: as of something alive in gullet. Involuntary urination when walking and during sleep. Venereal appetite increased by every attempt to satisfy it until driven to onanism and madness. Tumour of breast, ulcerated, indurated. Abscesses boils glandular swellings (especially of sub-maxillary and cervical glands). Herpes. Herpes and ulcers or scabs on scalp. Tumours. Wart-like growths on eyebrows. Falling off of eyebrows and beard. Chancre-like ulcers on penis. Pustules like small-pox on vulva. Abscesses, ulcers, and fissures on arms and hands. Eruptions like itch or lichen. "Erysipelas with much swelling of arms and legs, dark red or bluish eruptions, with tendency to suppurate" (Farrington). Formication as of ants. Ulcers yellowish, violet, swollen, everted, syphilitic. Discharges from ulcers are foul; foul breath and eructations. Coffee at first <, later >. Wine and coffee < toothache.

Relations.—*Compare:* Avena, Arundo, Anthox. (botan.); Bell., Can. ind., Stram., Staph., Merc., Lach., Thuj. *Antidoted by:* Aromatic liquors. *Inimical:* Wines and spirits.

SYMPTOMS.

1. Mind.—Gay humour, with disposition to laugh and sing.—Blunted intellect and loss of memory.

2. Head.—Vertigo with congestion, tendency to fall backward.—Drunkenness and staggering.—Burning, lancinating, pulsating headache, < r. side, forehead and temples, with nausea, vomiting and great heaviness of eyes.—Neuralgic pain in temples, with sensation as if pointed irons were thrust in, producing fits of craziness; < afternoon and night, from noise, light, and motion.—As if he had water in the head, < walking.—Herpes and ulcers on scalp, with compact, thick, humid scabs and prurigo.—Exostoses.

3. Eyes.—Muscæ volitantes and fiery circles before eyes; everything seems excessively bright and shining.—Wart-like growth on eyebrows.

4. Ears.—Copious ear-wax.—Deafness, < evening and damp weather.

5. Nose.—Stitches in nose, with a crushing sensation at root.—Air inhaled seems icy cold, and causes sneezing.—Ulcers, greenish, badly smelling discharge.—Inflammation of bones.—Boils and small tumours on tip.—Nose cold pale, pointed.

6. Face.—Tic douloureux, and tic convulsif.—Yellow and red spots; stinging pimples.—Ulcers, scabs, or scaly herpes; falling off of eyebrows and beard.—Pain in facial bones as if crushed or dislocated.—Jaws spasmodically clenched.—Submaxillary and cervical glands swell and tend to suppurate.—Ulcers at labial commissures; syphilitic.

7. Teeth.—Digging in teeth as if forcibly pulled out.—Constant inclination to clench teeth.—Decayed, crumbling teeth; bad smell from mouth.

8. Mouth.—Taste bitter, bloody, sweet or flat.—Speech difficult, stammering.—Severe pains at root of tongue as if it were cut off.—Tongue fissured, lacerated, as if cut on its edges, with copious salivation and debility, as from the effects of mercury.—Viscid saliva.

9. Throat.—Inflamed throat with sensation of fulness and obstruction as if plugged.—Tonsillitis; burning and stitches; sometimes coldness.—Thirst, but throat contracts as soon as he hears water mentioned, or sees shining objects.

11. Stomach.—Morbid hunger, wakes in the night to eat; as if he had tapeworm.—Eructations; painful; tasting of food; foul.—Nausea; vomiting of food, bile or blood; horrible pains in stomach.—Very painful pressure, like a bar, on epigastrium with short, anxious respiration.—Contraction, gnawing, and tearing pains; cramps and spasms.—Sensation as of a hard tumour starting from pylorus and extending to liver.

12. Abdomen.—Inflammation and swelling of liver.—Burning, pulsating, and lancinating pain in region of spleen.—Twisting and tearing pains in bowels with nausea and vomiting.—Swelling in groin.

13. Stool and Anus.—Stools mucous, bloody, brownish yellow; whitish, choleraic; offensive, with colic and burning in abdomen and rectum.—Obstinate constipation, stool hard, knotty, like sheep-dung.—Hæmorrhoids and abscesses.—Itching at anus.

14. Urinary Organs.—Ardor urinæ.—Incontinence; when walking and during sleep.

15. Male Sexual Organs.—Chancre-like sores on penis and in urethra.—Sexual appetite increased by every attempt to satisfy it until it drives him to onanism and madness.

16. Female Sexual Organs.—Scirrhus-like swelling of cervix uteri.—Eruptions, whitish and reddish, in vulva; pustules.—Erysipelatous swelling of mammæ.—Ulcerated indurated tumour in breast.—Excoriation of nipples.

17. Respiratory Organs.—Hoarseness and aphonia.—Difficulty of speaking with drowsiness, with glandular inflammation.—Corrosive sensations in larynx.—Liquids pass frequently into larynx and nasal fossæ.—Prominent swelling of laryngeal cartilages, obstinate, paroxysmal, shaking cough, < in evening and night, and from dust.—Burning and raw feeling in chest.

19. Heart.—Burning, stitches, and cramps in cardiac region, with oppression.—Heart seems paralysed with death-like weakness.

20. Neck and Back.—Stiffness of neck and back; lumbago.

22. Upper Limbs.—Rheumatic pains and swelling of joints.—Diseased and deformed nails.—Swelling of glands of axilla.

23. Lower Limbs.—Stiffness, lancinating and crampy pain in sacrum and iliac bones.—Nails grow awry and hurt toes.—Offensive feet-sweats.

25. Skin.—Abscesses, boils, ulcers.

Cenchris Contortrix.

Ancistrodon contortrix. Copperhead snake of North America. N. O. Ophidians. Solution of venom.

Clinical.—Amaurosis. Catarrh. Diarrhœa. Eyes, swelling over. Headache. Heart, affections of. Leucorrhœa. Menorrhagia. Nightmare. Ovary, pain in. Throat, affections of. Vulva, throbbing in; eruption on.

Characteristics.—*Cenchris* has the main features of all the serpent poisons: Coma; semi-consciousness; insensibility of cornea; swelling of upper lip; general swelling; paralysis; cold, clammy sweat. Distinctive symptoms are: a marked alternation of moods; and dreamy absent-mindedness. The dreams of *Cenchris* are very vivid and horrible, cannot be shaken off during waking hours; often lascivious. Swelling above eyes, below brow, like an over-hanging bag of waters. Diarrhœa has been cured having the following characters: "Pain before stool; stool papescent cold but not chilly." Yellow Leucorrhœa; pain in right ovary herpetic eruption on labia. Hard, dry tickling cough, < 3 p.m. Restlessness and sense of suffocation; palpitation; sensation of dying. Must lie with head drawn back, she chokes so. Tight clothing unbearable. Chill or fever beginning in afternoon. Feeling as if whole body were enlarged to bursting; < in region of heart. "Awoke with throbbing in vulva and anus, followed by a dull aching in the sacral region, > by walking about." Symptoms < lying down; < afternoon; < evening and all night; < on waking.

Relations.—*Laches*. is nearest, but affects left ovary more than right; *Cench*. has difficult empty swallowing with easy swallowing of solids and liquids; *Lach*. can swallow solids but not liquids; *Crotal*. (lost sense of position and direction); Crocus (alternating moods); Kali c. (swelling of upper lids). *Antidoted by:* Cham. (internal hæmorrhage); Am. c. (general symptoms). *Antidote to:* Puls.

SYMPTOMS.

1. Mind.—Memory lost.—Lethargy.—Anxiety, feels she will die suddenly.—Alternating moods.—Dreamy, absent-minded.—Took the wrong car without realising where she was going.—When riding in the car rode past the place she intended to get off at.—Suspicious, thinks her husband is going to put her in an insane asylum; every day, 3 to 8 p.m., for ten days, yet she knew it was a delusion.

2. Head.—Hard aching pain, commencing l. frontal eminence, spreading down l. side to teeth, thence to r. frontal eminence, then to teeth r. side.

3. Eyes.—Swelling like bags over eyes and under brows.—Aching and itching in eyes; dim vision, redness of margins and twitching.—L. eye waters; from concussive cough.

5. Nose.—Catarrh; scabs; obstruction.

6. Face.—Expression bloated, besotted.—Face sallow.—Burning face.—Blue circles round eyes.

9. Throat.—Accumulation of mucus; glossy, thick, tough.—Difficult empty swallowing, but easy swallowing of solids and liquids.—Warm drinks grateful.

11. Stomach.—Nausea > by ice; < by water which = vomiting.

12. Abdomen.—Intolerance of tight clothing.

13. Stool.—Diarrhœa early in morning, on, waking.—Stool, gushing, frequent, watery, at first without pain; after several hours, great pain before the motions.

15. Male Sexual Organs.—Violent sexual desire.

16. Female Sexual Organs.—Increased desire.—Yellow leucorrhœa.—Pain in r. ovary.—Herpetic eruption on labia.—Menstrual flow very profuse; light with dark clots.

19. Heart.—Feels as if heart were distended, or swelled to fill the whole chest.—Strongly conscious of heart.—Hard aching and sudden sharp stitching in heart.—Throbbing or fluttering under l. scapula.—At 3 p.m. sensation of fluttering followed by feeling that heart fell down into abdomen; then pulse became feeble, with heat lasting until after midnight.

17. Respiratory Organs.—Hard, dry, tickling cough, < 3 p.m., even causing escape of urine.

27. Fever.—Chill or fever beginning in afternoon.

Angophora.

Angophora lanceolata. Metrosideros costatus. Red Gum. (Australian bush.) N. O. Myrtaceæ. Tincture or trituration of dried sap or gum.

Clinical.—Constipation. Dysentery.

Characteristics.—Proved by F. Kopp, *Angophora* (which resembles *Eucalyptus* in appearance) produces the following symptoms: Bearing-down and constant inclination to stool. Dry, hard evacuations, accompanied with blood; diarrhœa, headache, nausea, flatulent distension, and colicky pains. For nearly a week there

was obstinate constipation; then nausea, sickness and diarrhœa, with vertigo and debility. Pains and tenesmus only > by lying down flat on the face.

Relations.—*Antidoted by:* Ipec.

Angustura Vera.

Bark of Galipea cusparia. Bonplandia trifoliata. (From Angustura, South America.) N. O. Rutaceæ. Trituration and tincture of the bark.

Clinical.—Bone-pains. Caries. Diarrhœa. Injuries. Intermittent fevers. Myopia. Spavin in horses. Tetanus. Toothache. Whooping-cough.

Characteristics.—The effects of *Angustura* are closely allied to those of Nux, Ruta, and Mercurius. The mental condition is one of over-sensitiveness and excitability; the slightest offence, a mere trifle, irritates as with *Nux*. On the other hand there is pusillanimity, which corresponds more to *Ruta*. Among the prominent features are: Drawing, tension, stiffness of muscles and joints; bruised, sore feeling as after a blow. Drawing of head to right side, later to left. Shortsighted. Heat in forehead at night. Exostosis of lower jaw. Trismus neonatorum (where much *Mercury* had been given). Drawing in upper r. molar tooth > application of cold finger. Thirst, constant desire to drink. Irresistible desire to drink coffee. Hiccough after cough. Belching with cough (*Ambra*). Every evacuation followed by shivering, crawling sensation over face. Tenesmus with soft stool. Hæmorrhoids protrude with hard, knotty stool. Seminal emissions. Itching of tip of glans penis (when walking in open air). Violent itching on scrotum. Dry, hacking cough from scratching in throat or irritation behind sternum. Irritation behind sternum through to back. Palpitation < sitting bent and > sitting up. Cutting pain from point of right scapula to breast, near nipple (*Chel.*). Pain in cervical vertebræ < moving arms. Tearing as if in the bones, < at rest; > cold applications; > extension; < exertion and pressure. Spinal cord and extensor muscles principally affected; cracking in all joints. Caries of long bones. I have verified the power of *Angust.* over long bones in a case of acute periostitis of the tibia in a scrofulous boy. The 5x trit. speedily arrested inflammation, after the failure of *Merc. viv.* Symptoms < from exertion; from stooping; sitting bent over (palpitation) moving or lifting arms; drinking warm milk; 3 p.m. (loose cough); > application of cold fingers (toothache); cold application; extension; lying on left side.

Relations.—Ang. is like Ruta in its action on bones, and as an antidote to Mercury; also like False Angustura (Angustura spuria, Brucea antidyssenterica, Nucis vomicæ cortex—*see* Brucea); Bell. (< 3 p.m.; easily startled; heat in female genitals; trismus), Bry., Rhus; Cep., Cham., Coff. (toothache > by cold); Cicut.,

Ign., Nux (tetanus); Merc., Pho., Sil. (caries of jaw); Æsc., Alo. (piles and backache); Ant. cr., Ant. t., Lil., Nat. m., Puls., Sep. (eruptions); Hyperic., Led. (punctured wounds); Ran. bulb. (pain in pectoral muscles). *Antidoted by:* Coffea (not Camph.), Bry. (bellyache after milk); Chel. (sharp, cutting pain from just beneath right scapula to chest).

SYMPTOMS.

1. Mind.—Timidity of character, and tendency to take alarm.—Pusillanimity, and want of self-confidence.—Ill-humour and discontent, with great readiness to take offence.—Extreme excitement and gaiety.—Absence of mind and reveries.—Vivacity of mind, chiefly in the afternoon.

2. Head.—Head bewildered, with stupidity, as if after intoxication.—Dizziness in the open air, or on crossing a stream of water.—In the evening, pressive headache, with heat in the face.—One-sided headache, or both sides ache as if about to faint.—Boring pains.—Pain, like that of a bruise, in the brain.—Cramp-like pains in the head.—Piercing in the temples.—The headaches appear mostly at sunset, and continue until the patient goes to sleep.—Sensation of torpor in the temporal muscles, with tension on opening the mouth.

3. Eyes.—Tension and pressure in the eyes, as from too strong a light.—Sensation of dryness and pain, as of excoriation, in the eyelids.—Redness, heat, and burning in the eyes, with nocturnal agglutination of the eyelids.—Spasmodic stretching open of the lids.—Eyes fixed, prominent, immovable.—Sight confused, as if by a mist, or as if the cornea were obscured (in the morning).—Objects too far distant, must bring them closer.

4. Ears.—Cramp-like pain in the ears.—Jerkings and tearing before and in the ears.—Sensation as if something were placed in or before the ears.—Heat in the ears.—Diminution of hearing.

6. Face.—Heat and bluish redness of the face.—Tension of the facial muscles.—Cramp-like pains in the cheek-bones and in the masseters frequently dart through the eyeballs and temples, < by stooping, walking, or mental excitement.—Trismus, with the lips strongly separated, displaying the teeth.—(After the spasms, the face and lips still remain bluish for some time.).—Exostosis at the lower jaw.

7. Teeth.—Drawing odontalgia.—Throbbing in the hollow teeth.

8. Mouth.—Dryness of the mouth and lips.—(In the evening), viscid, insipid, and putrid mucus in the mouth, with constant desire to drink.—Tongue white, and, as it were, rough.—Sensation of burning in the tongue.

10. Appetite.—Bitter taste, principally after dinner and after smoking tobacco.—Thirst, with desire for cold drinks, or sensation of thirst without a desire for drink.—Disgust for food, principally solid food with irresistible desire to take coffee, or with insatiable hunger.—Disgust for pork.—Imperfect eructuations after eating, with a sensation of fulness in the chest.

11. Stomach.—Bilious eructations.—Nausea while dining, or walking in the open air, with uneasy sensation of faintness.—Pain, as of incisive excoriation in the stomach, particularly at the beginning of a meal.—Cramp-like pain in the pit of the stomach.—Acidity, coated tongue, pappy, unpleasant taste and loss of appetite.

12. Abdomen.—Bruise-like pain in the abdomen.—Cramp-like colic.—Severe pain, extending in a line from navel to sternum.—Cutting pains, chiefly after having taken milk (hot).—Shooting pain in the abdomen.—Borborygmi and fermentation in the abdomen, as preceding diarrhœa.

13. Stool and Anus.—Stools frequent and copious.—Diarrhœa of mucus, with colicky pains.—Diarrhœa day and night, each evacuation preceded by cutting pains in the abdomen, usually attended with nausea in the morning; stools often whitish, thin and copious, diarrhœa becomes chronic, with loss of flesh and great debility; constipation.—Pressive and contractive pain in the anus, with swelling of the hæmorrhoids.—Burning in the anus while at stool.

14. Urinary Organs.—Frequent want to make water, with scanty evacuation, or frequent and abundant evacuation of urine, preceded by pressure on the bladder, and followed by tenesmus.—Urine of an orange colour, and soon becomes turbid.

15. Male Sexual Organs.—Much itching of all these organs, sometimes voluptuous.—Seminal emissions.

16. Female Sexual Organs.—Troubles with the r. ovary.—Sensation as if the uterus were beating against the r. ovary and r. hip.

17. Respiratory Organs.—Hoarseness from mucus in the aerial passages.—Intermitting spasmodic breathing.—Voice weak and faint.—Dry cough, with rattling and scraping of mucus in the chest.—Violent, deep cough, with expectoration of yellowish mucus.—A sort of whooping-cough with hiccough and belching of wind.—Cough occurring every p.m., at 3 o'clock.

18. Chest.—Respiration convulsive (intermittent).—Constriction in upper part of lungs, as if one had been running.—Oppression of the chest, on walking quickly, and during an ascent.—Cramp in the chest, with painful spasms of the muscles of the chest.—Painful sensitiveness of the chest, even to the slightest touch.—Bruise-like pain in the muscles of the chest, on moving the arms.

19. Heart.—Incisive shocks, or shootings in the chest, and in the region of the heart.—Violent throbbing of the heart, when seated and leaning forward, or in the evening, in bed, when lying on the left side.—Palpitation of the heart with anguish.—Heart feels suddenly swollen, with great fear of dying, > by lying on l. side.—Sensation of painful contraction of the heart.

20. Neck and Back.—Painful heaviness in the nape of the neck, and between the shoulder-blades, in bed, in the morning.—Opisthotonos.—Violent itching along the back.—Pain in the loins, as if bruised, mostly at night, and particularly towards four o'clock in the morning.

22. Upper Limbs.—Arms tired and heavy, as if paralysed, with stiffness in the elbow.—Paralytic weakness of the elbows and of the hands.—Cramp-like drawings in the forearm, the hands, and the fingers.—Coldness of the fingers.

23. Lower Limbs.—Pain, as of dislocation, or of cramp in the coxo-femoral joints; also in the leas and in the feet.—Pain, as from fatigue, in the thighs and in the legs, when walking, as if they were going to break.—Pressive drawing in all parts of the lower extremities.—Pain in the joint of the foot on putting it down, producing lameness.—Paralysis of the legs, imminent with trembling of the feet.—Paralysis of the joints of the feet.—Drawing in the limbs, with soreness.—Pain in the inner side of the ankle, when walking, causing limping.

24. Generalities.—Sensation of weakness and of stiffness in the whole body; as if the marrow of the bone were stiff.—The spinal marrow and the exterior muscles are principally affected.—Stiffness and extension of the limbs.—Tension in the muscles while walking.—Paralysis of different parts.—Great difficulty in walking, with threatened paralysis of the legs.—In tetanus, traumatic, or otherwise, when there is spasmodic twitching or jerking of the muscles.—Catalepsy, with the body bent backward.—Wasting of soft parts.—Convulsive starts.—Attacks of tetanus, excited mostly by touch, by drinking, and by noise.—Tetanic spasms caused (by the previously named causes) and by drinking of lukewarm water; cheeks and lips become blue; the breathing is laboured during the spasms, groaning and closing of the eyes, lips wide open, drawn up and down, exposing the teeth.—Commotion in the body trunk), as from an electric shock.—Twitching and jerking along the back, like electric shocks.—Cracking of the joints.—Caries, and painful ulcers, which attack the (long) bones and perforate them, even to the marrow.

26. Sleep.—In the evening, great drowsiness, followed by sleeplessness before midnight.—Sleep disturbed by frequent dreams.

27. Fever.—Pulse accelerated, spasmodic, irregular at times, intermitting.—Chill, in the morning and forenoon, preceded by thirst.—Violent chill every afternoon at 3 o'clock.—Heat in the evening after entering a room, after supper, mostly in the face; at 3 a.m., disturbing sleep, followed by chilliness.—Shuddering in the part

affected.—Heat, with confusion and pain in the head, in the evening and at night.—Thirst and vomiting of bile begin with hot stage.

Brucea Antidysenterica.

Angustura falsa. Nucis vomicæ cortex. N. O. Loganiaceæ. Tincture or trituration.

Clinical.—Abdomen, throbbing in. Headache.

Characteristics.—Under the name of *Brucea antidysenterica* a quantity of Nux vomica bark got upon the drug market, and was at first supposed to be Angustura bark. Many poisonings ensued before the mistake was discovered, and the bark received the name *Augustura falsa*, in contradistinction to the true Angustura. It contains strychnine, and the symptoms are included in the pathogenesis of *Nux vomica* and *Strychninum*. The homœopathic preparation of *Nux vom*. is, however, prepared from the seed. One characteristic symptom of *Brucea antidysenterica* (*i.e*., the *bark* preparation) is: "Headache with extreme drowsiness; disappearing in evening." Another is: "Sensation of throbbing in pit of stomach and in entire abdomen." (Although the symptoms are included in the pathogenesis of *Nux vomica* as the bark has been experimented with independently, I subjoin the Schema.)

Relations.—The following also have drowsiness with headache: Gins., Herac., Gels. (difficult to keep the eyes open), Nux m., Nat. s., Sul.

SYMPTOMS.

1. Mind.—Dejection, with want of sleep.—Taciturnity and hypochondriasis.—Gloomy, melancholy humour, with indolence and lassitude.—Sad and gloomy humour on waking in the morning.

2, 3. Head and Eyes.—Heaviness and confusion in the head, with sleepiness, disappearing in the evening.—Vertigo, which occasions falling, in the evening.—Digging crawling in the top of the head.—Headache in the evening, after having walked long in the sunshine.—Cephalalgia behind the eyebrows, which seem to be swollen.—Shootings in the head, aggravated by walking, esp. in the sun.—Headache aggravated by sitting, as well as after eating.—Eyes dull and swollen.—Eyes red in the corners in the evening.—Itching in the eyelids.—Eyes red and burning in the morning.—Painful sensation in the eyes, as from sand, rendering it necessary to rub them.

6, 8. Face and Mouth.—Mealy, itching tetters on the face, followed by peeling off of the skin.—Paleness in the face.—Slight convulsive, rapid movements in the lips.—Acute pains in the teeth and in the gums, esp. on drinking cold water.—Accumulation of saliva in the mouth, forcing one to spit continually.—Dryness and burning pain in the gullet, as if from rancid fat.

11. Stomach.—Weak appetite; food at dinner and breakfast appears insipid.—Clammy taste.—Empty risings.—Sensation in the stomach, as if nothing had been eaten for a long time.—Sensation of burning and of heat in the pit of the stomach.—Sensation of throbbing in the pit of the stomach, and in the entire abdomen.—Pressure in the stomach, immediately after eating or drinking.—After a meal, violent beating of the heart, aggravation of headache, fermentation in the intestines, and inclination to evacuate.—In the evening, attack of nausea, with cramp-like pains in the abdomen, vomiting of food, and loose evacuations, with great prostration.

12. Abdomen.—Painful pinching in the abdomen.—Squeezing, as from claws, in the abdomen, followed by frequent, small, slimy evacuations.—Borborygmi in the abdomen.—The pains in the abdomen cease after the first evacuation.—Evacuations too soft, in too small quantity, and of too light a colour.—Shootings in the umbilicus after the evacuations.—Loose evacuations, followed by fainting which enforces lying down.—Strong disposition to loose evacuations, with colic and flatulency.—Loose evacuations in the morning and in the evening.—Itching in the anus in the evening.

18. Chest.—On breathing, sensation of great weight on the whole chest.—Oppression of the chest, with chilly disposition and great sensibility in the open air.—In the morning, on waking, pain as from a bruise on the outside of the chest, with tensive pains on breathing deeply.—Pains, like excoriation, in the interior of the chest, esp. in bed at night, which are most violent when lying on the side.

20. Back.—Sensation of squeezing in the back.

21. Limbs.—Pains, as of fatigue, in the thighs and in the loins.—Cramp-like pain in the back of the hand.—Miliary eruption, red, raised, and itching, on the back of the hand and on the body.—In the evening, sensation of paralysis in the thigh.—Weariness in the knees.—Curvature of the joint of the foot, so that one walks almost on the ankle-bone.—Sensation of burning in corns.

24. Generalities.—Painful sensation of fatigue in the extremities.—Pinching in several parts of the limbs.—In the evening, stiffness in the joints, and acute drawing pains in the limbs, with shootings in the head, in the ears, and in the chest.—Dejection.—Disposition to stretch the limbs and to yawn.—Great weariness

when walking.—In the evening, nervous excitement, trembling and tottering when walking.—Irritability, augmented in the evening.

26. Sleep.—Sleepiness during the entire day, esp. when seated, in the morning, after dinner, and in the highest degree in the afternoon.—Sleepiness early in the evening.—Sleep full of dreams, with ebullition of the blood.—Sleep troubled, with confused or frightful, terrifying dreams.—Sleepiness alternately with want of appetite.

27. Fever.—Chilly disposition and aversion to the open air.—Shivering and excessive coldness.—Sweat on walking, notwithstanding the shiverings, which appear chiefly during rest.

Anhalonium Lewinii.

Mescal buttons. N. O. Cactaceæ. Tincture, extract, or infusion. Havelock Ellis says: "I first cut up the buttons into small fragments and poured on boiling water twice; a single infusion is inactive."

Clinical.—Brain-fag. Delirium. Headache. Hallucinations. Megrim. Mental weakness. Neurasthenia. Paraplegia. Senses, disordered. Visions, disordered, of; coloured.

Characteristics.—The plant from which the mescal buttons are obtained grows in barren and rocky soil in the valley of the Rio Grande. It is used by some Indian tribes in their religious ceremonies. It has been recently tested scientifically, a notable proving having been made by Dr. Wier Mitchell. Dr. E. M. Hale has collected the facts about the drug in an article published in the *Hahnemannian Monthly*. The chief feature of the drug's action is the production of coloured visions of most over-powering brilliancy, associated with moving shapes of fantastic design, the motion being regulated somewhat in time by music. In the Indian ceremonies the constant beating of tom-toms is an essential feature. Other symptoms are loss of conception of time, occipital headache, tired feeling in head, nausea. Tremor of muscles, increased knee-jerk, and loss of power of co-ordination. One prover, Havelock Ellis, noted distinct slowing of the pulse, slight faintness and shallow breathing; but there were none of the terrible heart symptoms of the other Cacti. The most prominent condition is < on closing eyes. The nausea and faintness were < on movement. There is great disinclination to move. > Lying down.

Relations.—*Compare:* Can. ind. (time sense disordered; fantastic visions); Gelsem. (paralysis of accommodation); Bell., Stram., Op., Pic. ac., Piper methyst., Coffea, Coca; Plat. (objects seem small and distant); Pso. (> lying down).

SYMPTOMS.

1. Mind.—Reverie.—Time seems long; intervals between words and sentences seem inordinately long.—Cannot find the right word, with difficulty of enunciation.—Seems to have a double personality.—Distrust and resentment; thinks companions are laughing at him; wants to do them violence.—Consciousness of unusual energy and intellectual power (which, when tested, was found not to actually exist).—Sense of superiority and well-being.—Sense of depression and inferiority.

2. Head.—Frontal (l.) headache with visual zigzags.—Occipital headache, with disturbed vision.—Persistent ache and tired feeling in occipital region (lasting several days and making work impossible).—(It rapidly removed headache in one prover.)

3. Eyes.—Visions in all colours, moving, fantastic, of surpassing brilliance, in designs (sometimes grotesque), moving scenes, dances; affected by beating time; dissipated or modified by opening the eyes; partly under control by an effort of thought.—Natural objects seem more brilliant, shadows deepened, flickering of lights greatly exaggerated.—Pupils dilated.—Accommodation impaired.—Ptosis.

4. Ears.—Impressions of sound and visions heightened by any marked stimulation of skin.—Exaggerated reverberation of ordinary sounds.

5. Nose.—The air seemed filled with vague perfume.—Smell blunted; could not tell whether or not tincture of asafœtida was a perfume.

6. Face.—Disinclined to make the slightest movement; eyelids droop; they scarcely move the lips and jaws in articulating.

8. Mouth.—Great difficulty in talking, partly from paralysis of the tongue, partly from slowness of thought.

11. Stomach.—Nausea; < on movement; entirely > on lying down.

19. Heart and Pulse.—Pulse slowed.—Respiration shallow.—Faintness.

23. Lower Limbs.—A fine tremor in lower extremities.

24. Generalities.—Motor inco-ordination.—Extreme muscular depression; don't want to stir; whole body feels relaxed.—Lazy contentment; "a land where it is always after noon.".—Fine tremor in lower extremities preluding the visions; unable to walk without assistance; can with difficulty sit up.

26. Sleep.—Drowsiness; followed by consciousness of unusual energy.

Anilinum.

Amidobenzene. C_6 H_5 NH_2.

Clinical.—Anæmia. Cancer. Cholera. Eczema rubrum.

Characteristics.—The symptoms of *Anilinum* have been observed on workpeople poisoned by inhalation of the fumes, and on persons who have worn aniline-dyed articles next the skin. The symptoms are in many respects like those of *Arsenic*. There are vomiting, purging, bursting headache, epileptiform attacks; cyanosis is very marked; swelling and irritation of the skin. In old-school practice injections of aniline blue have been used with some success to destroy cancerous growths, aniline having a marked affinity for cell nuclei, hence its use in staining microscopic specimens. In poisoning cases evacuants, the inhalation of oxygen, the free use of stimulants—brandy, ammonia, chloric ether—cold affusions to the head, and sinapisms on legs and thighs, have been used with success.

Relations.—*Compare:* Antipyrinum, Antifibrinum, Phenacetinum, Glon., Ars.

SYMPTOMS.

1. Mind.—Hebetude.

2. Head.—Vertigo.—Bursting pains in head.

3. Eyes.—Eyes irritated.—Burning, injected.—Lower lids puffed.

8. Mouth.—Bitter taste.

11. Stomach.—Intense burning in stomach and head, "could not get her breath"; later, vomiting, purging; extremities icy cold intense pain over stomach, which is very hard.

15. Male Sexual Organs.—Pain in penis and scrotum, later, swelling, still later, impotence.

24. Generalities.—Swelling of various parts.—Irritation of tissues.—Epileptic attacks.—Tetanic spasms.

25. Skin.—Vesicular eruption forming a bracelet round wrist.—Eczematous eruption affecting both knees.—Swelling, redness, intolerable itching of skin; eczema rubrum.

26. Sleep.—Somnolence.

Illicium Anisatum.

Star Anise. Chinese Anise. N. O. Magnoliaceæ. Tincture of seeds.

Clinical.—Catarrh. Colic. Cough. Hæmoptysis. Lungs, affections of. Stomach, catarrh of. Rheumatism. Thigh, pain in.

Characteristics.—*Illicium* is a genus of Magnoliaceous shrubs or low trees with smooth entire leaves, exhaling when, bruised a strong odour of aniseed, owing to the volatile oil contained in minute pellucid dots, which may be seen by the aid of a lens. The fruit is used throughout China, Japan, and India as a condiment, and is chewed in small quantities after a meal for sweetening the breath. It has also a local repute as a stomachic and carminative. Provings were made by Franz and Mure. Both showed the action of the drug on the nose, mouth, and stomach. Franz had many symptoms on the face, especially lips, skin, and extremities. A very remarkable symptom of Franz' has been confirmed by Flora A. Waddell (*H. P.*, vii. 427). A man suffering from rheumatism of two years' duration came limping into Dr. Waddell's office, asking if she could do anything for his limb. He complained that when he sat down he couldn't rest in that position at all. Asked why, he replied: "Whenever I sit down my limb feels as if broken off right here," pointing to the middle of his thigh). He said he often got up to straighten himself in order to make sure. He also had some pain in his arm, and severe "sore pain" in his back. *Illic*. 30x cured all the symptoms. Mure's symptoms were noted on head, abdomen, chest, and back. Tough white expectoration appears to be a characteristic; and this symptom has been frequently confirmed: Pain in region of third rib, about one or two inches from sternum (Junction of rib with its cartilage), generally on right side, but occasionally on left. Hering says it is useful for old asthmatics, and the stomach catarrh of old drunkards. Colic of babies. The pain in thigh is < sitting, > rising. Pains in the head are < in morning, > in evening.

Relations.—*Compatible after:* Aco. and Bry. in hæmoptysis *Compare:* In chest pains, Pix, Menth. pu. Botanical, Magnol.

SYMPTOMS.

2. Head.—Pains in head; > evenings, < mornings.

4. Ears.—Buzzing in ears.—Ringing in ears followed by sleep.—Itching over l. ear, going off when touching the place.

5. Nose.—Acute catarrh.—Watery discharge from nostrils.—Warm, smarting sensation in nose, succeeded by sneezing.—Sharp stitches in tip of nose.

6. Face.—Stinging sensation in upper lip, as if blood would press out, > from touch.—Dryness of upper lip, which is drawn closer to teeth.—Burning in inner surface of lower lip, with sensation as if it had gone to sleep.

8. Mouth.—Tongue covered with aphthæ; most on edges.—Edges of tongue folded like little bags.

9. Throat.—Tough, viscid phlegm from stomach; with old drunkards.

10. Appetite.—Rye bread tastes good, its odour is refreshing.—Satiety after eating but little.—All food, except rye bread, tastes too salty or bitter, yet appetite is good.

11. Stomach.—Nausea in stomach, extends to chest, then ceases.—Nausea, with gagging and inclination to vomit.—Bloating of stomach; acidity.

12. Abdomen.—Pain in splenic region.—Three months' colic, esp. if it recurs at regular hours; bowels disturbed.—Violent wind colic.—Rumbling in abdomen.

13. Stool.—Stools: bilious; compact and dark-coloured.

14. Urinary Organs.—Retention of urine.

17. Respiratory Organs.—Dyspnœa in old asthmatics.—After coughing, feeling of emptiness.—Frequent cough, with pain.—Spitting blood in small quantities and with pus-like phlegm, pain in r. chest.—Whitish expectoration.—Tough, viscous phlegm, with old drunkards.

18. Chest.—Pain in region of third rib, about one or two inches from sternum, generally on r. side, but occasionally l.—Pain about junction of third rib with its cartilage; hæmorrhage; cough; congestion; enlarged liver.

19. Heart.—Palpitation, with aphthæ and weakness.

20. Back.—Pain in back and chest.—Cramp-like drawing, as from a cold, in l. side of dorsal vertebræ.

22. Upper Limbs.—Jerking and tearing in bend of l. elbow and at same time in palm; a feeling as if an artery had been injured by a blow.—Pressure back of r. hand, between the two middle metacarpal bones, as though something hard lying between them; < pressing hand against anything hard, not by touch.

23. Lower Limbs.—L. thigh feels as if broken in the middle while sitting; it disappears on standing.

25. Skin.—Stitches as with pins in l. palm, between first and second fingers; > by scratching, but afterwards return with burning.—Dull, painful stitches in skin of

lower forearm.—Crawling, itching stitches in r. palm.—Itching in front and above left ear; > by touch.

26. Sleep.—Sleepless at nightfall.—Disturbed sleep.

27. Fever.—Heat from abdomen to stomach and chest, running over different places, and abating during day.

Anthemis Nobilis.

Roman Chamomile. N. O. Compositæ. Infusion of flowers, or tincture of whole plant when beginning to flower.

Clinical.—Ascarides. Colic. Dyspepsia. Headache. Liver, congestion of.

Characteristics.—*Anthem. nob*. is the common chamomile used domestically in the form of a tea made of the flowers. It is not to be confounded with *Matricaria chamomilla*. Burnett has recorded a case in which violent gastric disturbance and headache were caused by the "tea"; and Berridge has proved the tincture. In Burnett's case there was great coldness and chilliness inside abdomen; Berridge had feelings of coldness generally, and sensitiveness to cold air and the touch of cold things but slight exertion caused heat and perspiration.

Relations.—Compare Cina, &c. China is "useful after abuse of chamomile tea when hæmorrhage from uterus results" (Hering).

SYMPTOMS.

2. Head.—Intense vertical headache, pressure from within out, as if top of head were blown off.

8. Mouth.—Tongue coated white with islands on it.

12, 13. Abdomen and Stool.—Pain in region of transverse colon from r. to l.; then bowels relaxed, stools at first white then putty-like; then severe vomiting and griping and great ineffectual desire for stool.—Griping and coldness and chilliness in abdomen, passing down into legs as far as knees.—Itching of anus as from ascarides.

16. Female Sexual Organs.—Hæmorrhage from uterus.

25. Skin.—Goose-flesh.

Anthoxanthum.

Anthoxanthum odoratum. Sweet Vernal Grass. (Europe and America.) N. O. Gramineæ. Tincture of fresh flowering herb.

Clinical.—Coryza. Hay-fever.

Characteristics.—This remedy has not been proved, but has been used with success on the clinical indication of the effects produced by the pollen grains on those subject to hay-fever. It is used both locally and internally. A popular remedy for hay-fever is "hay tea," a decoction made of hay itself.

Relations.—*Compare:* Cepa, Arsen., Naphthal., Sabad., Psorin.; and its botanical allies, Ananth., Avena, Arundo, Lolium, and Sacch. off.

Anthracinum.

An alcoholic extract of the anthrax poison prepared from the spleens of affected sheep.

Clinical.—Acne. Boils. Carbuncles. Cynanche cellularis. Erysipelas. Gangrene. Malignant pustule. Parotitis gangrenosa. Phlegmonous inflammation and ulceration. Small-pox. Splenic fever. Ulcers. Whitlow.

Characteristics.—*Anthracinum* is indicated in all conditions of boils and boil-like eruptions (as acne in some forms, and in carbuncles). It was introduced into homśopathic practice by Lux the veterinarian long before the experiments of Pasteur. The keynote for its employment is "succession of boils" or carbuncles, but it is also of the greatest use in other cases. "Terrible burning" with carbuncle. The potentised virus is the best remedy for the disease from which it is obtained—"Splenic fever" in animals, and "Malignant pustule" in human beings. Erysipelas of a foul kind, and gangrenous erysipelas; cellulitis. "Hard, stony" swelling in region of right lower jaw and submaxillary gland. Anthrax-quinsy. Whitlow and sloughing. Glands painfully swollen. Induration of cellular tissue. Black or blue blisters. Horribly offensive gangrenous ulcers. A number of symptoms have been recorded from human patients affected with the anthrax disease.

Relations.—*Compare:* Anthracinum bovum, Anthracinum suum, Laches., Tarent. c., Arsen., Carb. v. *It follows well:* Arsen. (burning and ulceration), Phos. ac. *Is followed well by:* Aur. mur. nat. (periosteal swelling of lower jaw), Silic. (cellulitis). *Antidoted by:* Camph., Ars., Rhus, Silic., Laches., Carb. v., Puls., Kreos., Carbol. ac., Salicyl. ac., Apis.

SYMPTOMS.

2. Head.—Headache, as if a smoke with a heating pain was passing through the head.—Headache with chill.—Swelling of head.

6. Face.—Parotitis gangrenosa.—Stony swelling around lower jaw.—Gland under chin painfully swollen.

12. Abdomen.—Sensation as if diaphragm were pushed forward.—Enlargement of spleen.—Bellyache with chill.

13. Stool and Anus.—Vomiting followed by a painless, often bloody diarrhśa.—Diarrhśa with fever.—Cholera-like collapse.

19. Heart and Circulation.—Heart-beats frequent but weak.—Cyanosis.—Blood does not coagulate.

20, 21. Back and Limbs.—Axillary glands swollen.—Severe pains in limbs and joints with the fever.—Śdema; ulcers; gangrene; sloughing whitlows.

24. Generalities.—Restlessness.—Clonic and tetanic spasms (marked rigor mortis after death).—Exhaustion and collapse.—Terrible burning pains.

25. Skin.—Crusty oozing eruption.—Itching with dry skin.—Black or blue blisters.—Carbuncles.—Boils.—Sloughing ulcers.—Small-pox.

Anthrokokali.

Anthracite coal of a certain kind dissolved in boiling caustic potash. Trituration.

Clinical.—Caries. Cracks. Diabetes. Diuresis. Ecthyma. Eczema impetigenoides. Gout. Herpes. Impetigo. Lichen. Nostrils, cracked. Priapism. Prurigo. Rheumatism. Scabies. Scrofula. Sycosis. Urticaria.

Characteristics.—"A very absurd combination," says Hering, "proved on many people, but in a very superficial way." It has been principally used in skin affections, scabies, prurigo, chronic herpes, and chronic cracks and ulcerations of nostrils. Eruptions decrease with the full of the moon. The intense thirst and diuresis suggest a place for the remedy in diabetes.

Relations.—*Compare:* The Carbons; the Antimonies; Rhus, Dulc., Ferrum iod. (eczema impetigenoides).

SYMPTOMS.

5. Nose.—Chronic cracks and ulcerations of nostrils.

8. Mouth.—Dryness of the mouth; foul tongue.

9. Throat.—Dryness of the throat; internal heat, extending to the stomach; deglutition slightly impeded.

11. Stomach.—Want of appetite.—Surfeit.—Disagreeable taste in the mouth; great thirst; retching; vomiting of bile, and of black mucus; sensation of heat in the stomach; pressure within; cramps of the stomach.

12, 13. Abdomen and Stool.—Inflation of the abdomen, as in tympanitis; colic.—Blackish stools; evacuations like pap, with colic and borborygmi; diarrhœa, which continues several days.

14. Urinary Organs.—Increase in the secretion of urine; abundant flow of pale urine without sediment; burning in the urethra while passing water; or itching at the orifice; retention of urine.

15, 16. Male and Female Sexual Organs.—Frequent erections.—Catamenia beyond the usual period.

25. Skin.—Increased activity of the skin; nettle-rash.—Chronic erysipelas; purulent pimples, like papulæ, with considerable itching, appearing during the night and disappearing in the daytime; dropsy.

26. Sleep.—Sleeplessness, with agitation and excited pulse.

27. Fever.—Febrile shivering, alternating with heat, followed by gentle perspiration, and quickness of the pulse.—Redness and heat of the skin, disappearing on the supervention of sweat.—Perspiration all over the body, with pain in the head, agitation, and bruise-like sensation, and quickness of the pulse; nocturnal sweat, sometimes general, sometimes limited to the parts affected; viscid sweating of the feet; before the sweat, oppression of the chest and violent palpitations of the heart; the skin continues moist for a long time after the perspiration has ceased.

Antifebrinum.

Acetanilid (formed from aniline). CH_3 CO NH C_6 H_5. *Exalgine* is a derivative from this, Methylacetanilid, and has almost identical action. Solution and trituration.

Clinical.—Asthma. Cyanosis. Fainting. Head, enlarged sensation. Palpitation. Thrombosis.

Characteristics.—Given as remedies for migraine and in order to reduce fever, *Antifeb*. and *Exalg*. have produced symptoms of collapse and cyanosis, in some instances fatal, with great rapidity. One patient experienced from *Exalgine* a sensation that his head was so large that it seemed to occupy the whole room. Respiration was most difficult as in a bad attack of asthma, he seized and clenched the hands of those around him. He was not an asthmatic subject. He felt as if the diaphragm had ceased working and he must go on breathing on his own account at any cost. Several cases of thrombosis of the lower extremities from heart weakness have followed its use.

Relations.—*Compare:* Antipyr., Anilinum, Glon., &c.

Antimonium Arsenicicum.

Arseniate of Antimony. (Sb_2 O_3) As O_5 + 3 p.c. Trituration.

Clinical.—Catarrhal pneumonia. Emphysema. Ophthalmia. Pericarditis. Phthisis. Pleurisy. Pneumonia. Sciatica.

Characteristics.—*Antim. ars*. is said to affect preferably upper left lung. Emphysema where the dyspnœa is excessive. Haarer is the chief authority for this drug. Mattes, who used it after him, says it is equally effective in right-side cases in old pneumonias and catarrhal pneumonias in children; in old pleuritic effusions, and in pericardial exudations. The cough is < by eating, and on lying down. Wandering pains in sciatic nerves. It has caused inflammation of the eyes and œdema of the face.

Relations.—*Compare:* Other antimony salts, Ars., Aur., Laches., Puls. (wandering pains), Sul.

Antimonium Crudum.

Native Sulphide of Antimony. $Sb_2 S_3$.

Clinical.—*Anus, irritation of*. Callosities. *Catarrh*. Chorea. Constipation. Corns. *Diarrhœa. Dyspepsia. Eczema. Feet, sore and horny*. Fever. *Gum-rash. Nails, degeneration of. Nettle-rash*. Piles. Prolapsus recti. *Red gum. Remittent fever. Stomach, disordered*. Sunstroke. Tendons inflamed. *Tongue coated. Voice, low*. Warts. Whooping-cough.

Characteristics.—*Antim. crud*. corresponds in a sense to the race of swine, as Arsenic does to horses and *Pulsatilla* to sheep. It is preeminently a scrofulous medicine, corresponding to gross constitutions with tendency to rough scaling skin with horny patches. With these horny patches is great tenderness, the patient can hardly bear to walk on them. Analagous to these horny excrescences are warts, and *Ant c*. has cured many cases of these. A student, 17, had twenty-three on right hand and thirty four on left, mainly on backs and fingers, but a few on interior surface of fingers. In addition redness and inflammation of eyelids. Cured in seven weeks with *Ant. c*. 200x. In the same category may be mentioned the tendency of the nails to grow in splits. *Ant. crud*. is specially suited to infants and children (with coated moist white tongues) and also to elderly persons. Tendency to grow fat. When symptoms recur they change their locality or go from one side of the body to the other. Left side predominates, especially lower left and upper right. Among special symptoms are: Itching of scalp and falling out of hair. Tendency to take cold about head. Scrofulous ophthalmia, canthi especially affected (*Graph*. the whole margin). Otorrhœa. Moist eruption behind ears (*Graph*.). Slight noises startle. Nose-bleed with vertigo; after headache; after rush of blood to head. Children are peevish, won't bear to be touched or looked at. Adults are sulky or sad. Weeping and impressionable. Sentimental mood by moonlight. Amativeness. Suicidal. Gastric and remittent fevers, and fevers of children, with great thirst and the characteristic white tongue. The fever runs higher at night. The child is cross, but unlike the *Cham*. patient, who wants to be carried, this will scream and show temper at every little attention. There is a form of diarrhœa which alternates with constipation, often found in old people, to which *Ant. crud*. corresponds. "Stomach weak, digestion easily disturbed, in old people." It cures many cases of mucous piles: continuous oozing, staining linen. In connection with the intolerance of wine of the remedy, it may be mentioned that in one case it produced a feeling of intoxication like that of alcohol, so that the patient refused to take any more of it. A number of nervous symptoms appear in the provings—restlessness, jerking of muscles, &c. Dr. M. Jousset has recorded a severe case of chorea which resisted all the usual remedies and was cured with *Ant. crud*. prescribed on the digestive symptoms, particularly the characteristic white tongue. A notable characteristic of *Ant. crud*. is the thickly coated tongue. Generally it is thick and white; milky-white; or like whitewash evenly laid. The edges may be red and sore. Sore, cracked

and crusty nostrils and corners of mouth. Abnormal hunger; not relieved by eating; emptiness at epigastrium and want of animal heat. Disgust for all foods. Nursing children throw up a little sour milk as soon as they take the breast or bottle (*Æthus c.*, after vomiting the child sleeps and wakes hungry; *Ant. c.* the child refuses to nurse again). The sulphur element in *Ant. crud.* is strongly pronounced in the provings as in the constipation and other intestinal disorders of the drug. < By heat is a marked characteristic (*Apis, Puls., Cham., Secale, Camph.*); also < from cold washing (less severe after warm washing), from cold water and cold food. In spite of the < from heat there is great sensitiveness to cold, hence it is suitable to the hydrogenoid constitutions. Moonlight < mental symptoms. Many symptoms are < at night. < By touch. < From wine, especially sour wine; from vinegar and acids (though tamarind water does not disagree); from fruits. < From pork, bread, and pastry. > By rest, by lying down; < rising up; < ascending stairs.

Relations.—*Compare:* Æthiops ant., Ant. tar., Am. mur., Apis, Bry., Graph., Puls., Ran. b., Rhus t., Sul., Variol.; Cham., Chi, and Stram. (averse to be looked at); Hep., Rhus, Sep., Spi. and Sul. (averse to be washed). *Complementary:* Scilla. *Follows well:* Puls., Ipec. *Followed by:* Puls., Merc., Sul. *Antidote to:* Stings of insects. *Antidoted by:* Calc., Hep., Merc. Bry. compares very closely in digestive condition, loaded tongue and < from warmth; in summer complaint.

Causation.—Gluttony. Hot weather. Heat of sun. Getting over-heated. Disappointed love. Suppressed eruptions.

SYMPTOMS.

1. Mind.—Ecstasy and exalted love, with great anxiety about his fate and inclination to shoot himself; worse when walking in the moonlight, and then his conduct is like than of an insane person.—Desponding reflections upon one's condition.—Disgust of life, with an inclination to blow one's brains out, or to drown oneself.—Tendency to be frightened.—Peevish humour, ill-humour.—To be looked at and to be touched are unbearable (in the case of a child).—Dull intellect, imbecility.—Madness.

2. Head.—Confusion of head, as after long labour in the cold.—A feeling of intoxication.—Dizziness with nausea, or bleeding of the nose.—Attack of apoplexy, with frothy salivation.—Cephalalgia, after bathing in running water.—Cephalalgia with dizziness from the smoke of tobacco; better in the open air.—Sensation, as if the forehead were going to burst.—Dull pain in the sinciput and vertex, increased by going upstairs.—Cramp-like pain in the head, ameliorated by walking in the open air.—Piercing pain in the forehead and in the temples.—Sharp pains as from knives in head and under l. breast.—Congestion in the head, painful and followed by epistaxis.—Pain in the bones at the vertex, as if from a swelling in the periosteum.—Teasing itching in the head, with failing off of the hair.

3. Eyes.—Shooting in the eyes.—Red, inflamed eyelids.—Inflammation of the eyes, with itching and nocturnal agglutination of the eyelids.—Slight oozing of the skin near the external angle of the eye.—Humour in the corners of the eyes.—Enlargement of the eyes.—Sensibility of the eyes to the light of day.—Blindness.—Chronic sore eyes of children.

4. Ears.—Shooting in the ears.—Redness, swelling, and heat in the ear.—Otorrhœa.—Digging and murmuring in the ears.—Deafness, as if one had a bandage over the ears; as if a leaf were lying before the ears.—Buzzing in the ears.—Continual roaring in the ears.

5. Nose.—Eruption in the nose.—Excoriation of the nostrils, and of the corners of the nose.—Nostrils chapped and scurfy.—Stoppage of the nose.—Bleeding at the nose, esp. in the evening.—Sensation of coldness in the nose, when inspiring air.—Dryness of the nose, chiefly on walking in the open air.—Accumulation of thick yellowish mucus in the nostrils.

6. Face.—Sad countenance.—Heat in face, and chiefly in the cheeks, with itching.—Red, burning, suppurating eruptions on the face, with yellowish scurf.—Lumps and blisters on the face, as if from the stings of insects.—Granular eruptions, yellow as honey, on the skin of the face.—Eruption, like conoid chicken-pox, on the face and on the nose.—Sensation of excoriation of the chin.—Painful fissures at the commissures of the lips.—Pimples on the upper lip.—Dryness of the lips.

7. Teeth.—Pains in carious teeth, with dull pricking, successive pullings and gnawing, even in the head, renewed after every meal, increased by cold water, and mitigated in the open air.—Jerking toothache in the evening, in bed, and after a meal.—Grinding of the teeth while sleeping in a sitting posture.—Stitches in and about the teeth when inspiring cold air.—Bleeding of the teeth and of the gums, which become detached.

8. Mouth.—Bitter taste in the mouth.—Ptyalism (tasting salty).—Dryness of the mouth.—Accumulation of water on the tongue and in the mouth.—Salivation.—Tongue loaded; with a white coating.—Pain, as of excoriation at the edges of the tongue.—Blisters on the tongue.

9. Throat.—Soreness of the throat, as if there were a plug in it.—Inability to swallow.—Dryness and scraping, or an accumulation of viscid mucus in the throat.

10. Appetite.—Aversion to all food.—Longing for acids.—Thirst chiefly in the night.—Loss of appetite.—Sensation of hunger and of emptiness in the epigastrium, in the morning especially, and which is unappeased by eating.—After a meal, dejection, lassitude, fulness and tension in the abdomen.—Great desire to take food, which is not appropriated to strength.

11. Stomach.—Eructations with taste of food, or very acid.—Regurgitation of a watery fluid.—Hiccough on smoking tobacco.—Loathing of food, nausea, and inclination to vomit, as if caused by indigestion.—Heartburn with good appetite.—Nausea after taking wine.—Nausea and vomiturition, from overloading the stomach, or after drinking (sour) wine.—Vomiting of mucus and of bile, sometimes accompanied by diarrhœa, great anxiety, and convulsions.—Pain, burning, and cramp-like in the pit of the stomach, sometimes with despair and inclination to drown oneself.—Tension and pressure in the pit of the stomach.—Painful sensation, as if the stomach were overloaded with food.—Pain in the region of the stomach on being touched.—Gastric catarrh with characteristic white tongue; even if caused by metastasis of rheumatism or gout.

12. Abdomen.—Inflation of the abdomen, with a sensation of fulness, chiefly after a meal.—Violent cutting pains, sometimes with want of appetite; urine red and stools hard.—Sensation of emptiness in the abdomen, as after violent diarrhœa.—Sensation of swelling and of hardness in the inguinal region, on its being pressed.—Accumulation of flatus in the abdomen, with rumbling and borborygmi.

13. Stool and Anus.—Difficult evacuation of hard stools.—Difficult evacuations; the fæces are too large in size.—Urgent inclination to go to stool.—Stool of the consistence of pap.—Diarrhœa, generally watery, with cutting pains.—After vinegar or acid wine, loose stool.—Alternate diarrhœa and constipation, esp. in aged persons.—Constant secretion of yellowish-white mucus by the anus.—Flow of black blood from the anus.—Hæmorrhoidal excrescences, blind and running, with burning and tingling.—Burning itching and fissures in the anus.—Expansive pressure in the rectum (during stool as if an ulcer had been torn open) and the anus.—Burning furunculus in the perineum.

14. Urinary Organs.—Frequent inclination to make water, with scanty emission.—Frequent and abundant emission of urine, with abundant flow of mucus, and burning in the urethra, accompanied by pains in the loins.—On coughing, involuntary emission of urine.—Urine aqueous, or of a gold colour, or reddish brown, and sometimes mixed with small red corpuscles.—Incisive pain in the urethra, on making water.

15. Male Sexual Organs.—Excitement of sexual desire, and great lasciviousness.—Pollutions.

16. Female Sexual Organs.—Metrorrhagia.—Sharp and corrosive discharge from the vagina.—Nymphomania from checked catamenia.—Tenderness over ovaries after menses checked by a bath.—Gastro-intestinal disorders of pregnancy.—Pressure in the uterus as if something would come out of it, esp. during uterine hæmorrhage.—Toothache before the menses, with boring in the

temples.—Quite solid lumps in a watery leucorrhœa, which sometimes causes a smarting down the thighs.—Nausea, vomiting, and diarrhœa during pregnancy.

17. Respiratory Organs.—Great heat in the throat while moving in the open air.—Great weakness, or entire loss of voice, chiefly on becoming warm.—Looking into the fire increases cough.—Sensation of a foreign substance in the larynx, with inability to expectorate.—Violent spasm in the larynx, with sensation of excoriation.—Cough, with burning in the chest.—Morning cough, dry and shaking.—Whooping-cough.—Cough as if arising from abdomen.

18. Chest.—Stifling oppression and paralytic orthopnœa.—Respiration deep, with sighing.—Shootings in the chest, when drawing breath and at other times.—Pain, as of contusion, in the pectoralis major, on raising the arm, and on pressure.—Sharp pain under l. breast.

20. Neck and Back.—Cramp-like drawing in the muscles of the neck and of the nape of the neck.—Rheumatic pains in the nape of the neck.—Miliary eruption on the nape of the neck, in the shoulder-blades, and behind the ears.

22. Upper Limbs.—Rheumatic pains in the arms.—Red vesicles on the arms, with itching.—Painful inflammation of the tendons of the elbow, with great redness and curvature of the arm.—Hot and red swelling of the forearm, with shooting tension.—Sensation of drawing in the forearm, the fingers, and the joints of the fingers.—Arthritic pains in the joints of the fingers.—Painful sensibility of the skin under the nails, and slow growth of the nails themselves.—A horny growth under the nail.—Crushed finger-nails grow in splits, with horny spots.

23. Lower Limbs.—Sensation of drawing in the lower limbs, esp. in the coxo-femoral joint.—Lumps, with red rings, on the buttocks and legs.—Violent pain in the lower extremities.—Numbness of the legs after sitting for some time.—Shooting pain in the knee and in the tibia.—Drawing pain in knees, lower part l. tibia, in l. heel, and tearing through the r. great toe.—Tumour or white swelling of the knee.—Painful stiffness in the knee, preventing the extension of the leg.—Vesicles on the knee after scratching it.—Sensibility of the soles of the feet, when walking on the pavement.—Red swelling of the heel, with burning shootings, which are aggravated by walking.—Corns on the soles of the feet, and callous excrescence at the tips of the toes.—Pressive pain in the corns.—Burning in the fleshy part of the great toe.—Callous excrescence under the nail of the great toe.

24. Generalities.—Rheumatic pains and inflammation of the tendons, with redness and contraction of the part affected.—Inflammation of the muscles.—Drawings or shootings and tension, principally in the limbs.—Restlessness, uneasiness.—Disposition to start even at slight noises.—Twitching of muscles of many parts of the body.—Convulsions with vomiting.—The symptoms are aggravated in the heat of the sun, after having drunk wine, after a meal, night and

morning; amelioration during repose and in the fresh air.—Great sensibility to cold.—Heaviness of all the limbs.—General weakness, esp. at night, on waking.—Emaciation, or great obesity.—Dropsical swelling of the whole body.—Mucous membranes generally affected.—Anasarca.—Marasmus.—Children cannot bear to be touched or looked at.—Chronic affections traceable to suppressed eruptions or ulcers.

25. Skin.—Itching, esp. in the neck, chest, back and limbs.—Eruptions which appear chiefly in the evening, or which itch in the heat of the bed, and prevent sleep.—Miliary eruptions and nettle-rash.—Tumours and blisters, as if from the stings of insects.—Measles-like eruption.—Eruptions, similar to chicken-pox, with shooting pain on pressure.—Thick, hard scabs, often honey-yellow, here and there a crack oozing a green sanious fluid, burning as if immersed in hot embers.—Urticaria white, with red areolæ, which itch fearfully.—Pustules with yellowish or brown scurf.—Freckles.—Hepatic spots.—Deep spongy ulcers with gastric ulcers.—Fistulous ulcers.—Horn-like excrescences and disposition to abnormal organisations of the skin.—Corns and callous excrescences on the feet.—Nails discoloured and deformed.—Red and hot swellings.—Degeneration of the skin.—Fungus of the joints.

26. Sleep.—Strong inclination to sleep during the day, and somnolency, chiefly in the evening or morning.—Coma with delirium.—Waking with fright during the night.—Dreams, anxious, horrible, voluptuous, or painful, and full of quarrelling.

27. Fever.—Chilliness predominating even in the warm room.—Sensation of coldness in the nose when inhaling air.—Heat, esp. during the night, before midnight, with cold feet.—Great heat from little exercise, esp. in the sun.—Intermittent fever, with gastric or bilious affections, principally with disgust, nausea, vomiting, eructations, loaded tongue, bitterness of the mouth, with moderate thirst, diarrhœa, tension and pressure at the pit of the stomach, with cutting pains.—Tertian fever.—Hot sweat, early in the morning every second day.—Pulse irregular, sometimes quick, sometimes slow.

Antimonium Iodatum.

Teriodide of Antimony. $Sb. I_3$ Trituration.

Clinical.—Asthma. Bronchitis. Pneumonia. Uterus, hyperplasia of.

Characteristics.—Recommended by Hale in cases of uterine hyperplasia; also in cases of humid asthma, bronchitis (subacute and chronic, with or without asthma), and other pulmonary affections. The particular indications are: "Frequent spells of

coughing with expectoration of frothy, white, or thick yellowish mucus; loss of appetite and strength; moderate febrile action; coated tongue; yellowish discoloration of skin and conjunctivæ."

Antimonium Muriaticum.

Chloride of Antimony. Butter of Antimony. $Sb. Cl_3$. Trituration.

Clinical.—Cancer of lip.

Characteristics.—This remedy is unproved. It has been used in cancer of lower lip. Poisoning symptoms show-stupor, insensibility, collapse and cold, clammy surface. Pupils inactive, eyes sunken, lustreless. Nausea, vomiting, burning pains in throat and stomach; frequent abortive efforts to defecate. Mucous membranes destroyed.

Relations.—*Compare:* Other antimony salts; Acids; Arsen., Carb. v., Conium (cancer of lower lip and ineffectual urging to stool).

Antimonium Sulphuratum Aureum.

Golden Sulphuret of Antimony. $Sb_2. S_5$. Trituration.

Clinical.—Acne. Amaurosis. Catarrh. Constipation. Cornea, spots on. Diarrhœa. Indigestion. Iris, prolapse of. Itching. Nose-bleed. Lung, congestion of.

Characteristics.—*Ant. sul. aur*. has been proved. Its most notable effects were produced on the eye and chest. Burning in head (with eye complaints). Amaurosis (commencing). Spots on cornea and hypopion. Acute and chronic nasal and bronchial catarrh. Acne. Nose-bleed on washing. As with the other antimonies there is disordered digestion, pasty mouth and taste in morning. Increase of tough mucus in larynx and bronchi, respiration difficult. Dry, hard cough with passive congestion of upper lobe of left lung. Itching on hands and feet.

Relations.—*Compare:* Other Antimonies; Aur. (chest), Ars., Ferr., Merc. sul., Sul., Amm. c. (nose-bleed after washing).

SYMPTOMS.

3. Eyes.—Amaurosis, commencing.—Spots on cornea.—Iris protruding through cornea.

5. Nose.—Bleeding from nose on washing.—Increased mucus from nose and throat.

6. Face.—Pustular acne.

8. Mouth.—Pasty mouth and taste in morning.

9. Throat.—Burning or heat in fauces.—Mucus from throat becomes offensive to smell.—Pressure in throat as if a plug stuck in it.—Scratching, rough feeling in throat in morning.

11, 12. Stomach and Abdomen.—Pressure and fulness in stomach and abdomen; umbilical region sensitive.

13. Stool.—Passage of much flatus with sudden urging, followed by a stool solid at first then bright yellow and pasty; afterwards violent colic and rumbling round navel.—Constipation, fæces hard and passed with difficulty.

14. Urinary Organs.—Urine increased, dark red.

15. Male Sexual Organs.—Pustular eruption on scrotum with much itching.

17. Respiratory Organs.—Accumulation of tough mucus in bronchi and larynx.—Increased mucous secretion with fulness in bronchi and full, hard breathing.—Respiration difficult.—Dry, hard cough, no expectoration.—Increased mucous sputum, mixed with blood, of a sweetish taste.—Passive congestion of upper lobe l. lung, with hard, dry cough.

24. Generalities.—Malaise, fatigue, lassitude, with nausea.

25. Skin.—Itching on hands and feet.—Pustular acne.

26. Sleep.—Sleep deep; dreamy with sudden waking.—Sudden waking after midnight, with general aggravation of symptoms, heavy, confused head, slight sweat.

Antimonium Tartaricum.

Tartar Emetic. Tartrate of Antimony and Potash $_2$[K (Sb O) C_4 H_4 O_6] H_2O. Trituration and solutions.

Clinical.—*Alcoholism. Aphthæ*. Asphyxia neonatorium. *Asthma*. Bilious affections. *Bronchitis. Catarrh. Chicken-pox*. Cholera. Cholera morbus. Coccygodynia. *Cough. Group. Delirium-Tremens. Dyspepsia. Ecthyma. Eyes, inflamed. Impetigo*. Intermittent fever. *Laryngitis. Lumbago. Lungs, affections of. Myalgia*. Paralysis agitans. Plica-polonica. *Pneumonia. Psoriasis. Rheumatism*. Ringworm. *Screaming. Small-pox. Stiff-neck. Sycosis. Synovitis. Taste, altered. Thirst. Tongue, coated. Tremors*. Varioloid. *Vomiting. Whooping-cough*.

Characteristics.—*Antim. tart*. resembles closely *Antim. crud*. and the other Antimonies in its action, though the modalities differ. *Antim. tart*. was the favourite emetic of olden times, and consequently it is one of our best remedies in states of nausea. The nausea is as intense as that of *Ipec*., but less persistent, and is > by vomiting. Nash has found it the nearest thing to a specific in cholera morbus, the indications being "nausea, vomiting, loose stools, prostration, cold sweat, stupor, or drowsiness." In chest affections of all kinds it is indicated where there is great accumulation of mucus with *coarse rattling* and inability to raise it. Drowsiness and even coma may accompany cases of all kinds in which *Ant. t*. is called for. The face is pale or cyanotic and the breathing stertorous. There is heat about heart and warmth rising up from it. A sensation of coldness in the blood-vessels. A correspondent of the *Chemist and Druggist* (May 21, 1892) related the case of an apprentice who had been employed for a week making up "cough-balls" and diuretic balls for horses, both containing powdered antimony. He had been cautioned not to inhale the powder, but his employer believes he did. At the end of the week he was seized with an illness, due, his employer thinks, and no doubt correctly, to the antimony. The symptoms are very characteristic. First, there was nausea, lassitude, and a desire for sleep. He was sent to bed, and during the night his fellow apprentice said he got up and struggled to relieve himself of an imaginary load on the chest. On being put to bed again, a profuse perspiration broke out, and also a peculiar rash on his face and chest; after that he vomited freely and felt better. Temperature 104, pulse 120. A fever-mixture of liq. ammon. acet. and Sp. æther. nit. was given. A doctor who was called in found undoubted symptoms of pneumonia of left lung, but confessed he had never seen the rash before and would not venture an opinion regarding it. For two days the temperature kept at 104, then both temperature and the pulse became normal, the rash disappeared, and with it the pneumonic cough; in six days the boy was perfectly well. "A child coughs when angry" is characteristic. Heath cured a case of whooping-cough in a child who was very fretful before the cough. The mother said that if the child got angry she immediately had a fit of coughing. "Cough at 4 a.m." is another indication which I have found true. Further leading indications for this

remedy are: attacks of fainting, internal trembling. It causes relaxation of sphincters and muscles, with nausea or without. Os uteri dry, tender, undilatable, with distress, moaning, and restlessness with every pain (*Aco.*), feeling of sickness. Convulsive twitching. Convulsions. Great heaviness in all the limbs and great debility. Rheumatic pains (fever), with perspiration, which does not relieve. Inflammation of internal organs. Gastric and bilious complaints. Constant nausea—nausea felt in chest (*Puls.*). Sensation of weight or heaviness in many parts; head, occiput, coccyx, limbs. Pulsations in all the blood-vessels. The child wants to be carried and cries if any one touches it. Peevishness, whining, and crying. Inquietude, apprehension, agitation. Dulness and bewilderment of head as if benumbed. Chronic trembling of head; of head and hands (as in paralysis agitans). The tongue has a thick, white, pasty coat with red papillæ showing through. Intense nausea and vomiting with great effort; with perspiration on forehead. Fulness and sensation of stones in abdomen especially when sitting bent forward. The skin is notably affected. The typical eruption is like that of small-pox, the symptoms of which disease are so closely reproduced in the proving that it has been used instead of vaccine for inoculation purposes, and prophylactic power has been claimed for it. (Compare *Variolinum*.) The terrible backache of small-pox is paralleled by the back-pains of *Ant. t.*, which I have found to correspond to more cases of lumbago than any other remedy. *Ant. t.* is also a "sycotic," and I have verified a symptom given in Hering, "warts at the back of the glans penis." *Antim. tart.* has < by warmth, but not the excessive sensitiveness to heat and sun of *Ant. c.*, and some of the rheumatic symptoms are > by warmth. Warm drink < cough, also lying in bed, especially becoming warm there. There is also < from cold and damp, but not the ill effects of cold washing found in *Ant. crud.* Also cold washing > the rheumatic toothache of *Ant. t.* Both have < from touch and even from being looked at. *Ant. t.* has < on sitting down; when seated; and on rising from a seat; < sitting bent forward; > sitting erect. < Lying on side affected. < Motion, on every effort to move. A characteristic of *Ant. t.* in lung affections is "lies with head back." There is not the > from rest which is apparent in many symptoms of *Ant. c.* The *Ant. t.* headache is < by rest; also earache and respiration. < At night is more marked with *Ant. t.* than *Ant. c.* Cough is < 4 a.m. > from eructations.

Relations.—*Compare:* Acon. (croup); Æthus. c. and Ipec. (expression of nausea); Am. c.; Arsen. (asthma, heart symptoms, gastric catarrh); Bry. (pneumonia < l., Ant. t. < r.,-chest and brain symptoms after retrocession of eruption—Bry., measles and scarlatina; Ant. t. small-pox). Laches. (dyspnœa on waking); Lyc (catarrh of chest, flapping of nostrils.—Ant. t. has nostrils *dilated*); Verat. (colic, vomiting, coldness, craving for acids—Ant. t. has more jerks, drowsiness, urging to urinate; Ver. more cold sweat and fainting); Op. (cough with drowsiness and yawning); Sang. c. (pneumonia, face livid); Ipec. (Ant. t. has more drowsiness and tendency of lungs to collapse); Thuja (effects of vaccination when Thuja fails and Silic is not indicated. Ant. t. develops small-pox pustule; Thuja dries it up). *Compatible:* Phos. in hydrocephaloid, worn-out constitutions, laryngitis, pneumonia. *Follows well:* Silic. in dyspnœa from foreign substances in larynx; Puls. (nausea in chest,

gonorrhœal suppressions); Tereb. (symptoms from damp cellars); Variolinum. *Antidoted by:* Asaf., Chi., Coccul., Con. (pustules on genitals), Ipec., Lauro., Op. (Opium in large doses is the best antidote in poisoning), Puls., Sep. *It antidotes:* Baryt. c., Bry. (dyspepsia), Camph., Caust. (dyspepsia), Puls. Ant. t. differs from Mercury in producing a purely local action on the mouth similar to its action on the skin. The action of Merc. on the mouth is indirect.

Causation.—Effects of anger (cough) or vexation.

SYMPTOMS.

1. Mind.—During the day hilarity, in the evening anxious and timid.—Inquietude and agitation, with palpitation of the heart, and trembling.—Anxious apprehension respecting the future (in the evening).—Pitiful whining before and during the attack.—Bad humour.—Excessively peevish and quarrelsome.—Child will not allow itself to be touched.—Discouragement and despair.—Lethargy.—Suicidal mania.—Wild gaiety (by day only).—Consequences of anger and vexation.

2. Head.—Dulness, confusion, and bewilderment in the head, which is, as it were, benumbed, with inclination to sleep.—Fits of vertigo with sparkling before the eyes, and dizziness when walking.—Dulness of all the senses.—Headache, with palpitation of the heart, and vertigo.—Heaviness of the head, esp. in the occiput.—Semi-lateral headache.—Pressive pains in the head, with compressive tension, as if the brain were contracted into one hard mass, often with dizziness, extending into the root of the nose, sometimes in the evening, and at night; with stupefaction and lethargy; better when exercising and washing the head.—Pulsation in the right side of the forehead; worse in the evening, when sitting stooped, and from heat; better from sitting erect, and in the cold air.—Drawing, tearing, and digging in the head.—Stitches in the head.—Lancinating pains in the head, sometimes extending into the eyes, with necessity to shut them.—Boring in the forehead.—Semi-lateral throbbing in the forehead.—Chronic trembling of the head.—Trembling with the head, esp. when coughing, with an internal sensation of trembling, chattering of the teeth, and an irresistible somnolency; worse in the evening, and from heat.—Trembling with the head and hands, with great debility; worse when lying and getting warm in bed, better when sitting up erect and in the cold.—Neck stretched out, head bent back.

3. Eyes.—Eyes fatigued, requiring sleep, and to be firmly closed.—Pain, as of a bruise in the eyeball, on touching it.—Aching of the eyes.—Shootings, burning sensation, and smarting in the internal canthi, with redness of the conjunctiva.—Eyes confused, swimming in tears; sunken, surrounded by dark circles.—In pneumonia when the edges of the lids are covered with mucus.—Rheumatic ophthalmia or from gonorrhœa.—Incipient amaurosis.—Confused sight, with sparkling before the eyes, especially on rising from a seat.

4. Ears.—Humming in the ears.

5. Nose.—Violent fluent coryza, with frequent sneezing, ulcerated nostrils, shivering, loss of smell, and of taste.—Uncontrollable epistaxis with spongy gums.—Nose dry.—Nose pointed.—Nostrils widely dilated.—Nostrils black; alæ flapping.

6. Face.—Face pale and wan, or red and bloated, with anxious expression.—Face pale, sunken.—Dull, drawing pressure, in the zygomatic process.—Convulsive jerking of the muscles of the face.—Parched lips, with desquamation.—Eruption round mouth.—Cracked lips.

7. Teeth.—Odontalgia, with very violent pain in the morning.—Rheumatic toothache of intermittent type.—Scurvy.

8. Mouth.—Copious accumulation of saliva in the mouth.—Tongue moist, clean, or loaded with a brown coating.—Tongue: red, dry in middle; red in streaks, thick, white, pasty coat; thick white fur.—Aphonia.

10. Appetite.—Fatty taste in the mouth.—Insipidity of food.—Salt taste in the mouth.—Bitter taste in the mouth.—Thirst for cold water.—Moderate appetite with burning thirst.—Good appetite, with speedy disgust, on partaking of any food.—Bulimy, when walking in the open air.—Craving for acid things, or for raw fruits (apples); for cold drinks or thirstlessness.—Aversion to all food, esp. milk.—Every mouthful produces a painful sensation, extending to the stomach.—After drink: nausea; cough.

11. Stomach.—Empty risings.—Sobbing risings.—Risings with taste of rotten eggs, at night.—Regurgitation, of acrid, or salt, or else sourish fluid.—Regurgitation after partaking of milk.—Constant nausea, sometimes with inclination to vomit, anguish, pressure in the scrobiculus, and headache, mitigated by expulsion of flatus, upwards and downwards.—Violent retching, with copious flow of saliva, sweat on the forehead, and lassitude in the legs, or else with diarrhœa, and excessive debility.—Much vomiting, with violent efforts, pain in the stomach and abdomen, trembling of the body, necessity to bend double, shiverings, and strong inclination to sleep.—Vomiting of mucus, with mucous diarrhœa.—Acid vomiting, containing food.—Vomiting of sour and bitter substances, esp. at night.—Excessive sensibility of the stomach; the smallest mouthful causes a painful sensation.—Pain in the stomach, as if it were overloaded.—Uneasiness and emptiness in the stomach.—Pressure in the stomach and scrobiculus, esp. after a meal.—Violent throbbings and pulsations in the region of the stomach.—Shootings in the pit of the stomach.

12. Abdomen.—Pains in the abdomen, with great moral and physical agitation, and dislike to all kinds of labour.—Uneasiness in the epigastrium and hypogastrium,

which compels the patient to lie down and to stretch himself.—Fulness and pressure in the abdomen, as if it contained stones, esp. on stooping forward, while in a sitting posture.—Spasmodic colic in the abdomen, with violent contraction of the eyelids, and irresistible inclination to sleep.—Incisive pains in the abdomen, as if the intestines were being cut.—Pulsations in the abdomen.—Abundant production of flatus, with grumbling, borborygmi, and pinchings in the abdomen.

13. Stool and Anus.—Constipation, alternating with diarrhœa.—Diarrhœa in pneumonia, small-pox, and other eruptive diseases, esp. if the eruption has been suppressed.—Diarrhœa and vomiting.—Fæces of the consistence of pap.—Slimy diarrhœa, or yellow, bright brown, or else watery, often preceded by gripings and movements in the abdomen.—Sanguineous fæces.—Involuntary evacuations.—During the evacuation, palpitation of the heart.—Violent burning tickling, extending from the rectum into the glans penis.—Lancinations in the rectum.—Tenesmus during and after Stool, frequent burning at the anus.

14. Urinary Organs.—Very profuse and distressing emission of urine, with tension in the perineum, burning sensation in the urethra, and scanty stream, which is sanguineous towards the end of the emission, with violent pains in the bladder.—Nocturnal calls to urinate, with burning thirst and scanty emission.—Involuntary emission of urine.—Red, fiery urine, which forms blood-red filaments after standing.—Deep-brown, acrid, turbid urine.—Pressure and tension on the bladder.—Shootings in the urethra and lower part of the bladder.

15. Male Sexual Organs.—Excitation of sexual system.—Pain in testicles after checked gonorrhœa.—Warts behind glans penis; with ulcers elsewhere (sycosis).—Pustules on genitals and thighs.—Syphilis.

16. Female Sexual Organs.—Catamenia of watery blood.—Severe bearing-down in vagina.—Chronic metritis with feeling of weight tugging at coccyx.—Eruption of pimples or) the genital organs.—Itching of pudenda.

17. Respiratory Organs.—Catarrh, with irritation, which excites coughing, copious accumulation of mucus, and rattling of mucus in the chest.—Hoarseness.—Painful tenderness of the larynx when touched.—Cough, excited by violent tickling in the trachea.—A child coughs when angry.—Paroxysms of coughing, with suffocating obstruction of respiration (suffocating cough).—Dyspnœa, compelling one to sit up.—Shortness of breathing from suppressed expectoration.—Suffocating attacks with sensation of heat at the heart.—Whooping-cough, preceded by the child crying, or after eating or drinking, or when getting warm in bed; after the attack somnolency.—Cough, with heat and moisture of the hands, and perspiration on the head, chiefly on the forehead.—Cough, with vomiting of food, after a meal.—Hollow cough, with rattling of mucus in the chest.—Cough, with expectoration of mucus, sometimes at night only, chiefly after midnight.

18. Chest.—Velvety feeling in the chest.—Frequent fits of obstructed respiration, esp. in the evening or in the morning, in bed, almost to the extent of suffocation.—Shortness of breath.—Difficult respiration.—Paralysis of the lungs.—Anxious oppression of the chest, with a sensation of heat, which ascends to the heart.—Rattling of mucus in the chest when breathing.—Fitful pain, as from excoriation in the chest, esp. on the l. side.—Rheumatic pain in the l. side of the chest.—Burning sensation in the chest which ascends to the throat.—Inflammation of the lungs.—Miliary eruption on the chest.

19. Heart and Pulse.—Visible and anxious palpitation of the heart (also without anxiety), sometimes during an evacuation.—Palpitation with loose stools.—Heat about heart and warmth rising up from it.—Sensation of coldness in the blood-vessels.—Pulse: hard, quick, and small; or weak, quick, and trembling; small, threadlike: imperceptible.—Twisting, digging, and blows in the region of the heart, at night, which do not cease till perspiration breaks out.

20. Neck and Back.—Weakness of the muscles of the neck, which prevents the head from being held up.—Miliary eruption on the nape of the neck.—Pain in the back and loins when seated, as from fatigue.—Violent pain in the sacro-lumbar region; slightest effort to move causes retching and cold, clammy sweat.—Pain in sacrum with sensation of lameness.—Sensation as if a heavy load was hanging on end of coccyx, dragging downwards all the time.—Rheumatic pain in the back.

21. Limbs.—Heaviness in limbs followed by leprous eruption.—Limbs over-fatigued, a sensation coming from back.—Jerking up of limbs during sleep with loose stools.—Small ulcers on tips of fingers and toes, spreading, livid edges (leprosy).

22. Upper Limbs.—Cracking in the joints of the shoulder, with tearing in the arms, extending into the hands.—Excessive heaviness of the arms.—Jerking of the muscles in the arms and hands.—Miliary eruption on the arms.—Itching pimples on the arms and wrists.—Red spots on the hands, like fleabites.—Trembling of the hands.—Coldness of the hands.—Icy coldness in the tips of the fingers, as if dead.—Finger-ends dead, dry, and hard.—Spots of a deep yellow on the fingers.—Distortion of the fingers.

23. Lower Limbs.—Heaviness and rheumatic pains in the hips and legs.—Painful weakness in the knee-joint, in bed, in the morning.—Dropsy of the l. knee-joint.—Tension of the tendons of the ham, and of the instep, when walking.—Cramp in the calf of the leg.—Coldness of the feet.—Numbness of the feet, on sitting down.

24. Generalities.—Rheumatic pains (fever) with perspiration, which does not relieve.—Inflammation of internal organs.—Gastric and bilious complaints.—Arthritic and rheumatic tearings and drawings in the limbs, with sensation as of a fracture.—Collection of synovial fluid in joints.—Contraction of

the limbs.—Jerking of the muscles.—Convulsive jerks and spasm.—Epileptic fits.—Trembling of the limbs; long-continued of the head and hands after every exertion or motion.—Internal trembling.—Shootings in the varices.—Aggravation of the symptoms when sitting down, or else when seated, and when rising from the seat.—In some forms of asthma one has to sit in a chair and lean his head on a table.—In some forms of pneumonia so great is the prostration that the patient is constantly slipping down in bed.—Heaviness in all the limbs, and great indolence.—Violent pulsations throughout the body.—Great debility, weakness, and excessive lassitude; feels best when sitting still doing nothing.—A child continually wishes to be carried.—Syncope.—Excessive tenderness of the whole body.—A child, when touched, utters piercing cries.

25. Skin.—Itching in the skin.—Itching pimples, and miliary eruption.—Eruptions like scabies.—Eruption of pustules, like varioloids, as large as peas, filled with pus, with red areola (like small-pox), and which afterwards form a crust, and leave a scar.—Itching round inveterate ulcers.—Pustular eruption on different portions of the body, leaving a bluish-red mark.

26. Sleep.—Urgent inclination to sleep during the day, with frequent stretching and yawning.—Invincible drowsiness, with deep and stupefying sleep.—In the morning, sensation as from insufficient sleep.—Retarded sleep, and nocturnal sleeplessness.—Light sleep, with many fantastic dreams.—Much talking during sleep.—Cries during sleep, with fixed eyes, and trembling limbs.—Shocks and blows during sleep, which occasion jerking, sometimes of a single limb, at others of the whole body.—Lying on the back while sleeping, with the left hand passed under the head.

27. Fever.—Predominance of shivering and coldness.—Shiverings, with excessive paleness of the face, and trembling of the whole body.—Violent but not long-continuing heat, preceded by a long-lasting chill; worse from every exertion; or long-continued heat, with lethargy and perspiration on the forehead following a short-lasting chill.—Burning heat of the whole body, chiefly in the head and face, increased by the least movement.—Pulse quick, weak, or full; hard and accelerated; at times trembling.—The fever ceasing, the pulse becomes often slow and imperceptible.—The least exertion accelerates the pulse.—Fever, with adipsia, and excessive drowsiness.—Profuse, frequent, and sometimes cold perspiration.—Perspiration on the parts affected.—Profuse nocturnal perspiration.—Perspiration on the whole body.—Perspiration frequently cold and clammy.—Intermittent fevers, with lethargic condition.

Antipyrinum.

Phenazon (Phenyl-dimethyl-pyrazolon). C_{11} H_{12} N_2O. A product of coal tar through toluin. Solution and trituration.

Clinical.—Dysmenia. Enuresis. Epilepsy. Epistaxis. Erythema. German measles. Headache. Heart, paralysis of. Mind, deranged. Respiration, Cheyne-Stokes. Scarlatina. Throat, sore. Toothache. Urticaria.

Characteristics.—*Antipyrine* is known from the poisonous effects it has produced in old-school practice. Many fatal cases have been recorded, and there can be little doubt that its injudicious use has determined a fatal issue in many cases that have remained unrecorded. Its action is very like that of *Antifebrin* in producing collapse, but it has more effect on the skin, causing scarlet rash and śdema. A young lady patient of mine who took *Antipyrin* on her own account, whenever she thought she might be going to have a headache, developed intense dysmenorrhśa (to which she was not subject), with depression. This was only removed after she had discontinued the drug. Later on she took *Phenacetin*, with the result that an eruption of erythema appeared on both cheeks, which peeled after a few days, and recurred persistently. It would seem from the above that the drug is homśopathic to some forms, at least, of neuralgia. One patient had Cheyne-Stokes respiration. Erythema appears first on face and arms, last on legs. Hansen mentions its use in enuresis and epistaxis. > Hot drinks.

Relations.—*Compare:* Anilinum (skin). Antefeb.; Ars.; Chloral; Acon. (numbness; rapidity of attack). *Antidoted by:* Bell. The symptoms are much intensified in persons addicted to coffee in excess.

SYMPTOMS.

1. Mind.—Loss of consciousness.—Fear of impending insanity (mental balance did not return for some months).—Excitement.—Continual crying.—Nervous anxiety.

2. Head.—Headache, with toothache; pain behind both ears of tearing character.—Snapping sensation in head.

3. Eyes.—Complete loss of vision.—Eyelids swollen so that eyes were almost closed.—Coryza.

4. Ears.—Buzzing in ears.

5. Nose.—Tingling burning in nose, with sneezing and running from eyes and nose; nose and face swollen.—Coppery smell which comes and goes.

6. Face.—Śdema; dusky red face.

7. Teeth.—General toothache, together with headache; pain behind both ears of a tearing character.

8. Mouth.—Tingling burning in gums, mouth, and throat.—Lump in mouth about an inch thick just below level of upper teeth (passed away in half-hour).

9. Throat.—Dryness, burning, swelling, l. side of throat with aphonia; l. tonsil white and swollen.—Tight, constricted feeling.

11. Stomach.—Attacks of excitement accompanied by vomiting (in a child).—Epigastric pain, causing to bend double and cry out.—Expanding sensation rising from stomach.

14. Urinary Organs.—Incontinence of urine.—Amount diminished.

17. Respiratory Organs.—Cheyne-Stokes breathing.—Hoarseness following aphonia.

18. Chest.—Sensation as though contents of thorax and abdomen were being forcibly drawn up towards throat, and r. testicle to abdomen.—Dyspnśa; tightness of chest.—Sensation of tumour over notch of sternum.—Inability to lie down.

19. Heart.—Pulse feeble and rapid.—Fainting spells.

20. Neck and Back.—Feeling of numberless pins pricking him down each side of neck.

21. Limbs.—Pains in limbs.—Limbs swollen.

22. Upper Limbs.—Cramp in r. arm.—Fingers of r. hand clenched in the form of a claw.

24. Generalities.—Feeling of numberless pins pricking him down each side of the neck, extending down r. chest and abdomen, particularly severe r. side of scrotum and r. testicle, also in legs and feet, severely r., slightly l.—Sensation as if contents of chest and abdomen drawn upwards, felt he was "drawn in a ruck," and, being unable to stand, fell on the floor.—Trembled violently all over, had cramp in r. arm.—Epileptic attacks, with partial unilateral twitching; contraction of muscles; chattering of teeth; jactitation.—Cyanosis.—Collapse.—Throbbing all over body.—Sensation as if inside of body were filled with ice.

25. Skin.—Rash, erythema or urticaria, with troublesome itching; chiefly between fingers.—Irregular rounded pimples lying close together, in some places confluent, forming patches, between which skin was normal, giving a marbled appearance, lasted five days, turned brownish and desquamated slightly.—Eruption thickest on

body and extremities, extensor more covered than flexor surfaces.—Eruption begins on face and arms, last on legs.—Scarlet macular eruption.

27. Fever.—Excessive perspiration.—Throbbing all over body, coldness of hands and feet, nervous shuddering without chill.—Pulse goes up and down with the temperature.

Aphis Chenopodii Glauci.

N. O. Insecta. A tincture is made of the aphides grown on the Chenopodium glaucum.

Clinical.—Colic. Coryza. Cough. Diarrhœa. Headache. Tenesmus Toothache.

Characteristics.—Some of the most notable symptoms of *Aphis* are: Coryza with burning and biting on margins of nostrils, especially of septum. Increase of most violent toothache in bed, only relieved if after awhile a general warm sweat breaks out. Cutting in abdomen and rumbling of flatus. Ineffectual urging in bladder and rectum. In the morning urging after rising, several mush-like stools with pinching, burning in anus with urging. Flatus accompanies stool. Thin stools with slime and spots of dark blood. The insect partakes of the properties of the plant it lives on, *Chenopodium glaucum* being a popular colic remedy, and allied to the Polygonaceæ *Rheum* and *Rumex*. *Aphis* is peculiar in being the only remedy which has toothache > by sweat; though *Cham*. has general > by sweat.

Relations.—*Compare:* Æthus. (stool after rising; pinching, cutting before., urging after); Nat. sul. (stool after rising, with discharge of wind); Nux v. (frequent urging in rectum and bladder); Gelsem. (chills up and down the back).

SYMPTOMS.

2. Head.—Head confused in the evening, as with coryza; with transient heat in the face, great pressure and tightening in the forehead or occiput, increased by motion, with sensation of cerebral oscillation in the head, tearing shooting in the teguments of the head.

3. Eyes.—Burning heat in the eyelids during several evenings.

4. Ears.—Tearing pains, sometimes in one ear, and sometimes in the other.

5. Nose.—Pain of excoriation in the nostrils.—Violent sneezing, sometimes attended by a pain, as of excoriation, in the larynx.—Coryza, sometimes with burning and smarting at the edges of the nostrils, and esp. at the septum.—Fluent

coryza, with secretion of serous mucus, sometimes also at night, with pulse accelerated to eighty-five pulsations, with coldness in the feet extending to the knees, and shuddering all down the back.

6. Face.—Colour pale, yellowish; heat in the face, with head confused as by coryza, at night.—Dry lips, sometimes esp. in the morning.

7. Teeth.—Toothache with tearing shootings, at first in a hollow molar tooth, afterwards in all the teeth of the right side; extending from the right side to the ear, the temple, and the cheek-bone.—Aggravation of the toothache in bed, which is mitigated only after a hot and general perspiration, which supervenes at a later period.—Nocturnal tearing pains in the teeth, with tearing shootings above the face towards morning.

8, 9. Mouth and Throat.—Painful vesicles at the end of the tongue.—Dryness of the mouth and of the throat, sometimes with increased mucous secretion; increase in the secretion of saliva.—Great quantity of mucus in the mouth and throat, sometimes with a sickly taste, and with a constant necessity for hawking and expectoration.—Secretion of frothy mucus in the mouth and throat.—Scraping sensation in the palate; burning smarting; incisive burning, principally when inspiring; inflammatory redness.—In the throat, scraping and burning, as from acrid substances, sometimes with a sensation of dryness and increase of mucous secretion.

10. Appetite.—Dislike to meat and bread; frequent thirst, sometimes increasing at night, or produced by a sensation of dryness in the throat.—Frequent risings, most frequently empty, or else with a taste of the food which has been eaten.

12. Abdomen.—Frequent pinching pains in the abdomen, sometimes throughout the night, or else during the day, with necessity to go to stool, and frequent urinations.—Emission of wind.—Cutting and pinching pains, with borborygmi and emission of, wind.—Congestion of blood towards the abdominal viscera.—Rumblings of flatus in the abdomen, with frequent emission of wind.

13. Stool and Anus.—Abortive inclination to go to stool, with pressure on the bladder and rectum.—Loose evacuations of the consistency of liquid pap, usually accompanied by burning at the anus, and a recurrence of the necessity to go to stool, or else with pinchings in the abdomen, occasioned by flatulency before and after a stool.—Liquid, mucus-like stools in the morning, with spots of blood, pinchings in the abdomen, pressure on the rectum, and pressive headache.—At a later stage the stools have more consistence, but they press painfully on the rectum and the bladder, and are sometimes attended by a flow of sanguineous mucus.—Tearing shooting in the rectum.

14. Urinary Organs.—Tearing shooting in the bladder; pressure on the bladder, sometimes, esp. during an abortive effort to go to stool.—Irritation in the urethra, as from acridities, compelling frequent urination.—Voluptuous excitation of the glans penis.—Frequent and copious secretion of a frothy urine, deep yellow, sometimes with an acrid sensation in the urethra.—In the evening, urine red, brownish, frothy, depositing during the night a thick, yellowish sediment.—In urinating, burning in the urethra, esp. at the orifice.

17. Respiratory Organs.—Burning scraping in the larynx, as from acrid substances.—Burning tickling, or lancinations, esp. in the open air, in a damp, cold atmosphere, with continual irritation in the larynx, which causes coughing, followed by expectoration of mucus.—Voice frequently rough and smothered, which symptoms are removed by hawking.—Frequent irritation in the larynx, which compels coughing.—Dry cough, provoked by irritation in the throat.

20. Neck and Back.—Pain in the left shoulder-blade.

21. Limbs.—Bruise-like pain of the limbs, with tearing shootings in the shoulders and the upper part of the arms (rheumatic pains), or else from the knees to the feet, and esp. on the tibia and at the soles of the feet.

23. Lower Limbs.—Pulling and tearing above the knee in the morning, following nocturnal toothache.—Sensation of weariness in the legs.—Coldness of the feet, extending to the knees.—Burning lancinations in corns.

24. Generalities.—Pain (rheumatic) as from weariness in the limbs, with tearing, shootings, chiefly in the temples, the ears, and teeth, which are hollow; as well as in the shoulders, the upper part of the arms, the tibia, and the soles of the feet; sensation of weariness, esp. in the legs, weariness and weakness at night.—The limbs feel bruised.

26. Sleep.—Sleeplessness at night, without much pain; lascivious dreams with pollutions.

27. Fever.—Frequent shiverings of the whole surface of the body, chiefly of the back, burning in the palms of the hands, and tendency in them to perspire in the morning; with acceleration of pulse, sometimes principally in the evening; with fluent coryza, or accelerated and wiry pulse in the morning; with hot breath and dry lips; with great tendency to perspire in the face, in the morning; in the morning, in bed, hot sweat, or general perspiration.

Apis.

Apium virus. Honey-bee poison. N. O. Insecta. Tinctures are made of the whole bee; and of dilutions of the poison with alcohol.

Clinical.—*Abscess. Ankles, swelling of*. Apoplexy. Asthma. Bladder, affections of. *Carbuncle. Chancre*. Constipation; of sucklings. Diarrhśa. Diphtheria. Dissection wounds. *Dropsy. Ear, erysipelas of. Erysipelas. Erythema nodosum. Eyes, affections of; optic neuritis. Feet, burning of*. Gangrene. Gout. Hands, swelling of. Heart, affections of. *Heat-spots. Housemaid's knee. Hydrocephalus. Hydrothorax*. Injuries. *Intermittent fever. Irritation*. Jealousy, effects of. Joints, *synovitis. Kidney, Bright's disease of. Labia, inflammation of. Laryngitis. Lichen. Meningitis*. Menstruation, derangements of. *Nettle-rash. Nose, redness of*. Operations, effects of. *Ovaries pain in; inflammation of; tumours of*. Panaritium. Pannus. *Peritonitis*. Phlebitis. *Pleurisy*. Prostatitis. Punctured wounds. *Red-gum. Rheumatism. Scarlatina. Self-abuse*. Suppressed eruptions, effects of. Sycosis. Syphilis. *Throat, sore. Tongue, śdema of; ulceration of. Trachea, irritation of*. Tumours. Typhus. Urethritis. *Urine, abnormalities of. Vaccination*. Varicose veins. Variola. Wounds.

Characteristics.—The well-known effects of a bee's sting—burning, stinging, lancinating pain with excessive swelling—give leading keynotes for its employment in a great variety of conditions. In addition to these there is great sensitiveness of the surface to touch. General soreness: "every hair is painful to contact." Great debility as if he had worked hard; is compelled to lie down. Tired and bruised feeling. Great restlessness and fidgetiness (the *Arsen*. restlessness is more from mental anxiety). Trembling, jerking, and twitching. One half of the body twitching, the other lame or paralysed. Hemiplegia. *Apis* is more a right-side medicine; symptoms proceed from right to left (*Rhus* left to right) and from above downwards. In an involuntary proving of Apis in a woman (of forty, strong, florid, of full habit) Who kept bees and was frequently stung without constitutional effect, the following marked and peculiar symptoms were occasionally noted in addition to the better known ones (*New. Eng. Med. Gaz*., Nov., 1887): Stiffness of lower jaw, soon amounting to a sense of complete fixation. This stiffness extended to tongue and throat, rendering speech difficult and unintelligible, and causing a condition of extreme discomfort, the stiffness being accompanied by a feeling of constriction, which excited a single, spasmodic, backing cough at short intervals. Some difficulty in breathing, especially in inspiration. These symptoms were accompanied by a terrible restlessness. On a later occasion there was dyspnśa, face purple, head thrown back. The same symptoms as above recurred, but the throat was more swollen and the distress extended below the larynx to the upper part of the lung, which soon became very sore and sensitive. An hour after the sting on this occasion a violent cough came on. It seemed to be excited by the constrictive feeling in the throat, but it reached down to the sore place in the lungs, causing

great distress. It was a deep, hard, ringing cough, lasting without intermission for three hours. Traces of the cough and soreness lasted for months. Another symptom was an ominous twitching of muscles of extremities controlled by hot foot and hand baths. *Ledum* gave almost instantaneous relief to the graver symptoms.

The burning symptoms of *Apis* are distinguished from those of *Arsen*. in being < by heat. The stinging appears in many diseases and conditions, causing the "*crie cérébrale*" in acute hydrocephalus and meningitis. Stinging pains in hćmorrhoids. "Redness and swelling with stinging and burning pain in eyes, eyelids, ears, face, lips, tongue, throat, anus, testicles." Śdema of the throat may be accompanied with stinging pains, but if the case is more advanced it may be absolutely painless, and then it is more dangerous. (*Bapt*. has painlessness in throat affections but less śdema.─Nash.)

Apis has slow action and must not be changed too soon. Increased flow of urine shows it is having a favourable effect. The dropsies of *Apis* are characterised by a waxy hue of skin, whitish or yellowish; transparent swelling of eyelids; bag-like swelling under eyes; surface of body sore, bruised, or burning. In cardiac dropsy the feet swell after walking, and are intolerably sore and burning. In chest affections there is sensation of contraction (*Lach*.) and inability to lie down. Tension, swelling, and stiffness of limbs. This tight sensation is manifested in another symptom: sensation in abdomen as if something tight would break if too much effort was made to void a constipated stool. Aversion to tight things like *Lach*. Prostration even to faintness. Paralytic weakness. Paralysis (after diphtheria and other severe diseases). Nervous, restless, over-sensitive; or hot and drowsy, with or without thirst. < From touch or pressure (though the head is > by pressure). In this *Apis* resembles the Antimonies, and it is like them in sensitiveness to heat, especially to heated rooms (*Puls., Iod., Kali iod., Camph., Secale, Sulph*.); < by warmth of bed. Cold water >. Many symptoms (eyes and chest) are < in the night, and sleep is disturbed by piercing cries, or else by moaning and whining. < In morning: mucus in mouth, restlessness, diarrhśa. < In evening: erysipelas, giddiness, headache, chills, fever. Many symptoms are < lying down, and > sitting.

Relations.─*Compare:* Vespa and serpent poisons. Acet. ac. (dropsy); Aco.; Anac. (urticaria); Apoc. can. (dropsy); Arn. (bruised, sore conditions); Ars. (typhoid, gangrene, dropsies, scarlatina, urticaria, chills); Bell. (meningitis, sore throat, erysipelas, scarlatina); Brom. (swelling of ovary during menses); Bry. (meningitis, rheumatism); Canth. (burns, erysipelas, urinary symptoms); Chi.; Colch.; Crot. t. (urticaria); Euphras. (conjunctiva); Fer.; Graph.; Hep.; Hyo.; Iod. (synovitis); Lach.; Lyc.; Merc. Nat. ars.; Nat. mur. (chills, urticaria, tension in ovarian region) Puls.; Rhus (eyes; but Apis has less tendency to suppuration; vesicular erysipelas but darker than Apis and spreading left to right─Apis right to left; typhoid, restlessness, but Apis is more fidgetiness); Rumex (painless, greenish-yellow morning diarrhśa); Sabi.; Sep.; Silic. (ovarian affections with inverted nipples;

ulcer on tongue; vaccination effects); Urt. ur.; Zn. *Antidotes:* to medium doses and poisonings; Nat. mur. in all forms; sweet oil; onions; Ammonia; Ipec., low. (also powdered Ipec. applied locally) Lach.; Ledum. *It antidotes:* Canth., Iod., Chi., Dig. *It follows well:* Bry. (when cephalic cry appears); Helleb. (when torpor sets in); Iod., Hep., Merc., Lyc., Sul. *Is followed well by:* Graph. (tetter on ear lobe); Kali bi. (scrofulous ophthalmia); Arsen. (hydro-thorax); Phos. (diphtheria); Stram. (mania); Lyc. (staphyloma); Sul. (hydrothorax, pleurisy, hydrocephalus); Iod. (swollen knee). *Complementary:* Nat. mur. (the "chronic" of Apis). *Inimical:* Rhus in eruptive diseases.

Causation.—Grief. Fright. Rage. Vexation. Jealousy. (The queen bee is the most jealous thing in nature.) Hearing bad news, mental shock. Suppressed eruptions.

SYMPTOMS.

1. Mind.—The brain feels paralysed.—Tubercular meningitis.—Impaired memory.—Absent-minded.—Cannot concentrate thought.—Indifference.—Torpor and apathy.—Awkward, lets things fall and laughs sillily at the mishap.—(The mental symptoms are rich in unconsciousness, absent-mindedness, impaired memory, and slow march of ideas.).—Loss of consciousness.—Great tearfulness; cannot help crying.—Children constantly whining.—Screaming, sudden outcry during sleep.—Busy, restless, continually changing his occupation.—Cannot bear to be left alone.—Hysteria.—In women: jealousy; mania from sexual irritation.—Depression, feels as if about to die (without fear of death).—Delirium, low muttering.—Delirium, after suppressed scarlet eruption.—Irritation.—Premonition of death, thinks it is about to transpire.—Dread of death; sensation as if he could not breathe again.—Fear of being poisoned.

2. Head.—Giddiness: when sitting, standing, lying, when closing the eyes; with nausea and headache.—Congestion to the head, with suppressed menstruation.—Pressing pain in forehead and temples; < rising; in warm bed; > pressing, the forehead together.—The brain feels tired.—Sudden stabbing and stinging pains.—Aching in l. temple.—Hydrocephalus in children, and apoplexy in old persons.—Hydrocephalus; scalp very sensitive; copious sweat of head; child lies in torpor, delirium interrupted by shrill cries, boring head deep in pillow, rolls it from side to side.—Convulsed on one side of the body, paralysed the other; squinting, grinding of teeth, urine scanty (milky).

3. Eyes.—Burning, stinging, shooting, piercing pains in and about the eyes.—Aching over r. eye extending to r. eyeball.—Twitching of eyeballs.—Staphyloma.—Cornea thick, having dark, smoky, spots; greyish, smoky, opaque.—Keratitis.—Conjunctiva reddened, chemosed, lids everted.—Sensation of mucus in the eyes.—Itching in eyes and lachrymation.—Weakness of the eyes, with pain, photophobia, and increased secretions.—Agglutination of the

lids.—Śdematous swelling of eyelids; bags under eyes; upper lids hang over like sacs.—Styes with stinging pains; smoky darkness before the eyes.

4. Ears.—Redness and swelling of both ears.—Erysipelas; otitis after scarlatina; hardness of hearing.

5. Nose.—Swollen, red, śdematous.—Coryza, worse from warmth; chronic catarrh with crusty nostrils; polypus.

6. Face.—Śdematous swelling of the face; red and hot, swollen so as to be unrecognisable, with piercing and burning pain; waxy, pale.—Happy expression of face; or terror; or apathy.—Burning, stinging heat in the face with purple colour.—Erysipelas of the face.—Erysipelas of the face, with fever, coated tongue.—Erysipelas going r. to l. (Rhus l. to r.).—Jaws stiff, with stiff tongue and impossibility of intelligible speech.

7. Teeth.—Grinding of the teeth; sudden and involuntary biting them together; covered with yellow mucus or brown sordes.

8. Mouth.—Lips śdematous; upper lip swollen, hot and red.—Mouth red, burning, stinging, scalding.—Dryness of tongue, mouth, and throat; fiery redness of buccal cavity, with painful tenderness.—Dry, swollen, inflamed tongue, with inability to swallow.—White, dry tongue (with diarrhśa).—Tongue: can hardly be protruded; hangs from the mouth; cancer of.—Swollen tongue; shining.—Borders blistered; feel as if scalded and quite raw.—Ulcer in l. border (r. Silic., Thuj.).—Tongue swollen, dry, cracked, sore, ulcerated, or covered with vesicles.—Viscid, tough, frothy, saliva.—Gums sacculated and look watery.—Fetor of breath, with headache.

9. Throat.—Throat has appearance as if stung.—Dryness in the throat with heat, without thirst.—Burning, stinging in throat.—Erysipelatous.—Glossy red varnish.—Inflammation of the throat, with swelling, redness, and stinging pains.—Ulcerated sore throat (in scarlet fever, when the eruption does not come out).—Diphtheritic sore throat gets well as a scarlatina rash develops.—Throat swollen inside and outside; hoarse, sense of constriction; breathing and swallowing difficult.—Ulcers on the tonsils, palate, &c.—Uvula long and dropsical.—Sensation of foreign body or fishbone in the throat; of constriction.—Paralysis.—Small, clear, watery blisters on the back part of the throat.

11. Stomach.—No thirst with the heat.—Thirstlessness (with dropsy).—Vomiting of bile.—Vomiting, with inflammation of the stomach.—Vomiting, with diarrhśa.—Burning heat in the stomach.—Great soreness in pit of stomach when touched.—Violent pain and sensitiveness in region of stomach.

12. Abdomen.—Great sensitiveness of the abdomen to touch.—Soreness of the bowels and abdominal walls; mornings when sneezing or pressing upon

them.—Sensitiveness of epigastrium and whole abdomen to touch; of r. inguinal region; across hypogastrium from ilium to ilium.—Pain in abdomen on pressure, touch and horizontal position, with sensitiveness.—Peritonitis.—Erysipelas from contusion.—Rumbling and meteoric distension.—Ascites and anasarca.—Hard swelling in the r. groin, oblong, as large as a cucumber.—Long-standing inguinal hernia.—Collapse of abdominal walls in meningitis infantum.

13. Stool and Anus.—Sensation of rawness in the anus, with diarrhśa.—Discharge of flatus before stool.—Diarrhśa: during fevers; from heat; in debilitated children; from irritability of brain (hydrocephaloid).—Diarrhśa, yellowish-green, with mucus, esp. in the morning.—Stool thin, watery, yellow, < in morning; may or may not be offensive.—Stools smelling very offensively.—Diarrhśa and vomiting.—Diarrhśa is copious, blackish-brown, green, or whitish; orange-coloured; greenish, yellow mucus; yellow watery; soft and pappy, mixed with serum; thin yellow.—At every motion of body bowels act as though he had no power.—Uncertain anus; constantly open (during urination), oozing of liquid (Phos., Phos. ac.).—Swelling of anus.—Hćmorrhoids, with stinging pains.—Constipation, with feeling as if something would break if he continued to strain.—Stools involuntary and painless, or painful and urging, olive-green, profuse, and full of red lumps, like chopped beets; bloody, painless; smell brassy or like carrion; very offensive.—Protruding varices, which sting, burn, and smart intolerably.

14. Urinary Organs.—Burning soreness when urinating.—Strangury.—Pain in region of kidneys; soreness on pressure or when stooping.—Frequent desire, with passage of only a few drops.—Urine scanty and high-coloured; with thirstlessness.—Incontinence of urine from coughing and other circumstances.—Urine suppressed.—Too profuse discharge of urine.—Frequent and profuse urination.—Albuminuria of scarlatina.—(Increase of urine under Apis shows that the medicine is acting well.).—Burning and stinging in the urethra.—Burning and smarting in the urethra, as if it were scalded.—Bladder very painful, often tenesmus after urinating.—Urine often bloody, milky appearance; very dark and frothy; very fetid; sediment reddish-brown, like coffee grounds.

15. Male Sexual Organs.—Sexual desire increased.—Chancre with stinging pains like bee-stings, and with a highly inflamed circumference.—Pains and swellings of testes and prostate.—Dropsy of the scrotum and prepuce; hydrocele.

16. Female Sexual Organs.—Amenorrhśa or menorrhagia.—Inflammation, induration, swelling, and dropsy of the ovaries (r.).—Weight and pain in either ovarian region, predominantly r. side.—The ovaries feel better by lying on r. side.—Enlargement of the r. ovary with pain in the l. pectoral region and cough.—Sharp, cutting, stinging pain in the swollen (r.) ovary; worse during menstruation.—Ovarian tumours, with stinging pains like bee-stings.—Metritis, peritonitis, with stinging, thrusting pains.—Pressing-down pain in the

uterus.—Bearing-down, with sensation as before menses.—Dropsy of the ovaries (r.); dropsy of the uterus.—Strained pain l. ovary.—Menstruation suppressed or diminished, with congestion to the head.—Labour-like, bearing-down pains, followed by dark, bloody mucus.—Threatened miscarriage in the early months, with heaviness of the abdomen, restlessness, and yawning.—Abortion.—Abortion during the early months.—Dropsy in the latter part of pregnancy attended with puerperal convulsions.—Ulceration and engorgement of os uteri.—Large and painful swelling of the labia, with heat and stinging pains.—Erysipelatous inflammation of the breasts.—Swelling and hardness of the mammć threatening to ulcerate.—Scirrhus or open cancer of the mammć, with stinging, burning pains.

17. Respiratory Organs.—Irritation to cough in the supra-sternal fossa.—Hoarseness.—Hoarseness in the morning.—Respiration hurried and difficult (with fever and headache).—Śdema glottidis.—Asthma; worse in cold weather.—Croupy cough.—Obstinate night cough from 9 p.m., to 4 a.m.—Cough which loosens with difficulty, rouses from sleep before midnight and ceases as soon as least particle is loosened, which is swallowed.—Feeling of constriction causing a single, spasmodic, hacking cough at short intervals.—Violent cough, deep, hard ringing; incessant for three hours; excited by constricted feeling in throat, but reaching down to lungs, the upper part of which are very sore and sensitive.—Dyspnśa; esp. difficult inspiration.

18. Chest.—Hydrothorax.—Sensation of soreness in the chest, as from a bruise.—Oppression of the chest, shortness of breath, esp. when ascending; inability to remain in a warm room.—Dull, aching pain in the l. side of the chest, near the middle of the sternum, with sensation of fulness in the chest and short breath.—Expectoration of copious, transparent, frothy, bloody mucus.—Stitches in l. side of chest and through back.—Burning, stinging pain through entire front of chest.—Melting in region of diaphragm, as from running violently.—Every shock from coughing gives pain in the head and some pain through the chest, as from the clavicle; > after loosening a small portion of mucus, or a large quantity of transparent: frothy, and bloody mucus is expectorated.

19. Heart.—Sudden pain just below the heart, soon extending toward r. chest, with suffocation.—Very feeble action of the heart; violent beats, shaking the whole body; intermittent beats.—Region of heart sensitive to least pressure; rasping sounds of systole and diastole unmistakably audible.—Palpitation of heart from scanty secretion of urine, perfectly cured by establishing the natural quantity.—Pulse: almost imperceptible at wrist; accelerated and full; very frequent and hard; wiry; irregular and slow pulse; intermittent.

20. Back.—Rheumatic pain in back and limbs.—Cerebro-spinal meningitis.

22. Upper Limbs.—Hands bluish, and inclined to be cold.—Śdema of the hands.—Sensation of numbness in fingers, esp. the tips about the roots of nails.—Panaritium with burning, stinging, and throbbing, very sensitive to touch.

23. Lower Limbs.—Cold legs.—Sensation in the toes and whole foot, as if too large; swollen and stiff.—Legs (ankles) and feet waxy, pale, and śdematous.—Burning in the toes with redness; feet cold.—Suppressed perspiration of the feet.—Numbness and coldness of feet, even paralysis.—Dropsy of limbs in diphtheritic albuminuria.—Puffy swelling of the knees.

24. Generalities.—Great debility, as if he had worked hard; he is obliged to lie down.—Sudden "puffing up" of the whole body.—Tired, as if bruised in every limb, and esp. in the back, as after exertion; worse on rising after sitting.—Complete anasarca, no thirst, pale, waxy, almost transparent.—Burning, stinging pains, like bee-stings, occurring occasionally.—Great sensitiveness to touch and pressure (abdomen).—Clonic and tonic spasms.—Sudden weakness with coldness.—Tension (over the eyes in the l. side of head) behind the ears, in the neck.—Dark hćmorrhages.

25. Skin.—Śdematous swellings.—Skin usually white, almost transparent (ovarian dropsy).—Hives.—Urticaria like bee-stings, or stings from other insects, with intolerable itching at night.—Carbuncles, with burning, stinging pains.—Eruption like nettle-rash over the whole body.—Erysipelas; with gangrenous spots.—Swelling and dry erysipelatous redness.—Scarlet eruptions.—Body covered with large, elevated, white wheals.—Panaritium (burning, stinging).—Boils and swellings of all descriptions with stinging pains.

26. Sleep.—Much yawning.—Great desire to sleep; extreme sleepiness.—Sleep disturbed by many dreams.—Dreams full of care and toil; of making long journeys; of flying through the air; of hot stones; of walking over hot floors; of walking a long way over wet roads.—Sleep, late in the morning.—Awakens from sleep with a shrill shriek (child suffering from hydrocephalus).

27. Fever.—Pulse full and rapid; small and trembling; intermitting.—Chill, mostly towards the evening (3-4 p.m.).—Chilliness from the least movement, with heat of the face and hands; runs down the back with great prostration.—During hot stage more or less violent headache; generally a continuous deep sleep.—Heat with thirst, wishes to uncover.—Dry heat towards evening with sleepiness.—Sweating stage either absent or of a very light grade.—The sensation of heat is more felt about the pit of the stomach and in the chest.—Perspiration, alternating with dryness of the skin.—Much burning of the skin on various parts of the body.—Thirst wanting during sweat; may or may not be present during heat; always thirst during chill.—Sweat after trembling and fainting, then nettlerash.—After the fever paroxysm, sleep.—Apyrexia: urine scanty; feet swollen; limbs sore; restless; urticaria.

Apium Graveolens.

Celery. N. O. Umbelliferæ. Tincture of seeds. Tincture of sticks.

Clinical.—Fidgets. Headache. Heartburn. Otorrhœa. Post-nasal catarrh. Rumination. Toothache. Urine, retention of. Urticaria.

Characteristics.—A proving of tincture of seeds produced the following symptoms: Unpleasant feeling at stomach, with belchings tasting of celery. Heartburn. Spitting up of food. Gone feeling at pit of stomach lasting for hours and partially relieved by eating.—Effects of eating the root: during the following day and night, most obstinate retention of urine, which could only be relieved by the catheter. On another person this was observed: Inability to sit still or lie still in bed from feeling of "fidgets"; cannot keep mind from I thinking. In a proving under the direction of W. P. Wesselhœft (*Med. Advance*, April, 1886) a remarkable symptom was: a dull ache in sacrum < when lying down, > when moving about. Another symptom was "sensation as if both eyes were sunken back into their sockets." Throbbing headaches, < by slightest motion; > by rest, mostly left-sided. Urticaria, always appearing with shuddering; intense stinging itching with rapid change of location. Pressure in stomach preceding urticaria, and relieved when it appears. Toothache in left molars > by holding cold water in the mouth. Hering cured with *Apium g*. an old abscess near the umbilicus. Allen mentions: "Profuse discharge from granulating ulcers, intense constriction over sternum, with drawing feeling through to back on lying down," as having been cured by it.

SYMPTOMS.

1. Mind.—Cannot keep mind from thinking.

2. Head.—Frontal headache; over r. eye and r. temple; < during night.—Dull pain r. temple with nausea.—Pain in l. temple spreads over l. side of face and top of head.—Pain as from a jar or blow deep in l. temporal region, a throbbing ache.—Painful throbbing < by expiring through nose.—Headaches: > while eating; in open air; closing eyes; complete rest drinking cold water; by hot compresses. < After eating; by light; by reading or studying; by slightest motion or nodding head.

3. Eyes.—Eyeballs feel as if sunken into sockets.

4. Ears.—Partial deafness (< l.), painless pulsation.—Troublesome otorrhœa.

5. Nose.—Tough pearl-coloured discharge from nostrils.—Sudden dropping of mucus into posterior nares.—Tickling in nostrils with sneezing, forenoon.—Tickling

in r. nostril with watery discharge and sneezing.—Nostrils stuffed, with pain in forehead.

8. Mouth.—Sore spot on tip of tongue.—Dull, sore pain on upper and lower teeth.—Toothache > by cold water.

9. Throat.—Soft palate and fauces sore, dark red and swollen.—Air rushing down posterior nares hurts back of throat.

11. Stomach.—Unpleasant feeling at stomach with belchings tasting of celery.—Heartburn.—Spitting up of food.—Sore feeling at pit of stomach lasting for hours and partially relieved by eating.—Desire for oranges; for oatmeal.

13. Stool and Anus.—Three urgent well-formed stools during the day.—Before stool sharp pain from abdomen directly into rectum, with feeling that she cannot retain stool a moment.

14. Urinary Organs.—Obstinate retention of urine, could only be relieved by catheter.

17. Respiratory Organs.—Tickling in top of windpipe causing dry cough.—Wheezing breathing during the night.—Can count heart-beats by hearing and feeling it in chest.

20. Neck and Back.—Muscles of back of neck painful on motion, sore to pressure.—Dull pain in sacrum with slight bellyache.—Pain in sacrum more to l. side extending to lumbar region.—Pain in sacrum > after rising from bed and moving about; < lying down.—Red, intensely itching blotches on l. sacral region.

23. Lower Limbs.—Growing pains in r. leg during night.—Burning on inside of thighs.—Raw, excoriated surfaces on inner thighs extending into groins, < l. side.—Red itching blotches on inside l. foot, and outside ankle.

24. Generalities.—Inability to sit still, or lie still in bed from feeling of fidgets; cannot keep mind from thinking.

25. Skin.—Itching on all parts.—Red elevated pimples like stings of insects; intense itching; itching changes location by scratching; < after undressing in evening; during night till 4 a.m.

26. Sleep.—Sleepless; not fatigued by loss of sleep.—Sleep broken by bruised pain in l. temporal region.

27. Fever.—Perspiration on forehead on awaking 4 a.m.

Apocynum Androsćmifolium.

Spreading Dogbane. N. O. Apocynaceć. Tincture from the root.

Clinical.—Diarrhśa. Dropsy. Nausea. Neuralgia of face. Vomiting. Wandering rheumatism. Worms.

Characteristics.—It has been proved in large! doses, and its most prominent symptoms Are: Trembling of the body. Prostration and trembling. Swollen sensations of face and body. Swelling of hands and feet; showing its relation to dropsical states like *Apoc. can*. and *Stroph*. Heaviness with great desire to sleep. Flying pains in different parts. Itching of body and face. Acute rheumatism with great stiffness. General rheumatic pains. Profuse sweat of whole body. The pains go from above downward; are < when breathing; and on turning to left side. Hale has cured with it rheumatic gout: "Acute pains in the joints attended with cramps, bilious stools and flying pains in the teeth. The tincture in drop-doses has been known to expel ascarides and other worms." It has been used for expelling renal calculi and gravel.

Relations.—*Compare:* Bry. Iris., Colch., Benz. ac. Also Apoc. can., Alston., Stroph. (botan).

SYMPTOMS.

2. Head.—Pains and stiffness in back of head and neck.

5. Nose.—Everything smelled like honey.

6. Face.—Twitching in face.—Violent pain in l. zygoma.

7, 8. Teeth and Mouth.—Pains in all teeth of l. lower jaw.—Most delightful taste in the mouth.

11, 12. Stomach and Abdomen.—Vomiting and purging; > from copious evacuation.—Shooting pain in l. groin.—Constipation.

14, 16. Urinary and Sexual Organs.—Profuse flow of clear urine.—Profuse menstruation lasting eight days with violent pressing pain.

21. Limbs.—Swelling of hands and feet.—Most violent pains in all the joints.—Much pain in knee and r. shoulder.—Cramps and burning in soles.—Severe pain in joint of l. big toe.

Apocynum Cannabinum.

Indian (American) Hemp. N. O. Apocynaceæ. Provings were made with fresh plant-tinctures, or fresh or powdered root-tinctures or infusions. Watery infusions (with just enough spirit to keep them from fermenting) are said to be more efficacious than tinctures. The whole fresh plant, root included, should be used for making the tincture or infusion.

Clinical.—Ascites. Catarrh. Coryza. Diabetes insipidus. Diarrhœa. *Dropsies*. Enuresis. Heart, affections of. Hydrocephalus. Menorrhagia. Metrorrhagia. Nausea. Neuralgia. Snuffles. Tobacco-heart. Urinary difficulties. Vomiting.

Characteristics.—The clinical effects of *Strophanthus* and the symptoms produced on patients to whom it has been given in large doses, clearly show the relationship between it and *Apocynum*. Both produce intense gastric disturbance, extreme depression of the heart's action, and both control dropsical effusions and produce diuresis. *Apo. c*. depresses the heart, kidneys, and intestines, relaxing sphincters. It causes an intense sinking sensation; drowsiness and a bewildered state of mind. Dizziness. Hæmorrhages. The dropsies of *Apocynum* are general dropsies with or without organic disease; swelling of every part of the body; cardiac dropsies. The excretions are diminished, especially urine and sweat. Hydrocephalus has been cured with it: "Child lying in stupor, with constant involuntary motion of one arm and leg." "Paralysis of left side; one eye motionless, one rolling."

Three cases of neuralgia of the right side—groin, hip, and in one case region of right kidney—have been cured with this remedy. All were violent, extorting cries. In one case the pain set in very suddenly and the slightest jar aggravated. Hale says the kidneys are the peculiar seat of the operation of the drug, and that it is in renal dropsies that it is especially curative. It has cured diabetes insipidus with "a sense of sinking in the pit of the stomach with great debility." Hæmorrhages, especially menorrhagia, and hæmorrhages at the change of life have been cured with it. Hale has found it restore the menses when given in cases of dropsy.

Diarrhœa is < immediately after eating. Food or water is immediately ejected, though hungry. There is < on waking in the morning. Many of the symptoms are < after sleep.

Relations.—*Compare:* Apoc. andr., Alstonia const., Strophanth., Acet. ac., Apis (thirstless in dropsies), Arsen., Bell., Bry., Chi., Colch., Digit. (dropsy; slow pulse), Elat., Helleb. (hydrocephalus; ascites); Alo., Gamb., and Trombid. (diarrhœa), K. ca., Lyc., Merc., Merc. sul., the Loganiaceæ—Nux v., Ignat., Curare; Spig., Scill., Sul., Verat.

SYMPTOMS.

1. Mind.—Bewildered; nervous, low-spirited.

2. Head.—Dizzy.—Very marked piercing pain in r. temple followed by vertigo.—Vertigo suddenly appearing and disappearing.—Hydrocephalus: stupor, sight of one eye totally lost, the other nearly so; forehead projecting; sutures open; stage of exudation.

3. Eyes.—Eyes inflamed; < morning and evening.—As if sand in them.

5. Nose.—Violent coryza.—Nose and throat filled with thick yellow mucus on waking in morning.—("Snuffles" in infants.).—Peculiar dryness of mucous membranes of nose with sensation of stiffness, followed by secretion of thick yellow mucus, preceded in some cases by a thin, irritating discharge.

6. Face.—Face pale, covered with cold sweat (diarrhœa).—Dry lips.

8. Mouth.—Dry tongue, immoderate thirst.—Tongue coated.—Constant spitting, increase of mucus and saliva.

11. Stomach.—Thirst on waking.—Great thirst; but water disagrees, causing pain, and is immediately thrown off (Ars.).—Cannot tolerate food or drink, which is immediately ejected.—Distension after a moderate meal.—Feels hungry, but when she eats it settles in epigastrium, turns sour, and hurts.—Extreme epigastric sinking.—Oppression at epigastrium and chest excessive, can hardly, get breath enough to smoke a cigar.—Ascites, often with chronic diarrhœa.

13. Stool and Anus.—Gentle diarrhœa in the morning, no pain.—Diarrhœa explosive, involuntary immediately after eating.—Stool copious, yellow or brownish, like mush; sometimes containing undigested food.—Extreme prostration after stool.—Constipation though fæces not hard.—Piles with feeling as of a wedge being hammered into anus.—Tenesmus of rectum.—Bearing-down pain in anus.—Evacuations very scanty.—Watery stools.—Symptoms always immediately after eating.

14. Urinary Organs.—Urinary organs torpid, urine scanty, but flows as easily as oil.—Severe expulsive pains of bladder.—Urine copious and almost involuntary from relaxed sphincters.—Profuse light-coloured urine; no sediment.—Enuresis.

15. Male Sexual Organs.—Penis and scrotum swollen, dropsical.

16. Female Sexual Organs.—Exhausting menorrhagia (continuous or paroxysmal).—Blood expelled in large clots, sometimes in fluid state.—Amenorrhœa in young girls; abdomen and legs bloated.

17. Respiratory Organs.—Oppression; can scarcely speak; speaks in sharp staccato; must take deep breaths.—Violent hoarse cough, < at night.—Hæmoptysis.—Cough short and dry, loose and rattling with oppression.—Short, unsatisfactory respirations.

19. Heart.—Flutterings, dartings, prostrated feeling in cardiac region.—Quick, sharp, catching pain in heart with palpitation.—Pulse slow, laboured.—Irregular, intermittent, at times feeble, then slow.—Pulse quick, feeble when moved.—Fainting on moving the head.—Palpitation troublesome on walking; heart action scarcely perceptible.

21. Limbs.—Rheumatic condition.—Joints stiff, esp. on moving in the morning.—Constant involuntary motion of one leg and one arm.

22. Upper Limbs.—Finger nails of bluish red colour.

23. Lower Limbs.—Aching in both knees.—Œdema of feet, ankles, and legs.

24. Generalities.—Excretions diminished, esp. urine and sweat.

26. Sleep.—Drowsy in afternoon, restless at night.—Stupor.—On going to bed desire to sleep, but inability to do so.—Drowsy before and after nausea and vomiting.

27. Fever.—Body covered with large drops of cold sweat.—Dropsy after scarlet fever; after abuse of quinine.

Apomorphinum.

An alkaloid obtained from Morphia, but containing one equivalent less of water—C_{17} H_{17} NO_2 (Morphine is C_{17} H_{19} NO_3). Solution.

Clinical.—Alcoholism. Opium habit. Pregnancy, vomiting of. Sea-sickness. Vomiting, cerebral; reflex.

Characteristics.—Apomorphine contains the emetic properties of *Opium*. It causes very rapid vomiting, most rapid when injected subcutaneously. Vomiting without previous nausea. Drowsiness. Faintness. The peculiarity of the vomiting is its suddenness, completeness, and the absence of pain or continued nausea. It has been used with success in cases of sympathetic vomiting, and from pressure of a tumour on the brain. Halbert has given *Apomorph*. 3x with success in a desperate case of combined alcoholism and opism. The symptoms were constant nausea; constipation; insomnia; delirious headache; extreme emaciation; pronounced hysteria.

Relations.—*Compare:* Opium, Ipec., Ant. t., Cer. ox.

Aqua Marina.

Sea-water. Dilutions.

Clinical.—Biliousness. Constipation. Headache. Sea-sickness. Seaside, effects of.

Characteristics.—*Aq. mar*. has been principally used (in high potencies) for the effects of residence near the sea (as biliousness, constipation, headache, &c.). It has been used in wineglassful doses and also in potencies as a remedy for sea-sickness. It has been proved by C. Wesselhœft. Among the symptoms were: Neuralgic pains down right temple and forehead. Faceache left side; cold water intolerable. Sensation of a hair or fishbone in throat, tickling and urging to swallow, causing cough, which does not relieve. Pain on swallowing, extending to ear and temples. Nausea; and nauseous sensation in stomach and abdomen. This symptom seems peculiar: "Constant hawking and raising of phlegm, tough and white like cotton." The leading indication for it is: < at seaside; or on the sea.

Relations.—*Compare:* Nat. mur., Chlorum (but in addition to its chief ingredient, sea-water contains in solution every inorganic substance in the world); also Silica marina.

Aquilegia Vulgaris.

Garden Columbine. N. O. Ranunculaceæ. Tincture of fresh wild plant in bloom.

Clinical.—Clavus. Hysteria.

Characteristics.—Hansen gives the following indications for this unproved drug: "Clavus hystericus of women in climaxis, with vomiting of green substance, especially morning. Globus hystericus."

Relations.—*Compare:* Acon., Act. r., and other Ranunculaceæ.

Aralia Racemosa.

Spikenard (American name). Grows in rich woodlands throughout U.S.A. - N. O. Araliaceć. Tincture of fresh root.

Clinical.—Asthma. *Cough*. Diarrhśa. Hćmorrhoids. Hay-fever. Leucorrhśa. Prolapsus ani.

Characteristics.—*Aralia* was used by the old herbalists and by eclectics as a remedy in phthisis and coughs, and also for leucorrhśa and other complaints of women whose secretions are acrid or suppressed. The homśopathic uses have been chiefly based on a proving by Dr. S. A. Jones, in whom it developed an attack of asthma. The symptoms were: Loud wheezing respiration coming on immediately on lying down at midnight; and he particularly noted that inspiration was very loud and more difficult than expiration. The right lung appeared more affected than the left. On turning to left side, left side seemed affected, and right side became quite free. As the attack passed off phlegm came more freely, had a salty taste, and felt warm in the mouth. The characteristic cough, according to Burnett, is "a fit of coughing occurring before midnight, either immediately on lying down or *more commonly* after a short sleep." Cough occurring at 11 p.m., after a short sleep. Profuse perspiration whilst asleep. Dr. Jones also experienced diarrhśa and prolapse of rectum; soft yellow stools; after stool an aching pain in the rectum, extending upwards on the left side.

Relations.—*Compare:* Botanical relations, Ginseng., Hedera helix; Calc. (turning on one side, symptoms go to that side, relieving opposite side); Rumex c. (cough at 11 p.m.); Chlorum (opp. of Aral.—inspiration easy, expiration difficult).

SYMPTOMS.

1. Mind.—Fear of lung disease; cannot be shaken off.

5. Nose.—Smarting soreness of posterior nares, caused by passage of acrid mucus, with peculiar soreness of alć nasi as if fissured.

9. Throat.—Nausea in throat.

11. Stomach.—Faintly defined nausea in throat and stomach, and sensation in intestines as if diarrhśa would set in.

13. Stool and Rectum.—Feeling as if about to have loose stool, voided with great difficulty only a teaspoonful of soft yellow fćces.—Mucous membrane of rectum came down like a tumour.—After stool, whilst still sitting, an aching pain in rectum, extending upwards on the l. side.

16. Female Sexual Organs.—Acrid, offensive leucorrhśa, with bearing-down pains.

17. Respiratory Organs.—Dry, wheezing respiration, sense of impending suffocation, and rapidly increasing dyspnśa.—Very loud, musical whistling during both inspiration and expiration, but louder during inspiration; < lying down; obliged to sit up.—R. lung appeared more affected than l.—When the attack was over, I lay on my r. side, and then it seemed as if all the oppression and discomfort

was in r. lung.—On turning over it soon felt as if l. lung was affected, while r. was entirely relieved.—Constant desire to clear chest, so that I could inspire better.—All obstruction seemed to be in inspiration.—On making forcible expiration to clear chest, raw, burning sore feeling behind whole length of sternum and in each lung, most intense behind sternum.—After rising in morning raised some loose phlegm easily.—Spasmodic cough at night, awakens after the first sleep and cannot sleep again on account of it; caused by tickling in throat with constriction of chest; has to sit up and cough violently; sometimes caused by a feeling of a foreign body in the throat; sputum at acme of attack scanty; then increased, warm and saltish.—Immediately on lying down an attack of asthma.

24. Generalities.—Weak, prostrated, half-sick, and filled with a vague feeling of nausea.

Aranea Diadema.

The Cross Spider. N. O. Arachnida. Tincture.

Clinical.—Bones, affections of. Catalepsy. Chills. Dysmenorrhœa. Dyspepsia. Hæmorrhages. Hæmorrhagic diathesis. Headache. Hydrogenoid constitution. Intermittents. Malarial cachexia. Menstruation, irregularities of. Neuralgia. Punctured wounds. Scorbutic affections. Scurvy rickets. Spleen, affections of. Toothache.

Characteristics.—Grauvogl is our chief authority for the use of *Aranea*. It is one of the leading remedies for the hydrogenoid constitution as described by him, and for intermittent fevers and other intermittent affections. By hydrogenoid constitution he meant abnormal sensitiveness to damp and cold; and inability to live near fresh water, either rivers or lakes, or in damp, chilly places. This gives the < from bathing; from damp weather; damp localities, or habitations; < drawing in cold air. Chilliness followed by little or no fever. Chill and neuralgic attacks at the same hour every day, every other day, week, month, or regular period. Attacks are violent and sudden. Sensation of swelling in many parts, head, face, hands; of numbness; of coldness as if bones were made of ice. Hæmorrhages from many parts; from wounds. Punctured wounds. Exhaustion. Pains like electric currents. Great desire to lie down; many symptoms > lying down. Toothache < night after lying down. On lying down in bed and touching bed-clothes, whether linen or wool, has a chill. Many symptoms occur on the right side. Chill not > by external warmth; no sweat with fevers.

Relations.—*Compare:* Mygale, Theridion, Tarentula, Ipec., Nux v., Ars. (intermittents and bone affections); Cedron (intermittents of hot climates; Aran., of

cold climates chiefly). *It antidotes:* Chi., Quinine, Merc. *Antidoted by:* Smoking tobacco.

SYMPTOMS.

1. Mind.—Despondent; longs for death.

2. Head.—Headache (in the forehead), relieved by smoking tobacco and going out into the open air.—Confusion and pressure in the head, mitigated by supporting the head.—Vertigo and flickering before eyes, before headache; when sitting up; must lie down.—Confusion of head; after retiring; evening when studying; with pressure as if in bones of r. temple, > by pressure and sweating.—Headache > entirely in open air.—Headache, with burning eyes and heat of face.—Burning heat in forehead and face.

3. Eyes.—Glimmering and glittering before eyes; preceding headache.—Burning; stinging; shooting in eyes.

7. Teeth.—Painfulness of all the teeth as soon as he goes to bed in the evening.—Sharp sensation of cold in the teeth (incisive) every day at the same hour.—Sensitive, cold sensation in r. lower incisors, esp. on drawing in air; came on again next day at same hour.—Sudden violent pains in teeth of whole upper and lower jaw, at night, immediately after lying down.

8. Mouth.—Instantly a painful sensation, as though arising from several points, darted along the tongue, painfully affecting tongue, jaws, and head; the effect was instantaneous, like a shock from an electric battery.—Tongue seemed almost paralysed, utterance thick and heavy, and the pains at root of tongue and in lower jaw, esp. at joint, most excruciating.—Bitter taste, with coated tongue; relieved by smoking.

11. Stomach.—Thirst during the fever and during the greater part of the other sufferings.—Dejection and lassitude, with thirst.—Coryza, with thirst.—Eating causes headache and spasms.—Vomiting, with fever.—Epigastrium painful to pressure.

12. Abdomen.—Swelling of the spleen (after intermittent fever was suppressed by Quinine).—Enlarged spleen with chilliness.—Fulness and heaviness in the abdomen as from a stone, with sensation of sinking in the epigastrium.—Borborygmi in the abdomen, and heaviness in the thighs, every day at the same hour.—Colic, with shuddering towards evening.

13. Stool.—Diarrhœa; arms and legs as if asleep.—Stools watery, with great rumbling in bowels as if of fermentation.—Liquid, difficult evacuation, with colic, which is ameliorated by friction on the abdomen.

16. Female Sexual Organs.—Dysmenia, spasms commencing in stomach.—Catamenia too early, too frequent, too profuse, of too long duration.—Periods eight days too early, too strong, and too copious.—Metrorrhagia; bright-coloured blood.—Discharge of viscid mucus from the vagina.—Viscous leucorrhœa.

17. Respiratory Organs.—Hæmoptysis.—Violent hæmoptysis in anæmic and debilitated subjects.

22. Upper Limbs.—Numbness of parts supplied by ulnar nerve.—Dull, penetrating pains in the bones and in all parts of the body, esp. in the humerus and the forearm.—At night a sensation as if the hands and forearms were larger and heavier.—Sensation on the ring and little fingers as if they were asleep.

23. Lower Limbs.—Boring and digging in the r. tibia and os calcis, continuing on moving the foot, and disappearing by continuing the motion.—Ulcer on the l. heel.

24. Generalities.—Hæmorrhages from all the organs.—Neuralgic pains, most on r. side, > by hard pressure, < at menstrual period, esp. before, but still during whole cycle; < 12 at night, unbearable, driving her out of bed; < 3 to 8 p.m.; aggravations recurring like clockwork; menses every three weeks.—Great exhaustion and lassitude.—Desires to keep constantly moving when sitting.—Subsultus tendinum.—Catalepsy; periodic headache; < in damp weather.

26. Sleep.—As soon as he lies down at night a violent pain in all his teeth.—Restless sleep with frequent waking.—Restless; on awaking, some part of the body feels as if it were swollen.

27. Fever.—Before chill: cutting cramp in stomach; vomiting; backache.—Cold all the time, cannot get warm; chilly as if bones made of ice even in summer; < during rain.—Chilliness after being in water.—Chill with clock-like regularity; as clock strikes four daily.—Thirst, fever and sweat may be absent.—Chill every other day at precisely the same hour.—During chill: pains in head, stomach, knees.—Afterwards: vomiting.—During heat: headache (but less violent than during chill), with drowsiness.—After heat: vomiting and prostration; lies as if dead; stinging in eyes.—Sweat absent; sweat without thirst; sweat with thirst.

Aranearum Tela.

Cobweb (of black spider found in barns, cellars, and dark places). Tincture or trituration.

Clinical.—Sleeplessness.

Characteristics.—Cobweb has been used as a remedy from ancient times. It has also been experimented with on healthy persons. It very rapidly lowers the frequency of the pulse rate. In some it has produced "a calm and delightful state of feeling, followed by a disposition to sleep." "The most delicious tranquillity, resembling the action of opium, and followed by no bad effects." Twenty grains given to an old and infirm asthmatic produced "slight but pleasant delirium." Muscular energy is increased, could not be kept in bed, but danced and jumped about the room all night.

Aranea Scinencia.

A grey spider found in Kentucky on old walls. Does not spin a web. N. O. Arachnida. Tincture.

Clinical.—Debility. Eyes, affections of. Headache.

Characteristics.—*Aran. scin*. has been proved in 1st and 2nd dilutions. One remarkable symptom noticed was: "Constant twitching of under eyelids," which brings this spider into line with the choreic *Mygale*. Eyes inflamed, weak, watery, lids swollen. Rather profuse flow of saliva; sweet taste in mouth. Much dull, stupid headache of considerable intensity, especially in postero-superior part of head; unable to rest for it; could not collect thoughts with it. Felt as if he had been drinking. Sleepiness. All symptoms < in warm room.

Relations.—*Compare:* Spiders generally. Agar.; Carb. v. (< warm room, also Puls., Apis, Sul., &c.).

Arbutus Andrachne.

Strawberry Tree of the Levant. N. O. Ericaceæ. Tincture of young shoots.

Clinical.—Arthritis. Eczema. Gout. Rheumatism. Urine, disorders of.

Characteristics.—This is one of Dr. Cooper's remedies. He cured several cases of eczema with it, and observed that it produced pains in the joints of a gouty or rheumatic character. Hence he was led to give it in certain inveterate cases of arthritis. In one case the patient noticed that it "cleared his urine." *Arbutin* has a reputation among the allopaths as a urinary remedy. *Arbutus* is allied to *Uva ursi*,

which belongs to the Ericaceæ. One patient who was benefited by the remedy had < in north-east winds. The larger joints are principally affected, and the slightest movement sets up inflammation. The tree sheds its bark annually, which gives the signature of its use in skin cases.

Relations.—*Compare:* Led., Kalm., Bry.

Arctium Lappa.

Lappa officinalis. Lappa major. Arcion (Greek). Great Clote Burre. Burdock. N. O. Compositć. Tincture of fresh root.

Clinical.—Acne. Bunion. Dupuytren's contraction. Eczema serpiginosa. Eruptions. Glands, affections of. Gonorrhśa. Gout. Impotence. Leucorrhśa. Phosphaturia. Rheumatism. Ringworm. Scrofula. Sterility. Ulcers. Uterus, prolapse of.

Characteristics.—*Arctium lappa* has been extensively proved, notably by Dr. Jeanes and Dr. S. A. Jones (*H. R.*, 1893). The provings in the main confirm the teachings of antiquity in regard to this remedy. It has been given from the earliest times for prolapsus uteri, sterility, milky urine, and sores about the joints. A large number of the symptoms were observed in the skin (acne; eczema, especially scalp) and mucous membrane, eruptions and discharges. It is one of the remedies which have been successful in curing uterine prolapse. In skin affections it has been use externally as a glycerole, as well as internally. A writer in *Amer. Homśop*. recommended the local use of the seedling roots in acne. The roots are softened by soaking in water for two hours; then the blunt end is rubbed on each individual pimple. It is not to be repeated oftener than once a week. It was one of Culpepper's remedies for fetid sweat of axillć.

Relations.—*Compare:* The Compositć, Arn., Calend., Cina, &c.; Bry. (rheumatism); Fraxinus Amer., Lil. t., and Sep. (in uterine prolapse); Calc. ph. (phosphaturia); Vinca minor, Viol. tric. (skin).

SYMPTOMS.

2. Head.—Pain in head in region of veneration.—Eczema of scalp.

3. Eyes.—Feeling as if the eye was small and constricted.—Styes.

6. Face.—Inveterate acne.—Spreading vesicular eruption, great tearing and itching.—Herpetic eruption on r. ala nasi.

11. Stomach.—Flatulent dyspepsia, belching inodorous gas.

13. Stools.—Frequent yellow stools in forenoon, with nausea.—Diarrhśa alternating with rheumatic symptoms.

14. Urinary Organs.—Milky phosphatic urine.

15. Male Sexual Organs.—Loss of sexual desire.—Cutting, squeezed pain in whole length of urethra; scalding on micturition.—Ringworm-like patch of eruption on thigh beside testicles; groins raw.

16. Female Sexual Organs.—Prolapse of uterus with much bearing down (*Arct. l.* has been called the "uterine magnet").—Leucorrhśa.

17. Respiratory Organs.—Tickling in rima glottidis with loose-sounding cough, but no expectoration.—Acute tingling, cutting pain under middle of sternum, extending across breast.—Short breath on exertion.

19. Heart.—Pain in heart with indescribable movement under sternum; exceedingly rapid pulse with frequent intermissions.

20. Back.—Pains in back about eighth dorsal vertebra.

21. Limbs.—Rheumatic and gouty pains.—Soreness of muscles.—Dull pains, all < by motion; with high-coloured urine; weary and sleepy.—Rheumatic pains entirely relieved by onset of diarrhśa.—Pains in joints.—Sharp, darting, fugitive pains in tendons (Dupuytren's contraction).—Bunion.

24. Generalities.—Axillary glands suppurate.—Śdema and dropsical swellings.

25. Skin.—Boils.—Moist, offensive eruptions, greyish white crusts; esp. when glands are swollen.—Old sores, esp. about joints.

Areca.

Areca catechu. Fruit: Areca-nut, Betel-nut. N. O. Palmeæ. Trituration of the nut, and triturations and solutions of the alkaloids, Arecoline and Tenaline.

Clinical.—Helminthiasis. Myopia. Salivation. Tapeworm.

Characteristics.—The Betel-nut is in very common use in the East as a masticatory for sweetening the breath and hardening the gums. It is also used as a source of catechu, but the true catechu is an extract of *Uncaria gambir* of the Leguminosæ. The chief medical use of the *Areca nut* has been in helminthiasis in dogs; but it is not altogether without danger. Some animals to which it was

administered experienced in five minutes great difficulty of breathing, slight cough, and fell down on one side, and some died. The dose given for this purpose is one grain to each pound of the dog's weight. The *Hydrobromate of Arecoline* has been used to cause contraction of the pupil. It acts more promptly and more energetically than *Eserine*, but its duration of action is shorter. According to Ricapet it surpasses *Pilocarpine* as a salivatory. It arrests the heart's action in diastole in poisonous doses, and in non-toxic doses increases the amplitude of the pulsations without increasing their frequency. It promotes the contractibility of the intestines, and as a teniafuge it requires no additional laxative. It should be given in pills coated with gelatin or keratin. According to F. Hobday (quoted in *Amer. Hom*. xxiv. 123), *Tenaline* is a much safer and more certain anthelmintic than *Arecoline*. He advises a dose of one minim of the solution to the pound-weight of the animal, either given pure or with a little water. It is not to be given hypodermically.

Argentum Cyanatum.

Silver Cyanide. Ag CN. Trituration.

Clinical.—Angina pectoris. Asthma. Cough. Cramps. Œsophagus, spasms of.

Characteristics.—As a result of inhaling fumes whilst silvering with "Argentine" a woman experienced some very severe poisoning symptoms, among which the most prominent were in the throat: scraping in throat. Sense of constriction and burning. Violent pain in supra-sternal fossa and under manubrium sterni every time she turned to one side. Suffocative attack. Respiration difficult and short. Constant dry, spasmodic cough, allowing her to articulate but one word at a time. Painful cramps in feet. The face and tongue were very red.

Argentum Iodatum.

Iodide of Silver. Ag I. Trituration.

Clinical.—Catarrh. Hoarseness. Paralysis. Syphilis.

Characteristics.—Hale has suggested *Arg. iod*. as a remedy in conditions presenting symptoms of both the components. In practice he found it of great value in disorders of the throat, pharynx, larynx, and bronchia; in some peculiar mental disorders; glandular affections; catarrhs, and affections of the heart.

Argentum Metallicum.

Silver Leaf and Precipitated Silver. Ag (A. W. 107.66). Trituration.

Clinical.—Blepharitis. Brain-fag. Caries. Chlorosis. Cough. Diabetes. Enuresis nocturna. Epilepsy. Epithelial tissue, affections of. Exostosis. Heart, affections of. *Hit-joint, disease of. Hysterical joint. Joints, affections of*. Laryngitis. Ovaries, affections of. Phthisis. Pollutions. Rheumatism. Uterus, cancer of; prolapse of. Voice, loss of.

Characteristics.—*Argentum* affects all the cartilages, and hence all joints and bones, with tearing and bruised pains, tenderness and weakness; painful, so-called "hysterical" joint, articular rheumatism without swelling; pain in rib cartilages and especially the left. Exostosis on skull. The muscular system is also affected with cramps in limbs; calves feel too short on going downstairs; stiffness; numbness; electric-like shocks in joints and limbs; painless twitchings. The heart is specially affected; frequent, spasmodic, though painless twitchings in whole heart muscle, < lying on back; fears apoplexy. Sensation as if heart stood still followed by trembling, then irregular violent throbbing. Palpitation, at night; during pregnancy. Systemic convulsions. Epileptic attacks followed by delirious rage, jumping about, striking those near. In society disinclined to talk; discouraged. (Reaction from this: great inclination to talk, mind very clear.) Vertigo on entering a room after a walk. Vertigo on looking at running water. As if drunk. Frontal headache of business men. Headache increasing gradually and ceasing suddenly, at acme as if a nerve being torn, usually l. side. Viscidity of saliva and mucous expectoration, which is easy. From the mucous membranes generally there is secretion like boiled starch; or there may be thin and at the same time a thick yellow or greenish discharge. Great hunger even after a full meal. Extreme dryness of mouth, tongue sticks to palate. (This symptom with the polyuria points to diabetes, in which *Arg*. is particularly indicated if there is swelling of the ankles.) Spasmodic enuresis nocturna. Effects of onanism: impotence; atrophy of penis; bruised pains in testicles. Pains in left ovary; feels enormously swollen; with this, prolapse of uterus (scirrhus). Metrorrhagia, large lumps with violent pains, < by every motion. *Arg. met*. acts more on the left side than the right; left ovary is affected: "Prolapsus uteri with pains in left ovary." It corresponds to deep-seated insidious disease. In the mental sphere it affects the intellect more than the affections. Headache of business men. Left-sided headache as if in brain substance. Headache and dyspepsia induced by mental agitation, nursing the sick, mental exertion. Suited to thin patients with hollow eyes, pale skin, tendency to tubercle, caries, cancer, deep ulcers, imbecility. The more deeply seated the troubles are the more likely are they to be painless. Tenderness is prominent in *Arg. met*. Tearing pressure and pains in the bones. Articular rheumatism without swelling. Parts feel bruised when pressed on. Hoarseness of singers and speakers, < speaking or singing. Laughing causes cough. Restless sleep; electric shock through body

wakens her. Symptoms < in sleep; nausea in dreams; seminal emissions. On waking, limbs powerless. Paralytic weakness. < By touch; pressure riding in carriage; lying on back; sitting; stooping. At noon at night (profuse urine). Uncovering (chills before midnight). Entering warm room. Sun.

Relations.—Zinc (itching in canthi—Zn. more in inner canthi and acts more on muscular system and skin). Pallad. (ovaries; Pall., r., Arg., l.). Stan. (cough excited by laughing). *Follows well:* Alum., Plat. *Is followed well by:* Calc., Puls., Sep. *Antidoted by:* Merc., Puls. (an occasional dose of Puls. favours action of Arg. nit. in ophthalmia). Teste classes Arg. met. with Merc., and with Arsen.

Causation.—Onanism. Sunstroke.

SYMPTOMS.

1. Mind.—Restlessness, which forces one to walk quickly.—Ill-humour and aversion to talking.—When pleased, excessively merry, but cries a long time about a trifle.—Delirious rage (mania; after epilepsy).

2. Head.—Dulness, and sensation of emptiness in the head.—Confusion, as if caused by smoke, and sensation of intoxication, with tingling in the head.—Dizziness, with obscurity of vision, or with drowsiness, and falling of the eyelids.—Pressing, tearing pain in the skull, principally in the temporal bones, renewed every day at noon, with soreness of the external head, aggravated by pressure and contact, ameliorated in the open air.—Migraine (l.) as if in brain substance, coming gradually to a great height; ceasing suddenly.—Drawing and pressive pain in the occiput, as if caused by a foreign substance, with a sensation of stiffness in the nape of the neck.—Numbing pressure in the sinciput.—Compression in the brain, with nausea and burning in the epigastrium, on reading and stooping for any time.—Cramp-like pains and shootings in the head.—Pain, as of excoriation in the scalp, on the slightest pressure.—Cramp-like and pressive pains in the bones of the head.—Painful dartings in the temporal muscles, and in the forehead.—Pimples on the temples, with pain, as of ulceration.

3. Eyes.—Itching in the eyes, and principally in the angles.—Swelling and redness of the edge of the eyelids.—Stricture of lachrymal duct.

4. Ears.—Shootings in the ears, with incisive pain, which extends to the base of the brain.—Gnawing itching in the external ear, causing the part to be scratched till it bleeds.—Itching of the lobes of the ears.—Sensation of stoppage of the ears.

5. Nose.—Epistaxis, after blowing the nose, or preceded by itching and tickling in the nose.—Stoppage of the nose, with itching in the nostrils.—Violent fluent coryza, with frequent sneezing.—Flowing of purulent matter, mixed with clots of blood, from the nose.

6. Face.—Redness of the face.—Pale and earthy face.—Gnawing, cramp-like, and pressive pains in the bones of the face (in the r. zygoma, sometimes in the L; a violent pain in the bone of the r. lower jaw).—Swelling of the upper lip, immediately under the nose.

7. Teeth.—Pain in the teeth, as if the gums had receded.—Painful sensibility of the gums on being touched.—Gums loosened, and readily bleeding.

8. Mouth.—Dryness of the mouth.—Sensation of dryness on the tongue, though it be moist.—Accumulation of a viscid saliva in the mouth, with shuddering (sometimes the teeth seem coated with it, maybe sticking them together, the lower with the upper, making talking difficult).—Vesicles on the tongue, with burning pain of excoriation.

9. Throat.—Soreness in the throat, as if there were a tumour in the gullet, with difficulty of swallowing.—Hoarseness (or complete aphonia in singers, speakers, &c.) and scraping in the throat.—Inflammation of the throat, with sensation of excoriation on swallowing and on breathing.—The throat feels more sore from coughing than when swallowing, although the food passes with difficulty.—Yawning gives pain in the fauces.—Pricking and tingling in the throat.—Accumulation of greyish and viscid mucus in the throat, with easy expectoration.

10. Appetite.—Repugnance to all food, even to the thought of it, with prompt satiety.—Appetite much increased, he is hungry after eating a full meal.—Desire for wine.—Gnawing hunger, which cannot be appeased by food.

11. Stomach.—Pyrosis.—Hiccough on smoking tobacco.—Constant nausea and uneasiness.—Burning in the stomach, ascending to the chest.—Inclination to vomit, and vomiting of acrid matter, of a disagreeable taste, and which leaves in the throat a sensation of scraping and of burning.—Pressure in the epigastrium.

12. Abdomen.—Violent pressure on the entire abdomen, extending to the pubis, appearing as soon as one begins to eat; aggravated by breathing, and mitigated by rising up.—Pressive and painful inflation of the abdomen.—Cutting pains.—Tension in the abdominal muscles.—Contraction of the muscles of the abdomen on walking.—Loud borborygmi.

13. Stool and Anus.—Frequent inclination to go to stool, with scanty evacuation of soft matter.—Dry, sandy stool after dinner.—Vomitings during the stool.—Pain of contraction in the abdomen, after a stool in the morning.

14. Urinary Organs.—Frequent inclination to make water, with abundant emission (diabetes).

15. Male Sexual Organs.—Pain, as from a bruise, in the testes.—Pollutions.

16. Female Sexual Organs.—Prolapsus uteri, with pain in the l. ovary.

17. Respiratory Organs.—Pain of excoriation in the larynx, esp. on coughing.—Accumulation of mucus in the trachea, which detaches itself on stooping, laughing, or going upstairs, and which is easily expelled by expectoration.—Abundant accumulation of mucus in the chest.—Cough excited by incisive pain in the trachea, with expectoration of serous matter.—Sensation of rawness or soreness of the larynx.—Cough, caused by stinging, cutting in the trachea, with mucus in the chest, and expectoration of transparent mucus, like boiled starch.—Paroxysms of coughing, short and rattling, during the day, with easy expectoration of thick and whitish matter.

18. Chest.—Stitches in the (r.) side of the chest, when inhaling and exhaling.—Pressure in the chest.—Pressure and shooting in the sternum and in the sides of the chest.—Pain in the lower (l.) rib cartilages.—Incisive pain in the sides of the chest, on breathing and on stooping forward.—Cramp-like pain in the muscles of the chest and in the sides.

19. Heart.—Painless twitching in cardiac muscle, < lying on back; with feeling that he would have apoplexy.—Sensation as if heart stood still, followed by trembling, then irregular, violent throbbing.—Palpitation: at night; during pregnancy.—In evening, in bed, quick pulse with thirst.

20. Neck and Back.—Cramp-like pains in the shoulders and in the shoulder-blade.—Pains, as of bruising or of drawing in the loins.

22. Upper Limbs.—Tension and acute pullings, cramp-like and pressive pains in the arms and hands.—Cramp-like pressive pains in the bones, and in the joints of the hands and fingers.—Contraction of the fingers.

23. Lower Limbs.—Shooting, pressive, and, as it were, paralytic pain, in the coxo-femoral joint, when walking.—Jerking in the muscles of the thighs.—Cramp-like, acute, and incisive pains in the knees and in the ankle-bones.—Cramp in the calves of the legs, with sensation of contraction of the muscles, on going downstairs.—Pain, as of bruising and throbbing, in the joints of the feet.—Cramp-like pain in the bones and in the joints of the feet and toes.—Tearing in the bones of the feet and toes.—Sensation of numbness in the heel and in the tendo Achillis.—Feet œdematous (diabetes).

24. Generalities.—Pressure, cramp-like, pulling, principally in the limbs and in the bones.—Bruising pain, chiefly in the sacrum and the joints of the lower limbs.—Boring pain in the joints.—Sensation of soreness in the joints.—Strong effects on the secretions of the mucous membranes.—Sensation of excoriation in

the skin and internal organs.—Sensation of numbness arid stiffness in the limbs; as if asleep.—Epileptic attacks.—Aggravation of the symptoms every day, in the afternoon.—Burning itching in different parts of the skin.—Eruption of pimples, with burning pain, as of excoriation.—Anxious dreams.—Shuddering and cold, esp. in the afternoon and at night.—Nocturnal sweat.

Argentum Nitricum.

Nitrate of Silver. Lunar Caustic. Ag NO_3. Trituration and solution.

Clinical.—*Acidity. Addison's disease. Ańćmia*. Chancre. *Dyspepsia*. Epilepsy. *Eructations*. Erysipelas. *Eyes, affections of. Flatulence. Gastric ulcer*. Gonorrhśa. *Hands, swelling of*. Headache. *Heartburn*. Impetigo. *Locomotor ataxy. Neuralgia*. Ophthalmia neonatorum. *Paralysis. Prostate, enlargement of*. Scarlatina. Small-pox. *Spinal irritation*. *Syphilis. Taste, altered. Throat, affections of. Tongue ulcerated*. Warts. Zona.

Characteristics.—It was the use of *Argentum nit*. in olden times in the treatment of epilepsy which led to the production of the lamentable cases of lead-coloured pigmentation of the skin called Argyria. Homśopathic experience has proved the applicability of the drug to many cases of epilepsy and the needlessness of employing a dosage that entails any risk whatever. The cases of epilepsy calling for this drug are those caused by fright, or occurring at the menstrual period. For days or hours before the attack the pupils are dilated, and after the attack the patient is very restless and has trembling of the hands.

Among the leading symptoms of *Arg. n*. are: Great tremor. Nervous feeling; sensation as if being squeezed in a vice. Feeling of constriction in various parts as of a band of iron round chest or waist. A feeling as if the body or some part of the body were expanding. Migraine, with feeling as if head were enormously enlarged; > tightly bound. Defective co-ordination. Paralyses of motion and sensation; a peculiar numbness accompanied with hyperćsthesia. Sensation of a splinter sticking in various parts. Burning sensations. Gowers has recorded a case in which the use of *Arg. n*. for stomach trouble caused (like lead), drop-wrist, gout, and albuminuria. In allopathic practice the dyspepsia for which it is given is < before food, when the stomach is empty. The opposite condition is the leading indication in homśopathic practice. E. P. Brewer (*Hahn. Monthly*, July, 1883) has recorded a proving, (the prover, a young man, taking on three consecutive days one grain a day of *Arg. n*. triturated with sugar of milk), in which a number of motor and sensory symptoms were elicited, reminding Dr. Brewer of locomotor ataxy, in which it has been used with success by old-school practitioners. This use also has led to many cases of argyria. Among the symptoms of this proving were. "Mental operations sluggish; continued thought required special effort, but exertion of mind

did not aggravate the heaviness and fulness of head. Lower extremities (loins, sacrum, and particularly gastrocnemii) fatigued; as if they would suddenly fail him. Loss of ambition. Building air castles by day: monstrous dreams by night." Another peculiar symptom was: chilly down the back beginning close to occiput extending to extreme tip of coccyx at noon every day; > by warmth; at 5 p.m. chills subsided, no sweat, but profound sleepiness, without sleep but enchanted with vivid imagination: burning heat followed. There was burning in one spot in front of rectum, probably in prostate gland. Micturition more frequent, burning in urethra. The headache was > by *Act. r*. In a proving by myself one of the most marked symptoms was a kind of numb sensitiveness of the skin of the arms—a hyperćsthetic-anćsthetic state, increased sensitiveness to contact, but diminished power of distinguishing sensations. Other symptoms were sore throat with white patches, rheumatic pains in (left) wrist (which I have since confirmed), and finger joints, with external tenderness of bony prominences, pain on rising in right sacro-iliac notch. Soreness of muscles of neck and back. Urticarious spots in various parts. In poisoning cases complete loss of consciousness, insensibility, and convulsions have occurred. Some of the notable digestive symptoms are: "Irresistible desire for sugar." "Fluids go right through him." Belching accompanies most gastric affections. Green stools are remarkable. "Green mucus like chopped spinach in flakes." "Stool turning green after remaining on diaper." "Stool expelled with much spluttering." "Stool shreddy, red, green muco-lymph or epithelial substance." There is a pain in the small of the back, > on standing or walking, but severe when rising from a seat. (*Sul., Caust*.) *Arg. n*. has irresistible desire for sugar, which at the same time < Kent relates a case illustrating this. A nursing infant had a grass-green diarrhśa which failed to yield to *Merc., Ars*., and *Cham*. At last Kent discovered that the mother ate a pound of candy a day. *Arg. n*. was given and the candy stopped and the child soon got well. Intestinal catarrh with shreddy membranous discharges is often cured by *Arg. n*.

A mental peculiarity is one of apprehension and fear: when ready to go to church, &c., diarrhśa sets in. Fears projecting corners of buildings and high buildings. The sight of high buildings makes him giddy and causes him to stagger; it seems as if houses on both sides of street would approach and crush him. Imagines he cannot pass a certain point (*Kali bro*.). When crossing a bridge has an almost irresistible desire to jump over. Impulsion to walk very fast (*Lil. t*.). Mucous membranes affected, purulent and bloody discharges; membranous diarrhśa with agonising pains. Epithelium affected (cancers). Most symptoms are < night; very nervous at night. < At night or in morning on rising (epileptic attacks). Day half more cough, night half more diarrhśa. < On awaking. At 11 a.m. nervous attacks > by stimulants. Chill down back every day at noon. < In warm room; over a fire; in summer; warmth of bed; > by warm drinks. > In cool open air, > washing with cold water; < from cold food; < ice creams. Motion generally <; but walking in open air > back pains, which are < sitting. Lying on right side = pains in abdomen; palpitation. Heat <; but there 19 also < from uncovering; aversion to uncovering. < Rising from sitting. < Inspiration. < Touching the parts. > Bending

double. < Thinking intently. < Riding. > Tight bandage (headache).—*Suited to:* Hysteric nervous persons; headaches from mental causes characterised by dulness of head. Women with menstrual disturbances. Cachetic state. Scrawny, feeble, dried-up-looking women. Guernsey puts it, "withered and dried up by disease. A child looks like a withered old man." It corresponds in lower potencies to Grauvogl's carbo-nitrogenoid constitution (*Sul., Cupr.*); in higher to the hydrogenoid or sycotic constitution. A large number of symptoms appear on the left side.

Relations.—*Antidoted by:* Nat. m. (chemical and dynamic), Arsen., Milk. *Antidotes to Nit. ac. and Arg. nit.:* Puls., Calc., Sep.; next in importance, Lyc., Sil., Rhus, Phos., Sul. *It antidotes:* Am. caust., effects of tobacco. *Inimical:* Coff. c. (it increases the nervous headache). *Follows well:* Bry., Spig. (dyspepsia); Caust. (urethral affections); Spongia (goître); Verat. (flatus). *Is followed well by:* Lyc. (flatus). *Similar to:* Arg. met. (A. met. acts on cartilages, Arg. nit. more on mucous membranes, skin, bone, and periosteum, and is suited to herpetic patients); to Aur., Cup., K. bich., Lach., Merc., Merc. cor., Merc. iod., Nat. m., Nit. ac., Thuj. In complaints from pressure of clothes, like Calc., Bry., Caust., Lyc., Sarsap., Stan. In congestive headaches, like Glon. and other Nit. ac. compounds. In fish-bone sensation in throat, Nit. ac., Hep. (Hep. < by cold; Arg. n. < in warm room). Puls. is its nearest analogue.

Causation.—Apprehension, fear or fright. Eating ices. Intemperate habits. Mental strain and worry. Onanism and venery. Sugar. Tobacco (boys).

SYMPTOMS.

1. Mind.—Mental anxiety.—Very impulsive; always in a hurry but accomplishes nothing; in continual motion; he walks fast.—Hurries restlessly to fulfil engagements, fears to be late when there is plenty of time.—Melancholic; does not undertake anything lest he should not succeed.—Impulse to throw herself from the window.—Frequent errors of perception; mistakes distances; fears house-corners.—Time seems to pass very slowly.—Apprehension when ready to go to church or opera, bringing on diarrhśa.—Easily angered or excited, anger brings on symptoms, cough, pain, &c.—Profound melancholy; imagines if left alone will die; apprehends incurable disease of brain.—Nightly nervousness, with heat and fulness in the head.—Nervous, faintish, and tremulous sensation.—Awful faces appear on shutting eyes.—Apathy.—Mental operations sluggish; thought requires effort.—Complete loss of consciousness.—Memory impaired, cannot find the right word.—Building castles in the air by day: monstrous visions by night.

2. Head.—Vertigo, with headache.—Morning headache (when he awakens).—Excessive congestion of blood to the head.—Stitches in l. frontal eminence.—Cannot walk, talk, or think, the head gets so giddy.—Dulness, mental confusion, dizziness, tendency to fall sideways.—Staggers on stooping; on shutting

eyes.—Dizzy at sight of high houses, feels as if they would close or fall in upon him.—Momentarily blind with mental confusion; buzzing in ears, nausea, trembling.—Digging up, incisive motion, through the l. hemisphere of the brain.—Pressing boring pains, in small spots; in bones; in l. temple.—Hemicrania; epileptiform; periodic; boring pain < l. frontal eminence, > tight band; from mental emotion or strain, loss of friends, loss of sleep; sometimes pain so severe he loses senses; paroxysms frequently culminate in vomiting of bile or sour fluid.—Occipital headache.—Occipital headache decreases, frontal headache increasing.—Congestive headache with throbbing carotids, must loosen cravat; head feels much enlarged; as if bones of skull separated, with increased temperature.—Sensation of constriction of scalp; as if something tightly drawn over skull.—Drawing in bands over surface of brain, apparently in membranes or sinuses.—Headache, with chilliness.—Headache relieved by tying a handkerchief tightly around the head.—Headache worse in the open air.—Aching in one side of the head, with enlarged feeling in corresponding eye.—Itching, creeping, crawling of the hairy scalp (as from vermin); roots of hair feel as if pulled upward.

3. Eyes.—Photophobia.—Asthenopia from want of accommodation; even coarser kinds of work strain.—Suddenly becomes far-sighted.—Cloud over l. eye; grey spots and serpent-like bodies before sight; black motes (esp. r.).—Opacity, of the cornea; ulceration of cornea in infants.—Acute granular conjunctivitis, conjunctiva intensely pink, or scarlet red; discharge profuse, inclined to be muco-purulent.—Purulent ophthalmia; pus thick yellow and bland, < in warm room or from fire, > open air.—Ophthalmia neonatorum, pus thick, yellow, profuse and bland (internally; and locally in 2 gr. to ounce solution); after failure of *Puls.* and *Merc.*—Blepharitis, thick crusts on lids; canthi red as blood; swollen red caruncula (standing out like a lump of red flesh); clusters of intensely red vessels extend from inner canthus to cornea; granular conjunctivitis; < by warmth.—Iritis.—Sight and eyes seem to suffer as abdominal sufferings increase.

4. Ears.—Deafness; ringing; buzzing noises; feeling of distraction (l.); earache.—Whizzing in l. ear with feeling of obstruction and hard hearing.

5. Nose.—Violent itching, obliged to rub until it looks raw.—Coryza with chilliness, lachrymation, sickly look, sneezing and stupefying headache (over the eyes); has to lie down.—Discharge of (whitish) pus with clots of blood.—Discharge like boiled starch.—Ulceration of nostrils.—Bruised pains in bones.

6. Face.—Sunken, pale, bluish countenance; yellow, dirty-looking.—Sickly appearance.—Dried-up look.—Prematurely old look.—Hard blotches on vermilion border of upper lip, paler than lip and sore to touch.—Lips dry and viscid without thirst.

7. Teeth.—Gums swollen, inflamed, bleed easily, painful when touched.—Gums tender and bleed easily; but neither painful nor swollen.—Prosopalgia, esp. in infra-

orbital branch of fifth nerve and nerves going to teeth; pain intense, at its height accompanied by unpleasant sour taste in the mouth.—Face convulsed; jaws clenched.—Teeth sensitive to cold water.—Toothache when chewing; eating cold or sour things.

8. Mouth.—Dry tongue with thirst.—Papillć prominent, erect, feeling sore; tip of tongue red and painful.—Tongue white and moist.—Red streak down middle of tongue.—Fetid odour from mouth.—Ptyalism.—Thick phlegm in mouth.—Mouth coated inside whitish grey.

9. Throat.—Dark red appearance of uvula and fauces.—Sensation as if a splinter were stuck in when swallowing, breathing, or moving the neck.—Thick, tenacious mucus in the throat, obliging him to hawk.—Rawness, soreness, and scraping in the throat.—Burning and dryness in fauces and pharynx.—White patches in throat.—Paroxysms of cramp in the śsophagus.—Ulcers: mercurial, syphilitic, and scrofulous.

10. Appetite.—Irresistible desire for sugar (but it <; in the evening.—Desire for cheese.—Sweetish-bitter taste.—Eating relieves nausea, but < stomach pains.—Warm drinks >; cold drinks or ices < stomach pains.—Eating or a swallow of wine > head: coffee <-The least food < pain of gastralgia; flatulence.—Fluids go right through him (in cholera infantum).—Warm fluids >, cold < pains in stomach.—After heavy meal, epileptic fit.—Nausea after each meal, esp. after dinner.

11. Stomach.—Gastralgia, esp. in delicate, nervous women; brought on by any emotion, loss of sleep, or at menstrual period.—Inflammation of the stomach; gastro-enteritis.—Gnawing pain in the l. side of the stomach.—Pressure with heaviness (sensation of lump) and nausea.—Trembling and throbbing in stomach.—Most gastric complaints are accompanied by violent belching.—Eructations of air accompanied by a mouthful of undigested food (*Pho., Fer.*).—After yawning, feeling as if stomach would burst; wind presses upwards, but the śsophagus feels spasmodically closed; hence an ineffectual effort to eructate, with excessive strangulation, pressing pain in stomach, faintish nausea, confluence of water in the mouth and inability to stir; the paroxysm ceased after a quarter of an hour, amidst frequent and violent out-rush of wind.—Vomiting of some fluid, of bile, black vomit; with anxiety in precordia.—The vomited substance tinged the bedding black.—Awakens at midnight with oppression at stomach, as from a heavy lump, inducing vomiting; in the morning throws up glairy mucus, which can be drawn into strings.—Warmth at epigastrium.—Gnawing ulcerative pain in epigastrium.—Stinging, ulcerative pain in l. side of stomach, worse from touch and deep inspiration.—Pain increases and decreases slowly.—Small spot between xiphoid and navel sensitive to slightest pressure; pains radiate in all directions.—Pain in l. side of stomach below true ribs, < during inspiration and on touching the parts.—Stomach pains are accompanied by intense spasm of chest

muscles and dyspnśa; excessive accumulation of wind; nervous feeling or sensation as if squeezed in a vice.

12. Abdomen.—Sensation as of a ball ascending from abdomen to throat.—Stitches through the abdomen (l. side) like electric shocks, esp. when changing from rest to motion.—Pain in abdomen as if sore; with great hunger; > after eating, but a trembling sets in its place.—Violent attacks of pain at irregular intervals; patient rolls on floor; descending colon tender to touch; tapeworm-like stool passes.—Fulness, heaviness, and distension with anxiety.—Flatulence.—Griping.—Cutting pains.—Constriction as if tightly tied with a band.—Pain in hypochondria.—Intolerance of lacing round hypochondria.

13. Stool and Anus.—Cholera infantum in dried-up, mummy-like children, stools green, slimy, noisy, flatulent, < at night.—Like spinach in flakes.—Green, slimy, shreddy stools, with severe bearing-down in hypogastrium; membranous stool like unsegmented tapeworm; blood, slime, and epithelium; of ten with much flatus; after eating sugar; after drinking; "as soon as the least drink is taken it goes through"; from any excitement.—Advanced dysentery, with suspected ulceration.—Constipation and dry fćces.—Tćnia or ascarides with itching at anus.—Piles with burning or tenesmus; bleeding.—Burning in one spot in anterior wall of rectum (probably in prostrate gland).

14. Urinary Organs.—Nephralgia; pain by touching region.—Urine dark red; contains deposit of renal epithelium and uric acid crystals (esp. after Caust.).—Quick urging to urinate; frequent and copious emission of pale urine.—Incontinence night and day.—Urethra from meatus to bladder hot and burning; < at meatus and behind scrotum.—Urine burning while passing, urethra feels as if swollen.—Inability to pass urine in a projecting stream.—Oozing of mucus from urethra: thick, white at night.—Stitches in extremity of urethra; cutting from posterior part of urethra to anus, when emitting last drop of urine.—Inflammation, and violent burning or shooting pains in the urethra, with increased gonorrhśa.—Priapism, bleeding of the urethra.—Stricture of the urethra.—Dysuria, bloody urine and fever.—Ulcerative pain in middle of urethra, as from a splinter.—Stream of urine spreads asunder.

15. Male Sexual Organs.—Chancre-like ulcer on prepuce.—Ulcers on the prepuce; small, covered with pus; later, spreading, bowl-shaped, with a tallow-like coating.—Impotence; erections, but they fail when coition is attempted.—Want of desire, organs shrivelled.—Coition painful, urethra as if put oil stretch or sensitive at orifice.—Painful tension during erection, chordee, bleeding from urethra, and shooting in urethra from behind forward.—Urethra swollen, hard, knotty, painful.—Spasmodic contraction of cremaster muscle, testicle drawn high up.—Pain in testes and scrotum as from pins and needles, < r.—Orchitis.—Burning in spot in anterior of rectum (prostate gland).

16. Female Sexual Organs.—Ovarian pains, feels as if an enormous swelling in side affected.—Prolapsus with ulceration of os or cervix; with copious yellow, corroding leucorrhśa and frequent bleeding from points of ulceration.—Menses irregular; scanty (with asthma).—Menses too copious or too scanty, too soon or too late.—All symptoms < before and during menses.—Coition painful, followed by bleeding from the vagina.—Orgasms at night.—Metrorrhagia.—Metrorrhagia, with nervous erethism at change of life; also in young widows and those who have borne no children; returning in attacks, region of ovaries painful, with pains radiating to sacrum and thighs.—During pregnancy, stomach as if it would burst with wind; head feels expanded.—Puerperal convulsions; just after attack lies quiet, but becomes very restless before another.

17. Respiratory Organs.—Pure nervous asthma; spasm of respiratory muscles; great dyspnśa, < in crowded room.—Muco-purulent sputa seeming to come from wall of larynx.—Expectoration purulent, mixed with light blood.—Internal soreness of the larynx and pit of the throat, worse mornings.—Chronic laryngitis of singers; raising the voice causes cough.—Marked hoarseness, sometimes loss of voice; feeling as if something clogging vocal cords.—Cough with sense of soreness in l. side preventing lying on it.—Evening cough worse from tobacco smoke.—Cough < evening and night.—Suffocative cough at noon.—Cough in paroxysms induced by: phlegm in larynx; irritation under sternum; fit of passion; laughing; stooping; smoking; ascending stairs; lying down; on awaking.—Hćmoptysis.

18. Chest.—Aching, tensive pain in various parts of chest in small spots.—Weight as of a stone in middle of sternum.—Burning in chest; sensation of warmth between scapulć and sternum.—Violent cramps and pain in muscles of chest.

19. Heart.—Palpitation of the heart in paroxysms, with nausea.—Violent palpitation of the heart; in afternoon with faintish nausea; caused by any emotional excitement or any sudden muscular exertion; from lying on r. side.—Angina pectoris, intense pain in chest and about heart, can hardly breathe.—Irregular (intermittent) action of heart (with an unpleasant sensation of fulness), < when noticing it, > when moving about in open air.

20. Neck and Back.—Muscles of r. side of neck sore and stiff.—Soreness in lumbo-sacral region.—Heaviness in os sacrum, extending along pelvis with painful drawing.—Heaviness, with paralytic sensation, preventing long sitting, and obliging him, when walking, to stretch the dorsal spine.—Pain in small of back, < rising from sitting; > standing or walking.—Pain in sacro-iliac symphyses, feeling as if bones were loose there.—Fatigue in back.—Pressure in back at night.

21. Limbs.—Trembling.—Lassitude.—Weariness of forearms and legs.

22. Upper Limbs.—Drawing in shoulders.—Pain in l. shoulder and arm.—Rheumatic pain in l. wrist.—Left arm heavy.—Nightly boring pain in ulna.—Hyperćsthetic numbness of arms and shoulders.—Pain in wrist, and finger joints.—Hands tremble.—Numbness of finger tips.

23. Lower Limbs.—Staggering gait.—Lassitude of lower limbs with dizziness as if intoxicated.—Pain in calves all night; weary as after a long journey. (Paralytic heaviness and debility, so that he did not know where to put them.).—Heaviness and debility of the legs.—Limbs, esp. knees, start up at night.—Weariness with rigidity.—Śdema of feet.

24. Generalities.—Insensibility; face and upper limbs convulsed; trismus; pupils dilated.—Epileptic attacks caused by fright, or during menstruation (at night, or in the morning when rising).—Chorea-like convulsive motion of all the limbs.—Fatigue.—Tremulous weakness, accompanied with general debility.—Expanding sensation, esp. in face, in head, with feeling as if bones of skull separated; with increase of temperature.—Anćsthetic-hyperćsthetic condition of surface.—Sticking sensations in various parts.—Emaciation.—Dropsy; śdema of legs and ascites.—Loss of voluntary motion.—Paraplegia from debilitating causes.—Sensation of splinters in various parts, esp. in mucous membranes.

25. Skin.—Wart-shaped excrescences.—Skin blue-grey, violet, or bronze to real black.—Bluish-black eruption; (in scarlet fever).—Itching.—Itching pimple.—Impetigo.—Zona.—Small-pox.—Erysipelas.—Urticaria.—Skin brown, tense, and hard.—Warts.

26. Sleep.—Restless at night; when he does sleep has all sorts of troubled dreams.—Restless, stupefied sleep, with horrid dreams of serpents, &c.—Prevented falling asleep by fancies and images.—Wakes in the morning, dreams he is hungry and wakes with flatulence and spasms and twinges.—Soporous condition.—Nightly nervousness with heat of head.—Restless sleep with stupefaction and headache.

27. Fever.—Chilliness and nausea.—Chills, shifting or constant, are more lasting than the heat and return quickly on uncovering; both stages without thirst.—Chilliness.—Chilly down back, at noon, extending from occiput to tip of coccyx up back and over shoulder.—Night sweat.—Morning sweat.—Scarlet fever.

Aristolochia Milhomens.

A. cymbifera. A. glandifera. Brazilian Snake-root. N. O. Aristolochiaceæ. Tincture of the flowers.

Clinical.—Diabetes. Extravasations. Heart, pain in. Tendo Achillis, pain in.

Characteristics.—This medicine was proved by Mure. I do not know of any clinical verifications. Prominent among the symptoms are: Lancinating and pricking pains in various parts. Lancinating pain at apex of heart stopping breath. Excoriations of lips and gums. Cramp-like pains in left tendo Achillis. "The whole leg is covered with large irregular patches formed by extravasated blood." The mouth is pasty in the morning. Anorexia. Colic followed by diarrhœic stool. Burning at anus. Disturbed rest. Disgusting dreams. Head burning hot. Great thirst and bitter mouth; makes water more frequently than usual.

Aristolochia Serpentaria.

Serpentary. Virginia Snake-root. N. O. Aristolochiaceæ. Trituration of dried roots.

Clinical.—Dyspepsia. Flatulence.

Characteristics.—Serpentary was proved by Jörg's provers and others. Its chief effects were noticed in the gastro-enteric organs, nausea, vomiting, abdominal distension, flatulence, and urging to stool. Increased and afterwards lost appetite. Irritation of the urinary and genital organs with frequent desire to micturate. As with *A. milhomens*, there was disturbed rest; also heat of the head.

SYMPTOMS.

1. Mind.—Peevish mood.—Disinclination for work.

2. Head.—Sticking in forehead extending to base of brain.—Increased warmth of head.

8. Mouth.—Copious salivation with frequent spitting.

11. Stomach.—Increased appetite; yet able to eat little, since the first morsels satisfy.—Loss of appetite.—Nausea and vomiting; vomiting did not cease till stomach was entirely emptied.—Distended feeling as if too full.—Heaviness > by emission of much flatus.

12. Abdomen.—Colic in umbilical region.—Distension, rumbling, uneasiness, cutting pains, with at times emission of flatus and eructations which relieve.

13. Stool and Anus.—Distressing itching about anus.—Frequent desire for stool, with evacuation of scanty, hard, tenacious fæces, with much flatulence.—Frequent desire with evacuation of more gas than fæces.

14. Urinary Organs.—General irritation of urinary and genital organs.—Violent desire to urinate with great increase in quantity of urine.—Frequent desire but only a little brownish urine passed.

20. Neck.—Pressive pain in nape of neck.

Armoracea Sativa.

Cochlearia armoracea. Horse-radish. N. O. Cruciferć. Tincture of root.

Clinical.—Albuminuria. Aphonia. Asthma. Cataract. Colic. Cornea, spots on. Eruptions. Eyes, affections of. Gonorrhśa. Gravel. Headache. Leucorrhśa. Lungs, śdema of. Rheumatism. Scurvy. Strangury. Toothache. Ulcers. Urinary disorders.

Characteristics.—*Armor. sat*., and also *Cochlear. officin*., are old-world anti-scorbutics, and homśopathic provings have confirmed the old experience. *Armor*. has the anti-scorbutic properties of the other Cruciferć, and is specially efficacious in scurvy from eating salt. The essential oil is said to be identical with that of *Sinapis*. The mucous membranes are affected: mucous stools; gonorrhśa; leucorrhśa; pituitous asthma and pituitous phthisis have been benefited by it. There are peculiar symptoms in connection with the teeth. Some violent abdominal pains were experienced. Tearing pains from the belly through to back, down the back, and settling in sacrum. "Colic with backache" appears to be a leading indication. Wandering chronic rheumatism. Touch or slight pressure < many symptoms. Bending forward >.

Relations.—*Compare:* The Cruciferć generally. Canth., Caps., Rhus, Sinap.; Arg. n. (diarrhśa from nervous excitement).

Causation.—Checked foot-sweat. Nervous excitement. Cold.

SYMPTOMS.

1. Mind.—Difficult thinking in evening.—Irresolution.

2. Head.—Headache, now one side now the other; < opening the eyes (wide), but not on reading or motion.—Violent headache with nausea; < sitting up.—Aching, boring pains in head, as if brain bursting.

3. Eyes.—Obscuration of sight for some minutes.—Lachrymation.—Spots on cornea.—Swelling of eyes.—Styes.—Rheumatic ophthalmia.

6. Face.—Twitching of l. corner of mouth, 4 a.m.—Soreness of upper lip.

7. Teeth.—Dull sensation in teeth, as if they were soft and became bent and moved in their sockets on chewing.—Scurvy of salt-eaters.—Dental fistula.

8. Mouth.—Paralysis of tongue.—Biting sensation on tongue.—Tongue furred white.—Very offensive odour from mouth and lungs.

9. Throat.—Dryness of pharynx, larynx, and posterior nares.—Scraping in throat with nausea.—Hawking thick, viscid mucus.

11. Stomach.—Unnatural craving for food with profuse painless diarrhśa.—Belchings of sulphurous odour, like garlic.—Bilious regurgitations.—From region of stomach the pain draws through both sides towards back.—Cramp in stomach; pain drives to despair.—Crampy, tensive pain above epigastrium apparently in diaphragm, > by bending forward.

12. Abdomen.—Spasms through to back and loins.—Borborygmi in morning.

13. Stool and Anus.—Profuse painless diarrhśa with craving for food.—Diarrhśa after great nervous excitement.—Tenesmus all night till morning, sometimes discharging a little blood.—Mucous stools.—Involuntary passage of mucus from anus.—Itching and burning at anus.

14. Urinary Organs.—Uneasiness in region of kidneys.—Increased desire and increased secretion.—Urination difficult, causing burning, tenderness, and inflammation of urethra as in first stage of gonorrhśa.—Strangury.—Gravel.—Albuminuria.

15. Male Sexual Organs.—Burning or cutting at glans during micturition; felt also before or after.—Gonorrhśa.—Impotence.

16. Female Sexual Organs.—Stringy black blood passes from the vagina when urinating; also during the night.—Menses: every ten or fifteen days; suppressed with chlorosis.—Leucorrhśa and menostasis.—Since climaxis cramp in stomach.

17. Respiratory Organs.—Aphonia; with blood-spitting; oppressed breathing.—Promotes expectoration, and relieves cough; increases activity of respiratory organs.—Mucous asthma, and consumption.—Śdema of lungs.—Chest painful to touch.

21. Limbs.—Twitchings in limbs.—Towards morning pain in all joints when lying still; < lying on side; > on motion and when getting up.—Suppressed foot sweat.

26. Sleep.—Sleep very refreshing; awoke with clearer mind than usual.

Arnica.

Arnica montana. Leopard's-bane. Fallkraut. N. O. Compositæ. Tincture of whole fresh plant. Tincture of root.

Clinical.—*Abscess. Apoplexy. Back, pains in*. Baldness. Bed-sores. *Black-eye. Boils. Brain, affections of. Breath, fetid*. Bronchitis. *Bruises. Carbuncle. Chest, affections of*. Chorea. Corns. *Cramp. Diabetes*. Diarrhœa. Dysentery. *Ecchymosis*. Excoriations. *Exhaustion. Eyes, affections of. Feet, sore. Hæmatemesis. Hæmaturia*. Headache. *Heart, affections of. Impotence. Labour. Lumbago. Meningitis*. Mental alienation. *Miscarriage. Nipples, sore. Nose, affections of. Paralysis. Pelvic hæmatocele. Pleurodynia. Purpura. Pyæmia. Rheumatism*. Splenalgia. *Sprain. Stings. Suppuration. Taste, disorders of. Thirst. Traumatic fever*. Tumours. *Voice, affections of. Whooping-cough. Wounds. Yawning*.

Characteristics.—Growing on the mountains, *Arnica* may be said to possess a native affinity to the effects of falls. As its German name, Fallkraut, attests, its value as a vulnerary has been known from remote times. It may be said to be the traumatic *par excellence*. Trauma in all its varieties and effects, recent and remote, is met by *Arnica* as by no other single drug, and the provings bring out the appropriateness of the remedy in the symptoms it causes. Tumours in many parts, following injury, have been cured by *Arnica*, including scirrhous tumours of the breast. Nervous affections as chorea after falls. It is suited to plethoric red-faced persons; "*Arnica* is particularly adapted to sanguine, plethoric persons, with lively complexions and disposed to cerebral congestion. It acts but feebly on persons who are positively debilitated, with impoverished blood and soft flesh. This may be the reason why it is eaten with impunity by herbivorous animals as Linneus remarks" (Teste). It is suited to persons who are extremely sensitive to mechanical injuries, and who feel the effects of them long after; persons easily made train-sick or sea-sick. Patients complain that the bed is hard no matter how soft it may be. *Arn*. corresponds to the effects of violent cough or sneezing; the child cries before cough comes on (or with the cough) in whooping-cough. Chronic bronchitis when patients have bruised, weak aching in the chest, or great sensitiveness of the chest on exertion, or walking. Allied to wounds are hæmorrhages, and *Arnica* causes and cures hæmorrhages of many kinds: dilatation and rupture of small blood-vessels. Vomiting, coughing, purging, accompanied by streaks of blood in ejecta; extravasation of blood into the conjunctiva as in whooping-cough. Hæmorrhages into the tissues of internal organs or the skin. An odd symptom of *Arnica* is "coldness of the nose." A case of facial (left) neuralgia, face swollen, dark red, very painful to touch, was cured with *Arnica* (*radix*), the guiding symptom being "cold nose." Patient had bitter taste; was very excitable, and < at night. Ussher notes that the local use of *Arnica* produced an extraordinary growth of hair on a limb. This suggested the use of an oil mixed with *Arn*. 1x in a case of baldness, which was followed with marked success. *Arn*. affects the left upper extremity and

the right chest. There is a putridity in connection with *Arnica* excretions, as with *Baptis*., which it resembles in typhoid conditions: putrid breath; fetid sweat. With *Arnica* there is apt to be incessant passing of stool and urine in these states. Nash gives the following as "leaders": "Stupor, with involuntary discharge of fæces and urine." "Fears being touched or struck by those coming near him." Putrid smell from mouth." "Bruised, sore feeling in uterine region; cannot walk erect." "While answering falls into a deep stupor before finishing." "Head alone, or face alone, hot; rest of body cool." "Many small boils, painful, one after another, extremely sore." "Suddenness" is a feature of Arn. pains and action. P. P. Wells relates a cure of double pleuro-pneumonia in a child with sudden stabbing pains on both sides of the chest almost preventing breathing. *Arnica instantly* caused a violent aggravation, the next instant relief was perfect, and the child fell asleep breathing naturally. I once ran a piece of wire into the tip of one of my fingers, causing paralysing pain. I applied *Arn*. 1x at once, and the pain was better instantly—seeming to be wiped out from the point of injury up the arm. There is < in damp, cold weather with *Arnica*, which is included by Grauvogl among the remedies suited to the hydrogenoid constitution (comp. *Baryt. c*.). Motion and exertion <. (Bruised, aching sensation in chest on walking.) > Lying down, and lying with head low; but < lying on left side.

Arnica should not be used externally where there is broken skin. For torn and lacerated wounds *Calendula* must be used locally.

Relations.—Teste takes Arn. as the type of his first group, which includes Ledum, Crot. t., Fer. magnet., Rhus t., Spig. *Compare:* Abrot., Absinth., Calend., Chamom., Cina, Gnaphal., and other Compositæ. *Complementary:* Acon. *Similar to:* Acon., Am. c., Croton (swashing in abdomen), Arsen., Baptis. (typhoid states—Bap. "feels ill," Arn. "feels well," resents being thought ill), Bell., Bry., Cham., Chi., Euphras., Calend., Hep., Hyper., Ham., Ipec., Led., Merc., Puls., Ran. scel., Rho., Ruta, Staph., Silic, Symph., Sul., Sul. ac., Verat. *Follows well:* Aco., Ipec., Verat., Apis. *Followed well by:* Aco., Ars., Bry., Ipec., Rhus t. *Action aided by:* Arsen. (dysentery and varicose veins). *Injurious in:* Bites of dogs or rabid or angry animals. *Antidote to:* Am. c., Chi., Cicut., Fer., Ign., Ipec., Seneg. *Antidoted by:* Camph., Ipec. (to massive doses); Coffee (headache); Aco., Ars., Chi., Ign., Ipec. (to potencies). Wine increases unpleasant effect of Arnica.

Causations.—Mechanical injuries. Fright or anger. Excessive venery (vaginitis in the female, impotence in the male).

SYMPTOMS.

1. Mind.—Hypochondriacal anxiety with fear of dying and disagreeable temper.—Declines to answer any questions.—Great agitation and anguish, with groans.—Unfitness for exertion, and indifference to business.—Apprehension and despair.—Over-excitement and excessive moral sensibility.—Great sensitiveness of

the mind with anxiety and restlessness.—Tendency to be frightened.—Quarrelsome.—Combative, quarrelsome humour.—Tears.—Shedding of tears and exclamations of rage.—Opinionated.—Foolish gaiety, levity, and mischievousness.—Absence of ideas.—Depression of spirits and absence of mind.—Says there is nothing the matter with him (in typhoid fever, &c.).—Abstraction and musing.—Unconsciousness (like fainting after mechanical injuries).—Delirium.

2. Head.—Whirling giddiness with obscuration of the eyes, chiefly on getting up after sleeping, on moving the head, or in walking.—Giddiness, with nausea; when moving and rising; better when lying.—Vertigo when shutting eyes.—Pressive pains in the head, principally in the forehead.—Cramp-like compression in the forehead as if the brain were contracted into a hard mass, chiefly when near the fire.—Pain, as if a nail were driven into the brain.—Dartings, pullings, and shootings in the head, principally in the temples.—Incisive pain across the head.—Cutting through the head, as with a knife, followed by a sensation of coldness.—Stitches in the head, esp. in the temples and forehead.—Effects from concussion on the brain.—Pain in the head over one eye, with greenish vomiting (after a strain of the back).—Heat and burning in the head, with absence of heat from the body.—Burning and heat in the head, the rest of the body is cool (night and morning, < from motion, > when at rest).—Heaviness and weakness of the head.—Pains in the head, brought on, or aggravated by walking, ascending, meditating, and reading, as well as after a meal.—Tingling at the top of the head.—Immobility of the scalp.

3. Eyes.—Pain, like excoriation, in the eyes and in the eyelids, with difficulty in moving them.—Red, inflamed eyes.—Inflammation of the eyes with suggillation after mechanical injuries.—Burning in the eyes, and flowing of burning tears.—Eyelids swollen, and with ecchymosis.—Pupils contracted.—Eyes dull, cloudy, and downcast.—Eyes prominent, or half open.—Fixed, anxious look.—Obscuration of vision.

4. Ears.—Pain, as of contusion in the ears. Acute pulling in the ears.—Shootings in and behind the ears.—Hardness of hearing, and buzzing before the ears; from blows.—Blood from ears.

5. Nose.—Pain, as of contusion in the nose.—Tingling, in the nose.—Nose swollen, with ecchymosis.—Nasal hæmorrhage.—Ulcerated nostrils.—Coryza, with burning in the nose.—Cold nose (*A. radix*).

6. Face.—Face pale and hollow, or yellow and bloated.—Heat in the face without heat in the body.—Hard swelling, shining redness and heat in one cheek, with throbbing pain.—Puffing of cheeks on breathing.—Tingling round the eyes, in the cheeks, and in the lips.—Pustulous eruption on the face, chiefly round the eyes.—Dryness, burning heat, swelling, and fissures in the lips.—Ulceration of the

corners of the mouth.—Paralysis of the lower jaw.—Painful swelling of the submaxillary glands, and of those of the neck.—Trismus, with the mouth closed.

7. Teeth.—Pain in the teeth, with swelling of the cheeks and tingling in the gums.—Sensation of pulling in the teeth while eating.—Loosening and elongation of the teeth.—Toothache after operation.

8. Mouth.—Dryness of the mouth, with thirst.—Saliva mixed with blood.—Sensation of excoriation and itching on the tongue.—Tongue dry, or with a white coating.—Putrid smell from the mouth in the morning.

9. Throat.—Sensation as if there were something hard in the throat.—Deglutition hindered by a kind of nausea.—Noise while swallowing.—Burning in the throat, with uneasiness, as from internal heat.—Bitter mucus in the throat.

10. Appetite.—Taste putrid or bitter, or slimy.—Bitter taste, esp. in the morning.—Thirst for cold water, without fever.—Longing for alcoholic drinks.—Thirst for water, or desire to drink, with repugnance to all liquids.—Loathing of food—principally milk, meat, broth, and tobacco.—Liking for vinegar.—Want of appetite, and tongue loaded with a white or yellowish coating.—(In the evening) immoderate appetite, with sensation of fulness and cramp-like pressure in the abdomen, immediately after a meal.—Irritable and plaintive humour, after a meal in the evening.

11. Stomach.—Frequent eructations, esp. in the morning, empty, bitter, putrid, as from rotten eggs.—Belches after coughing.—Rising of a bitter mucus or of salt water.—Nausea, with inclination to vomit, chiefly in the morning.—Nausea, and empty vomiturition.—Retching even in the night, with pressure in the precordial region.—Vomiting of coagulated blood, of a deep colour.—After drinking (or eating), vomiting of what has been taken, often with a mixture of blood.—Pressure, fulness, contraction, and cramp-like pain in the stomach and in the precordial region.—Shootings in the pit of the stomach, with pressure extending to the back, and tightness of the chest.

12. Abdomen.—Shootings in the region of the spleen, with difficulty of breathing.—Pressure in the hepatic region.—Abdomen hard and swollen, with pain of incisive excoriation in the sides, chiefly in the morning, mitigated by the emission of wind.—Pain in the umbilical region when moving.—Shocks across the abdomen.—Pain, as of contusion, in the sides.—Flatulence, having the smell of rotten eggs.—Cutting, colicky pains in the abdomen.—Colic with strangury.—Tympanites.

13. Stool and Anus.—Constipation, with ineffectual attempt to go to stool.—Stools in the form of pap, of an acid odour.—Flatus, smelling like rotten eggs.—Diarrhœa, with tenesmus.—Frequent, scanty, small, mucous stools.—Involuntary stools,

chiefly during the night; thin, brown, or white.—Stools of undigested matter.—Purulent, bloody stools.—Hæmorrhoids.—Pressure in the rectum.—Tenesmus.—Thread-worms.

14. Urinary Organs.—Tenesmus.—Spasmodic retention of urine, with pressure in the bladder.—Ineffectual attempts to make water.—Involuntary emission of urine, at night in bed, and in the day, when running.—Frequent micturition of pale urine.—Urine of a brownish red, with sediment, of a brick colour.—Emission of blood.

15. Male Sexual Organs.—Bluish red swelling of the penis and of the scrotum.—Inflammatory swelling of the testes (in consequence of contusion).—Purple-red swelling of the penis and testicles, after mechanical injuries.—Hydrocele.—Painful swelling of the spermatic cord, with shooting in the testes, extending to the abdomen.—Sexual desire increased, with erections, pollutions, and seminal emission on the slightest amorous excitement.—Impotence from excess or abuse.

16. Female Sexual Organs.—Discharge of blood from the uterus, between the periods, with nausea.—Excoriation and ulceration of the breasts.—Soreness of the parts after a severe labour.—Violent after-pains.—Erysipelatous inflammation of the mammæ and nipples.—Violent stitches in middle of l. breast.—Vomiting of pregnancy.—Threatened abortion from fall, &c.—Feeling as if fœtus were lying crosswise.—Tumour of breast.

17. Respiratory Organs.—Dry, short cough, produced by a titillation in the larynx.—Cough at night during sleep.—Paroxysm of cough, preceded by tears, and cough with children after having wept and sobbed from caprice and waywardness.—Whooping-cough; child cries before the cough comes on; and after.—Cough with bloodshot eyes, or nose-bleed.—Even yawning provokes a cough.—Cough with expectoration of blood; the blood is clear, frothy, mixed with coagulated masses and mucus.—Even without cough there is expectoration of black, coagulated blood after every corporeal effort.—Inability to eject the mucus; what the cough detaches is therefore swallowed.—On coughing, shooting pains in the head, or a bruise-like pain in the chest.—Breath fetid; short, and panting.—Excessive difficulty of breathing.—Cough worse in the evening till midnight, from motion, in the warm room, and after drinking.

18. Chest.—Respiration short, panting, difficult, and anxious.—Rattling in the chest.—Oppression of the chest and difficulty of breathing.—Respiration frequently slow and deep.—Shootings in the chest and sides, with difficulty of respiration, aggravated by coughing, but breathing deeply, and by movement; better from external pressure.—Pain, as of a bruise and of compression in the chest.—Burning or rawness in the chest.—Sensation of soreness of the ribs.—Stitches in the chest

(l.), aggravated from a dry cough, with oppression of breathing; < from motion, > from external pressure.

19. Heart.—Beating, and palpitation of the heart.—Pain from liver up through l. chest and down l. arm, veins of hands swollen, purplish; sudden pain as if heart squeezed or had got a shock (angina pectoris).—Heart strained; irritable; stitches in; from l. to r.—Painful pricking in the heart, with fainting fits.

20. Neck and Back.—Weakness of the muscles of the neck; the head falls backwards.—Painful swelling of the glands of the neck.—Pains, as from a bruise, and of dislocation in the back, in the chest, and the loins.—Tingling in the back.—Great soreness of the back.—Dragging-down pain and sense of weight in loins.

22. Upper Limbs.—Pain, as if from fatigue, and crawlings in the arms and in the hands.—Pain, as of dislocation, in the joints of the arms and hands.—Tingling, in the arms.—Sensation of soreness of the arms.—Sensation as if the joints of the arms and wrists were sprained.—Darting in the arm.—Veins in the hands swollen, with full and strong pulse.—Want of strength in the hands on grasping anything.—Cramps in the fingers.

23. Lower Limbs.—Pains, as from fatigue or from dislocation, or acute drawing in the different parts of the lower limbs.—Painful paralytic weakness in the joints, chiefly of the hip and knee.—Want of strength in the knee, with failing of the joint when walking.—Tension in the knee, as from contraction of the tendons.—Pale swelling in the knee.—Sensation of soreness in the legs.—Inflammatory erysipelatous swelling of the feet with pain, and aggravation of the pain by movement.—Hot, painful, hard, and shining swelling of the great toes.—Tingling in the legs and feet.

24. Generalities.—Tearing, drawing in outer parts.—Pricking, from without, inward.—Pressing in inner parts.—Tingling in outer parts.—Acute drawing, crawling, pricking, or paralytic pains, and sensation as from a bruise in the limbs and the joints, as well as in the injured parts.—Pain, as if sprained in outer parts, and in the joints.—Pains, as of dislocation.—Rheumatic and arthritic pains.—Restlessness in the diseased parts, which causes them to be constantly in motion.—Aggravation of pains in the evening and at night, as well as from movement, and even from noise.—Unsettled pains, which pass rapidly from one joint to the other.—Soreness of the whole body, with tingling.—Stiffness of the limbs after exertion.—Muscular jerking.—Stiffness and weariness of all the limbs.—Sensation of agitation and trembling in the body, as if all the vessels were throbbing.—Extreme sensibility of the whole body, chiefly of the joints and of the skin.—Over-sensitiveness of the whole body.—Bleeding of internal and external parts (vomiting of blood).—Ebullition of the blood, and congestion in the head, with heat and burning in the upper parts of the body; and cold, or coolness, in the

lower parts.—Fainting fits, with loss of consciousness, in consequence of mechanical injuries.—Convulsions, traumatic trismus and tetanus.—General prostration of strength.—Paralytic state (on the l. side) in consequence of apoplexy.—Dropsy of inner parts.

25. Skin.—Hot, hard, and shining swelling of the parts affected.—Stings of insects; snake-bites.—Red, bluish, and yellowish spots, as if from contutions.—Black and blue spots on the body.—Yellow-green spots, caused either by a bruise or by disease.—Bed sores; blue mortification.—Miliary eruption.—Petechiæ.—Many small boils, or blood-boils; one after another, extremely sore.

26. Sleep.—Great drowsiness during the day, without being able to sleep.—Inclination to sleep, early in the evening.—Comatose drowsiness with delirium.—Wakens at night with a hot head, and is afraid to sleep for fear of its recurrence.—Anxious dreams about animals.—Sleep not refreshing and full of anxious and terrible dreams, and waking with starts and frights.—Dreams of death, of mutilated bodies, of unbraiding, of indecision.—During sleep, groans, talking, snoring, involuntary stools and urine.—Giddiness on waking.

27. Fever.—Pulse very variable, mostly hard, full and quick.—Chilliness, internally, with external heat.—Great chilliness, with heat and redness of one cheek.—Chilliness of the side on which he lies.—Head alone, or face alone, hot, rest of body cool.—Shivering, principally in the evening, and sometimes with a sensation as if one were sprinkled with cold water.—Heat in the evening or at night, with shivering on raising the bed-clothes, even slightly, and frequently with a pain in the back and in the limbs.—Dry heat over the whole body, or only in the face and on the back.—Fever, with much thirst, even before the shiverings.—Before the fever, dragging sensation in all the bones.—Intermittent fever; chill in the morning or forenoon drawing pains in the bones before the fever; changes his position continually breath and perspiration offensive.—During the apyrexia, pain in the stomach, want of appetite and loathing of animal food.—Perspiration smelling sour or offensive—sometimes cold.—Typhus, putrid breath and stool.—Nocturnal acid sweat.

Arsenicum Album.

The white oxide of Metallic Arsenic, $As_2 O_3$. Solution and trituration.

Clinical.—*Abscess*. Acne rosacea. Alcoholism. Amenorrhśa. *Anćmia. Aphthć. Asthma. Atrophy. Bronchitis. Brown-ague. Cćcum, affections of. Cancer. Cancrum oris. Carbuncle. Cholera Asiatica. Cholera. Traumatic fever. Typhus. Ulcers. Vomiting*. Whooping-cough. *Worms*. Wounds. *Yellow fever*.

Characteristics.—*Arsenic* is the horse's remedy; as *Puls*. is the sheep's, and *Antim. crud*. the pig's. The reprehensible fashion of "doctoring" horses with *Arsenic* is merely an abuse of a therapeutic fact. The horse is an animal on whose power of endurance and "wind" enormous demands are made, and *Arsenic* is the remedy for the effects of feats of prolonged endurance. The *Arsenic* habit of the Styrian mountaineers has arisen from the discovery of its power of strengthening the muscles both of the limbs and of the breathing apparatus. But in another way the horse typifies the *Arsenic* temperament. The mental symptoms of my drug, when pronounced, carry precedence of all others. The horse is an exceedingly nervous animal, constantly moving about, restless to a degree, and very prone to take fright—quite a picture of the *Arsenic* temperament. According to Teste *Arsen*. acts much more powerfully on vegetable-eating animals than on carnivora (opp. *Nux v*.); and it is suited to the effect's of excess of vegetable diet, melons, strawberries, and fruits in general, especially watery fruits.

The arsenic-eaters of the Tyrol can take as much as six grains of white arsenic, or the sulphide, every two days. They maintain that it imparts a sense of invigoration and enables them to carry enormous loads up perpendicular mountains. According to one account it is resorted to by populations who live on vegetable food almost exclusively. "It strengthens the muscles," an old indulger in the habit is reported to have said, "helps to digest our coarse bread and potatoes, and allows us to breathe freely and easily. Meat-eaters have no need for such a thing, but with us it is a necessity." It is difficult to say how far this is a directly "tonic," effect, and how far curative of the dyscrasia generated by the conditions of life. The fine skin and glossy hair of the young women among the arsenic-eating populations is remarkable, and is comparable to the fine coats of arsenic-fed horses. On the other hand, "staring coat" in animals, and "dry, rough, scaly, unhealthy-looking skin" in human beings are keynote indications for the remedy. In this connection may be

mentioned the effects on the crew of the ship *Zion*, which carried arsenic as a portion of its cargo. This was exposed somewhat to the sun's rays, and the crew noticed a peculiar smell. Soon they all began to notice themselves growing stout, and on reaching Philadelphia from England they had all gained much, one to the extent of two stones in weight.

Restlessness is one of the grand characteristics of *Arsenic*. Even the stupor of *Arsenic* is interrupted by fits of restlessness with anxious moaning. Patients are anxious, full of the fear of death, restlessness compelling them to frequently change their position. Hence the applicability of the drug in many nervous affections, notably chorea. Jerks and starts on falling asleep. Irritability, desperately angry; almost furious. Despair, hopelessness, unutterable misery. The irritability and sadness of malarial cachexias; of the cachexias of quinine, mercury, and syphilis. Low types of disease; typhoid states. Inflammations of great intensity with tendency to destruction of tissue. Burning, lancinating pains. *Burning* is another of the leading characteristics of Arsenic. No other remedy has it in more pronounced degree. The peculiarity of the "burnings" of *Ars*. is that they are > by heat (herein comparing with *Capsic*.). The burning in the throat is > by eating or drinking hot things. On the other hand cold food and cold drinks < stomach irritations; hence *Ars*. is of signal use for effects of eating ices and drinking ice-water. *Arsen*. affects the entire alimentary tract. The lips are so dry and parched and cracked that the patient often licks them to moisten them. The mouth is aphthous, ulcerated, or gangrenous. The stomach is so irritable that the least food or drink causes distress or vomiting, or stool or both together. Abdominal pains are intense, causing the patient to turn and twist. Hćmorrhoids are exceedingly painful as if burning needles plunged in. States of lowered vitality.
The *Prostration* of *Arsen*. is remarkable. With it there is the desire to move or be moved constantly. The patient is exhausted from the slightest exertion. Exhaustion is not felt while lying still, but as soon as he moves he is surprised to find himself so weak. The prostration seems out of proportion to the rest of his illness. Must lie down. Exhaustion from hill-climbing, breathless, sleepless. Thirst for little and often (*Ant. t., Lyc*.), wants it very cold and immediately rejects it (*Phos*. as soon as it becomes warm). Before and after the cough of *Arsenic* there is an attack of asthma (*Phos*.) Arsen. has a great place in acute coryza and hay-fever. The fluent coryza is corrosive, reddening the upper lip, and has more burning than either *Merc*. or *Cepa*. Also it is < out of doors, and > in warmth, which distinguishes it from *Cepa* especially. *Arsenic* is predominantly right-sided. The neuralgias affect the right side most; the right lung ("acute, sharp, fixed or darting pain in apex and through upper third of right lung") is more affected than the left; also the right side of the abdomen, hence typhlitis. Many dropsical conditions are controlled by *Arsen*. Especially has it done brilliant work in cases of hydrothorax. It has been called the "liquid trochar," on account of the expeditions way in which it will remove a watery effusion. The patient cannot lie down; must sit up to breathe; anxious; restless; < about 1 a.m.

It is suited to the full plethoric habit. Puffiness in one of its characteristics; and from this to dropsy. All mucous membranes are irritated. The skin is cold and clammy. Scurfy eruptions. Bran-coloured scales on head coming down to forehead. *Arsenic* has cured epithelioma of the lips and closely corresponds to the cancerous diathesis. Many cures of cancer have been reported under its use, both in the crude and in potencies. When the subjective symptoms of *Arsen*. are present, it will cure in the potencies. When the homśopathicity is more crude the lower potencies will be required: in this case the *Arsen*. appears to act directly on the cancerous tissue and cancerous elements in the system.

Arsenic is a hćmorrhagic: it acts on both blood and blood-vessels. Varices burn like fire. Anćmia, chlorosis, pyćmia all come within the scope of *Arsenic*, which corresponds also to states resulting from losses of blood, as venesection, metrorrhagia, hćmoptysis.

The Conditions, especially of time and temperature, are all-important with *Arsenic*. Unless these correspond in the patient, failure will be more frequent than success. *Arsenic* is one of the greatest of periodics. I once treated some members of a family who all had attacks of fever of short duration, recurring regularly every six weeks, from living in rooms papered with arsenical papers. Its periods are: every day; every third or fourth day; every fortnight; every six weeks; every year. There is pronounced night aggravation, the pains are unsupportable with restlessness. < Midnight and after (*Acon*. is rather before midnight); < 3 a.m. There is < from cold and damp; > warmth. *Arsen*. loves warmth like *Nux v., Psor., Hepar, Silic., Mag. mur*. and other hydrogenoids, and herein is differentiated from *Sul., Ant. crud., Iod., Apis*, and *Puls*. *Arsen*. hugs the fire and likes warm wraps. < Lying on affected side, or with head low. > Lying with head high.

Relations.—*Antidotes:* To poisonous doses-milk, albumen, demulcent drinks, followed by emetics of mustard, Sulphate of Zinc or Sulphate of Copper (Tartar emetic is too irritating). Castor oil is the best purgative. *Chemical antidotes:* Animal charcoal, Hydrated peroxide of iron, Magnesia, Limewater. *Dynamic antidote:* Opium; it may be administered by clyster if not retained on stomach. Brandy and stimulants if there is depression and collapse. If urine is suppressed, Sweet spirits of nitre in large quantities of water.

Antidotes of potencies: Camph., Chi., Chin. sul., Fer., Graph., Hep., Iod., Ipec., Nux v., Sambuc., Tabac., Verat. *Arsen. is antidote to:* Carb. v., Chi., Fer., Graph., Hep., Iod., Ipec., Lach., Merc., Nux v., Phos., Sambuc., Strych., Tabac., Verat. *Follows well:* Aco., Agar., Arn., Bell., Cham., Chi., Ipec., Lach., Verat. *Followed well by:* Aran. d., Nux v., Iod., Sul. Rhus follows well in skin affections, especially in cases treated allopathically with large doses of arsenic. *Complementary:* All. sat., Carb. v., Phos. *Similar to:* Aco., Apoc., Arg. n., Bell., Bism., Calc., Can. ind., Carb. v., Chi., Ferr., Hyo., Ipec., Kreos. Lach., Lyc., Nux v., Phos., Puls., Rhus t., Sil., Tab., Verat. The restlessness of Ars. differs from

that of Mag. c.; Ars. goes from room to room, from bed to bed; Mag. c. must get out of bed and walk the floor to relieve pain. The fear of death is not that of Acon., but is an anxiety and a feeling that it is useless to take medicine as they will surely die (more like Agnus). Bry. drinks much and seldom: Ars. little and often; Ars. eats much at a time, Bry. often and little.

Causation.—Chill in the water. Eating ices. Poor diet. Fruits, ailments from. Drunkenness. Effects of tobacco; of quinine; of iodine. Sea-bathing and sea-travelling. Climbing mountains. Strains. Fit of passion. Care. Grief. Fright.

SYMPTOMS.

1. Mind.—Melancholy, sometimes of a religious character, sadness, care, chagrin, cries and complaints.—Anguish, driving one out of bed at night, and from one place to another in the daytime.—Restlessness.—Great fear of being left alone.—Anger, with anxiety, restlessness and sensation of coldness.—Anxiety, restlessness, and excessive anguish which allows no rest, principally in the evening in bed, or in the morning on waking, and often with trembling, cold sweat, oppression of the chest, difficulty of breathing, and fainting fits.—Anxiety of conscience, as if a crime had been committed.—Inconsolable anguish, with complaints and lamentation.—Hypochondriacal humour, with restlessness and anxiety.—Fear of solitude, of spectres, and of robbers, with desire to hide oneself.—Indecision and changeable humour, which demands this at one time, that at another, and rejects everything after having obtained it.—Despair; he finds no rest, esp. at night, with anguish.—Despondency, despair, weariness of life, inclination to suicide, or excessive fear of death, which is sometimes believed to be very near.—Too great sensibility and scrupulousness of conscience, with gloomy ideas, as if one had offended all the world.—Ill-humour, impatience, vexation, inclination to be angry, repugnance to conversation, inclination to criticise, and great susceptibility.—Caustic and jesting spirit.—Extreme sensibility of all the organs; all noise, conversation, and clear lights are insupportable.—Great apathy and indifference.—Great weakness of memory.—Stupidity and dulness.—Delirium.—Delirium, with great flow of ideas.—Loss of consciousness, and of sensation; dotage; maniacal actions and frenzy.—Madness; loss of mind (from the abuse of alcoholic drinks).

2. Head.—Heaviness, sensation of weakness, and confusion in the head, chiefly in a room, mitigated in the open air.—Stupor and confusion.—Vertigo, principally in the evening, on shutting the eyes, on walking, or in the open air, and sometimes with tottering, with danger of falling, intoxication, loss of sense, obscuration of the eyes, nausea, and headache.—Tearing in the head, with vomiting, when raising up the head.—Pains, throbbing, oppressive, stunning, or drawing, shooting and burning in the head, often on one side only, and chiefly above one eye, or at the root of the nose, or in the occiput, and sometimes with inclination to vomit, and buzzing in the ears.—Tension, tightness, and pain as of a bruise in the

head.—Headache > by applying cold water, or by walking in the open air.—Periodical headaches.—The pains in the head often occur periodically, and esp. after each meal, in the morning, at night, and in the evening in bed; and sometimes they are insupportable, and accompanied by tears and wailings, being mitigated for a moment by cold water, but returning much more strongly afterwards.—Sensation, on moving the head, as if the brain struck against the cranium.—Cracking or buzzing in the head.—Pain in the scalp and in the integuments of the head, as if they were ulcerated or bruised, greatly increased by the slightest touch.—Excessive swelling of the head and face.—Erysipelatous burning, swelling of the head (face and genitals) with great weakness and coldness; worse at night.—Gnawing or burning itching, scurfy eruptions, pustules, and corroding ulcers on the scalp.—Eruptions, white, dry, like bran; burning, itching on the forepart of the head; when scratching it burns and bleeds violently.—Burning, biting boils on the scalp, with sensitiveness to touch and cold.

3. Eyes.—Aching, burning, and shooting pains in the eyes, < by light, as also by the movement of the eyes, accompanied sometimes with a necessity to lie down, or with anguish which does not permit to rest in bed.—Eyes inflamed and red, with redness of the conjunctiva, or of the sclerotica, and injection of the veins of the conjunctiva.—Swelling of the eyes.—Inflammatory or śdematous swelling of the eyelids.—Inflammation of the eyes and lids, with severe burning pains.—Inflammation of the inner surface of the eyelids, preventing the opening of the eye.—Great dryness of the eyelids, chiefly in the edges, and on reading by the light (of a candle).—Corrosive tears.—Agglutination of the eyelids.—Spasmodic closing of the eyelids, sometimes from the effect of light.—Excessive photophobia.—Specks and ulcers on the cornea.—Eyes convulsed and prominent; look fixed and furious.—Pupils contracted.—Yellowish colour of the sclerotica.—Yellow colour, spots, or white points and sparks before the eyes.—Blue colour around the eyes.—Weakness, obscuration, and loss of sight.—Eyes dull and deep sunk.

4. Ears.—Squeezing, sharp pains, shootings, voluptuous tickling and burning in the ears.—Tinkling, roaring, buzzing and sound, as of bells, in the ears.—Sensation, as if the ears were stopped, and hardness of hearing, esp. to the human voice.

5. Nose.—Aching pains in the nose.—Swelling of the nose.—Swelling of and burning in the nose.—Violent bleeding of the nose.—Desquamation of the skin of the nose, in furfurs.—Knotty tumours in the nostrils.—Ulceration at the top of the nostrils, with flow of ichor fetid, and of a bitter taste.—Smell of pitch or sulphur before the nose.—Violent sneezing.—Great dryness of the nostrils.—Fluent coryza; with stopped nose, burning in the nostrils, and secretion of serous and corrosive mucus.—Cancer of nose.

6. Face.—Face pale, hollow, and cadaverous.—Yellowish, bluish, or greenish colour of the face.—Leaden and earth-coloured tint, with greenish and bluish spots

and streaks.—Face discomposed, with distortion of features, or with eyes deep-sunk and having a dark circle around them, and nose pointed.—Distorted features; death-like countenance.—Redness and bloated appearance of the face.—Hard and elastic swelling of the face, chiefly above the eyelids, and esp. in the morning.—Swelling of the face, with fainting fits and vertigo.—Papulć, pimples, scurfy ulcers.—Rosacea and mealy tetters in the face.—Blackish tint round the mouth.—Lips bluish or black, dry and chapped.—Brownish band in the red part of the lips.—Skin rough and tettery round the mouth.—Eruption on the mouth and on the lips, near the red part.—Cancer of the face and lips with burning pain.—Hard knots and cancerous ulcers, having thick scurf with lard-like bottoms on the lips.—Lips excoriated, with a sensation of tingling.—Swelling and bleeding of the lips.—Swelling of the submaxillary glands, with contusive pain, and soreness on being touched.—Paralysis of the lower jaw.—Drawing stitches here and there in the face.

7. Teeth.—Sharp aching pains, or successive pullings in the teeth and gums, chiefly at night, extending sometimes to the cheek, to the ear, and to the temples; with swelling of the cheek and insupportable pains, which impel to furious despair, or which are aggravated when one lies on the diseased side, and mitigated by the heat of the fire.—Convulsive grinding of the teeth.—Sensation of elongation and painful loosening of the teeth, with swelling and bleeding of the gums.—Pain in teeth > by hot applications.

8. Mouth.—Offensive smell from the mouth.—Secretion of abundant tough, fetid, bloody saliva.—Great dryness of the mouth, or accumulation of saliva, sometimes bitter or bloody.—The mouth is reddish-blue, inflamed, burning.—Tongue bluish or white.—Ulceration of the tongue, with blue colour.—Torpor and insensibility of the tongue, as if it were burnt.—Tongue brownish or blackish, dry, cracked, and trembling.—Tongue a bright red.—Tongue white as chalk, as if painted white.—Tongue red with a silvery white coat.—Tongue stiff like a piece of wood.—Ulceration of the tongue on the anterior edge.—Swelling, inflammation, or gangrene of the tongue.—Angina gangrenosa (with aphthć).—Aphthć in the mouth.—Speech rapid, precipitate.

9. Throat.—Burning in the throat.—Scraping, sharp pain, with burning in the throat.—Inflammation and gangrene of the throat.—Spasmodic constriction of the throat and of the śsophagus, with inability to swallow.—Deglutition painful and difficult, as if from paralysis of the śsophagus.—Sensation of great dryness in the throat and in the mouth, which induces continual drinking.—Accumulation of greyish or greenish mucus of salt or bitter taste in the throat.

10. Appetite.—Bitter taste in the mouth, chiefly after having drunk or eaten, also in the morning.—Astringent, or putrid, or acid taste in the mouth.—Food appears acid, insipid, or too salt.—Insipidity of food.—Bitter taste of food, particularly of bread and beer.—Complete adypsia; or violent burning, choking, and unquenchable thirst,

making it necessary to drink constantly, but little at a time.—Desire for cold water, for acids, for brandy, for coffee and milk.—Want of appetite and of hunger, frequently with burning thirst.—Insurmountable dislike to all food, chiefly meat and butter.—Everything that is swallowed causes a pressure in the śsophagus, as if it had stopped there.—Continual craving, with want of appetite and prompt satiety.—After a meal, nausea, vomiting, eructations, pains in the stomach, colic, and many other sufferings.—After having drunk, shivering or shuddering, return of vomiting and diarrhśa, eructations and colic.

11. Stomach.—Frequent eructations, particularly after having drunk or eaten, mostly empty, acid, or bitter.—Regurgitation of acrid matter, or of bitter greenish mucus.—Frequent and convulsive hiccoughs, principally in the night.—Frequent and excessive nausea, sometimes rising even to the throat, with inclination to vomit, necessity for lying down, sleep, swooning, trembling, shuddering, or heat, pains in the feet, &c.—Flow of water from the stomach, like water-brash.—Vomitings, sometimes very violent, and principally after having drunk or eaten, or at night, towards the morning; vomiting of food and of drink, or of mucous, bilious, or serous matter, of a yellowish, greenish, brownish, or blackish colour; vomiting of saguineous matter.—While vomiting, violent pains in the stomach, sensation of excoriation in the abdomen, cries, burning internal heat, diarrhśa, and fear of death.—Inflation and tension of the precordial region and of the stomach.—Excessive pain in the epigastrium, and in the stomach, chiefly on being touched.—Pressure in the stomach as from a stone, or as if the heart would burst, and excessive anguish in the precordial region, with complaints and lamentations.—Sensation of constriction, cramp-like pains, pulling, piercing, and gnawing in the stomach.—Burning in the pit of the stomach and stomach.—Inflammation or induration of the stomach.—Cramp in the stomach (2 a.m.).—Cancer in the stomach.—Sensation of cold, or insupportable heat and burning in the precordial region, and in the stomach.—The pains in the stomach manifest themselves mostly after a meal, or in the night.—Tetters on the pit of the stomach.

12. Abdomen.—Compression in the region of the liver.—Swelling of the spleen.—Excessive pains in the abdomen, principally on the left side, and often with great anguish in the abdomen.—Inflation of the abdomen.—Ascites.—Swelling of the abdomen as in ascites.—Hard bloated abdomen.—Violent cutting pains, cramp-like pains, digging, pulling, tearing, and gnawing in the abdomen.—Attacks of colic occur chiefly after having drunk or eaten, or in the night, and are often accompanied by vomiting or diarrhśa, with cold, internal heat, or cold sweat.—Burning pains with anguish.—Sensation of cold, or insupportable burning in the abdomen.—Pain, as from a wound in the abdomen, chiefly on coughing and laughing.—Swelling and induration of the mesenteric glands.—Much flatulency, with rumbling in the abdomen.—Flatulency of a putrid smell.—Painful swelling of the inguinal glands.—Ulcer above the navel.

13. Stool and Anus.—Constipation, with frequent, but ineffectual inclination to evacuate.—Tenesmus, with burning in the anus.—Involuntary and unperceived evacuations.—Violent diarrhśa, with frequent evacuations, nausea, vomiting, thirst, great weakness, colic, and tenesmus.—Nocturnal diarrhśa, and renewal of the diarrhśa, after having drunk or eaten.—Burning stools, with violent pains in the bowels, with tenesmus, thirst, worse after eating.—Burning and corrosive evacuations; fćces with mucus, or bilious, sanguineous, serous, painless, involuntary, &c., of greenish, yellowish, whitish colour, or brownish and blackish; fetid and putrid evacuations; evacuations of undigested substances.—Emission of mucus by the anus, with tenesmus.—Prolapsus of the rectum: with much pain.—Itching, pain as from excoriation, and burning in the rectum and in the anus, as well as in the hćmorrhoidal tumours, chiefly at night.—Shootings in the hćmorrhoidal tumours.

14. Urinary Organs.—Retention of urine, as from paralysis of the bladder.—Frequent inclination to make water, even at night, with abundant emission.—Incontinence of urine, which escapes almost involuntarily, even at night, in bed.—Difficult and painful emission of urine.—Scanty urine, of a deep yellow colour.—Urine aqueous, greenish, brownish, or turbid, with mucus-like sediment.—Sanguineous urine.—Burning in the urethra on making water.—Involuntary discharge of burning urine.

15. Male Sexual Organs.—Itching, shooting, and burning in the glans and in the prepuce.—Inflammation, painful and gangrened swelling of the genital parts.—Glans swollen, cracked, and bluish.—Swelling of the testes.—Erysipelatous inflammation of the scrotum.—Nocturnal pollutions.—Flowing of the prostatic fluid during loose stools.

16. Female Sexual Organs.—Venereal desire in women.—Catamenia too early and too copious, attended by much suffering.—Catamenia suppressed, with pains in the sacrum and in the shoulders.—Leucorrhśa acrid, corrosive, thick, and yellowish.—Scirrhus uteri.

17. Respiratory Organs.–Catarrh, with hoarseness, coryza, and sleeplessness.—Voice rough and hoarse.—Voice trembling or unequal; at one time strong, at another weak.—Tenacious mucus in the larynx and the chest.—Bronchitis, with difficult secretion of mucus.—Sensation of dryness and burning in the larynx.—Spasmodic constriction of the larynx.—Dry cough, sometimes deep, fatiguing, and shaking, principally in the evening after lying down, or at night, obliging the patient to assume an erect posture; also after drinking; on being in the fresh and cool air, during movement, or during expiration, and often with difficulty of respiration, suffocating, contractive pain, or sensation as of excoriation in the pit of the stomach and the chest; pain, as from a bruise in the abdomen, shootings in the hypochondria, in the epigastrium, and in the chest, &c.—Arrest of breathing with cough.—Cough excited by a sensation of constriction and suffocation in the

larynx, as if by the vapour of sulphur.—Respiration oppressed, anxious, short.—Oppressed, laboured breathing, esp. when ascending a height; in cold air; when turning in bed.—Periodical attacks of cough.—Cough with expectoration of sanguineous mucus, sometimes with burning heat over the whole body.—Difficult expectoration, or scanty and frothy.

18. Chest.—Shortness of breath, difficulty of respiration, choking, dyspnśa, and attack of suffocation, sometimes with cold sweat, spasmodic constriction of the chest or of the larynx, anguish, great weakness, body cold, pain in the pit of the stomach, and paroxysm of cough.—The sufferings occur chiefly in the evening in bed, or at night, when lying down; also in windy weather, in the fresh and cold air, or in the heat of a room, or when warmly clothed, on being fatigued, on being angry, on walking, on moving, and even on laughing.—Respiration anxious, stertorous, and wheezing.—Oppression of the chest on coughing, on walking, and on going upstairs.—Constriction and compression of the chest, sometimes with great anxiety, inability to speak, and fainting fits.—Tension and pressure in the chest.—Stitches and pressing in the sternum.—Shooting pains in the chest and in the sternum.—Chilliness or coldness in the chest.—Shivering, or great heat and burning in the chest.—Heat, burning, itching in the chest.—Yellowish spots on the chest.

19. Heart.—Violent and insupportable throbbings of the heart, chiefly when lying on the back, and esp. at night.—Irregular beatings of the heart, sometimes with anguish.—Cramp in the heart.—Heart-beats irritable.—Palpitation with anguish, cannot lie on back; < going upstairs.—Palpitation and trembling weakness after stool; must lie down.—Palpitation after suppressed herpes or foot-sweat.—Angina pectoris.—Hydropericardium.—Fatty degeneration.

20. Neck and Back.—Śdematous, painless swellings of the neck and of the lower jaw.—Tetters between the shoulder-blades.—Violent and burning pain in the back, powerfully aggravated by the touch.—Acute drawing pains in the back and between the shoulder-blades, which necessitate lying down.

22. Upper Limbs.—Acute drawing pains in the arms and in the hands.—Swelling of the arms, with blackish pustules of a putrid smell.—Acute drawing pains in the night, beginning from the elbow and extending to the armpits.—Acute pulling and shooting in the wrists.—Cramps in the fingers.—At night, sensation of fulness and swelling in the palms of the hands.—Excoriation between the fingers.—Hard swelling of the fingers, with pain in the finger-bones.—Ulcers at the extremities of the fingers, with burning pain.—Discoloured nails.

23. Lower Limbs.—Cramp in the legs.—Acute drawing pains in the hips, extending to the groins, the thighs, and sometimes even to the anklebones, with uneasiness, which obliges one to move the limb constantly.—Tearing and stinging in the hips, legs, and loins.—Tearing in the tibia.—Rheumatic pain in the legs, and esp. in the tibia.—Paralytic weakness of the thigh.—Pain, as from a bruise in the joint of the

knee.—Old ulcers on lower limbs, with burning and lancinating pains.—Contraction of the tendons of the ham.—Tetters on the ham.—Cramps in the calves of the legs.—Affections of the shin-bones.—Burning and shooting ulcers in the leg.—Itching herpes in the bends of the knee.—Varices.—Fatigue in the legs and in the feet.—Swelling of the foot, burning, hard, and shining, with burning vesicles of a blue-blackish colour on the instep.—Corrosive and ulcerous vesicles on the soles of the feet and on the toes.—Pains in the fleshy part of the toes, as if they were galled by walking.

24. Generalities.—Paroxysms of suffering with anxiety, coldness, rapid failure of strength, and wish to lie down.—Burning, chiefly in the interior of the parts affected, or sharp and drawing pains.—Nocturnal pains, which are felt even during sleep, and which are so unbearable that they excite despair and fury.—Aggravation of suffering by conversation, as well as after a meal, in the morning on rising, in the evening in bed, on lying on the part affected, or during repose after prolonged exercise; mitigated by external heat, as well as by assuming a standing posture, or by walking, and movement of the body.—Return of sufferings periodically.—Śdematous swellings, with burning pain in the parts affected.—Excessive indolence, and dread of all exertion.—Want of strength, excessive weakness, and complete asthenia, even to prostration, sometimes with paralysis of the lower jaw, eyes dull and deep, and mouth open.—Rapid failure of strength, and sensation of weakness as if from want of food.—Inability to walk; the patient is obliged to remain lying down.—When lying down, the patient feels stronger, but on rising, falls from weakness.—Deficiency of blood; dropsy of outer and inner parts; inflammation of mucous membranes; ulcers in the glands.—Emaciation and atrophy of the whole body, with colliquative sweats, great weakness, face earthy, and eyes sunken, with a dark ring surrounding them.—Violent convulsive attacks, spasms and tetanus.—Epileptic fits, preceded by burning in the stomach, pressure and heat in the back, extending to the nape of the neck, and to the brain, with dizziness.—Śdematous inflation and swelling of the whole body, chiefly of the head and face, with enlargement of the abdomen, and engorgement of the glands.—Burning pains of inner or exterior parts (glands).—Emaciation.—Trembling of the limbs, chiefly the arms and legs.—Trembling of the limbs (in drunkards).—Stiffness and fixedness of the limbs, sometimes with sharp rheumatic pains.—Paralysis and contraction of the limbs.—Paralysis, especially of the lower extremities.—Fainting fits, sometimes with dizziness and swelling of the face.—Fainting, from weakness, with scarcely perceptible pulse.—Sensation of torpor in the limbs, as if they were dead.

25. Skin.—Desquamation of the skin of the body.—Skin dry as parchment, cold and bluish.—Yellowish colour of the skin.—Shootings, hot itching, and violent burning in the skin.—Reddish or bluish spots in the skin.—Petechić.—Inflamed spots, as from morbilli, chiefly in the head, face, and neck.—Miliary eruptions, red and white.—Conical pimples, whitish or reddish, with burning itching.—Nettle-rash.—Eruption of painful black pustules.—Eruption of itchy pimples, small and

tickling.—Eruption of small red pimples, which increase and change into gnawing ulcers, covered with a scurf.—Vesicular eruptions.—Herpes, with vesicles, and violently burning, esp. at night, or with coverings, like fish-scales.—Skin jaundiced; general anasarca; black blisters.—Pustules filled with blood and pus.—Tettery spots, covered with phlyctenć and furfur, with burning nocturnal pains.—Ulcers with raised and hard edges, surrounded by a red and shining crown; with the bottoms like lard, or of a blackish-blue colour, with burning pains or shooting, principally when the parts affected become cold.—Ulcers, hard on the edges, stinging, burning spongy; with proud flesh; turning black; flat; pus thin, ichorous (cancers).—Fetid smell, ichorous suppuration, ready bleeding, putridity, and bluish or greenish colour of the ulcers.—Thin crusts or proud flesh on the ulcers.—Spacelus.—Want of secretion in the ulcers.—Carbuncles (burning).—Inflammatory tumours with burning pains.—Warts.—Ulcers inform of a wart.—Chilblains.—Varices.—Discoloured nails.

26. Sleep.—Constant drowsiness, with strong and frequent yawnings.—Nocturnal sleeplessness, with agitation and constant tossing.—Drowsiness in the evening.—Coma vigil, often interrupted by groans and grinding of the teeth.—Unrefreshing sleep; in the morning it seems as if more sleep were needed.—Starting of the limbs when on the point of falling asleep.—During sleep, startings with fright, groans, talking, querulous exclamations, grinding of the teeth, convulsive movements of the hands and fingers, sensation of general uneasiness, and tossing.—In sleep, lying on the back, with the hand under the head.—Light sleep; the slightest noise is heard, though the patient dreams continually.—Frequent dreams, full of cares, threats apprehensions, repentings and inquietude; anxious, horrible, fantastic, lively and angry dreams; dreams of storms, of fire, of black waters and darkness; dreams with meditation.—In the night, jerking of the limbs, heat and agitation, burning under the skin, as if there were boiling water in the veins, or cold, with inability to get warm, stifling sensation in the larynx, asthmatic attacks, great agitation, and anguish at the heart.—Frequent waking during the night, with difficulty in sleeping again.—Sleeplessness, from anguish and restlessness, with tossing about (after midnight).

27. Fever.—Cold over the whole body, sometimes with cold and viscid sweat.—General coldness, with parchment-like dryness of the skin, or with profuse, cold, clammy perspiration.—Chilliness without thirst; worse after drinking; with stretching of the limbs and restlessness with external heat at the same time; when walking in the open air.—Shiverings and shuddering, chiefly in the evening in bed, or on walking in the open air, or after having drunk or eaten, and often with the addition of other sufferings, such as sharp pains in the limbs, headache, oppression of the chest, and difficulty of respiration, drawing in the limbs, anxiety and restlessness.—Universal heat, principally at night, and often with anxiety, restlessness, delirium, heaviness and perplexity in the head, dizziness, vertigo, oppression and pricking in the chest, redness of the skin, &c.—Febrile attacks, mostly in the morning or evening, often with shivering and heat slightly developed,

burning thirst or perfect adypsia, quartan or tertian, or sometimes quotidian; sufferings before the attack, and sweats after, on going to sleep; apyrexia (or shivering or heat), with great weakness, dropsical affections, pains in the regions of the liver and of the spleen, dull or shooting headache, sharp and drawing pains in the limbs, in the back and in the head, pressure, fulness, tension, and burning in the stomach and in the epigastrium, prickings in the chest and in the sides, difficulty of breathing, anxiety, face puffed, earthy, &c.—Pulse irregular, or quick, weak, small, and frequent, or suppressed and trembling.—Pulse frequent in the morning, slower in the evening.—Frequent colliquative, or cold and viscid sweats; sweat at night, or in the evening on going to sleep, or in the morning on waking; partial sweat, chiefly on the face and legs.—Perspiration at the beginning of sleep, or all night; cold, clammy, smelling sour or offensive.—During perspiration, unquenchable thirst; after the fever, attack of headache.—Perspiration, which imparts a yellow colour to the linen and to the skin.—During the sweat, heaviness in the head, buzzing in the ears and trembling of the limbs.

Arsenicum Bromatum.

Bromide of Arsenic. As Br_3.

Clinical.—Acne. Diabetes.

Characteristics.—"Acne rosacea, with violet papules on the nose. Diabetes mellitus" (Hansen).

Arsenicum Hydrogenisatum.

Arseniuretted Hydrogen. As H_3. Solution in distilled water.

Clinical.—Collapse of cholera. Hiccough. Suppressed menses. Yellow fever.

Characteristics.—*Arsen. hydro*. was used by Drysdale as a substitute for *Arsenic* in the collapse stage of cholera. The symptoms set in suddenly but develop slowly. In poisoning cases death often took place in the second week, and one person, who recovered, suffered seven weeks. Though like *Ars. alb*. in general symptoms, the gas has symptoms of its own. A striking case of sudden suppression of menses was cured with it after failure of *Ars. a*.

Relations.—*Compare:* Arsen. alb. *antidoted by:* Am. acet. (breathing); Sinapisms (breathing); Nux v. (fever); drinks containing sulphuretted hydrogen.

SYMPTOMS.

2. Head.—Stupefying feeling in the head as if a load were there.

6. Face.—Face looks old and has an expression of pain.

11. Stomach.—Loss of appetite.—Tormenting hiccough with oversensitive epigastrium.

12. Abdomen.—Abdomen burning outside; cold feet.—Constipation, with a feeling of heaviness and stiffness like a weight in the abdomen.

13. Anus.—Frequent flying pains in perineum to anus or upwards in anterior wall of rectum.

14. Urinary Organs.—Pressure in kidneys extending to shoulder-blades.—Discharge at times of large quantities of pale urine.—Hæmaturia.

15. Male Sexual Organs.—Foreskin and glans covered with numerous pustules leaving round superficial ulcers.

16. Female Sexual Organs.—Sudden suppression of menses with internal chills for three days, followed by tearing pains in hands and feet, confused head, ringing in ears; red diarrhœa; dry, red, cracked tongue; night cough, causing retching (Ars. h. cured immediately after failure of Ars. a.).

17. Respiratory Organs.—Ammoniacal breath.—Constriction of chest.

20. Back.—Pain as if something sticking behind r. shoulder-blade.

24. Generalities.—Coldness of limbs.—Great prostration and malaise.—< From cold and damp; general chilliness on slight exposure in change of temperature.

25. Skin.—Dark-brown, sallow look of skin.—Deadness from hands up to middle of forearm, and feet to knees, then nose and region of eyebrows, with cessation of pulse.—Hair becomes white over the "deadened" parts.

27. Fever.—Much heat and burning in different parts of the body, particularly over renal region.

Arsenicum Iodatum.

Iodide of Arsenic. As I_3. Trituration.

Clinical.—*Acne rosacea Aneurism. Angina pectoris*. Breast, tumour of. Bronchitis. *Cancer. Catarrh. Consumption. Debility. Dropsy*. Epithelioma. Gastritis. Hay-fever. *Heart, affections of. Hydrothorax. Laryngitis. Leucocythæmia. Lichen. Liver, affections of. Lungs, affections of. Measles. Otorrhœa. Pneumonia*. Rheumatism. Scrofulous ophthalmia. *Syphilis*.

Characteristics.—This medicine was originally used by H. Nankivell, on analogical grounds, in cases of phthisis. It has had a short, independent proving, and symptoms observed on patients have increased the pathogenesis. The Conditions resemble more closely those of *Arsen*. than those of *Iod*.: < from cold wind; > warmth. Great vital prostration. < From any exertion.

It is a medicine of wide range and great power. Chronic inflammatory states of the lungs and bronchial tubes, with profuse, greenish-yellow, pus-like expectoration and short breath are especially relieved by it. Kent observed in a proving made by himself that a thick, yellow discharge resembling honey is characteristic, and he cured with it a case of disease of the nasal bones, with weak intellect, in a girl, being guided by the symptom: "Discharge excoriating, thick, and yellow." There was also great improvement in the mental state. Hale's keynote of the remedy is: The peculiar and persistently irritating, corrosive character of all the discharges. In hay-fever, otorrhœa, and leucorrhœa, with fetid, corrosive discharge, and in diarrhœa where the evacuations "scald," it is indicated. It has been used successfully in tumours, including epithelioma. L. B. Wells cured a case of left axillary tumour in a lady æt. 49. A gland the size of a hen's egg, exuding a fluid which formed a hard, brown crust. The tumour was painful and very sensitive. Left breast enlarged, indurated, and very sore. There was also yellow, bloody, and irritating leucorrhœa with swelling of labia (Hale). In many cases of weakened heart I have found *Ars. iod*. of signal service, more especially when associated with chronic lung conditions. Many skin affections have been remedied by it; particularly dry, scaly, burning and itching eruptions as psoriasis, tinea, impetigo, pityriasis. The consumption-diathesis is in itself a strong indication for the remedy.

During the influenza epidemic in this country *Ars. iod*. was specific for "pink-eye," the form it took among horses, but it was not found of such general utility among human patients.

Ars. iod. has a marked action on the stomach, and when given low needs to be given *after* food, if unpleasant symptoms are to be avoided. In one patient there was nausea immediately after each dose. In another there was aggravation of a pain he had in the epigastrium, and vomiting one hour after food. An observer reported in the *Lancet* the following: "At first appetite is increased but after taking it ten or

twelve days pain is felt at epigastrium, with thirst, dry throat, slight fever, sometimes diarrhœa and tenesmus; skin becomes dry, and the quantity of urine increased. If continued the nervous system becomes extremely irritable and wakefulness supervenes." In several persons taking low attenuations I have observed headaches confirming those of the provers. From the 3x a woman experienced this: "Violent, dull, heavy pain above root of nose, as if she would go silly." She never had anything of the kind before. From the 1x a man had "a heavy headache, across forehead, as if he would like to go to sleep; so weak he could hardly move about." All ceased when he had finished the medicine. Wandering rheumatic pains were felt by one prover. Great vital prostration. Paralysis.

Relations.—*Compare:* Bacil.; in acrid discharges, Nit. ac., Ailanth., Arum, Ars., Arsen. metal. and its salts. *Useful after:* Sulph. in phthisis pulmonalis, and after Conium in sensitive lump in breast. *Antidote:* Bry. relieved pain and pyrosis. *Complementary:* Pho.

Causation.—Study (headache).

SYMPTOMS.

1. Mind.—Irritability.—Unable to study.

2. Head.—Dulness of head, with dull pain in l. malar bone and Occasional slight frontal headache all morning.—Bad headache on waking, lasting all day; dull, heavy; pressing from within outwards, < on motion, stooping, or studying.—Severe frontal headache with dulness of entire head during forenoon, with stiffness and soreness of l. side of neck, < when moving head.—Pain over root of nose as if she would go silly.—Head seemed enormously large and heavy with the pain.—Scalp covered with inflammatory scaly eruptions.

3. Eyes.—Eyes weak, with burning pain; smarting; secretion of meibomian glands increased.

4. Ears.—Very sharp pain in forehead and ears (< l.), when riding in a sharp, cold wind.

5. Nose.—Chronic nasal catarrh, discharge gluey, like yellow honey, excoriating.

6. Face.—Face sallow; peaked; cadaverous, with purple, livid hue.

7. Teeth.—Intermittent pains in first r. upper molar.

9. Throat.—Throat dry.—Hawking up from throat thick mucus and clotted blood; it seemed to come from head and relieve the pain.

10. Appetite.—Loss of appetite.—Appetite at first increased, later pain in epigastrium.—Intense thirst, with uncontrollable desire for cold water, which is almost immediately ejected.

11. Stomach.—Distressing nausea and vomiting.—Pain and pyrosis unbearable; < rising after sitting; > raising wind and a greasy fluid as after eating pork.—(Subacute gastritis.).—Vomiting an hour after food.

12. Abdomen.—Abdomen hard and distended with flatus, which is constantly discharged.—Cutting pains, obliging to bend double.

13. Stool and Anus.—Continual aching in anus, with seeming inability to keep sphincter closed; amounts to real dysenteric straining at stool.—Excoriating diarrhœa.—Diarrhœa or dysentery; stools not at all at night, but urging commencing on beginning to move in morning.

14. Urinary Organs.—Skin dry, urine increased.—(Diseases in uro-genital organs, esp. in females with scrofulous taint.)

16. Female Sexual Organs.—Lump in mamma, sensitive to touch and painful; nipple retracted.

17. Respiratory Organs.—Slight hacking cough, with dryness and stoppage of the nostrils.—Asthmatic sensations; must sit up to breathe.—Expectoration heavy night and morning.—Frequent cough with muco-purulent and occasionally stringy expectoration.—Greenish-yellow pus-like expectoration; hæmorrhage (chronic induration of the lungs).—Chronic bronchitis with difficult expectoration and short breath.—Pneumonias that fail to clear up.

19. Heart.—Irregular pulse; cardiac weakness; pain either with or without valvular disease, esp. when accompanied with induration of lung tissue.

20. Neck and Back.—Soreness of back, esp. of back of neck, as if he had been beaten.—Burning heat in lumbar region, as if the clothes were on fire.

21. Limbs.—Sharp pain in upper third of r. humerus while writing; after ten minutes shifted to metacarpal bones, and was then felt in l. femur.—Cold limbs.

23. Lower Limbs.—Peculiar chilliness back of l. thigh, followed by formication and weight of l. foot, the latter extending later up the leg; clothes feel cold; partially > by walking; removed by applied warmth.—Severe laming pain l. calf.—Painful formication outer border l. foot, followed by burning on instep.

25. Skin.—Persistent itching of various parts of body, most of back.—Chronic skin affections.—Psoriasis.

Arsenicum Metallicum.

Metallic Arsenic. As (A. W. 74.9). Trituration.

Clinical.—Constipation. Coryza. Diarrhœa. Eyes, affections of. Hæmorrhoids. Headache. Itching. Sciatica. Syphilis.

Characteristics.—The symptoms of metallic arsenic are very like those of *Ars. alb*., but not entirely. The following may be regarded as the most peculiar: Symptoms recur every 14 days; coryza every 21 days. Pains extend from one part to another; or leave one part and appear in another. Attacks come suddenly and go slowly, or *vice versâ*. Enlarged or swollen feeling of brain, head, eyelids, hands, and fingers. Cutting, burning, stinging pains. Itching in many parts, skin peels off in small scales. Hot bathing < pain in hip. > Lying on l. side (heart). Washing > itching of anus. Cold bathing > itching of face. < On waking in morning. Thinking of symptoms < Many symptoms appear on r. side. *Ars. met*. lights up syphilis after being many years dormant.

Relations.—*Compare:* Iod., Merc., Nat. c. in syphilis; Nux v. (drowsy after sound sleep); Rhus (pain in back, hips, &c.); Sul. (pulse); Ars. alb. Useful in pterygium after failure of Nux v. and Spigel. *Antidoted by:* Bell. (sore throat); Nat. c. (syphilitic symptoms).

Causation.—Laughing (headache). Thinking (headache).

SYMPTOMS.

1. Mind.—Memory weak, esp. of what is read; cannot take in what he reads.—Fears will be poisoned.

2. Head.—Heavy, dull feeling in forehead above frontal sinuses in morning.—Fulness; on waking at night.—As if brain were too large and it would burst.—Glow over l. brow.—Pain l. side extending to ear and eye, with nausea.—Headache when writing, thinking, laughing.—Hair falls off.

3. Eyes.—Soreness of eyes; irritated and red or sore.—Upper lid sore and feels swollen.—Pterygium (r).

5. Nose.—Coryza and hoarseness < in morning.—Eyes red, excoriating tears, nose swollen, head feels enlarged, full as if tied up; sneezing and dyspnœa increase every second day; return every two weeks.

6. Face.—Swelling, itching, burning, stinging of forehead and face, < at night, > by cold washing.

8. Mouth.—Tongue coated white; imprinted with teeth.—Mouth sore; ulcerated.

9. Throat.—Inflamed and ulcerated, several small ulcers.—Violently inflamed throat, pain on swallowing, heat < r. side, after coryza.

11, 12. Stomach and Abdomen.— < From brandy.—Takes away, or causes desire for alcohol.—Sore pain in liver goes through to shoulders and spine.—Pain in spleen down to groin, evening.—Pain in breast extends to region of spleen.—Bloated abdomen.—On waking, cutting, shooting, tormenting belly-ache, followed by burning, watery stool and cessation of pain.—Painful swelling in r. groin < on extending leg.

13. Stool and Anus.—Diarrhœa, burning watery stools with, relief of pain, but leaving much debility falls asleep sitting.—Constipation.—Piles exceedingly painful, bleed a little itching in an us < after rubbing; extending to perineum and scrotum; > washing with very hot water.

14. Urinary Organs.—Urine hot in evening.—Red, sandy sediment.

15. Male Sexual Organs.—Pain in groins; morning, r., evening, l.—Bubo r. < stretching leg; > walking; < sitting.—Itching in glans, prepuce swollen.—Chancres, with burning pain.—Offensive sweat on genitals.—Itching on scrotum.

16. Female Sexual Organs.—Catamenia too early and too scanty.—Heat in uterus and vagina; burning when touched.—Pain in uterus and vagina during period.

18. Chest.—Stitches in breasts; extending to hip; to spleen.—As if heavy load lying on chest all night; dreams of danger on water.

19. Heart.—Cutting pain in heart (4 p.m.); can only lie on l. side.—Pulse accelerated in morning (*Sul*.).

21. Limbs.—Hands and fingers feel swollen; feel stiff as if they could not be closed.—Cracking of finger-joints.—Icy coldness or burning of hands and feet.—Lameness in r. hip-joint, and down thigh, < moving from seat, > continuing to walk; < bathing; < lying on r. side; throbbing < morning, > evening.—Sensation of dryness in r. knee-joint.

24. Generalities.—Prostration of strength, weariness.

25. Skin.—Peels off in small scales.—Rash on face; or abdomen.—Small boils on face.—Syphilitic symptoms reproduced.

26. Sleep.—Excessive drowsiness all day after an unusually sound sleep at night.—Sleepy, but can't sleep (*Bell*).

Antimonium Arsenicicum.

Arseniate of Antimony. ($Sb_2 O_3$) As O_5 + 3 p.c. Trituration.

Clinical.—Catarrhal pneumonia. Emphysema. Ophthalmia. Pericarditis. Phthisis. Pleurisy. Pneumonia. Sciatica.

Characteristics.—*Antim. ars*. is said to affect preferably upper left lung. Emphysema where the dyspnœa is excessive. Haarer is the chief authority for this drug. Mattes, who used it after him, says it is equally effective in right-side cases in old pneumonias and catarrhal pneumonias in children; in old pleuritic effusions, and in pericardial exudations. The cough is < by eating, and on lying down. Wandering pains in sciatic nerves. It has caused inflammation of the eyes and œdema of the face.

Relations.—*Compare:* Other antimony salts, Ars., Aur., Laches., Puls. (wandering pains), Sul.

Arsenicum Sulphuratum Flavum.

Arsenious Sulphide. Orpiment. $As_2 S_3$. Trituration.

Clinical.—Apoplexy. Caries. Children, emaciated. Diarrhœa. Gonorrhœa. Indigestion. Laryngeal phthisis. Walking, late.

Characteristics.—The two sulphides of *Arsenic*, *Orpiment* and *Realgar*, have been used in a somewhat general way in cases combining prominent symptoms of both elements; but independent observations and provings have been made with the two salts. *Orpiment* has the burning pains and sensations of both *Arsenic* and *Sulphur*; stitching, tearing, and rheumatic pains moving from place to place. Lameness, staggering, trembling. Spasms, colic, vomiting, and diarrhœa. Annoying twitching. General debility. Chafing of skin about genitals and behind ears of children. Skin itching, dry, cracked; rhagades; itch. Jaundice. The periodicity of both *Arsenic* and *Sul*. are marked: < every afternoon and evening. > From steam or hot water. > Lying down.

Relations.—*Compare:* Sulph., Calc. c. (children slow in learning to walk).

SYMPTOMS.

1. Mind.—Intense torturing anxiety and apprehension.

2. Head.—Needle-like stitches in r. frontal region.

8. Mouth.—Taste bitter.—Tongue furred, yellow-white; stiff; swollen; later, dry with disgust for all nourishment.—Mouth and throat dry, herpetic ulcers.

11. Stomach.—Burning and gnawing in stomach, with vomiting and diarrhœa.

13. Stool and Anus.—Stools like water, green and slimy and terribly offensive.—Diarrhœa daily 8 a.m. and several times during day, but not at night.—Diarrhœa, with colic and backache and tenesmus.

15. Male Sexual Organs.—Gonorrhœa, with terrible pains; discharge copious, yellow, constant; burning day and night along entire urethra, with restlessness.

25. Skin.—Eruption on outer side of l. wrist; also on inner side.

26. Sleep.—Starting in sleep, also in falling asleep; as if he would fall out of bed.—Restless at night, excited; dreams with seminal emissions.

Arsenicum Sulphuratum Rubrum.

Arsenic Sulphide (or Disulphide). Realgar. $As_2 S_2$. Trituration.

Clinical.—Acne. Diarrhœa. Eczema. Furuncles. Gastritis. Influenza. Neuralgia. Psoriasis. Sciatica.

Characteristics.—The Red Sulphide of Arsenic was introduced and proved by Neidhard, but it has been used somewhat empirically on indications borrowed from its two components. T. N. McLaughlin has reported much success in skin cases, especially in cases of psoriasis, and also of eczema, acne, and furuncles. He gave it in tablets of 2x trit., and found patients who could not tolerate *Ars. alb*. could take *Ars. sul. rub*. without any unpleasant symptoms, and with marked curative effect. There was no gastric or intestinal irritation in any of his cases. The provings brought out some characteristic features. J. Meredith cured, with *Ars. s. r*. mainly, a young girl who suffered from an occipital headache; profuse, repulsive, nauseating nasal catarrh; leucorrhœa, pelvic pains, menstrual troubles, and general anæmic appearance. I have found it useful in many cases of influenza and its sequelæ, especially sciatica. Burning pains (as if coals of fire in stomach, < drinking cold water). External heat. Bone pains. All symptoms < at

night. < On waking (headache). Chilly even before a hot stove. Restless sleep with very vivid dreams. Convulsions. Itching in various parts. Numbness.

Relations.—*Compare:* Ars. sul. flav., Caps.

SYMPTOMS.

1. Mind.—Crossness; and acts with more energy.

2. Head.—Severe continued pain extending deep into brain in r. frontal region, also in r. ear; < by stooping and exercise; > cold application; 5 p.m.—Waking often with dull pain in forehead over eyes, extending over top of head to crown.—Pain commencing at back of head extending round sides.—Neuralgia r. side of face, nose, jaw, and through temple.

8, 9. Mouth and Throat.—Mucous membranes of mouth and throat inflamed.—R. tonsil enlarged.—Intolerable itching in throat inducing short, dry, expulsive cough.

11. Stomach.—Burning in stomach like coals of fire, < drinking cold water; could not bear least pressure on region of stomach.—Sharp cutting pains in l. abdominal region after each meal.—Weight and gnawing in stomach.

13. Stool and Anus.—Diarrhœa, yellow, mushy stools in morning early, after getting up; and in the evening before going to bed; constant tenesmus in anus.

17. Respiratory Organs.—Hoarseness with accumulation of thick, tenacious mucus in throat.—5 a.m. wakes with sharp cutting pain, commencing between cartilages of 5th and 6th ribs, extending inwards and upwards deep into chest; slightest motion <; had to limit respiration as much as possible.

19. Heart.—Occasional sharp pains through base of heart impeding respiration.

20, 21. Back and Limbs.—After rising in morning a heavy pressing pain, extending from tip of coccyx to anus; soreness of coccyx; pain in anus < by efforts to stool or micturition; bearing-down would cause heavy sickening sensation.—Rheumatism from r. shoulder down arm as if in bone.—Pain in r. hip with lameness of leg.—Severe pain in l. tibia.—All joints immovable after recovery from the poison.

Abrotanum.

Artemisia abrotanum. Lady's Love. Southernwood. (Southern Europe.) N. O. Compositæ. Tincture of fresh leaves and stems.

Clinical.—Boils. Chilblains. Epilepsy. Gout. Hæmorrhoids. Hectic fever. Hydrocele. Indigestion. Lienteria. Marasmus. Myelitis, chronic. Nose-bleed. Paralysis. Rheumatism. Umbilicus, oozing from. Worms.

Characteristics.—The most prominent symptom of *Abrot.* is the wasting it causes, most marked in lower extremities. It has also an intense indigestion and morbid appetite. There are burning, gnawing, constricting pains, and sometimes vomiting of offensive matters. A peculiar sensation is as if the stomach were hanging or swimming its water. After a checked diarrhœa, rheumatism may ensue. Another great characteristic of *Abrot.* is metastasis; metastatic rheumatism. Metastasis of rheumatism from joints to heart; to spine. There is a sudden aching pain in back > by motion. Symptoms are < at night and in cold air. The face is wrinkled, pale, old-looking; feels cold; blue rings round eyes. It is suited to affections of newborn children, and especially little boys; hydrocele; epistaxis; emaciation. Oozing of blood and moisture from navel of newborn. I have cured with it indigestion with vomiting of large quantities of offensive fluid in a middle-aged woman.

Relations.—*Compare*: Absinth., Cham., Cina, Gnaphal., and other Compositæ; Nux and Agar. (chilblains); Bry., Bar. c. *Follows well*: Acon. and Bry. (pleurisy); Hep. (boils).

SYMPTOMS.

1. Mind.—Great anxiety and depression.—Child cross, depressed, very peevish.—Feels she would like to do something cruel; no humanity.—Thinking difficult.—Feels as if brain softening.—Excited, loquacious, like shouting, good-humoured, happy (secondary, after ceasing the drug).

2. Head.—Cannot hold the head up.—The l. brain seems esp. weak, easily tired by conversation or mental effort.—Sensation as of creeping chills along the convolutions of the brain, accompanied by prickling sensation.—Scalp sore, esp. l. side; itching.

3. Eyes.—Blue rings around dull-looking eyes.

5. Nose.—Nose dry.—Nose-bleed with boys.

6. Face.—Face wrinkled, as if old.—Comedones, with emaciation.

8. Mouth.—Slimy taste; acid.

10. Appetite.—Gnawing hunger, craves bread boiled in milk.—Ravenous appetite, and all the while emaciating.—Gastralgia with loss of appetite.

11. Stomach.—Sensation as if stomach were hanging or swimming in water, with coldness.—Pains cutting, gnawing, burning; < at night.

12. Abdomen.—Great distension of abdomen.—Weak, sinking feeling in bowels.—Hard lumps in different parts of abdomen.

13. Stool and Anus.—Food passes undigested.—Rheumatism after suddenly checked diarrhœa.—Alternate diarrhœa and constipation.—Protruding piles, with burning, from touch or when pressing.—Piles appeared, and became worse as rheumatic pains abated, with frequent inclination to stool, hardly anything but blood being passed.—Destroys worms, esp. ascarides.

15. Male Sexual Organs.—Hydrocele of children.

16. Female Sexual Organs.—Darting pain in left ovary.—Twitching in both ovarian regions, seems to extend to back.—Blood and moisture oozing from navel of newborn.

17. Respiratory Organs.—Cold air causes a raw feeling in respiratory tract.—In pleurisy when a pressing sensation remains in affected side, impeding free breathing (after *Acon*. and *Bry*.).

19. Heart and Pulse.—Pain across chest sharp and severe in region of heart; rheumatism.—Metastasis of rheumatism to heart.—Pulse weak and small.

20. Back.—Pains in sacrum.

21. Limbs.—Inability to move.—Marasmus of lower extremities only.—Soreness and lameness; worse mornings.—Chilblains itch; frost-bitten limbs.—Gout in wrists and ankles.—Inflammatory rheumatism before swelling begins.

24. Generalities.—Weak, sickly feeling when excited, trembling.—Lame and sore all over.—Weak and prostrated after influenza.—Inability to move.—Numbness.

25. Skin.—Flabby; hangs loose; marasmus.—Furunculus; after *Hep. s*.

26. Sleep.—Restless; frightful dreams.

27. Fever.—High fever (rheumatism).—Hectic fever, with chilliness, very weakening; (marasmus).

Absinthium.

Artemisia absinthium, Linn. Common Wormwood. (Europe.) Not to be confounded with Artemisia vulgaris, which is also called Wormwood. N. O. Compositæ. Tincture of fresh young leaves and flowers.

Clinical.—Brain, congestion of. Chlorosis. Dyspepsia. Epilepsy. Nervousness. Otorrhœa. Restlessness. Sleeplessness. Spine, congestion of. Typhoid.

Characteristics.—*Absinthium* has been proved, but a number of the symptoms are taken from observations made on absinthe drinkers. The convulsions of *Absinth*. are preceded by trembling; the patient makes grimaces; bites tongue; foams. Halbert regards *Absinth*. as of especial service in cases of minor epilepsy, where consciousness is not entirely lost. The characteristic is "a peculiar vertigo on rising, with a tendency to fall backward." In a case of epileptoid vertigo, signs of constant cerebral and spinal congestion; nausea and tendency to frequent vomiting, persistent tremors; epileptoid attacks of hysterical character and opisthotonos, *Absinth*. first in Ø, and later in 3, completely cured. Tremor is a marked feature of the remedy: tremor of tongue; of heart. Magnan, who has studied absinthism, says the characteristic symptoms of absinthe are: Sudden and severe giddiness, epileptiform seizures, delirium with hallucinations, and loss of consciousness. For some time after the attack there is loss of memory. The giddiness and epileptiform attacks are the most important of the symptoms. He adds that those who take absinthe are liable to hysterical manifestations. There is exhilaration followed by horrible delirium (*Bell*.); patient obliged to walk about (*Artem*., *Cham*., *Cin*. have > moving about). Patient walks about in distress, seeing all sorts of demons. Sleeplessness; typhoid with congestion of base of brain. It corresponds to nervousness, excitement, and sleeplessness in children.

Relations.—*Compare*: Artem. vulg., Abrot., Cicut., Hyosc., Bell., Stram. Strong urine, Benz. ac., Nit. ac.

SYMPTOMS.

1. Mind.—After recovery has no recollection of taking the poison, nor of the cause of his doing so.—Forgets what has recently happened.—Insane; idiotic; brutal.—Idiotic manner, doesn't care whether she dies or not.—Wants nothing to do with anybody.—Frightful visions and terrifying hallucinations.—Stupor alternating with dangerous violence.—Insensible with the convulsions.

2. Head.—Vertigo; when she rises up; tendency to fall backward.—Confusion in head.—Headache.—Wants to lie with the head low.—Congestion of the brain and spinal cord.

3. Eyes.—Injected conjunctiva.—Pain in the eyes.—Itching.—Lids heavy.

4. Ears.—Otorrhœa; esp. after hemicrania.

6. Face.—Foolish look.—Rush of blood to the face.—Makes grimaces, and foams at the mouth in epilepsy.

8. Mouth.—Jaws firmly fixed.—Bites his tongue in epilepsy.—Tongue thick, protruding; can scarcely talk.—Tongue trembling; feels paralysed.

9. Throat.—Scalded feeling in the throat.

11. Stomach.—Loss of appetite; loathing of food.—Food lies heavy.—Stomach feels cold and oppressed.—Eructations; nausea; vomiting.—Nausea, apparently in region of gall bladder.—Uncomfortable, irritated feeling of stomach.

12. Abdomen.—Liver feels swollen.—Pain in spleen; it feels swollen.—Bloated around waist and in abdomen, as after ague.—Immense accumulation of flatulence in abdomen; wind colic.

14. Urinary Organs.—Constant desire to urinate.—Urine deep orange, of a strong smell, like horse's urine.

16. Female Sexual Organs.—Pains in uterus.—Darting pain in right ovary.—Chlorosis.—Promotes menses.

17. Respiratory Organs.—Cough with liver complaint.

19. Heart.—Tremor of the heart felt toward the back.—Heart thumps; can be heard in scapular region.

24. Generalities.—Feet very cold.—Falling down, as in epilepsy, unconscious, with distortion of the features, followed by spasms of the body and limbs, bloody foam at mouth, and biting of the tongue; stupidity and loss of memory afterward.—Opisthotonos; grinding teeth; followed by stupor.—Paralysis of inner organs.—(Horses kick with hind legs towards the belly.—Ascarides.)

Cina.

The unexpanded flower-heads (commonly called "seeds") of several varieties of Artemisia maritima. Semen cinæ. Flores Cinæ. Artemisia contra. Wormseed. N. O. Compositæ. Tincture.

Clinical.—*Abdomen, distended*. Anæmia. *Anus, irritation of*. Asthenopia. Asthma. Bronchitis. *Borborygmi*. Chorea. *Colic*. Convulsions. *Cough*. Dentition. Diarrhœa. Enuresis. *Eyes, affections of*. Hydrocephaloid. Intermittent fever. *Leucorrhœa*. Neuralgia. Remittent fever. Scarlatina. Sight, affections of. Spasms. Strabismus. Twitchings. *Urine, milky*. Whooping-cough. Worms.

Characteristics.—*Cina* is the source of the alkaloid *Santoninum*. It is pre-eminently a worm medicine, as it causes all the symptoms which characterise helminthiasis both mental, nervous, and bodily. It corresponds more to the effects of lumbrici than to those of other worms. There is irritation of the nose, causing constant desire to rub, prick, or press into it. In children there is extreme ill-humour and naughtiness. Nothing pleases them for any length of time; gritting teeth during sleep; wetting the bed (when accompanied by picking nose, great hunger, restless sleep); tossing all about the bed in sleep; crying out as if in delirium Sherbino has found "getting on hands and knees in sleep" a strong indication for it. But *Cina* is much more than a mere worm-medicine. Many symptoms appear to be reflex from abdominal irritation. A characteristic feature is: Extreme sensitiveness of mind and body: offended by the slightest thing; peevish and obstinate; aversion to be caressed. Over-sensitiveness of surface: cannot endure to be approached, touched, or pressed upon; touch induces or aggravates spasms. Child cannot bear to have head combed or brushed. Aversion to light. Strabismus; with sickly look and dark circles round eyes; yellow vision. Asthenopia, defective accommodation; yellow vision. Ravenous hunger; sinking immediately after a meal. Difficult swallowing of liquids; clucking noise from throat to stomach. Nocturnal enuresis; urine white, turbid, at times fetid. Larynx extremely sensitive, touching it causes suffocative spasm. Cough excited by sensation of feather down in throat. Reflex cough; caused by writing or reading (to oneself). In fever there is thirst with chill; face pale and cold; hands warm; nausea or vomiting of bile or ingesta. Charles Mohr (*H. M*., January, 1898) commends it for: anæmic persons suffering from indigestion and non-assimilation of food; or after acute illness when they have headache, vertigo, and neuralgia. In the cachectic who have pains in the belly and deranged abdominal functions, and suffer nervously. For asthenopia from onanism, when reading by artificial light is next to impossible; eyes feel veiled, need constant wiping. Spasmodic strabismus from abdominal irritation. Spasmodic asthma after food that disagrees, "sensation as if sternum lies too close to back, embarrasses breathing and causes anxiety and sweat." Prosopalgia of supra- and infra-orbital region and zygoma chiefly, pains pressing, screwing, with hyperæsthesia. Gastralgia, enteralgia, and fevers when the leading symptoms are present. Nash

(*Leaders in Typhoid Fever*) mentions two cases of typhoid in which Cina proved curative, the indications being "Intense *circumscribed redness of the cheeks*, and frequent and *violent rubbing of the nose*." S. C. Ghose has recorded (*H. W.*, September, 1899) a striking cure by *Cina* 6 and 200 of a case of infantile remittent fever, in which the classical symptoms of the drug were present; the fever came on very irregularly. The symptoms of *Cina* are < night; before midnight child wakes up frightened. < From open air; cold air; cold water. < Yawning. Child lies on belly, or on hands and knees, during sleep. Guernsey says *Cina* is suited to complaints which are concomitant to yawning, which come on whenever one yawns.

Relations.—*Antidoted by:* Camph., Caps., Chi., Pip. nig. *Antidote to:* Caps., Chi., Merc. *Follows well:* Dros. and Ant. t. *Compare:* In aversion to be touched, Ant. c., Ant. t., Hep. Sil., Thu. gurgling along œsophagus when swallowing fluids, Helleb., Cupr. difficult swallowing liquids, Bell., Caust., Hyo., Ign., Lach., Lyc., Pho.; in cough < by reading or writing, Mang., Meph., Nux, Plat. in white stools, Dig.; in ravenous hunger, Ars., Calc., Iod., Sil. Staph.; aversion to be caressed, Ars., Lach.; in squint, Alm.; in asthenopia and defective accommodation, Artem. v. (but Art. v. has dizziness from coloured light; and Cina has > from rubbing). Teste places Cina in the Arsen. group from its analogy in the digestive sphere. Cham. has many points of contact with Cina and some opposite conditions.

Causation.—Worms. Yawning.

SYMPTOMS.

1. Mind.—Lachrymose and plaintive humour.—A child cries when it is touched; is averse to being caressed.—Continual inquietude, with desire for things of all kinds, which are rejected some moments after.—Disposition to be offended by trifling jests.—Great anguish and anxiety on walking in the open air.—Delirium.

2. Head.—Headache, alternately with pressure on the abdomen.—Numbing pressure, as from a load, which weighs upon the head, esp. when walking in the open air.—The head falls to the side and is jerked backwards, with twitches in the limbs and cold perspiration of the face.—Tearing, drawing cephalalgia, aggravated by reading or meditation.—Headache before and after the epileptic attacks; after attack of intermittent fever.—Dull pains in the head, with eyes fatigued, chiefly on waking in the morning.—Cold perspiration on the head (forehead) and on the pale, cold, bloated face, with blueness around the mouth; twitching of the limbs and sleepiness, worse at night (after attacks of whooping-cough and epilepsy).

3. Eyes.—Aching in the eyes, when fatiguing them by reading; when using them at night by the candle-light.—Convulsive movements of the muscles of the eyebrows.—Confusion of sight, on reading, which disappears on rubbing the eyes.—Pupils dilated.—Weakness of sight (from onanism).—Weak sight, with

photophobia and pressure on the eyes, as if sand had been introduced into them.—When looking at a thing steadily (reading) he sees it as through a gauze, which is relieved by wiping the eyes.

5. Nose.—Epistaxis; also bleeding from the mouth.—Inclination to put the fingers into the nose.—The child rubs the nose constantly, and bores with the fingers in the nose until blood comes out.—Flow of pus from the nose.—Violent sneezing, which provokes a sensation of pressure on the temples, and seems as though it would burst the chest.—Fluent coryza, with sensation of burning in the nostrils.—Stoppage of the nose, in the evening.—Fluent coryza at noon.—The nose burns.

6. Face.—Paleness of face, with livid circle under the eyes.—Earth-coloured complexion.—Face, puffed and bluish, esp. round the mouth.—Face alternately pale and cold, or red and hot.—Pale, cold face, with cold perspiration.—Cramp-like pains and successive pullings in the cheek-bones, aggravated or renewed by contact and pressure.

7. Teeth.—Toothache, provoked by the air and cold drinks.—Pains, as from excoriation, in the teeth.—Grinding of the teeth.

8. Mouth.—Sensation of dryness and roughness of the mouth, esp. of the palate.

9. Throat.—Inability to swallow, esp. liquids.

10. Appetite.—Increase of thirst.—Hunger shortly after a meal.—Voracity.—Bulimy.—Aversion of the sucking child to the milk of its mother.—Hunger may come on in the middle of the night, as in children, or one may feel hungry a few minutes after a hearty meal.—Bitter taste of bread.—Vomiting, or diarrhœa immediately after eating or drinking, esp. drinking.—Vomiting of mucus and of ascarides.—Vomiting during the fever, with tongue clean.—Bilious vomiting.—Disagreeable risings.

11. Stomach.—Audible gurgling from the throat into the stomach when drinking.—Frequent hiccough.—Pain in the precordial region oppressing the breathing.

12. Abdomen.—Obstinate pinchings in the abdomen.—Pinching or cramp-like pressure transversely across upper abdomen, after a meal.—Painful twisting about navel.—Cutting and pinching pain in the abdomen from worms.—Painful rolling in the region of the navel, which is very sensitive to the touch.—Cramp-like, frequently recurring pains in the abdomen, as when the catamenia are about to appear.—Unpleasant sensation of warmth in the abdomen.—Bloated abdomen, esp. in children.—Feeling of emptiness in the abdomen.

13. Stool and Anus.—Stool with maw-worms (short, thick worms).—Loose evacuations of the consistence of pap.—Discharge of ascarides, and of other worms by the anus.—Itching of the anus.—Diarrhœa of bile, and of stercoraceous matter.—Loose, involuntary, whitish evacuations.

14. Urinary Organs.—Frequent want to make water, with profuse discharge.—Wetting the bed.—Urine soon becomes turbid.—Involuntary emission of urine (at night).—Urine milky.

16. Female Sexual Organs.—Catamenia premature, and too abundant.—Metrorrhagia.—Womb-troubles in general.

17. Respiratory Organs.—Short, interrupted breathing.—Respiration wheezing and panting.—Abundance of mucus in the larynx, which is constant, and compels continual hawking.—Gagging cough in morning after rising; irritation thereto (as from dust); is renewed by inspiration after a long interval.—Cough, excited by taking a deep inspiration.—Dry, tickling cough induced by reading (to oneself).—Hoarse, transient cough in the evening.—Dry cough, with cramp, want of breath, anxiety, paleness of face, and groans after the paroxysm; or with stiffness of the body, and bleeding from the nose and mouth.—Cough, with sudden starts, and loss of consciousness.—Before coughing, child raises herself suddenly, tosses wildly about, the whole body becomes stiff, she loses consciousness, just as if she would have an epileptic fit, then follows the cough.—Whooping-cough in violent, periodically returning attacks, from a titillating sensation in the throat, as of a feather, and much tough mucus:—in the morning without expectoration, in the evening with difficult expectoration of white, occasionally blood-streaked mucus, which is tasteless; worse in the morning and in the evening; better during the night, aggravated by drinking, walking in the open air, pressing on the larynx, when lying on the right side, in the cold air, and when awaking from sleep.

18. Chest.—Difficulty of respiration, and anxious oppression of the chest, as if the sternum were compressing the lungs.—Respiration short, often interrupted, or rattling.—Spasmodic digging in the chest, as if it were going to burst.—Jerking and digging shootings in the chest.—Burning, stitches., and soreness in the chest.

20. Back.—Pains, as from a bruise, in the loins, < by motion.—Drawing-tearing pain along whole spine.—Drawing or jerking pains in middle of spine.

22. Upper Limbs.—Tearing and paralytic pullings in the arms.—Cramp-like tearings in the arms and in the hands.—Contraction and starting of the hand and of the fingers.—Sprained feeling in the wrist-joint.—Weakness of the hand, which suffers everything to escape from it.

23. Lower Limbs.—Paralytic or cramp-like pains, and pullings in the legs.—Spasmodic stretching and twitching of the feet.—Cramp-like extension of the legs.

24. Generalities.—Paralytic, tractive pains in the limbs.—Pressure and squeezing, with dull shootings, or cramp-like tearings, pullings and jerkings, or burning shootings in different parts.—Twitching of limbs.—Convulsions, and distortion of the limbs.—Nocturnal epileptic convulsions, followed by headache.—Epileptic convulsions (esp. at night, with or without consciousness) with cries, bending backwards of the back, and violent movements of the hands and feet.—Tetanic stiffness of the whole body.—External pressure <, or renews the sufferings.—Painful sensibility of all the limbs, on movement, and on being touched.—Affections of the l. side; l. lower extremity.—The majority of the sufferings appear at night, or when seated, and are < in the morning and in the evening.—Heaviness in the limbs.

26. Sleep.—Frequent yawning, with trembling and shuddering.—Nocturnal sleeplessness, with agitation, tears, cries, heat, and anguish; in children.—Wakes in the morning, restless and lamenting, in a start.—Child gets on hands and knees in sleep; on abdomen.

27. Fever.—Pulse small, hard, and rapid.—Frequent shuddering, with trembling, even near the fire.—Quotidian fevers, or tertian, with bulimy, nausea, tongue clean, diarrhœa, pupils dilated, and emaciation.—Shivering in the evening.—Strong febrile heat, with delirium, tossing, and agitation.—Chilliness, with shaking or trembling, ascending from the upper part of the body to the head.—Chill, with coldness of the pale face and heat of the hands.—Heat at night, with thirst.—Chilliness with thirst.—After the perspiration (sometimes before the chill) vomiting of food (with a clean tongue); at the same time canine hunger.—Heat, esp. in the head, with paleness, or yellowish colour of the face, and livid circle under the eyes, or with redness of the cheeks.—After the fever, headache.—Cold sweat on the forehead, around the nose, and on the hands.

Artemisia Vulgaris.

Artemisia vulgaris, Linn. Wormwood. Mugwort. Beifuss. N. O. Compositæ. Tincture of fresh root.

Clinical.—Catalepsy. Chorea. Convulsions. Dysmenia. Epilepsy. Hydrocephalus. Hysteria. *Somnambulism*. Worms.

Characteristics.—Like the other Artemisias this remedy has a prominent place in convulsive diseases. It is indicated where the patient is excitable and irritable before attack of epilepsy. Epilepsy after fright or grief; after a blow on the head; with menstrual disturbances; with teething. Attack accompanied or followed by

profuse offensive sweat; by seminal ejaculations. Profuse sweat, having a peculiar fetid, cadaverous or garlic-like odour is a characteristic of the remedy. Attacks frequently repeated, then followed by a long interval of rest. Somnambulism. Catalepsy after fright. Spasms. Chorea; swallowing difficult, hungry but cannot get the food down. Right side convulsed, left paralysed. Nocturnal pollutions. Violent cramps in abdomen with irregular, insufficient menstruation. Irregular or deficient menstruation with epileptic convulsions. Nervous chlorosis with a very dry skin. Worms.

Relations.—Artem. v. acts better when given with wine than with water. *Compare:* Abrot., Absinth. (nearest relative), Cina, Cham., Arn., Millef. *Compatible:* Stram., Puls., Aur. (in alternation). *Compatible after:* Aco., Bell., Bry., Helleb., Cina, Iod. *Compatible before:* Caust. *Similar to:* Cicut. (staring, jerking head, &c.); Cina (eyes); Apis, Helleb., Bufo (irritable before fit); Caust., Cham., Ruta, Secale, Bry. (chewing motion of jaw).

Causation.—Blow on head. Fright or grief or bad news.

SYMPTOMS.

1. Mind.—Stupor following convulsions.—Somnambulism.—Inclination to steal.—Effects of fright.—Catalepsy induced by bodily exertion or by alluding to the disease.

2. Head.—Sharp shooting pains through the head.—Head drawn back by spasmodic twitchings.—Head bent backwards and sideways.

3. Eyes.—Coloured light, as light falling through stained-glass windows, makes head dizzy (white light does not).—Eyes turned up before attack.

6. Face.—Twitchings in face; mouth drawn to l.—Face looks oldish.—Lower jaw pressed forward.—Chewing motion of gums; grinding teeth.

7. Teeth.—Grinding of teeth, froth at mouth, thumbs drawn into fist, eyes half open, drawn upwards.

8. Mouth.—Bites tongue in spasms.—Speech unintelligible, can utter but single words, and these only with great exertion.

9. Throat.—Swallowing difficult; food escapes from the mouth.

11. Stomach.—Hunger, but cannot get the food down.—Nausea and vomiting.—Cramp in stomach.

12. Abdomen.—Violent cramps in abdomen; irregular, insufficient menses.

13. Stool and Anus.—Greenish diarrhœa.—Passes fæces and urine with the spasms.—Worms.

14. Urinary Organs.—Urine increased; yellowish.—Obstinate strangury in a child.

15. Male Sexual Organs.—Nightly pollutions.—Seminal ejaculations with the spasm.

16. Female Sexual Organs.—Prolapsus uteri.—Violent contractions of uterus.—Spasms during menses.—Irregular or deficient menstruation with epileptic convulsions.—Nervous chlorosis with a very dry skin.—Violent contractions of pregnant uterus; threatened miscarriage.—Checked lochia.—Eclampsia of sucklings.

17. Respiratory Organs.—Rattling breathing with the spasms.—Breathing checked; suddenly a deep inspiration ends the attack (catalepsy).

23. Lower Limbs.—Over-fatigue or weakness of the feet after long walks or long illness.

24. Generalities.—Convulsions of sucklings or teething children.—Epileptic spasms after cooling off while over-heated from dancing.—Epilepsy from menstrual disturbances.—Nightly epilepsy with violent trismus injuring teeth.—During epileptic attacks violent sweat of offensive odour.—Long and deep sleep after a fit.—Somnambulism.—Congestion of brain and spine.—Hydrocephalus.

Arum Dracontium.

Green Dragon. N. O. Araceæ. Tincture of root.

Clinical.—Asthma. Croup. Ear, affections of. Hoarseness. Impotence. Influenza. Laryngismus stridulus. Pruritus. Sore-throat. Urticaria.

Characteristics.—*A. Dracont*. has the irritating properties of Arums generally. It has been well proved by Dr. C. P. Hart, and tested clinically as well. The chief features are the following: Throat raw and tender. Dryness and smarting. Hawking. Continual disposition to clear throat by hawking and coughing. Hoarseness on awaking in morning; expectorates thick mucus. Expectoration of thick, heavy, yellowish-white pus. Rattling of mucus on full expiration. Croupy, hoarse cough, with sore throat. Laryngismus between 12 and 2 a.m.; attacks every week or ten days. Asthmatic attacks from cold. Frequent and copious emissions of urine. Great diminution, mostly an entire absence of sexual desire. Penis flaccid and relaxed. Fine shooting pains in course of left spermatic cord. Chronic pruritus scroti.

Eruption of pimples, or species of lichen, on nose; a patch of urticaria on right arm near elbow. The symptoms move about, and from side to side, especially right to left. Swallowing develops and < the throat symptoms.

Relations.—*Compare:* Calad. in skin affections; Arum triph. *Useful after:* Colch. and Ant.—t. in laryngismus.

SYMPTOMS.

1. Mind.—Great languor and depression, with asthma at night.

2. Head.—Head feels heavy and aches slightly in occipital and r. parietal regions; next morning dull, heavy aching in head and chest, with asthma at night.

3. Eyes.—Aching over l. eye; conjunctiva highly injected.—Lids dry, stiff, and slightly agglutinated at edges, which burn and smart; 3 p.m.

4. Ears.—Shooting pains in r. ear, 8 a.m., transient, frequent; but leaving a feeling of fulness and slight aching in middle ear; next day changed to l. ear.—Warmth and fulness in ears, one or other side, swallowing renews it temporarily.—Aching pain behind r. ear.—Shooting pains in r. ear, sometimes very severe; deep shooting frequently, and for ten or fifteen minutes; only occasionally in l.—Mucus in left Eustachian tube.

5. Nose.—Sneezing.—Eruption of pimples on nose; lichen.

6. Face.—Slight aching r. malar region.—Flushing of hands and face.

8. Mouth.—Aphthous ulcer on tongue; next day mouth and throat become very sore.—Bad taste, mornings.—Tongue and mouth coated With a foul, putrid-tasting, slimy mucus.—Peculiar acrid sensation in mouth and throat.—Bad taste in mouth.

9. Throat.—Swallowing develops a slight soreness in muscles of throat, and renews temporarily the feeling of warmth and fulness in the ears, sometimes in one, sometimes in the other.—Disposition to swallow arising from an excess of mucus; without the unpleasant acrid sensation as expected.—A slight uneasiness in throat and disposition to cough.—Dry soreness, < when swallowing.—Dryness and smarting, rawness and fulness, not painful but annoying and attracting constant attention.—Raw and tender.—Hawking.—Continual disposition to clear throat by swallowing and coughing.—Rawness, disappearing when asthmatic attacks began.

11. Stomach.—Eructation of flatus tasting of the drug.—Sinking in pit of stomach.

12. Abdomen.—Pain in bowels from incarcerated flatus.—Rumbling.

13. Stool and Anus.—Escape of flatus from stomach and bowels.—Copious semi-liquid stool with much flatus.—Bilious passages, attended with aching in abdomen and burning in rectum; borborygmus and escape of much flatus from bowels.

14. Urinary Organs.—Irresistible desire to pass urine, which is diminished in quantity, very highly coloured, and has a burning or smarting effect on urethra; orifice tender and smarts slightly.—Frequent copious emissions of limpid urine.

15. Male Sexual Organs.—Great diminution, mostly entire absence of desire.—Penis flaccid.—Fine shooting pains in course of l. spermatic cord.—Chronic pruritus scroti of twelve years' standing (cured in prover).

17. Respiratory Organs.—Hoarseness on awaking in morning.—Hoarseness; expectorates thick mucus.—Rattling of mucus at every full expiration, which disappears in morning.—Excess of mucus in larynx; increased soreness and great disposition to cough.—Laryngeal symptoms deep-seated and persistent.—As of larynx partly obstructed.—About midnight great oppression of breathing, soon passing off, leaving rattling in larynx and trachea.—Paroxysms of dyspnœa with aching in chest.—Violent asthmatic attacks at night; from cold.—Loose cough with dry soreness of throat, like catarrh; rattling of mucus; < lying down at night.—Expectoration thick, heavy, yellowish-white, with continuation of a violent cough.—Hoarse, croupy cough with sore throat; rattling laryngeal breathing, swelling of air passages threatening suffocation.

19. Heart.—Heart beats so violently as to shake the walls of the chest.—With increased heart's action, aching in precordial region and down l. arm; flushing of hands and face.—Pulse full, hard, somewhat jerking, soon becomes small and irregular; very feeble after a large dose.

20. Neck and Back.—Shooting pains l. anterior inferior triangle of neck, near clavicle.—Aching along the spine, most between shoulder-blades and in lumbar region.—Great weakness across loins; feeling of extreme prostration continuing to increase, had to retire early.

21. Limbs.—Fine pricking or tingling sensation in feet and hands, beginning in r. foot, afterwards attacking in regular succession r. hand, l. foot and l. hand.—Aching pains along outer aspect of l. foot, immediately followed by a similar pain in corresponding part of l. hand.

22. Upper Limbs.—Tingling or slight stinging in fingers; all over r. hand, which is redder and warmer than l. and appears somewhat swollen.—Aching pain in l. forearm, l. hand, and r. humerus; r. hand remains red and swollen.—Shooting and aching pains in l. brachial plexus of nerves.—Shooting at styloid process of r. ulna.

23. Lower Limbs.—Tingling in toes.—Shooting pain down r. thigh.—Burning in soles.

25. Skin.—Urticaria and other eruptions.

Arum Dracunculus.

A. dracunculus, Willd. N. O. Araceæ. Tincture of root.

Clinical.—Nettle-rash. Pricking pains.

Characteristics.—*A. dracun*. is commonly cultivated in gardens. It has a fetid smell which is apt to cause headache. The following effects of pounding the root and tearing up leaves and stems have been observed: Styptic metallic taste at back of mouth. Pricking, mingled with intolerable itching in fingers, as if hand plunged among nettles. On rubbing the fingers together, sensation as if a vast number of stings were driven perpendicularly into them.

Arum Italicum.

A. Italicum, Miller. N. O. Araceæ. Tincture of root.

Clinical.—Brain-fag. Colic. Fever. Headache. Hoarseness. Itching.

Characteristics.—Dr. Paul Pitet is the authority for this medicine. The chief symptoms observed were the following: Headache, chiefly in occiput, < in damp weather. Dull pain in brain from least intellectual effort. Colic in umbilical region with diarrhœa. Smarting and tearing pains in rectum during stool. Burning behind sternum. Burning in fingers, < by pressure. Skin covered with miliary vesicles desquamates. Prickling and formication as from hundreds of needles on tips of fingers. The colic is < by wine, brandy, coffee. Itching is < 6 p.m. Hoarseness 9 p.m. Damp weather <. Unconquerable drowsiness in morning. Copious night sweat, especially on chest, smelling of ivy.

Relations.—*Compare:* Araceæ; Æthusa c., Pic. ac., Anac. (brain-fag).

Arum Maculatum.

Cuckoo-pint. N. O. Araceæ. Tincture of fresh tuber or corm.

Clinical.—Ascarides. Asthma. Catarrh. Coryza. Nasal polypus. Prolapsus ani. Scorbutus. Swallowing, constant.

Characteristics.—The leading symptoms of *Arum mac*. are as follows: Inflammation and ulceration of mucous membranes. Violent irritation of nose and eyes. Pain left side of nose. Nasal polypus. Bleeding from mucous membranes and cavities. Tongue swollen, pricking, stinging, burning, excoriated. Burning, stinging pains in mouth and lips "as with a hundred needles" Tickling and burning in throat. Sensation of a swelling in left side above larynx. Hoarseness. From abdomen ascending to chest an oppression over whole chest, with hot breath; it then rose into throat. Burning, constricting pain in stomach. Ascarides have been cured by it; also prolapsus ani.

Relations.—*Antidoted by:* Sweet oil, milk, butter. Gum relieves pungent effect on mouth. *Compare:* Arum t.

SYMPTOMS.

8. Mouth.—Gums bleed readily.—Tongue so swollen he could not swallow.

9. Throat.—Pain in the throat, with difficult deglutition, as if from constriction in the œsophagus, with constant inclination to swallow; after drinking, sensation as if something were attached to the epiglottis.—Obstinate hoarseness.—Pressure in the larynx.—Tickling, with inclination to cough.

12. Abdomen.—Sensation of emptiness after breakfast in the abdomen, as after vomiting; with contraction in the abdomen, as from anxiety and fear.—Severe aching between the navel and the hip, esp. when standing upright, or lying on the side, or drawing a deep inspiration, with great sensitiveness of the part affected to external pressure.

14. Urinary Organs.—Clear, watery urine; exhaling a smell of burnt horn, and depositing a cloudy sediment.

16. Female Sexual Organs.—Catamenia profuse.

17. Respiratory Organs.—Phlegm in the respiratory organs.—Violent tight cough, with scanty expectoration.—After much coughing, expectoration of mucus streaked with yellow.—Sanguineous expectoration.

24. Generalities.—Violent convulsions.—Great physical depression and lassitude.—Irrepressible inclination to sleep after meals, the face becoming redder than usual during sleep.

Arum Triphyllum.

Indian turnip. N. O. Araceæ. Tincture of fresh tuber or corm.

Clinical.—Brain, inflammation of. Clergyman's sore throat. Delirium. Diphtheria. *Glandular swellings*. Headache. *Jaw-joint painful. Mouth, sore. Scarlatina. Tongue, cracked*. Typhoid fever. Voice, hoarse.

Characteristics.—*Ar. tri*. is the most important of the Arums. Its irritating properties are well marked; excitable and irritable in mind and body. It is especially irritating to the nose and throat. This with its scarlet rash suggested its appropriateness in cases of scarlatina of malignant type, in which it has met with great success. An indication of its curative action in scarlatina is the urine becoming more abundant and watery. Raw, bloody surfaces appear on lips, on mouth, on nose, &c. With the rawness there is itching. "Picks lips till they bleed, corners of mouth sore, cracked, and bleeding "is a characteristic indication; also, "picking ends of fingers" and "boring nose" (especially *side* of nose). Tongue cracked and bleeding. Urine scanty or suppressed. Patient passes into unconsciousness and slides down in bed. Dr. Lippe, who is one of the greatest authorities on this remedy, said it should not be given low or repeated often. "Bores head in pillow" is an indication when the brain is involved. Kent points out that almost all the discharges are acrid and cause irritation of orifices. He defines the hoarseness as that of public speakers who, after long exertion, get cold (as from a draught), and suddenly are unable to finish. (With *Rhus* the hoarseness is at the beginning and passes off by using the voice.) *Ar. t*. prominently affects the l. side. It has a headache < from hot coffee and has cured headache < from too hot clothing.

Relations.—*It is antidoted by:* Butter-milk, Lac. ac., Acet. ac., Puls. *Compare:* The other Arums and Calad.; Ailanth. (scarlatina; depressing, stupid, drowsy sleep); Cina (boring nose); Am. c. (acrid discharge from nose in scarlatina, but right parotid more decidedly affected in Am. c., and drowsiness is marked); Am. m. (scarlatina); Arg. n. (scarlatina, painful red blotches left side of tongue); Ars., Canth., Caps.; Castor. (nasal discharge watery and acrid but with violent tearing pain at root of nose); Caust., Cepa, Crocus (elevated papillæ, but tongue white); Hepar, Hydr. ac., Iod., Kali iod., Lach., Lyc., Merc., Mez., Mur. ac., Nit. ac., Phytol., Sang., Silic., Sul. *Useful after:* Hep., Nit. ac., Caust., Seneg. *Incompatible:* Calad.

SYMPTOMS.

1. Mind.—Restlessness or irritability.—In delirium bores in nose; picks at one spot or at dry lips.—Great delirium.—Absence of mind; giddy.

2. Head.—Child has headache, puts hand on back of head and cries; a raw spot appears on lip, corners of mouth, or on nose, emitting one drop of blood; urine scanty; this raw spot may occur on the hand when the child bores and digs at it.—Dull headache; upper part feels cold, as if open and without covering.—Violent headache; pressing on r. or both sides; < from hot coffee; > after dinner, and after breakfast.—(Headache from too warm clothing, from becoming hot.).—Head burning hot.—Tinea capitis.

3. Eyes.—Aversion to light.—Quivering of l. upper lid.—Catarrh of lachrymal sac; bores into side of nose.

5. Nose.—Sore, discharge of burning ichorous fluid from nose, excoriating nostrils and upper lip.—Nose stopped; can only breathe with mouth open; dry coryza.—R. nostril open, l. blocked.

6. Face.—Tongue sore, red papillæ elevated; cracked and bleeding (strawberry tongue).—Lips dry; swollen, cracked; corners of mouth sore, bleeding, cracked; picks them.—Face swollen.—Swelling of submaxillary glands.

8. Mouth.—Mouth burns and is so sore that he requires drink and cries when anything is offered.—Extreme salivation, saliva acrid.

9. Throat.—Throat sore, feels excoriated; cannot swallow.—Clergyman's sore throat, or sore throat of one who speaks a great deal.

10. Appetite.—Appetite, loss of.

12. Abdomen.—Sensation of emptiness after breakfast in the abdomen, as after vomiting; with contraction in the abdomen, as from anxiety and fear.—Severe aching between the navel and the hip, esp. when standing upright, or lying on the side, or drawing a deep inspiration, with great sensitiveness of the part affected to external pressure.

13. Stool and Anus.—Diarrhœa, typhoid-like.—Stool like cornmeal mush.—Stool dark brown, watery, thin, acrid.—Thin fæces escape from anus, and keep the parts raw and burning.

14. Urinary Organs.—Frequent discharge of abundant pale urine.—Clear, watery urine and smelling like burnt horn, and depositing a cloudy sediment.—Very scanty secretion of urine, sometimes passing none for a day.

15. Male Sexual Organs.—Tearing pain in r. testicle, sometimes extending to abdomen; comes and goes suddenly.—Smarting at end of penis.

16. Female Sexual Organs.—Cutting pain in either ovary.—Menstrual blood darker.—Menses checked for two months, returned.

17. Respiratory Organs.—Hoarseness (clergyman's sore throat), < from talking.—Voice uncertain, constantly changing (goes off into a squeak on attempting to speak or sing).—Accumulation of mucus in trachea.—Cough hurts the throat and annoys the patient.

18. Chest.—Raw feeling in chest.—Lungs (esp. l.) feel sore.

20. Neck and Back.—Stiff-neck; with intolerable pressing headache.—Pain in region of atlas vertebra, extending to r. side.—Sore, moist places on coccyx.

24. Generalities.—Burning in many parts—ear, lips, tongue, palate, throat, anus, lungs, upper arms.

25. Skin.—Erythema of scarlet rash, skin peels afterwards.—Itching of scarlet eruption.—One of the first indications for this drug is the appearance of raw, bloody surfaces, which may be on the lips, buccal cavity, nose, back of ear, &c.

26. Sleep.—Sleeplessness from soreness of mouth or itching of skin.

27. Fever.—Dry heat of skin.

Arundo Mauritanica.

An Italian Grass. N. O. Gramineæ. Tincture of the root sprouts.

Clinical.—Catarrh. Coryza. Dentition. Diarrhœa. Ear, discharge from. Hay-fever. Stomacace. Urine, deposit in.

Characteristics.—*Arundo* is a reedy grass and the tincture is made from the root-shoots.—It has not been much tested clinically, but its chief sphere has been proved to be in catarrhal conditions. Constant (serous) diarrhœa of nursing or teething children. Urine deposits much red sand. Mouth excoriated. Thirst. Coryza and snuffling. Scrofulous ophthalmia. Purulent discharge from the ear. *Arundo* has cured a case of hay-fever, the symptoms beginning with "burning and itching of palate and conjunctiva." Chagon is the authority for the pathogenesis.

Relations.—*Compare:* Other Gramineæ, Ananth., Lolium. Also Cepa, Sul., Calc. c., Lyc., Sabad., Psor.

SYMPTOMS.

1. Mind.—Lascivious ideas.—Laughs easily.

2. Head.—Vertigo on getting out of bed.—Painful undulation in frontal region.—Deep-seated pains in sides of head.—Roots of hairs painful.—Hair falls off entirely in children.—Scurf.

3. Eyes.—Ophthalmia in children.—Blepharitis.—Undulating luminous openings appear wherever he looks.—Fluttering luminous objects.—Cannot look up.—Pricking, itching, burning in conjunctiva.

4. Ears.—Burning itching in auditory canals, coincide with pain in sublingual glands.—The inflammation of ears begins with shooting pains in concha, extends to external meatus; finally with itching and discharge of blood.—Purulent discharge from ears.—Eczema behind ears.—Sound of little bells in ears.

5. Nose.—Pain at root of nose.—Coryza with snuffling.—In the beginning water runs from nose, later green mucus and thick, white, slimy masses; with sneezing, pieces of indurated greenish mucus.

6. Face.—Erysipelas on r. cheek.—Pricking in point of chin.

8. Mouth.—Mouth excoriated.—Pains in sublingual glands.—Salivation.—Burning and itching of palate.

11. Stomach.—Wants to belch but cannot.—Coldness in stomach.

12. Abdomen.—Pain in liver.—Pricking in spleen.—Acute pain at umbilicus.

13. Stool and Anus.—Stools at first hard, soon become loose.—Constant diarrhœa (serous) of nursing or teething children.—Greenish stools.—Stools followed by burning at anus.—Pricking at anus.—Piles and prolapse of rectum.

14. Urinary Organs.—Much red sand in urine.—After urinating, weight; burning itching in urethra.

15. Male Sexual Organs.—Sexual desire; lascivious ideas; frequent erections.—Pain in spermatic cords after coitus.—Difficult breathing after coitus.

16. Female Sexual Organs.—Uterine catarrh.—Violent desire for coition; or aversion to it.—Early, profuse, long-lasting menses; blood dark clotted.—Pains start from l. side of jaw, along l. eyebrow, extending to shoulders and loins and finally settling on pubis, burning like fire.—Excessive secretion of milk causes pain in l. breast.

17. Respiratory Organs.—Catarrhal cough.—Sputa at first bluish, then white, and so alternately.—After expectorating bruised feeling in pit of throat.—After cough: burning in epigastrium; larynx obstructed.—Accumulation of mucus in bronchi causes anxiety.

20. Neck and Back.—Startings in neck; crawling on l. side of it.—Acute pain under l. scapula.

21. Limbs.—Œdema of limbs.—Pain in limbs as if tightly bandaged.

Asafśtida.

Narthex asafśtida. N. O. Umbelliferć. Tincture of the gum resin (obtained by incision from the living root).

Clinical.—Asthma. Bone, disease of. Chorea. Diarrhśa. Dyspepsia. Flatulence. Headache. Heart, affections of. Hypersensitiveness. Hysteria Iritis. *Lactation, disorders of*. Mercury, effects of. Neuralgia. Obesity. Orbital neuralgia. Ozćna. Syphilis. Tympanitis. Ulcers. Whitlow.

Characteristics.—The symptoms of *Asafśtida* present an almost perfect picture of hysteria, of the flatulent order. Reversed peristalsis of stomach and bowels. Excessive abdominal distension and sensation as if everything in the abdomen would burst through the mouth. After belching of wind strong rancid taste in mouth. Sinking sensation at epigastrium, < 11 a.m. Hysteria from suddenly suppressed discharges. Many of the discharges of *Asaf*. are fetid: watery stools of most disgusting odour; profuse and greenish; fetid flatus. Eructations smelling like garlic. Hiccough-like contractions of diaphragm. Griping (into a ball) pain below navel while standing. Heat in spleen and abdomen. Stitches in right hypochondrium, towards the diaphragm. *Asaf*. affects the left side generally: left side of abdomen; left hypochondrium; left side of neck and nape; left arm; left leg. Hysterical restlessness and anxiety. Eyes inflamed, dry sensation, > in open air. The fetid smell of the drug may be regarded as one of its "signatures." Fetid discharge from nose; bones affected. The following is a strong characteristic: Bones of orbits bruised, sore, and sensitive (iritis; after abuse of *Mercury*. *Merc*. has less of the sensitiveness). Caries of bones. Multiple nodes on roof of mouth, discoloured, bone deeply involved. Deficient milk with over-sensitiveness after confinement. Periosteal affections ending in ulcers which are so sensitive that no dressing is tolerated. Pressing pains in various parts, especially pressure from within outwards, < in room, > in open air. Many symptoms come on or are < after eating or drinking. Heat in face after eating. Diarrhśa after eating. *Suited to:* nervous and hysterical people; phlegmatic, scrofulous, and syphilitic who have taken much *Mercury*. Sensitiveness to contact is a leading characteristic. Most pains are accompanied by numbness in the affected parts. Many symptoms appear while sitting and are > in open air. Touch > pain in head; on touch pains cease or change place. Scratching > itching.

Relations.—*Antidoted by:* Puls., Caust., Camph., Chi., Merc., Val. *Useful in ailments from:* Puls., Merc., Alcohol. *Similar to:* Arg. n. > open air); Aur. (bone diseases, iritis); Castor., Chi., Caust., Crot. t. (whooping-cough); Hep. (sensitiveness round ulcers; faints from pains), Mang. acet., and Kali iod. (nodes: Mang., bluish; K. iod., pink; pain unbearable. Asaf. the nodes are multiple and discoloured); Ign., Merc., Mosch., Phos., Puls., Thuj., Val. *Compare* family relations: Ammoniac., Cicut., Con.

Causation.—Checked skin affections.

SYMPTOMS.

1. Mind.—Dissatisfied with one's self; complaints about one's troubles.—Hysterical restlessness and anxiety.—Unsteady and fickle.—Ill-humour; irritable; apprehensive.—Over-sensitive, excitable.—If he thinks of having taken the drug, it causes faintness.

2. Head.—Pressive pain in forehead from within outward; with it vertigo and vanishing of sight.—Single deep-penetrating stitches in left frontal eminence.—Heaviness and pressure in forehead and r. half of the head.—Drawing, pressive pains like a plug, in sides of head or temples; most on l. side.—The pains in the head cease, or change from touch.—Rush of blood to head and warmth of face.—All headaches < towards evening; in room while at rest, sitting or lying; > when rising or moving about in the open air.

3. Eyes.—Nocturnal throbbing pains in and around the head; syphilitic iritis.—Extensive superficial ulceration of the cornea, with burning, sticking, or pressive pains, from within outward; rest and pressure relieve.—Sharp pain extending through eye into head on touching.—Sensation of dryness in the eyes.—Dryness and burning in, the eyes.—Severe boring pains over the eyebrows.

4. Ears.—Hardness of hearing, with discharge of offensive, thin pus from the ears.

5. Nose.—Ozćna; discharge of very offensive greenish matter from the nose; bones swollen and inflamed after *Mercury* or in scrofula.

6. Face.—Sensation of numbness in the bones of the face; painless tension in various places.—Swelling of the lower lip.—Numbing pressure on chin.

7. Teeth.—Grinding of teeth.—Bluntness of teeth.

8. Mouth.—Greasy, rancid taste in mouth; and of phlegm hawked up.—Speech unintelligible; tongue white, swollen (chorea).—Constantly chewing, and working frothy slime out of mouth.

9. Throat.—Sensation of dryness in the mouth and throat.—Dryness of mouth, throat, and śsophagus.—Sensation of a ball rising in the throat, obliging frequent swallowing to keep it down, and causing at times difficult breathing; globus hystericus.—Sensation in the śsophagus as if the peristaltic motions were from below upward.

11. Stomach.—Ravenous hunger.—Desire for wine.—Disgust for all food.—Pulsation in the pit of the stomach, perceptible to the hand and eye even.—Rising in throat.—Loathing; inclination to vomit.—Sensation of fulness and distension in stomach.—Eructations; smelling like garlic; tasting rancid, sharp, or putrid.—Flatus passing upward, none down.

12. Abdomen.—Great distension of the abdomen.—Pulsations in abdomen.—Heat in spleen and abdomen.—Colic with distension and a "rising-up" feeling; > by external pressure; at height of pain, fainting.—Sense of fulness, and as if beaten, in epigastrium and whole abdomen.—Pressive pain on drawing in abdominal muscles. Lancinations; dartings in abdominal-muscles.

13. Stool and Anus.—Pain in perineum, as from something dull pressing out.—Stool profuse, watery, or thick, papescent, brown, and exceedingly offensive.—Diarrhśa, very offensive, with pain in the abdomen and discharge of fetid flatus.—Stool stinking; slow; difficult; hard.

14. Urinary Organs.—Urine brown, and of pungent smell.—Urine smells like ammonia.—Spasm in the bladder during and after urination.

15. Male Sexual Organs.—Faintness is worse after seminal emissions.—Urging towards genitals; aching in testes; < from touch or motion.—Needle-like stitches in penis.—Drawing in glans; < afternoon.

16. Female Sexual Organs.—Labour-like pains in uterine region, with cutting and bearing-down.—Excited sexual desire.—Leucorrhśa profuse, greenish, thin, and offensive.—Swelling and inflammation of the genitals.—Mammć turgid with milk; when not pregnant.—Deficient milk with over-sensitiveness.—Milk increased; or diminished.

17. Respiratory Organs.—Spasmodic dyspnśa, as if the lungs could not be sufficiently expanded.—Asthmatic attacks.—Obstinate titillating cough., < night.—Hoarse, ringing, short cough, excited by tickling in trachea, with asthmatic feeling therein; spasmodic contraction of thorax and accumulation of stringy mucus.—Cough on gaping.—Greasy-tasting sputa.

18. Chest.—Oppressive pressing, aching pains in the chest.—Stitches in chest (r. side), from within outward.

19. Heart and Pulse.—Nervous palpitation, with small, quick, irregular pulse.—Continual pain about heart region.—At times heart feels bound tightly, as if it could not beat; afterwards only on exertion or walking.—Heart feels swollen to bursting.

20. Neck and Back.—Fine burning stitches in and behind r. scapula, extending to ribs.—Very violent sacral pains.—Cannot work on account of the backache.—Crawls run over back in afternoon.

22. Upper Limbs.—Sensation as if bones of the arm were bending.—Darting pains in the bones; caries in; caries of the periosteum.—Tearing stitches in upper arm and forearm down to tips of fingers.—Painfulness of the periosteum, accompanied with great sensitiveness; nodes.—Twitching in the muscles of the arms.—Aching, drawing, beaten pain in wrist joints.—Whitlow, pains < night.

23. Lower Limbs.—Psoas abscess and disease of pelvic bones.—Twitching of the muscles of the legs.—Carious ulcer on the tibia.—Pain as of a splinter sticking in r. fibula.—Swelling and caries of the tibia, and bones of the feet.—Stitches and pulsation in the big toe.

24. Generalities.—Asthma of different kinds.—Sense of rigor.—Body heavy and bloated.—Hysterical attacks.—Hysteria, with much trouble about throat or śsophagus.—Twitching and jerking in the muscles.—Dull stitches (periodically) from within outwards, changed or relieved by touch.—Pains mostly in the inside (flexor side) of the joints and limbs.—St. Vitus' dance.

25. Skin.—Itching, better by scratching; pricking, burning skin.—Ulcers with high, hard edges, sensitive to touch, easily bleeding; old ulcers on forearm, wrist, hand; ulcers, esp. when affecting the bones; pus profuse, greenish, thin, offensive, even ichorous.—Ulcers, very painful to contact, esp. in the circumference, gangrenous.

26. Sleep.—Much against his habit, he is much inclined to sleep.

27. Fever.—Pulse small, rapid, and unequal.—Heat in the face after dinner, with anxiety or drowsiness, without thirst.—Chills run over body from time to time.

Asarum Europœum.

Asarabacca. Hazelwort. Wild Nard. (Mountainous woods in Europe.) N. O. Aristolochiaceæ. Tinctures of root and whole fresh plant.

Clinical.—Alcoholism. Anus, prolapse of. Catarrhs. Cholerine. Diarrhœa. Dysmenorrhœa. Eyes, affections of; operations on. Fidgets. Headache. Hysteria. Levitation, sensation of. Typhus.

Characteristics.—Before Hahnemann's time *Asar*. was little known except as an emetic. His proving brought to light some unique characteristics. Most remarkable is a state of over-sensitiveness of the nerves, the scratching of linen or silk, or even the thought of it, is insufferable. Sensation of lightness of the limbs, thinks she is gliding through the air when she walks. Nervous irritability and exaltation. Sensation as though whole body or single parts were being pressed together. Pain as from contraction in forehead, temples, and behind ear, with watering and burning of the eyes; < afternoon, > when sitting, and by washing. Eyes inflamed, bleared, staring. Weak sight, < bright light. When reading sensation as if eyes would be pressed asunder. Cold air and cold washing >. With a single dose of *Asar*. 200 I cured a case of subacute inflammation of eyes and lids which had lasted some months after an attack of influenza, the indications being "> in open air, and by washing in cold water." On the other hand, it is suited, according to Guernsey, to chilly persons who are always shrinking from the cold; *e.g*., literary, sedentary men who are sick and chilly. It is useful for the darting pains remaining after operations on the eyes. Several symptoms are < in cold, dry weather; in clear, fine weather; in dry weather. > In damp, wet weather; on wetting affected parts. Sensation of skin stretched over right external ear. Deafness. Plugged sensation. Pressure, tension, and contractive sensations are leading features of *Asar*. Accumulation of cold watery saliva in mouth. Hunger in early morning. Constant nausea. Vomiting, with diarrhœa and violent colic. Stool of jelly-like mucus. Menstrual colic. Headache before and after menses. Violent pain in small of back, which scarcely permits her to breathe, at beginning of menses. Deschere reports a case of dysmenorrhœa in a nervous, fidgety woman of twenty-seven, who had intense backache during first two days, so severe that she could not move It often rose to the dorsal region, when it would take away her breath. Cured with *Asar*. 50, one dose every evening. Heat especially of face, and in palms of hands. When retching all symptoms < except stupidity of the head, which is >.

Relations.—*Antidotes:* Camph., vinegar and vegetable acids. *Followed well by:* Bismuth. *Compare:* Acon., Alo. (stringy stools); Camph. (cholerine); Cupr., Hep., Ipec. (cholerine); Merc. (stringy stools); Nux v., Phos., Pod., Puls. and Sul. ac. (stringy stools); Sep., Stram., Tabac., and Verat. (cholerine). Asaf. (over-sensitiveness). Sticta pul., Calc., Can. ind., Gels., Thuj., Ol. jec. asel. (levitation). Mosch., Tarent., Meph., Zinc. (fidgety feet).

SYMPTOMS.

1. Mind.—Nervous irritability and exaltation of the senses.—Merely thinking some one might scratch with finger-tip or nail on linen, &c. = disagreeable thrill through him, arresting thought and action.—Cold "shivers" from any emotion.—Condition of mind as if just falling asleep; a gradual vanishing of ideas.—Imagines he is hovering in the air like a spirit; when walking in the open air.

2. Head.—Vertigo, as if drunk, on rising from a seat; on walking.—Giddiness, pressure or aching in head, chiefly temples, forehead, and above root of nose.—Very sensitive, compressive headache in forehead, temples, and behind the ears (l. side of head), with watering and burning of the eyes, < afternoon (5 p.m.), > when sitting, and by washing, but not by wiping.—Headache < by intellectual exertion.—Tension of whole scalp, making hair feel painful; cannot bear combing.—Head dull and stupid; feels the pulsation of arteries in occiput.

3. Eyes.—Obscuration of sight.—When reading, sensation in eyes as if they would be pressed asunder.—Inflamed eyes, blear-eyedness.—Inflamed eyes, burning in the lids, esp. the canthi.—The eyes stare.—The cold air is pleasant to the eyes; sunshine, light, and wind are intolerable.—Painful dryness of the interior of the eyes.—Asthenopia with congestive headache; eyes < morning and evening; > middle day, and by bathing them in cold water.—Sharp pain over l. eye, running of tears, and sensitive to light.

4. Ears.—Over-sensitiveness of nerves; scratching of linen or silk is insupportable.—Pressure and tension in the region of the orifice of the meatus auditorius.—Deafness in one or both ears.—Sensation as if ears closed or plugged with some foreign substance.

6. Face.—Warm feeling in face; all symptoms disappear on applying cold water, but return soon after.

8. Mouth.—Disgusting taste in the mouth.—Accumulation of cold, watery saliva in the mouth.—Bread tastes bitter.—Tobacco tastes bitter when smoking.—Burning across tongue.—Biting on tongue.—Tongue somewhat whitish and thickly furred.—Stomacace.

9. Throat.—Tough phlegm in throat; can't raise it.

11. Stomach.—Eructations putrid or sour, setting the teeth on edge.—Frequent empty eructations.—Violent, empty retching, which increases all the symptoms, only relieving the stupid feeling about the head, which decreases.—Heartburn.—Attacks of nausea; < after eating; tongue clean.—Want of appetite, even nauseated by food.—Nausea and inclination to vomit.—Vomiting with great anguish, under violent exertion, with chilliness.—Vomiting, with

diarrhœa and violent colic.—Pressing digging and feeling of discomfort in pit of stomach.—Horrible sensation at epigastrium on waking (in drunkards).—Unquenchable longing for alcohol.

12. Abdomen.—Oppression around navel, three or four times after each meal, lasting one hour.—Pain in region of descending colon, with discharge of stringy mucus.

13. Stool and Anus.—Diarrhœa, consisting of tenacious mucus.—A long yellow twisted string of inodorous mucus, with pain in abdomen.—Lientery.—During stool, discharge of thick, black blood.—Prolapsus ani during stool.—After stool, pressing and straining, and discharge of white, viscid, bloody mucus.—Before stool, cutting in the abdomen, and sharp stitches in the rectum, from above downward.

15. Male Sexual Organs.—Violent pains in l. groin, darting through urethra to glans.

16. Female Sexual Organs.—Menses too early and long-lasting, blood black.—Headache often appears before and after menses.—Violent pain in small of back, at the appearance of menses, scarcely permitting her to breathe.—Tenacious yellow leucorrhœa.—Vaginal fistula.—Nausea of pregnancy.—Threatened abortion from excessive sensibility of nerves.

17. Respiratory Organs.—Stitches and constriction in larynx; > by cough.—Frequent cough on account of mucus in chest; mucus rises into throat, causing difficult breathing, and finally cough with expectoration.—Constant short, hacking cough of consumptives.

18. Chest.—Sharp pressure in region of last ribs as with the back of a knife.—Pain round both lungs as if they were constricted by a wire.—Frequent stitches in both lungs during inspiration.

21. Limbs.—Lightness of all the limbs; he does not perceive that he has a body.

22. Upper Limbs.—Sweat in axillæ smelling sour.—Laming pain in l. wrist.

23. Lower Limbs.—Dull pressure in the right hip.—Chronic sciatica.—Gurgling sensation in patella.

24. Generalities.—Excessive sensibility of all the nerves; when merely thinking (and this he must continually) that some one might, with the finger-tip or nail, scratch even lightly on linen or similar materials, a most disagreeable sensation thrills through him, arresting momentarily all his thoughts and actions.

26. Sleep.—Great drowsiness by day.—Frequent yawning.—Short breath by night.—Nightly vexatious dreams, about humiliations.—Restless sleep.

27. Fever.—Pulse full and accelerated.—Chilliness and coldness, after eating and drinking, with heat of the head.—Nervous chilliness; single parts get icy cold.—Cold feeling not > by covering or heat of room.—Heat esp. in the face, and in the palms of the hands.—Perspiration smelling sour at night in the armpits.—Easily excited perspiration, esp. on the upper part of the body.—Slow fevers.

Asclepias Syriaca.

A. cornuti. Milkweed or Silkweed. N. O. Asclepiadaceæ. Tincture of root.

Clinical.—Abortion. Bronchitis. Catarrhal fever. Dropsy. Dysmenorrhœa. Hay-fever. Headache. Indigestion. Influenza. Pleurisy. Rheumatism. Uræmia. Uterine pains.

Characteristics.—*Asclep. syr*. has especial influence on nervous tissues. Nervous headache; as if a sharp instrument were thrust through from one temple to the other; with vomiting; followed by sweating or profuse urination. Belching of food with its proper taste. Influenza and hay-fever. Dropsy after scarlatina or heart disease. Headache from checked sweat or retention of effete matters. Uræmia. Acute rheumatism confined to large joints with much pain and swelling. Intermittent, pressing, uterine pains; threatened miscarriage.

Relations.—*Compare:* Act. r., Bry., Colch., Asclep. tub.

SYMPTOMS.

2. Head.—Vertigo, dulness, and stupidity, with headache (l.).—Violent headache between the eyes; sense of constriction across the forehead.—Headache from suppressed perspiration, or from the retention of effete matters in the system.—Nervous headaches, followed by sweating or profuse urination.—When the drug did not cause sweating or profuse urination, it caused violent headache with quick, full pulse and nausea.—A feeling (after vomiting) as if some sharp instrument were thrust from one temple to the other.

8. Mouth.—Tongue covered with a white fur.

9. Throat.—Burning and tickling in the fauces, with nausea and headache.

10. Appetite.—Great appetite even a few hours after a meal.—Increased appetite, notwithstanding the vomiting and headache, with constipation.

11. Stomach.—Excessive nausea; with violent headache; violent vomiting and retching.—Severe and long-continued vomiting, leaving behind it a sensation of rawness in the stomach and a slight pain, coldness of the surface of the skin, and feeble pulse, and a feeling as if a sharp instrument thrust through from one temple to the other.

13. Stool and Anus.—Increased secretion of bile.—Slight inclination to evacuate the bowels; with nausea and diuresis.—Diarrhœa, with nausea and vomiting, with excoriation of the anus.—Copious stools of soft, fluid consistence, yellowish in colour, and attended with some griping pain.—Constipation; pain in r. side, lower limbs, loss of appetite.

14. Urinary Organs.—Ardor urinæ.—Increased flow of urine.—Pale coloured urine, with light specific gravity.—Increase of solid matters in urine.

15. Male Sexual Organs.—Tickling sensation at the end of the penis.

16. Female Sexual Organs.—Intermittent, bearing-down, labour-like pains (during dropsy); pressing from sacrum to hypogastrium, with scanty flow.—Suppression of menses (during dropsy).

17. Respiratory Organs.—Increase of the bronchial secretions.—Burning and tickling in fauces.—(Influenza; catarrhal fevers; bronchitis; hay-fever.).—Pain in l. side of chest on deep inspiration (pleurisy).

19. Heart and Pulse.—Action of heart lessened; pulse slow.—Feeble pulse after vomiting.

20. Back.—Cutting and aching about lowest dorsal vertebra.

21. Limbs.—Large joints affected.

26. Sleep.—Drowsy; sleepiness; hard sleep during the night.

27. Fever.—Coldness of surface after vomiting.—Diaphoresis; profuse sweat.

Asclepias Tuberosa.

Pleurisy-root. Butterfly-weed. N. O. Asclepiadaceæ. Tincture of fresh root.

Clinical.—Alopecia. Asthma. Bilious fever. Bronchitis. Catarrh. Chancre. Colic. Cough. Diarrhœa. Dysentery. Headache. Heart, affections of. Influenza. Ophthalmia. Pericarditis. Pleurisy. *Pleurodynia*. Rheumatism. Scrofula. Syphilis.

Characteristics.—*Asclep. tub*. causes sharp, stitching, pricking pains; < by motion. It is of the hydrogenoid type, corresponding to catarrhal complaints from cold and damp weather. Rheumatic pains affect the body diagonally, l. upper and r. lower, or the opposite. Muscular and articular rheumatism with stitching pains, dark red urine and hot, perspiring skin. Sensitive to tobacco. Pain in forehead and abdomen from coughing. Griping and sharp peritoneal pains < by pressure. Dysentery in autumn; and painful diarrhœa with griping and tenesmus. Warm feeling in chest. Dyspnœa. Cough hard and dry; or hoarse, croupy with tight breathing and constriction of larynx, and acute pleuritic pains. Pains in lungs > bending forward. Stitches in l. side shooting over to r. and up to l. shoulder. Influenza with pleuritic pains. Cutting pain behind sternum; intercostal spaces near sternum tender to pressure. Pain like pricking of a needle in region of heart. Contracting pain in heart. Sharp pains, starting from l. nipple downward with stiffness of l. side of neck. Excessive weakness, walking seems impossible. Bilious marsh-fever on rice plantations. High fever with hot sweat. Catarrhal complaints from cold and damp weather. Diarrhœa is < in winter. Symptoms < in morning; on rising; by motion; by coughing; by tobacco. Chest pains < 4 a.m. and 4 p.m.

Relations.—*Compare:* Agar. (diagonal pains); Bry.; Verat. relieved pains with stool at night. Dulc. (< cold and damp).

SYMPTOMS.

1. Mind.—Weakness of memory thinking difficult.—At 9 p.m. cheerful, mood changed, and without any cause he became fretful and feverish.

2. Head.—Feeling of drunkenness with weakness of sight after smoking a very little.—Swimming of the head with dulness behind forehead.—Dull headache in the forehead and vertex, < by motion; > by lying down.—Headache in the morning on rising.—Headache > after a foot-bath.—Headache pressing deeply on, the base of the skull.—Pain in the forehead from coughing.—Alopecia.

3. Eyes.—Eyes look dull, fatigued, and heavy (as after long illness).—Ophthalmia, with itching and pain in eyes.—Feeling of sand in the eyes.—Vision disturbed large spots before the eyes.

5. Nose.—Fluent coryza, with much sneezing.—Blowing of blood from l. nostril.—Itching of the nose.—Snuffles of children.

6. Face.—Hippocratic face after violent diarrhœa.—Yellow complexion.—Vesicles on lips.—Itching of lips.

8. Mouth.—Teeth yellow-coated.—Bleeding of the gums.—Tongue covered with a tough yellow coating.—Taste putrid.—Taste of blood.

9. Throat.—Slight constriction of throat, and pricking in larynx.

11. Stomach.—Loss of appetite; esp. in morning.—Insatiable hunger.—Sensitive to tobacco.—Eructations.—Nausea, and efforts to vomit in the morning when rising.—In stomach: nervous pains; disagreeable weight; burning.—In evening, violent gastralgia after supper; it seems as if coughing would bruise the stomach.—Cramp.

12. Abdomen.—Grumbling in r. hypochondrium.—Throbbing in l. hypochondrium.—Rumbling in the bowels, with uneasiness, or sharp, cutting pains and soreness.—Burning borborygmi.—Colic pains from flatulence.—Colic on going upstairs.—Dull pain in bowels on pressure.

13. Stool and Anus.—Emission of fetid flatulence.—Soft and fetid stool at 11 a.m., preceded by rumbling in the bowels.—Early morning diarrhœa (1 to 3 a.m.), sudden discharge.—Winter diarrhœa.—Autumnal dysentery.—Tenesmus.—At 11 a.m. another stool, almost black, with many ascarides and yellow spots like fat, with a feeling as if a stream of fire passed through abdomen.—Stools: dysenteric; like white of eggs; yellow; green; clammy; smelling like rotten eggs; enveloped in froth; like moss.—With stool: colic.—After stool: colic continues long.—Constipation after diarrhœa.

14. Urinary Organs.—Lancinating pain in urethra, excoriation of glans penis in several places, with commencement of sanious and purulent secretion.—Urine very red: looks as if blood were in it.

15. Male Sexual Organs.—Flabbiness, perspiration, and insipid smell of genitals.—Excoriation of glans penis in several places, with commencement of sanious discharge (chancre); > by bathing with urine.—Weakness; erection without desire.

16. Female Sexual Organs.—Menorrhagia, with violent bearing down.

17. Respiratory Organs.—Dry cough, with constriction of throat; causing pain in forehead and abdomen; dry, hacking cough, < night and morning; from irritation of larynx or bronchia.—Respiration painful, esp. at base of l. lung.—Breath smells like

pepper.—Humid asthma; < after eating: < after smoking a little.—Oppression and difficulty of breathing; in paroxysms, like asthma.

18. Chest.—Warm feeling in chest.—Sharp pains shooting from l. nipple downward, with stiffness of l. side of neck.—Pain moves up to behind the sternum, and becomes more sharp and cutting, < drawing a long breath, or moving the arms (as in triturating).—The spaces between the ribs, close to the sternum, are sensitive to pressure, and the pain, which is quick and darting, shoots over from l. to r. side, and up to l. shoulder.—Pain in chest relieved by bending forward.—Acute pleuritic pain in r. side, with dry, hacking cough, and scanty mucous expectoration.—Pain in chest low down, in diaphragm.—Sharp pains from l. nipple downward, with stiffness l. side neck.

19. Heart and Pulse.—Constrictive pain in the heart.—Tenderness to pressure over heart.—Lancinating pains; like pricking of a needle in region of heart.—Pain beneath l. nipple with palpitation.—Pulse slightly accelerated.

20. Neck and Back.—Stiff-neck (l.); on waking.—Lancinating pains in back and between the shoulders.—Pains shooting from l. chest into l. shoulder.—Sharp pain in loins near sacrum; lumbago.

21. Limbs.—Rheumatic pain in all the joints.

22. Upper Limbs.—Sharp, shooting pains in r. shoulder.—Pain in l. shoulder, shooting from l. chest.—Pains near wrists.

23. Lower Limbs.—Itching of thighs and nates but no eruption.—Coxalgia in r. hip.—Corns painful.

24. Generalities.—Weak and languid, as if he had been sick a long time.—Emaciation.—Numbness of whole body.

25. Skin.—Vesicles, pimples, and pustules all over the body, esp. on arms, legs, and face; itching.

26. Sleep.—Drowsy.—Uneasy, restless sleep.—Troublesome dreams.

27. Fever.—Chill towards noon; with cold feet though room is warm.—Feverish afternoon.—High fever with hot sweat.—Rheumatic; catarrhal; bilious marsh fevers of rice plantations.

Asimina Triloba.

Paw Paw, or Custard Apple. N. O. Anonaceæ. Tincture of ripe and unripe fruit, green leaves, bark, and root.

Clinical.—Aphthæ. Carbuncle. Cramp. Diarrhœa. Fever. Scarlatina. Throat, sore.

Characteristics.—The *Anonaceæ*, to which *Asimina* belongs, are allied to the Magnolia family. From eating the unripe fruit five children developed high fever, sore throat, and a scarlet eruption, with diarrhœa, one of them having eventually a carbuncle. It has also been proved. The mouth, throat and stomach are irritated. Drinks much. Desire for ice-cold things and < after eating.

Relations.—*Compare:* Caps., Bell., Illic. anis (colic).

SYMPTOMS.

8, 9. Mouth and Throat.—Mouth feels corroded; fauces red, swollen; tonsils and submaxillary glands enlarged.

11. Stomach.—Nausea and belching; soreness in regions of stomach and abdomen on pressure.

12. Abdomen.—Colic.

13. Stool and Anus.—Diarrhœa after eating; yellowish discharges; soreness of anus when wiping it.—Sudden urging to stool, with sensation as if a stick the thickness of a thumb passed down the rectum; followed by a sudden diarrhœic stool, repeated every ten or fifteen minutes, with. chilliness, drowsiness, and weak voice.

17. Respiratory Organs.—Hoarseness; the voice is weak and talking is an effort, as if the mucous membrane was thickened.

18. Chest.—Cramp in chest, lasting three hours, with blueness of face.

25. Skin.—Itching when undressing.—Scarlet rash followed by desquamation.

26. Sleep.—Fever, with sleepiness.—Drowsiness and sleeplessness alternating.

27. Fever.—Fever heat, with desire for something icy-cold; with drowsiness; with much thirst.

Asparagus.

A. officinalis. N. O. Liliaceæ. Tincture of young sprouts.

Clinical.—Coryza. Diabetes. Dropsies. Heart disease. Urinary disorders.

Characteristics.—Like other liliaceous plants *Aspar*. acts on the heart, kidneys, and dropsical effusions. Severe coryza and nasal catarrh, with profuse secretion of thin, whitish fluid from left nostril, afterwards right. Frequent violent sneezing. Copious discharge of tenacious mucus from the throat, not easily loosed, but brought up by hawking or paroxysms of cough. Frequent urination, with fine stinging in the meatus; followed by stitches out of the urethra. After urinating burning in urethra with sensation as if some were still passing. Increased urine beer-brown, without sediment. Urine strong-smelling; odour peculiar; deposits greasy sediment on sides of vessel; gravel. Prurigo pudendi. Fulness in chest; hydrothorax. Visible violent palpitation; while sitting; with anxious restlessness, increased by motion or ascending; with oppression of chest. Pulse weak, slow, irregular. Pain at left acromion process, under clavicle and down left arm. Constant desire to be carried about in the arms.

Relations.—*Antidoted by:* Acon. (prostration, feeble pulse, pain in shoulder); Apis, *Antidote to:* Coffea. *Compare:* Conval. maj., Sarsap., Arn., Aur. mur., Cannab., Digit., Spigel.

SYMPTOMS.

2. Head.—Vertigo in forehead; head confused, as during an attack of vertigo; dizziness in the forehead, followed by aching in the temples, chiefly the l. one; aching in the forehead over the eyes, or a sensation of confusion in the fore part of the head; aching in the temples, aggravated by pressure; weight in the forehead.

3. Eyes.—Darting and tingling in the eyes; sight more piercing.

6. Face.—Paleness of the face; increase of heat in the face; cheeks burning.

11. Stomach.—Taste insipid, sweetish (as of copper); softness of the saliva, as if it were mixed with blood.—Thirst increased.—Eructations; flatulency in the stomach; nausea in the morning, on waking, followed by vomiting of food, mixed with bile and slimy matter; afterwards diarrhœa of bile and of fæcal matter.

12. Abdomen.—Sensation of fulness in the abdomen, pinching in the umbilical region, at night, with painful sensibility to the touch.—Inflation of the abdomen; frequent emission of wind.

13. Stool and Anus.—Bilious diarrhœa, with pain as of excoriation in the anus, colic, and dragging in the groins.

14. Urinary Organs.—Urine straw colour, scanty, soon becomes turbid, with little white specks; afterwards (about four hours), a white flaky sediment; the urine deposits a fatty sediment on the sides of the vessel; urine brown, without sediment; clear, and of a fetid smell; a peculiar smell from the urine.—Urgent inclination to urinate; frequent and scanty emission of urine, preceded by a sensation as if a foreign body were introducing itself into the urethra, and followed by a burning sensation; diminished secretion of urine augmentation, in the last stage of experimenting; burning in the urethra fine stitches in the orifice of the urethra; sometimes incisive pains, sometimes with dragging in the groins, colic, diarrhœa, and pain in the anus, sometimes with a sensation as though there were more urine to pass.—Urine loaded with phosphates and the urate of ammonia (in renal dropsy).—Gravel passes in small quantities with the urine.

15. Male Sexual Organs.—Excitation of sexual appetite; dartings in the glans penis.

16. Female Sexual Organs.—Catamenia continue a day beyond the usual time.

17. Respiratory Organs.—Frequent sneezing; hawking, with irresistible inclination to cough, but without power to detach mucus; paroxysms of coughing, which compel the patient to rise from his seat, abating after breakfast; violent cough, attended by oppression of the chest, and copious expectoration of mucus.—Violent cough, inducing retchings.—Abundant secretion of mucus in the throat; a constant rattling of mucus in the chest, with roughness in the throat.

18. Chest.—Oppression of the chest, esp. when writing; dyspnœa brought on by motion, on going upstairs, and sometimes in the night-time, obliging the patient to sit up in bed.—Pressure on the chest, sometimes after breakfast, also with tension in breathing; feeling of emptiness within, with weight on the chest; shootings at different parts of the chest, esp. below the l. shoulder-blade; sometimes in the l. side, in breathing; severe shooting pain across the r. side when sitting down.

19. Heart.—Palpitations of the heart, which are visible and audible even during very gentle movements, and which frequently recur, accompanied by agitation and anxiety during motion, and on ascending the stairs; violent when seated; irregular beating of the heart, rapid, redoubled, almost imperceptible.—Shooting pains in the region of the heart after a meal.—Pulse slightly accelerated; feeble.

20. Neck and Back.—Pain near the shoulders on touching the part; rheumatic pain between the shoulders.—Sensation, as if something passed through the kidneys, and penetrated to the abdominal vertebræ, on the patient sitting down.—Pains in the region of the false vertebræ.

23. Lower Limbs.—Pain, as of dislocation, in the right femoral joint, which causes lameness.—Shootings in the knees, at night, afterwards under the l. patella, on being seated.—Bruise-like pain in the l. thigh, with difficulty in walking, and esp. in mounting the stairs; internal pain, as of excoriation, on touching the part; also in the femoral articulation, and the knee, on bending the limb; the r. leg suffers more than the l., and is also much weaker.—Severe drawing pains in the calf of the r. leg, in the morning, on waking, and on extending the limb; cramps in both calves.—Drawing in the great toe, in consequence of a wound.

24. Generalities.—Symptoms aggravated by motion.—Drowsiness, with yawning; yawning in the morning.—Increase of natural heat; pulse quick, small, easily stopped; rapid while seated.—Anxiety, with palpitation of the heart, and ill-humour; calmness of mind.—Rheumatic pains in the back and limbs.—Concretions of lithic acid in the joints.—Great languor and disinclination to physical or mental exertion.

Astacus Fluviatilis.

Cancer fluviatilis. Crawfish or River Crab. N. O. Crustaceæ. Tincture from whole animal.

Clinical.—Biliousness. Colic. Cough. Diarrhœa. Fever. Glands, enlarged. Intermittent fever. Jaundice. Liver complaints. *Nettle-rash*. Neuralgia. *Shiverings*. Stomach, disorders of. Toothache. Tumours.

Characteristics.—The well-known effects of shell-fish, as well as of other fish, in producing nettle-rash is exemplified in *Astacus* beyond all other varieties. The lacquer-workers of the East have discovered in the river-crab the best antidote to the effects of *Rhus* which they employ in their craft. The liver is markedly affected, and a great characteristic is "nettle-rash with liver complaint." jaundice of children. Itching of various parts. Crusta lactea, with large lymphatic glands. Enlarged glands of neck in children and old people. Pain and tenderness of liver, jaundice, stools of pipe-clay colour. Inward chilliness and sensitiveness to air; < uncovering. Violent fever with headache, glowing red face, inward chilliness. Nervous crawls over body. Tumours, recent. Gout of drinking people. Stinging pains are felt in various parts. A notable remedy.

Relations.—*Antidoted by:* Acon. *Compare:* Apis, Rhus, Homarus, Chloral, Nat. m.

SYMPTOMS.

1. Mind.—Apprehensiveness, with anxiety in chest.

2. Head.—Dulness in head.—On head, neck and chest inflammation, with red spots filled with serum, gone after a sweat.—A thick, crusty eruption on scalp, with enlarged lymphatic glands.

3. Eyes.—Dilated pupils.—Dim vision.—Sees coloured spots when reading.—Motion of eyes painful.—Yellow conjunctiva.

4. Ears.—Sensation as if a foreign body obstructed passage of r. ear, causing slight deafness.—Heat and redness of ears.

5. Nose.—Nose-bleed, relieving the attacks.

6. Face.—At intervals darting like lightning from temple to cheek.—Face glowing and red with fever.—Erysipelas with nettle-rash.

7. Teeth.—Toothache at intervals; dull drawing, as if tooth being drawn out.—Toothache in whole lower r. jaw, with cold feeling in an eyetooth.

8. Mouth.—Canker-spots in mouth; scorbutus.—Fishy taste, followed by nausea spreading through chest.

11. Stomach.—Fulness and pressure in stomach; burning in epigastrium.—Empty eructations; with sneezing and yawning.—Nausea and vomiting.

12. Abdomen.—Severe pain in duodenum.—Liver inflamed, sensitiveness to pressure.—Jaundice; of little children.—Pressure in region of spleen.—Colicky pain with tenesmus and prostration; > sitting, < walking.

13. Stool.—Stool, colour of pipe-clay; pain in liver.—Diarrhœa, with vomiting and colicky pain.

14. Urinary Organs.—Pain in kidneys, stinging in night; < when inhaling.—Fishy-smelling urine.—Urging, scanty discharge, burning during and after urination; reddish sediment.—Urine pale, acid; quantity of albumen.

15. Male Sexual Organs.—Restless sleep from strong sexual excitement.—Averse to coition; diminished power; scrotum relaxed.

17. Respiratory Organs.—Dyspnœa, with anxiety and rattling of mucus.—Cough from tickling in larynx < during day.—Cough did not molest him when walking, but returned as soon as he sat down.

25. Skin.—Nettle-rash over whole body; with liver complaint.—Itching on various parts.—Jaundice; of children.—Erysipelas, with fever, headache, and increased sweat.

27. Fever.—Sensitiveness to air no matter how great the feeling of heat.—Inward chilliness and sensitiveness to air; < from uncovering.—Nervous crawls all over body.—Chilly confusion of the head, face red, swollen; eyelids swollen; great prostration and slight delirium.—Violent fever, with headache, glowing red face, inward chilliness and sensitiveness to air.

Asterias Rubens.

Star-fish. N. O. Radiata. Tincture of fish.

Clinical.—Acne. Apoplexy. *Cancer*. Constipation. Convulsions. Epilepsy. Headache. Heart, affections of. Hysteria. Salivation. Sycosis. Tongue, paralysis of; swelling of. *Ulcers*. Uterus, affections of.

Characteristics.—The star-fish was used by Hippocrates in uterine diseases. This shows its pathogenetic relationship to *Sepia* and *Murex*. It is also an ancient remedy for epilepsy. It powerfully affects the mind and head, producing symptoms strongly suggesting apoplexy. The face is red, and there is strong congestion to the head, which is hot and feels as if surrounded with hot air. Certain forms of cerebral congestion with obstinate constipation. Electric shocks in the head. Nightly lancinating pains in the breasts have led to its successful use in cases of mammary cancer. Petroz used *Aster. r*. successfully in old skin affections, old ulcers, and in cancers. He found that it only acted on the latter when on the *left* side. (I have a case—probably not cancerous—of tumour of the left breast, diminishing under this remedy; but I have also seen it act well on the right breast). Sexual desire increased, sexual excitement. A pushing-out sensation in womb, impeding walking, recalling *Sepia*. H. C. Allen mentions it as a remedy for acne having small puncta with black tips and small red bases. Symptoms are < at night; by motion, and in cold, damp weather. Tears > the mental state. Teste says the malaise is < by heat. Great desire for cold drinks Coffee < all the symptoms, and excites them anew several days after they have disappeared. *Ast. r*. is a very important remedy too seldom used.

Relations.—*Antidoted by:* Plumb., Zn. *Compare:* Murex, Sepia; Astac. fl., Homarus; Erythrinus; Crot., Grat., Gamb., jatrop., Thuj., Bell., Lil. t. *Follows well:* Bell., Carb. an., Con., Silic., Sul., Calc. *Incompatible:* Coffee, Nux v. (Ipec. relieved after Nux v. aggravated.) Teste includes Aster. r. in the Sulphur group of antipsorics.

SYMPTOMS.

1. Mind.—Anxious, apprehensive, impatient; easily excited by any emotion, esp. contradiction.—The slightest cause moves to tears.—Has hallucinations: that he is

away from home; hears voices and replies.—Sense of impending misfortune; fears bad news.—Cerebral excitement in opposite directions: sadness, desire to weep; extraordinary mirth; desire to give one's self up to intellectual labour, or some violent exercise; slight dulness of the mental faculties.—Delicacy of the moral perceptions.

2. Head.—Vertigo, transient, when walking, with insensibility of lower limbs.—Heat of head as if surrounded with hot air.—Sudden sensation of fulness in the head, as if congested.—Rush of blood to the head, as if it would burst.—Throbbings.—Sensation of confusion in the brain.—Wakes at night as if brain shaken with electric shocks; fears apoplexy.—Cerebral congestions accompanying obstinate constipation.—Severe pressure in forehead seemed to crush eyes with heavy weight.—Boring pain along l. eye (with dimness of sight) comes and goes suddenly; causes contraction of brows.—Pain in occiput, r. side, making it difficult to walk.—Dull occipital headache (after breakfast) coming and going suddenly.—Bones of skull and scalp sore.—Fulness of the head, whose sides seem to swell out; stitches in the r. temple; passing stitches in the forehead, temples, and esp. in the occiput; transitory pains in r. parietal region; pressive pains in forehead or sinciput, which passes off towards noon.—A sort of emptiness in the head; the consciousness is almost lost; thoughts about apoplexy; this sensation, which lasts a few minutes, is followed by fever, with a hard, quick pulse, violent beating in the r. carotid; these symptoms continue until the end of the following day.—The cerebral symptoms come on in the morning, cease in the daytime, and come on again in the evening.

3. Eyes.—Heat and redness in the eyes, weary look, difficulty of bearing the light.—Eyes are drawn backwards.—Winking of the eyelids, the free margin of which is red.

4. Ears.—Lightning-like stitches in the meatus auditorius.—Violent reports in the ears; noise in the ears as from waves.—Dulness of hearing in the r. ear.

5. Nose.—Epistaxis; sneezing and coryza in the morning on waking.

6. Face.—Red, flushed face.—Transitory or permanent flush in the face.—A sort of stupid, meaningless expression in the physiognomy.

7. Teeth.—Acute and pressing stitches in the upper teeth.

8. Mouth.—Swelling of the tongue; pulling pains in the tongue; heaviness of speech, profuse flow of saliva.

9. Throat.—Pressing irritation of the throat.—Dull pain apparently all along the œsophagus.

10. Appetite.—Loss of appetite; or else a strange and uncertain appetite; aversion to meat; dulness of taste.

11. Stomach.—Frequent eructations; dull or constrictive pain at the precordial region.

12. Abdomen.—Shocks of dull pain in the r. side of abdomen and near umbilicus.—Incarcerated wind.—Violent colic, with shuddering, alternating with flushes of heat in the face.—Alternate swelling and sinking of the abdomen during the twenty-four hours.—Pulling in the abdominal walls.

13. Stool and Anus.—Obstinate constipation, 12 to 15 days without stool, which was of hard round substances size of an olive.—Constipation, with ineffectual urging to stool.—Diarrhœa; liquid, brown-coloured stool, spirting out with force.—Several soft stools in the daytime.—Heat in the rectum; hæmorrhoidal tumour; piles.

14. Urinary Organs.—Urine frequent, clear, profuse; or else thick and slimy; heat in the urethra while the urine passes out.

15. Male Sexual Organs.—Sexual desire increased; erotic thoughts.—Frequent erections during sleep or in the morning.

16. Female Sexual Organs.—Twitching in the womb.—Pushing sensation in the womb.—Sense of pressure on the inferior organs of the abdomen, which hinders walking; sensation as if the menses would appear.—Delayed menses.—Unusual dampness of the vagina, which affords a feeling of ease.—Delay of the menses, although the usual colic and other symptoms are present; these only cease on the appearance of the menses, which are more profuse than usual.—Excitement of the sexual instinct, every morning in bed; violent and constant desire, with nervous agitation, and apprehension of not being able to support these painful sensations.—Lancinating pains in breasts.—L. breast feels drawn in.—Induration (l.) and ulceration.—Swelling of the breasts as when the menses are about to appear.—Itching spots.—Miliary or furfuraceous eruption between the breasts.

18. Chest.—Whole l. chest painful, < motion.—Darting pain towards internal part of chest from before backward, extending under l. nipple into whole internal part of arm to extremity of little finger.—Stitches in the anterior portion of the chest on the r. and l. of sternum.—Pain under sternum.—Sensation as if l. breast were drawn in.—Nightly anxiety, caused by undulating beatings in the chest.

19. Heart.—Palpitation; pulse hard and frequent.—Strong and frequent beating of the heart; jerking palpitations.—The heart seems to have ceased beating.—Anxiety at the heart.

20. Neck and Back.—Scrofulous ulcer l. neck.—Pulling in the back and sacrum.

22. Upper Limbs.—Axillary glands swollen hard and knotted.—Uneasiness in the upper extremities.—Pain extending from thumb to the shoulder-joint.—Numbness of hands, with coldness of the arm.—Lancinating pain at l. elbow; circular red spot at the l. elbow, which becomes covered with a furfuraceous, dry, and friable layer.—Considerable itching around the nail of the l. thumb.

23. Lower Limbs.—Lassitude and great weakness of the lower extremities.—Pain in the l. hip.—Burning stitches in the great trochanter and the coxo-femoral articulation of the l. side.—Stitches at the fore part of the thigh.—Pain in the joints of the foot.—Painful pulling in the sole of the foot.—Gouty pain in the joint formed by the l. big toe with the first metatarsal bone; redness and heat of the skin at this place.—Violent, very unpleasant itching at the thighs and legs, < towards six o'clock, evening, in open air.—Eruptions on the thighs and insteps, consisting of small, itching vesicles, which tear easily and change to small, burning, large and superficial ulcers, lasting several days before cicatrising.

24. Generalities.—Night aggravation.—Cancer pains.—Shocks in head.—Sycosis.—Flabby lymphatic constitutions.—Complaints < in cold, damp weather.

25. Skin.—Itch.—Tetters.—Ulcers with sensitive edges, fetid discharge.—Acne, black-tipped puncta, small red bases.—Dry, harsh skin, earthy appearance.

Astragalus Menziesii.

A. Menziesii, Gray. N. O. Leguminosæ. Tincture of leaves.

Clinical.—Emptiness, sensation of. Face, bones of, painful. Headache.

Characteristics.—From eating some of the green leaves J. M. Selfridge experienced: Burning in pharynx, œsophagus, stomach. Fulness right temple and right upper jaw; slight nausea, with shivering and chilliness; dizziness and fulness of the head. Later, weakness and sense of emptiness in stomach; eating relieved empty sensation, but not the weakness. Pressive pains in both temples; later, slight pain in left maxilla; and still later, aching in right maxilla, with pressure in both bones.

Athamanta.

A. oreoselinum, L. Peucedanum oreoselinum, Munch. "Grundheil." N. O. Umbelliferæ. Tincture of fresh plant.

Clinical.—Head, confused. Headache. Indigestion. Vertigo.

Characteristics.—This medicine has been very little employed. It was proved by Franz, and has produced some peculiar symptoms. There is a dull, befogged condition of brain, recalling., *Æthusa*, "Fool's parsley." A stupefaction and confusion rises like a vapour from the lower part of the occiput; on motion and walking. Vertigo > lying. Pressure and numbness of head and upper teeth. Pressure on one eyeball from below upward. Bitter taste and bitter mucus in air passages. Icy coldness of feet and hands. Sleep heavy and profound, prolonged in the morning to later period than usual.

Relations.—*Compare:* Umbelliferæ, especially Æthus. cyn.

SYMPTOMS.

2. Head.—Vertigo, decreased on lying down; or else with dragging pains from side to side in the brain.—Stupidity, and as if the head were paralysed at the occiput, with sensation as though a vapour ascended there, while walking.—Pressure in the head, with numbness, and the like sensation in the upper teeth.—Cloudiness, with dull pains in the head.—Constriction in the sides of the head, attended with giddiness; pressure outwards at the temples.

3. Eyes.—Pressure from above downwards on the eyeballs.

4. Ears.—Ears as if stopped up with cotton.

8, 11. Mouth and Stomach.—Accumulation of water in the mouth, with sensation of dryness on the tongue; bitter taste, chiefly after every meal.—Eructations, sometimes incomplete, with uneasiness as from hunger, or without taste, and preceded by borborygmi in the abdomen.—Extreme hunger before supper, with an afflux of bitter saliva.

12. Abdomen.—Pullings and pinchings in l. hypochondrium.—Rheumatic shooting pains externally, esp. in walking, extending to the legs.

13. Stools.—Sudden stools, of a kind which cannot be retained, preceded by cutting pains.

17, 18. Respiratory Organs and Chest.—In the larynx a bitter taste, which is not removed even by vomiting; after supper, an accumulation of a serous liquid in the

larynx, tickling in the trachea, which excites vomiting.—The thoracic viscera are as if loaded; painful pinching in l. cavity of the thorax, increased during inspiration; burning lancinations at the exterior of the chest, on l. side, while sitting down.

22. Upper Limbs.—Pullings in the metacarpal bones of l. thumb.

23. Lower Limbs.—Sensation of heat in l. thigh; pain, as of a bruise, in the thighs, even while seated, as also on walking; pressure from within outwards in the knee-joint, in walking, ceasing during repose, and recurring when again in motion.—Sensation of scraping on l. instep, while sitting; tearing and burning in l. little toe.

24. Generalities.—Sensation of weakness and heaviness, chiefly in the eyes.—Icy coldness of the feet and hands, with shivering of the whole body, and a lassitude which renders frequent repose needful; burning sensation, sometimes in one place, sometimes in another, which disappears when the part is touched, leaving an excessive coldness and numbness (deadness) of one finger; increased heat in the head, at night, with agitated pulse, and over-excitement of the mental and physical powers, without thirst.—Nocturnal sleep, heavy and profound, prolonged in the morning to a later period than usual.

Atropinum.

Atropine. An alkaloid of Belladonna. C_{17} H_{23} NO_3. The effects of the Sulphate of Atropine, the preparation most in use, are included. Solution.

Clinical.—Blepharospasm. Convulsions. Enuresis. Epilepsy. Eyes, affections of. *Gastric ulcer*. Locomotor ataxy. Mania. Neuralgias. *Pancreatitis*. Spinal irritation. Stammering. Tetanus. Vision, disorders of. Wryneck.

Characteristics.—*Atropine*, as the most active principle in *Belladonna*, produces, as we should expect, most of the characteristic effects of that drug; but at the same time the two are not identical. *Atrop*. produces hyperæsthesia of the sensory nerves. The most numerous symptoms have been observed in the eyes. All kinds of illusions of vision. Everything appears large. Motes over everything. I once cured with it a lady who had an appearance of shadows passing over whatever she looked at. It has shown an affinity for the pancreas, which relates it to *Iod*., *Kali iod*., and *Iris*. A case of chronic wryneck, of three years' standing, was relieved and finally cured within two weeks by injections of 1/120 into the platysma, the dose being increased up to 1/20th. This was in old-school practice. It has caused difficulty of speech: frequent stuttering, especially at words difficult to pronounce; articulation indistinct, rapid and chattering.

Relations.—*It antidotes:* Muscarine and Opium. *It is antidoted by:* Op. and Physostigma. Like Bell., it is a right-side medicine.

SYMPTOMS.

1. Mind.—Frenzied with excitement.—Spectral illusions; sees insects and crawling things and tries to catch them.—Mania, tries to escape.—When spoken to often turns his head to wrong side.

2. Head.—Vertigo on turning head suddenly.—Feeling as if head were screwed up; walking caused the most severe sticking pains; > towards 11 a.m., and disappeared by evening.—Head very hot.—Headaches of epileptics.—Sticking pains in back of skull and over eyes, < every motion and stepping.—Sticking l. temple on waking, extending into ear and eye; > moving in open air.—Headache, with flushed face, blindness, and delirium.

3. Eyes.—Objects appear large, with red halo.—Everything seems elongated, objects appear in a cloud.—Clouds of flies; motes; bright spots; stars; flashes.—Figures on carpet appear constantly and successively to rise in her face.—Diplopia.—Sharp neuralgic pains in and about eyes.—At 9 p.m. eyelids heavy, difficult to keep open.

6. Face.—Face hot and very red.—Deathly pallor.

8. Mouth.—Mouth dry.—Tongue thick; cannot articulate distinctly.—Tongue semi-paralysed.—Speech slow, embarrassed, stuttering, chattering.

9. Throat.—Burning caused by coughing.—Dryness.—Dysphagia; swallowing causes paroxysms of suffocation.—Throat dark red.

11. Stomach.—Vomiting of food; after hot drinks; with severe sticking pains in umbilical region.—> After vomiting.—Region of stomach very sensitive; swelling in pyloric region.

14. Urinary Organs.—Frequent micturition.—Involuntary, but scanty; nocturnal enuresis.—Cutting, drawing pains in l. ovary, extorting screams, > bending; ovary swollen and tender during menses.—Epilepsy from ovarian irritation.

19. Heart.—Failure of action from chloroform and other cardiac paralyzers.—Accelerated pulse.

20. Back.—Burning in back under sternum and in region of stomach.—Spinal irritation, pressure causes pallor, nausea, belching, and retching.

21. Limbs.—Numbness; heaviness; paralysis of limbs.

24. Generalities.—Hyperæsthesia of some nerves: ophthalmic, auditory, olfactory, vaginal, spinal, solar-plexus, nerves of uterus and bladder.—Great desire for open air (faintness).—Very weak in the open air.—Giddiness and staggering.—> From motion.

26. Sleep.—Disturbed by gastric pains.—Restless through night.—Waked by frightful dreams.

Aurantium.

Citrus vulgaris. Orange. N. O. Rutaceæ. Tincture of peel of Seville orange.

Clinical.—Choking, sensation of. Faintness. Headache. Metrorrhagia. Neuralgia. Palpitation. Throat, rising in.

Characteristics.—The tincture of the peel is used as a pleasant bitter tonic in the old-school practice. On sensitive individuals oranges in any form produce pathogenetic effects. One patient of my own could never eat an orange without experiencing a fearful taste at the back of the nose and throat, lasting many days and causing choking sensations and faintness. Nervous affections predominate; neuralgias of various kinds. The skin is the seat of many symptoms.

Relations.—*Compare:* Citrus Limonum, Ruta, Angustura.

SYMPTOMS.

1. Mind.—Great excitement; quick motions.

2. Head.—R. side hemicrania.

6. Face.—Neuralgia in face; shooting, gnawing pains, most in temples, esp. r. side.

7. Teeth.—Constant toothache.—Teeth become carious; wear off.

9. Throat.—Something seems to rise in throat and choke her.—Fearful taste at back of nose and throat, lasting for days and causing choking sensation and faintness.

14. Urinary Organs.—Pains in kidneys and bladder.

16. Female Sexual Organs.—Too copious menses.

18. Chest.—Pleurodynia.

19. Heart.—Palpitation.

24. Generalities.—Suited for diseases of old men, esp. with coldness and chilliness.—An orange eaten before breakfast is said to destroy the craving for alcohol in drunkards.

25. Skin.—Itching, general or more often only in upper limbs, with redness and swelling of hands.—Eruption and other symptoms like scarlatina.

Aurum Arsenicicum.

Arseniate of Gold. Trituration.

Clinical.—Anæmia. Cancer. Chlorosis. Headache (syphilitic). Lupus. Phthisis. Syphilis.

Characteristics.—The arseniate of gold was first used by Chrestien in cases of phthisis. Later it has been used by others in syphilis, especially chronic syphilitic headaches, lupus, anæmia, chlorosis. The first effect of the remedy is to cause rapid increase of appetite. The peristaltic contractions of stomach and intestines are excited and absorption accelerated.

Aurum Bromatum.

Bromide of Gold. $Au\ Br_3$. Trituration.

Clinical.—Epilepsy. Heart, affections of. Migraine. Night terrors.

Characteristics.—This is an unproved salt of gold. It has been recommended by Dr. E. M. Hale as being superior to other preparations of gold, especially in certain nervous affections of an epileptiform character, as migraine, night terrors, somnambulism. Also in valvular diseases of the heart and hypertrophy, attacks of faintness with coldness and feeble pulse alternating with attacks of congestion and red face with palpitation.

Aurum Iodatum.

Iodide of Gold. Au I_3.

Clinical.—Larynx, spasm of. Paresis, senile; syphilitic. Syphilis.

Characteristics.—This is another unproved gold salt brought forward by Hale, and used by him with success in cases of above-named diseases where symptoms of the components were present.

Aurum Metallicum.

Aurum foliatum (metallic gold). Au (A. W. 196.8). Trituration.

Clinical.—Alcohol, effects of. Amenorrhœa. Angina pectoris. Asthma. *Bone affections. Breath, offensive*. Corpulency. *Depression*. Ears, affections of. Erethism. *Erysipelas. Eye, affections of*. Fevers. Gonorrhœa. Hæmorrhages. Hæmorrhoids. Hemiopia. *Hydrocele*. Jaundice. Leucorrhœa. *Locomotor ataxy*. Melancholy. Melanosis. Mercurial poisoning. Naso-pharyngeal catarrh. Night terrors. *Ozæna. Paralysis*. Phthisis. Pining boys. Scrofula. *Smell, disordered. Syphilis. Testicles, affections of*; undeveloped. *Tongue, nodules on*. Tumours. *Uterus, induration of*. Vertigo. Vision, disordered.

Characteristics.—Gold affects profoundly the entire organism, exercising a solvent action on the tissues, producing ulcerations and the disappearances of new growths. Hence it is one of the best antidotes to Mercurial over-dosing, and especially in cases of syphilis. Scrofula and caries of bone also find in *Aurum* a remedy. It also produces rushes of blood and hæmorrhages. Boring pains and burning stitches predominate. No drug produces more acute mental depression than *Aurum*, and in any case where this profound melancholy is found, Aurum must be well studied. There is a condition of melancholy, hoplessness, profound depression, tendency to suicide and longing for death. Anthrophobia. Aggravation from emotion. Complaints after grief, fright, anger, disappointed love, contradiction, reserved displeasure. Hysteria, laughs and cries alternately. The head is giddy, full, hot. Rush of blood to the head. Vertigo as if turning in a circle when stooping, goes off on rising. As if drunk when walking in the open air. Sensation as if a current of air were rushing through the head, if not kept warm. Bones of skull painful, especially lying down. Vertical half-sight. Fiery sparks. Caries of mastoid process of bones of nose. Ozæna. In the abdominal region, as with *Merc*., there is swelling of liver, jaundice. Hernia, inguinal or umbilical; and in children. Onanism. The sexual organs are markedly affected. Induration of testes. Undeveloped testicles in puny boys. Swelling or neuralgia of testicle (r). Uterus prolapsed and indurated; the weight of it causes prolapse. (The chloride of gold

and sodium acts more powerfully in these conditions.) Shelton has recorded as effects on girls working with gold leaf the occurrence of a "thick leucorrhœal discharge, not offensive, white or yellowish, occasionally profuse, invariably < by walking." Suffocative attacks, with suffocative oppression of chest. Anxious palpitation from congestion to the chest. Palpitation, with anguish and tremulous fearfulness. Pain in heart region extending down left arm to fingers. There are boring pains in bones, < at night. Over-sensitiveness to all pain. Hysterical spasms, with laughing and crying alternately. Great ebullitions with congestion to the head and chest, and palpitation of the heart. Frightful dreams; he sobs aloud when asleep. Chilliness predominates; shivering in open air; coldness of hands and feet, sometimes lasting all night. Heat, only in the face. Perspiration in the morning hours; mostly on and around the genitals. Ulcers which attack the bones. Warts, scrofulous, syphilitic, mercurial. "< From Sunset to sunrise" is a leading Condition of *Aurum*. Paralytic drawing in the limbs in the morning when awaking; and on getting cold. < At night; in morning; on getting cold; by rest. Shivering on getting into bed. > Moving; walking; getting warm. Suited to sanguine people with black hair and dark eyes, olive-brown complexion. Also light-haired scrofulous persons. Pining boys, girls at puberty, and old age. Syphilitic and mercurial patients.

Relations.—*Compare:* Luet. (syphilis); Am. c., Arg. met., Arg. n., Ars.; Asaf. (pains about eyes; but Asaf. has > from pressure; mercurial caries); Bell.; Caps. (caries of mastoid, corpulency); Calc. c. (night terrors; leucophlegmatic; Aur. has more over-sensitiveness and erethism); Calc. ph.; Coccul. (empty feeling); Chi. and Coff. (hyper-excitation) Cup. (asthma); Dig., Fer.; Glon. (Hyperæmia of lung from heart) Hep., Iod.; Kali bich. (deep ulcers, scrofulous ophthalmia, ozæna, syphilis); K. ca.; K. iod. (syphilis); K. bro. (anguish at heart and desire to move about); Lach., Lyc., Merc., Nit ac.; Nux v., (hernia; prolapsed uterus); Pallad., Platin., Puls., Spigel., Sol. nig., Sil., Sep., Sul.; Tarent. (heart as if turned round); Thuj., Ver. v. *Antidoted by:* Bell., Chi., Coccul., Coff., Cup., Merc., Puls., Spi., Sol. nig. *Antidote to:* Merc., Spigel., Chronic effects of alcohol, Kali iod.

Causation.—Mercury. Alcohol. Iodide of Potassium. Effects of grief; fright; anger; disappointed love; contradiction; reserved displeasure.

SYMPTOMS.

1. Mind.—Melancholy, with inquietude and desire to die.—Irresistible impulse to weep.—Longing to see one's relations, resembling nostalgia.—Imagines he has lost the affection of his friends; this makes him weep.—Sees obstacles everywhere.—Hopeless.—Suicidal; desperate; inclined to jump off heights; to dash himself into a chair.—Sad, feels that all is against her and life is not desirable, and the thought of death alone gives pleasure.—Great anguish, which even induces a disposition to suicide, with cramp-like contractions in the abdomen.—Excessive scruples of conscience.—Despair of oneself, and of others.—Ill-humour and aversion to conversation.—Grumbling, quarrelsome humour.—The least

contradiction excites his wrath.—Alternate peevishness and cheerfulness.—Anger and passion.—Alternation of gaiety, or of irritability with melancholy.—Hypochondriacal humour.—Weakness of the intellectual faculties.—Weakness of the memory.

2. Head.—Vertigo: when stooping, as if turning in a circle; > on rising; as if drunk when walking in open air; feels as if he would fall to l.; must lie down, even then for some time it returns on slightest motion.—Fatigue from intellectual labour.—Sudden stupefaction, with loss of sense.—Pain, like that of a bruise in the brain, esp. in the morning, or during intellectual labour, and sometimes inducing confusion of ideas.—Pain in the head, as if the air passed over the brain, when it is not kept very warm.—Acute drawing pains in the head.—Beating and hammering pain on one side of the head.—Congestion of blood to the head.—Congestions to and heat in the head, with sparks before the eyes, and glossy bloatedness of the face, aggravated from every mental exertion.—Buzzing in the head.—Pain in the bones of the cranium, esp. on lying down.—Exostosis on the head; on the r. vertex, with boring pain.—Falling off of the hair.

3. Eyes.—Pain in the eyes aggravated by touch, as if the ball of the eye were pressed inwards.—Tension in the eyes, with diminution of sight.—Burning pain and redness in the eyes.—Obscuration of the sight.—Black spots before the eyes.—Eyes very prominent.—Flames and sparks before the eyes.—Vertical half-sight.—Hemiopia; objects are seen cut in horizontal lines.—Eyes better by moonlight and after violent muscular exercise.—Objects seem smaller and more distant.

4. Ears.—Hearing too sensitive.—Pain in the ears, like internal tension.—Caries of the mastoid process.—Flow of fetid pus from the ears.—Oversensitive to noises, but music >-Annoying dryness in ears and nose with difficult hearing.—Hardness of hearing from hypertrophy of the amygdalæ, with embarrassed speech.—Humming in the ears.—Roaring in the ears.

5. Nose.—Pain in the nasal bones on being touched.—Gnawing prickings.—Inflammatory swelling and redness of the nose, followed by desquamation.—Caries of the bones of the nose.—Nasal cavities ulcerated and covered with thick crusts.—Running from the nose of a fetid greenish-yellow matter.—Stoppage of the nose.—Fluent coryza.—Nose red, swollen; tip knobby, red.—Cancer.—Furfuraceous desquamation of the epidermis of the nose.—Increased sensibility, or absence of smell.—Sweetish putrid smell, or smell of brandy before the nose.—Fetid odour from the nose.

6. Face.—Face puffed, and shining as if from sweat.—Inflammation of the bones of the face.—Parotids swollen, painful to touch as if pressed or bruised.—Swelling of the cheeks.—Swelling of the bones of the forehead, of the upper jaw, and of the nose.—Red eruption, which peels off, on the forehead and on the nose.—Traction in

the jaws, with swelling of the cheeks.—Tensive pain in the upper jaw.—Painful swelling of the submaxillary glands.

7. Teeth.—Odontalgia, with heat and congestion in the head.—Looseness of the teeth.—Ulcers in the gums, with swelling of the cheeks.—Toothache < at night, < drawing cold air into mouth.

8. Mouth.—Fetid smell of the mouth, like rotten cheese.—Piercing pain in the velum palati.—Tongue swollen; with scirrhus-like hardness; after biting tongue in sleep.—Tongue coated; dry; ulcerated.

9. Throat.—Caries in the palate, with ulcers of a bluish colour, esp. after the abuse of mercury.—Tonsils swollen and ulcerated.—Drinks find a passage through the nostrils.—Stinging soreness in throat only when swallowing.—Dull, pressive pain, either with or without swallowing, in a gland below angle of jaw.

10. Appetite.—Milky or sweetish taste.—Loathing of food, and esp. of meat.—Great desire for coffee.—Excessive hunger and thirst.—No appetite for plain food in pining boys.

11. Stomach.—Pain in the stomach, as if proceeding from hunger.—Immoderate appetite and thirst, with qualmishness in the stomach.—Sensation of indescribable uneasiness in the epigastrium.—Swelling of the epigastrium and of the hypochondria, with shooting pains on being touched.—Burning at stomach and hot eructations.—Burning, drawing, and cutting pain; pressure.—Pressure to l. of scrobiculum, below cartilages of upper false ribs; < during expiration.

12. Abdomen.—Burning heat and cutting pain in r. hypochondrium.—Colic with sensation of great uneasiness and inclination to evacuate.—Tensive aching and fulness in the abdomen.—Abdomen inflated.—Exostosis in the pelvis.—Tendency of hernia to protrude, sometimes with cramp-like pains and incarcerated flatus.—Swelling and suppuration of the inguinal glands from syphilis or the use of mercury.—Windy colic by night, with pinching, grumbling, and borborygmi.—Frequent emission of very fetid wind.

13. Stool.—Copious evacuation.—Nocturnal diarrhœa.—Nightly diarrhœa, with burning in the rectum.—Constipation; stool very large in size, or very hard and knotty.

14. Urinary Organs.—Painful retention of urine, with urgent inclination to make water, and pressure on the bladder.—Frequent emission of watery urine.—Urine turbid, like butter-milk, with thick mucus-like sediment.

15. Male Sexual Organs.—Sexual desire greatly increased.—The whole genital system is strongly affected.—Nocturnal erections and pollutions.—Flow of prostatic

fluid, with flaccidity of the penis.—Swelling of the (lower part) of the testicle (r).—Swelling of the testes, with aching pain on touching and rubbing.—Induration of the testes.—Testes mere pendant shreds (in pining boys).—Hydrocele.—Bubo.—Chancre.

16. Female Sexual Organs.—Pains in the abdomen, as if the catamenia were coming.—Prolapsus and induration of the matrix.—Uterine affections with depression and tendency to suicide.—Menses too late; and scanty or absent.—Drawing pain in pubes; r. inguinal region sore to touch.—Before menses: swelling of axillary glands.—During menses: colic; prolapse of rectum.—Leucorrhœa: profuse and corroding, yellow; thick white, not offensive, < by walking.—During pregnancy: suicidal melancholia; jaundice.

17. Respiratory Organs.—Accumulation of mucus in the trachea and in the chest, which is expectorated with difficulty in the morning.—Voice nasal.—Cough from want of breath at night.—Cough with tough yellow sputum on awaking in morning.

18. Chest.—Great difficulty of respiration at night, and on walking in the open air, requiring deep inspirations.—Paroxysms of suffocation, with constrictive oppression of the chest, falling, loss of sense, and bluish colour of the face.—Pain, as if there were a plug placed under the ribs.—Continuous aching in l. side of the chest.—Incisive pain, and obtuse shootings, near the sternum.—Great weight on chest; esp. heavy weight on sternum.—Much congestion in the chest.

19. Heart.—Anxious palpitation of the heart, from congestion to the chest.—Beatings of the heart, irregular, or by fits, sometimes with anguish and oppression of the chest.—Pain in heart region extending down l. arm to fingers.—Floundering heart.—When walking, the heart seems to shake as if it were loose.—Sensation as if the heart stood still.—Palpitation compels him to stop.

20. Neck and Back.—Swollen cervical glands.—Tension in neck as if muscles too short, even at rest; < stooping.—Stinging pains in small of back.—Gressus gallinaceous (in spine disease).—Pain at lower part of spine.—Pains, generally passive, or drawing and acute, in the back, chiefly in the morning, and sometimes so violent as to prevent any motion of the limbs.

21. Limbs.—Limbs go to sleep; numb, insensible on waking; more when lying than moving.—Has to seize hold of l. arm during attack of palpitation.—Limbs swollen, painful, almost anchylosed.

22. Upper Limbs.—Boring in l. shoulder.—Aching pains in the arms and in the forearms.—Cramp-like and acute drawing pains in the bones of the carpus and of the metacarpus.—Acute drawing pains and paralytic weakness in the bones and joints of the fingers.—Palms itch; herpes; nails turn blue.

23. Lower Limbs.—Coxalgia.—Sharp pains in the thighs, esp. morning and evening.—Paralytic and painful weakness of the knees, as if a bandage were tightly compressed above them; they are feeble and give way.—Drawing pains and acute pullings, with paralytic weakness, in the bones and the joints of the toes.—Nodes; caries.

24. Generalities.—Pain, like that of a bruise, with acute pullings, and paralytic weakness in the limbs in general, and chiefly in the joints, esp. on uncovering the part affected, in the morning, on waking and during repose, disappearing on getting up.—Darting pains in the limbs, with great dejection.—Inflammation of the bones, with nocturnal pains.—Exostosis on the head, on the arms and on the legs.—Great acuteness and delicacy of sensation, with excessive sensibility to the least pain.—Over-sensitiveness to all pain, and to the cold air.—Hysterical spasms, sometimes with alternate tears and laughter.—Great sensibility to cold, or strong desire to go into the open air, even in bad weather, because it is found to be a relief.—Great ebullitions, with congestions to the head and chest, and palpitation of the heart.

26. Sleep.—Weary, but cannot rest or sleep.—Drowsiness after meals.—Nocturnal sleep till four o'clock in the morning only.—Awakened by bone pains; in despair.—Fatigue and weakness in the morning on waking.—Restless sleep, with anxious dreams; of thieves.—Nocturnal mumbling in the form of questions.

27. Fever.—Pulse small, but accelerated.—Febrile shiverings over the whole body, while in bed in the evening, followed neither by heat nor thirst.—Cold of the entire body, with bluish colour of the nails, nauseous taste, with inclination to vomit, sometimes followed by an increase of heat.—Heat of the face, with cold in the hands and feet.—Copious general perspiration early in the morning; mostly about genitals.

Aurum Muriaticum.

Chloride of Gold. Na Cl, Au Cl_3, $2H_2O$.

Clinical.—Albuminuria. Amaurosis. Angina pectoris. Anus, fistula of. Asthma. Bubo. Cancer. Caries. Chancre. Condylomata. Dropsy. Eczema. Fistula. Gonorrhœa. Hæmorrhage. Hair falling out. Heart, affections of. Indurations. Liver, affections of. Morvan's disease. Ophthalmia. Ozæna. Periostitis. Phthisis. Pudenda, over-sensitiveness of. Spinal sclerosis. Spleen, enlarged. Sterility. Syphilis. Uterus, tumours of; hæmorrhage from. Vagina, heat, burning and itching of. Voice, hoarse. Warts.

Characteristics.—This salt has been proved. The symptoms are in the main identical with those of the metal, but some are peculiar or more pronounced in the one than in the other. The Muriatic element is seen in the heart symptoms; violent palpitations, sore aching, heaviness and sensation of rigidity in heart, hyperæmia from heart disease. Catarrhal and glandular affections are marked. Warts appear in various parts: on the tongue, on the genitals. Digestion is slow. Diarrhœa after eating. *Aur. mur*. is a sycotic remedy causing suppressed discharges to reappear. Halbert has given *Aur. mur*. 2x with much success in cases of sclerotic and exudative degeneration of the nervous system. He narrates a case of disseminated sclerosis, the result of a fall; one of exudative localised meningitis; and one of Morvan's disease greatly improved under its use. This patient, a man cook, had hypertrophy of all the fingers. In some of them this had progressed till painless whitlows appeared. Analgesia and anæsthesia were present, and some atrophy of the muscles of the hand and arm. Brachial neuritis appeared to be the causative factor in the case. Remarkable improvement occurred under *Aur. mur*. 2x. *Aur. mur*. is particularly valuable in hæmorrhages from the womb at climacteric and after, which are frequently of sycotic origin. Violent chill and fever. Hectic fever. Ascending stairs < Cold washing and cold weather >. Warmth <; throws off bed-covers. *Suited to:* Lymphatic, scrofulous constitutions. Gold salts, like mercury salts, dissolve organic tissues; they stimulate the heart more, but act on fluid tissues less powerfully than mercury.

Relations.—*Compare:* Aco., Am. c., Arg., Arg. n., Ars., Bell., Cannab., Fer., Glon., Hecl., Lyc., Merc., Nit. ac., Pho., Plat., Sil., Sul. Sulphur springs are incompatible. *Antidoted by:* Bell., Cannab., Merc.

Causation.—Chagrin. Fright. Vexation.

SYMPTOMS.

2. Head.—Constant burning in whole head, < l. side.—Head hot; limbs cold.—Pulling pains in forehead; tingling itching in that part.

3. Eyes.—Sudden blindness in childbed.—Neuralgic pains in l. eye.—Scrofulous phlyctenular ophthalmia.—Chronic inflammation of margins of lids.—Fistula lachrymalis.

4. Ears.—Music relieves.—Burning and itching behind ears < night.—Tinkling sound in ears followed by deafness, as if interior of ears were large and empty.

5. Nose.—Pressing pain in nose.—Ozæna scrofulosa.—Tingling, burning, and itching in nose; redness and inflammation, with itching, followed by desquamation; red swelling with ulcerated nostrils; dry yellow crusts and sensation of stoppage; yellow pus, sometimes below.—Deep crack in alæ nasi; lupus.

6. Face.—Red face.—Hair falling out of eyebrows and head.—Exostosis of (r.) cheek-bone.

7. Teeth.—Teeth loose.—Dental fistula.—Toothache with thrilling pains.

8. Mouth.—Indurated tongue; warts; cancer; ulcers.

9. Throat.—Frequent desire to swallow; feeling of a plug in throat; metallic taste; increased saliva.

11. Stomach.—Burning, cutting, stitching in stomach; cramps.—Slow digestion.

12. Abdomen.—Liver indurated.—Spleen enlarged.—Swelled abdomen; ascites.—Stiffness in region of groins.—Swelling of inguinal glands.

13. Stool and Anus.—Diarrhœa; < night; after eating; with pain in bowels.—Hæmorrhoids, bleeding during stool.—Condylomata.—Anal and inter-crural excoriation.—Fistula.

15. Male Sexual Organs.—Diminished virility.—Increased desire.—Exhausting erections.—Violent itching of glans penis wakes him at night.—Drawing along spermatic cord.—Painful drawing in l. testis extends towards inguinal ring, recurring by paroxysms.—Chancres.—Condylomata.—Excrescences from glans up to sacrum.—Warts on prepuce.

16. Female Sexual Organs.—Constant running from vulva.—Burning stitching of vulva.—Heat and itching in vagina.—Hæmorrhage at and subsequent to the climacteric.—Leucorrhœa, light yellow, esp. mornings.—Leucorrhœa acrid, excoriating thighs, with itching of genitals.—Gonorrhœal discharge with swellings in each groin.

17. Respiratory Organs.—Hoarseness; speaking difficult.—Dyspnœa; sensation in larynx as if closed; laryngeal affections in syphilis and mercurio-syphilis.—Pressure under sternum.—Loud cough with thick yellow expectoration.—Anxious contraction of chest.—Asthma < at night.—Pleuritic pains l. side of chest; changing place.

19. Heart.—Lancinating pains above the heart.

22. Upper Limbs.—Swelling of the wrists, with tension on reversing the hand, and lancinations in grasping an object; tearing pains in middle finger after meals.

23. Lower Limbs.—Legs swollen and very tender along inside of tibia.—Exostosis.—Periostitis; after typhoid.

24. Generalities.—Great restlessness; changes his position every moment; his friends call him "the quicksilver man.".—Laziness, aversion to all work.—Indescribable weariness in whole body.—Drawing pains in various parts, esp. the extremities.

Aurum Muriaticum Kalinatum.

Double Chloride of Potassium and Gold. K. Cl, Au Cl_3, $_2H_2O$.

Clinical.—Uterus, hæmorrhage from; induration of.

Characteristics.—An unproved salt, recommended by Dr. Burford and others as the best preparation of gold in cases of uterine induration and hæmorrhage.

Relations.—*Compare:* Aur. mur. nat., Hydrastinin. mur.

Aurum Muriaticum Natronatum.

Double Chloride of Gold and Sodium. Na Cl, Au Cl3 2H2O.

Clinical.—Ascites. Carcinoma. Hæmorrhoids. Hair, falling out. Headache. Hectic fever. Jaundice. Phthisis. Rhinoscleroma. Sycosis. Syphilis. Tongue, affections of. Tumours. Uterus, indurations of; scirrhus of. Warts.

Characteristics.—Boring pains are very marked in the pathogenesis of this salt; over left eye, skull, chest, tibiæ, and bones generally. Symptoms < cold wet weather; from October to spring (headache). Warts on tongue. White stools (Jaundice). Bright's disease. Chancres; ulcers; warts. Bubo. Enormous induration of an ovary. Induration of one part, softening of another part of the uterus. Corrosive leucorrhœa; pustules on genitals. Scirrhus or carcinoma of breast or uterus. A case of rhinoscleroma has been reported cured by it in 5x by Kranz-Busch. Old cases of rheumatism or gouty pains. Scrofula. All symptoms are < by rest. According to Hale, this is the most active of all the preparations of gold. In toxic doses it causes "violent gastro-enteritis," accompanied by cramps, convulsive trembling, insomnia, priapism and insensibility. In pathogenetic doses it causes "epigastric pain, nausea, loss of appetite, and constipation." The constipation is like that of *Hydrastis*, being accompanied with catarrh. Hale has used it with success in nervous dyspepsia with a tendency to diarrhœa after eating; in gastric and duodenal catarrh, with or without jaundice. The same authority states that the primary effect

of the salt is to cause "congestion, irritation of uterus and ovaries, subacute metritis, ovaritis, profuse and premature menses, habitual abortion, nymphomania, ulceration of uterus, endocervicitis." For these the attenuations are suitable. The secondary effects are: "Atonic amenorrhœa, scanty and delaying menses, deficient sexual desire, sterility from ovarian torpor, ovarian dropsy;" for these he recommends the lowest triturations. He suggests its use in puerperal mania with sexual excitement, ovaritis, gastro-intestinal irritation, and suicidal impulses. Also in corresponding states in men. *Aur. mur. nat*. has been proved, but it has been chiefly used on general Aurum indications. Burnett considers it to have more power over uterine tumours than any other gold preparation.

Relations.—*Suited to:* Carbo-nitrogenoid and mercurio-syphilitic constitutions. *Compare:* Arg. n., Ars., Bad., Bry., Crot., Con., Graph., Hep., Iod., Kali bich., Kali iod., Lyc., Merc., Nit. ac., Pho., Sul., Thuj.

Causation.—Vexation (Jaundice).

SYMPTOMS.

2. Head.—Violent (boring) pains on whole side of head, mostly over eye.—Every morning pressure over eyes, pains in forehead, dulness in head, lasting until afternoon; > in evening; nasal discharge bloody, fetid, ichorus.—Hair falls out.

3. Eyes.—Amaurosis.—Ophthalmia: scrofulous; cancerous; at same time nose scurfy.

5. Nose.—Ulcers; caries; ozæna.—Nose swollen, hard, shining (scrofulous); if he takes cold, erysipelas sets in.

7. Teeth.—Teeth get loose, look dirty, gums recede.

8. Mouth.—Tongue white.—Warts on tongue.—Burning on tip of tongue.—Redness and swelling of palate behind upper incisors.—Salivation.

12. Abdomen.—Pressure in r. hypochondrium.—Dropsy.

13. Stool and Anus.—Clay-like fæces.—Appearance of hæmorrhoid which protrudes and is painful.

15. Male Sexual Organs.—Ulcers on foreskin; warts around them; ulcers on glans eating deeply.

16. Female Sexual Organs.—Ulcers with induration of uterus.—Enlargement of ovary.—Leucorrhœa, corroding the parts.—Pustules on genitals.—Abortion from uterine indurations.—(Given to syphilitic mothers, it prevents the disease in her off spring.).—Scirrhus of uterus and mammæ.

19. Heart.—Irregular heart-beats with anxiety and short breath; while sleeping.—Severe violent beats of the heart, with sensation of pressure while standing.

20. Neck and Back.—Cracking in cervical vertebræ on bending head.—Burning pain in skin of nape.—Heat in nape rising into head and cheeks.—Burning and drawing; tension and pressure in muscles to l. of nape extending to shoulder, < bending head to r.; at times unbearable during rest.—Pustular eruption on back.

22. Upper Limbs.—Burning in skin of r. axilla.—Pressure in r. deltoid.—Boring and pressing pains in arms and elbow-joints; boring in bones.—Painful stitching in finger-tips.

23. Lower Limbs.—Boring in thighs, knees, tibiæ (first r. then l.).—Boring in both sides r. tendo Achillis when sitting.—Stitches in tips of toes; in bunion.

25. Skin.—Intolerable itching all over body; sores followed by an eruption of little lumps, several covered with dark-looking scabs.—Jaundice.

27. Fever.—Remarkable coldness of back.—Remarkable heat in skin.—Sweats only on r. side; l. (affected) side of head remains dry.—Excessive perspiration.

Aurum Sulphuratum.

Auric sulphide. $Au_2 S_3$.

Clinical.—Enuresis. Goître. Head, nodding of. Impotence. Jaundice. Mammæ, affections of. Nightmare. Nose, swelling of. Paralysis agitans. Pruritus vulvæ. Staggering.

Characteristics.—This is a valuable gold preparation which I have used with success in *Aurum* cases with some *Sulphur* indications. It has been proved, and the most striking symptoms are the following: Constant nodding of head (suggesting paralysis agitans). Lancinations in occiput. Redness and swelling of nose; crusts; dry coryza; great sensitiveness to least contact. Sensitiveness to touch was observed in other parts. Inclined to vomit after eating. Nocturnal enuresis. Impotence. Lancinations in penis. Heaviness in genitals. Heat, lancinations, and itching of vulva. There is swelling of the breasts; they are painful to touch; nipples are cracked; lancinating pain in point of nipples. Thick yellowish leucorrhœa, especially in morning. Staggering gait. Weariness. Frightful dreams: thieves, &c.

SYMPTOMS.

1. Mind.—Desire for solitude.—Disgust for life.

2. Head.—Constant nodding of head.—Continual rush of blood to head.—Lancinations in occiput.—Itching of scalp, < night.—Burning and smarting of scalp.—Falling out of hair.

3. Eyes.—Redness of lids.—Morning agglutination.—Stye near outer canthus.—Photophobia.

5. Nose.—Redness and swelling of nose.—Crusts on nose.—Sensitiveness to least contact.

6. Face.—Cracked lips.

8. Mouth.—Redness, swelling and bleeding of gums.—Aphthæ.

9. Throat.—Swelling of thyroid.

11. Stomach.—Great thirst.—Watery eructations tasting of ingesta.—Frequent hiccough.—Very slow digestion.

14. Urinary Organs.—Nocturnal enuresis.—Thick, yellow, red and sandy urine.

15. Male Sexual Organs.—Frequent erections with desire for embrace, but ceasing immediately.—Impotence.

16. Female Sexual Organs.—Thick, yellowish leucorrhœa, esp. in the morning.—Irregular menstruation.—Sensitiveness of uterus to touch.—Swelling of breasts; painful to touch.—Cracks on nipples.

17. Respiratory Organs.—Nightly paroxysms of loud cough.—Hard cough with scanty expectoration of pure blood.—Suffocating attacks at night.

19. Heart.—Palpitation when ascending a height.

24. Generalities.—Staggering gait.

26. Sleep.—Troublesome frightful dreams; of thieves; of assassins.

Avena Sativa.

Oat. N. O. Gramineæ. Tincture of fresh plant in flower.

Clinical.—Alcoholism. Cholera. Debility. Influenza. Neurasthenia. Opium habit. Palpitation. Sexual excess. Sleeplessness. Tuberculosis.

Characteristics.—*Avena* has been used empirically in substantial doses (5 to 15 drops of the tincture, preferably in hot water) in a large number of cases of nerve weakness. The leading indications are: Irregularities of the male sexual system. Nervous exhaustion. General debility. Nervous palpitation. Insomnia. Inability to keep the mind fixed on any one subject, especially when due to masturbation or sexual irregularities. It is most valuable in enabling a patient to overcome the morphine habit. It appears to exert the same kind of soothing action, without creating a habit of its own. When not more than four grains of morphine have been taken daily it may be discontinued abruptly, 15 drops of *Avena* in a wineglass of hot water being given four times a day instead. The only symptom that has been observed to be caused by it is a pain at the base of the brain from 20-drop doses.

An alkaloid, *Avenin* (C_{56} H_{21} NO_{18}), has been isolated from oats. It is easily soluble in alcohol. No clinical observations with this have been recorded.

Aviaire.

A preparation of chicken-tuberculosis introduced by Dr. Cartier and other homœopaths of Paris.

Clinical.—Bronchitis. Influenza. Measles. Phthisis.

Characteristics.—Dr. Cartier gave an account of this nosode in his paper read at the International Homœopathic Congress, 1896 (*Transactions*, Part "Essays and Communications," p. 187). *Aviaire* acts most prominently on the apices of the lungs, and it corresponds most closely to the bronchitis of influenza, which simulates tuberculosis, having cured several hopeless-looking cases. It has also done excellently in some cases of bronchitis following measles. The bacillus of avian tuberculosis has been identified with that of human tuberculosis, but the clinical properties of the two nosodes are not identical.

Relations.—*Compare:* Bacil., Bacil. t., Tuberc., Ars. i.

Azadirachta Indica.

Melia Azadirachta. Nim or Neem. Margosa. N. O. Meliaceć; Tribe, Melieć. Tincture of the bark.

Clinical.—Constipation. Diarrhśa. Intermittent fever. Quinine, effects of. Spleen, congested.

Characteristics.—This is an Indian remedy of very ancient date. All parts of the tree are intensely bitter, and the separate parts are said to have different effects. The bark, known as *Margosa Bark*, is the best-known medicinal portion, and the tincture for the provings was made from this by Dr. P. C. Majumdar, who is our chief authority for its effects. It contains *Azadirin*, *Margosin* and *Catechin*. It is popularly used in a great variety of complaints, especially of the eyes, digestive derangements, and skin affections. The most peculiar feature of the proving is the fever, which commences with a very slight chill or none at all, about 3 to 4.30 p.m., and abates about 7.30 p.m. Glowing heat and burning, especially in face, eyes, palms of hands and soles of feet in open air; sweat copious, commencing on forehead, gradually extending towards trunk; no sweat on lower part of body. It is especially useful in cases previously maltreated with quinine. < In open air; in afternoon.

Relations.—*Compare:* Cedron, China, Ars., Nat. m. Also Guarea which belongs to the same botanical order.

SYMPTOMS.

1. Mind.—The mind is depressed and forgetful; uneasiness; desire to lie down.

2. Head.—Giddiness as if head were moving to and fro, < rising from sitting.—Much throbbing headache, < r. side, with much pain in r. eyeball; < in open air.—The scalp is painful and sensitive to touch, even the hair is painful.

3. Eyes.—Burning in eyes and coryza.

4. Ears.—A buzzing in ears (recalling the effect of Peruvian bark).—A peculiar crackling sound in the ear like tickling with a feather, < on opening the mouth.

8. Mouth.—Clammy mouth, but water tastes good.—Sensation as if scalded on side and surface of tongue.—Salty tasting saliva.

9. Throat.—Bitter taste in throat.

10. Appetite.—Very keen appetite.—There may be no thirst, or very great thirst for large quantities of cold water.—Great thirst at long intervals.—Craving for sweets.

12. Abdomen.—In the abdomen there are twisting pains in the epigastrium, and clutching pains in umbilical region.—Burning in the bowels.

13. Stool and Anus.—Insufficient, constipated, hard, small, and knotty stool.—Diarrhśa with no satisfaction after stool.—Passing of offensive flatus.

15. Male Sexual Organs.—Great sexual excitement.

17. Respiratory Organs.—Troublesome cough after bathing.—Sputa white, in small lumps, expelled with difficulty.

18. Chest.—Cramping pains in chest.—Breathing deep and at long intervals; or rapid and hot breath.—Burning sensation in chest.

21. Limbs.—Numbness of hands and feet.

25. Skin.—Much itching of body; burning and prickling; sudamina on back.

26. Sleep.—Dreams of quarrels.

27. Fever.—Chill slight or absent; fever continues from 3 or 4.30 p.m. to 7.30 p.m.—Glowing heat and burning, esp. in face, eyes, palms of hands and soles of feet in open air.—Sweat copious, commencing on forehead, gradually extending towards trunk; no sweat on lower part of body.

Bacillinum.

A nosode of tuberculosis named and first described by Dr. Burnett, for whom it was prepared from tuberculous sputum by Dr. Heath. As this preparation has been experimented with separately, I think it, on the whole, advisable to give its symptoms apart from the other nosodes of phthisis.

Clinical.—*Addison's disease*. Alopecia. Consumptiveness Growth, defective. *Hydrocephalus*. Idiocy. Insanity. Joints, affections of. Phthiriasis. Pityriasis *Ringworm*. Scrofulous glands. Teeth, defective; pitted. *Tuberculosis*.

Characteristics.—This remedy has been used largely in infrequent doses (at intervals of a week or more) of the 30th and upwards chiefly on diathetic indications in the affections named above. In acute affections it has been found useful to dissolve a few globules in a wineglassful of water and administer a teaspoonful every four hours. In the provings, a severe headache, deep in, < by

motion, was a constant symptom; also a slight cough with easy expectoration of phlegm. In cases of acute tuberculosis it has not done so well as in mote chronic cases. Dr. Cartier has found it particularly useful in cases where there was excessive muco-purulent bronchial secretion threatening to occlude the lungs. It must be compared with *Bacillinum testium, Tuberculinum* of Swan, *Aviaire* and *Tuberculinum* of Koch. Dr. Burnett has shown that ringworm of the scalp and pityriasis versicolor on the body are indications of tubercular diathesis, and they respond to this remedy. Also they are leading indications for it when present in combination with other affections. A case of insanity with pityriasis yielded rapidly to the remedy. Phthiriasis has been cured by it when all attempts to kill the body-lice by parasiticides were useless. Dr. Young has recorded the cure of several cretinous idiots. An inter-current course of *Bacillinum* will often make a wonderful change in patients who have a personal or family history of chest affections. I have found an eczematous condition of the margins of the eyelids a strong indication for it. < Night and early morning; < cold air. It is a diathetic remedy of vast importance. The symptoms of the *schema* are taken from the provings by Burnett and myself recorded in the last edition of Burnett's *The Cure of Consumption by its own Virus*, together with some cured symptoms, and some from a proving by R. Boocock.

Relations.—Calc. phos. goes with this remedy very well. So do Lach. and Kali c. I know of no antidote.

SYMPTOMS.

1. Mind.—Taciturn, sulky, snappish, fretty, irritable, morose, depressed and melancholic even to insanity.—Fretful ailing, whines and complains; mind given to be frightened, particularly by dogs.

2. Head.—Severe headache, deep in, recurring from time to time, compelling quiet fixedness; < shaking head.—Terrible pain in head as if he had a tight hoop of iron round it; trembling of hands; sensation of damp clothes on spine; absolute sleeplessness.—Meningitis.—Ringworm.—Alopecia areata.

3. Eyes.—Eczematous condition of eyelids.

6. Face.—Indolent, angry pimple on l. cheek, breaking out from time to time and persisting for many weeks.

7. Teeth.—Aching in teeth, esp. lower incisors (all sound), felt at the roots esp. on raising or projecting lower lip; very sensitive to air.—Grinds teeth in sleep.—Imperfectly developed teeth.

9. Throat.—Tickling in fauces, compelling cough.

11. Stomach.—Windy dyspepsia, with pinching pains under ribs of r. side in mammary line.

12. Abdomen.—Fever, emaciation, abdominal pains and discomfort restless at night, glands of both groins enlarged and indurated; cries out in sleep; strawberry tongue.—Tabes mesenterica; talks in sleep; grinds teeth; appetite poor; hands blue; indurated and palpable glands everywhere; drum belly; spleen region bulging out.—Inguinal glands indurated and visible; excessive sweats; chronic diarrhœa.

13. Stool and Anus.—Sudden diarrhœa before breakfast, with nausea.—Severe hæmorrhages from bowels, cough.—Obstinate constipation.—Passes much ill-smelling flatus.—Stitch-like pain through piles.

14. Urinary Organs.—Increased quantity of urine, pale, with white sediment.—Has to rise several times in night to urinate.

17. Respiratory Organs.—Slight, tedious, hacking cough.—Hard cough, shaking patient, more during sleep but it did not waken him.—Pricking in larynx with sudden cough.—Single cough on rising from bed in morning.—Cough waking him in night; easy expectoration.—Expectoration of non-viscid easily detached, thick phlegm from air passages, followed after a day or two by a very clear ring of voice.—Sharp pain in precordial region arresting breathing.—Very sharp pain in l. scapula, < lying down in bed at night, > by warmth.

20. Neck and Back.—Glands of neck enlarged and tender.

23. Lower Limbs.—Pain in l. knee whilst walking; passed off after persevering in walking for a short distance.—Tubercular inflammation of knee.

24. Generalities.—Great weakness, did not want to be disturbed.

26. Sleep.—Drowsy during day; restless at night; many dreams.

27. Fever.—Flush of heat (soon after the dose), some perspiration, severe headache deep in.

Bacillinum Testium.

A nosode prepared from tuberculous testicle.

Clinical.—Inguinal glands, disease of. Mesenteric glands, disease of. Phthisis. Testicles, tubercle of.

Characteristics.—This preparation has been used by Burnett as having a more direct relation to the lower half of the body than the pulmonary *Bacillinum*. My own experience confirms the correctness of this inference; but it must not be supposed that *Bac. test*. does not act in pulmonary cases, or *vice versâ*.

Badiaga.

Spongilla fluviatilis. Fresh-water sponge. Trituration of the dried sponge gathered in autumn.

Clinical.—Breast, cancer of. Bruises. Bubo. Catarrh. Chilblains. Coryza. Eyes, pains in. Glands, affections of. Hay-fever. Hæmorrhoids. Heart, affections of. Indurations. Ophthalmia. Palpitation. Rheumatism. Scrofula. Syphilis. Tibia, pain in. Whooping-cough.

Characteristics.—*Badiaga* is the Russian name for the river sponge, which is a popular Russian remedy. Among the peculiar symptoms and indications are: Headache with aching in backs of eyeballs, 2 p.m. to 7 p.m.; < motion. Severe headache in vertex > night, returning severely after breakfast. Headache with inflamed eyes. Pains in eyeballs extending to head. (J. A. Biegler cured a case with the following symptoms: A lady had for months off and on a severe pain in r. eyeball, which extended to forehead over this eye, then to temple; always < in afternoon.) Scalp sore; dry; itching; scurf; tetters. Soreness is one of the key-notes of the remedy; general soreness of integuments and muscles; as if beaten; very sensitive. Profuse coryza, coming from nostril with a gush. L. cheek and malar bone sore to touch. Lancinating pains in stomach; liver; below scapulæ; urethra; chest. Buboes. Chancres suppressed by cautery. Infantile syphilis. Carcinoma of breast. There is a cough which causes sneezing, profuse coryza. Occasional severe fit of coughing ejecting viscid mucus flying out of mouth; caused by tickling in larynx as if a particle of sugar was dissolving in throat; > in warm room. Tremulous vibrative palpitation < lying r. side. Palpitation after pleasurable emotions. Soreness of anterior muscles of legs; toes bend while walking as if extensors were paralysed. It has lessened a hard cellular swelling of both legs. Sharp stinging back of r. heel, < least pressure. Chronic rheumatism, < by cold, especially in cold air. < Stormy weather. > In warm room; < afternoon. < Pressure and touch: there is general soreness, even to touch of clothes. Sore as if beaten. Headache > at night, after sleep.

Relations.—*Compare:* Spongia; Seneg. (cough *caused* by sneezing, opposite of Bad.); Grind. rob. (respiration ceases on falling asleep); Spo. (cough with much sneezing); Kali c. (phlegm flies from mouth); Calc. s. (indurations); Carb. an. (indurations, buboes); Cist. can. (scrofula); Clemat., Hep., Iod., Kali iod., Lach., Merc., Merc. iod., Nit. ac., Sil., Sul. *Followed well* by Lach. *Complementary to* Sul., Iod., Merc.

SYMPTOMS.

1. Mind.—After pleasurable emotions, palpitation.—Mind generally clear, active in spite of headache.

2. Head.—Headache from 2 p.m. to 7 p.m., with slight aching pains in the posterior portion of both eyeballs, and in the temples.—During the day more or less headache, with pain in the eyeballs (worse l.); more from 1 p.m. to 7 p.m.—Frontal headache during the forenoon, worse in the temples, and extending into the posterior portion of the l. eyeball; < by moving the eye.—Pain in the temples and eyeballs; from eyeballs to temples.—A very severe headache on top of the head; remains the same in all positions; better at night after sleeping, and better in the morning; returning violently after breakfast; lasting several days.—Headache with inflamed eyes.—Headache < on moving eyes.—Excess of dandruff, or dry, tetter-like appearance of the scalp, with slight itching; hair dry.—Scalp sore to touch, with tetter-like eruption on forehead.

3. Eyes.—Bluish-purple margin of the eyelids, and blue under the eyes.—Scrofulous inflammation of the eyes, with hardening of the Meibomian glands.—Severe pain from eyeballs (< l.) into temple; < turning eyes.—Intermittent neuralgia of r. eyeball, extending to temple, < afternoon.—Headache extending into the eyeballs.—L. eyeball quite sore, even upon closing it tightly.—Twitching of l. eyelid.

4. Ears.—Slight shocks heard in the ear, as of very distant artillery; afternoons.

5. Nose.—Profuse coryza, mostly from the l. nostril; comes with a gush; worse in afternoon and evening; with sneezing.—Coryza and cough.—Itching of l. ala nasi.

6. Face.—On forehead, tetter-like eruption.—Pale, ashy, or leaden colour of face.—Stiffness in the maxillary joints.—L. cheek and malar bone sore to touch.

8. Mouth.—Mouth and breath hot and feverish, with thirst for large quantities of water at a time.—Mouth and tongue feel scalded.

9. Throat.—Hawks up, in morning, masses of gluey bloody mucus from throat, which is inflamed and sore, < swallowing, solids.—Tonsils red, inflamed, < swallowing solids.

11. Stomach.—Pressure in epigastrium, nausea, and rumbling.—Lancinating in pit of stomach 8 a.m.; extends to vertebræ, r. scapula, at times to r. side, resulting there in pleuritic pain.

12. Abdomen.—Lancinating pain with a bounding movement in region of liver.—Indurated inguinal glands.—Syphilitic buboes.

13. Stool and Anus.—Catarrh of the bowels.—Constipation.—Hæmorrhoids.

14. Urinary Organs.—Severe, sharp, lancinating pain in or near orifice of urethra.—Urine high-coloured; and reddish.

15. Male Sexual Organs.—Chancres, after cautery, elevated discoloured cicatrices, rhagades.—Syphilis of infants, whole convolutes of hard glandular swellings, buboes.

16. Female Sexual Organs.—Carcinoma mammæ.—Metrorrhagia < night, with feeling of enlargement of head.

17. Respiratory Organs.—Breath hot and feverish.—Occasional severe paroxysms of spasmodic cough, ejecting viscid mucus from the bronchial tubes, which at times comes flying forcibly out of the mouth, < afternoon and evening, caused by tickling in the larynx, as if sugar was dissolving, > in warm room.—Cough = sneezing; profuse coryza.—Pain in upper part of r. chest.—Pleuritic pain, < on motion or on full inspiration; with soreness.—Severe, sharp, lancinating pain in r. supra-clavicular region.—Stitches in sides, esp. r.—While lying on r. side in bed, and at moment of becoming unconscious by sleep, severe oppressive suffocative attacks from suspended respiration, causing a quick effort to prevent suffocation by changing position.—Typhoid pneumonia.

19. Heart.—Severe vibrating, tremulous palpitation of the heart, even while sitting or lying, quiet, upon any sudden elating or other emotion of mind.—Lying on r. side, heart is heard and felt to pulsate from chest up to neck.

20. Neck and Back.—Very stiff neck.—Soreness and lameness, with stitches in nape of neck, < by bending the head back and forth.—Scrofulous swelling of the glands of the l. side of the face, throat, and neck; nearly as large as a hen's egg; some hard, some suppurating.—Severe lancinating pains and stitches in the posterior r. side, below the scapula, much < by throwing the shoulders back and chest forward, or any contortions of the body; pain extorting at times a mean or shriek.

22. Upper Limbs.—Palms of hands hot and dry.

23. Lower Limbs.—Several hard, small lumps along the shin-bone.—Hard cellular swelling of the legs.—Anterior muscles of r. leg sore, as if beaten.—At night violent lancinating pains in the limbs.—Hard swellings of both legs lessened.—Hurts of horses' hoofs.—Bad ulcers of horses' feet.—Toes bend while walking as if extensors paralysed.—Checked foot-sweat.

24. Generalities.—General soreness of the muscles and integuments of the whole body; flesh sore to touch, even of the clothes; sore as if beaten.

25. Skin.—Skin sore to touch.—Raised and discoloured scars.—Rhagades.—Brown and blue spots after concussions.—Externally applied causes checked eruptions to reappear.—Tetters on scalp and forehead; itching on scalp.

26. Sleep.—Restless at night; must frequently change position, body feels so sore.—Awake 3-4 a.m. with frightful dreams and severe cramping pains in metatarsal bones of both feet.—> After sleep (head).

Balsamum Peruvianum.

Balsam of Peru. Myroxylon Pereiræ. N. O. Leguminosæ. Tincture of the balsam that flows from the stems.

Clinical.—Bronchitis. Catarrh. Cracks. Epistaxis. Hectic. Itch. Phthisis. Ulcers.

Characteristics.—Peruvian Balsam has been chiefly used empirically in catarrhal phthisis or bronchial catarrh with copious purulent expectoration. Sputa thick, creamy, yellowish white; loud râles, night sweats, hectic. Hale has used it with success in "chronic, purulent, fetid anterior or posterior nasal catarrh, with or without ulceration." He says that a cerate of the *Balsam* is the best application next to *Glycerole of Aloes* for indolent ulcers, cracked nipples, cracks in fingers and palmer surfaces of hands, or fissured and chapped lips. The *Balsam* is also used externally for killing the acarus of itch. All parts affected are gently rubbed with it at night and a bath taken in the morning. A single application is sufficient. It has been proved by Lembke.

SYMPTOMS.

5. Nose.—Bleeding from r. nostril without coryza, or sneezing, or blowing nose; repeated at 7 p.m.—Profuse thick discharge from nose, whether chronic or otherwise.—Ozæna with ulceration.

9. Throat.—Continued scraping of fauces.

11. Stomach.—Vomiting of food and mucus; catarrh of stomach.—Mucous diarrhœa, &c.

13. Stool.—Copious liquid stool, painless.—Passage of blood with normal stool (does not have piles).

14. Urinary Organs.—Sticking and cutting in urethra.—Urination more frequent and copious.—Urine scanty, with mucous sediment; catarrh of bladder.

17. Respiratory Organs.—Scraping in larynx in forenoon; dry cough.

18. Chest.—Cough, mucous and purulent expectoration.—Phthisis of mucous type; vomica in lungs.

22. Upper Limbs.—Oppressive pain in r. wrist.

23. Lower Limbs.—Severe pain in l. tibia.—Boring in r. tibia.

24. Generalities.—Debility; rhagades of nipples and fingers.

Baptisia Confusa Acetica.

Australian Baptisia. N. O. Leguminosæ. Acetum of stem and leaves.

Clinical.—Headache. Oppression. Spleen pain. Typhoid. Vision, defective.

Characteristics.—Mr. J. Meredith ("Agricola") communicated to the *Hom. World* (xxxi. 267) his experience with this shrub. Symptoms produced on himself were: Congestion of fore part of head. Vision weak. Hectic flush after tea. Right molar felt too long,< by pressure, intermittent; right jaw (later both jaws) stiff and painful at joint. Sciatica left side. Appetite increased, more energy for brain work. Sleep improved. But the most remarkable effect was the relief of a distressing symptom which had troubled him many months, and which the ordinary *Bapt. tinct*. in any preparation had failed to relieve. He describes it as "a really distressing left hypochondrium oppression, fulness and actual dyspnœa, impelling me to assume an erect position." This would continue half the night. It was uninfluenced by eating. The distress was located either in the spleen or splenic curve of the colon. The *Bapt. c. acet*. seemed to relieve the part very rapidly, causing something to move to the left and downwards, after which he went to sleep. A case simulating typhoid was rapidly relieved by the remedy—showing its relation to *Bapt. tinct*.

Baptisia Tinctoria.

Wild Indigo (United States of America.) N. O. Leguminosć. Tincture of fresh root and its bark.

Clinical.—Abortion, threatened. Apoplexy. Appendicitis. Biliousness. Brain softening. *Cancer. Consumption*. Diphtheria. Dysentery. *Enteric fever*. Eye, affections of. Gall-bladder, affections of. Gastric fever. Headache, bilious. *Hectic fever*. Hysteria. *Influenza*. Mumps. Śsophagus, stricture of. Plague. *Relapsing fever*. *Sewer gas-poisoning*. Shivering. Stomatitis. Tabes mesenterica. Tinea capitis. *Tongue ulcerated*. Typhus. Variola. *Worms*.

Characteristics.—*Baptisia* has gained its greatest reputation as a remedy in typhoid fever, to the symptoms of which its pathogenesis strikingly corresponds. But it is only when it is used strictly in accordance with its symptoms that it will give successful results. When given as a matter of routine there are sure to be failures. Another disease in which it has proved specific in a large number of cases is epidemic influenza. The besotted countenance, bleary eyes, aching head, sore throat, pains and soreness all over the body, and profound prostration which are present in all typical cases indicate *Baptisia* before any other remedy.

Among the chief symptoms of the remedy are the following: Stupor, falls asleep whilst being spoken to, confused as if drunk. Cannot keep his mind together, a wild wandering feeling. This scattered feeling is further exemplified in the illusion that the body is double; limbs separated and conversing with each other; can't sleep because body seems scattered about and cannot collect pieces. There is a dull heavy sensation in head with drowsiness and heavy eyelids. The head feels large, with a numb feeling of head and face. Bruised headache; soreness as if in brain; bruised feeling in occiput; heavy feeling at base of brain with drawing in cervical muscles. Frontal headache with pressure at root of nose. The neck is tired, cannot hold head easy in any position. The eyes cannot bear light; burn; are weak; painful on reading. Weight on eyes; eyeballs sore, lame on moving. Blear-eyed. Lids partially paralysed. An illusion of smell "as of burnt feathers" has been caused and cured by it. Pain in left parotid gland. Flat, bitter taste. Tongue swollen; feels numb; speech difficult. Is coated whitish yellow, and feels burnt or scalded. Dry, parched, brown centre; cracked and ulcerated. Canker sores in mouth. Ulcerations. The sore-mouth of sucklings. Painlessness is a feature in the sore throat; putrid, painless, dark ulcers. Śsophagus feels constricted down to stomach; can only swallow liquids; cases of convulsive contraction of śsophagus and cardiac orifice, with regurgitation of food, have been cured by it. In one case, that of an old man, food could be swallowed and retained some days, but not on others. He had always liked very hot food. The śsophagus was red and granular. *Bapt*. 12 cured. Nausea, retching and vomiting. Sinking, gone feeling. Pain in liver; and especially in gall-

bladder; in spleen; in right iliac region; in groins; glands swollen. Soreness of abdominal muscles and right iliac region. Fetid exhausting diarrhśa; dysentery in autumn or hot weather. Worms. The urine is high-coloured, scanty, alkaline, fetid. Orchitis, squeezed pain in testes. Hale considers it specific in threatened miscarriage from mental depression, shock of bad news, watching, fasting, or low fever. Patients in these conditions often complain of "dreadful sinking at the stomach," fetid breath and other symptoms of *Baptisia*. Many cases of phthisis are relieved by this remedy when the symptom and type of fever correspond. Lumbar backache. Feels as if lying on a board. Pain in sacrum. Weakness of lower limbs. Left foot much prickling and numbness. Numbness and soreness are very general in *Baptisia* patients. It has cured hysteria with prostration, numbness and fear of paralysis, wanted to die, rubbed hands continually, restlessness. The bed feels hard. There is excessive drowsiness. < On waking; < walking; < open air; < cold wind; < autumn or hot weather.

Relations.—*Compare:* Arn., Arsen., Bry.; Gels. (malaise, nervousness, flushed face, drowsiness, and muscular soreness); Ecchin. angust., Hyo., Kali mur., Lach., Mur. ac. and Nit. ac. (typhoid); Nux v., Op., Rhus t. *Follows well:* Ars. *is followed well by:* Tereb., Nit. ac., Ham. Silic has, like Bap., ability to swallow only liquids (like milk), but unlike Bap., Silic has aversion to milk. Ecchinacea angustifolia is perhaps its nearest analogue.

SYMPTOMS.

1. Mind.—Stupor; falls asleep while being spoken to, or answering; heavy sleep till aroused; awakes only to again fall asleep in the midst of his answer, which he vainly endeavours to finish.—Indisposed to think, want of power; mind seems weak, confused, as if drunk.—Cannot confine his mind: a sort of wild, wandering feeling.—Gloomy, unhappy state of mind.—Body feels scattered about, tosses around to get the pieces together; cannot sleep because he cannot get pieces together.—Mind wanders as soon as the eyes are closed.—Mentally restless but too lifeless to move.—Indisposed to think; inability to memorise.—< When thinking of pains in various parts of body.

2. Head.—Vertigo, and weak feeling of entire system, esp. lower limbs and knees.—Vertigo, with paralysis of eyelids.—Peculiar feeling in head, which is never felt except during fever, excitement of brain such as precedes delirium.—Dull, heavy pressive headache.—Frontal headache, with pressure at root of nose; with feeling of fulness and tightness of whole head.—Head feels large and heavy, with numbness of head and face.—Sharp darts of pain in supraorbital nerve at foramen.—Frequent sharp pains by spells in r. and l. temple.—Soreness in the brain, worse on stooping.—Top of head feels as if it would fly off.—Dull, bruised feeling in occiput.—Skin of forehead feels tight.—Scalp feels sore.—Sensation as if head swelling.—Neck feels so tired she cannot hold her head easy in any position.

3. Eyes.—Cannot bear light eyes burn but do not water.—Feeling as if eyes would be pressed into head eyeballs feel sore, with great confusion of sight; cannot place anything until after looking at it a few seconds; everything appears to move.—Severe pains in eyes on reading, compelling to stop.—Bloated feeling of eyes, glistening; disposition to have them half closed.—Eyeballs feel sore; sore and lame on moving them.—Partial paralysis of lids.

4. Ears.—Dull hearing.—Delirium with almost complete deafness.—Slight pain in l. parotid gland.

5. Nose.—Dull pain at root of nose; crampy sensation.—Sneezing and feeling as after a severe cold; slight bleeding from r. nostril of bright red blood, thick.—Epistaxis of dark blood.—Sensation of fulness; śdema of affected parts, esp. in choanć.—Illusion of smell: as of burnt feathers.

6. Face.—Face flushed, dusky, hot; dark-red, with a besotted expression.—Muscles of jaw rigid.

8. Mouth.—Sordes on the teeth and lips.—Tongue yellow along the centre; first white, with reddish papillć, followed by yellow-brown coating in centre, edges dark-red and shining; dry, brown down the centre; cracked, sore, ulcerated.—Filthy taste with flow of saliva.—Saliva rather abundant, somewhat viscid, tasting flat.—Numb, pricking sensation in tongue.—Putrid ulcers of the buccal cavity, with salivation.—Mouth and tongue very dry in fevers.—Putrid; offensive; fćcal breath.—Flat, bitter taste in mouth.

9. Throat.—Pain and soreness of fauces.—Constrictive feeling in throat, causing frequent efforts at deglutition.—Throat feels swollen or full.—Fauces dark-red; dark, putrid ulcers; tonsils and parotids swollen; absence of pain, and great prostration.—Difficult deglutition; can only swallow water; śsophagus feels as if constricted from above down to stomach.

11. Stomach.—Sinking, gone feeling at the stomach.—Constant desire for water, with nausea and want of appetite.—Great thirst.—Loss of appetite; averse to nourishment and stimulants.—All symptoms < from beer.—At night, frequent pain in the epigastric region; < from turning over, which he had to do all the time.—Full feeling in stomach.—Heavy gnawing in stomach.—Burning heat rising up to throat.—Pains in stomach; feeling there as of a hard substance.

12. Abdomen.—Pain in liver, from r. lateral ligament to gall-bladder; can scarcely walk, it so augments pain in gall-bladder.—Constant severe pain over gall-bladder.—Constant pain in stomach and liver; < walking; hot sensation; heavy aching in liver.—Pain in liver region on going upstairs.—Constant aching distress in stomach and umbilical region.—Pain in region of spleen, with darts of pain in body, esp. in carpus, metacarpus, and phalanges.—R. iliac region sensitive.—Fulness and

distension of the abdomen.—Abdominal muscles sore on pressure.—Sharp, rheumatic pains in groins, lasting a short time but returning after short interval, < from walking.—Glands of l. groin swollen; painful on walking.

13. Stool and Anus.—Frequent small, thin, dark, offensive, and acrid stools.—Very fetid, exhausting diarrhśa; excoriating.—Stool papescent, with large quantities of mucus; no pain.—Dark-brown mucous and bloody stools, with tenesmus and typhoid tendency.—Dysentery: rigors, pains in limbs and small of back; stools small, all blood, not very dark but thick; tenesmus; great prostration, brown tongue, low fever; in autumn or in hot weather, constipation; severe, with hćmorrhoids; in afternoon.—Stricture from piles.

14. Urinary Organs.—Stitches in region of r. kidney; shooting in l. kidney.—Burning when urinating.—Urine rather scanty, dark-red colour; alkaline; fetid.—Light-green urine.

15. Male Sexual Organs.—Orchitis.—Pressing pain in l. testicle; cramp, as if squeezed.

16. Female Sexual Organs.—Menses too early and too profuse.—Excites abortion.—Lochia acrid, fetid.—Puerperal fever.—Stomatitis materna.

17. Respiratory Organs.—Aphonia.—Larynx sore to touch, painful swallowing or speaking.—Fetid breath.—Awakes with great difficulty of breathing; the lungs feel tight and compressed; must have fresh air.

18. Chest.—Constriction and oppression of the chest.—Weight and oppression in precordial region, with a feeling of unsatisfied breathing; afternoon.—Sharp pains in centre of sternum.—Dull stitches in l. nipple.

19. Heart and Pulse.—Feeling of greatly increased compass and frequency of heart's pulsations; seem to fill chest.—Pulse at first accelerated, afterward slow and faint.

20. Neck and Back.—Neck tired; sore down neck.—Stiffness and lameness of cervical muscles; < on moving head.—Back and hips very stiff, ache severely; < walking.—Feels as if lying on a board; changes position often, bed feels so hard; < in region of sacrum.—Dull sacral pain, compounded of a feeling as from a pressure and fatigue, from long stooping; soon extending round hips and down r. leg.

21. Limbs.—Wandering pains in all the limbs with dizziness.—Drawing pains in arms and legs; aching in the limbs.

22. Upper Limbs.—Constant twitching in l. deltoid.—Pain in l. shoulder, extending down arm.—Pains in bones of arms and hands.—Numbness of l. hand and forearm, with prickling.

23. Lower Limbs.—Soreness in front of thighs, < after sitting.—Limbs weak and vacillating.—L. foot numb, prickles.—Burning of top of r. foot from toes to back of foot.

24. Generalities.—Restless; does not sleep quietly; wants to be on the move.—Great languor; wants to lie down.—Tired, bruised, sick feeling in all parts of the body.—Weak and tremulous, as if recovering from a severe illness.—Great weakness, esp. in lower limbs.—Prostration, with disposition of fluids to decompose.—Indescribable sick feeling all over.—Numbness prickling and paralytic feeling over the whole body, esp. l. side.—Ulceration of mucous membranes, esp. of the mouth, with tendency to putrescence.—Discharges and exhalations fetid.—Sensation all over the body as if bruised or beaten.—Feels as if lying on a board; changes position, bed feels so hard makes him feel sore and bruised.

25. Skin.—Great burning and heat in skin; < in face.—Livid spots over body and limbs.—Eruption like measles or urticaria.—Confluent small-pox, tardy eruption.—Foul, gangrenous, eating syphilitic sores.

26. Sleep.—Delirious stupor; falls asleep while answering a question or being talked to.—Sleeps well till 2 or 3 a.m., then restless till morning.—Drowsy, stupid, tired feeling; disposition to half close the eyes.—Restless, with frightful dreams.—Wants to get out of bed.—Cannot sleep, limbs seem scattered about so.

27. Fever.—Chilly going into the open air; chills over the back and lower limbs.—Chilly, with soreness of body.—Whole surface hot and dry, with occasional chills, mostly up and down the back.—On awaking, 3 a.m., flashes of heat; feeling as if sweat would break out.—An uncomfortable burning all over surface, esp. face; moves to cool part of bed; finally rises, opens window and washes.—Typhoid and cerebral forms of fever.—Beginning of typhus when the so-called nervous symptoms predominate; causes sweat to break out and relieve; typhus; critical sweat on forehead and face.—Fever originating from confinement on shipboard, without good care or food.—Fetid sweat.

Barosma.

B. betulina, B. crenulata, B. sanatifolia. Buchu (South Africa). N. O. Rutaceæ (Genus, Diosmeæ). Tincture of dried leaves.

Clinical.—Bladder, affections of. Calculus. Catarrh. Gravel. Leucorrhœa. Prostate, disorders of.

Characteristics.—The leaves of several species of Barosma contain in vittæ a volatile oil, having a warm camphoraceous taste and an odour something like mint. There are no provings of the remedy, and the only uses made of it have been with the tincture. But it has a markedly specific effect on mucous membranes generally, and especially on the genito-urinary system, closely resembling that of *Sabal ser., Populus, Copaiva*, and *Thuja*. Hale gives as indications: chronic affections of genito-urinary organs having *muco-purulent discharges*, abundance of epithelium mixed with pus and mucous corpuscles. Irritable bladder, with vesical catarrh or gravel; with spasmodic stricture. Prostatic disorders. Vaginal Leucorrhœa. Undue secretions from mucous follicles of urethra, vesiculæ seminales, or prostate produced by excessive venery or self-abuse.

Baryta Carbonica.

Carbonate of Barium Ba $C0_3$, with which are included symptoms of Baryta acetica—Barium acetate $Ba(C_2H_3O_2)_2$. (I follow Hering and Hahnemann in combining the two, as I agree with Hering that "there is hardly any difference between the two, and certainly none in the symptoms cured.") Solution of acetate; trituration of carbonate.

Clinical.—*Aneurism*. Apoplexy. Atrophy. Baldness. *Brain, affections of*. Cysts. Foot-sweat. *Glandular swellings*. Hćmorrhoids. *Heart, affections of. Memory defective*. Śsophagus, spasm of. Panaris. *Paralysis*. Parotitis. Prostate, enlarged. *Quinsy. Throat, sore. Tonsils, enlarged. Tumours*. Warts. *Wens*.

Characteristics.—*Baryta* corresponds to scrofulous conditions in children and old age; dwarfish children and childish old people. Old people who are fat. Those liable to take cold easily; sore throat from cold; glandular affections. Many cases of aneurism have been cured with *Baryta*, mostly in lower attenuations. It corresponds to the atheromatous condition. A paralytic condition runs throughout the pathogenesis. There is paralysis of mind and body. Mistrust; want of self-confidence; aversion to strangers (the child does not want to play). It has cured a case of fetid foot-sweat with spells of despondency, seeking solitude, sobbing and crying. Deficient memory (children cannot remember and learn). Sensation as if brain loose. Vertigo: with nausea; from stooping; when lifting arms up; in old people. Pressure and sticking in brain, at vertex on waking. It has cured baldness in young people; tinea, wens. The scalp is very sensitive to touch. Enlarged glands in occiput and neck. On the face there are rough, dry and herpetic eruptions. Dark redness. Tension of whole face as if white of egg had dried on it; as if a cobweb (*B. acet*.) over face, temples, and scalp. Painful swelling of parotid and of submaxillary glands. The sense of smell is very acute. There is an illusion of smell as of pine smoke. Nose-bleed before menses. The tongue is paralysed. Salivation; saliva runs out during sleep. The digestion is weak; after eating, pressing in

stomach; and pain in hard, swollen abdomen. Sensation of soreness of stomach; while eating it feels as if the food had to force its way through some raw place. It has proved curative in the habitual colic of children who do not thrive; enlarged mesenteric glands; hungry, but refuse food, swallowing painful. The anus is sore and humid. Piles protrude with urination as well as stool. Constipation, with hard, knotty stools; hćmorrhoids, burning and soreness. The paralytic condition appears in the sexual organs. Impotence. Soreness and moistening between scrotum and thighs. Enlarged prostate. There is also a paralytic condition of the respiratory organs. There is a feeling in the larynx as if inspiring smoke or pitch. Hoarseness and loss of voice from cough, mucus in larynx and trachea. Suffocating catarrh and paralysis of lungs in old people. Sensation as if lungs full of smoke. There is a spasmodic cough, like whooping-cough, from roughness and tickling in throat and pit of stomach. Cough < evening till midnight; after getting feet cold; exercise; lying left side; cold air; thinking of it. Palpitation with soreness of heart, < lying on left side; < thinking of it. Violent long lasting palpitation; felt in head. Palpitation < on exertion. Slightest exertion makes him feel tired and sleepy. These heart symptoms of *Bar. c*. are met with in many cases of aneurism and atheroma, and no remedy has a better record here. I cured an advanced case of thoracic aneurism with the 3x. *Baryt. c*. has cured tumours of several kinds. Induration in the breasts. Sarcoma in neck with burning. Fatty tumours, especially about the neck. Swelling and induration of glands. A marked symptom is, pulsation in the back. Stiffness and tension in small of back, in evening, especially while sitting, allowing neither to rise nor to bend backwards. Painfulness of arms and swelling of axillary glands. Cold feet. Fetid perspiration of feet. Corns with burning and stinging. Burning and drawing pains are frequent in lower limbs. A case has been recorded in which *Baryt*. removed in an old man a pain, coming suddenly, in hollow of knee and running down back of leg like a thin stream of hot fluid or molten metal, running down under the skin. Tearing in limbs with chilliness. Tension and shortening of muscles. Intolerable irritation all over like prickings and tingling, waking him at night. Itching, sore and humid skins.─Warts.─Burning pains are found in many parts. General soreness and sensitiveness. Small wounds ulcerate and get very sore.

Chilliness predominates. It has cold, clammy feet as notably as *Calcarea*. < Cold air; cold washing; damp weather; warm food; in sun (headache); near warm stove (headache). < From raising arms, < from mental emotion. < Thinking of complaints. < In company; > alone. > From cold food. Left side much affected. Offensive sweat of one side (mostly left). < Lying on painful side; on left side. < After eating. After eating, so weak cannot raise his hands; too weak to masticate.

Relations.─*Compare:* Alum., Ant. t. (paralysis of lungs); Bell., Calc. c. (scrofulosis, coryza, &c.); Calc. iod. (large tonsils); Caust. (paralysis); Cham., Chi., Con. (old people); Dulc. (catching cold); Fluor. ac. (old people); Iod. (glands); Lach., Lyc. (tonsils); Mag. c., Merc. (colds, glands, diarrhśa); Nat. c.,

Phos., Puls., Sep. (tinea); Silic. (glands, fetid foot-sweat, but Bar. c. lacks the head-sweat of Silic., and Silic. has self-will instead of the weak-mindedness of Bar. c.); Sul., Tell. *Antidoted by:* Ant. t., Bell., Camph., Dulc., Merc., Zn. *Compatible:* after Scilla, Ars. Before and after Sul. *Incompatible:* Calc.

Causation.—Checked foot-sweat.

SYMPTOMS.

1. Mind.—Lachrymose disposition.—Repugnance to strangers or to society; (the sight of them < symptoms or causes a recurrence).—Mistrust; want of self-confidence, the child does not want to play.—Anxious inquietude about domestic affairs.—Scrupulous, irresolute, suspicious temper, with mistrust of one's self.—Fear and cowardice.—Aversion to play (in children).—Sudden fits of passion from trifling causes.—Incessant activity.—Great weakness of memory.—Inattention to studies in children.—Deficient memory (children cannot remember and learn).

2. Head.—Vertigo, with nausea, and headache on stooping.—At night everything rocks with him as on a ship.—Aching pains in the head, principally in the forehead, over the eyes, and the root of the nose, or with tension in the occiput, towards the nape of the neck.—Pricking, lancinating pains in the head, esp. provoked by the heat of a stove.—Pressure in brain under vertex, towards occiput, on waking, with stiffness of neck.—Digging in the head, with a sensation of looseness of the brain.—Painful sensibility in the scalp.—The scalp is very sensitive to the touch, esp. on the side on which he lies, with the sensation of sugillation, worse from scratching.—Numbness in skin of forehead to root of nose.—Tendency to take cold through the head.—Itching and gnawing in the scalp; and external head, particularly behind the ears; lobe of the ear, or lobes of the ears; upper lip; nape of neck.—Eruptions and humid or dry scabs on the head.—Baldness.—Losing hair from crown of head.

3. Eyes.—Aching and burning pain in the eyes, esp. on fatiguing the sight.—Inflammation of the ball of the eye and of the eyelids, with pain as of excoriation, sensation of dryness with photophobia.—Swelling of the eyes in the morning.—Exophthalmos.—Scrofulous inflammation with phlyctenulć and ulcers on cornea.—Stye in inner corner of l. eye.—Tarsal tumours.—Agglutination of the eyelids.—Confusion of sight, which prevents one's reading.—Specks flying about, and black spots before the eyes.—Sparks before the eyes in the dark.—Dazzling of the eyes by the light.

4. Ears.—Itching in the ears.—Nocturnal pulsation in the ears when they are lain upon.—Eruptions on the ears or behind the ears.—Parotids swollen and painful.—Hardness of hearing.—Tinkling and roaring in the ears.—Cracking in the ears on swallowing, on sneezing, and on walking quickly.—Tearing in bone in front of r. ear.

5. Nose.—Epistaxis, esp. after having blown the nose; before catamenia.—Crusts below the nose.—Very acute sense of smell.—Smells pine smoke.—Fluent coryza with abundant secretion of thick mucus.—Painful dryness of the nose.—Coryza; with upper lip swollen, < mornings.

6. Face.—Face deep red, with purple lips, and great ebullition of the blood.—Sensation of swelling and tension in the face, as if it were covered with cobwebs.—Pains in the face with tensive swelling.—Eruption on the face.—Lips dry and cracked.—Swelling of upper lip; with burning pain.—Acute pain in the joint on closing the jaws.—Swelling of the submaxillary glands, with induration.

7. Teeth.—Toothache only in the evening, in bed.—Pullings, throbbing, and shocks in the teeth, extending even to the ear and the temple.—Toothache < when thinking about it.—Burning shootings in the carious teeth, excited by contact with anything hot.—Toothache before the catamenia, with pale red swelling of the gums and of the cheek.—Bleeding of the gums.—Fistula dentalis.

8. Mouth.—Buccal cavity feels numb.—Dryness of the mouth.—Accumulation of saliva in the mouth.—Offensive smell from the mouth.—Inflamed vesicles in the mouth and on or under the tongue.—Cracks in the tongue, with burning pain as of excoriation.—Paralysis of tongue.—Cold tongue, somewhat black (*Acet.*).—Tongue coated as if fuzzy.

9. Throat.—Sore throat, with swelling of the palate and of the amygdalć, which suppurate.—Sensation, as if one had a plug in the throat.—Suffocation and contraction in the throat.—Shootings, and pain as of excoriation, in the throat, esp. during the act of deglutition.—Spasm of śsophagus; can only swallow liquids.—Sensation in śsophagus as if a morsel of food had lodged there.

10. Appetite.—Disagreeable, or bitter taste, generally in the morning, with tongue much loaded.—Sour taste, esp. before, but not after a meal.—Continual thirst.—Appetite weak, and soon satisfied, although the food pleases the palate.—After dinner, pains in the stomach, uneasiness, indolence, and aversion to labour.—Weakness of digestion.—Cough from warm food.—> From cold diet.

11. Stomach.—Sinking sensation in the afternoon.—Risings after a meal.—Frequent risings, abortive or sour.—Discharge of phlegm from the stomach.—Vomiting of mucus.—Nausea, chiefly in the morning, when fasting, and sometimes as if in consequence of indigestion.—Pains in the stomach, when fasting, after a meal, or on pressing upon the epigastrium.—Sensibility and pain in the epigastrium at every step taken.—Heaviness, fulness, and pressure in the stomach and epigastrium, ever. after having eaten little.—Weakness of the digestion after eating, pressing in the stomach; and pain in the hard, swollen abdomen.—Sensation as if stomach were hanging relaxed.—Pain, as of excoriation, in the region of the stomach, with a sensation when eating as if the parts through which the food passes were raw.

12. Abdomen.—Pain in the abdomen, relieved by eructation or by external heat.—Painful tension and inflation of the abdomen.—Colic, with retraction of the navel.—Pinchings and cuttings in the abdomen, with inclination to evacuate, as if diarrhśa were coming on.—Accumulation of flatulency in the abdomen.

13. Stool and Anus.—Evacuations difficult and knotty, or hard and insufficient.—Frequent inclination to evacuate, with a sensation of anxious uneasiness in the lumbar region, shiverings passing over the thighs, and evacuations soft and loose.—Sudden irresistible urging to stool, with painful soreness in the lumbar region, followed by frequent diarrhśic stool (Acet.).—Urgent desire to evacuate, which can scarcely be repressed.—Expulsion of ascarides.—Crawling in the rectum (ascarides).—Appearance of hćmorrhoidal excrescences, with shooting pain.—Itching, sensation of burning, excoriation and oozing at the anus.

14. Urinary Organs.—Frequent inclination to make water, with abundant emission.—Urgent inclination to make water; it can hardly be retained.—During urination, burning in urethra.

15. Male Sexual Organs.—Diminution of sexual desire, and weakness of the genital functions.—Relaxed penis, premature emissions.—Falling asleep during coition, without the emission having taken place.—Gleet.—Hypertrophied prostate.—Excoriation and oozing between the scrotum and the thighs.—Erections only in the morning before rising.

16. Female Sexual Organs.—Diminution of sexual desire in women.—Catamenia too feeble, and of too short duration.—Leucorrhśa a little before the catamenia.—Before and during menses: toothache; colic; pain in back.

17. Respiratory Organs.—Catarrh, with cough, voice hollow and low, and fluent coryza.—Suffocative catarrh and paralysis of the lungs in old people.—Sensation of smoke in the larynx.—Spasmodic cough (like whooping-cough) from roughness and tickling in the throat and pit of the stomach.—Cough worse in the evening till midnight; after getting the feet cold; from exercise; when lying on the l. side; in the cold air; from thinking of it.—Hoarseness and loss of voice, from an accumulation of viscid mucus in the throat and on the chest, with dry cough, chiefly at night, in the evening, or in the morning.

18. Chest.—Difficulty of respiration and shortness of breath, with sensation of fulness in the chest.—Pains in the chest, mitigated partly by eructations and partly by external heat.—Sensation of soreness in the chest.—Sensation, as if something hard dropped down in the chest.—Fulness and pressive heaviness on the chest, esp. when ascending, with shooting in the act of respiration.

19. Heart.—Very violent throbbings of the heart.—Throbbing of the heart excited by lying on the l. side, or renewed by thinking of it.—Palpitation felt in head.—Atheroma and aneurism.

20. Neck and Back.—Stiffness at the nape of the neck.—Shootings in the nape of the neck.—Aching pains in the nape of the neck.—Steatoma in the nape of the neck, with burning pain in the bottom of it.—Swelling and induration of the glands of the neck.—Encysted tumour under the arm-pit.—Sacral pains, more violent when seated than when in motion.—Tensive stiffness in the loins, aggravated in the evening to such an extent that one cannot get up from one's chair, nor stand up straight.—Tension in the shoulder-blades, the nape of the neck, and the muscles of the neck, esp. in a sharp and cold air.—Burning pain and throbbing sensation in the back, esp. after mental emotion.—Beating and pulsation in the back.—Stiffness in the small of the back in the evening, esp. while sitting, which allows neither to rise nor to bend backwards.

22. Upper Limbs.—Swellings of the arms, with pain of the axillary glands.—Pain in the deltoid muscle on raising the arm.—The arm becomes numbed when one lies down.—Hands cold, with bluish spots.—Swollen veins and redness of the hands.—Hands dry, like parchment.—Trembling of the hand when writing.—Violent tingling and gnawing in the palm of the hand, with desire to scratch.—Peeling off of the skin of the back of the hand, and of the tops of the fingers.—The fingers are numbed.—Panaris.

23. Lower Limbs.—Pain, as of dislocation or of stiffness of the coxo-femoral joint.—Tension in the legs, as if the tendons were too short.—Drawing pain in r. nates as if the flesh were being torn off.—Violent stitches; burning in nates.—Drawing pain down whole l. leg (*Acet.*).—Burning pains: in nates; in bend of thigh; in knee-pan; in soles.—Tractive and acute pains in legs, as if in the bones.—Itching in the thighs, even at night.—Shootings in the joints of the knee.—Tension in the tibia and in the calves and the legs.—Cramps in the calves of the legs and in the toes on stretching out the limbs.—Inquietude and trembling in the legs and feet.—Pain in the joint of the foot, as from a sprain.—Fetid sweat of the feet.—Ulcers in the feet.—Lymphatic and painful swelling in the fleshy part of the great toe.—Pain like that of a corn in the callous part of the sole of the foot, esp. when walking.—Corns, with burning shootings and pinchings.

24. Generalities.—Pains in the joints and in the hollow bones.—Cramp-like pressure or pulling, with paralytic weakness, or tension, as if from contraction of the tendons, in different parts.—Paralysis and palsy of aged persons.—Acute drawing pains in the limbs, with shuddering.—At night, starting of the muscles.—Shakings and startings of some of the limbs, and of the whole body during the day.—Tearing in the limbs with chilliness.—The symptoms exhibit themselves particularly on the l. side, and when sitting; they disappear on movement, or in the open air.—Swelling and induration of the glands.—Heaviness

in the whole body.—Great uneasiness and over-excitability of all the senses.—Great weakness, which does not permit a long-continued standing posture.—Great weakness of mind and body of old men.—Necessity to lie down, or to be seated.—Intellectual, nervous, and physical weakness.—Emaciation, or bloating of the body and of the face, with inflation of the abdomen.—Great tendency to catch cold, which commonly occasions inflammation in the throat.

25. Skin.—Sensation in different parts, like the pricks of burning needles, itching and crawling sensations.—Intolerable itching and tingling over the whole body at night.—Excoriation and oozing in several parts of the skin.—Injuries in the skin healing with difficulty.—Swelling and induration of the glands.—Warts.—Whitlows.

26. Sleep.—Somnolency in the daytime.—Drowsiness night and day.—Nocturnal sleep, agitated, with frequent waking and anxious dreams.—At night, ebullition of the blood; strong pulsations of the heart, and sensation in the heart as if it were excoriated, with great anxiety, and inability to lie on the l. side.—Sleep with many unquiet dreams.

27. Fever.—Pulse accelerated but weak.—Strong disposition to chilliness.—Shuddering, with corrugated skin, and uprising of the hair, or with tension of the face.—Shuddering, which runs over the whole body, beginning at the face, or at the epigastrium, followed by a transient heat over the whole body.—Chilliness relieved by external heat.—Flushes of heat, more at night, with great restlessness.—Perspiration, one-sided (l.) every other evening.

Baryta Iodata.

Baric iodide. Ba I_2. Trituration.

Clinical.—Breast, cancer of. Cancer. Glands, enlargement of. Tumours.

Characteristics.—*Baryt. iod*. has been used empirically, especially in cases of glandular enlargement and new growths, on indications suggested by its two elements.

Baryta Muriatica.

Chloride of Barium. Ba Cl_2 $2H_2O$.

Clinical.—Aneurism. Anus, abscess of. Asthma. Convulsions. Deafness. Dyspepsia. Fistula. Glandular swellings. Gleet. Gonorrhœa. Idiocy. Leucorrhœa. Mania. Mumps. Nymphomania. Otorrhœa. Pancreatitis. Paralysis. Scrofula. Sterility. Testicles, affections of. Tinea capitis. Tinnitus. Tonsillitis. Tumours.

Characteristics.—The symptoms of *Baryta mur*. are like those of the other Barium salts, but it has a distinct character of its own. Convulsions are more marked in the muriate. Periodical attacks of convulsions, with excessive jactitation of the limbs. Idiocy. Mania, with increase of sexual desire; "in every form of mania as soon as the sexual desire is increased." Offensive otorrhœa. Parotid glands hard and swollen (especially right). It has cured whizzing and buzzing in ears; noises on chewing and swallowing. Deafness. Great salivation and odour from mouth as from mercurialisation. Swelling of salivary glands. Disposition to tonsillitis. There is great indigestion. Below stomach to left a hardness from which paroxysms of dyspnœa come. Induration of pancreas. Distressing throbbing in abdomen (abdominal aneurism). Many cases of aneurism have been benefited by *Bar. mur*. Both elements have a strong action on heart and arteries. In one poisoning case, that of a girl, the instant she swallowed the solution she exclaimed that she was on fire; vomitings, convulsions, pain in the head and complete deafness supervened; and death within an hour. *Baryt. mur*. acts on parotid glands and pancreas. Is suited to scrofulous children. Attacks of tonsillitis occurring in spring and autumn. The earache is > by sipping cold water.

Relations.—*Compare:* Con. (indurations of abdominal glands); Iod., Kali iod. and Iris (pancreas); Selen. (pulsations in abdomen). *Useful after* Ars. in extravasations of blood. The vomiting is *antidoted by* Absinthe.

SYMPTOMS.

1. Mind.—Great anxiety, with gastralgia, nausea, and retching; has to bend double.—Idiocy.—Mania of every form as soon as sexual desire is increased.

2. Head.—Vertigo, swimming before the eyes; things turn round.—Head confused and heavy.—Cephalalgia, with vomitings.—Very purulent eruptions on the scalp.—Scabby eruptions on the head and on the neck.—Eruption at the nape of the neck.

3. Eyes.—Eyes fixed and immovable.—Shuns light; child lies all the time on its face.—Pupils dilated and insensible, with fixed look.—Blennorrhœa of the eyes, of the ears, and of the nose.

4. Ears.—Deafness and vomiting.—Otorrhœa; odour like rotten cheese.—Abscesses behind ears.—Parotids (esp. r.) swollen.

5. Nose.—Sneezing in sleep.—Coryza.

6. Face.—Tractive pains in the muscles of the face.—Painful nodosity at the point of the nose, with slight pricking.

7. Teeth.—Shooting, throbbing pains in the teeth, esp. on waking, after midnight.—Looseness of the teeth.

8. Mouth.—Swelling of the salivary glands and of the palate.—Tongue loaded.—Tongue and mouth dry.—Fetor of the mouth, as if from mercury.—Putrid taste in the mouth, also of food.

9. Throat.—Uvula elongated.—Varicose veins of throat.—Suppuration of tonsils after every cold.—Swallowing difficult.

11. Stomach.—Loss of appetite.—Thirst.—Inclination to vomit.—Retching.—Vomiting in the morning, with anxiety.—Vomiting of a small quantity of water, with nausea.—Sickness.—Pressure on the stomach, with spasm.—Sensation of heat, ascending from the stomach to the chest and head.—Burning pain in the stomach, with vomiting.—The membranes of the stomach are of a blue red, with red spots on the muscular part.—The pit of the stomach is inflamed, with isolated ecchymoses.—Uneasiness, as if from worms.

12. Abdomen.—Burning pains in the abdomen.—Tumefaction of the liver.—Throbbing of tumour in abdomen.—Inguinal glands swollen; painful; ulcerating.

13. Stool and Anus.—Fæces slimy.—Easy evacuation.—Chronic, painless diarrhœa, or diarrhœa with violent colic.—Stools jelly-like, with blood, no pain; discharges every fifteen or twenty minutes.—Stools white, hard as stones.

14. Urinary Organs.—Urine frequent, involuntary, and painful.—Urine yellowish, very offensive.—Flow of urine.—Whitish sediment in the urine.

15. Male Sexual Organs.—Frequent emission of semen.—Swelling of the testes.—Buboes after suppressed gonorrhœa.

16. Female Sexual Organs.—Catamenia too early.—Pains, as from a bruise, in the cavity of the pelvis.—Sterility.—Leucorrhœa.—Induration, tumour or atrophy of ovaries.—Nymphomania.

17. Respiratory Organs.—Weak voice.—Dry cough.—Chronic cough of scrofulous children.

18. Chest.—Catarrh, with heat.—Heat in the upper part of the chest.—Oppression.

19. Heart.—Throbbing of the heart accelerated.—Palpitation of the heart.—Heart-beats irregular, pulse scarcely perceptible.

20. Neck and Back.—Enlargement and induration of cervical glands.—Pains in the back.

21. Limbs.—Trembling of limbs.—Convulsive jerkings of hands and feet.—Paralysis of upper and lower limbs.—Swelling of hands and feet.

22. Upper Limbs.—Painless twitching in arm esp. at night.

23. Lower Limbs.—Drawing pains in thighs.—Hæmorrhagic extravasations in knee-joint.—Feet swollen.—Effects of checked foot-sweat.

24. Generalities.—Great weakness, which necessitates lying down.—Weakness and prostration, amounting almost to paralysis.—Syncope.—Stiffness and insensibility of the body, with periodical convulsions.—General heaviness.—Trembling of the limbs.—Convulsive trembling.—Twitching in the face or in some of the limbs, or in the whole body.—Periodical convulsive fits, with starting and excessive tossing about.

25. Skin.—Pricking in the skin.—Burning and pricking in excoriated places.—Small itchy eruptions on the head, nape of the neck, abdomen, and thighs.—Glands inflamed and ulcerated.—Hæmorrhage.

27. Fever.—General dry heat, night and day.—Redness and heat of the face.—Pulse frequent and full.—Tertian fever.—Increased perspiration.—Cold sweat.

Belladonna.

Atropa Belladonna. Deadly Nightshade. (Greece, Italy, Britain.) N. O. Solanaceć. Tincture of whole plant when beginning to flower.

Clinical.—*Abscess. Acne. Amaurosis. Apoplexy. Bladder weakness. Boils. Brain, affections of. Bronchial glands, disease of. Carbuncle. Colic*. Constipation. *Convulsions. Cough. Croup. Delirium tremens. Depression*. Diarrhśa. Dysentery. *Ear, affections of*. Enteric fever. *Epilepsy. Erysipelas. Erythema. Excitement. Eye, affections of. Fear, effects of. Glandular swellings. Goître*. Gout. Hćmorrhoids. *Headache. Heart, affections of. Hydrocephalus. Hydrophobia. Hyperćmia. Influenza. Kidney, affections of. Lung, affections of. Malignant pustule. Mania. Measles. Meningitis. Menstruation. Mouth affections. Mumps. Neuralgia. Nose, affections of. Nyctalopia*. Nymphomania. *Paralysis. Parametritis. Perichondritis. Perimetritis. Peritonitis*. Phlegmasia alba dolens. Pleurisy. Pneumogastric paralysis. Pneumonia. *Pregnancy, disorders of*. Puerperal mania. Rheumatism. *Roseola. Scarlatina. Sensitiveness. Sleep, disorders of. Smell, disordered. Strangury. Taste, disordered. Tenesmus. Testicles, affections of. Thirst. Throat, sore. Tongue, affections of. Tuberculosis. Ulcers. Uterine affections. Vaccinia. Vertigo. Whooping-cough*. Worm fever.

Characteristics.—*Belladonna* acts primarily on the brain, and Teste very acutely explains the diversity of its action on men and animals by suggesting that it acts with an intensity proportionate to the brain development. On goats and rabbits it has no poisonous action whatever. On carnivorous animals it acts with moderate intensity. On man it acts with highest intensity. But on idiots, as Hufeland mentions, it has no more action than it has on some of the carnivora. An enormous number of the symptoms of *Bell*. are developed in and from the head and sensorium. Conformably with this, the pains of *Bell*. run downwards, *i.e*., away from the head. (*Silic*. and *Gels*. have a pain running *up* the back). To understand aright the action and uses of this great medicine it is necessary to bear in mind some leading features which characterise its action in all parts of the organism. But before alluding to these I will briefly refer to its correspondence to scarlatina. Cases of *Belladonna* poisoning have frequently been mistaken for cases of scarlatina. But it is the smooth form only, these presenting a smooth, even, red surface that come under its controlling action and prophylaxis. When such an epidemic is about, any one who may be exposed to infection may obtain almost certain immunity by taking *Belladonna* two or three times a day.

The several points to be remembered about *Belladonna* are that it is a medicine which has great general sensitiveness and also sensitiveness of the special senses—sensitive to light; to slightest noise; to motion or jar as when someone touches the bed. This is one feature which renders *Bell*. so appropriate in hydrophobia. It is a *chilly* medicine; sensitive to changes from warm to cold, to draught of air, to damp weather, to chilling from having the head uncovered, or *having the hair cut*; better from being wrapped up warmly in a room. Under this drug there is a remarkable quickness of sensation, or of motion; the eyes snap and move quickly. The pains *come and go suddenly* no matter how long they may last. They are in great variety, but throbbing, burning, and stabbing are very characteristic: "*stabbing* from one temple to the other."

The great intensity and variety of the head pains has caused *Bell*. to be regarded as the headache medicine *par excellence*. Congestion of blood to the head. Vertigo, mostly at night on turning over in bed, or when getting up in the morning, also when walking and on every change of position. Headache with flushed face and brilliant eyes, dilated pupils. Feeling in brain like swashing of water. Throbbing, pulsating headache, with beating arteries and violent palpitation of the heart. It has cured a very severe headache in a nervous man occurring whenever he was exposed to tobacco smoke. In the mental sphere are mania; rage; disposition to bite, scratch and tear things. Fantastic illusions when closing eyes. Dull and sleepy; half asleep and half awake. Spasms and twitchings are very marked. Many disorders of vision. *Heat, redness* and *burning* are three great characteristic notes of *Bell*., and are constantly cropping out in the pathogenesis. The face is purple, red, and hot, or yellow. Redness and pallor alternate. The mouth is exceedingly dry without thirst. Stinging in śsophagus, < swallowing or talking. Śsophagus feels contracted. Sensation of a hand clutching intestines. Stool in lumps like chalk.

Spasmodic contraction of anus; obstinate constipation. Bleeding piles; back pains as if breaking. The menstrual flow is hot; of light colour; or bad smell. Cough short, dry, tickling, similar to cough of *Rumex* and *Phos*. Whooping-cough; with crying or pains before the attack; flushed face; nose-bleed and bloody expectoration; sparks before eyes; stitches in spleen; involuntary stool and urine. Paralysis of lungs and heart (vagus nerve). Violent palpitation of heart. Stitches in chest. Swelling of breast with bright red streaks radiating from centre of inflammation. Rheumatism < by motion. Sweat on covered parts only.

A striking picture of *Bellad*. is sometimes seen in cases of worm-fever. A case (ćt. 3, pale, feeble child) reported by Lutze had the following symptoms: Awakened, or at least sits up at night in bed screaming, cannot be pacified; wets bed at night; passes worms now and then; cheeks and ear-tips brilliant scarlet, other parts of face, especially round mouth, white as snow; eyes brilliant, staring; pupils dilated. Skin dry and hot like fire. On being spoken to coaxingly flew into a violent rage. *Cina* 200 had ameliorated. *Bell*. cm. and m. cured permanently.

Bell. is a great children's remedy, not less important than *Cham*. Complaints come suddenly; hot, red face, semi-stupor, every little while starting or jumping in sleep as if it might go into convulsions. A very general characteristic of *Bell*. is < on lying down. It refers to headache and all kinds of inflammatory affections. Some characteristic symptoms are: "Tenderness of abdomen, < by least jar." "Pressing downward as if contents of abdomen would issue through vulva, < mornings; often associated with pain in back as if it would break." Starting, twitching, or jumping in sleep. Moaning in sleep. "Sleepy, but cannot sleep." The characteristic skin of *Bell*. is: "Uniform, smooth, shining, scarlet redness, so hot that it imparts a burning sensation to the hand of one who feels it." "Sweat on covered parts only" is also a marked symptom of *Bell*.

A number of cases of poisoning have been reported from application of *Belladonna* plasters to the skin, classical symptoms of the drug being produced and no little danger to life. One practitioner was warned by his patient that she could not tolerate a *Belladonna* plaster, but he, thinking there must have been a mistake, and that cantharides must have been in the plaster she had formerly used, had one made up under his own eyes and applied it himself. In less than one hour there was an unbearable pain and when the plaster was removed the surface was found to be blistered.

A case of poisoning reported in the *Medical Press* (September 9, 1891) brings out the profound and long-lasting effects of the drug. Three children, aged 7, 5, and 3 1/2, ate a number of the berries. Three days after, a doctor saw them. The condition of the eldest was as follows: pupils dilated to maximum and insensitive to light; pulse frequent; breathing feeble and hurried; skin dry, bright red; temperature lowered; extremities and face cold; urination and defecation suspended. *Co-ordination was lost*; the patient staggered as if drunk and acted like a mad person.

When asked his name he would shout as loud as he could, *falling backwards* with his hands in the air, his legs slightly bent as if about to sit down on a low stool, and then tumble on the floor. When raised from the ground and seeing his friends again he began to talk without ceasing, laughing, and singing local melodies in a boisterous manner. *Suddenly* his whole demeanour would change in to a melancholic depression of agony; he would look blank and wild on all around. He would instantly jump up, run at the wall, and endeavour to spring on the highest articles in the room with the strength of a wild animal, and it was with difficulty that his movements could be controlled.

The youngest of the three lay depressed, in a soporific condition, eyes closed, skin cold, limbs powerless. Pupillary reaction, tendon and muscular reflex were almost gone, whilst the sense of heat and cold still remained. On shouting loud in his ear, he slowly tried to open his eyes in wonder; when shaken and put on his feet he *made two or three steps backward* as his elder brother and fell senseless on the floor. The second eldest lay in a deep sleep, face cyanotic; skin of extremities and part of body dry and cold; breathing feeble, pulse scarcely perceptible. Loudest crying, or shaking could not rouse him; feeling and reaction lost. Washing out the stomach was effected in the eldest, but no evidence of the berries was obtained in that way. A long injection tube was inserted into the rectum and irrigation with hot and cold water alternately was carried out, with the object of exciting peristalsis. This was successful. Besides a great quantity of black-brown masticated fruit with skins and seeds, broken berries were found to the number of 28 in the case of the eldest, 39 in the second, and 37 in the youngest. Pilocarpin and morphia were injected in the case of the eldest, and camphor subcutaneously in the other two. The skin was rubbed, warm applications administered and rectal injections of milk, egg and brandy.

Nothing was heard of the children till "June of the present year" (1891), [the date of the poisoning is not stated, but it was probably the previous autumn] when the children were brought to the doctor by their father. They all looked pale and feeble; the pupils contracted slowly, and all were sensitive to light. The eldest was irritable and desponding. In the other two hearing and speech were almost gone. The almost. absolute deafness in these cases is noteworthy in connection with Dr. Cooper's cure of a very chronic case of deafness with single drop doses of *Bell* Ř.

Bell. is predominantly (but by no means exclusively) a right-side medicine: all affections of internal head, right side right eye; right ear right face; right teeth; right hypochondrium right chest; right upper extremity; right lower extremity; mouth and fauces left side. It is suited to plethoric persons with red face; and to conditions where there is local plethora, that is, inflammatory states with pain, throbbing, shiny redness as in acute gout. Symptoms are < afternoon; 3 p.m.; 11 p.m.; after midnight; during the night and not at all in the day; morning. By touch; draught of air; cold applications; having hair cut; looking at shiny things; drinking; sleeping; lying down; lying on affected side. > Bending affected part backwards or

inwards; leaning head against something; standing; by warmth. *Bell.* is suited to the bilious, lymphatic temperament. Light hair and complexion, blue eyes. It grows in dry limestone soils and is the acute correlative of *Calc. c.*

Relations.—Bell. must be *compared* with the other Solanaceć: Caps., Dulc., Lycopers., Hyos., Stramonium and the alkaloids Atropia and Solania. *Antidotes:* To effects of large doses, Vegetable acids, infusion of galls, or green tea, Coffea., Hyoscy; to effects of small doses, Camph., Coff., Hep., Hyo., Op., Puls., Sabad. (salivation), Vinum. *It antidotes:* Aco., Arum t., Atrop., Chi., Cup., Fer., Hyo., Jaborandi, Merc., Op., Plat., Plumb., sausage poisoning; oil of turpentine. *It follows well:* Ars., Cham., Hep., Lach., Merc., Phos., Nit. ac., Cup. *Is followed well by:* Chi., Cham., Con., Dulc., Hep., Hyo., Lach., Rhus, Seneg., Stram., Valer., Verat. *Similar to:* Acon., Alcohol (merry craziness); Ars. (pains of cancer); Bry. (rheumatism < by motion. In pleurisy and pneumonia it is distinguished from Bry. in that it has < lying on affected side whilst Bry. has the opposite); Calc. c., Cham., Cicut., Coff., Cup., Eupat. purp. (diuresis and vesical irritation, but Eupat. has more hyperćmia and vesical inflammation); Gels., Hep., Hyo., Lach., Lil. tig. (Lil. has > by motion; Bell. < by motion), Merc., Nux v., Op., Puls., Rhus, Stram. (rage), Tereb., Verat.; Arn. (whooping cough). *Complementary:* Calc. c. *Incompatible:* Vinegar.

Causation.—Hair-cutting. Head, getting wet. Sausages. Sun. Wind, walking in.

SYMPTOMS.

1. Mind.—Melancholy, with grief, hypochondriacal humour, moral dejection, and discouragement.—Great agitation, with continual tossing about, inquietude, and anguish, chiefly at night, and in the afternoon, sometimes with headache and redness of face.—Desire to die, and inclination for suicide.—Lamentations, groans, cries, and tears.—Perversity, with tears (in children).—Timidity, disposition fearful, mistrustful, and suspicious; apprehension and inclination to run away.—Fear of approaching death.—Mental excitation, with too great sensibility to every impression, immoderate gaiety, and disposition to be easily frightened.—Nervous anxiety, restlessness, desire to escape.—Dotage, delirium, and mania, with groaning, disposition to dance, to laugh, to sing, and to whistle; mania, with groans, or with involuntary laughter; nocturnal delirium; delirium with murmuring; delirium, during which are seen wolves, dogs, fires, &c.; delirium by fits, and sometimes with fixedness of look.—Stupefaction, with congestion to the head; pupils enlarged.—Delirium.—Great apathy and indifference, desire for solitude, dread of society and of all noise.—Repugnance to conversation.—Disinclination to talk, or very fast talking.—Ill-humour, disposition irritable and sensitive, with an inclination to be angry and to give offence.—Folly, with ridiculous jesting, gesticulations, acts of insanity, impudent manners.—Fury and rage, with desire to strike, to spit, to bite, and to tear everything, and sometimes with growling and barking like a dog.—Dejection and weakness of mind and body.—Dread of all

exertion and motion.—Loss of consciousness.—Fantastic illusions (when closing the eyes).—Dementia, to such an extent as no longer to know one's friends, illusions of the senses and frightful visions.—Complete loss of reason, stupidity, inadvertence, and distraction, inaptitude for thought, and great weakness of memory.—Memory: quick; weak; lost.

2. Head.—Confusion of the head, cloudiness, and apparent intoxication, chiefly after eating or drinking, or else in the morning.—Apoplexy.—Fits of vertigo, with tottering, swimming in the head, dulness, giddiness, nausea, trembling of the hands, anxiety; sparks before the eyes, chiefly in the morning on getting up, on standing upright, or on stooping.—Vertigo with anguish, and falling with loss of consciousness, or with weariness and fatigue before and after the attack.—Vertigo, with stupefaction, vanishing of sight and great debility.—Vertigo, with anguish and falling insensibly on the l. side, or backwards, with flickering before the eyes, esp. when stooping, and when rising from a stooping posture.—Stupor and loss of consciousness, so as to know one's friends only at most by the hearing, sometimes with pupils dilated and mouth and eyes half open.—Fulness, heaviness, and violent pressure on the head, chiefly on the forehead, above the eyes, and nose, or on one side of the head, and sometimes with giddiness, stupor, and sensation as if the cranium were going to burst, or with ill-humour and groans, drawing up of the eyelids and desire to lie down.—Sensation of inflation and pressive expansion in the brain.—Sharp, tractive, and shooting pains in the head.—Dartings into the head, as if from knives.—Violent throbbings in the head.—Strong pulsation of the arteries of the head.—Ebullition and congestion of blood in the head, chiefly on stooping.—Congestion of blood to the head, with external and internal heat; distended and pulsating arteries, stupefaction in the forehead, burning, red face; < in the evening, when leaning the head forward, from the slightest noise, and from motion.—Stupefying, stunning headache, extending from the neck into the head, with heat and pulsation in it; < in the evening and from motion; > when laying the hand on the head, and when bending the head backward.—Sensation of cold or of heat in the head.—Headache, from taking cold in the head, and from having the hair cut.—Sensation of fluctuation in the brain, as if there were water in it.—Sensation, during the pains, as if the cranium were too thin.—Sensation of a dull balancing in the brain, and shocks in the head, chiefly on walking quickly or ascending.—Daily pains in the head, from about four o'clock in the afternoon till towards three o'clock the following morning, < by the heat of the bed and by a recumbent posture.—The pains in the head are generally aggravated by movement, especially of the eyes, by shaking, by contact, by free air and a current of air; they are mitigated by holding the head back and by supporting it.—Cramp-like pain in the scalp.—Copious sweat in the hair.—Affections of the hair, which may split, or come out, or be hard and dry, &c.—Profuse pungent-smelling perspiration, esp. on the covered parts, while the body is burning.—Shaking or turning of the head backwards.—Hydrocephalus, with boring with the head in the pillows; sensation as if water were moving in the head; < in the evening and when lying; > from external pressure, and when bending the head backwards.—Boring with the head on the

pillow while sleeping.—Boring headache in the r. side of the head; changing to stitches in the evening.—Pressing headache, as if the head would split, pupils contracted, voice faint.—Swelling of the head and of the face.—Smooth, erysipelatous, hot swelling, first of the face, then extending over the whole head, with stupefaction or delirium, violent headache, red, fiery eyes.

3. Eyes.—Heat and burning in the eyes, or pressure as from sand.—Aching in the eyes and the sockets, extending into the head.—Sensation of weight in the eyelids, which close involuntarily.—Quivering in the eyelids.—Ectropium.—Paralysis of the optic nerve.—Falling down of the eyelids, as if from paralysis.—Shooting in the eyes and in the corners, with itching.—Eyes red, brilliant, and convulsed, or fixed, sparkling, and prominent, or dull and turbid.—Congestion of blood to the eyes, and redness of the veins.—Look fixed, furious, and wavering.—Look wild, unsteady, wavering.—Spasms and convulsive movements of the eyes.—Eyelids wide open.—Inflammation of the eyes, with injection of the veins and redness of the conjunctiva and of the sclerotica.—Heat in the eyes.—Distension of the sclerotica.—Inflammatory swelling and suppuration of the lachrymal aperture.—Softening of the sclerotica.—Spots and ulcers on the cornea.—Medullary fungus in the eye.—Swelling and inversion of the eyelids.—Yellowish colour of the sclerotica.—Eyes as if affected by ecchymosis, with hćmorrhage.—Sensation of burning dryness in the eyes; or flow of acrid and (salt) corrosive tears.—Pupils immovable and generally dilated, but sometimes also contracted.—Agglutination (nocturnal) of the eyelids.—Desire for light, or photophobia, with convulsive movements of the eyes when the light strikes them.—Distortion, spasms, and convulsions of the eyes.—Momentary blindness.—Confused and weak sight, or obscuration and entire loss of sight.—Blindness at night (moon-blindness).—Presbyopia.—Mist, flames, and sparks, before the eyes.—Diffusion of the light of candles, which appear to be surrounded by a coloured halo.—White stars and silvery clouds before the eyes, esp. on looking at the ceiling of the room.—Objects appear double or reversed, or of a red colour.—Trembling and sparkling of the letters when reading.

4. Ears.—Piercing, aching, sharp pain, pinching, squeezing, and shooting in the ears.—Inflammation of the external and internal (r.) ear, with discharge of pus.—Excretion of pus from the ears.—Stinging in and behind the ears.—Ringing, murmuring, and buzzing in the ears.—Humming and roaring in the ears.—Paralysis of the auditory nerves.—Great acuteness of hearing.—Hardness of hearing; sometimes as if there were a skin before the ears.—Swelling of the parotids, with shooting and tractive pains, which sometimes extend even to the throat.—Stitches in the parotid gland.

5. Nose.—Pain, as of a bruise, in the nose, esp. on touching it, and sometimes with burning.—Nocturnal shootings in the nose.—Swelling, redness, and burning it the point of the nose.—Inflammatory swelling and redness of the external and internal nose.—Bleeding of the nose, with redness of the face.—Painful ulceration of the

nostril.—Nose very cold.—Bleeding of the nose, chiefly night and morning.—Hćmorrhage from the nose and mouth.—Great dryness of the nose.—Sense of smell either too sensitive, esp. to tobacco smoke, or diminished.—Putrid smell in the nose.—Fluent coryza of one nostril, alternating with stoppage of the nose.—Smell like herring in the nose during the coryza.

6. Face.—Paleness of the face, which sometimes suddenly alternates with redness.—Face hollow, with anxious look of the features, and wandering air.—Burning heat of the face, sometimes without redness.—Glowing redness and bloated appearance of the face, as from drinking wine.—Deep, or scarlet, or bluish redness of face.—Purple, red, hot face, or yellow colour of the face.—Hard swelling and bluish redness of face, principally (of one) of the cheeks, and sometimes with burning, shooting, piercing, and pulsation.—Erysipelatous swelling of the face.—Semi-lateral swelling of the face.—Spots of a scarlet or deep red colour on the face.—Eruption of red pimples on the temples, in the corners of the mouth, and on the chin.—Purulent and scabby pimples, chiefly on the cheeks and on the nose.—Thickening of the skin of the face.—Cramp-like pressure, sharp and drawing pain in the cheek-bones.—Nervous, violent incisive pain in the face, following the course of the sub-orbital nerve.—Nervous prosopalgia, with violent, cutting pains.—Muscular palpitations and convulsive movements in the face, chiefly in the mouth, which is drawn towards the ear.—Spasmodic distortion of the mouth (risus sardonicus).—Swelling, of the upper lip.—Induration and swelling of the lips, with shootings in rough weather.—Deep redness and dryness of the lips.—Pimples, scabs, and ulcers; with a red circular margin, on the lips and in the corners of the mouth.—Convulsive clenching of the jaws, which renders it impossible to open the mouth.—Sensation as if the lower jaw were drawn very far back.—Sharp pains in the jaws; shooting and tension in the maxillary articulations.—Mouth half open, or spasmodically closed by lock-jaw; sensations under the jaw; affections of the articulations of the jaws (sometimes while chewing).—Swelling of the sub-maxillary glands, and of those of the neck, with nocturnal (shooting) pains.

7. Teeth.—Violent grinding of the teeth.—Sharp and drawing pains or successive pullings in the teeth, sometimes with pain in the ears, and chiefly at night or in the evening, during intellectual labour, or else after having eaten.—The toothache is < by exposure to the air, or by the touch, while masticating.—Toothache with inflammatory swelling of the cheek.—Piercing in carious teeth, and flow of blood on sucking them.—Painful swelling of the gums, with heat, itching, and pulsations, or with ulcerative pain on being touched.—Bleeding of the gums.—Vesicles on the gums, with pain like that of a burn.

8. Mouth.—A sensation of great dryness, or a real and extreme dryness and choking in the mouth.—Dryness of the mouth, without thirst.—Foam before the mouth, sometimes of a reddish colour, or having the smell of rotten eggs.—Accumulation and flow of saliva, viscid, thick, and whitish.—Great accumulation of viscid, whitish mucus in the mouth and in the throat.—Offensive

smell of the mouth, chiefly in the morning.—Inflammatory swelling and redness of the buccal cavity, and of the pharynx.—Violent hćmorrhage of the mouth.—Excoriation of the interior of the cheek; the orifices of the salivary ducts are as if ulcerated.—Sensation of cold, of torpor, and of numbness in the tongue.—Tongue red, hot, dry, and cracked, or loaded with whitish mucus, or yellowish, or brownish; redness of the edges of the tongue.—Inflammatory swelling and redness of the papillć of the tongue.—Phlegmonous inflammation of the tongue.—Soreness of the tongue, esp. on touching it, with a sensation as if it were covered with vesicles.—Heaviness, trembling, and paralytic weakness of the tongue, with difficult and stuttering speech.—Dumbness.—Voice weak, whistling, and nasal.

9. Throat.—Pain of excoriation, scraping, and shooting in the throat and in the amygdalć, principally on swallowing, and sometimes extending to the ears.—Great dryness and burning in the throat and on the tongue.—Inflammation and swelling of the throat, of the velum palati, of the uvula, and of the tonsils; suppuration of the tonsils.—Inflammation of the throat, with sensation of a lump, which induces hawking, with dark redness and swelling of the velum palati and tonsils.—Burning and dryness in the śsophagus.—Stinging in the śsophagus, in the tonsils; < when swallowing, and when talking.—Tonsils inflamed, swollen, ulcers rapidly forming on them.—Painful and difficult deglutition.—Complete inability to swallow even the least liquid, which frequently passes out through the nostrils.—Constant inclination to swallow, with a sensation as though suffocation would otherwise follow.—Sensation of contraction, strangling, and spasmodic constriction in the throat.—Sensation as if there were a tumour in the throat, or a plug which cannot be detached.—Paralytic weakness of the organs of deglutition.

10. Appetite.—Loss of taste.—Food appears insipid or too salt.—Putrid, or insipid, or slimy, or bitter taste of the mouth.—Rye bread tastes acid.—Want of appetite and distaste for all food, chiefly for meat, acids, coffee, milk, and beer.—Burning, excessive, intolerable thirst, often with dread of all drink; or constant desire to drink with inability to swallow a single drop of liquid.—Drinking is performed with trembling precipitation.—Great and unbearable hunger.—After having eaten, a feeling of intoxication, colic, pains in the stomach, heat, and thirst.

11. Stomach.—Frequent risings, often bitter, or putrid, or sour and burning.—Pyrosis.—Obstructed and abortive risings.—Nausea and inclination to vomit, chiefly on beginning to eat, or in the open air, or after breakfast, sometimes with burning thirst.—Retching and violent vomiting, principally in the evening or at night; retching, with entire inability to vomit; vomiting of food, or of mucous or bilious matter, of blood; or acid and serous matter; vomiting with diarrhśa, or with vertigo, heat, and sweat.—Spasmodic hiccough, sometimes with sweats and convulsions.—Pressure, cramp-like and contractive pains, sensation of fulness and inflation in the stomach and in the epigastrium, principally after having eaten or

while eating.—Shootings, beatings, pulsations, and burning in the stomach and in the precordial region.—Inflammation of the stomach and of the duodenum.

12. Abdomen.—Colic with constipation, abundant flow of urine, risings and nausea.—Violent pain in the abdomen, which allows no rest whatever.—Shootings in l. side of the abdomen, on coughing, on sneezing, and on being touched.—Pains and burning in the hypochondria.—Pressure in the abdomen, as if by a stone, chiefly in the lower part of the abdomen and in the groin.—Painful pressure in the pit of the stomach and stomach, esp. after eating.—Painfully distended abdomen, very sensitive to the touch.—Inflation and tension of the abdomen, chiefly in the hypochondria.—Colic, with restlessness, below the umbilicus, as from clutching and griping with the nails, < from external pressure.—Cramp-like, contractive, and constrictive pains and pinching in the abdomen, and esp. round the navel or in the hypogastrium, with a sensation as if one or other of the parts were squeezed, or seized with the nails; the pains necessitate a bending of the body, and are sometimes accompanied by vomiting, or by inflation and protrusion of the colon in the form of a pad.—Digging in the abdomen.—Cuttings and shootings in the abdomen, as from knives.—Heat and great anguish in the abdomen.—Rumbling in the abdomen, with frequent escape of flatus without smell.—Soreness of the whole abdomen, as if everything in it were excoriated and raw, and painful sensibility to the touch of the teguments of the abdomen.—Shootings in the groins.—Itching in the abdomen.

13. Stool and Anus.—Suppressed evacuations and constipation, sometimes with inflation of the abdomen, heat of the head, and copious sweats.—Hard and scanty evacuations.—Frequent inclination to evacuate, with tenesmus, but without result.—Frequent small evacuations, often with tenesmus.—Frequent small diarrhśic stools of mucus.—Evacuations whitish like chalk, or greenish; evacuations watery or slimy.—Thin, green stools, with frequent micturition and perspiration.—Dysenteric stools.—Before stool, perspiration.—During stool, shuddering.—Spasmodic stricture of the rectum.—Stinging pain in the rectum.—Loose evacuations, with nausea and aching pains in the stomach.—Involuntary evacuations, from paralysis of the sphincter of the anus.—Bleeding piles; back pains as if breaking.—Mucous membrane of anus seems swollen as if pressed out.—Prolapsus ani.

14. Urinary Organs.—Frequent desire to make water.—Retention of urine.—Difficult discharge of urine (and then discharge of a few drops of bloody urine only).—Continual dribbling of urine.—When passing water, fćces escape.—Frequent emission of urine, copious, pale, and watery, sometimes with profuse perspiration, thirst, increased appetite, diarrhśa, and obscuration of sight.—In continence and involuntary emission of urine, even in the night and during sleep.—Paralysis of the neck of the bladder.—Strictures of the urethra.—Urine turbid, of a yellow colour, or clear, the colour of gold or citron; or scanty and of a brownish-red colour, or the colour of blood, or a bright red

colour.—Red, or whitish and thick sediment in the urine.—Sensation of motion in the bladder, as of a worm.—Nocturna pressure in the bladder.—Shooting, burning pains in the renal region.

15. Male Sexual Organs.—Sharp and drawing pain in the spermatic cords, chiefly while making water.—Retraction of the prepuce.—Soft and painless nodosity in the glans.—Shootings in the testes, which are drawn up.—Inflammation of the testicles, great hardness in the drawn-up testicles.—Pollutions, with flaccidity of the penis.—Nocturnal sweat of the genital parts.—Flow of prostatic fluid.—Sexual desire diminished, with perfect indifference to all voluptuous excitement.

16. Female Sexual Organs.—Violent pressure towards the genital parts, as if all were going to protrude, principally when walking, or when in a crouching posture.—Shooting in the internal genital parts.—Great dryness of the vagina.—Prolapsus and induration of the matrix.—Catamenia too copious, and too early, or too tardy.—Catamenia too pale.—Before the catamenia, fatigue, colic, loss of appetite, and confused sight.—During the catamenia, nocturnal sweat on the chest, with yawning and transient shiverings, colic, or anguish of heart, burning thirst, sharp and cramp-like pains in the back and in the arms.—Flow of blood beyond the period of the catamenia.—Flow of blood between the periods.—Menstrual discharge bright red, feeling very hot like hot sealing-wax.—Metrorrhagia of clear red blood, with a discharge of fetid clots; with violent pain in the small of the back and bearing-down.—Menstrual blood of bright colour, or of a bad smell.—Leucorrhśa with colic.—Diminished lochia.—Spasmodic contraction of the uterus.—Labour pains too distressing, spasmodic; too weak, or ceasing.—After-pains.—Congestion and inflammation of the uterus and labia.—Stitches in the organs.—Puerperal fever, nymphomania.—Flow of milk from the breast.—Mammć swelled, inflamed, or indurated.

17. Respiratory Organs.—Catarrh with cough, coryza, hoarseness with tenacious mucus in the chest.—Voice weak, hoarse, and whistling; nasal-toned voice.—Loss of the voice.—Great soreness of the larynx, with danger of suffocation on pressing the gullet, as well as on coughing, on speaking, and on breathing.—Spasmodic constriction of the larynx.—Larynx very painful, with anxious starts when touching it.—Constriction of the trachea.—Short, dry cough, from tickling in the larynx, with headache, redness, and heat in the face.—Cough with stitches in the chest, in the lumbar region, in the hip, in the uterus; pain in the sternum, with tightness of the chest; with rattling of mucus on the chest.—Dry spasmodic cough, with vomiturition, esp. after midnight.—Whooping-cough, with crying, or pain in the stomach before the attack, with expectoration of blood (pale or coagulated), congestion of blood to the head, sparks before the eyes, spasms in the throat, bleeding from the nose, stitches in the spleen, involuntary stool and urine, oppressed breathing, stiffness of the limbs, shaking of the whole body, and dry general heat.—Cough, as if one had swallowed dust, or as if there were some foreign body in the larynx, or in the pit of the stomach, which excites the cough;

chiefly at night, or in the afternoon, in the evening in bed, and even during sleep; the cough is mostly dry, short, and sometimes convulsive, fatiguing and shaking, or hollow and barking.—Before the cough, tears, or pains in the stomach; when coughing, shootings in the abdomen, or retching, or pain as of a bruise in the nape of the neck; after the paroxysm, sneezing.—The least movement, when in bed at night, renews the cough.—Cough with rattling in the chest, or with catarrh, and shootings in the sternum, or with headache and redness of face.—Expectoration of thick and puriform mucus with the cough.—Cough with spitting of blood.

18. Chest.—Breathing laboured, unequal, quick, with moaning.—Rattling noise, and crepitation in the bronchia.—Vehement expirations.—Feeling of suffocation when swallowing, or when touching and turning the neck.—Oppression of the chest, difficult respiration, dyspnśa and shortness of breath, sometimes with anxiety, and chiefly in the evening in bed, and after having drunk (coffee).—Oppression of the chest in the morning when rising, cannot breathe in the room, better in the open air.—Congestion to the chest.—Irregular respiration, at one time small and rapid, at another time slow and profound.—Respiration short, anxious, and rapid.—In the morning after rising, want of breath, relieved in the open air.—When walking, cramp-like oppression of the chest, with necessity to fetch a long breath.—Pressure on the chest, with pain in the shoulder-blades and short breath.—Tension in the chest.—Shootings in the chest, sometimes as if from knives, and chiefly on coughing and yawning.—Great inquietude and beatings in the chest.—Painful blisters, filled with water, or small spots of a deep red colour on the chest.

19. Heart.—Violent beatings of the heart, which sometimes are felt in the head.—Palpitation of the heart when ascending.—Trembling of the heart, with anguish and pressive pain.—Violent palpitation of the heart, reverberating in the head.

20. Neck and Back.—Painful swelling and stiffness in the neck and in the nape of the neck.—Painful swelling in the glands of the neck and in those of the nape of the neck.—Sharp pains in the armpits.—Red and purulent pimples on the back and nape of the neck.—Veins in the neck swollen.—Sour sweat, only on the neck.—Pain, as of dislocation; rheumatic and drawing pains in the back and between the shoulder-blades.—Furunculus on the shoulder.—Dartings, as if from knives, in the bones of the spine.—Gnawing in the dorsal spine, with cough.—Painful stiffness and cramp-like pains, in the sacral regions and in the back.

22. Upper Limbs.—Arms benumbed and painful.—Tractive pressure, with sensation of torpor, and sharp pains in the arms.—Inclination to stretch the arms.—Arms heavy, as if paralysed.—Torpor and heaviness of the arms.—Swelling and scarlet redness of the arms and of the hands.—Drawing and aching pain in the shoulder, running rapidly from the top to the bottom of the arms, and exhibiting itself particularly at night, diminished by external pressure, excited by

motion.—Painful startings, cramp and convulsions in the arms and in the hands.—Trembling of the hands.—Pressure, with sharp pains in the carpal and metacarpal bones.—Arthritic stiffness in the joints of the hand.—Frequent dislocation of the joints of the fingers.—Drawing back of the thumbs.

23. Lower Limbs.—Shootings and burning pains, aggravated by fits, in the coxo-femoral joint, more unbearable at night, and increased by the least contact.—Stiffness in the hip, after sitting for some time, with difficulty in getting up.—Pain in the hip, which causes lameness.—Involuntary limping.—Tottering walk, when rising from bed in the morning, the legs refuse their service.—Trembling of the knees.—Drawing pains in the legs, esp. in the knees.—Heaviness and paralysis of the legs and of the feet.—Bending of the knees and of the feet in walking.—Tension of the tendons of the ham.—Swelling of the feet.—Crawling sensation in the feet.—Phlegmasia alba dolens.

24. Generalities.—Shooting, or tearing, aching pains in the limbs.—Bruise-like pains in the joints and bones.—Rheumatic pains (in the joints) flying from one place to another.—The pains are aggravated, chiefly at night, and in the afternoon towards three or four o'clock.—The least touch, and sometimes also the slightest movement, aggravates the sufferings.—Some of the symptoms are aggravated, or make their appearance after sleep.—Jerking in the limbs, muscular palpitations and shocks of the tendons.—St. Vitus's, dance.—Sensation in the muscles, as if a mouse were running over them.—Cramp, spasms, and convulsive movements, with violent contortion of the limbs; convulsive fits, with cries, and loss of consciousness; epileptic convulsions, drawing back of the thumbs.—Renewal of the spasms by the least contact, or from the glare of light.—Hydrophobia.—Burning in the inner parts.—Attacks of immobility and of spasmodic stiffness of the body, or of some of the limbs, sometimes with insensibility, swelling of the veins, bloatedness and redness of the face, pulse full and quick, with copious sweat.—Spasms in single limbs, or of the whole body, in children, during dentition.—Full habit (plethora).—Swelling in general of the parts affected.—Inflammation of the glands; induration of the glands; glands painful, prickling, swelling, hot swelling of the glands.—Attacks of tetanus at times, with the head thrown back.—Spasmodic attacks, with involuntary laughter.—Before the convulsive fits, formication, with a sensation of swelling and torpor in the limbs; or colic and aching in the abdomen, extending to the head; after the attack, oppression at the chest, as if from a heavy weight.—The attacks are renewed by the least touch, as well as by the slightest opposition.—Great uneasiness in the head and limbs, chiefly in the hands.—Trembling of the limbs, with fatigue and lassitude.—Heaviness in the limbs, with weariness, great indolence and dread of all movement and of all labour.—Failing of strength, paralytic weakness, and paralysis of the limbs.—Paralysis and insensibility of one side of the body.—Fits of swooning and of syncope, with loss of all sensation and of all motion, as in death.—Ebullition of blood, with congestion to the head, and fatigue even to fainting.—Congestions (head, lungs).—Apoplexia.—Over-excitement and too great sensibility of all the

organs.—Tendency to be chilled easily, with great sensibility to cold air.—Formication in the limbs.

25. Skin.—Swelling, with heats and scarlet redness of the whole body, or of several parts, chiefly the face, the neck, the chest, the abdomen, and the hands.—Cutting of the skin as though "sliced" with a sharp knife.—Erysipelatous inflammations, with phlegmon, which sometimes turn to gangrene.—Gangrene and sphacelus of several parts.—Red places, inflamed and scarlet spots on several parts of the body, sometimes with small, quick pulse, difficulty of respiration, violent cough, delirium, liveliness of memory, inclination to rub the nose, and dilated pupils.—Red spots, the colour of blood, over the whole body, principally on the face, neck, and chest.—Eruption resembling morbilli.—Eruption of petechić, with itching and redness of the whole body.—Miliary eruptions.—Vesicles which discharge a great deal of serum, and are so painful as to extort cries and groans.—Bleeding soreness of the bends of the joints.—Eruption of pustules with whitish edges, with black slough, and śdematous swelling of the diseased part.—Boils (returning every spring).—Red scaly eruption on the lower part of the body.—Scrofulous tumours and nodes, which are painful.—Pain, as of excoriation, burning and pulling in ulcers, principally on being touched, during motion, and in the night.—Dry, burning-hot skin.—Burning of the skin, particularly when the hand continues to burn after touching the skin, as though a hot stove had been touched, very characteristic.—Red, hot, and shining swelling of the diseased parts.—Smooth, even shining (not circumscribed) redness of the skin, with bloatedness, dryness, heat, burning itching and swelling of the parts (esp. face, neck, chest, abdomen and hands).—The ulcers secrete a purulent and sanguineous matter.—Chilblains.—Painful swelling of the glands (inflamed, stinging).

26. Sleep.—Constant drowsiness, sometimes with cloudiness, and yawning, and chiefly towards the evening.—Fits of somnolence and of lethargy, with profound sleep, immobility of the body, jerking of the tendons pale and cold face, hands cold, and pulse small, hard, and quick.—Somnolence: stupor, lethargy (with snoring).—Coma, interrupted by momentary wakings, with furious looks.—After the fit of coma, great hunger, burning heat, and dryness of the mouth.—Pulsations of the blood-vessels; may hear the pulsations of the blood-vessels so loud when trying to sleep as to be kept awake by it.—Comatose sleep at night, with frequent waking and convulsive movements.—Sleep, with moaning and tossing about.—Nocturnal sleeplessness, sometimes with desire to sleep and useless efforts to go to sleep, mostly in consequence of excessive anguish or great agitation.—On sleeping, frequent starts with fright, groans, cries, starting of the limbs, carphology, aggravation of pains, singing, talking, delirium, and continual dreams.—Nightmare.—Dreams: anxious, terrible, frightful, vivid, dreams of fires, of robbers, and assassins; meditative dreams.—On closing the eyes in order to go to sleep, frightful visions and jerking in the limbs.—On waking, headache and aggravation of sufferings.

27. Fever.—Coldness over the entire body, with paleness of face, or coldness of the extremities, with bloatedness and redness of the face.—Shiverings and partial shuddering, chiefly in the back or the pit of the stomach, or in one arm, and sometimes with heat in other parts, chiefly in the head, or followed by universal shivering.—Cold limbs, with hot head.—Chilliness not relieved by the heat of the stove.—Continuous dry, burning heat, with perspiration only on the head.—Internal heat with restlessness; hot forehead and cold cheeks.—Dry heat and thirst, and perspiration only on the head and neck (sour-smelling).—The shiverings appear mostly in the evening, sometimes with nausea; bruise-like sensation, and pulling in the back and in the limbs, pricking in the chest and obscuration of the eyes.—Febrile attacks, in which shiverings alternate with heat, or of shiverings followed by heat, with aggravation at night or in the evening, resembling quotidian, or double quotidian, or tertian, with complete adypsia, or burning and inextinguishable thirst.—Dry, burning heat, often with swelling of the veins, pulsation of the carotids, heat, redness and bloatedness of the face, burning thirst, agitation, furious delirium, and shiverings on being even slightly uncovered.—Pulse strong and quick, or full and slow, or small and quick, or hard and wiry.—If slow, the pulse is full.—Pulse full; hard; strong, bounding, double.—Sweat with or after the heat; copious sweat during the night, or in the morning; sweat of the parts that are covered only; ascending from the feet to the head; sweat when asleep; sweat of an empyreumatic smell, or which imparts a yellow colour to the sheets.

Bellis Perennis.

The Daisy. N. O. Compositć. Tincture of whole fresh plant.

Clinical.—Acne. Arteries, diseases of. Boils. Brain, softening of. Change of Life. Exudations. Fatigue. Giddiness. Gout. Headache. Indigestion. Masturbation. Mydriasis. Overwork. Pregnancy, complaints of. Psoriasis. Railway spine. Rheumatism. Sleeplessness. Spleen affections. Stasis. Traumatism. Tumours. Uterus, fatigued. Varicosis.

Characteristics.—The old name of "Wound-wort," or "Bruise-wort," shows one of the main spheres of the action of *Bellis*, and allies it in action with its fellow Compositć, *Arnica* and *Calendula*. The daisy is a flower which is repeatedly trodden upon and always comes up smiling afterwards; and being the "day's eye" may be the sign of its too early waking propensities. Dr. Burnett is the chief authority for its homśopathic uses. "It acts very much like *Arnica*, even to the production of erysipelas." He has cured with its aid several cases of tumours originating in a blow. "Stasis" and "fag" are the principal notes of its action. Exudations and swellings of many kinds. Fagged womb. Varicose veins. The giddinesses of elderly people (cerebral stasis). It has marked action on female sexual organs, especially on engorged uterus and breasts. It relieves troubles of

pregnancy: inability to walk; varicose veins. Fag from masturbation. Overworked old labourers and workmen; head sufferings of elderly working gardeners; commercial travellers; railway spine. Burnett has generally given it in the Ř tincture. It is a pre-eminently left-side medicine; causes stitches in spleen. It has produced acne; boils; rheumatic pains; giddiness. Headache from occiput to sinciput; contracted feeling in front brain. A pain in inner side of right arm as if a boil were developing. A leading indication is found in its causation: Ill-effects of sudden wet chill to heated stomach or body surface. This may be taken as a keynote: "effects of cold or iced drinks when heated"; dyspepsia, amenorrhśa, skin affections (including a striking case of psoriasis), rheumatism from this cause. Near and remote effects of blows, falls, accidents (trauma). It causes a tired feeling with desire to lie down. As a remedy for debility following acute attacks of gout Burnett gives it a very high place, classing it with *Vanadium*, of which it is a complement in degenerative states, as brain softening and atheroma of arteries. It has been observed to cause dilatation of the pupil when used locally. It is well not to give it near bed time, as it is apt to cause sleeplessness, waking at 3 a.m. and conversely "waking up too early in the morning and cannot get to sleep again" is a leading indication for its use.

Relations.—*Compare:* Arn., Calend., Hyperic., Con., Ars., Hamam., Vanad. In effects of fag, Pic. ac.

Causation.—Injuries. Effects of cold drinks when overheated. Wetting when overheated.

SYMPTOMS.

2. Head.—A little giddiness in the head at times (after two weeks).—Headache from occiput to sinciput; of a cold, aching character.—Brain feels as though contracted in frontal region (after two weeks).

11. Stomach.—Want of appetite.—Slight nausea.—Effect of cold or iced drinks when heated.

12. Abdomen.—Stitches in spleen.

22. Upper Limbs.—Pain inner side r. (also l.) forearm, as if a boil developing.—Pain in middle finger of l. hand, as of a gathering; for a short time only.

25. Skin.—Small boil (after five hours, from application of tincture).—Small boil at angle of l. lower jaw (after chewing flowers).—Painful pimple a little behind angle of l. lower jaw (after two weeks, from tincture).—Large boil on back of neck, commencing with a dull, aching pain; some difficulty and bruised pain in keeping head erect; began as a slight pimple with burning pain in skin, increasing until in

six days it was very large, of a dark fiery purple colour, and very sore, burning and aching pain in it; accompanied with headache, extending from occiput to sinciput, of a cold, aching character; brain as though contracted in frontal region; dizziness, &c.

26. Sleep.—Wakes at 3 a.m. and cannot get to sleep again.

Benzinum.

Benzol, Benzoline, Benzene. A product of distillation from coal tar. C_6 H_6. Tincture with alcohol.

Clinical.—Dysentery. Fever. Headache. Insomnia. Sweat. Typhoid fever. Vision, disorders of.

Characteristics.—Our knowledge of this medicine is derived from observations on a worker in a rubber factory, who for weeks had his hands and arms daily bathed in benzine, and drank water impregnated with it. It caused profound disturbance of mind and body; weeping at trifles; irritability; pain darting upwards in occiput. Could not turn eyes upward without severe aching and throbbing. A sort of clairvoyant state, in which a great white hand appeared to him in the darkness, coming outspread towards his face, causing him in terror to scream for the watcher. A sense of falling through the bed and floor. Insomnia and photopsic illusions. Pains travel from below upward (headache, pain in anus); also chills.

Relations.—*Compare:* Bry. (< motion; moving eyes); Benz. nit.; Benz. dinit. (amblyopia and disorders of vision). Sul. (symptoms go from below upward).

SYMPTOMS.

1. Mind.—Weeping at trifles and despairing of recovery.—Extremely irritable and fault-finding.

2. Head.—Severe darting pains in occiput, from below upward, recurring in paroxysms, < by motion, and esp. by rising after sitting.

3. Eyes.—Could not turn eyes upward, or to one side without severe aching and throbbing.—A great white hand seemed to appear to him in the darkness, coming outspread towards his face, causing him in terror to scream for the watcher.—Photopsic illusions with wide-open eyes.

6. Face.—Occasional sudden puffing up of l. cheek and calf of l. leg, as though filled with air, going off in a few hours and returning again.

8. Mouth.—Teeth covered with sordes.—Soreness and sensation of looseness in upper incisors.—Tongue parched and brown.—Painful round white ulcers in the mouth, esp. on inside of cheeks.—Hot and very offensive breath.

10. Appetite.—Appetite lost.—Craving for lemons and cider.—Extreme thirst; for ice-water, satisfied with a sip, but wanting it again directly.

12. Abdomen.—Continual soreness to pressure in abdominal walls.—Heat and grinding wearing pains in lower part of bowels, < just before stool.

13. Stool and Anus.—Several times an hour, a stool, smelling of benzine, of lead-coloured mucus, mixed with bright blood, accompanied with some tenesmus, and followed by throbbing in anus and rectum and lancinating pains from below upward, continuing about five minutes.

14. Urinary Organs.—Pressing pain in bladder, after passing urine, throbbing and smarting in neck of bladder and urethra for several minutes.—Urine: dark, offensive; sediment like red sand.

17. Respiratory Organs.—Every few days continual, dry, hacking cough.—Continual soreness and aching in clavicular region.

20. Back.—Continual aching and throbbing in lumbar region, < by a full inspiration.—Extreme irritation of the kidneys.

22. Upper Limbs.—Continual soreness and aching in muscles of upper arm.

24. Generalities.—Wasted, pallid, exhausted; general prostration.—At one time he sank very low, approaching a typhoid condition.—Complained of sensation of falling through bed and floor.

26. Sleep.—For three nights, before the sweating began, complete insomnia, with unpleasant thoughts crowding the mind, and wide-open eyes, before which photopsic illusions floated continually.

27. Fever.—Chills seized remote parts and passed toward the head, from the thumbs to the elbows, and thence to shoulders; from small of back to shoulders and vertex.—Cold compresses came off steaming in a few minutes, smelling of benzine and stained a deep yellow, which could only be removed by long exposure to the sun.—For several nights copious, general, warm sweat toward morning, very exhausting, followed on several succeeding mornings by sweat only on breast, on side not lain upon, and in axillæ.

Benzinum Dinitricum.

Di-Nitrobenzol. $C_6 H_4 (NO_2)_2$. A crystalline substance obtained from the further action of Nitric Acid on Nitrobenzol at higher temperatures. Solution in alcohol.

Clinical.—Amblyopia. Anæmia. Colour-blindness. Impotence. Peripheral neuritis. Retinitis. Spastic paralysis. Urine, black.

Characteristics.—*Benz. dinit*. is used in the manufacture of the higher explosives. The effects on workpeople have been recorded by Simeon Snell in the *British Medical Journal* of March 3, 1894. The symptoms observed strongly resemble those of *Benz. nit*., viz.: Headache, giddiness, staggering; numbness and paralytic sensations. But the following:—Anæmia, with a murmur in the pulmonary artery. Impotence observed in men (in women there was no-alteration in menstrual functions); distaste for tobacco—are not mentioned under *Benz. nit*., but were marked in those under the influence of *Benz. dinit*.: The knee-jerks were, if anything, somewhat exaggerated. Dyspnœa was marked in all, accounting partly for the inability to smoke. In the eyes the symptoms were very marked, and were very carefully observed. Ordinary vision was greatly impaired; the field of vision contracted, and partial colour-blindness, "a small central scotoma for red and green." The retinal veins were found much engorged; probably part of the general venous engorgement and cyanosis. The blood is altered and turned black, and the urine is black without containing blood.

Relations.—*Compare:* Benz., Benz. nit., Hydrocy. ac., Ars. *Antidoted by:* Strychnine.

SYMPTOMS.

1. Mind.—Raving and unconscious from 5 p.m. to 10 p.m.; the doctor gave him up, but he recovered.—Delirious, complaining of great pain in head.

2. Head.—Giddiness, compelling to sit down.—Reels like one drunk; even fell off a stool when sitting; stumbled getting into a trap.—Could not walk many yards without falling.—Occipital headache; unable to work on account of headache.—Frontal headache with delirium.—Colour of hair altered from golden to a sort of red.

3. Eyes.—Blindness.—Colour-blindness, "central scotoma for red and green.".—Disc pale; greyish; edges defined; retinal vessels full, esp. the veins.—Retinal hyperæsthesia.—Veins much larger than the arteries.—Conjunctivæ jaundiced.

6. Face.—Face pale, lips blue.—Face bluish, asphyxiated look.

11. Stomach.—Occasional nausea and vomiting.—Intolerance of alcohol, "it made him feel so bad."

14. Urinary Organs.—Urine dark, like ink; sp. gr. 1,029.

15. Male Sexual Organs.—Sexual desire lost, power diminished (restored when taking liq. strychniæ after leaving off the work).

17. Respiratory Organs.—Breath very short; rendering smoking very difficult.—Short breath with giddiness.—Asphyxia.

19. Heart.—Engorgement of venous system.—Bruit in pulmonary artery.—Pulse very frequent (115), small, and compressible.—Anæmia.—Blood black.

21. Limbs.—Want of sensation in arms and legs; prickly feeling.—Legs numb to knees and arms to elbows.—Stiffness about hands and feet, but esp. the fingers.—Hands and feet cold; feet numb and also sore.—Finger-tips feel cold to the touch, though she herself is not aware of it.

Benzinum Nitricum.

"Essence of Morbane." "Artificial Oil of Bitter Almonds." $C_6 H_5 NO_2$. (Prepared by heating Benzol with Nitric Acid; the oily fluid formed is washed and rectified; it is miscible with alcohol, and has an odour of bitter almonds.) Solution in alcohol.

Clinical.—Amaurosis. Convulsions. Cyanosis. Diuresis. Epilepsy. Nystagmus. Respiration, slow. Strabismus. Tetanus. Trismus.

Characteristics.—*Nitro-benzene* is a very poisonous substance, and our knowledge of its action is due to numerous cases of poisoning that have occurred. It produces faintness, sinking, convulsions, twitchings, stupor. It slows the respiration until death occurs. Rolling of the eyeballs in their vertical axis is a prominent feature, and the pupils are dilated. Blueness of lips, face, and finger-nails. Flapping of alæ nasi. Head drawn backward and to the left side in spasms. Involuntary evacuations. Paralysis of all limbs. Punctiform ecchymoses. The odour of bitter almonds is strong in the secretions.

Relations.—*Compare:* Benzin., Amygd. am., Camph. Hydrocy., ac.

SYMPTOMS.

1. Mind.—Extreme mental excitement.—Loquacity, followed by drowsiness, soon passing into stupor.—Soon became unconscious with inarticulate, confused speech.

2. Head.—Vertigo; and headache.—Trembles; staggers; falls unconscious.—Sensation of formication under scalp, or as if the hair was bristling up.

3. Eyes.—Rolling of eyeballs.—Constant slow movement of eyeballs from l. to r. under closed lids.—The eyeballs showed a constant turning inward and outward in a slow, regular motion, with the visual axes perfectly parallel.—Constantly rolling in vertical axes.—Strabismus.—Eyes staring.—Great injection of conjunctiva of bulbs.—Eyeballs seemed enlarged.—Pupils dilated; insensible to light.—Distorted vision and flashes of strange light and colours.

4. Ears.—Violent roaring in ears, and sounds.

6. Face.—Stupid expression.—Cyanosis.—Œdema.—Covered with cold sweat.—Trismus.

8. Mouth.—Tongue white and swollen; thick and soft.—Burning taste, followed by numbness and tingling of tongue and lips.—Stammering speech.—Tenacious saliva flowed from the mouth.

11, 12, 13. Stomach, Abdomen, Stool.—Burning in throat and stomach.—Nausea, vomiting, of food eaten.—Pains in abdomen.—Involuntary evacuations.

14. Urinary Organs.—Diuresis; urine brownish red; odour of bitter almonds.—Urine and fæces passed involuntarily.

17. Respiratory Organs.—Sighing respiration.—Respiration frequently interrupted.—Dyspnœa.—Respiration exceedingly slow; shallow.—Snoring.—Respiration difficult, catching, accelerated.

19. Heart.—Pulse rapid, weak, irregular.—Pulse full and slow.—Pulse scarcely perceptible.

20. Neck.—Stiff-neck; trismus and fibrillary twitchings in masseter muscles.

21. Limbs.—Twitchings in hands and feet.—Arms spasmodically flexed, sometimes extended.—Arms spasmodically flexed at first, afterwards relaxed.

24. Generalities.—Gait as if intoxicated; staggering here and there.—Violent convulsions; with unconsciousness.—Fell unconscious; extremities paralysed;

evacuations involuntary.—Fainted from inhaling vapours.—Over-powering odour of bitter almonds.

25. Skin.—Punctiform ecchymoses.—Skin livid; bluish-grey.—Ecchymosed spots, bluish-black, beneath scalp and on gluteal muscles.

27. Fever.—Skin cold.—Sweat on forehead and face.—Whole body covered with profuse cold sweat.

Benzoicum Acidum.

Benzoic Acid. $C_6 H_5 CO. OH$. Obtained, by sublimation, from Gum benzoin; or artificially from several aromatic hydrocarbons. Tincture or trituration.

Clinical.—*Asthma. Bladder, affections of. Bunion*. Cracks. *Diarrhśa*. Enuresis. *Eye, tumours of. Ganglion*. Gonorrhśa. Gout. *Joints, affections of. Knee, pain in. Rheumatism*. Sycosis. Throat, sore. Tongue, sore. Tonsils, enlarged. Ulcers. *Urine, disorders of*. Wens.

Characteristics.—The leading note of Benzoic acid is the occurrence, as a concomitant of any morbid condition, of strong-smelling urine, generally also dark. Benzoic acid is a chilly medicine, the symptoms being < in open air; by uncovering; > by heat. Pains suddenly change their locality, but are mostly felt in region of heart. Joints crack when moving. Symptoms appear left side first, then right. Asthma has been cured by it, especially in rheumatic persons. Inflammation of bronchi and lungs, with great tenderness of chest, cough < night, lying on right side. Some of the chief symptoms are: Inclined to dwell on unpleasant subjects; if he saw any one deformed it made him shudder. Tongue spongy on surface with deep cracks and spreading ulcers. Sensation of lump (as of food) in pit of throat; of swelling and constriction. Throat symptoms are > by eating. Watery, light, very, offensive stools (in children), stools like soapsuds, with usually strong-smelling urine. Enuresis nocturna; urine dark, strong-smelling; heavy, hot; smelling like horse's urine. Shivering before stool. Long-continued, dry cough after suppressed gonorrhśa. Ganglion of wrist and bunion of great toe I have frequently cured with *Benz. ac*. In these cases an ointment (one ounce of the 3x to cetacean ointment one ounce) is a useful external adjunct. Tearing and stitches in great toe, especially right (gout). Swelling and pain of right knee. Gouty concretions. "Most of the symptoms appear on the left side, but may subsequently come on the right" (Guernsey). Motion < most symptoms, but headache is < at rest, and toothache is < lying down.

Relations.—*Compare:* Copaiv., Fer., Zn., Nit. ac. (urine smelling like horse's); Tropćolum. *Useful* in gout after Colch.; after abuse of Copaiv. in suppression of gonorrhśa; in enuresis after failure of Nitrum. *Incompatible:* Wine, which < pains in kidneys, drawing in knees, &c.

SYMPTOMS.

1. Mind.—Inclination to dwell on unpleasant subjects; if he saw any one deformed it made him shudder.—While writing he often omits words.

2. Head.—Giddiness, esp. in the afternoon, is if he would fall sideways.—Pressure on the vertex, extending to the spine; without pain, but with anxiety.—Rheumatic pains in the head.—Headache from a draught of air; from taking cold in it; from uncovering the head; in the morning, when awaking; < when at rest; returning periodically, and accompanied by pain in the stomach, nausea, and cold hands.—Fearful pain in occiput or cerebellum.—Cold perspiration on the head.

3. Eyes.—Distress in eyes as from want of sleep.—Throbbing in eyeballs.—Burning heat in lids.

4. Ears.—Swelling behind ears, which seems to reach periosteum.—Sound as of confused voices in ears, < when swallowing, or walking in open air.

5. Nose.—Seems to smell cabbage, dust, or something stinking.—Sense of smell diminished.—Epistaxis.—Sneezing with hoarseness.—Cold easily caught.—Pressure at root of nose.—Pain in bones of nose.—Itching of septum.

6. Face.—Burning heat of one side of the face.—Circumscribed redness on the cheeks.—Copper-coloured spots on the face.—Cold perspiration of the face.—Trembling of lips.—Involuntary biting of lower lip at dinner.—Itching on chin.

8. Mouth.—The tongue is spongy on the surface, with deep cracks, and with spreading ulcers.—Toothache (the oil or gum is a popular local application).—After-taste of food.—Acid mucus in mouth.—Taste of blood; bitter; flat; soapy (water); smoky (bread).—Ulcerated tumour l. side of mouth, on soft commissure of jaws, behind last molar.—Heat around mouth.

9. Throat.—Sensation as of a lump in the pit of the throat, as if some food had lodged there.—Sensation of swelling or constriction in the throat.—The throat symptoms are relieved by eating.—Swallowing difficult, incomplete; with noise in ear; with soreness on back of tongue.—Heat in śsophagus.—Thyroid gland feels swollen.—Angina faucium and tonsillaris, with characteristic urine.

11. Stomach.—Sweat while eating.—Hiccough.—Pressure in stomach and eructations.—Burning or warmth; pressure on stomach.—Weak digestion.—Sensation of lump in pit of throat, as if food had lodged there.

12. Abdomen.—Sense of weakness in precordia.—Obstruction of the liver.—In liver region constant, fine, but violent stitching, midway in upper portion thereof.—Cutting about navel; > by stool.

13. Stool and Anus.—Watery, light-coloured; copious; very offensive stools (in children), with unusually strong-smelling urine.—Frothy stool.—Stitching in rectum.—Sense of constriction at lower end of rectum.—Wart-like elevations round anus; with smarting soreness; strong-scented, high-coloured urine (after previous use of *Copaiva* for chancre.).—Formication at anus.—Diarrhśa of children during dentition.

14. Urinary Organs.—Urine highly coloured; urinous odour exceedingly strong; offensive, pungent smell.—Soreness or hot, burning pain in the (l.) kidney.—A granular kind of mucus mixed with phosphates in the sediment; urine dark-reddish brown; sheets usually stained brown; acid reaction, or very offensive heavy hot; fleeting pains in bladder, not when urinating, but at other times vesical catarrh from suppressed gonorrhśa, calculi, or gout.—Urinous odour highly intensified; like horse's urine.—Nocturnal enuresis; with strong, dark urine.

15. Male Sexual Organs.—Suppressed gonorrhśa; gleet; with offensive urine.—Painfulness of genitals; pressure; raw pain.—Smarting of frenum.—Thrilling l. side of glans, extending into urethra, causing starting.—Itching on glans; on sulcus behind corona.

16. Female Sexual Organs.—Menses too early; or retarded.—Amenorrhśa.—Prolapsus uteri with fetid urine.—Weakness after menses.—Gastric derangements when ascending a height (in a pregnant woman).—Too long-lasting lochia.

17. Respiratory Organs.—Long-continued dry cough, after suppressed gonorrhśa.—Cough followed by expectoration of green mucus.—Cough: after slight cold; excited by inspiration; produced by something acrid or dry in chest.—Asthma with inflammatory rheumatism.

18. Chest.—Burning in nipples.—Sensation of swelling in breasts and thyroid gland.—Stitches in chest; < breathing deeply; in evening.—Asthenic pneumonia.—Mucous oppression of lungs.

19. Heart and Pulse.—Pains in the region of the heart.—Most of the symptoms appear on the l. side, but may subsequently come on the r. side.—Awakens every morning at two o'clock, with violent internal heat, and hard, beating pulse, compelling him to lie on the back, because the beating of the temporal arteries causes a humming in the ears, and prevents him from going to sleep.—Pains about heart mostly, but suddenly change locality.—Awakens after midnight with violent palpitation of the heart, and hard beating of the temporal arteries.

20. Neck and Back.—Stiffness of neck, only on one side.—Nape: pressure; itching.—Dull pain in back, in region of kidneys; stiffness in loins.—Coldness in sacrum.

21. Limbs.—Nodes on joints of upper and lower extremities, cracking on motion.—Gouty concretions.—Syphilitic rheumatism.

22. Upper Limbs.—Gouty deposits in both wrists between metacarpal bones; swelling of elbow-joints.—Paralytic pains of fingers.—Eruption of red spots on fingers.—Fingers swollen, tearing and fine stitching pains in various parts of the limbs.—Ganglion.—Panaritium.

23. Lower Limbs.—Swelling in r. knee; ulcerative pain in whole leg, with pains in kidneys.—Cracking or sense of dryness in knee-joint.—Pain in both knees; after drinking wine.—Pain in gastrocnemii.—Sharp pain in l. ankle, when weight is on l. foot on walking.—Severe pain in l. tendo Achillis close to os calcis when weight on that foot.—Pain in r. tendo Achillis and in heart region at same time.—Tearing and stitches, esp. in the metatarsal joints of the r. great toe.—Gouty concretions and nodosities.

24. Generalities.—Great weakness, perspiration, and comatose condition.—Trembling, with palpitation of the heart.—Weariness and lassitude.—Pains suddenly change their locality.—Symptoms in sick go from l. to r. and from below upward, esp. in rheumatism and gout.

25. Skin.—Itching on various parts; agreeable sensation on being scratched, but leaving a burning.—Red spots on fingers.—Syphilitic spots and marks.

26. Sleep.—Awakens with oppression of breathing, with palpitation of the heart (after midnight), with heat and hard pulse.

27. Fever.—Cold hands; feet; back; knees, as from cold wind.—Chilliness before the stool.—Great internal heat when awaking.—Perspiration: while eating; when walking; morning in bed, esp. on face; with anxiety.—Cold sweat: on head; on face; on feet.—Sweat with aromatic odour.

Benzoin.

Lindera Benzoin. Laurus Benzoin. Benzoin oderiferum. Spice bush. Fever-bush. N. O. Lauraceæ. Tincture of twigs.

Clinical.—Fever. Hair, oiliness of. Vertigo.

Characteristics.—The symptoms of *Benzoin* as shown in a short proving somewhat resemble those of Laurocerasus. Empty sensation at the stomach and lower part of bowels. < On lying down: head swims, with sinking sensation which makes lying down in bed unpleasant. The hair is oily. Feverish. < After sleep. Sense of touch fine, quick and pleasant.

Relations.—Compare. Lach (< after sleep).

SYMPTOMS.

1. Mind.—Unpleasant, fearful feeling.

2. Head.—Hair oily.

11, 12. Stomach and Abdomen.—Wakes from sleep with a sick feeling in stomach and bowels; tired feeling; turns often in bed at night.—Empty feeling in stomach and lower part of bowels.

13. Stool.—Soft stool, with pain before stool in lower bowel.

14. Urinary Organs.—Urine more frequent, small quantity, dark colour; had to rise twice in night to urinate.

23. Lower Limbs.—Hips feel crushed.—Pains in knees.—Feet and legs cold up to knees; remained cold in bed.

Berberis Aquifolium.

Oregon Grape. N. O. Berberidaceæ. Fluid extract or tincture of root.

Clinical.—Biliousness. Bronchorrhœa. Eczema. Face, roughness of. Headache. Herpes. Leucorrhœa. Pityriasis. Psoriasis. Spleen, affections of. Stomatitis. Syphilis. Typhoid. Voice, affections of.

Characteristics.—*Berb. aqui*. belongs to the Mahonia group of the Barberry family. It has been used by eclectics in chronic syphilis, chronic skin diseases, in

scrofulous cachexia, and for removing pimples from the faces of girls. Hale reports a case of very advanced secondary syphilis cured with it, and some characteristic cases of psoriasis. In all these conditions it has been given in the Ø tincture 5 to 10 drops. J. D. W. C., in *Recorder*, 1896, gives personal experiences with doses of 10 to 15 drops a day. On the third day felt "nausea and thick-headedness." Later there was "straining to vomit without vomiting." Then a peculiar headache, strong compression, as if a band of iron two inches wide passed entirely round head just above ears. It kept growing tighter and tighter. Strong black coffee relieved this after a time, but left him tremulous in nerves and unsteady in gait. Ever after that a single drop of *Berb. aq*. on the tongue was sufficient to avert an attack of biliousness when threatening, and saved him much trouble of the kind to which he had formerly been liable. *Berb. aq*. has a reputation for making "a new man of an old one." A tea made of the leaves of *Berb. mahon*. has a local reputation in the mountain typhoid of the Rockies, and the provings of *Berb. aq*. show febrile symptoms and a marked action on the spleen. A systematic proving was made under Winterburn's direction. I have verified its usefulness in secondary, syphilis.

Relations.—*Compare:* Berb. v., Euonym, &c.

SYMPTOMS.

1. Mind.—Unhappiness and depression; sometimes coming on suddenly.—Hysterical crying at frequent intervals.—Nervous, restless.—Disinclined to move or do anything; dull, stupidity.—Drowsy in daytime.—Nausea and thick-headedness.

2. Head.—Dizzy sensation < sleeping or moving.—Pain r. side pressing like a weight.—Pain r. temple running down into teeth; pains transitory and recurring.—Pain like iron band completely surrounding head above ears, with gradually increasing compression.

3. Eyes.—Conjunctiva injected.—Sensation of film before eyes.—Eyes look hollow and weak as if tired; burning feeling and aching as from strain.—Weak feeling in eyes lasting a long time.

5. Nose.—Stuffy feeling, with discharge of greenish-yellow mucus.—Itching within nose with desire to sneeze.

6. Face.—Blotches and pimples on face.—Yellow skin.—Waxy, yellowish white.—Flashes of heat to cheeks.—Pinched expression.

8. Mouth.—Bilious taste after eating.—Tongue thickly coated, yellow-brown or pasty white.—Tongue feels as if, or actually is blistered.—Soreness in lower teeth and salivary glands.

9. Throat.—Dry throat.

11. Stomach.—Hunger, even soon after eating, without desire for food.—Sudden nausea after eating.—Burning in stomach and borborygmi.—Cramps, and no appetite (2nd week).—Nausea and severe straining to vomit (occurred when fasting).

12. Abdomen.—Uneasy feeling without desire for stool.—Pain in hypogastrium.—Biliousness and waxy jaundiced hue.—Intense burning in spleen and feeling as if pounded.—Distressing soreness in spleen.

13. Stool and Anus.—Large, free, dark stools.—Hot bilious diarrhœa.—After looseness, light-coloured, varnished, constipated stools.—Stools too large and expelled with difficulty.

14. Urinary Organs.—Urine increased or decreased in quantity.

15. Male Sexual Organs.—Drawing and pressure in testicles.

16. Female Sexual Organs.—Slight burning in vagina, bearing-down pains and aching as, if menses about to come on.

17. Respiratory Organs.—Bilious cold: throat choked with mucus, voice rough and somewhat hoarse, expectoration yellow and then greenish.—Voice seemed cut off as if a damper had closed.—Lack of *timbre* in voice.—Dry, irritative cough.—Scanty, tenacious, blood-streaked expectoration.

18. Chest.—Oppression and weakness of upper part of chest.—Burning heat in lower l. lung.—(Accelerated pulse and heightened temperature vividly suggest phthisis pulmonalis.)

21. Limbs.—Sense of numbness and feeling as if there was no strength of will to lift the part.—When perfectly still, no pain; on movement, cramp (in legs), trembling and uncertainty of motion and pain.—Pain severe as after a heavy blow.—Peculiar prickling as from electricity back of hand and outside forearm, momentary but frequently returning and independent of conditions.—Rheumatic tension and stiffness of legs.

24. Generalities.—Weak, tired feeling, better for exercise.—Tremulous in nerves, unsteady in gait.

27. Fever.—Diurnal rise of temperature and pulse.—Flashes of heat and burning of palms.—Flashes of heat to cheeks.

Berberis Vulgaris.

Barberry. (Britain.) N. O. Berberidaceć. Tincture of the bark of the root.

Clinical.—Biliary colic. *Bilious attack. Bladder affections. Calculus*. Duodenum, catarrh of. Dysmenorrhśa. Fevers. Fistula. Gall-stones. *Gravel*. Herpes. *Irritation*. Jaundice. *Joint affections. Knee, pain in*. Leucorrhśa. *Liver disorder. Lumbago*. Ophthalmia. *Oxaluria*. Renal colic. Polypus. *Rheumatism. Sacrum, pain in. Side pain*. Spermatic cords, neuralgia of. Spleen, affections of. Tumours. *Urine, disorders of*. Vaginismus.

Characteristics.—The usual preparations of *Berberis* are made from the root bark. *Berberis mahonia* has a great local repute in the popular treatment of the low fever (typhoid) of the Rocky mountains, an infusion of the fresh plant being used. Chills and fever are among the prominent effects of *Berb. vulg.:* "Coldness of body with hot face, commencing 11 a.m.; burning heat in afternoon, < during night." Ague with enlargement of spleen, of spleen pains. Affections of liver and kidneys are strongly marked; but *Berb*. is a medicine of wide range. Movement < its complaints. Stitches are frequent, and a "bubbling sensation" or "bubbling stitches" are characteristic. A bubbling feeling as if water were coming up through the skin. Tearing, burning pains or bubbling sensation in joints. The mental condition is one of indifference, apathy. Melancholy, with inclination to weep. There is aversion to darkness, terrifying apparitions in the twilight. In the head there is vertigo and heaviness. Darting and shooting pains often changing their localities; < movement, > open air. Heat of head after dinner or in afternoon. Puffy feeling in head; as if it were becoming larger. Scalp tense. The face is pale, with dingy grey tinge, sunken cheeks, deep-set eyes, surrounded with bluish and blackish grey border. Mouth dry and sticky; painful white blisters on tip of tongue. The pit of the stomach is puffed up. Sticking pain in region of liver and gall-bladder shooting up to left shoulder, < by pressure. Gall-stone colic, followed by jaundice. Gnawing pain in right hypochondrium, shooting up to left scapula. Pains shoot down from tenth rib to navel. Burning in either inguinal region (especially right). *Berberis* produces both constipation (sheep-dung stools) and diarrhśa, and a number of symptoms about the anus. Hćmorrhoids, with itching or burning, particularly after stool, which frequently is hard and covered with blood. Fistula in ano with painful pressure in perinćum, extending deep into pelvis (left side). The urinary organs are markedly affected. The emission of urine is frequently accompanied by pains in thighs and loins. Lancinating, or tearing, bubbling pains in region of kidneys; < stooping and rising again, sitting or lying; > standing. Violent sticking pains in bladder, extending from kidneys into urethra, with urging to urinate. Many cases of (especially right) renal colic have been cured by it. Frequent urging to urinate. Urine dark yellow, red, becoming turbid, copious; mucous sediment, or transparent, jelly-like or reddish, bran-like sediment. Urine slimy when passed, depositing copious loamy yellowish sediment. Greenish urine

depositing mucus. *During* urination burning in urethra, or bladder, pressure in bladder, cutting, burning, or stitches in urethra. Dragging or lancinating pains in spermatic cord, extending into testes. Cold feeling in prepuce, glans, testes, and scrotum. In the female a marked symptom is absence of pleasurable sensation during coition. Uterine symptoms and leucorrhśa associated with painful urinary symptoms. Dysmenorrhśa, pains radiating in all directions down thighs, &c. Vagina intensely painful; reddened. Violent pain in back, with menses which are too scanty. It is a leading remedy in lumbago; pains extend from back, round body, down leg; with red sediment in urine. Numbness, stiffness, and lameness in kidney region. Many old troubles in the back. Sufferings < by fatigue. Aching in small of back; < sitting; or lying; in the morning on awakening. Neuralgia under finger-nails. B. Simmons has verified a symptom of *Berb*. which may be regarded as characteristic. A gentleman of 52 complained of rheumatic pains in his legs and loss of walking power. *After he had walked a short distance he was compelled to stop from a feeling of intense weariness, heaviness, lameness, and stiffness of the legs, which fell sore as if bruised*. A single dose effected a complete cure, improvement commencing on the fourth day. Stuart Close (*H. P.* xix. 218) records the cure with *Berb*. 200 of a woman who had cutting, burning pains in the balls of the feet on stepping. On, standing with most of the weight on the heels she had no pain. On rising in morning sensation in soles as if stepping on needles. There is great weakness, like fainting, after a walk, with perspiration and heat on the upper part of the body; cold, pale, sunken face and oppression of breathing. Great relaxation, with disinclination to do anything. On the indication "tumours and sessile growths," Ozanam cured a case of polypus of vocal cords, red, with a sessile base. *Thuja* had failed. *Berb*. 200 was given at first with good effect, the attenuation being gradually reduced with increasingly good effect until the growth disappeared entirely under the 1x, Guernsey admirably sums up the remedy as follows: "Affects particularly the lumbar region; kidneys; uterus. The patient is sometimes unable to tell the exact locality, but the pain is somewhere in the back and shoots up the back; or into the spermatic cord, or testes, bladder, buttocks or legs. The pain may shoot up or down, or both ways. Pains may be felt all over the body, emanating from the back; the pains are of a sticking, pricking, lancinating, or jerking character, flying about now here and now there. There is often a bubbling sensation in the region of the kidneys; this sensation may occur elsewhere, but it is usually found here." Great sleepiness during day and after dinner. After riding much, great sense of weakness in kidney region. *Suited to:* Bilious diathesis. Cases where renal or vesical symptoms are prominent.

Relations.—*Compare:* Alo., Ant. t., Arsen., Calc., Calc. ph. (fistula in ano; chest symptoms, especially after surgical operation); Canth., Carb. v., Cham., Chi., Lyc., Nat. m., Nit. ac., Nux v., Pul., Rheum. In burning and pricking pains in anus: Lyc., Thuj. In duodenal catarrh: Chi., Lyc., Hydrast., Pod., Ric. com., Merc. In aversion to darkness: Stram., Am. m., Calc., Carb. an., Stro., Val. In pains in feet on stepping: Cycl. *Botanical relations:* Podo., Caulo., Berb. aq. *Antidoted*

by: Camph., Bell. *Antidote to:* Aco. An occasional dose of Lyc. helped action of Berb. *Follows well:* Bry., Kali bi., Rhus, Sul.

SYMPTOMS.

1. Mind.—Careless, calm, apathetic humour.—Ill-humour, disgust to life.—Melancholy, inclination to weep, with dislike to conversation.—Anxiety, great fear and disposition to take fright.—In the twilight, all objects seem larger than they really are.—Intellectual labours are performed with difficulty and prove fatiguing, esp. in the morning.

2. Head.—Vertigo, with sensation as in fainting, and great weakness.—Vertigo on stooping and on making use of the arms.—Feeling of intoxication and giddiness.—Confusion and heaviness of the head, often with pressure, dejection, ill-humour and shiverings, commencing in the morning, after waking.—Head confused, as before a coryza.—Sensation, as if the size of the head were increased.—Sensation of swelling in the head.—Aching, tensive pains in the forehead, in the temples, and in the eyes.—Cephalalgia in the forehead and in the temples, as if from pressure from the inside outwards.—Headache < by movement, > in open air.—Acute, shooting pains in the forehead and in the temples.—Darting and shooting pains in the head after changing the locality.—Teguments of the head as if they were stretched and swollen.—Head feels full and heavy, as if a cap were pulled hard down on head.—Heat in the head after dinner (or in afternoon) and in the morning.—Sweat after exertion, on stooping, and on standing for any time.—Small red spots in the forehead and in the cheeks.—Itching or gnawing shootings in the teguments of the head and of the face.—Pustules in the teguments of the head and in the face.

3. Eyes.—Eyes sunk, with a blue or dirty grey circle.—Aching and sensation of burning in the eyes.—Painful sensibility of the eyes on reading by candle-light.—Sensation of stiffness, with pressure in the eyes.—Shootings in the eyes, originating in other parts (for instance, the forehead), and extending towards the eyes, and thence to the forehead.—Burning and dryness in the eyes, which are dull.—Dryness of, or biting-burning, or itching sensation in the eyes.—Itching in the canthi, eyebrows, and eyelids.—Redness of the conjunctiva, with confused sight, as if there were a veil before the eyes, in the morning after rising.—Ophthalmia, with the characteristic flying pains from the back; sensation as if sand were between lids and eyes.—Bubbling in eyes.—Indistinct sight, better near than at a distance.—Sensibility of the eyes to the brightness of the sun.—Sharp pains in the ball of the eye, and in the eyelids.—Heaviness in the eyelids during motion.—Burning or gnawing pains in the eyelids.—Convulsive movement of the eyelids when reading by candle-light.

4. Ears.—Itching, sometimes gnawing, sometimes burning, sometimes shooting, sometimes with small pustules in the exterior parts of the ears.—Small tumour, size

of hazel-nut, under and behind ear, apparently enlarged gland.—Acute and shooting pains in the interior of the ear and in other parts.—Stitches in the ear.—Sensation of coldness in; bubbling in.

5. Nose.—Dryness in the nose.—Coryza, with secretion, at first of yellowish serum, afterwards of purulent, whitish, yellowish, or greenish mucus, esp. in the morning.—Crawling or gnawing pains in the nostrils.

6. Face.—Heat, and bluish colour of the interior of the lower lip.—Dryness of the lips, and exfoliation of the epidermis, with a flat, brownish crust upon the edges.—Sensation of burning on the exterior of the lips.—Sensation of tingling on the lips.—Small pustules in the lips.—Acute aching or acute shooting pains in the cheek-bone and in the jaw.—Great paleness of face, dirty grey complexion, with hollow cheeks and sunk eyes, surrounded by a bluish or dark grey circle.—Aspect, one of great and prolonged dejection.—Feeling as if cold drops spurted into face on going into open air.

7. Teeth.—Acute drawing pains and shootings in the teeth, with a sensation as if the teeth were set on edge, or too long or too large; also with great sensibility of the teeth to the fresh air, esp. in the afternoon and at night.—Ulcer in the gums.—Small white painless nodes in the gums.—Dirty red colour of the edges of the gums.—Bleeding of the gums.

8. Mouth.—Painful sensibility of the tongue to the touch and to motion.—Stiffness and sensation of swelling at the end of the tongue.—Painful, whitish vesicles at the end of the tongue.—Sensation of dryness, clammy taste in the mouth, more disagreeable in the morning after rising, with harshness of the mucous membranes, and white tongue.—Diminution of the secretion of saliva, or viscid, frothy saliva.

9. Throat.—Inflammation of the tonsils and pharynx, with swelling and fiery redness, and a sensation as if a lump were lodged in the side of the throat; expectoration of a quantity of thick, yellow, jelly-like mucus.—White, sticky tongue, viscid saliva resembling soap-suds.—Tonsillitis, with sensation of something rough there; stiff-neck; feeling of a plug in the throat.

10. Appetite.—Taste bitter.—Acid, bitter taste, esp. after a meal.—Thirst and dryness of the mouth.—Burning and acrid taste in the mouth and in the throat, as if from pyrosis.—Excessive appetite, almost like bulimy.—Want of appetite, with bitter, bilious taste.—Food appears insipid.

11. Stomach.—Nausea before breakfast, better after.—Nausea and inclination to vomit before dinner.—Risings alternately with yawning.—Bilious risings.—Shiverings in the epigastrium.—Aching, with shooting pains in the epigastrium.—Burning, shooting pains in the stomach, sometimes extending to the pharynx.—Sticking pain in gastric region; whirling pain in.

12. Abdomen.—Cramp-like pains under the navel.—Shooting, aching pains in the hepatic region, increased by pressure.—Pressure in the region of the liver.—Burning under the skin, in the l. side of the abdomen.—Bubbling externally.—Violent burning, under the skin; in l. side of abdomen.—Drawing, acute, and shooting pains in the region of the l. hypochondrium.—Sensation of tension in the groins, as if hernia were about to protrude, esp. when walking or standing.—Aching pains in the region of the inguinal glands, which are painful on being touched, as if they were going to swell.—Pain, with throbbing shootings in the groins, esp. when walking and standing, extending to the testes, the thighs, and the loins.—Varicose veins in the groins.

13. Stool and Anus.—Hard stools like sheep dung; or soft, easy stools, with burning in anus.

14. Urinary Organs.—Bubbling sensation in region of kidneys.—Lancinating or tearing pulsative pain in the region of the kidneys; worse when stooping and rising again, sitting or lying; better when standing.—Violent sticking pains in the bladder, extending from the kidneys into the urethra, with urging to urinate.—Frequently recurring, crampy, contractive pain, or aching pain, in the bladder, when the bladder is full or empty.—Incisive pains in the urethra, even when not in the act of making water.—Smarting pain in the urethra, with sensation of excoriation, even during the emission of semen in coition.—Motion excites and aggravates the pains in the urethra.—Burning pains in the urethra when making water, and afterwards, but esp. at other times.—Stitches and burning in the urethra.—Shooting pains in the urethra, extending to the bladder.—Aching pains in the region of the bladder, even when it is empty, and after making water.—Contractive, drawing, acute, incisive, and cramp-like pains in the bladder.—Shooting, violent pains in the loins, extending to the bladder.—Sensation of burning in the bladder.—Pressure on making water.—Urgent inclination to make water, esp. in the morning after rising.—Increased secretion of urine, which is as clear as water.—Urine pale yellowish, with slimy, gelatinous, mealy sediment, white, greyish white, or reddish.—Urine thick, yellowish, like whey, or clay-coloured water.—Urine of a deep yellow, with abundant sediment.—Urine dark yellow, red, becoming turbid, copious; mucous sediment, or transparent, jelly-like reddish, bran-like sediment (which is easily crushed and dissolved between the fingers).—Greenish urine, depositing mucus.—Urine reddish, as if inflamed, with abundant sediment.—Urine reddish, sanguineous, with slimy, mealy, and abundant sediment, of a bright red colour.—The emission of urine is often accompanied by pains in the thighs and in the loins.

15. Male Sexual Organs.—Burning, smarting pains in the glans.—Sensation of cold in the glans and in the prepuce, sometimes with sensation of torpor.—Cold feeling in the prepuce and scrotum.—Sensation of weakness and insensibility in the external genital parts.—The penis seems to be shrivelled and retracted.—Burning pain in penis.—Aching, drawing, contractive pains in the testes and in the spermatic

cords, with contraction of the scrotum, which appears cold and shrivelled.—Pains, as from excoriation in the scrotum.—Movement excites or aggravates the majority of the symptoms in the genital parts.—Smarting, burning, shooting, drawing, or squeezing pains in the spermatic cords, extending to the testes.—Swelling of the spermatic cord, with pains verging towards the testes.—Sensation of great weakness of the genital parts after coition.—Diminution of sexual desire.—Premature emission in coition.

16. Female Sexual Organs.—Tardy enjoyment in women, during coition, and often accompanied with incisive or shooting pains.—Sensation of burning and excoriation in the vagina, extending to the labia.—Pale catamenia, composed of serous blood.—Menses, consisting of grey mucus or brown blood.—Suppressed menstruation.—During the catamenia, pains in the genital parts and in the loins, or violent pains in the head, with sensation of fainting.—Catamenia insufficient, with acute drawing pains in the whole body, painful inflation of the abdomen, pain in the loins, shootings in the chest, dejected aspect, with violent pains in the head; or with ill-humour, disgust of life, dejection, smarting pains in the vagina, sensation of burning and excoriation in the anus, and pains in the arms, as far as the shoulders and the nape of the neck.

17. Respiratory Organs.—(Sessile polypus of vocal cord.).—Hoarseness, with soreness or inflammation of the glands of the neck.

18. Chest.—Sensation of excoriation in the chest.—Oppression of the chest, esp. at night, with violent flowing of the coryza.—Shooting pains in the centre of the chest, increased deep breathing, with dry, short cough.—Painful shootings in the l. side of the chest.

19. Heart.—Squeezing, with shootings, in the region of the heart.—Palpitation of the heart.

20. Neck and Back.—Drawing, acute rheumatic pains in the nape of the neck.—Pustules in the nape of the neck, in groups, esp. near the scalp.—Shooting pains between the shoulder-blades, increased by breathing.—Acute drawing pains in the dorsal spine.—Bubbling sensation in back.—Stitches in the spine.—Pustules in the back.—Sensation of tension, of stiffness, and of torpor in the loins, as if they were swollen or benumbed.—Aching, tensive, acute, drawing, or shooting pains in the loins.—Sensation of tensive pressure in the loins, often with heaviness, heat, or torpor of these parts, esp. in the morning on waking, aggravated by sitting or lying, sometimes diminished by evacuations, or by the emission of wind.—Pain in the small of the back; worse when sitting and lying, in the morning when awaking (during menstruation).

22. Upper Limbs.—Sensation of lassitude, of paralysis, and of bruising in the arms, esp. during motion, provoked or aggravated by pressure.—Acute pains in the

arms.—Pains in the shoulder, as of subcutaneous ulceration.—Marbled spots on the arms, with burning itching.—Cramp-like pains in the forearm.—Tractive, acute pains in the forearm and in the bones, extending to the hand and the joints of the fingers, with heaviness and weakness of the arm.—Burning or smarting pains in the forearm, aggravated by friction or scratching, and sometimes followed by a red spot.—Small itching spots, like petechić, on the forearm and on the back of the hand near the wrist.—Lymphatic swelling of the forearm, with spots like petechić and burning pains in the skin.—Drawing, acute pains in the joints of the hand and of the fingers.—Aching, digging, violent pains in the back of the hand, with sensation of heaviness.—Urticarial spot on the back of the hand.—Small warts in the fleshy part of the hand, under the thumb.—Sensation in the extremity of the finger, as if caused by subcutaneous ulceration.—Flat wart on the finger.—Redness of the hands, with itching, as if from chilblains.—Neuralgic pain under nails; tender to touch.

23. Lower Limbs.—Sensation of weariness and pain, as of fatigue, in the legs, sometimes with heaviness, stiffness, and a sensation of paralysis, as after a very long walk, or as from dislocation in the parts affected, esp. in the soft parts, but also in the bones, and easily excited by movement.—Great weakness of the legs while walking.—Sensation in the legs as if they had wasted away.—Tensive pains in the thighs, in the calves of the legs, and in the knees, as if tendons were too short.—Drawing, tensive pains in the legs.—Starting of the muscles of the legs.—Sensation of cold on the outside of the thighs, as if from quicksilver circulating under the skin.—Sensation of weariness, of bruising, and of paralysis in the knees while walking, and afterwards, as well as on rising after having been seated a long time.—Lymphatic swelling of the tendo Achillis, with pains on lifting the foot, and a sensation as if the foot were bearing a heavy load.—Swelling of the foot after movement, with sensation of burning, swelling of the heel, and cramp in the foot.—Sensation of dislocation in the joints of the toes.—Heels pain as if ulcerated on standing.—Stitches between metatarsal bones, as from a nail when standing.—Tearing in balls of feet, with pain when stepping on them.—At every step stinging in the big toe.—Burning pain in the soles of the feet, esp. in the evening.—Drawing, acute, or burning pains in the toes.—Pain of excoriation in the toes, with redness, as if from chilblains.

24. Generalities.—Pulling, shooting, and gnawing pains, or pains as from fatigue in the limbs, aggravated or excited by movement.—Muscular palpitations.—Bubbling sensations and bubbling stitches.—Paralytic weakness in some parts.—Lymphatic swellings.—Great lassitude, increased by walking, or by remaining long in a standing posture.—Sinking, after the slightest effort.—Weakness, which even induces trembling.—Weakness, as from fainting, with vertigo, on walking or standing for some time.—After a walk, a fainting fit, with ebullition of the blood, sweat and heat of the upper part of the body, paleness of face, hollow cheeks, and oppression of the chest before going to rest.—Fainting, after having been in a carriage.—Sessile growths.

25. Skin.—Small pustules, red, burning, itching or shooting, and painful on being touched, upon the skin over the whole body: they change into brownish spots, like large freckles.—Warts: small, flat.

26. Sleep.—Sleepiness during the day, esp. in the morning and afternoon; after dinner.—Unquiet sleep, disturbed by burning itching of the skn, or by anxious dreams.—Sleep unrefreshing.—Waking in the morning between two and four o'clock, without being able to go to sleep again, with tension and congestion in the head, and thirst.—Sleep greatly prolonged, with pain, as of a bruise, and pressure on the loins, and on the thighs.—Frequent waking, and fatigue, as from want of sleep.

27. Fever.—Shiverings before dinner, and sometimes after, with feet icy cold, mouth dry and clammy, and pains in the l. side of the epigastrium.—Shiverings in the morning in the back, in the arms and in the thighs, followed by burning heat, with giddiness and violent shooting pains in the head, and sore throat; on the third day, sweat, smelling like urine.—Heat in the hands and head in the afternoon, continuing for several days.—Disposition to sweat on the least exertion, esp. in the afternoon, with anxiety.—Thirst, with the mouth dry, esp. in the afternoon.—Pulse slow and weak, or full, hard and rapid.

Bismuthum.

Bismuth (including the Subnitrate "Magistery of Bismuth" Bi_2O_3. $_2HNO_3$; the Nitrate $Bi\ O_2\ HNO_5$; and the Oxide $Bi\ 0_3$). Trituration.

Clinical.—Abdominal operations, vomiting after. Angina pectoris. Cholera. *Cough*. Cystitis. Delirium tremens. Diaphragmitis. Diarrhœa. Gangrene. Gastralgia. Gastritis. Headache. *Phlegmasia alba dolens*. Stomach, cancer of. Stomatitis. Toothache. Vomiting.

Characteristics.—*Bismuth* exerts its chief influence in the stomach and stomach region. It causes a *pure* gastralgia, not associated with catarrh like that of *Nux*. There is vomiting of large quantities and intense thirst, with ejection of *water immediately* after it is taken; food is retained a little longer. Burning, griping, lancinating, with dull pain in back or spasmodic vomiting. The pains are chiefly piercing, tearing, burning, cramping, and screwing. Headache alternating with gastralgia. There are tearing pressing pains in the bones of the hands and feet, spasmodic affections of the muscles of face and limbs. Hæmorrhages; the blood being dark, pitchy. Anæmia, and with this there is an itch-like eruption. Corrosive itching on side of tibia. Gangrene and gangrenous ulcers, bluish; or dried, parchment-like. Piedvache has recorded a case in which a *Bismuth* dressing applied to a burn produced the following results: Pseudomembranous stomatitis, with

disseminated plaques, the membranes resting on black spots. Black borders on gums; loosening of the teeth. Pharyngeal angina (uvula, tonsils, and palatine arch); false membrane, slightly adherent, and of slight consistency; slate-coloured spots all over; later, sphacelus of soft palate. Vomiting, hiccough. Pain along œsophagus. Diarrhœa, albuminuria.

O. W. Smith has verified: "Pain in stomach > bending backward"; and "eructation tasting of food eaten twenty-four hours before." Cold drinks and cold bathing > headache; toothache. When the water in the mouth becomes warm it < toothache. Summer complaints. Headache returning in winter. Motion relieves most symptoms and < some headaches. > Bending backward (pressure in spine). The patient is restless, moving about; anxiety.

Bism. has a great affinity for affections of r. upper extremity or forehead. Sensation of *heaviness* in inner parts. With gastralgia there is *pressing heaviness*. In gastric affections with vomiting, purging, and prostration, the surface of the patient is *warm*. In summer complaint of children there is cadaverous smell of flatus and of stool. Desires company; child holds on to its mother's hand. According to Teste, *Bism*. corresponds to slow digestion, with fetid eructations; it is hardly ever indicated where eructations are inodorous or sour; or when gastralgia is accompanied by habitual constipation, without vomiting, or with vomiting of insipid ropy mucus. The stools are preceded by crampy, pinching pains in the stomach. Teste cured with the oxide a wearing, nightly cough in a hysteric lady; and a case of sub-acute cystitis, with irregular paroxysms of crampy pains in the bladder; also a case of phlegmasia alba dolens (left); Petroz having cured another.

Relations.—Bismuth *is antidoted by:* Calc., Caps., Coffee, Nux. *Is isomorphic with:* Ant c., Ars., Phos. *Similar to:* Ant. c. (vomiting, white tongue, gastritis); Ars. (anxiety, gastritis, cancer, gangrene, vomiting); Bell. (gastralgia, cancer, flatus in ridges); Bry. (toothache, gastritis); Calc., Caps., Chi., Ign., Kali c., Kre., Lach. (sore throat, sleep, ulcers); Lyc., Merc., Nux (gastralgia, urging to stool); Phos. (vomiting: Bism. vomits immediately; Pho. vomits water as soon as it becomes warm in stomach); Plumb. (abdomen in ridges, gastralgia; > bending backward; heart disease); Puls., Rhus > by motion); Sep., Sil., Staph. *Useful after:* Euonymus (headache).

Causation.—Abdominal operations.

SYMPTOMS.

1. Mind.—Discontented, morose, and complaining humour.—Inconstancy.—Aversion to solitude.—Delirium.—Delirium tremens.—Loss of consciousness.—Moral apathy and insensibility.

2, 3. Head and Eyes.—Giddiness in the morning.—Vertigo, as if the brain were turning in a circle.—Stupor, with mist before the eyes.—Headache, chiefly in the sinciput, and extending even to the eyes.—Cutting pain in brain, beginning above, r. orbit, extending to occiput.—Pressive heaviness on the head, esp. on the forehead, above the root of the nose and in the temples.—Constant digging and piercing in the forehead, which extends to the eyes and point of the nose.—Headache attended by, or alternating with, gastralgia. Burning contraction in the head, esp. in the forehead and in the eyes.—Aching of the eyeballs.—Secretion of humour in the corner of the eyes.

5. Nose.—Nose-bleed, dark blood.

6. Face.—Earth-coloured, sickly, and wan (with distorted features), with livid circle round the eyes.—Aching pain in the cheek-bones; > running about and holding cold water in the mouth.—Face pale and cold.

7, 8. Teeth and Mouth.—Pressive, tractive odontalgia.—Toothache > taking cold water into the mouth, < when the water becomes warm.—Gums swollen, with pain like excoriation.—Painful sensibility of the interior of the mouth, as if from excoriation.—Constant secretion of a brownish, thick saliva, of a metallic taste.—In the morning, taste of blood in the mouth, with spitting of sanguineous mucus.—In the evening, tongue white and loaded (without heat or thirst).—In the evening, great thirst, with preference for cold drinks.

9. Throat.—Inflammation of the whole throat.—Burning pain in the throat, sometimes insupportable.—Phagedenic ulceration of uvula, with burning and tearing; difficult swallowing of fluids, which return through nose.

11, 12. Stomach and Abdomen.—Nausea after every meal.—> By cold water (drink).—Water is vomited as soon as it reaches the stomach.—Vomiting, convulsive gagging and inexpressible pain in stomach (after operations on abdomen).—Nausea, with inclination to vomit, esp. after having eaten.—Violent risings of a putrid smell.—Strong inclination to vomit, with violent retching.—Cancer of stomach.—Vomiting of brownish matter.—Vomiting (of bile) with oppressive anxiety, small pulse, vertigo and prostration.—Vomiting and diarrhœa.—Vomiting of all fluids (children).—Cramp-like and pressive pains in the stomach, esp. after having cater.—Pressure like a load in the stomach, esp. after a meal.—Burning in the stomach.—(Inflammation of the stomach.).—Borborygmi and rumbling in the abdomen.—Colic with pinching, pressure, and an inclination to go to stool.—Great inflation of the abdomen.—Abdomen bloated in ridges; rumbling of wind along colon, passes rarely, but then relieves.—Painful sensibility of the abdomen to the touch.

13. Stool and Anus.—In the evening, ineffectual efforts to go to stool.—Aqueous diarrhœa of a putrid smell.—Stools: cadaverous smell.—Cholera; cholerine; fluids vomited as soon as taken.

14. Urinary Organs.—Frequent and copious emission of aqueous urine.—Emission of urine entirely suppressed.

15. Male Sexual Organs.—Aching pains in the testes.—Nocturnal pollutions without dreams.—Pressing, aching in the (r.) testicle.

18. Chest.—Cough, day and night, with copious expectoration.—Aching in r. half of chest, near sternum, in a small spot.—Pressure and squeezing across the chest, in the region of the diaphragm.—Hot, burning constriction of the chest, with difficulty of respiration and of speech.—Burning and piercing in the chest and in the back.

19. Heart.—Beating of the heart.

21. Limbs.—Pressive and drawing pain, with paralytic weakness in the forearms and in the bones of the wrist.—Trembling of the hands after eating.—Tearing in r. index finger, also in tips and joints of fingers.—Acute drawing pains under the nails of the fingers.—Excessive dryness of the palms of the hands and of the soles of the feet.—Cramp-like contraction of the hands and of the feet.—Sharp and pressive pains in the bones of the foot.—Itching and gnawing in the tibia and in the back of the foot, increased by scratching.—Tearing in maleolus of r. foot., in paroxysms, terminating in tendo-Achillis.—Thighs and feet bluish.

24. Generalities.—Sensation of heaviness in the inner parts.—Screwing pains.—Pressing pains (eyes, head, abdomen, testicles).—Pressing-tearing (bones of the hands and of the feet).—Cramp-like contractions in all the muscles.—Aching pains, or aching and pulling pains together.

25. Skin.—Ulcers, gangrenous bluish.—Dry gangrene; parchment-like.—Burning smarting in the skin.

26. Sleep.—Languor and weakness.—Frequent waking, as if in a fright.—Night sleep disturbed by lascivious dreams, with or without emissions.—Great sleepiness in the morning after rising.—Awaking from sleep with a start, and in a fright.—Voluptuous dreams.—Lassitude on awaking in the night.

27. Fever.—Coldness of the whole body, externally.—Great heat.—Flushes of heat, esp. on head and chest.—Intermittent, small pulse.

Blatta Americana.

The great American cockroach, probably *Kakerlac insignis*. N. O. Orthoptera. Trituration of live insect with sacch. lact.

Clinical.—Asthma. Dropsy. Jaundice.

Characteristics.—*Blatt. Amer*. has been used as a remedy for dropsy, and has a popular reputation in jaundice. It was proved by Mure, and developed symptoms of jaundice; yellow sclerotics. Heat in urethra when urinating (showing a relation to *Cantharis*). Pain shifting from back (r.) to shoulder-blade. Acute pain in chest with want of breath (*B. orient*.). General prostration and weariness on going upstairs.

Blatta Orientalis.

Indian cockroach. N. O. Orthoptera. Trituration of live insect.

Clinical.—Asthma. Bronchitis. Phthisis.

Characteristics.—Found accidentally to relieve asthma in a patient who took tea in which a beetle had been infused; it has since proved to have a wide range in asthmatic cases (Ray, *Hom. Recorder*, 1890, p. 254; 1891, p. 193). In the acute attack it acts better in low potencies; the higher being given in the more chronic stages. It is especially suited to corpulent people; and to malarial cases; cases < in rainy weather. Has saved cases in which suffocation was threatened by great accumulation of mucus. Useful in cases of bronchitis and phthisis where there is much dyspnœa.

Boletus Laricis.

B. purgans. N. O. Fungi. Trituration.

Clinical.—Diarrhœa. Dysentery. Fever. Gall-bladder, affections of. Headache. Liver, diseases of.

Characteristics.—Burt proved the crude substance and the 3rd trituration. The gastro-enteric irritation common to the Fungi was very well marked.
Motion < headache.

Relations.—Compare. Agaric., &c. Coccul. (head hollow).

SYMPTOMS.

1. Mind.—Very gloomy and despondent.—Irritated at the least trifle.—Absent-minded.

2. Head.—Head feeling very light and hollow, with deep frontal headache and great faintness.

3. Eyes.—Agglutination of eyelids every morning, with dull, aching pains in eyeballs.

8. Mouth.—Teeth and gums very sore.—Tongue: white coat; thick yellow coat showing marks of teeth.—Taste: flat; coppery; unnatural, of all food; lost.

11. Stomach.—Feeling in fauces as if would vomit.—Nausea and vomiting.—Great faintness at epigastrium.

12. Abdomen.—Severe cutting pains in stomach every few minutes, with dull, aching distress in umbilicus, and loud rumbling in bowels all night.—Heavy dragging pains in liver, more in r. lobe.—Dull, burning distress; drawing; aching in r. lobe of liver with frontal Headache.—Sharp cutting pains in r. lobe of liver and whole dorsal region on full inspiration.—Sharp cutting pains near gall-bladder.—Burning distress in region of gall-bladder all afternoon, with sharp pains in stomach and heavy aching in whole liver, esp. r. lobe.—Severe, dull, aching distress just below stomach, causing great faintness.

13. Stool.—Straining after stool.—Stool: Thin, yellow papescent; mixed with something looking like oil in large and small drops; followed by aching in liver and umbilicus.—Black, lumpy, dry stools mixed with bile and mucus.—Stools of bile, mucus, and blood, with high fever.—Lienteria.

20. Back.—Dull, aching distress in back and legs.

24. Generalities.—Great restlessness after midnight.—Faintness after stool.—Aching distress in all joints.

27. Fever.—Chilliness along spine with frequent hot flashes of fever.—Disposition to yawn and stretch when chilly.—Face hot and flushed with severe frontal headache.—Hands hot and dry.—Waking at midnight two different nights in a profuse perspiration.

Boletus Luridus.

B. nigrescens. N. O. Fungi. Trituration.

Clinical.—Urticaria tuberosa.

Characteristics.—Poisoning effects show delirium; sunken features; violet colour of nose and lips; intense thirst; violent pain in epigastrium; meteorism; subsultus tendinum; urticaria tuberosa (speedily followed by death); cold sweat.

Boletus Satanas.

N. O. Fungi. Trituration.

Clinical.—Diarrhœa membranosa. Dysentery.

Characteristics.—There are two fragmentary provings of this fungus, and observations on six persons poisoned. It produces gastro-enteric disturbances very similar to that of its two relatives.

SYMPTOMS.

1. Mind.—Fear and restlessness.

3. Eyes.—Sparks before eyes alternating with obscuration of vision.

8, 9. Mouth and Throat.—Troublesome dryness in mouth and throat.—Violent burning and scraping in throat.

11. Stomach.—Unquenchable thirst.—Sudden desire to vomit; no nausea between attacks.—Vomited twenty times in three hours.—Frightful pain in stomach.

12. Abdomen.—Abdomen sunken and frightfully painful.—Obstinate tension of abdomen.

13. Stool.—A profuse diarrhœa of blood, and of the mucous lining of the intestines.—Watery evacuations.

24. Generalities.—Sudden sensation through all his limbs as if he would be attacked with apoplexy.—Violent and extremely painful cramps in the muscles of the limbs and face.—Faintness while vomiting.—Limbs cold; cold sweat over whole body.

Bombyx Processionea.

Procession Moth. N. O. Lepidoptera. Tincture of live caterpillars.

Clinical.—Urticaria.

Characteristics.—Contact with the caterpillars or the emanations from a nest of them causes intense irritation, and hard, large, areola-formed tubercles, with a red areola, so thick as to leave hardly any space between. Sometimes they are linear-formed; most marked near joints. Sensation as if a foreign body were under the skin. Itching of whole body. Itching, evenings; not relieved by anything. In one victim it caused frequent waking at night, and dreams that his arms were being cauterised, and arrows thrust into the muscles. Burning heat of skin. In one case, that of a boy who shook a large number of the caterpillars from a tree into his naked breast, it caused an itching so severe that the boy had to run home for assistance; then fever, somnolency, delirium, and finally death ensued.

Relations.—*Compare:* Apis, Ast. fl., Rhus, &c.

Boracicum Acidum.

Boric Acid. H_3BO_3. Solution of crystals in alcohol.

Clinical.—Antiseptic. Climacteric flushings. Erythema. Eyes, affections of. Headache. Impetigo. Œdema. Renal colic. Vomiting. Whitlow. Wounds.

Characteristics.—Poisonings and provings with *Bor. ac*. have caused: headache; vertigo; noises in the ears; prostration; cold saliva; vomiting of tough, greenish stuff; uncontrollable vomiting; sweat on scrobiculus cordis; hiccough; pasty stool; pain in region of ureters or increased urine and increased call to urinate; albuminuria; erythematous eruption on face, body, and thighs followed by pearly vesicles on face and neck. Three cases of poisoning have been reported from packing the vagina with the dry acid, kept in by tampons till liquefaction took place. Symptoms were: Formication of hands and feet, later of face. Sad spirits, great nervous depression. Burning skin; it became swelled and charred, and all motion was painful. One case went into collapse; temperature subnormal; sighing and weeping by turns. The patients were cold; vagina felt "cold as if packed with ice." Coldness is a prominent feature, as cold saliva. In the 3x Cooper has found it give great relief in climacteric flushings. In connection with the skin effects may be mentioned the case of a woman who took gr. xxx per diem of the acid for a month, when there appeared a multiform erythema of trunk extending to upper limbs; at the same time there appeared a painful swelling of upper lids with conjunctivitis and photophobia. Finally the œdema was so intense as to close the

eyes and give the appearance of sclerosed tissue. The symptoms began to abate when the *Bor. ac*. was discontinued, and disappeared in a week. *Bor. ac*. has been largely used as an antiseptic dressing for wounds, as a lotion for the eyes and for whitlow, and as a wash in catarrh of the bladder. It is much less irritating than *Carbolic acid*. But it also has produced skin eruptions. Symptoms > after walking in open air.

Relations.—*Compare:* Borax, Carbolic acid, Kali bi. (tough mucus).

SYMPTOMS.

1. Mind.—Low spirits, nervous depression.—Sighing and weeping by turns.—Apathetic.

2. Head.—A gastric headache.—Headache, vertigo, noise in ears.

3. Eyes.—Intense œdema closing eyes, conjunctivitis and photophobia.

8. Mouth.—Much cold saliva.—Tongue dry, furred, difficulty in moving it; dryness in throat.

11. Stomach.—Nausea and heaviness in stomach > after walking in open air.—Vomiting of tough mucus, strongly alkaline.—Vomits greenish stuff.

14. Urinary Organs.—Pain in region of ureters.—Frequent and urgent desire to urinate.—Quantity of urine doubled.—Albumen in urine.

16. Female Sexual Organs.—Vagina packed with it felt cold as if ice had been used.—Climacteric flushings.

24. Generalities.—Collapse.—Formication of hands and feet; later of face.

25. Skin.—Impetigo figurata first on r. thigh then on left.—Burning skin.—Multiform erythema and hard œdema.

27. Fever.—Coldness; temperature subnormal.

Borax.

Borax veneta. Natrum biboracicum. Sodium biborate. $Na_2 B_4 O_7 10H_2O$. Trituration and Solution.

Clinical.—*Aphthæ*. Corns. Dentition. Diarrhœa. *Ear-discharge*. Entropion. Erysipelas. Eyes, affections of. Finger joints, ulcers on. Herpes. *Menstruation, painful (membranous).* Nipple, sore. *Nose, affections of*. Pleurisy. Plica-polonica.

Psoriasis. *Screaming*. Sea-sickness. *Sterility*. Syphilitic sore-throat. *Taste, disordered*. Trichiasis. Ulcers. *Urine, strong-smelling. Vertigo*. Zoster.

Characteristics.—*Borax* has some very peculiar symptoms which will serve as keynotes to many cases. Chief among them are: (*1*) Sensitiveness to sudden noises, as a distant shot, which causes violent starting. (It has cured "shot-shyness" in sporting dogs.) (*2*) Intolerance of downward motions a child screams when nurse puts it into cot, or when she rocks it symptoms are worse going downstairs; sea-sickness (when the downward motion is felt most: "Every time the ship goes down, everything in me comes up"). Restlessness with ebullitions, especially after talking, with nausea. Laughter alternating with weeping. Cobweb sensations; sore mouth; infant pale, earthy, flesh flabby; screams out in sleep, wakes frightened and clings to nurse; excessively nervous, a slight noise arouses. Starts with pain. Muco-cutaneous surfaces are sore; in the eyelids there is ingrowing of lashes. Otorrhœa and inflammation of auricle: "starts with the pains." Nostrils ulcerated; soreness, pain and swelling of tip of nose. Aphthæ; mouth of child feels hot to mother's nipple; child lets go nipple and cries with pain and vexation, or else refuses breast altogether. Diarrhœa with pain or soft yellow stools accompanying aphthæ. Child screams before urinating (from inflammation of mucous membrane). Leucorrhœa clear, copious, albuminous, unnaturally hot. Painful nursing; pain after nursing; *empty* feeling in breasts; they ache because they are empty, > by pressure: this is characteristic. Dysmenorrhœa (may be membranous), pain excessive during flow. Leucorrhœa preceding and following menses, albuminous, acrid. Herpetic eruptions; pleuritic symptoms (upper right chest) and cough, with expectoration of a mushy, mouldy odour. A notable symptom is: Before the easy stool in afternoon, fretful, ill-humoured, indolent, and discontented; after it, lively, contented, and cheerful. Another mental symptom is: Idles through the afternoon does not really get to work; changes from one business to another from one room to another. It is suited to the period of dentition; to persons with light hair; lax skins and muscles; wrinkled skin consequences of getting cold in cold and wet weather; riding eating fruit. Symptoms are < in warm weather, < after menstruation. Parts usually red turn white. Many *Natrum* symptoms appear in the proving. Stitching pains predominate.

Relations.—*Compare:* Calc., Nux, Bry., Lyc., Merc., Puls., Rhus All. c., Sil., Sul., Ars., Bell., Graph., Ign., Kali bi., Phos. *Antidoted by:* Cham., Coff. *Similar to:* Am. c. and Mag. m. (right nostril stopped); Calc. (inclination to breathe deeply); Kali bi. (tough mucus); Aur. and Puls. (laughter alternately with weeping); Sars., Lyc., Benz. ac. (strong urine, crying before urination; but these three have gravel: with Borax it is from inflammation of mucous membrane); Arum tri. (sore mouth); Graph. (trichiasis); Bell. (hot leucorrhœa); Sep. (small ulcers about joints); Bar. c. (cobweb-sensation); Nat. sul. (cheerful after stool). *Incompatible:* Acet. ac., Vinegar, Wine.

SYMPTOMS.

1. Mind.—Great anxiety, esp. when riding in a carriage or descending a mountain.—Dread of downward motion; child has anxious countenance when laid in cot, or carried downstairs.—Easily frightened and startled with least noise.—Before stool irritable, cheerful and happy after.—Fear of being infected by some contagious disease.—Strong tendency to be frightened.—Irritability.—Disposition to be angry, with ill-humour and passion.—Becomes vehement and swears.—Does not wish to do anything.—Dread of labour.

2. Head.—Fits of vertigo, with fainting.—Vertigo, with fulness in the head, esp. when going upstairs, or to any elevation whatever.—Headache, with shootings in the ears.—Headache (all over, with trembling of the body), with nausea and inclination to vomit, mostly at ten o'clock in the morning.—Fulness in the head, and pressure above the eyes.—Aching and drawing pains in the forehead, and as far as the root of the nose and the nape of the neck, increased by writing, by reading, and by stooping.—Successive drawing pains in the forehead, with nausea, and acute drawing pains in the eyes.—Shootings in the head, esp. above the eyes and the temples.—Congestion in the head, esp. in the occiput, with pulsative pains.—Sensibility of the teguments of the head to cold and to bad weather.—Hair entangled, as in plica polonica; is rough and frowsy, splits; sticks together.

3. Eyes.—Pressure on the eyes.—Itching in the eyes.—The eyes burn and are contracted on putting on spectacles.—Inflammation of the eyes, esp. in the canthi, with excoriation of the edges of the eyelids, trichiasis, and nocturnal agglutination.—Granular eyelids.—Sparkling before the eyes when writing.—Too great sensibility of the eyes to candle-light.

4. Ears.—Shootings in the ears, with pain as of excoriation.—Inflammation and swelling of the ears, with discharge of pus and shooting cephalalgia.—Fits of stoppage of the ears and of deafness.—Buzzing and murmuring in the ears, with acute, drawing pains in the top of the head.—Affections of the l. ear particularly.—Itching; stitches.

5. Nose.—Itching in the nose, with tingling.—Nostrils ulcerated, with swelling and pain, as of excoriation at the point of the nose.—Dry scabs in the nose.—Blood follows on blowing the nose.—Red shining tip of nose; red noses of young women.—Nasal hæmorrhage, with pulsative pains in the head.—Sneezing, with violent shootings in r. side of the chest.—Accumulation of thick and greenish mucus in the nose.

6. Face.—Complexion (in a suckling woman) wan, pale, and earth-coloured.—Sensation in the r. side of the face as if it were covered with cobweb.—Muscular palpitation in the corners of the mouth.—Erysipelatous

inflammation and swelling of the cheeks, with acute, drawing pains in the cheek-bone, aggravated by laughter.—Eruption of pimples on the face, the nose, and the lips.—Smarting in the lips.—Tettery spots round the mouth, and scabs on the upper lip.—Swelling of the lower lip, with burning and pain as of excoriation.—Red papulous eruption on cheeks and around chin.

7. Teeth.—Pressive and cramp-like pain in teeth which are carious, esp. in damp weather, sometimes with inflammatory swelling of the cheek, or swelling of the gums.—Acute drawing pains in the teeth which are carious, spreading over the head, when they are touched with the tongue, or when cold water is applied to them.—Pressive tingling in the teeth, immediately after supper, or breakfast, > by smoking tobacco.—Shooting pains in teeth which are carious, with shootings in the ears, and headache.—Ulcers in the gums, with inflammatory swelling of the cheek.—Bleeding of the gums.

8. Mouth.—Aphthæ in the mouth and on the tongue, which bleed easily.—Spasmodic stiffness and torpor of the tongue.—Skin of the palate hard and wrinkled.

9. Throat.—Dryness in the throat.—Tenacious mucus in the throat, with difficult expectoration.

10. Appetite.—Bitter taste in the mouth on eating, or on swallowing the saliva.—Loss of taste.—Thirst in the morning.—Desire for acid drinks.—Appetite moderate, esp. at supper.—Nausea and uneasiness during a meal.—After every meal inflation of the abdomen, with diarrhœa and colic.—Fulness and pressure in the stomach, with uneasiness and ill-humour, after having eaten fruit (pears and apples).—Colic, with tendency to diarrhœa after smoking tobacco.

11. Stomach.—Nausea, with inclination to vomit, when riding in a carriage.—Vomiting of sour mucus, when fasting in the morning or after breakfast.—Pressure in the stomach after every meal.—Contractive pains in the stomach, or a sensation such as would follow a strain in the loins, with shootings in the vertebral column and loins.—Pain in region of stomach, after lifting heavy weights, extending into the small of back, quite incapacitating one.

12. Abdomen.—Pain in the hypochondria, mostly pressive and in the l. side, and esp. when riding in a carriage.—Pressure and shootings in the lumbar region.—Pains in the hypochondria and in the lower part of the abdomen, as if hard and cutting bodies were moving in them.—Pinching in the abdomen, with diarrhœa.—Accumulation of flatus in the abdomen, and frequent escape of wind.

13. Stool and Anus.—Evacuations frequent, soft, or loose, with pinching and borborygmi in the abdomen.—Greenish evacuations (in children).—Slimy diarrhœa.—Abundant flow of pale, yellowish, or brownish slime, and of blood from

the anus, with pains in the loins.—Itching, contraction, and shootings, in the anus and in the rectum.

14. Urinary Organs.—Ineffectual urgency to urinate, with incisive pains in the urethra, and swelling in the lumbar region.—Urgent inclination to urinate.—Frequent emission of urine even in the night.—Hot urine.—Acrid fetor of urine.—Soreness in the urethra after micturition, and esp. on being touched, even when not making water.

15. Male Sexual Organs.—Absence of sexual desire.—Erections, with painful tension, on waking in the morning.—Gonorrhœa.—Chancres studding prepuce.—Stitches.—Sticking, sore pain, < when touched.

16. Female Sexual Organs.—Catamenia premature and too copious, of a pale red colour.—During the catamenia, pulsative pains in the head, buzzing in the ears, nausea, with pains in the stomach and in the loins, or shootings and aching in the groin.—Leucorrhœa, corrosive, and thick, like starch.—Sterility.—Acrid leucorrhœa, appearing for two weeks between catamenia, with swelling of labia and inflamed and discharging Duverney's glands.—Stinging and distended feeling in clitoris.—During pregnancy, swelling, itching, and burning of vagina, with a discharge like gonorrhœa.—False pains.—Labour pains: spasmodic; more in stomach than in uterus; dart upwards, head of child goes back.—Griping and sometimes stitches in l. mamma, and when child has nursed she is obliged to compress the breast with the hand because it *aches from being empty*.—Pain in the breasts when suckling.—Flow of milk, which curdles speedily.—Aphthæ so tender they prevent child nursing.

17. Respiratory Organs.—Acute, drawing pains in the larynx, extending to the chest, with inclination to cough.—Hoarseness in the throat, with drawing shootings on coughing and sneezing.—Dry cough, caused by a tickling and scraping in the throat, with pressure on the chest.—Dry, hectic cough, with shootings in the r. side of the chest, and the groins, relieved by washing with cold water, increased by drinking wine.—Nocturnal cough.—Cough, with expectoration of the smell and taste of mould.—On coughing, expectoration of mucus with streaks of blood.

18. Chest.—Difficult respiration, with urgent want to inspire deeply, and shootings in the r. side of the chest.—Constrictive oppression of the chest, esp. on going upstairs.—Shortness of breath after having ascended the stairs, with shootings in the chest on speaking.—Feeling of congestion, with heaviness in the chest.—Shootings in the chest, esp. on the r. side, and principally on yawning, on coughing, on breathing deeply, on running, and during every physical effort.—Drawing shootings in the intercostal muscles of the r. side, extending to the groins, augmented by the least movement of the chest or arms, with inability to remain lying on the side affected.—Pains in the chest >, esp. when lying quietly on the back, or on walking slowly, and pressing the part affected with the hand.

19. Heart.—Sensation as if the heart were on the r. side, and were going to be crushed.—Infants cyanotic from birth.

20. Neck and Back.—Sharp and drawing pains between the shoulder-blades, on the shoulder, and in the nape of the neck, with inability to stoop.—Furunculus in the arm-pit.—Itching and crawling in the sacrum.—Aching and burning pains in the sacrum, esp. when seated and when stooping.

22. Upper Limbs.—Sensation in the hands, as if they were covered with cobweb.—Pulsative pains in the extremity of the thumb, day and night, preventing sleep.—Burning pains, heat and redness of the fingers, like chilblains.—Pustules on the fingers, with swelling and suppuration of the affected limb.

23. Lower Limbs.—Ulcerating vesicles on the buttocks.—Burning pain in the thighs.—Sensation as if warm water were running down thighs.—Erysipelatous inflammation and swelling of the leg and of the foot, principally after having danced a long time, and sometimes with drawing pains, burning and tensive, esp. when touched.—Great weakness and debility of the lower extremities.—Shootings in the soles of the feet.—Pain, as of excoriation, in the heel.—Suppuration of a spot in the heel, where the rubbing of the shoe had occasioned a wound.—Burning pains, heat and redness of the toes, as if from chilblains.—Shooting piercing in the corns, esp. in rainy weather.

24. Generalities.—Parts which are usually white, turn red.—Shooting and drawing pains.—Commencement and aggravation of sufferings from damp and unsettled weather, or during and subsequent to a meal.—Sufferings from riding in a carriage or from eating fruit.—Uneasiness in the whole body, which does not permit one to remain long in the same place.—Restlessness and ebullitions, esp. after talking, with nausea.—Uneasiness, trembling nausea, giddiness, and vertigo, after an animated conversation, or when thinking.—Want of strength, esp. in the joints.—Attacks of syncope, with tingling, trembling of the feet, and nausea.

25. Skin.—Skin difficult to heal; dingy, unhealthy-looking skin; every injury tends to ulceration.—Erysipelatous inflammations, with swelling and tension of the part affected, and fever.—Erysipelatous inflammation on the lower leg, with chilliness, followed by heaviness and pulsation in the head; later, bleeding of the nose.—Tendency of old wounds to suppurate.—Whitish pimples, with red areola.—Herpetic eruptions.—Purulent and phagedænic vesicles.

26. Sleep.—Sleepiness during the day, and sleeplessness at night.—Inclination to sleep long before the usual hour, and too long sleep in the morning.—Restless sleep, in consequence of ebullition of the blood, of colic, and of diarrhœa.—Waking too early, with difficulty in going to sleep again, from heat and too great a flow of ideas.—Anxious cries of children, during sleep, with convulsive movements of the hands.

27. Fever.—Shivering, shuddering, or cold with trembling, heaviness and weakness, or with cephalalgia and pains in the periosteum of femur, followed by heat.—Chilliness, esp. during sleep.—Flushes of heat (morning and evening).—Perspiration during the morning sleep.—Coldness, most frequently in the afternoon; afterwards heat, with headache or pain in the hypochondria, sometimes followed by sweat.—Thirst before or during the cold, or else after the sweat.—Heat in the evening in bed, with shivering on being on the least uncovered.—Moisture of the body during the night.

Bothrops Lanceolatus.

Yellow viper. Vipera jaune. Fer-de-lance of the island of Martinique. N. O. Crotalidæ. Solution of the poison in glycerine; attenuations in rectified spirit.

Clinical.—Blindness. Bones, necrosis of. Day-blindness. Gangrene. Hæmorrhages. Lungs, congestion of. Tongue, paralysis of.

Characteristics.—The most peculiar symptoms of *Bothrops*, for which Ozanam is the authority, are these: Amaurosis. Day-blindness.—"can scarcely see her way after sunrise." Inability to articulate without any affection of the tongue. Hæmorrhages, the blood being fluid and black. All the symptoms of pulmonary congestion, oppressed breathing and bloody expectoration, more or less profuse. Paralysis of one arm or one leg only. After being bitten in the little finger of one hand, paralysis began in the finger-tips of the other hand and extended over the whole of that side. Deep gangrene, bones laid bare and necrotic. Intolerable pain in right great toe (patient bitten in left thumb). The diagonal course of symptoms is marked. Hemiplegia. Dissecting gangrene. Slight shivering followed by very profuse cold sweat.

Relations.—*Compare:* Other serpent poisons. Bell has *night*-blindness.

Bovista.

Lycoperdon bovista. Warted puff-ball. N. O. Fungi. Trituration.

Clinical.—Coccyx, itching of. Corns. Cysts. Diabetes. *Diarrhœa. Ear, eczema of. Eczema*. Ganglion. Gleet. Hæmorrhages. Hæmorrhagic diathesis. *Headache*. Heart, affections of. Jaundice. Joints, affections of. Menstruation, disordered. Metrorrhagia. Ovaries, affections of. Rheumatic affections. Stammering. Tongue, ulcerated. Tumours. Urticaria. Warts. Whitlow. Wounds.

Characteristics.—"This globular fungus, which, according to report, is eaten in, Italy before it is ripe, becomes filled, while ripening, with a blackish dust that breaks the husk which contains it, with a slight noise." Corresponding to this signature, "bloatedness," puffy condition of body surface," and a sense of "enlargement," flatulent distension and noisy passage of flatus, are leading features of the *Bovista* pathogenesis. *Bovista* has cured cases of ovarian cyst; and also warts and corns, with shooting pains. There are ebullitions with great thirst. The corners of the mouth are broken out. Numb, pithy feeling in mouth. There is stuttering and stammering speech. Awkwardness, misapplies words in speaking and writing. Relaxation of entire capillary system; hæmorrhagic diathesis; hæmorrhage from menstrual irregularities; from traumatism. Menstrual flow occurring only or chiefly at night. Hæmorrhage between the periods. The puffy, expanding properties of the remedy are shown in a puffy condition of the body surface; instruments (*e.g.*, scissors) indent the fingers in an unusual degree. The heart feels enormously large. *Bovista* has colic like *Coloc*., causing the patient to bend double, but it differs from *Coloc*. in that the colic is > by eating and is sometimes accompanied by voiding of red urine. M. L. Sircar has recorded a striking cure of such a case with *Bov*. 3x, the pain being griping-twisting, intermittent, starting below umbilicus and diffusing itself towards epigastrium; some constipation; urine scanty and reddish. Nothing gave relief except eating. "Itching at top of coccyx" is another characteristic symptom. A case of cyst in broad ligament was cured, presenting these symptoms:—Metrorrhagia, flow at night or early morning, easily provoked from slight over-exertion during menses; can bear nothing tight round body; menses preceded and followed by diarrhœa; acrid corrosive leucorrhœa, flowing at night only, follows menses.—"We may always think of *Bovista* when we see a very "tettery" person, one who has tetters here and there, all over the body. These tetters may be either moist or dry" (Guernsey). Teste observed psoric eruptions appear on the hands and feet of a patient to whom he gave *Bov*. for headache. He cured with it a "red, crusty eruption on thighs and bends of knees of eighteen years' duration. It disappeared for weeks, reappearing in hot weather and at the full moon. W. S. Gee cured with *Bovist*. 4, after the failure of *Rhus*, the following case. A widow, 55, had an eruption, which she thought to be erysipelas, on right foot. Some years before she had had an eruption on left foot, which discharged much water, and was "cured" by the use of a salve. A few months later the left knee became affected and the limb was amputated above the joint. The present eruption was fiery red, covered with yellowish-brown scales, thick as an old-fashioned wafer. There were also rheumatic pains in the leg. After *Rhus* had been given without benefit, Dr. Gee elicited these additional symptoms: "Occasional spells of short breathing, especially from working with the hands. Sleep disturbed by burning and itching, and also by anxious, frightful dreams; headache when waking from sleep. Frequent desire to urinate, even immediately after urinating." These symptoms being found under *Bovist*. in addition to "moist vesicular eruptions, with formation of thick crusts," the latter put in heavy type by Lilienthal, this medicine was given with steady improvement and eventual cure.

Great weakness of the joints. Sensitive to touch, cannot bear clothing. Sensitive to draught, chilliness predominates. Early morning sweat < on chest. Many symptoms are < in early morning; the diarrhœa occurs then. Sweat of axilla smells like onions. Symptoms generally are < morning; < cold food; > hot food. < Hot weather; < at full moon. Effects of over-exertion. Bending double > colic; straightening up > shooting pains between shoulders. *Bovista* antidotes effects of charcoal fumes. Easily intoxicated; < from wine. < From coffee.

Relations.—*Compare:* Calc., Rhus, Sep., Pho., Puls., Staph., Sul., Ver., Bell., Bry., Carbo v., Caust., Kali c., Lyc., Merc., Nat. m., Sil., Spi., Stront., Valer.—Aur., Pul., Lyc., Stram. (laughter alternately with weeping); Ars., Lyc., Sul. (sinking immediately after eating); Bufo (sensation as if heart in water); Zn. (< from wine); Coloc. (colic > bending double); Am. c. (poisoning by charcoal fumes); Stram. (stammering); Ambra (hæmorrhage between periods); Sec., Ust. It has cured where Rhus seemed indicated and failed. *Antidoted by:* Camph. *It antidotes:* Effects of Tar applied locally. *Followed well by:* Alum., Calc., Rhus, Sep. Teste puts Bovist. in his Sulphur group.

SYMPTOMS.

1. Mind.—Dejection and sadness, when alone.—Placid melancholy, with inquietude and sombre thoughts.—Sad, depressed, and desponding.—Great sensitiveness; irritable, takes everything amiss.—Great loquacity and unreserved conversation.—Weakness of memory.—Absence of mind.—Awkwardness; allowing everything that is taken hold of to fall.—Misapplication of words in speaking and writing.—Laughs and cries alternately.

2. Head.—Intoxication after having drunk but very little wine.—Vertigo as if everything turned round in a circle.—Stunning dizziness, with loss of sense.—Sudden attacks of vertigo and feeling of stupidity in bed; on rising, loses consciousness for a moment preceding and following a headache in morning.—Pains in the centre of the brain, with a sensation as if the head were enlarged.—Pains in the head pressing inward; pains from side to side pressing outward; as if both sides were pressed towards each other.—Headache on waking, as after too long a sleep.—Stunning headache with heat in the eyes.—Nocturnal cephalalgia, with insupportable pain on raising the head.—Aching pains in the head, with throbbing, as in an abscess.—Compressive cephalalgia.—Sharp pains in the head, with heaviness and a bruise-like sensation.—Excessive sensibility in the scalp to the touch.—Falling off of the hair.—Excoriated spots on the scalp.

3. Eyes.—Painful twisting in the eyes, with pressure in the sockets; bone sensitive to pressure, during menstruation.—Nocturnal agglutination of the eyelids.—Eyes dull, without brightness, and without fire.—Objects seem to be nearer than they really are.

4. Ears.—Ulcer in the r. ear.—Ulcers in the ears, with pain on swallowing.—Scabby and humid eruption in the ears.—Oozing of fetid pus from the ears.—Itching in the ears.—Diminution and hardness of hearing, with frequent mistakes.

5. Nose.—Excoriation in the nostrils.—Nostrils scabby, with burning pain.—Scurfs and crusts about nostrils.—Stoppage of the nose, which impedes respiration.—Fluent coryza, with secretion of serous mucus and confusion in the head.—Bleeding of the nose early in the morning (during sleep).

6. Face.—Heat in the cheeks, as if they were going to burst.—Face alternately pale and red.—Extreme paleness on getting up in the morning.—Piercing and digging in the cheek-bones.—Very pale swelling of the upper lip, of the nose, and of the cheeks.—Swelling of the upper lip (and cheek, after toothache) in scrofulous subjects.—Sensation of a splinter, or of something sticking in lips.—Lips cracked.—Corners of the mouth ulcerated.—Rheumatic pains in the lower jaw, with swelling and pulsative pains in the sub-maxillary gland.

7. Teeth.—Pains in the upper incisor teeth, followed by swelling of the upper lip.—Drawing odontalgia, esp. in the hollow teeth, in the evening and at night, mitigated by heat and walking in the open air.—Piercing and digging in the teeth.—The gums bleed easily at night, or on sucking them.

8. Mouth.—Accumulation of saliva in the mouth.—Sensation of torpor in the buccal cavity.—Stuttering.—Incisive pains in the tongue.—Ulcers on the edges of the tongue, with pain like excoriation.—Putrid smell from the mouth.—Sore throat, with scraping and burning pains.

10. Appetite.—No appetite for breakfast.—Nausea in the morning, generally vomiting a watery fluid and relieved by eating breakfast.—Putrid taste in the mouth.—Taste of blood.—Desire for cold drinks, esp. in the afternoon and evening.—Eager and continual hunger, even after a meal.—Great sleepiness after having eaten, esp. after dinner and in the evening.—Hiccough before and after a meal.

11. Stomach.—Nausea, with chilly disposition from morning till noon.—Sensation of cold in the stomach, as if a piece of ice were there.—Pressure and fulness in the precordial region, with tension in the temples and anxiety.

12. Abdomen.—Pains in the umbilical region after having eaten, as if the abdomen were cut by knives.—Colic > by eating.—Twisting colic causing patient to bend over; sometimes voiding red urine; > by eating.—Cutting in fore part of abdomen, > by eating.—Colic < by rest.—Violent cutting, aggravated by repose.—Painful sensibility of the exterior and interior of the abdomen.—Violent colic, with coldness, to such an extent as to cause shuddering and chattering of the teeth, esp. after going to stool.—Pains of ulceration and shooting in the

abdomen.—Frequent escape of fetid wind.—Colic, which causes the patient to double over, and accompanied by the voiding of red urine, > by eating.

13. Stool and Anus.—Ineffectual urging to stool.—Stool hard and difficult.—After stool, tenesmus and burning at the anus.—Constipation.—Hard and compact fæces.—In the rectum, itching as from worms.—Darting from the perinæum to the rectum and the genital organs.—Diarrhœa with colic, cuttings, and pain of ulceration in the abdomen.—The first portion of the stool is hard, and the latter part thin and watery.

14. Urinary Organs.—Frequent inclination to make water.—Frequent desire to urinate, even immediately after urination (diabetes mellitus).—In the urethra, stinging, itching, burning; the orifice is inflamed, and feels as if glued up.—Pain of ulceration in the urethra on making water.

15. Male Sexual Organs.—Increase of sexual desire.—Frequent pollutions.—After coition, staggering, confusion, and numbness in the head.—Hard, painful and suppurating node in the penis.—Burning pains in the genital parts.—Gleet.

16. Female Sexual Organs.—Catamenia premature and too copious.—Catamenia flow only in the night.—Catamenia, too early and two profuse, or too late, too scanty, too short; flowing only at night.—Before the catamenia, diarrhœa.—Flow of blood during the intervals.—Leucorrhœa: a few days before or a few days after menses; while walking; like white of egg; yellow-green, acrid, corrosive, leaving green spots on clothes; thick, slimy, tough.—Excoriation in the inguinal fold during the catamenia.

17. Respiratory Organs.—Spasmodic laughing and crying, with asthma.—Hoarseness in the morning, and speaking through the nose as from coryza.—Scraping and excoriation in the throat, with accumulation of tenacious mucus.—Cough, with so viscid an expectoration that it can scarcely be discharged.—Dry cough, produced by a tickling in the throat and in the chest.

18. Chest.—Difficult and short respiration during manual labour.—Constrictive oppression of the chest; everything seems to be too tight.—Stitches in the chest.

19. Heart.—Beating of the heart, with inquietude, trembling, vertigo, nausea, and headache.—Palpitation as if heart working in water.—Palpitation accompanies many symptoms.—Visible palpitation of heart.

20. Neck and Back.—Sweat of a strong smell under the arm-pits.—Swelling of the glands of the neck, with tensive and drawing pains.—Pain in the back, with heaviness after stooping.—Itching of tip of coccyx.

22. Upper Limbs.—Paralytic weakness and pains of dislocation in the joints of the arms and hands.—Sensation in the wrist-joint, as if sprained.—Affections of wrists.—Ganglion.—Tension in the shoulder-joints, as if the tendons were too short.—Sensation of paralysis, as from excessive fatigue.—Tremor of the hands, with palpitation of the heart and oppressive anxiety.—Blunt instruments (scissors) make deep impressions in the skin of the fingers.—Cramp-like drawing in the joints of the hands.—Shooting pains in the joints of the hands on laying hold of anything.—Want of strength in the hands, so that they allow the lightest objects to fall from them.—Humid tetters on the back of the hand.—Perspiration in the arm-pits, smelling like onions.

23. Lower Limbs.—Tingling and numbness in the legs, with inability to stand upright.—Shootings in the joints of the knees and of the feet.—Strong tension in the calves of the legs, and in the legs, as if the tendons were too short.—Cramps in the calves of the legs, in bed, in the morning.—Miliary eruption in the legs.

24. Generalities.—Great lassitude and want of strength, esp. in the joints.—Ebullition of the blood, with much thirst.

25. Skin.—Skin flabby; blunt instruments leave a deep impression in it.—Itching, esp. when the body is warm, and of that kind which receives no relief from scratching.—Urticaria, covering whole body.—Pimples and miliary eruption, with burning itching.—Oozing eruptions and with a thick crust; in bends of elbows and knees.—Humid tetters.—Whitlows.—Warts.—Violent shootings in corns.

26. Sleep.—Great sleepiness in the morning, and early in the evening.—Sleepiness after dinner and early in the evening.—Nocturnal sleep, agitated by anxious and frightful dreams.

27. Fever.—Chill after going to bed at night.—Shivering, with thirst, even near a fire, and at night in bed.—Chilliness and heat, with thirst.—Heat with thirst, anguish, agitation, and oppression of the chest.—Sweat in the morning, esp. on the chest.—In the evening, fever with shivering and shuddering in the back, with drawing pains in the abdomen.

Brachyglottis Repens.

New Zealand "Puka Puka." Tincture of green leaves and flowers. N. O. Eupatoriaceæ.

Clinical.—Bright's disease. Dysmenorrhœa.

Characteristics.—*Brachyglottis* was proved by C. L. Fischer. The Maories use the leaves to apply to old sores and ulcers. Horses eating young shrubs lose all power over hind legs and spine. It causes lassitude; weakness; loss of flesh. A large

number of symptoms were produced in all regions of body, but few have been tested clinically. This appears to be the most marked: Urgency in passing urine; pain in neck of bladder; pain in bladder after urinating, and in urethra and stinging in penis; a large quantity of pale-coloured urine voided, of low specific gravity and containing albumen. Throbbing pains are very prominent in the proving. Dysmenorrhœa with fluttering in abdomen and right ovary has been cured with it. Pains in the back and limbs. Chilliness predominates.

Relations.—*Compare:* Eupatoriaceæ, Apis (soreness, stinging in urethra); Arn. (bruised, sore feeling); Bovist. (albuminuria); Helon. (albuminuria); Merc. cor. (albuminuria, urging to urinate and defecate); Nux (urging to urinate and defecate); Op. (constipation); Plumb. (fæces like balls, painful micturition, albuminuria).

SYMPTOMS.

2. Head.—Confusion in head and pain in forehead; giddiness and flushed face.—Throbbing: l. side; forehead; around r. ear, and passing from ear to eyes and then to neck.—Headache and faceache very severe, preventing sleep at night.—Cold sensation and tightness about scalp.—Soreness all over head and stiffness in neck.

4. Ears.—Tingling, itching, pricking in ears.—Throbbing about r. ear, from ear to eyes, and throat to neck.

5. Nose.—Nostrils, sore; itching and irritation in nose.

6. Face.—Twitching in l. side of face (evening).—Soreness r. zygomatic, process.—Flushed face.—Faceache l. side, submaxilliary glands affected.

8. Mouth.—Pain, numbness, pricking, soreness of tongue.—Heat in mouth.

9. Throat.—Soreness, rawness, scraping in throat < by swallowing.

11. Stomach.—Nausea in stomach.—Fluttering.—Evening, after tea soreness, throbbing in stomach, r. side.

12. Abdomen.—Isolated throbbing l. groin.—Fluttering sensation in abdomen.

13. Stool and Anus.—Ineffectual urging.—Stool dry; like balls; evacuated with sore constrictive pain in anus; evening.

14. Urinary Organs.—Pressure and soreness in neck of bladder.—By passing urine, pain in bladder and soreness in urethra; feeling as if urine could not be retained.—Passing urine preceded by pains in bowels.—Urine abundant, contains mucus and albumen.—Throbbing in penis and desire to pass urine; pressure in bladder.

17. Respiratory Organs.—Oppression of breathing; > by sighing.

18. Chest.—Pains flying about chest and precordial region.—Throbbing in sternum.

20. Back.—First dorsal vertebra sore to touch.—Cutting under l. shoulder.—Aching in lumbar region.—Isolated throbbing r. side of back.—Feeling as if whole back would contract backward, and muscles of neck were affected.

21. Limbs.—Great weakness in limbs; weariness and prostration.

Brassica Napus.

Cole Seed, Rape Seed, Wild Corn Kale. N. O. Cruciferæ. Tincture of whole fresh plant.

Clinical.—Bulimia. Dropsy. Gangrene. Nails, shedding of. Scurvy. Ulcers.

Characteristics.—Our knowledge of the pathogenetic effects of *Brassica napus* is derived from the experience of the Irish famine, during which the people ate it freely. Dropsical swellings, scorbutic mouth, voracious appetite, tympanitic abdomen, blotches like burns, dropping off of nails, and gangrene. All the symptoms of impoverished blood appear, such as growth of downy, colourless hair.

Relations.—*Compare:* Raphanus, Armoracea, Sinapis, Secale.

SYMPTOMS.

2. Head.—Very distressing frontal headache and tension.

6. Face.—Swollen to an enormous extent, the distended state of eyelids and upper lip producing great deformity.—Burn-like blotches on nose and forehead (also hands and feet), varying from discoloration to ulceration.

8, 9. Mouth and Throat.—Mucous membrane of mouth and throat inflamed, ulcerated in parts, gums spongy.

11. Stomach.—Appetite increased, sometimes voracious.

12. Abdomen.—Abdomen tympanitic.

13. Stool.—Bowels torpid.

14. Urinary Organs.—Urine deficient and irritating.

21. Limbs.—Hands and feet dry and shrunken, with blotches of a deep red, like burns, on backs of hands and dorsa of feet, the fingers and toes being frequently cold and livid; ulceration; loss of nails.

25. Skin.—Sallow and muddy-looking; covered with downy hair.—General œdema.—Blotches, deep red, like burns, on backs of hands and feet and nose and forehead, varying from simple discoloration to most troublesome ulceration, causing destruction of cuticle and dropping off of nails, with a marked disposition in the aggravated cases to gangrene.

Bromium.

Bromine. Br. (A. W. 79.9). Solution in distilled water.

Clinical.—Apoplexy. Asthma. Breast, cancer of. Cancer. *Cough. Croup*. Diphtheria. Dysmenorrhœa. Emphysema. *Feet, pain in*. Fistula lachrymalis. Glands, enlargement of. Goître. Heart, disease of; hypertrophy of. Laryngismus. Migraine. Parotid gland, induration of. *Respiration, affections of*. Scrofula. Seaside, effects of. Testicles, induration of. *Throat, sore*. Tonsils, enlarged; inflamed. *Trachea, irritation of*. Tuberculosis. Tumour of breast. Ulcers. *Uterus, air in. Vagina, air in*. Vertigo.

Characteristics.—*Bromine* forms a leading constituent in the mineral waters of Kreutzach and Woodhall. It is a predominantly left-side medicine. It affects particularly the internal head, left side. It is suited to blue-eyed, fair people (opp. *Iod*.), especially children with thin, white, delicate skins, and very light hair and eyebrows (patients with dark hair are not excluded); to scrofulous constitutions. The glands (thyroid, testes, maxillary, parotid) are swollen and indurated. There is much anxiety of mind; a fear of ghosts or visions when in the dark. Like the other Halogens, *Bromine* is a strong anti-scorbutic. It has > at the sea-side (opp. *Nat. mur*.); but < in sailors when coming ashore. Migraine chiefly left side, < from stooping, especially after drinking milk. It has a peculiar vertigo: sensation deep in brain as if vertigo would come on; tendency to fall backward; < at the sight of running water; or if he put his foot on a bridge; < in damp weather. Vertigo with nose-bleed. Soreness and crusts inside nose. Nose-bleed accompanies many affections, especially of chest. There is a peculiar headache with coryza. In the cases of diphtheria indicating it the disease begins in the larynx and runs up. In croup, with all the croupy sound, there is much loose rattling in larynx with the breathing and coughing, *but no choking in the cough, as there is in Hepar* (Guernsey). Tuberculosis, especially of right lung. Hypertrophy of the heart and palpitation. Pain in heart going up to axilla. A very peculiar symptom is: loud emissions of air from the vagina. Symptoms are < by cold air; cold water; cold diet; cold damp weather; heat of sun. The cough is < entering

warm room. Headache < from drinking milk; from stooping. Complaints are better at sea-side; sailors coming ashore suffer from asthma, which is relieved when they go to sea again. Symptoms < evening till midnight; when at rest; > riding on horseback. After dinner feels he will have an attack of apoplexy.
Exertion = oppression at heart.

Relations.—*Compare:* Iod. (but Iod. has < morning; dark hair and eyes); Chlorum, Lach., Spong., Fluor. ac., Hep., Apis, Arg. n., Chi., Con., Coff., Cin., Cup., Lyc., Merc., Pho., Rhus (cardiac hypertrophy, also Spo.; Arn.—from over-exertion); Sep., Sul., Ant. t.; Pul. (blondes. Fear of ghosts or visions; also, Aco., Ars., Carb. v., Pho., Sul.). *Antidoted by:* Camph., Am. c., Mag. c., Op. *Useful after:* Iod., Pho., Spo. *Compatible:* Arg. n. (generally *after* Bro.); Kali c. (emphysema).

SYMPTOMS.

1. Mind.—Cheerful, desire for mental labour.—Low-spirited and out of humour.—Crying and lamentation, with hoarse voice.—Anxiety; originating in body (heart, lungs), patients expect to see things jump around the floor.—In evening, when alone, feels as if he should see something if he should turn round; as if some one were behind him.

2. Head.—Sensation deep in brain (after dinner) as if vertigo or fit of apoplexy would come on.—Vertigo with tendency to fall backward; < stepping on bridge; from running water; from rapid motion in front of him; with anxiety.—Peculiar headache and coryza: pressure in forehead which seems to be pushing brain down and out at root of nose.—Headache: deep in crown, with palpitation; over l. eye; < from stooping; from drinking milk.—Scalp tender; malignant scald-head.

3. Eyes.—Lachrymation (r.) with swelling of tear-gland.—Darting through eye (l.).—Dilated pupils.—Flashes before eyes.—Protruded eyes.

4. Ears.—Noise in ears.—Swelling and hardness of (l.) parotid gland; feeling warm to the touch.—Suppuration of l. parotid, edges of the opening smooth; discharge watery and excoriating; swelling remaining hard and unyielding; after scarlatina.

5. Nose.—Soreness in (swollen) nose with scurfs; pain and bleeding on wiping.—Bleeding of nose relieving chest.—Severe coryza, r. nostril stopped up and sore throughout, later l.—Coryza, with sneezing; margins of nose and parts under nose corroded, with stoppage (occurring annually).

6. Face.—Greyish, earthy complexion; old appearance.—Pale.—Heat in cheek, first r., later l.—Sensation of cobweb.—Strong, hard swelling of glands, esp. on lower jaw and throat.

8. Mouth.—Ptyalism; much frothy mucus in mouth.—Burning from mouth to stomach.—Heat in mouth and œsophagus.—Stinging in tip of tongue.

9. Throat.—With all the croupy sound there is a good deal of loose rattling in larynx with the breathing and coughing, but no choking in the cough as there is in *Hepar*.—Inflammation of throat with net-like redness and corroded places.—Scraping in throat.—Swelling of mucous membranes of fauces and pharynx.—The diphtheria begins in the larynx and runs up.

10. Appetite.—Desire for acids, which < and cause diarrhœa.—Water tastes saltish.

11. Stomach.—Vomiting bloody mucus.—Nausea, retching, and pains in stomach; > after eating.—Feeling of emptiness in stomach > after eating.—Heavy feeling in stomach.—Inflammation of stomach.

12. Abdomen.—Tympanitic distension of abdomen, and passage of much wind.—Enlargement and induration of spleen.

13. Stool and Anus.—Diarrhœa, stools yellow, green, black; < after every meal.—Hæmorrhoids, blind, painful, during and after stool < from application of cold or warm water; > wetting with saliva; (with black diarrhœic stools).—Intensely painful hæmorrhoids.

15. Male Sexual Organs.—Swelling and induration of (l.) testis, with sore pain or sensation of coldness.—Swelling of scrotum (with chronic gonorrhœa).

16. Female Sexual Organs.—Loud emission of flatulency from vagina.—During menses pain in abdomen and small of back.—Menses too early and too profuse; of bright red blood; flow passive, with much exhaustion; or membranous shreds may pass off.—Violent contractive spasm before or during menses, lasting hours, leaving the abdomen sore.—Membranous dysmenorrhœa.—Dull pain in ovary (l.).—Stitching pains from breast to axillæ, cannot bear pressure (scirrhus).

17. Respiratory Organs.—Hoarseness and aphonia < evening.—Soreness and roughness in throat.—Cold sensation in larynx, with cold feeling when inspiring, after breakfast; > after shaving.—Constriction in the larynx; tickling, causing cough.—Tickling in trachea during inspiration causing cough.—Stitch in posterior portion of larynx, with feeling of constriction when swallowing saliva.—Scraping and rawness in larynx, provoking cough, as if pit of throat were pressed against trachea.—Diphtheria.—When the diphtheria begins in the larynx and runs up.—Croup.—When with all the croupy sound there is a good deal loose rattling in the larynx with the breathing and coughing, but no choking in the cough.—Dry, spasmodic, wheezing cough, with rattling breathing.—Cough rough, barking, from tickling in throat.—Inspiration very difficult; cannot inspire deep enough.—Cough with sudden paroxysms of suffocation on swallowing; respiration very short;

obliged to catch for breath.—Sensation as if the air passages were full of smoke.—Spasmodic closure of the glottis.

18. Chest.—Stitches in r. side of chest.—R. lung most affected.—Stitch (inflammation of lungs r. side).—Sensation of weakness in chest.—Tightness (asthma); < at night; in sailors when they come ashore.

19. Heart.—Violent palpitation < lying l. side; (hypertrophy).

20. Neck and Back.—Neck stiff.—Glands of neck much swollen.—Goître.—Two encysted tumours on both sides of the neck.—Aching at inner border l. scapula up to neck, on moving l. arm, or sitting leaning to l.—Boring in spinous processes of different vertebræ.

21. Limbs.—Stiffness in all limbs, 11 a.m., > in afternoon.—Pains in limbs alternating with chilliness and heat.

22. Upper Limbs.—L. arm feels paralysed.—Eruptions on l. elbow.—Icy-cold forearms.—Hands cold and moist.

23. Lower Limbs.—Paralytic sensation in one or other leg.—Pains in one or both tibiæ.

24. Generalities.—Excessive languor and debility (worse after breakfast).—Great weakness and lassitude after all the symptoms passed off; in diphtheria.—Shivering with yawning and stretching; repeated every other day, as a chilliness and cold feet.—Tremulousness all over.

25. Skin.—Pimples and pustules (acne).—Boils on the arms and face.

26. Sleep.—Irresistible drowsiness while reading.—Continued yawning and drowsiness with the respiratory troubles.

27. Fever.—Pulse much accelerated.—Chill every other day with shaking, yawning, and stretching; with cold feet.—Skin cool, covered with viscous sweat.—Sweat on palms.—Perspiration from the least exertion.

Brucea Antidysenterica.

Angustura falsa. Nucis vomicć cortex. N. O. Loganiaceć. Tincture or trituration.

Clinical.—Abdomen, throbbing in. Headache.

Characteristics.—Under the name of *Brucea antidysenterica* a quantity of Nux vomica bark got upon the drug market, and was at first supposed to be Angustura bark. Many poisonings ensued before the mistake was discovered, and the bark received the name *Augustura falsa*, in contradistinction to the true Angustura. It contains strychnine, and the symptoms are included in the pathogenesis of *Nux vomica* and *Strychninum*. The homśopathic preparation of *Nux vom*. is, however, prepared from the seed. One characteristic symptom of *Brucea antidysenterica* (*i.e*., the *bark* preparation) is: "Headache with extreme drowsiness; disappearing in evening." Another is: "Sensation of throbbing in pit of stomach and in entire abdomen." (Although the symptoms are included in the pathogenesis of *Nux vomica* as the bark has been experimented with independently, I subjoin the Schema.)

Relations.—The following also have drowsiness with headache: Gins., Herac., Gels. (difficult to keep the eyes open), Nux m., Nat. s., Sul.

SYMPTOMS.

1. Mind.—Dejection, with want of sleep.—Taciturnity and hypochondriasis.—Gloomy, melancholy humour, with indolence and lassitude.—Sad and gloomy humour on waking in the morning.

2, 3. Head and Eyes.—Heaviness and confusion in the head, with sleepiness, disappearing in the evening.—Vertigo, which occasions falling, in the evening.—Digging crawling in the top of the head.—Headache in the evening, after having walked long in the sunshine.—Cephalalgia behind the eyebrows, which seem to be swollen.—Shootings in the head, aggravated by walking, esp. in the sun.—Headache aggravated by sitting, as well as after eating.—Eyes dull and swollen.—Eyes red in the corners in the evening.—Itching in the eyelids.—Eyes red and burning in the morning.—Painful sensation in the eyes, as from sand, rendering it necessary to rub them.

6, 8. Face and Mouth.—Mealy, itching tetters on the face, followed by peeling off of the skin.—Paleness in the face.—Slight convulsive, rapid movements in the lips.—Acute pains in the teeth and in the gums, esp. on drinking cold water.—Accumulation of saliva in the mouth, forcing one to spit continually.—Dryness and burning pain in the gullet, as if from rancid fat.

11. Stomach.—Weak appetite; food at dinner and breakfast appears insipid.—Clammy taste.—Empty risings.—Sensation in the stomach, as if nothing had been eaten for a long time.—Sensation of burning and of heat in the pit of the stomach.—Sensation of throbbing in the pit of the stomach, and in the entire abdomen.—Pressure in the stomach, immediately after eating or drinking.—After a meal, violent beating of the heart, aggravation of headache, fermentation in the intestines, and inclination to evacuate.—In the evening, attack of nausea, with cramp-like pains in the abdomen, vomiting of food, and loose evacuations, with great prostration.

12. Abdomen.—Painful pinching in the abdomen.—Squeezing, as from claws, in the abdomen, followed by frequent, small, slimy evacuations.—Borborygmi in the abdomen.—The pains in the abdomen cease after the first evacuation.—Evacuations too soft, in too small quantity, and of too light a colour.—Shootings in the umbilicus after the evacuations.—Loose evacuations, followed by fainting which enforces lying down.—Strong disposition to loose evacuations, with colic and flatulency.—Loose evacuations in the morning and in the evening.—Itching in the anus in the evening.

18. Chest.—On breathing, sensation of great weight on the whole chest.—Oppression of the chest, with chilly disposition and great sensibility in the open air.—In the morning, on waking, pain as from a bruise on the outside of the chest, with tensive pains on breathing deeply.—Pains, like excoriation, in the interior of the chest, esp. in bed at night, which are most violent when lying on the side.

20. Back.—Sensation of squeezing in the back.

21. Limbs.—Pains, as of fatigue, in the thighs and in the loins.—Cramp-like pain in the back of the hand.—Miliary eruption, red, raised, and itching, on the back of the hand and on the body.—In the evening, sensation of paralysis in the thigh.—Weariness in the knees.—Curvature of the joint of the foot, so that one walks almost on the ankle-bone.—Sensation of burning in corns.

24. Generalities.—Painful sensation of fatigue in the extremities.—Pinching in several parts of the limbs.—In the evening, stiffness in the joints, and acute drawing pains in the limbs, with shootings in the head, in the ears, and in the chest.—Dejection.—Disposition to stretch the limbs and to yawn.—Great weariness when walking.—In the evening, nervous excitement, trembling and tottering when walking.—Irritability, augmented in the evening.

26. Sleep.—Sleepiness during the entire day, esp. when seated, in the morning, after dinner, and in the highest degree in the afternoon.—Sleepiness early in the evening.—Sleep full of dreams, with ebullition of the blood.—Sleep troubled, with

confused or frightful, terrifying dreams.—Sleepiness alternately with want of appetite.

27. Fever.—Chilly disposition and aversion to the open air.—Shivering and excessive coldness.—Sweat on walking, notwithstanding the shiverings, which appear chiefly during rest.

Brucinum.

Brucine. An alkaloid obtained from the bark and seeds of Strychnos nux vomica. C_{23} H_{26} N_2O_4.

Clinical.—Headache. Paralysis.

Characteristics.—Lepelletier has recorded the following effects of 0.02 to 0.90 of a gramme of *Brucinum*. Sudden jerking, especially of lower extremities, spreading generally but not accompanied by trismus and tetanus, and not extending to Œsophagus and pharynx as with *Strychnia*. Twitching in the paralysed as well as healthy muscles. A fever of short duration ends the attacks; after which deep sleep comes on.

Bryonia.

Bryonia alba. White Bryony. N. O. Cucurbitaceć. Tincture of root procured before flowering.

Clinical.—Alcoholism. Amenorrhśa. Anger, effects of. Aphthć. Apoplexy. Asthma. *Bilious attack. Brain, affections of. Breast, inflamed. Bronchitis. Cancer*. Chill, effects of. Chlorosis. *Constipation. Consumption*. Coryza. *Cough*. Dentition. *Diaphragm, rheumatism of*. Diarrhśa. Dropsy. *Dyspepsia*. Eczema. *Enteric fever. Eruptions*. Gastro-enteritis. Hćmorrhages. *Hands, swollen. Headache. Heart, inflammation of*. Hernia. Hiccough. *Hydrocele. Hydrocephalus. Influenza*. Intermittent fevers. Jaundice. *Joints, pain in. Lactation, disorder of. Liver, disorders of. Lumbago*. Measles. *Meningitis. Menstruation, vicarious*. Miliaria. Milk fever. *Myalgia*. Nephritis. *Nose-bleed. Peritonitis*. Phlegmasia alba dolens. *Pleurisy. Pleurodynia. Pneumonia. Pregnancy, morning cough of*; sickness of. Puerperal fever. *Pyuria. Relapsing fever*. Remittent fever. *Rheumatism. Scarlatina. Screaming. Side, pain in. Sleep, anxious dreams in. Spina bifida. Stiff-neck*. Suppressed eruptions, bad effects of. *Thirst. Tongue, coated. Toothache. Trachea, pain in. Vertigo. Waking, starts and screams on. Water-brash*. Whooping-cough. *Yellow fever*.

Characteristics.—*Bryonia alba* is one of the polychrest remedies of the homśopathic materia medica. The common *Bryony* of this country is the *Bryonia dioica*, which has been substituted for the *B. alba*, and has probably identical properties; but the *Alba* alone has been proved, and consequently this should always be dispensed. Less rapid in its action than *Aconite*, it goes deeper in its effects, and often takes up the work where *Acon*. leaves off. It not only disorders the circulation, but alters the blood itself. It corresponds to fevers of almost all kinds, especially rheumatic, typhoid, bilious and remitting. In these, as in all other complaints, the exquisite sensitiveness of the drug to movement of all kinds is a leading characteristic. The patient avoids even the movement of the eyes; raising head from pillow causes faintness, nausea, and vomiting. Allied to this is > from pressure; from lying on painful side. (This distinguishes *Bry*. from *Bell*. in pulmonary complaints. A case of intense pleurisy with high fever grew steadily worse under *Bry*. until I noticed that the patient lay on the unaffected side. *Bell*. was then given, and cured rapidly. Lying on the painful part *keeps the part at rest*.) There is also an intense headache, dull throbbing or sharp stabbing pains; sharp pain in or over eyes. "Headache or neuralgia in (left) side of head and face; > from hard pressure and cold applications; < moving. Head greasy, scalp tender; eyeballs tender." Mouth very dry; tongue coated white down the middle, the edges may be quite clean; later it becomes yellow with bitter taste; later, very dry, but still coated. If the fever is intermitting there is chill mixed with heat: during chill, head hot, cheeks deep red, decided thirst, generally for large quantities at long intervals; sweat < by least motion, sour or oily. The lips are dry and cracked. Facial eczema has been cured with it in an infant five months old, presenting these additional symptoms: Constipation, peevish, fretful, thirsty, face and lips cracked and sore, child scratched continually. The mother had had a similar eruption for some years, and it disappeared suddenly at the sixth month of her pregnancy. The mucous membranes are *dry*, especially those of the mouth and stomach; deficient secretion. The serous membranes are inflamed, the seat of sharp, stitching pains, < from motion; later on, exudation occurs. The muscles, likewise, are inflamed and sore. Irritability of mind and tissues runs through the remedy. Hćmorrhages are frequent. In this connection it may be remembered that *Bryonia dioica* is a popular remedy for "black-eye" as a local application. I have often known nose-bleed occur in patients to whom I have been giving *Bryonia*, especially in the night, 3 to 4 a.m., which is characteristic. This may or may not be preceded by a sense of fulness in the head. Nose-bleed occurring consequent on suppression of the menses is characteristic. The characteristic mental state of *Bry*. is irritability. Easily angered (with biliousness, headache, dyspepsia, &c.), and it corresponds to the effects of anger, fright, chagrin. The patient desires things to eat which cannot be had; or are refused if offered. In fever cases there is often a stupid, drowsy condition; or mild delirium, in which the patient has the delusion that he is somewhere else and "wants to go home." The headache is dull, frontal; or bursting, splitting; < by any motion or by the concussion of cough; goes from before backward. The headache of drunkards; of over-feeding. Nausea and faintness when rising up, > when lying

still. *Bry*. is a gourmand (*Nux* an epicure); dirty wash-leather, foul tongue, congested eyes, bitter nausea. *Bry*. is a coarse feeder. Food lies at the epigastrium like a stone; > bringing up wind. The digestion is < in summer. Symptoms < after a meal. There is intolerance of vegetable food. Everything tastes bitter. Thirst for large quantities. "Eructations of tasteless gas" is characteristic. Sour stomach. Van den Berghe has found *Bry*. signally curative in chlorosis. There is diarrhśa and constipation. Diarrhśa occurs: in the morning "as soon as he moves"; from cold drinks in warm weather; on every spell of hot weather. The usual *Bry*. state is one of constipation; there is the usual dryness of mucous membranes; atony of the bowels; stool large, *dry*, hard, brown or black; as if burnt or charred; crumbling. (*Plat*. has sticky, tenacious stool; sticks to rectum.) Stools smell of old cheese. The liver is tender and inflamed. The kidneys also are inflamed, the urine being dark red without deposit (from excess of colouring matter). Mastitis, hard, tender. Left ovarian pain, > lying on painful side. The respiratory organs and heart are profoundly affected. Dropsical swellings, swellings of the legs, sensitive to touch. "joints red, swollen, stiff, with stitching pain from slightest motion." Synovial swellings. I have cured a case of congenital hydrocele with *Bry*. The *Bry*. patient dreams of the occupations of the day. The child kicks the covers off. Speech is hasty. "Frequent desire to take a long breath; *must* expand the lungs" is a characteristic.

The typical *Bryonia* patient is of dark complexion and hair, choleric, bilious tendency with firm fleshy fibre; tendency to great irritability and bad temper; but *Bryonia* has a wide range, and no great stress must be laid on the absence of these features. Teste takes *Bryonia* as the type of a group which includes *All. sat., Lyc., Digit., Nux v., Coloc*., and *Ignat*. All these act with much more power on carnivorous than on herbivorous animals. They are thus appropriate to persons who over-eat or eat excessively of meat, and have strong constitutions; "persons accustomed to rich living, with rich blood, firm resisting flesh." Teste regards the digestive canal, and more particularly the stomach, as the principal seat of the action of *Bry*. With regard to the burning thirst of *Bry*., which is < by drinking beer, he says, the gastric derangement of *Bry*. "absolutely requires water as a *dissolvent*." The constipation of the remedy is not due to inertia merely; it depends on "a more or less marked antiperistaltic movement of the rectum: hence the pains and the ataxic phenomena that accompany it sometimes, as is the case, for example, in the period of constipation of low typhoid fevers, &c." A peculiar and characteristic symptom of *Bryonia* in brain affections is: Constant motion of the mouth as if chewing. Complaints from taking cold or getting hot in summer; from cold drinks in hot weather. Complaints when warm weather sets in after cold days. Most symptoms are < by warmth and in warm room (cough, chilliness). < From warm food; but there is thirst for large draughts of cold water, which >. Rash > getting warm in bed. Pains in joints and limbs > by warmth. Toothache is > by pressing head into pillow; by cold applications. Chilliness predominates. Dry, burning heat as if blood burning in veins. Sweat profuse night and morning; sour or oily. Cough, headache, diarrhśa < in morning. Nose-

bleed < 3-4 a.m. Symptoms generally < evening (9 p.m.). < While coughing; after eating; while swallowing; from motion of all kinds; exertion; ascending; sitting up in bed (can't sit a moment gets faint, or sick, or both on sitting up). < After suppression of eruption or discharge. Headache following checked coryza. > Descending; lying, especially on painful side; sitting. > From pressure.

Relations.—Bryonia *is antidoted by:* Acon., Alum., Camph., Cham., Chel., Clem., Ign., Mur. ac., Nux, Puls., Rhus, Seneg. Teste found, by accident, Fer. mur. the best antidote in his experience. *It antidotes:* Alum., Chlorum, Chi., Frag. vesc., Merc., Rhus. *Compare:* The Cucurbitaceć (all have belching, with unaltered taste of food); Aco. (pallor on rising up. Aco. has more restlessness and tossing about; is full of fears; Bry. must keep still); Amm., Ant. c. (nausea, vomiting, and diarrhśa; aversion to milk); Arn. (hćmorrhages, wounds, soreness all over; also Bap.); Ars. (unlike Bry., drinks often and little, and eats seldom but much); Asclep. tub. (pleurisy); Bell. (delirium, hasty speech, hasty drinking. Bell. has headache < lying down, Bry. must lie down; Bell. has < lying on painful side, Bry. > lying on painful side; Bell. has "chewing motion of jaws" but without the dry, cracked lips of Bry.). Calc. c. (very like Bry., but the resemblance is too close for compatibility. They should never be given one after the other without an intercurrent remedy between. Calc., like Bry., Chi., and Bell., has "as soon as he closes his eyes sees all sorts of objects"); Carb. v. (miliaria); Caust., Cham., Ign., Ipec. (miliaria); Kali c. (miliaria, bilious affections, chest affections; sharp pains in right hypochondrium shooting up into chest; sharp pain coming from lower lobe right lung, but Kali c. has not necessarily < by motion); Kre., Lach., Lyc., Merc., Nat. s. (morning diarrhśa); Nat. m. (headache in morning, oily, sour sweat on face; Bry. on head generally; cracked lips; Bry. and Nat. m. go well together, and are often complementary); Nit. ac., Nux (digestive organs; corresponds to epicures, Bry. to gourmands); Op., Pet., Pho., Pod., Puls. (morning diarrhśa); Ran. b. (pleurisy, rheumatic affections); Rhus (rheumatism; headache; typhoid. Rhus is restless and > by movement and by warmth); Rumex (morning diarrhśa); Sep., Sil., Spi. (pleura); Sul., Squil. (pleura). Pul. and Chi. have nausea < on sitting up. Ars. has gagging at the end of a cough like Bry., Cimex, gagging and belching after cough. Aco. is like Bry. in effects of cold, dry winds (cold, *moist* winds, Nx. m., Calc., Ars., Dulc.); Ham. and Millefol. (hćmorrhages). Bry. *follows well:* Aco., Amm. Nux, Op., Rhus. *Is followed well by:* Alum., Ars., Kali c., Nux, Pho., Puls., Rhus, Sul. *Complementary:* Alum., Rhus. Alumina is the "chronic" of Bry.; and Kali c. and Nat. m., hold a similar but less pronounced relation to it.

Causation.—Anger; fright; chagrin. Suppressed eruptions and discharges. Alcohol. Gluttony. Wounds. Cold winds.

SYMPTOMS.

1. Mind.—Anxiety and inquietude, with fear of the future.—Frequent tears.—Despair of being cured, with fear of death.—Restlessness, with fear of the

future; fear of death, which he thinks is near.—Fear, with desire to run away.—Discouragement.—Aversion to conversation.—Exceedingly irritable and inclined to be angry.—After having been angry he is chilly; has a red face and heat in the head.—Irascibility and passion.—Want of memory.—Momentary absence of mind.—Giddiness.—Desire for things which are rejected when obtained.—Delirium (at night) and ravings about the transactions of the day.—Unconsciousness.

2. Head.—Confusion, giddiness, and cloudiness of the head.—Giddiness, with sensation of looseness in the brain when stooping, and when raising up the head.—Staggering and drunkenness, as if from congestion of the head.—Staggering backward.—Tendency to run backward.—Vertigo only when stooping.—Swimming in the head, esp. on rising from a seat, or on getting up after lying down.—Cephalalgia, as after a nocturnal debauch.—Headache after every meal.—Attack of headache, with vomiting, nausea, and urgent inclination to lie down.—Headache in the morning as soon as the eyes are, open.—Great fulness and heaviness of the head, and digging with pressure towards the forehead, and, when stooping, a sensation as if everything were going to fall out through the forehead.—Expansive pressure, or compression of the brain.—Shootings in the head, sometimes on one side only.—Pulsative starting pains, increased by movement, with aching in the eyes.—Congestion in the head, with heat in the brain.—Burning pain in the forehead.—Headache aggravated by movement, or rapid walking, or when the eyes are opened.—Painful sensibility of the scalp, as if from excoriation.—Drawing and starting pains in the head, from the cheek-bone to the temple, increased by contact.—Tearing in one (r.) side of the head, extending into the cheek and jaw-bones; worse from motion, touch, and heat; better during rest and external pressure.—Burning heat of the head, externally.—Heat of the head with dark-red face; with coldness of the rest of the body; with much thirst and pain in the limbs when moving them.—Cold sweat on the forehead.—Hair very greasy.—Oily, greasy, sour-smelling perspiration on the head (and the whole body) during sleep; at night, esp. towards morning.

3. Eyes.—Pains in the eyes on moving them.—Aching of the eyes, as if they were going to start out of the head.—Pressure on the eyes, as if from sand, esp. morning and evening.—Stitches in the eyes.—Shooting and drawing pains in the eyes.—Burning pain in the eyes.—Inflammation of the eyes and of the eyelids, with redness.—Inflammation of the eyes, < by heat.—Inflammation of the eyes, esp. in gouty subjects.—The eyes feel very sore to the touch, and when moving them.—Painful swelling of the eyes, with suppuration, and the conjunctiva swollen and red.—Red swelling of the eyelids, esp. of the upper lids, with aching pains.—Furfuraceous tetters on the eyelids, with burning itching.—Stye on the eyelid.—Abscess in the internal angle of the eye.—Nocturnal agglutination of the eyelids, with lachrymation during the day, esp. in the sun, and with confused sight.—Eyes dull, glassy, turbid, or sparkling, and, as it were, drowned in tears.—Presbyopia.—Confusion of the letters when reading.—Blackness or flames before the eyes.—Photophobia.

4. Ears.—Contractive pains in the ears, with diminution of hearing.—Shootings in the ears, while walking in the open air, and afterwards.—Swelling, like a knob, before and behind the ear (parotitis).—Bleeding from the ears.—Sensation in the ears, as if they were stopped.—Buzzing in the ears.—All noise is insupportable to the ears.

5. Nose.—Swelling of the nose, with painful sensibility to the touch, and obstruction of the nose.—Inflammation and ulceration of the nostrils.—Ulcer in the nostrils, with gnawing pain.—Frequent bleeding of the nose, sometimes in the morning, or when the catamenia are suppressed, or even when sleeping.—Epistaxis, esp. just before the beginning of the menses, or in pregnant women, just before the time for the menses to appear.—Dryness and obstruction of the nose, sometimes obstinate.—Fluent coryza, with shooting and aching in the forehead.—Dry coryza, sometimes obstinate.—Catarrh with dryness, sudden suppression of discharge and headache.—Hard mucus, drying in crusts.

6. Face.—Face of a pale, yellow, earth-coloured hue.—Face red and burning.—Red spots on the face.—Hot, bluish, and brownish swelling of the face.—Pains in the face, mostly aching, mitigated by external pressure.—Swelling of the face, sometimes on one side only, or under the eyes and at the root of the nose.—Swelling of the cheek, close to the ear.—Small nodosities and indurations in the face, like subcutaneous glands.—Lips swollen and cracked, with bleeding, and sensation of burning on being touched.—Lips dry.—Exanthema on the under lip; parched, dry, and cracked lips (very characteristic).—Eruption on the lips, with burning smarting.

7. Teeth.—Toothache; shooting from one tooth to another, or into the head and cheeks; from an exposed nerve (sensitiveness of the decayed teeth to contact of the air); pain < from smoking or chewing tobacco; from introducing anything warm into the mouth; > momentarily by cold water, and when lying on the painful side.—Toothache, with urgent inclination to lie down, < at night by hot things.—Jerking, pulling odontalgia, with a sensation as if the teeth were too long, or as if they were loose, esp. during a meal and afterwards.—Pains, as of excoriation in the gums, with loosening of the teeth.—Gums spongy.

8. Mouth.—Dryness of the mouth, with burning thirst.—Dryness of the mouth, tongue, and throat.—Accumulation of a soapy and frothy saliva in the mouth.—Salivation.—Putrid smell of the mouth.—Tongue dry, loaded with a white coating, or dirty, or yellow; esp. in the middle.—Tongue furred, usually dry and hard with deep cracks.—Dark coloured and wrinkled state of the tongue.—Burning blisters on the edge of the tongue.—Speech indistinct, from dryness of the throat.

9. Throat.—Sore throat, with hoarseness and difficult deglutition.—Pain, as of excoriation in the throat, during empty deglutition.—Sensation of swelling and constriction in the śsophagus.—Sensation of dryness, and great dryness, in the

throat.—Pressure in the pharynx, as from a hard and pointed body.—Shootings in the throat on contact, also on turning the head and on swallowing.—Tenacious mucus in the throat, which is not detached without effort.

10. Appetite.—Loss of appetite.—Taste insipid, clammy, putrid.—Insipidity of food.—Sweetish taste.—Bitter taste of all food, or only after meal-time, or at other times, as well as in the morning.—Burning thirst, sometimes after a meal, increased by taking beer.—Infrequent, but copious, drinking.—Bitter taste and thirst.—Great desire for wine, for acid drinks, for coffee, and even for things which are not eaten.—Abnormal hunger; he must often eat something.—Morbid hunger, which forces frequent eating, and little at a time.—Bulimy, often with absence of appetite, or with thirst and transient heat, sometimes even in the night.—Loss of appetite after the first morsel has been eaten.—Repugnance and disgust for food.—After every meal, risings, with pressure on the stomach and on the epigastrium, colic or vomiting, principally after having eaten bread.

11. Stomach.—Risings, especially after having eaten, mostly bitter or sour, with a taste of the food.—Empty risings.—Regurgitation if the food after every meal.—Hiccough.—Nausea and inclination to vomit, esp. after eating food which has pleased the palate, or on rising after lying down.—Nausea, with inclination to vomit and anxiety, when sitting, or on forcing one's self to drink.—Nausea in the morning.—Retching, with water-brash.—Vomiting soon after drinking, and esp. on drinking after a meal.—Bitter vomiting, when drinking immediately after a meal.—In the evening, vomiting of viscid mucus.—Vomiting in general of what has been eaten, which comes up very soon after eating, of food in mouthfuls at a time (vomiting very often excited by motion); of a watery fluid; bitter and flat taste; belching or eructations; collection of water in the mouth.—Vomiting of food, with hiccough and retching, or vomiting of bitter water, or of bile, even at night.—Vomiting of solids, and not of fluids.—Vomiting of blood.—Shootings in the left side of the abdomen, during the vomitings.—Pressure in the stomach after eating, esp. after eating bread.—Pressure, as if from a stone in the stomach, esp. after a meal, or on walking, sometimes accompanied by ill-humour.—Incisive pains in the pit of the stomach, as from knives.—Contractive pains in the stomach, sometimes with vomiting of food.—Squeezing in the pit of the stomach, and painful tension on being touched, with sensation of heat.—Shootings in the stomach, when lying on the side, as well as in the pit of the stomach, during movement and walking, or making a false step.—Pain, as of excoriation, in the pit of the stomach, sensible to the touch, or on coughing.—The least pressure on the pit of the stomach is insupportable.—Sensation of burning in the pit of the stomach, and in the stomach, esp. when moving.—Inflammation of the stomach.—Sensation of swelling in the pit of the stomach.

12. Abdomen.—Pains in the liver, mostly shooting, tensive, or burning, esp. on being touched, on breathing, or on coughing.—Tractive pains in the hypochondrium, extending to the stomach and the back, in the morning and after

dinner, sometimes with vomiting.—Hard swelling in the hypochondriac and umbilical regions.—Shootings in the region of the spleen.—Colic with tension of the abdomen, and water-brash.—Inflation of the abdomen, with pressure in the epigastrium, esp. after dinner.—Inflammation of the liver.—Tearing in the stomach, from the hips to the pit of the stomach.—Cramp-like pains, pinching, or cuttings and shootings in the abdomen, chiefly after eating or drinking (esp. hot milk), sometimes with loose evacuations.—Hard swelling round the navel.—Dropsical swelling of the abdomen.—Gurgling and borborygmi in the abdomen, with escape of flatus; sometimes only in the evening, in bed.

13. Stool and Anus.—Constipation.—Fćces too large, with difficult evacuation.—Stools too large in size; too hard and dry.—Fćces scanty, but hard, and as if burnt.—Diarrhśa, with colic, sometimes alternating with constipation and gastralgia.—Loose evacuations, of a putrid smell, as of rotten cheese; (worse (or only) in the morning; during hot weather).—Involuntary stools while asleep.—Evacuations of undigested substances.—Diarrhśa in the morning; on beginning to move about.—Diarrhśa preceded by pain in the abdomen.—Nocturnal diarrhśa, with burning pain in the anus.—Colliquative diarrhśa.—Constrictive colic, during an evacuation.—Loose and frequent evacuations, of a brownish colour (in the case of infants at the breast).

14. Urinary Organs.—Urine scanty, reddish, brownish, and hot.—White, turbid urine.—Urine is dark; becomes turbid; often casts a pinkish stain all over the bottom of the chamber.—Urgent inclination to make water, without power of retention.—Frequent emission of aqueous urine.—Inclination to make water, with suspended respiration, on lifting loads.—Inclination to make water at night.—Involuntary emission of hot urine, when moving.—Sensation of burning, and incisive pains in the urethra, before making water.—Cutting in the urethra, or sensation of constriction while urinating.—Sensation of contraction.—Shooting and burning pains in the urethra.

15. Male Sexual Organs.—Red, itching, miliary eruption on the glans penis.—Shootings in the testes.—Stitches in the testicles while sitting.

16. Female Sexual Organs.—Catamenia suppressed.—Suppressed menses, with bleeding of the nose.—Catamenia premature.—Menstruation too early and too profuse, with dark, red blood.—Menses with bad smell.—Acute, tractive pains in the limbs, during the catamenia.—Flow of blood between the periods.—Metrorrhagia of a deep red blood, with pain in the loins and in the head.—Burning pains in the fundus uteri, during pregnancy, increased by movement, diminished by pressure and repose.—Swelling and inflammation of the labia majora (< l.).—Swelling of one of the labia, with a black and hard pustule.—Lumps, indurations, and inflammations of the mammć, with diminished or retarded secretion of milk.—(Puerperal fever.)

17. Respiratory Organs.—Hoarseness, with tendency to perspiration, cough and rattling in the chest.—(Acute bronchitis).—Deep, slow breathing.—Difficult breathing only possible with the assistance of the abdominal muscles.—Frequent sighing, breathing.—Continued inclination to draw a long breath.—Breathing quick, difficult, and anxious; caused by stitches principally in the chest, compelling him to sit up.—Stitches in the chest, when breathing or coughing.—Inclination to cough, as if from viscid mucus, afterwards pains, as of excoriation, in the larynx, aggravated by speaking, or by smoking tobacco.—Cough, mostly dry, excited by a tickling in the throat, or as if caused by smoke in the larynx, with a necessity for breathing often.—Cough, from tickling in the throat and pit of the stomach; in the evening at night without expectoration; during the day the expectoration is yellow, or consists of coagulated brown blood, or of cold mucus of a disagreeable flat taste.—Cough and stitches in the head and chest; or pain as if the head and chest would burst.—Cough: with involuntary secretion of urine; hoarseness; thirst; sneezing; stitches in the chest and small of the back; red face; aggravated by motion, talking, laughing, eating, and drinking.—Cough, as if from irritation of the stomach.—Cramp-like, suffocating cough, esp. after midnight, or after having eaten or drunk, and often with vomiting of food.—Cough in the morning, with water-brash.—Cough which seems to bruise the chest.—Cough, with shootings in the sides of the chest, or with aching pains in the head, as if it were going to split, as well as with shooting pains in the pit of the stomach, or with pains in the hypochondria.—Cough, with expectoration of mucus of a dirty reddish colour.—Cough, with yellowish expectoration.—Cough, with expectoration of pure blood, or of slimy matter with streaks of blood.—On coughing, pain, as of excoriation, in the pit of the stomach.—Fit of choking before the paroxysm of nocturnal cough.

18. Chest.—Respiration difficult, or short, rapid, and anxious, or sighing.—Oppression, with fits of choking.—Respiration impeded by shootings in the chest.—Respiration deep and slow, esp. while making any exertion.—Constant occasion to make a deep inspiration.—Fit of dyspnśa, even at night, sometimes with shooting colic and inclination to evacuate.—Pressure on the chest, as if from a weight, with oppression.—Contractive pain in the chest, excited by the cold air.—Tension in the chest, on walking.—Shootings in the chest and in the sides, as from an ulcer, esp. when coughing or breathing deeply, obliging the patient to remain seated, and when lying down to rest only on the back; aggravated by every movement.—Heat in the chest (pleurisy, pneumonia).—Heat and burning pain in the chest, with anxiety and tightness.—Sensation in the chest as if all there were detached, and were falling into the abdomen.

19. Heart.—Beatings of the heart; frequently very strong, and attended by oppression (carditis).—Frequent sharp pain, stitching in cardiac region.

20. Neck and Back.—Painful stiffness of the neck.—Rheumatic stiffness and tension in the nape of the neck, and in the neck.—Red spots on the sides of the

neck.—Red miliary eruption on the neck, with violent itching.—Sweat in the arm-pits.—Sacral pains, with rigidity, which does not allow of walking upright.—During rest, pain, as if caused by a bruise in the loins.—Contractive, cramp-like pain all over the back.—Shootings in the loins and in the back.—Painful stiffness in the small of the back, compelling him to walk and sit crookedly.—Shootings under the left shoulder-blade, extending to the heart, greatly aggravated by cough and respiration.—Pressure on the shoulder, with shootings on breathing deeply.

22. Upper Limbs.—Rheumatic swelling of the r. shoulder and upper arm, with stitches.—Tractive pains in the joints of the shoulders and of the arms, with tension, shootings, and shining red swelling.—Tractive pains in the whole arm, and to the ends of the fingers.—Convulsive movements, startings, and trembling of the arms.—Burning pains and weariness in the arms.—Constant trembling of the arms, and of the fingers.—Swelling of the arm, round the elbow.—Swelling of the elbow and hand joints, and upper parts of the hands.—The wrist feels as if dislocated when moving it.—Shootings in the joints of the elbow, and of the hand, with heaviness of the hands.—Red miliary eruption on the forearm.—Pain of dislocation in the joints of the hands, on moving them.—At night, inflammation in the back of the hand, with burning pain.—Swelling of the hands.—Sensation of torpor in the palms of the hands.—Shooting pains in the fingers when writing.—Hot and pale swelling of the joints of the fingers.—Starting of the fingers on moving the hands.

23. Lower Limbs.—Cracking and dislocation of the hip-joint, when walking.—Stitches in the hip-joint, extending to the knee.—Drawing pains in the thighs.—Shootings in the thigh, from the buttock to the ankle, with insupportable pain on being touched, and during movement, as well as with great sweat over the whole body.—Weariness and instability of the legs, esp. on going up stairs.—Paralysis of the legs.—Tensive and painful stiffness of the knees.—Red and shining swelling of the knees, with violent shootings, esp. on walking.—Painful stiffness of the knees, with stitches, esp. when moving them.—Staggering and yielding of the knees, while walking.—Tensive shootings and cramp-like pains in the knees, with tension extending to the calves of the legs.—Sharp pains in the knees, extending to the tibia.—Tensive and drawing shootings from the calves of the legs to the ankles, with red, shining swelling of the parts affected.—The ankle feels as if dislocated, esp. when walking.—Putrid ulcers on the lower extremities.—Cramp in the calves of the legs, night and morning.—Lassitude of the legs when walking and standing for any time.—Swelling of the legs, extending to the feet.—Pain, as of dislocation, in the foot when walking.—Swelling of the feet, with redness and heat; pain, as from a bruise, on stretching the feet, tension on moving them; and pains, as from ulceration, on being touched.—Shootings in the feet, the soles of the feet, and the toes, esp. when resting on the foot.—Corns, with pressure, or with burning shootings, or with pain of excoriation on being touched.

24. Generalities.—Over-sensitiveness of the senses to external impressions.—Rheumatic and gouty pains in the limbs, with tension; worse from

motion and contact.—Tension, drawing pains, acute pullings and shootings, esp. in the limbs, and chiefly during movement, with insupportable pains on being touched, sweat of the part affected, and trembling of that part when the pains diminish.—Stiffness and shootings in the joints, on being touched and when moved.—In the evening, pain, as from fatigue, in the limbs, with paralytic weakness.—Torpor and numbness of the limbs, with stiffness and pain of fatigue.—Pale, tense, hot, swelling.—Red, shining swelling of some parts of the body, with shooting during movement.—Pain, as from a bruise, or of subcutaneous ulceration, or as if the flesh were detached from the bones.—Dragging, with pressure, on the periosteum.—Swelling and induration of the glands.—Hard nodosities, in several parts of the skin, like small indurated glands.—Pain, with shivering and cold in the body.—Disposition to catch cold; inflammation of the inner parts.—Startings of the muscles and of the limbs.—Convulsions.—Aggravation of the pains and sufferings at night, or in the evening, towards nine o'clock, as well as after having eaten, and from movement; amelioration during repose.—Affections of the r. hypochondrium; inner lower belly; inner region of the liver; inner navel region; of r. upper and r. lower extremity.—General uneasiness, sensation of squeezing, with shiverings, caused by the pressure of the clothing.—Sensation of pulling throughout the whole body.—Trembling of the limbs on rising after lying down.—Want of strength in the limbs on walking, after having been seated.—Great weariness and weakness, esp. in the morning, or on walking in the open air.—Necessity to remain in a recumbent posture.—Syncope.—Sensation of weakness, esp. on walking in the open air.

25. Skin.—Yellow colour of the skin.—Skin moist and clammy.—Burning and pricking over the whole body, as if from nettles, after slight emotions.—Erysipelatous inflammation, esp. in the joints.—Nettle-rash.—Miliary eruption, esp. in children, and lying-in women.—Phlyctćnoid eruptions, with gnawing or burning itching.—Hard knots and blotches.—Furfuraceous tetters, with burning itching.—Petechić.—Putrid ulcers, feeling cold.—Ulcers, with sensation of cold or with pulsative or smarting pains.—Chilblains.—Corns, with pressure, or burning shootings, or pains of excoriation on being touched.

26. Sleep.—Constant inclination to yawn.—Great sleepiness during the day, esp. after dinner.—Drowsiness, with half-closed eyes.—Failing asleep late; not refreshing; complaints causing sleeplessness; lying on the back during sleep.—Comatose sleepiness, interrupted by anxious delirium.—Sleeplessness, esp. before midnight, caused by heat.—Sleeplessness before midnight, with thirst, heat, and ebullitions.—Ebullition of the blood, and anxiety, esp. in the chest.—Sleep disturbed by thirst; with bitter taste in the mouth on waking.—Inability to remain lying on the r. side.—Starts, with fright, on going to sleep and during sleep.—Unquiet sleep, with confused dreams, and great flow of ideas.—On going to sleep, cries and delirium, as soon as the eyes are closed.—Delirium as soon as he awakes.—Disagreeable, vexatious dreams.—Vivid dreams of the transactions of the

day.—Nocturnal delirium, and visions with the eyes open.—Groans, esp. towards midnight.—Somnambulism.—Nightmare.

27. Fever.—Pulse full and hard, tense, and quick; seldom intermitting.—Chill, with external coldness of the body.—Coldness and chilliness, mostly in the evening, and often only on one (r.) side.—More chilliness in the room than in the open air.—Cold and shivering in the body, even in bed, in the evening, or accompanied by pains in all the limbs and cold sweat on the fore" head.—Shiverings, with trembling, often with heat in the head, redness of the face, and thirst; or followed by heat, with sweat and thirst.—Before the shiverings, vertigo and cephalalgia; then shivering with tension and drawing in the limbs.—Fever, with bitter taste and thirst.—Dry, burning heat, mostly internal, as if the blood were burning in the veins.—Dislike to food and drink during the shiverings.—Heat, at first alternately with shiverings, then burning heat and thirst, afterwards copious sweat.—Universal dry heat, external and internal, almost always with a strong desire for cold drinks.—Want of perspiration.—Wants to drink much water during chill and fever.—Heat on one side only.—During the heat, vertigo and cephalalgia.—Febrile attack, with cold, and shivering predominating; type, tertian; nausea, and necessity to remain in a recumbent posture, or with shooting pains in the side and in the abdomen, and thirst during the shiverings and the heat.—At the termination of the fever, dry cough, with vomiting, shootings and oppression in the chest.—Cold sweat on the forehead and on the head.—Copious sweat while walking slowly in the open, cold air.—Greasy sweat, day and night.—Sweat, with anxiety and inquietude.—Sighing-like breathing, short cough, and pressure on the chest.—Profuse sweats, night and morning, sometimes of a sour smell.—Compound fevers in general; chilliness and heat alternately; heat and shuddering alternately.

Bufo.

The Toad. (Including the common variety, Bufo rana, and the Brazilian toad, Bufo Sahytiensis, proved by Mure.) N. O. Bufonidć, Batrachidć. Solution in rectified spirit of the poison expressed from the cutaneous glands.

Clinical.—Brain, softening of. Buboes. Cancer. Carbuncles. Caries. Chorea. Dropsy. *Epilepsy*. Heart, affections of. Impotence. Intermittents. Malignant pustule. Meningitis. Panaritium. Pemphigus. Phlegmasia alba dolens. Plague. Podagra. Self-abuse. Skin, affections of. Stammering. Suppuration. Whitlow.

Characteristics.—In spite of modern scepticism regarding the poisonous properties of the toad, Shakspere, who seems to have known everything, was absolutely correct in speaking of the toad as having "sweltered venom." The poison is excreted by glands in the skin of the back. L. Guthrie (*H. W.*, xxviii. 484) tells a story of an Italian peasant, apparently dying of dropsy, whose wife, weary of the

interminable length of his illness, thought to hasten his end by putting a toad into his wine. The result was the man was completely cured. "Quintessence of toads" figured largely in the therapy of Salmon's *Doron Medicon* (1583), where it is commended as a "Specifick in the Dropsy." Homśopathic experiments and poisonings have shown that this reputation is founded on fact. But the chief laurels of *Bufo* have been won in the treatment of epilepsy. Bojanus has cured many cases; and no medicine has served me better in the treatment of this disease. Few people who have witnessed a characteristic epileptic seizure can have failed to notice the curiously toad-like aspect assumed by the subject. The epileptic seizure and the *status-epilepticus* give the clearest correspondence to the *Bufo* range of action. Again, epilepsy is often found among the effects of self-abuse in the young, and *Bufo* provokes the tendency to the practice, and even causes impotence. The Indian women of Brazil are aware of this last property, and administer the venom to their husbands in food or drink when they wish to free themselves from their marital attentions. *Bufo* causes low grades of inflammatory action, fetid exhalations and discharges. (I have removed the fetor in hopeless cases of cancer with this remedy.) Guernsey commends it in panaritium where the pain runs in streaks, all the way up the arm. Also when the fingers have been injured and look black, with pains running in streaks up the arm. E. E. Case has reported a cure with *Bufo cinereus* of "epistaxis daily for several weeks with flushed face, heat and pain in forehead > by the bleeding; there was also easy perspiration in general, apt to be offensive, especially on the feet." According to Lippe *Bufo* is especially indicated in epilepsy when the attacks occur during sleep at night. The patient may or may not be awakened by the attack; if not, when he does awaken he will have violent headache. Epileptic symptoms are < in warm room; but there is also great sensitiveness to cold air and wind. Marked periodicity: quartan fevers. Hćmorrhages.

Relations.—Heloderma, Amphisbśna. Salamandra is complementary in epilepsy and brain-softening (Hering). *Antidoted by:* Lach., Seneg. *Similar:* Cubeb. In convulsions from low grades of suppuration, Arsen., Canth., Lach., and Tarent.; in epilepsy aura starting in solar plexus, Artem., Calc., Nux, Sil.; aura starting in arm, Lach., Sul.; in chorea, patient cannot walk, must run or jump, Kali bro., Nat. m.; as if heart in water, Bovist.; in masturbation, impotence, &c., Hyo., Merc., Sul.; in malignant pustule, Anthrax., Ant. c., Lach. in bullć, panaritium, &c., Hep., Lach., Ph. ac., Sil., Diosc. Head drawn to either side, Camph.

SYMPTOMS.

1. Mind.—Weak memory; idiotic.—Desire for solitude.—Inclination to be angry; to bite.

2. Head.—Numbness of brain before attack.—Pressure like two iron hands holding temples.—Headache: after breakfast; one-sided (r.) > by nose-bleed; congestive; < by light and noise; with cold feet and palpitation.—Head at first

drawn to one side (r. or l.), then backwards before an attack.—Sensation as if hot vapour rose to top of head.

3. Eyes.—R. eye open, l. nearly closed; eyeballs rolled upward and to l. before attack.—L. lid paralysed.

4. Ears.—Least noise disagreeable; music intolerable.—Purulent otorrhśa; ulceration and bleeding of external ears.

6. Face.—Face bloated and distorted; mouth and eyes convulsed.—Hot flushes.—Face bathed in sweat (during spasms).

8. Mouth.—Paralysis of tongue; lapping motion before attacks.—Stuttering and stammering; angry when not understood.—Bloody saliva; fetid breath.—Desire for sweet drinks.

15. Male Sexual Organs.—Involuntary emissions; too quick ejaculation; impotence.—Masturbation.

16. Female Sexual Organs.—Menses too early and too profuse; epileptic attacks with menses.—Headache with or before menses.—Cancer of breast.—Cord-like swelling from groin to knee (milk-leg).

17, 19. Respiratory Organs and Heart.—Burning like fire in lungs.—Heart feels as if too large; as if drowned in a basin of water.—Palpitation with headache; during menses.—Constriction about heart.

20. Neck and Back.—Attacks ushered in by a jerk in nape of neck.—Swelling of bone size of fist (caries of dorsal vertebrć).

21. Limbs.—Bruised pains; trembling; cramps; arthritic swellings.—Swelling of hands and arms; burning pains.

22. Upper Limbs.—Great desire to exercise the arms.—Burning lancinating in bones.—Arms become stiffened before an attack.—Numbness of l. arm.—Arms go to sleep easily.—Blister in hand recurring annually.—After slight contusion inflammation of lymphatics.—Panaritium, swelling blue-black around nail; pain in streaks up arm.—Contraction of fingers of r. hand, then l., followed by lapping movement of tongue with thumbs drawn into pelvis; before an attack (epilepsy).

23. Lower Limbs.—Sciatica.—Lower limbs more in motion than upper.—Cramp awakens him from sleep.—Lower limbs get weak (brain-softening).—Lower limbs straight and stiff before attack.—Swelling of knees with pulsative and distending pains.—Podagra.

24. Generalities.—Epileptic attacks, ushered in by a cry; face livid followed by sleep; occur at midnight; at time of menses; at change of moon; result of sexual excitement.—Swelling of whole body which turns a deep yellow.—Lividity.

25. Skin.—Dirty greenish oily.—Large yellow bullć, which open, leaving a raw surface exuding an ichorous fluid.—Burning blisters.—Sweat profuse; oily.—Carbuncles.—Chilblains.

26. Sleep.—Sleepy; after meals.—All symptoms < on awaking.

Cactus Grandiflorus.

Cereus grandiflorus. Night-blooming Cereus. (Mexico and the West Indies.) N. O. Cactaceć. Tincture of youngest and tenderest stems and flowers collected in summer.

Clinical.—Aneurism. *Angina pectoris*. Apoplexy. Arteries, atheroma of. Asthma. Bladder, paralysis of. *Brain, congestion of*. Bronchitis. *Diaphragm, rheumatism of*. Dropsies. Ear, inflammation of. Fistula. Goître, exophthalmic. Hćmaturia. *Hćmorrhages. Headache. Heart, affections of*; hypertrophy of. Indigestion. Intermittent fevers. *Lungs, hćmorrhage from*. Melancholy. Menstruation, painful. *Miliaria*. Neuralgia. Otitis. Ovaritis. Pneumonia. Prostate, affections of. Rheumatism. Sun, effects of. *Sunstroke*. Traumatic fever. Vaginismus.

Characteristics.—We are indebted to Rubini of Naples and his devoted wife for the first provings of this great remedy. *Cactus* affects powerfully the entire organism, but its intensest operation is on the heart and circulation. In congestive violence it rivals *Acon*., which is one of its antidotes. As with *Acon*., too, the pains are unendurable; they extort screams. Sadness, apprehension, fear of death and a tendency to be easily frightened characterise the *Cactus* mental state, as they do many conditions of heart disease. Given as an organ-remedy it will benefit a large number of cases of weakened and painful heart; and if its keynote symptom of constriction—"as if an iron band prevented its normal movements," or "heart as if compressed violently and as violently struggled to burst its bonds"—is present, it will cure. Pain and numbness in left arm accompanying heart disease. Sharp pains in diaphragm and girdle pain round its attachment. Indigestion with these symptoms. Snader considers *Cactus* specially indicated where the heart is weak and the arteries atheromatous. This is confirmed by a venerable correspondent of the *Hom. World* (July, 1898), who, finding his temporal arteries much swollen and hard to touch, took several doses of *Cact*. 1x, with the result that in a few days they became normal. Snader uses the lower attenuations in this condition. A case of angina pectoris was cured by the 30th, with the following characteristic: sensation as though a swarm of hornets were going from pectoral region to heart. *Cactus* has the weakness and coldness of the extremities which characterise many heart cases, and render it an appropriate remedy. Constricting pains run through the pathogenesis (throat; chest; heart; bladder; rectum; vagina). Twitching of muscles, and sensation of constriction produced by touching the affected part. Hćmorrhages (nose; lungs; rectum; stomach). Sanguineous congestions, which are in a way a counter-part of the constrictive sensations. Prostration. Among the other prominent symptoms of *Cactus* are: "Heavy pain in vertex, like a weight." "Periodical attacks of suffocation, with fainting, cold sweat on face, and loss of pulse." "Fluttering and palpitation of heart, < when walking or lying on left side." "Heart disease with swelling of left hand only." "Numbness of left arm." "Rheumatism of all joints,

beginning in upper extremities." The pains are very sharp, causing the patient to cry out. Many symptoms are < at night ("*Night*-blooming Cereus"). Menses cease at night. Many symptoms < lying down, or come on when lying down. Periodicity is well marked (quotidian fever, 11 a.m.). Chill at same hour every day, 11 a.m. or 11 p.m. Choudhury has reported a case cured, the characteristics being: "Chill severe, 11 a.m., thirsty, headache, body hot; no separate heat." When there is heat there is thirst and short breath. At times there is entire absence of sweat. There is < after eating (weight at stomach); and also < from missing a meal or fasting (prosopalgia and other neuralgias); < from lying on left side; from noise and light from heat; from sun's rays; from exertion; from damp.

Relations.—*Botanical relatives:* Cereus bonplandii, C. serpentinus, Opuntia, and, in a sense, Coccus cacti, *Antidoted by:* Aco., Camph., Chi., Eup. perfol. *Compatible:* Dig. (tumultuous action of heart; slow, irregular pulse; scanty urine; dropsy); Eup. perf., Lach Nux, Sul. (pleurisy). *Follows well:* Aco., Arn., Ars., Bell., Bry., Cham., Gels., Ip., K. bro. (diaphragmitis), Lach., Nux, Rhus. *Compare:* In mental symptoms, Dig., Lach. In congestions to head, Bell., Glo. In pain and pressure in head, Arn., Carb. v., Coral., Iod., Nux, Op., Spi. Weight in vertex, Alo., Alum. In heart affections, Aco., Act. r., Amyl. n., Arn., Bell., Bov., Crotal., Dig., Eup. perf., Kalm., Lach., Lil. t., Naja, Puls., Spi., Zn. (as if a cap over heart); irritable heart, Cer. b., Hep., Pho. In constrictions (of chest) Zn., K. chlo., Cad. s., Alum., Bell., Bov., Arn., Cain., K. nit., Lach., Stram., (uterus) Murex, (vagina) Kali c. In menses ceasing at night, Caust. In leucorrhśa, Am. mur. In intermittents, Ars., Bry., Calc., Eup. perf., Nat. m:, Rhus, Sul. In dropsies, Dig., Kalm. In sleeplessness, Sul. Neuralgia and other forms of pain which are sure to appear when an accustomed meal is missed, Ars. Hćmoptysis, strong throbbing at heart, Aco. (Aco. has more anxiety and fever). Pain in diaphragm, Ran. b. (Ran. b. has pains shoot from front to back; Cact. has sharp pains in diaphragm and girdle pain round attachment). Reptile sensation, Crocus.

Causation.—Sun. Damp. Love disappointment.

SYMPTOMS.

1. Mind.—Sadness and bad humour; taciturnity; melancholy; hypochondriasis.—Cries, knows not why; < by consolation.—Screaming with pain.—During menses, hysteria.—Fear of death, belief that his disease is incurable.—Love of solitude.

2. Head.—Vertigo, from sanguineous congestions to head.—Heavy pressing in the head as if a great weight lay on the vertex; > from pressure; < from noise (even talking) and light.—Throbbing pain with sensation of weight and violent neuralgias in r. side of head; periodic.—Feeling as if head compressed in a vice, and would burst from severity of pain.

3. Eyes.—Dimness of sight; cannot see at a distance; objects seem obscured.

4. Ears.—Hearing diminished by the buzzing in the ears.—Pulsations in the ears (otitis).

5. Nose.—Profuse epistaxis; soon ceasing.

6. Face.—Paleness of the face.—Bloated and red; with pulsations in head.—Prosopalgia, right-sided, chronic; < from slightest exertion; bearable only when lying still in bed; brought on by wine, music, strong light, missing dinner at usual hour.

8. Mouth.—Loss of taste for food with nausea.—Tongue purple, thick brown sordes on teeth.—Prickling on point of tongue.—Breath very offensive.

9. Throat.—Feeling of warmth about throat and chest.—Constriction of śsophagus, which prevents swallowing.—Constriction of throat exciting a constant desire to swallow.—Suffocative constriction at throat with full, throbbing carotids.—Scraping sensation at soft palate.

11. Stomach.—Appetite good; digestion weak.—Complete loss of appetite, stomach rejects everything.—After eating weight and distress in stomach.—Nausea in the morning, lasting all day.—Acrid, sour fluid in stomach which rises in throat and mouth.—Frequent vomiting.—Copious hćmatemesis.—Burning pulsation or heaviness in stomach.—Constriction or pulsation in scrobiculus.—Gastro-enteritis.

12. Abdomen.—Pulsation in the cśliac artery (after dinner), burning extends down from it in flashes.—Sharp pains shooting through diaphragm and up into chest.—Colic with loose stool.—Insupportable heat in abdomen.—Pain and bearing-down in lower abdomen.

13. Stool and Anus.—Constipation; stool hard and black.—Diarrhśa, watery, mucous, bilious (in forenoon).—Sensation of great weight (in anus), and urging to evacuate a great quantity, but nothing passes.—Copious hćmorrhage from the bowels (from the anus).—Itching in the anus.—Fluent hćmorrhoids.—Fistula in ano with violent palpitation of heart.

14. Urinary Organs.—Constriction of neck of bladder.—Irritation in urethra, as if he would pass water constantly.—Urine passes by drops, with much burning.—Profuse urine, of a straw colour.—Urine, on cooling, deposits a red sand.—Hćmaturia; urination prevented by clots.—Frequent urging; at night, with a copious flow each time.

15. Male Sexual Organs.—Prostatic affections; weight in anus.

16. Female Sexual Organs.—Pulsating pain in uterus and ovaries.—Constriction in uterine region; round pelvis.—Constriction of vagina preventing coition (vaginismus).—Very painful menstruation; extorting loud cries.—Menses too early; scanty menstruation, ceasing while lying.—Labour suppressed.—Breast, tumour in; inflammation of.

17. Respiratory Organs.—Difficulty of breathing; attacks of suffocation with fainting.—Chronic bronchitis, with rattling of mucus.—Spasmodic cough and copious mucous expectoration.—Pricking pains in chest with oppressed respiration (pneumonia).—Oppression of breathing in going upstairs.—Catarrhal cough with much viscid expectoration.—Much rattling of mucus.—Cannot lie in a horizontal position.—Periodical suffocation, with fainting, and sweat on face and loss of pulse.—Hćmoptysis, with convulsive cough.—Sharp pains shooting from body to back and up into chest, with sensation of rush of blood to chest (rheumatism of diaphragm).

18. Chest.—Difficulty of breathing; continued oppression and uneasiness as if the chest were constricted with a (hot) iron band, hindering respiration.—Whirling sensation from chest to brain; arterial throbbing.—Oppressed breathing from a weight on chest.—Congestion of the chest which prevents lying down; palpitation; constriction as from a tight cord around false ribs.—Sensation of a great constriction in middle of sternum, as if the parts were compressed by iron pincers, with oppression of breathing; worse on motion.

19. Heart and Pulse.—Pain deep in heart like a jerking body, frequently repeated.—Something seemed to be whirling up from chest to brain.—Sensation as if heart turned over ; as if it whirled round; as if some one was grasping heart firmly, with sensation as if it whirled round; as if heart was bound down and had not room enough to beat; as if bolts were holding it; as if compressed or squeezed by a band.—Lancinating pain in heart when perspiration fails.—Deathlike feeling at heart and round to l. back.—Acute pains, pricking and stitches in the heart.—Palpitation of the heart, day and night; < when walking, and at night, when lying on l. side.—Palpitation in small irregular beats (at times frequent, at others slow), from slightest excitement or deep thought, with necessity for deep inspiration.—Pains in apex of heart, shooting down l. arm to ends of fingers; feeble pulse; dyspnśa.—Endocardial murmurs; excessive impulse; increased precordial dulness; enlarged ventricle.—Heart disease with śdema of l. hand only.—Aneurism.—Atheromatous arteries.

20. Neck and Back.—Exophthalmic goître.—Cold in back and icy cold hands.—Rheumatism of shoulder.—Pain under l. shoulder-blade (with palpitation).—Lumbar muscles tender on pressure and stiff, esp. on first moving after repose.

21. Limbs.—Rheumatic pains, in shoulders, upper and lower arms, in hips down to feet; < in rest and in motion, and in all positions.

22. Upper Limbs.—Pain in shoulders and arms.—Sore aching in l. arm down to elbow; down to fingers.—Numbness of l. arm.—Formication and weight in arms.—Śdema of the hands; worse in the l.

23. Lower Limbs.—Restlessness of legs; cannot keep them still.—Śdema of the feet, extending to the knees; the skin is shining; pressure with the fingers leaves an indentation.

24. Generalities.—General weakness and prostration of strength.—Sensation of constriction: in throat; chest; heart; bladder; rectum.—Hćmorrhages: from nose; lungs; rectum; bladder; stomach.—Congestions.

25. Skin.—Dry, scaly herpes on the outside of the elbow, and on the r. internal malleolus.

26. Sleep.—Sleeplessness without cause; or from arterial pulsations in the scrobiculus, and in the r. ear.—Dreams: frightful; lascivious.

27. Fever.—Slight chilliness towards 10 a.m.—Chilliness, with chattering of the teeth.—Chilliness not relieved by covering; 11 a.m. and 11 p.m.—Burning heat, with shortness of breath.—Scorching heat at night, with headache, following a chill and terminating in perspiration.—Coldness in back and icy cold hands.—Intermittent fever (quotidian) recurring every day at the same hour (for many successive days).—One o'clock in the afternoon slight chill, then burning heat, with dyspnśa, pulsating pain in the uterine region, terminating in slight perspiration.—Quotidian, 11 a.m., great coldness for two hours; then burning heat, with great dyspnśa, violent pain in the head, coma, stupefaction, insensibility till midnight, and unquenchable thirst and perspiration.

Cadmium Bromatum.

Cadmium bromide. Cd Br_2. Trituration or solution.

Clinical.—Apoplexy. Heartburn. Indigestion.

Characteristics.—*Cad. br.* must be compared with *Cad. s.* Three persons have experimented with it. It produced a burning sensation in mouth, gullet, and stomach. In two ladies there was extreme pain and burning in stomach, and vomiting and (in one case) purging also, for five hours, pulse imperceptible. After

this the symptoms were better and sleep followed, but both were confined to bed for several days, and one of them (the one who had the diarrhœa) was afterwards subject to cerebral symptoms threatening apoplexy.

Cadmium Sulphuratum.

Sulphide of Cadmium. Cd S. Trituration.

Clinical.—Apoplexy. Boils. Chilblains. Cholera infantum. Corneal opacity. Eyes, affections of. Facial paralysis. Indigestion. Meningitis. Nasal polypus. *Ozæna*. Yellow fever.

Characteristics.—*Cadmium* is found in nature in intimate association with *Zinc*, which it nearly resembles in action, but *Cadmium* acts more powerfully. The profound action of *Cad. s*. on the stomach—burning and cutting pain, intense retching, gagging, bringing up tough mucus, intense nausea and vomiting—led to its being given in yellow fever with brilliant success. Black vomit is very characteristic. The least thing touching the lips will excite vomiting. Pitchy taste; food tastes like salt. *Cadm*. is a cross between *Bry*. and *Ars*.: it has the desire to keep quiet of *Bry*., with the exhaustion and stomach irritability of Ars. (Kent). *Cadmium* is a chilly medicine. There is icy coldness—coldness even when near a fire. Horripilation: after drinking; with hot hands. Sweat in axillæ. Effect of a draught of cold air in checking sweat. < From cold air; itching of skin when cold. < Sunshine. < In morning and after sleep. < Walking; < ascending stairs. < When swallowing. < After grief. < After intoxication. > By eating. Effects of: anxiety, or fit of passion; of cold winds (facial paralysis). Acts well in drunkards. It is a notable antipsoric. There is much itching of skin; at night in bed; when touched; when cold; > scratching, which causes a voluptuous feeling. Skin blue; yellow; scaly, cracking, damp, suppurating herpes; chilblains. Cutting, lancinating pains are prominent; also a sense of constriction. The nasal symptoms are very important; no remedy has served me better in cases of ozæna and polypus.

Relations.—*Compare:* Zn. (but in Zn. the action is primarily on brain; in Cadm. primarily on stomach); in constriction across chest with palpitation, K. chlo.; weakness, nausea, vomit and burning, Ars.; black vomit, affections of drunkenness, Ars., Lach.; in nausea and retching, Asar., Bry., Crot. t., Cup., Nux, Pod., Ant. t.; in deathly nausea, Ip., Tab.; greenish gelatinous vomit, Æthusa, Ars., Bry., Ip., Ver.; gelatinous stools, Alo., Cubeb., Hell., K. bich., Pod., Rhus, Sep. (green); loss of breath on going to sleep, Carb. an., Carb. v., Op., Grind., Lach. *Followed well by:* Bell. (rolling of head with open eyes in cholera infantum); Carb. v., Lob. inf. (in yellow fever); Nit. ac.; Alet. (nausea of pregnancy). *Follows well:* Ip., Ars., Bell.

Causation.—Sun. Draught of air. Cold wind. Alcohol.

SYMPTOMS.

1. Mind.—Excessive irritability.—Horror of solitude and of work.

2. Head.—Constriction; stitches; pulsation.—Hammering in the head, preceding vomiting.—Headache with restlessness, icy coldness of body, epistaxis, constriction in throat, thirst, nausea, vomiting; mostly present when awaking, in open air, from draught of air, in sun.—Herpes on temples.

3. Eyes.—Cannot read small type.—Night-blindness.—Scrofulous inflammation.—Opacity of cornea.—Hot tears.—Swellings of lids.—Hollow eyes; blue circles.

4. Ears.—Sounds echo in head.

5. Nose.—Ulcerative or cancerous smell (ozæna).—Tightness at root and tension in nose.—Obstruction of nose by swelling.—Numbness of nose.—Erysipelas.—Boils on nose.—Caries of nasal bones.—Ulceration of nostrils.

6. Face.—Spasmodic movements of upper lip.—Facial paralysis from cold air—crawling sensation—chronic eruption on forehead, nose, and round mouth.—Swelling of lips.

8, 9. Mouth and Throat.—Salivation.—Taste first sweetish, then bitter and burning.—Fetid breath.—Ulcers; dryness; itching; burning; constriction in throat.—Dysphagia.

11. Stomach.—Nausea; must lie quiet.—Nausea in mouth; chest; abdomen.—Saltish, rancid belchings, cold sweat on face.—Vomiting of acid or yellow substances, cold perspiration on face and cutting pains in abdomen.—Black vomit.—Burning and cutting pain in stomach.—Gastric symptoms < after drinking beer; in forenoon; during pregnancy; in drunkards; after cramps in stomach.

12. Abdomen.—Pain in abdomen with vomiting.—Pain and pulsation in sides of abdomen.—Cutting pains in bowels and kidneys.—Lancinations in l. hypochondrium.—Symptoms of stomach and hypochondria < by walking or carrying burdens.

13. Stools.—Stools, almost gelatinous, yellowish-green, semi-fluid. (Cholera infantum.)

14. Urinary Organs.—Severe cutting in region of kidneys; urine suppressed, or scanty, or bloody.

15. Male Sexual Organs.—(Too frequent seminal emissions checked by it.)

16. Female Sexual Organs.—Acts well during pregnancy.—Erysipelas of mammæ.—Inflamed nipples.

17, 18. Respiratory Organs and Chest.—Chest feels dilated.—Feeling as if lungs adhered to chest.—Cough with loss of consciousness, agitation, red face, pain in stomach, or vomiting of bile.—Interrupted breathing during sleep.—Chest symptoms < squatting.—Brown spots on chest.—Swelling of external chest.

21. Limbs.—Suppuration of axillary glands.—Brown spot on elbow.—Boils on buttocks.—Restlessness; jactitations; startings.

26. Sleep.—Sleeps with eyes open.—Stops breathing on going to sleep; wakes up suffocating.—Symptoms < after sleep.—Annoying protracted sleeplessness.

Cainca.

Chiococca racemosa. (Brazil.) N. O. Rubiaceæ. Tincture of dried root bark.

Clinical.—Bright's disease. Cough. Dropsies. Fatigue. Kidneys, pain in. Ophthalmia. Polyuria. Spleen, pain in. Travelling, effects of.

Characteristics.—*Cainca* is related botanically to *China, Ipecac*., and *Coffea*. Clinically it is very like *Apocynum*. It has not been used much, but has been given with success in dropsies, especially when associated with dry skin. It removes fatigue from too long riding on horseback. Polyuria while travelling. There is also sensitiveness of the abdomen to touch. Rest >. Motion <.

Relations.—*Compare:* Apocynum, Bry. *Antidoted by:* Colch., Rhus (gastralgia), Verat. Cainca *follows well:* Ars. *Similar to:* Coffea in relieving effects of fatigue; also Arn.

Causation.—Fatigue.

SYMPTOMS.

3. Eyes.—Inflammation of the eyes with fluent coryza.

12. Abdomen.—Lancinations through spleen region.—Abdomen sensitive to touch.

14. Urinary Organs.—Pain in kidney regions in morning; cannot change position.—Polyuria; whilst riding.—Copious urination after drinking coffee.

17. Respiratory Organs.—Attacks of cough from 7 p.m. till 1 a.m., with rattling of phlegm. and short breath; accumulation of wind in abdomen, which feels like a pair of bellows set in motion; feels it putting hands there.—Cough with weeping.

26. Sleep.—Somnolence; yawning.

Cajuputum.

Cajuput oil distilled (in water) from leaves of Melaleuca leucadendron. Variety, M. cajupute minor. (Moluccas.) N. O. Myrtaceć. Solution of the oil in rectified Spirit.

Clinical.—Deafness. Diarrhśa (night). Dropsy. Epilepsy. Gout. Headache. Heartburn. Hiccough. Hysteria. Menstruation, disorders of. Śsophagus, stricture of. Paralysis. Rheumatism. Tongue, affections of; swelling of. Toothache. Urinary disorders. Vertigo.

Characteristics.—*Cajutut* has a reputation in the old school as a local application in rheumatism, and also in cases of dysmenorrhśa. It has had a homśopathic proving, and some very characteristic symptoms have been developed. A feeling of enlargement; too large all over; as if head as large as half a bushel. Feeling as though could not get himself together (*Bapt.*); could not get his clothes for a time, though they were quite near. As if poisoned. As if the arms were tied to the body; heavy; useless. Numb feeling all over. A measles-like eruption; intense itching. Many nervous symptoms are developed, some reflected from the female sexual organs. There is the persistent choking sensation of hysteria; nervous dyspnśa; nervous distension of the bowels. Earache and faceache; the lobe of the ear is red; alć nasi suddenly turn red; nose appears swollen. It has cured obstinate hiccough from slightest provocation, talking, laughing, eating, or any motion. Symptoms appear and disappear suddenly; come at 5 a.m.; disappear suddenly on eating. Many symptoms are < at night. Smoking = desire to vomit.

Relations.—*Compare:* Bov. (swollen sensations); Plantago (earache, toothache); Colch. (gout and rheumatism); Aco. and Bell. (effects of checked sweat). Eucalyptus, Eugenia caryophyllacea (clove), Eugenia jambos and the Brazil-nut tree belong to the same order.

Causation.—Effects of checked perspiration.

SYMPTOMS.

1. Mind.—Averse to being spoken to, though likes to hear other people talk.—Can't bear to look inside the books he usually studies; can think of a thousand things in a

minute.—Prefers to walk alone, slowly.—Feels better in the society of ladies, and can talk with them (though naturally bashful); he does not like to talk with the men.

2. Head.—Intoxicated feeling, feels as if he would stumble over his own legs.—Head feels enlarged; dull and heavy; in occiput.—Frontal headache, esp. in eyes, < on bending forward.—Severe headache 5 a.m., with prosopalgia and stiffness of jaws.

3. Eyes.—Heavy feeling in eyes; upper lids feel as heavy and thick as leather.

4. Ears.—Lobules of ears turn red.

5. Nose.—During day alć nasi suddenly turn red, redness suddenly disappearing.—Nose is most prominent; looks as if large and extending out from face on looking down.

6. Face.—Face feels all puffed up.—Cannot hurt skin of face by pinching it.—Face feels rough.—Stiff, dry feeling in jaws, with neuralgic pains in malar bones, and severe headache all over head on waking at 5 a.m.

8. Mouth.—Tongue feels swollen; as if it filled mouth all up, making her lisp, feels scalded; looks white and rough.—Profuse salivation.—Speech thick and slow.—Acrid taste.

9. Throat.—Constant inclination to spit and hawk up large quantities of tough white mucus, which he could feel drawn through the nares.—Feels closed up.—Śsophagus: paralysed; swollen sensation; constricted,< attempting to swallow solid food.—Burning in pharynx and śsophagus.—Persistent sensation of choking.

11. Stomach.—Burning in throat down to stomach.—Nausea.

13. Stool and Rectum.—Rectum paralysed.—Bright yellow diarrhśa < night.—Choleraic diarrhśa from sudden check of perspiration.

14. Urinary Organs.—Urine diminished, milky; smells like cat's urine.

15. Male Sexual Organs.—Erections with great desire.—Erections all night, and long after rising, but without the least desire.—Penis soon became shrivelled up.

16. Female Sexual Organs.—Menses suspended, or diminished and attended with pain, when caused by a cold or check of perspiration.

17. Respiratory Organs.—Warmth down trachea into lungs.—Hoarseness.—Cough causing vomiting.—Nervous dyspnśa.—Sharp pain through apices of both lungs from before backward (esp. r.).

20. Neck.—All the muscles of the neck are very sensitive to pressure.

21. Limbs.—Rheumatic symptoms (Cajuput oil is a common remedy as an application to rheumatic joints).—Pain as if joints were enlarged.

22. Upper Limbs.—Arms feel like soaked wood hanging to one.—Left arm feels out of joint.

23. Lower Limbs.—Weakness in both knees.—Stitching pains in knees on rising in bed.

Caladium.

Caladium seguinum. Arum seguinum. Dumb Cane. (South America.) N. O. Araceæ. Tincture of whole fresh plant.

Clinical.—Asthma. Dropsical swellings. Gleet. Impotence. *Irritation*. Nymphomania. Pruritus vaginæ. Spermatorrhœa. Typhoid. Typhus. Worms.

Characteristics.—Like the other Arums, *Caladium* has an intensely irritating effect on the mucous membranes and skin, and produces many burning sensations. *Calad*. is one of the best remedies for that troublesome affection, pruritus vulvæ. Sometimes this is set up by intestinal worms finding their way into the vagina, and they may then cause masturbation, and even nymphomania. There is also great disturbance in the male sexual sphere. Masturbation and its results. Nocturnal emissions occurring either without dreams or with non-sexual dreams. Spermatorrhœa. The glans penis is flabby from masturbation, prepuce if drawn back remains so from loss of contractility. Catarrhal asthma, mucus not readily raised, but giving relief when it comes up.

H. N. Martin gives this picture of Calad.: "Is similar to *Lycopod*.; patient wants to lie down always; > from sweat (opp. *Merc*.); > after short sleep (opp. *Lach*.). Perspiration attracts flies. Genitals relaxed and perspire. Patient afraid to go to sleep, and doesn't know why. Itching of vulva with burning."

It is *suited* to persons of lax, phlegmatic temperament. There is < from warmth; aversion to cold water; but bathing with cold water > itching. Heat with drowsiness. Sweet odour of sweat. All symptoms > after sweat; after sleeping in the daytime. Motion < most symptoms. Great desire to lie down and aversion to motion; but if he makes the effort he is strong enough. Attacks like fainting after writing and thinking, when lying down or when rising.

Relations.—*Compare:* The *Araceæ* (but it is *incompatible* with them); Aco., Bry., Caust., Carb. v., Canth., Caps., Cina (worms); Gels. (effects of sexual excesses); Hyo., Ign., Lyc., Merc., Nit. ac., Nux, Pho., Plat. (nymphomania and irritation of genitals); Pul., Sep., Staph. (effects of masturbation); Sul., Zingib. *Antidoted by:* Caps.; Ign. (stitches in pit of stomach and fever); Carb. v. (rash); Hyo. (night cough); Zingib. (asthma); Merc. (preputial symptoms). *Antidote to:* Merc. *Compatible:* Aco., Canth., Puls., Sep. *Complementary:* Nit. ac.

SYMPTOMS.

1. Mind.—Low spirits and gloomy thoughts (impotence).—Forgetfulness.—Very irritable and depressed.—Confused, cannot concentrate the mind.—Apprehensive; careful about his health.

2. Head.—Dull, frontal headache.—Vertigo with nausea, mornings.—Fulness in head, as if too much blood were there.—Throbbing pain in the head.—Headache with nausea.—Dull, pressive, or sharp, cutting pain in temples.—Numbness in side of head.

3. Eyes.—Burning and stitches.—Eyes violently inflamed.—Drowsiness and heaviness.—Eyelids red and inflamed, with smarting and burning.—Dull, pressive aching in portion of eyeballs.—Eyeballs sore and sensitive to pressure.

4. Ears.—Very sensitive to noise (start from sleep).

5. Nose.—Fluent or stopped coryza.

6. Face.—Sensation as if a spider web or plaster were sticking here and there.

7. Teeth.—Toothache, teeth feel elongated.

8. Mouth.—Swelling of tongue with excessive ptyalism; saliva resembling white of egg; mucous membrane red.

9. Throat.—Dryness and burning in fauces and pharynx (without thirst); with aversion to cold water.

11. Stomach.—Nausea, esp. in the morning on rising.—Acid eructations.—Frequent eructations of very little wind, as if stomach were full of dry food (with asthma).—Burning in stomach, not > by drinking.

12. Abdomen.—Spasmodic cutting pain in stomach and abdomen.—Abdomen swollen and tender to touch.—Sensation as if a long worm writhing in region of transverse colon or duodenum.

13. Stool and Anus.—After stool thin red blood passes.—Discharge of mucus from the rectum after stool.—Stitches in rectum after stool.—Soft, pasty, clay-coloured stools, passed with difficulty.—Stool containing hard lumps.—Very scanty, pasty stool.—Urging to stool on rising in the morning.—Burning in the anus after stool.

14. Urinary Organs.—Bladder feels full without desire to urinate.—Urine fetid; with sediment (with impotence and gleet).

15. Male Sexual Organs.—Organs swollen (puffy), relaxed, and sweating.—Swelling of margin of prepuce with smarting during micturition.—After waking prepuce remains retracted; painful and swollen.—After coition the prepuce remains behind the glans; it is painful and swollen.—Glans red, dry; dotted with still redder points.—Glans flabby from masturbation.—Painful erections without sexual desire, alternating with sexual desire with relaxed penis.—Impotence with mental depression.—Frequent nocturnal emissions.—Nocturnal emissions either without dreams or with non-sexual dreams.—Imperfect erections and premature ejaculation of the semen.—Impotence; the penis remains relaxed, even when excited.—Feeling of coldness, and cold perspiration of the sexual organs.

16. Female Sexual Organs.—Itching of external genitals with voluptuousness.—Pruritus of vulva and vagina.—Pruritus vaginæ; with onanism (nymphomania).—Worms escape into vagina and cause masturbation.—Cramp-like pains in uterus after midnight.

17. Respiratory Organs.—Larynx and trachea seem constricted; impedes deep breathing.—Sudden and involuntary cough caused by tickling high up in throat (above larynx).—Oppression of breathing, cannot get his breath easily.—Asthma alternating with itching, burning rash.—Catarrhal asthma (with mucus which is not readily raised, but the asthma is relieved when it is raised).

18. Chest.—Sharp stitches in r. side of chest.

20. Back.—Rheumatic pain in back; can hardly turn in bed.—Pain in shoulder with headache.

21. Limbs.—Limbs feel tired and weak.—Rheumatic pains in the limbs.—Trembling of the limbs.—Stitches in corns.—Cramps in the soles of the feet at night.

24. Generalities.—Attacks like fainting after writing and thinking, when lying down, or when rising.—Disinclination to move, and desire to lie still.—Weariness over the whole body.—Extremely nervous.—Great throbbing all through the body.—Sighing respiration; dryness of parts which are usually moist.

25. Skin.—The skin has a rough, dry feeling.—Itching, burning rash (forearm and chest), alternating with asthma.—Violent itching on various parts.

26. Sleep.—Drowsy and sleepy.—Sleepless, or unrefreshing sleep.—Sleepiness in the daytime, but cannot go to sleep on account of vertigo.—Groans and moans anxiously in sleep.—Dreams; frightful.

27. Fever.—Chilliness in the evening, without thirst.—Chilly even in a warm room.—Feverish, skin hot and dry.—Face, head, and hands hot; legs and feet cold.—Internal heat, going off from sleep.—Heat with thirst, pain in the ears, swelling of the sub-maxillary glands, and retention of stool.—Sweat towards evening, with prostration, yawning, and drowsiness.—The perspiration (after the heat) attracts the flies.

Calcarea Acetica.

Impure Calcium Acetate. $Ca(C_2H_3O_2)_2$. Tincture.

Clinical.—Anus, itching of. Bronchitis membranosa. Cancer, pains of. Dysmenorrhœa membranosa. Headache. Vertigo.

Characteristics.—The symptoms of *Calc. acet*. (the first of the lime preparations proved by Hahnemann) are in the main identical with those of *Calc. carb*. (both being prepared from oyster shells), and are included in the pathogenesis of that medicine. Among its most marked symptoms may be named: Vertigo when walking in the open air. Stupefying, pressive pains in the forehead with compression of the whole head and obscuration of the senses *whilst reading*: he was obliged to stop while reading and did not know where he was. Clotar Muller cured many cases of megrim with *Calc. acet*. The indications he relied on were: "Sour taste in mouth, sour eructations, sensation of coldness in the head, and of emptiness. Pain one-sided, affecting right eye, which was red, causing lachrymation." Sour, offensive eructations. Profuse, painless, not exhausting diarrhœa. Severe itching of anus. Allen (*Handbook*) mentions that it has cured some marked cases of membranous dysmenia and also of violent spasmodic cough ending in the expulsion of casts of bronchial tubes. For *comparisons* see *Calc. c*. It has been used in the excruciating pains of open cancer (compare *Calc. oxal*.).

Calcarea Arsenicosa.

Arsenite of Lime. Tricalcic Diarsenite. $Ca_3\ 2AsO_4$. Trituration.

Clinical.—Acidity. Albuminuria. Asthma. Cholera. Cirrhosis of liver. Constipation. *Consumption. Corpulency*. Dropsy. Embolus. Epilepsy. Gastric ulcer. Headache. Heart, disease of. Indigestion. Intermittent fever. Kidneys,

affections of. Liver, affections of. Obesity. Palpitation. Pancreas, cancer of. *Tumours*. Typhoid.

Characteristics.—*Calc. ars*. was prepared and proved by Hering in the 4th centesimal tincture in 1848. It has also been tested clinically. It has many head symptoms: Vertigo when moving the head. Flying or swimming sensation as if feet did not touch the ground indescribably well; most wonderful visions pass before the eyes, manifold but lasting only a second; passing like lightning, but is infinitely much." Rush of blood to head before an epileptic attack. Epilepsy with heart disease. Weight an vertex, later on occiput. The headaches go from before backward; < mornings going out of doors; < on aspect opposite to the one lain on, whether front or back, or either side. > By mental exertion but < after. < After slightest error in diet. Headache and palpitation are < and > together. Violent pains over right eye; stitches in right forehead, recurring weekly. Head is hot. Delirium in the dark. Blue rings under eyes. Swelling of inguinal glands, with tearing pains in legs. General dropsical swelling, temples, face, backs of hands, with albuminuria. Drawing as with a thread from larynx backwards. Burning and heat in chest; feeling as if he would suffocate with palpitation; pains in heart region followed by shooting in back extending to feet and arms. Every fourth beat of pulse omits with great regularity. The fever symptoms are well marked—intermittent, remittent, hectic, and masked malarious. Chilliness is marked, originates inwardly, with a sensation as if skin and adjoining parts were hot. Chilly cramps over back towards arms and chest. Night sweat after 3 a.m. Liver and spleen somewhat enlarged. It is the most efficient remedy, according to P. C. Majumdar, in the infantile enlarged liver and spleen of India. In albuminuria cases there is great sensitiveness of the kidney region. Cholera with impeded respiration from heart embolism. Suited to lymphatic, scrofulous, and tuberculous persons; fat women, approaching the climaxis; fat persons; complaints of drunkards after leaving off alcohol. It is a chilly medicine, the symptoms being < in cold weather; when out of doors.

Relations.—*Compare:* Lith. c. (mental symptoms, palpitation); Graph. (obesity); Glo., Puls., Sep., Sul. (headache); Ars. (alcohol-drinking); Nux (desire for wine); Ars., K. iod., Pho. (gastric ulcer); Ars., Ip. (asthma); Ars., Carb. v., Dig., Glo. and Lith. c. (heart). *Antidoted by:* Carb. v. (palpitation); Glo. (headache); Puls. (headache, tearing pains in face). *Compatible:* Con., Glo., Op., Puls. *Acts well in:* Cases which have been heavily dosed with Quinine.

SYMPTOMS.

1. Mind.—Depression and anxiety.—Delirium, evenings in the dark.—Slightest emotion causes palpitation of heart (*Lith*.).

2. Head.—Vertigo on moving the head.—Rush of blood to head before an epileptic attack.—Digging, pressive beating through l. half of head, from before backwards.—Headache over r. eye.—Weekly headache.

8. Mouth.—Lips dry.—Tongue dry; burning on tip.—Salivation with tasteless belching.—Sour taste.

11, 12. Stomach and Abdomen.—No appetite.—Great thirst, but when she drinks too much, pain in belly and diarrhœa ensue.—Region of stomach distended.—Gastric ulcer with scanty menses.—Pancreatic disease (cancer); with burning pain and albuminuria.—Enlarged liver and spleen in children.—Swelling of inguinal glands with tearing pains in legs.

13. Stool.—Diarrhœa at midnight after sweet potatoes.—Looseness and colic also during pregnancy.—Infantile diarrhœa.—Hard and difficult stool for months.—Faintness; cold hands followed by a stool without relief.

14. Urinary Organs.—Sensitive to pressure in kidney regions.—Frequent micturition; burning with scanty urine; albuminuria.

15. Male Sexual Organs.—Pain in spermatic cords after great exertion and drinking wine; hands cold; faintness and stool without relief.

16. Female Sexual Organs.—During pregnancy, bearing-down, prolapsus vaginæ.

17. Respiratory Organs.—A kind of asthma; awakens soon after midnight.—Drawing as with a thread from larynx backward, with headache; chest feels full.

19. Heart.—Pains in heart region, burning and shooting, extending to arms and legs.—Constriction of heart.—Palpitation; with suffocation; synchronous with headache.—Palpitation and heart pains preceding epileptic attack.

20. Neck and Back.—Stiffness of neck, with headache, on waking in morning.—Throbbing in back drives out of bed at night.—Violent backache between shoulders and sacrum; cannot straighten back.

22. Upper Limbs.—Lame pain as if beaten in l. shoulder and arm.

23. Lower Limbs.—Pain in l. knee of neuralgic character.—Weariness amounting to lameness in lower limbs.

26. Sleep.—Sleepless, cannot bear to lie down.—After 3 a.m. sleepless, restless, and perspiring.

27. Fever.—Chilly crawl over back towards arms and chest; it originates always inwardly with a sensation as if skin and adjoining parts were hot.—Shuddering or shivering running over back; has sometimes gooseflesh, esp. at night, and is sleepless.—Fever in afternoon with sensation as if abdomen were puffed up; much thirst for cold water and afterwards loss of appetite.—Heat in chest with palpitation.—Sweat after 3 a.m.

Calcarea Bromata.

Bromide of Calcium. $Ca Br_2$.

Clinical.—Brain, congestion of. Fretfulness. Irritability. Sleeplessness.

Characteristics.—*Calc. bro*. is an unproved remedy, recommended by Hale in a variety of children's complaints. Suited to children who are of lax fibre, lymphatic, nervous, and irritable. As both *Bromine* and *Calcarea* are suited to fair-haired and fat children the combination appears to intensify the effect. Gastric, intestinal, and cerebral irritation in such children. Vomiting, diarrhœa, sleeplessness, fretfulness, and tendency to brain disease.

Relations.—*Compare:* Bellad., Æthus., Calc., Bro.

Calcarea Carbonica.

Impure Calcium Carbonate. $Ca CO_3$. Including symptoms of Calcarea acetica, and Calcarea ostrearum, a trituration of the middle layer of oyster shells, of both of which Hahnemann made provings. Koch's provings were made from carbonate of lime precipitated from a solution of chalk in hydrochloric acid. Trituration.

Clinical.—*Abdomen, large. Acidity*. Alcohol, effects of. *Anæmia. Ankles, weak. Appetite, depraved. Beard, sycosis of. Bone, disease of*. Brachial neuralgia. *Breasts, painful. Bronchial glands, affections of. Calculus*. Caries. *Cataract*. Chilblains. Chorea. *Cold. Consumption. Corpulency*. Coryza. *Cough*. Coxalgia. *Croup*. Crusta lactea. *Debility*. Delirium tremens. *Dentition*. Diabetes. Diarrhœa. *Dropsy. Dyspepsia. Ear, affections of. Epilepsy*. Epulis. *Eyes, affections of*. Fever, intermittent. Fistula. Gall-stones. *Glandular swellings*. Gleet. *Goître*. Gonorrhœa. Gouty swellings. Headache. *Hernia*. Herpes. *Hydrocephalus*. Hypochondriasis. Hysteria. Impotence. *Joints, affections of. Lactation, defective. Leucocythæmia. Leucorrhœa. Lupus*. Masturbation. Melancholia. *Menstruation, disorders of*. Milk-fever. Miller's

phthisis. *Miscarriage. Molluscum contagiosum. Nævus*. Nervous fever. Neuralgia. Night terrors. Paralysis. Parotitis. *Peritonitis. Perspiration*. Plethora. *Polypus. Pregnancy*. Prosopalgia. Psoriasis palmaris. *Ranula*. Renal colic. Rhagades. *Rheumatism*. Rickets. *Ringworm*. Sciatica. Scrofula. Skin, affections of. Sleep, disorders of. Sleeplessness. *Smell, disorder of*. Spinal affections. Stone-cutter's phthisis. Strains. Sycosis. Sycosis menti. *Tabes mesenterica*. Tapeworm. *Taste, disordered. Teeth, carious. Toothache. Trachea, affections of. Tuberculosis. Tumours*. Typhoid. Urticaria. *Uterus, affections of*. Varices. *Vertigo. Walking, late. Warts*. Whitlow. *Worms*.

Characteristics.—*Calcarea* is one of the greatest monuments of Hahnemann's genius. His method of preparing insoluble substances brought to light in this instance a whole world of therapeutic power formerly unknown. Moreover, *Calcarea* is one of the polychrest remedies, and ranks with *Sulphur* and *Lycopodium* at the head of the antipsorics. It is absolutely essential to a correct appreciation of the homœopathic materia medica that these three medicines should be thoroughly known, as these are in a sense the standards around which the rest are grouped. All three have a very wide range and deep action. They have many symptoms in common, but *Calc*. is somewhat sharply distinguished from *Sulphur* in that it is a chilly remedy, the patient seeking warmth, whilst the *Sulphur* patient is < by heat, and > by cold. *Calc*. has cold, clammy feet, "as if there were damp stockings on"; *Sulphur* has characteristically *hot*, sweaty feet. The "sinking sensation" common to all three is most marked with *Sulphur* at 11 a.m., with *Lycopod*. at 4 p.m., with *Calcarea* at any time. *Calcarea* is closely allied to *Belladonna, Nux, Puls*., and *Rhus* in its action. It follows well *Sulph*. and *Nit. ac*., to both of which it is complementary. It is inimical to *Bryonia*, and should not be given immediately before or after that medicine. Like many of the other carbonates, *Calc. carb*. corresponds to persons of soft fibre with tendency to be fat. "This remedy is particularly adapted to the real *Leucophlegmatic Constitution*. Where we find a *large* head, large features, pale skin, with a *chalky* look, and (in infants) open fontanelles, we may think strongly of *Calc. c*." (Guernsey). The scrofulous constitution embraces a large number of *Calcarea's* characteristic effects: fat children rather bloated than solid, pale but flushing easily. Fair; slow in movement; of irregular growth, large heads, with wide-open fontanelles; large abdomens; irregular and partial sweats: the head sweats profusely, wetting the pillow for a space around the head; enlarged and hard lymphatic glands. Icy coldness in abdomen. In addition there are night terrors; child wakes at 2 or 3 a.m. screaming, cannot be made to understand, remembers nothing of it in the morning.

Children are slow in teething and walk late. Sourness is one of the characteristic notes of *Calc. c*.; the body is sour; taste sour; sour stool and urine. All the symptoms are made worse by taking cold. In all cases where there is improper nutrition and imperfect digestion, such as described above, and where there is chilliness, aggravation from contact with water and from cold, cold, clammy feet

and sinking sensations, *Calcarea* will most likely prove the remedy. *Calc*. also corresponds to ailments following losses of fluids, such as from self abuse; and it corresponds to a form of menorrhagia, the flow being excessive and the intervals shortened. Periods return too soon after excitement. There is often pain in the breasts before the flow commences, as with *Conium*. But if the menses are scanty or absent, and the *Calc*. characteristics of chilliness and cold, clammy feet are present, *Calc*. will still be the remedy. Suppression of menses in women of full habit after working in water. Bearing-down pains. Ovarian or uterine pains, right side, extending down thighs; < on reading or writing (left, *Lil. t*.). In addition to the cold symptoms there are sensations of heat and burning: heat in and on the vertex. In connection with this the sweat of the head must be remembered. It occurs chiefly on occiput and forehead (that of *Sil*. is all over). There is > uncovering during the heats (as with *Lyc*. and unlike *Sil*.). Burning in soles of feet at night; burning in back of hands. The characteristic *Calc*. hand is soft, warm, and moist; a boneless hand. Also hands inclined to chap. There are copious night sweats, which may be sour or odourless. Foot-sweat, sour or odourless. The sweats of *Calc*. give no relief. Bloody sweats. Among other heat symptoms is hot breath, with heat in mouth. Rumination is among the Calc. effects. Nausea after drinking water, even ever so little; *but not if iced*. The "sinking" sensation of *Calc*. has some modifications. There is ravenous hunger; hunger and feeling of emptiness immediately after a meal, and in the early morning. If he doesn't have his breakfast at the proper time, a headache comes on. Craving for eggs; for indigestible things, chalk, coal, &c. Nausea when fasting. Sour eructations. Sour diarrhœa. Sour body smell. Milk disagrees; sour vomiting of large curds. Inability to swallow solids. Chronic disease of left tonsil; feeling of lump in left side of throat which he wants to swallow down. Pain from left tonsil to ear. Semilateral swelling of tongue. The prosopalgia of *Calc*. is > warm fomentations, like *Pul*. Biliary colic: cutting pain under right scapula running to right hypochondrium and epigastrium. Crawling in rectum as from worms. Burning in rectum. Weight in lower rectum. Stools hard and pasty; like chalk or clay offensive; undigested. Ardor urinæ; offensive urine. Impotence penis cold and relaxed. *Calcarea* is related to the pretubercular stage of phthisis; it is more especially suited to affections of the right apex. Stitching in chest and sides of chest when moving and when lying on affected side. The cough is provoked by going into a cold room; by chilliness. Tickling cough, sensation of feather in throat. I have cured with Calc. a "fat cough"—*i.e*., a cough with easy expectoration of a little mucus—and an arsenical cough (brought on by sleeping in a room having an arsenical wallpaper) which waked the patient in the middle of the night, causing him to sit up and cough till phlegm was raised. Rattling in the chest; miller's and stone-cutter's phthisis; old suppurating cavities. Swelling of cervical and bronchial glands. Scrofulous glands and scrofulous diseases of bones; spinal curvature; rickets. Swellings; false appearance of fat; milk leg > by elevating the limb, < hanging it down. The same conditions mark the sciatica of *Calc*., which follows on working in water. Rheumatic and gouty conditions from wetting. Joints crack and crepitate as if dry. The skin is rough and scaly and inclined to chap.

Rhagades. Chapped hands. Chilblains from wetting. Eruptions. Cooper has cured with it psoriasis palmaris. Eruption behind right ear. Warts and polypi. *Calc*. is an eminently sycotic medicine, as the early morning aggravation would indicate.

The mental and nervous systems of *Calc*. are no less remarkable than the bodily. The *Calc*. patient is slow in movements (*Sul*. quick and active). The state of mind is one of apprehension. The patient fears she will lose her reason, or that people will notice her mental confusion. Fears she has some fatal disease, especially heart disease. Shuddering and dread as evening, draws near. Sees visions on closing eyes (hence useful in delirium tremens). Cries out, twitches, grasps at flocks; restless and anxious though unconscious (nervous and typhoid fever); beside herself with anguish; on the borders of acute mania. Evil forebodings; talks of Mice, rats, murders. Forgetful. The epilepsy of *Calc*. has an aura spreading up from the solar plexus, in which case the convulsion comes on immediately; or it may be like a mouse running on the arm; or it may run down from epigastrium into uterus or limbs. The causes are fright, suppressed eruptions and discharges, sexual excesses. Rush of blood to head; a sensation of something rising up from epigastrium to head is very characteristic. Trembling, twitching; internal trembling sensation on awaking. Fainting, coming on in the street with sensation of something rising from stomach to head. Talking = a feeling of weakness which compels him to desist. Exertion or excitement = exhaustion, though he may feel well before. Ascending = great weakness. Exhaustion in the morning. Vertigo: tendency to fall to left; to either side; backward. Caused by turning head; < looking upward; going (especially running) upstairs. Sensation as if in a dream. *Calc*. is one of the remedies that has been used for the sensation of levitation. Aversion to darkness. Cloud coming over head. In sleep the mental symptoms come out again: the patient is either abnormally sleepy or sleepless. Wakes 3 a.m., and cannot get to sleep again; tosses about. Horrible phantasms. The child wakes in the night screaming and cannot be pacified; in the morning remembers nothing of it. Chews and swallows in sleep. Frightful dreams of sickness, death, and smell of corpses.

Neuralgias and paralyses are among the *Calc*. effects. A remarkable case (of Dr. Mayntzer's) improved by *Silic*. and cured by *Calc*. is quoted in *Hom. League Tract*, vol. ii. p. 108. A girl of nineteen had had for some months neuralgic pains in both arms, coming on every evening, lasting all night, and being replaced during the day with sensation of lameness and weakness. Pressure and movements aggravated. Hands trembling, numb, fingers often remained opened out stiff and could not be bent. The *Silica* symptoms are: "Tearing pains in upper arm. Pain as of dislocation at wrist. Cramp pain and lameness of hand on slight exertion. Gone-to-sleep feeling of hands at night. Numbness and formication of hands. Restlessness and trembling in right arm." The symptoms of *Calc*. are: "Bruised pain of arms on moving or grasping. Pain as if sprained in wrist, with shooting and tearing in it when moved. Tearing in whole arm, shooting, tearing pain in upper arm and elbow. Nocturnal tearing and drawing in arms. Spasmodic tearing pain on outer side of forearm from elbow to wrist. Cramp in whole of one or other arm. Cramp

in hands at night until she rises in morning. Cramp-like contraction of fingers. Pain and weakness of hands; trembling of hands in morning. Weakness and a kind of lameness of arm. Fingers feel furry." Both remedies were given, and great improvement occurred under *Silic*., but as the pain was not gone the patient took *Calc*. (which was only to be taken in case of need) on the fifth day. On the sixth day the pain was gone "as if blown away," as the patient expressed it—and no wonder! It would be difficult to find a closer simillimum. The general condition of the patient underwent a complete change for the better at the same time. Both remedies were given in globules of 6th. Dr. Van den Neucker (*H. Recorder*, 1886, p. 139) once cured a baker of paralysis of both arms with Calc.; and also a case of paralysis with many symptoms of locomotor ataxy in a lymphatic blonde girl of nineteen.

According to Guernsey *Calc*. is in general a right-side remedy. It affects specially right external head; right eye; right face; right abdominal ring; sexual organs right side; right back; right upper extremities. *Left* side neck and nape of neck; left chest; left *lower* extremities. Complaints prevailing in inner parts. Among the *sensations* of *Calc*. are: Pain as if the parts would burst, were pressed asunder, were pushed asunder; as if cold, damp stockings were on the feet. Creeping on the limbs like a mouse. Pain as if sprained in outer parts. Sensation of dust in inner parts as the eye, bronchial tubes. Pricking, darting, jerking, trembling; itching > by scratching. It is often indicated in epilepsy, disposition to strain a part by lifting heavy things, pricking corns, polypus, cysts, occurring in leucophlegmatic constitutions. Where a cold wind strikes the body and it immediately runs to the teeth, causing them to ache. Ranula. Flatulence or gurgling in right hypochondrium. Cramp in legs at 3 a.m. Hands chap from hard water.

Alexander Villers cured with *Calc. c*. 200 in rare doses a case combining many of the features of the remedy. The patient, a lady, æt. 20, very despondent through long-continued depressing circumstances, became very nervous. She was companion to an exceedingly deaf lady, whose voice was high-pitched. This, with the strain on her voice to make herself heard, caused headache through temples > by rapid motion of head. Outdoor exercise was accompanied by hard pressure on chest, which only eructations seemed to relieve. Bowels constipated. Menses every fortnight, with backache and great prostration. Under the remedy, repeated at rare intervals, the menses came on monthly, headache and pressure on chest disappeared.

Among the Conditions of *Calc*., dread of the open air ranks most prominently; the least cold air goes right through. Great sensitiveness to cold, damp air. Also cannot bear sun. The slightest change <. Dread of bathing and water. There is inclination to stretch and put the shoulders back; but straightening < rheumatism. *Calc*. is hydrogenoid and sycotic—sensitive to cold and damp and early morning aggravation. Warts and polypi also point to the same constitutional state. The *Calc*. patient generally feels better when constipated. The diarrhœa of *Calc*. is

generally < in afternoon. There is painless hoarseness < in morning. "The *Calc*. pains are most generally felt while lying in bed, or while sitting; they are felt in the parts upon which the body has been lying for a time" (Teste). There is < after midnight and in early morning; on awaking. Chill at 2 p.m. In the evening, 6 to 7, there is fever without chill, < from working in water or bathing, < at full moon; at new moon and at solstice. < After eating (smoked meats, milk); when fasting. < By mental exertion (writing). < From pressure of clothes. < From lifting; from stooping. < Walking in open air, cold air, wet weather, to which he is very sensitive. < From letting limbs hang down. In spite of the sensitiveness to cold, cannot bear sun. < From light in general; from looking fixedly at any object; from looking upward; from turning the head. Some symptoms are > inspiring fresh air; and during heat, uncovers. > After breakfast; on rising from drawing up limbs; from loosening garments. > In the dark when lying on the back; after lying down; from rubbing, from scratching; in dry weather; wiping or soothing with the hands; from being touched. Great weakness on ascending, on walking, talking (chests feels weak), or excitement.

Relations.—*Antidoted by:* Camph., Ip., Nit. ac., Nit. sp. dulc., Nux, Sul. *Antidote to:* Bism., Chi., Chi. sul., Dig., Mez. (headache), Nit. ac., Phos. *Follows well:* Cham., Chi., Con., Cup., Nit. ac., Nux, Pul., Sul. (especially if the pupils dilate). *Followed well by:* Lyc., Nux, Pho., Plat., Sil. Hahnemann says that Calc. must not be given *before* Nit. ac., or
Sul. *Complementary:* Bell. *Incompatible:* Bry. *Compare:* Alum. and Am. mur, (tightness of chest); Arn. (strains, &c.); Arsen. (swollen mesenteric glands). Calcarea ovi testæ, Calc. ars., Calc. ph., and other Calcareas. In ardor. urinæ (Sep., burning and cutting; Canth., cutting); losses of fluids (Chi., Sul.); left tonsil (Bar. c., Sul., Lach.); nausea when fasting (Pul., Lyc., Sil.); leucorrhœa, acrid or bland (Graph., Sul., Alum.); glandular enlargement; alcohol, effects of (Ars., Chi., Nux, Lach.); acid stomach (Chi., Lyc., Sul., Pul., Rob.); menses too copious and too early (Bell.); one side of tongue (Lauro., Sil., Thu.); waking at 3 a.m. (Bellis, Nux, Kali c., Ars., Sep.); swelling and painfulness of breasts before menses (Con.—Con. is an anti-fat, like Calc., precedes and follows it well; suits well Calc. subjects who have scanty menses, Bell. corresponds otherwise); dread of losing senses (Lyc., Nux, Sul.); levitation, as if raised from the ground (Sil., Can. i., Sticta, Gelsem., Asar., Thu.; Phos. ac. has feeling as if legs were raised above the level of head); prosopalgia > by warm fomentations (Pul.); sinking immediately after meals (Ars., Cin., Lyc., Staph., Ur. n.); cough when eating or in open air Rx. c. (*after* eating, Nux, Ip.; < change of temperature, Lach.; < current of cold air, Sil., Nat. c.); ravenous hunger (Ars., Calc., Cin., Iod., Sil., Stp.); hot breath (Sul., Rhus); aversion to darkness (Am. m., Carb. a., Stro., Val., Stram.); > uncovering (Aco., Camph., Fer., Iod., Lyc., Pul., Sec., Sul., Ver.); vertigo on turning head or looking up (Pul., looking up; Sul., looking down); vomits milk (Æth., Ant. c.); tightness of chest (Alum., Am. m.); child chews and swallows in sleep (Amyl., Bry., Ign.); convulsions, scarlatina, headache (Bell.); weak from talking (Cocc., Stan., Sul., Ver.); epilepsy (Cupr.); nævus (Fluor. ac.); diarrhœa, cholera infantum (Ip.);

constipation, intertrigo, gout, ophthalmia, gonitis, epilepsy, typhus (Lyc.); intertrigo, &c. (Cham.); canker sores, quinsey, heart, stool, sweat, especially on chest with old people (Merc.—compare the *Hydrarg. cum creta* of the old school); burning on vertex (Phos., Sul.); rheumatism from damp, ophthalmia, inflamed glands from strains (Rhus—Rhus is a very close analogue of Calc.; Bell., Dulc., Nux, Puls., and Rhus may be regarded as the acute satellites of Calc.); desire to be mesmerised (Phos., Sil.), nævus, mesenteric glands (Sil.); epilepsy, aura of mouse running up arm (Sul.—Sul. should be given first, and if it does not cure, then Calc.); polypus (Teuc.); scarlatina (Zn).; sunstroke and sunheadaches (Aco., Glo., Lach., Lyc., Sul., Nat. c., Nat. m.—headache > by heat of sun, Stro.). Teste puts Calc. in the Pulsatilla group of remedies. He says there is a "sort of negative relation between the symptoms of Merc. sol., or rather between those of Nit. ac. and the symptoms of Calc. This contrast has struck me several times, and it is the most remarkable for this reason, that Nit. ac. is one of the best antidotes to Calc."

Causation.—Alcohol. Cold, moist winds. Excessive venery. Self-abuse. Injury to lower spine. Over-lifting. Strains. Mental strain. Losses of fluids. Suppressed sweat. Suppressed eruption. Suppressed menses. Fright.

SYMPTOMS.

1. Mind.—Melancholy, dejection, and sadness.—Disposition to weep, even about trifles.—Vexation and lamentation, on account of old offences.—Anxiety and anguish, excited by fancies, or frightful stories, also with shuddering and dread during the twilight, or at night.—Excessive anguish, with palpitations of the heart, ebullition of the blood, and shocks in the epigastrium.—Anxious agitation, forbidding rest.—Disposition to take alarm.—Sadness, with heaviness in the limbs.—Apprehensions.—Easily frightened or offended.—Children are self-willed.—Despair in consequence of the impaired condition of the health; or hypochondriacal humour, with fear of being ill or unfortunate, of experiencing sad accidents, of losing the reason, of being infected by contagious diseases.—Discouragement and fear of death.—Impatience, excessive excitability, and excessive liability to mental impressions; the least noise fatigues.—Excessive ill-humour and mischievous inclination, with obstinacy and a disposition to take everything in bad part.—Indifference, apathy, and repugnance to conversation.—Aversion to others.—Solitude is insupportable.—Disgust and aversion to all labour whatever.—Absence of will.—Great weakness of memory and of conception, with difficulty in thinking.—Dizziness of mind.—Tendency to make mistakes in speaking, and to take one word for another.—She fears she will lose her understanding, or that people will observe her confusion of mind.—Loss of sense and errors of imagination.—Delirium with visions of fires, murders, rats and mice.

2. Head.—Head compressed, as if by a vice.—Dizziness after scratching behind the ear; or else, before breakfast, with trembling.—Headache, with empty eructations, and nausea, vertigo; < from mental exertions, stooping, or walking in the open

air; > by closing the eyes, and by lying down.—Vertigo, sometimes with obscuration of the eyes, on mounting to a great height, or only a flight of stairs, on walking in the open air, on turning the head briskly, or after a fit of anger.—Vertigo at night, in the evening, or in the morning.—Headache from over-lifting, straining the back, or from having wrapped the head in a handkerchief, or in consequence of a chill.—Headache every morning on waking.—Attacks of semi-lateral headache, with risings and nausea.—Pulsations in the occiput.—Pains in the head, producing giddiness, pressive or pulsative, < esp. by reading, writing, or any other intellectual labour, as well by spirituous drinks, or by stooping.—Fulness and heaviness of the head, esp. of the forehead, with shutting of the eyes, < by movement and physical exertion.—Heat in the vertex.—Pressive pains at the vertex, appearing in the open air.—Tensive and cramp-like pains, with pressure outwards, commencing from the temples and extending to the vertex.—Drawing pains in the right side of the forehead; the part is painful when touched.—Shooting pains in the head.—Piercing in the forehead, as if the head were going to burst.—Pains of hammering in the head, which force the patient to lie down, and which appear esp. after a walk in the open air.—Icy coldness in and on the head, esp. at the r. side, with pale, puffed face.—Congestion in the head.—Congestion of blood to the head, with heat and stupefying headache; with redness of the face and bloatedness; < in the morning when awaking, and from spirituous drinks.—Buzzing and pains in the head, with heat of the cheeks and in the head.—Movement of the brain on walking.—Immense size of the head, with the fontanel open in children.—Sweat on the head (profuse, particularly where it stands out in large, bead-like drops, and in such profusion as to soak the pillow thoroughly; it may run down upon the face and neck) in the evening.—Profuse perspiration, mostly on the back part of the head and on the neck (in the evening).—Strong disposition to take cold through the head.—Scabs on the scalp.—Scaling off of the skin at the scalp (dandriff; milk crust).—Painful sensibility in the roots of the hair.—Falling off of the hair (sides of head—temples).—Tumours and boils in the scalp, which tend to suppuration.

3. Eyes.—Aching in the eyes.—Itching and shooting in the eyes.—Pressure, itching, burning and stinging in the eyes.—Smarting, burning, and incisive pains in the eyes and the eyelids, esp. on reading during the day, or by candle-light.—Sensation of cold in the eyes.—Eyes inflamed, with redness of the sclerotica and abundant secretion of mucus.—Inflammation of the eyes from foreign bodies coming into them; in infants or scrofulous subjects.—Ulcers, spots, and opacity of cornea.—Dimness of the cornea.—Flow of blood from the eyes.—Inflammation and swelling of the corners of the eyes.—Lachrymal suppurating fistula.—Lachrymation, esp. in the open air, or early in the morning.—Quivering in the eyelids.—Red and thick swelling of the eyelids, with abundant secretion of humour and nocturnal agglutination.—Closing of the eyelids in the morning.—Pupils greatly dilated.—Confusion of sight, as if there were a mist, a veil, or down, before the eyes, chiefly on reading, and on observing an object attentively.—Obscuration of the sight on reading, or after a meal.—A dark spot is

seen before the eyes, on reading, to accompany the letters.—Great photophobia and dazzling from too strong a light.—Presbyopia.

4. Ears.—Shootings in the ears.—Pulsation, beating, and heat in the ears.—Internal and external inflammation and swelling of the ear.—Purulent discharge from the ears.—Humid eruption upon and behind the ears.—Polypus in the ears.—Humming, buzzing, tingling, or rumbling, sometimes alternately with music, in the ears.—Crackling and detonation in the ears, when swallowing and when chewing.—Sensation, at intervals, of stoppage in the ears, and hardness of hearing.—Hardness of hearing, esp. after the suppression of intermittent fever by Quinine.—Inflammatory swelling of the parotids.

5. Nose.—Inflammation of the nose, with redness and swelling, chiefly at the extremity.—Ulcerated and scabby nostrils.—Epistaxis, chiefly morning and night, sometimes producing fainting.—Fetid smell from the nose.—Sense of smell dull, or exceedingly sensitive.—Painful dryness in the nose.—Obstruction of the nose by yellowish and fetid pus.—Polypus of the nose.—Dry coryza, in the morning, with frequent sneezing.—Excessive fluent coryza.—Coryza, alternately with cutting pains in the abdomen.—Fetid odour before the nose, as if from a dunghill, rotten eggs, or gunpowder.

6. Face.—Yellow colour of the face.—Face pale and hollow, with eyes sunk and surrounded by a livid circle.—Red patches on the cheeks.—Heat, redness, and puffing of the face.—Erysipelas in one cheek.—Ephelis on the cheeks.—Itching and eruption on the face, chiefly on the forehead, in the cheeks, and in the region of the whiskers, sometimes humid and scabby, with burning heat (sycosis menti).—Milk crusts.—Acute pains in the face and the bones of the face.—Swelling of the face without heat.—Pale bloatedness of the face.—Eruptions and scabs on the lips and round the mouth.—Lips cracked.—Swelling of the upper lip.—Ulcerated corners of the mouth.—Fissures in the ulcerated lips.—Attacks of torpor and paleness in the lips, which appear as if dead.—Painful swelling of the sub-maxillary glands.

7. Teeth.—Toothache, aggravated or excited by a current of air, or by cold air, or by taking anything too hot or cold, or by noise, or else during and after the catamenia; the pains are, for the most part, shooting, piercing, contractive, pulsative, or gnawing, and digging, with a sensation as of excoriation.—Toothache at night, as if from congestion of blood.—Sensation of lengthening and loosening of the teeth.—Fetid odour of the teeth.—Painful sensibility of the gums, with shootings.—Difficult dentition.—Ready bleeding and swelling of the gums, with throbbings and pulsations.—Fistulous ulcers in the gums of the lower jaw.

8. Mouth.—Accumulation of mucus in the mouth.—Constant spitting of acid saliva.—Vesicles in the mouth and on the tongue.—Cramp-like contraction of the mouth.—Dryness of the tongue and of the mouth, chiefly at night and in the morning on waking.—Swelling of the tongue, sometimes on one side.—Tongue

loaded with a white coating.—Burning and pain as of excoriation on the tongue and in the mouth.—Tongue difficult to move, with embarrassed and indistinct speech.—Ranula under the tongue.

9. Throat.—Sore throat, as if from a plug or a swelling in the gullet.—Constriction in the throat, and cramp-like contraction of the gullet.—Excoriation of the gullet, with shooting and pressure on swallowing.—Inflammatory swelling of the gullet and of the uvula, which are of a deep red colour, and covered with vesicles.—Swelling of the amygdalæ, with sensation of contraction in the throat on swallowing.—Affection in the throat after straining the back.—Hawking up of mucus.

10. Appetite.—Unpleasant taste in the mouth, mostly bitter, or sour, or metallic, esp. in the morning.—Insipidity, or sickly or sour taste of food.—Burning or constant thirst, esp. for cold drinks, and often with total absence of appetite.—Continued violent thirst for cold drinks (at night).—Hunger, a short time after having eaten.—Bulimy, generally in the morning.—Prolonged distaste for meat and hot food.—Repugnance to tobacco-smoke; desire for salt things, for wine, and for dainties.—Weakness of digestion.—After having taken milk, nausea or acid regurgitations.—After a meal, heat or inflation of the abdomen, with nausea and headache, pain in the abdomen or in the stomach, or else risings and water-brash, or dejection or drowsiness.—Risings, with taste of undigested, or bitter, or sour food.

11. Stomach.—Pyrosis after every meal, and noisy and constant eructations.—Eructations tasting like the ingesta.—Regurgitation of sour substances.—Frequent nausea, esp. in the morning, in the evening, or at night, sometimes with shuddering, obscuration of sight, and fainting.—Sour vomitings.—Sour vomiting, esp. in children, and during dentition.—Vomiting of food, or of bitter mucus, often with incisive and cramp-like pains in the abdomen.—Black or sanguineous vomiting.—Flow of saliva from the stomach, even after a meal.—The vomitings appear chiefly in the morning, at night, or after a meal.—Pressive, or pinching pain in the stomach, or cramp-like and contractive pains, chiefly after a meal, and often with vomiting of food.—Cramps in the stomach at night.—Pressure on the stomach, even when fasting, or in coughing, or with pressure on the hypochondria, or else with squeezing as if from a claw, on walking.—Pinchings, cutting pains, and nocturnal aching in the epigastrium.—Inflation and swelling of the epigastrium and of the region of the stomach, with painful sensibility of those parts to the touch (they look like a saucer turned bottom up).—Pain, as of excoriation, and burning in the stomach.

12. Abdomen.—Pains generally shooting, or tensive, or pressive, with swelling and induration of the hepatic region.—Stinging pain in the liver (during or after stooping).—Painful pulling from the hypochondria and the back, with vertigo and obscuration of sight.—Tension in the two hypochondria.—Inability to wear tight

clothes round the hypochondria.—Tension and inflation of the abdomen.—Frequent gripings and shootings in the sides of the abdomen, in children.—Colic, with cramp-like and gnawing contractive pains, esp. in the afternoon, and sometimes with vomiting of food.—Frequent attacks of griping, chiefly in the epigastrium.—Shootings or pinchings, and aching in the abdomen, even without diarrhœa.—The pains in the abdomen appear chiefly in the morning, in the evening, or at night, as well as after a meal.—Sensation of cold in the abdomen.—Pain, as of excoriation and burning, in the abdomen.—Swelling and induration of the mesenteric glands.—Enlargement and hardness of the abdomen.—Incarceration of flatulency.—Pressure of wind towards the inguinal ring, as if hernia were about to protrude, with noise and borborygmi.—Painful pressure, pullings, griping, and shootings, or heaviness or traction in the groins.—Swelling and painful sensibility of the inguinal glands.

13. Stool and Anus.—Constipation.—Evacuations suspended, hard, in small quantity, and often with undigested substances.—Ineffectual efforts to evacuate, sometimes with pain.—Difficult evacuation, and only every two days.—Relaxation of the abdomen, frequent or continual; two evacuations a day.—Evacuations like clay, in small quantity, knotty, or serous, or in the form of pap.—White evacuations, sometimes with streaks of blood and hepatic pains, on touching the region of the liver, and on breathing.—Diarrhœa of sour smell; putrid; during dentition.—Involuntary and frothy evacuations.—Diarrhœa, of a sour smell, or fetid, or yellowish, in infants.—Ejection of ascarides and of tenia.—Prolapsus of the rectum during evacuation.—Before the evacuation, great irascibility.—After the evacuation, dejection, and relaxation of the limbs.—Flow of blood from the anus during the evacuation, also at other times.—Swelling, and frequent protrusion of hæmorrhoidal excrescences, esp. during the evacuations, with burning pain.—Cramps, tenesmus, and contraction of the rectum.—Burning in the rectum and in the anus, with itching and tingling.—Burning eruption, in the form of a cluster, in the anus.—Excoriation at the anus, and between the buttocks and the thighs.—Affections of the rectum, as fissures, which are very painful, bleeding after every stool, followed by extreme exhaustion.

14. Urinary Organs.—Tenesmus of the bladder.—Too frequent emission of urine, even in the night.—Wetting the bed.—Deep-coloured urine, without sediment.—Urine red like blood, or a brownish red, of an acrid, pungent, and fetid smell, with white and mealy sediment.—Passing of blood.—Flow of blood from the urethra.—Abundant discharge of mucus with the urine.—Polypus of the bladder.—Burning in the urethra, when making water, and at other times.

15. Male Sexual Organs.—Inflammation of the prepuce, with redness and burning pain.—Pressure, and pain as from a bruise, in the testes.—Weakness of the genital functions, and absence of sexual desire.—Increase of sexual desire, with voluptuous and lascivious ideas.—Absence of pollutions, or great frequency of them.—Erections of too short continuance, and emission of semen too slow and too

feeble during coition.—Lancinations and burning in the genital parts, during the emission of semen in coition.—After coition, confusion of the head and weakness.—Flow of prostatic fluid, after evacuation and emission of urine.

16. Female Sexual Organs.—Catamenia premature and too copious.—Sterility, with catamenia too early, and too profuse.—Before the catamenia, mammæ swollen and painful, fatigue, headache, disposition to be frightened, colic, and shivering.—During the catamenia, congestion in the head, with internal heat, or cuttings in the abdomen, and cramp-like pain in the lumbar region, or else vertigo, headache, toothache, nausea, colic, and other sufferings.—Suppressed menstruation, with full habit.—Miscarriage.—Voluptuous sensation in the genital parts, with emission.—Flow of blood at a time different from the catamenia.—Metrorrhagia.—Itching or pressing in the vagina.—Shootings in the orifice of the matrix, and pressive pain in the vagina.—Prolapsus uteri, with pressure on the parts.—Itching in the womb.—Inflammation and swelling of the womb, with redness, purulent discharge, and burning pain.—Varices in the labia majora.—Leucorrhœa before the catamenia.—Leucorrhœa, with burning itching, or else like milk, flowing by fits, and during the emission of urine.—Pain, as of excoriation and ulceration, in the nipples.—Inflammatory swelling of the mammæ and of the nipples.—Swelling of the glands of the breast.—Breasts painful and tender before menses.—Milk too abundant, or suppressed.

17. Respiratory Organs.—Ulceration of the larynx.—Ulceration of the lungs.—Frequent or long-continued hoarseness.—Hoarseness (painless).—Sensation, as if something were torn loose in the trachea.—Abundant accumulation of mucus in the larynx and in the bronchia.—Cough, without expectoration, excited by a tickling in the throat, and often accompanied by vomiting.—Tickling cough, caused by a sensation of dust in the larynx.—Short cough in the day, as if from a feather in the throat.—Cough excited by playing on the piano, or by eating.—Cough in the evening, in bed, or at night, when asleep, or in the morning, and generally violent and dry (with expectoration during the day, but not at night), sometimes even spasmodic.—Cough, with expectoration of thick mucus; gray; bloody; purulent; tasting sour; or yellowish and fetid, generally at night, or in the morning.—Expectoration of purulent matter, on coughing.—Cough, with expectoration of blood, pain of excoriation in the chest, vertigo, and unsteady walk.—On coughing, pressure in the stomach, shootings or shocks in the head, and pains in the chest.

18. Chest.—Obstructed breathing on stooping, walking against the wind, or on lying down.—Urgent inclination to inspire deeply.—Sensation, as if respiration were obstructed between the shoulder-blades.—Oppression at the chest, as if from congestion of blood, with tension, mitigated by bringing shoulder-blades together.—Wheezing respiration.—Shortness of breath, chiefly on ascending.—Anxious oppression of the chest, as if it were too narrow, and could not be sufficiently dilated.—Great difficulty of respiration.—Sensation of fatigue in

the chest after speaking.—Anxious feeling in the chest.—Pressure on the chest.—Shootings in the chest and the sides, esp. during movement, on breathing deeply, and when lying on the side affected.—Shocks in the chest.—Sensibility, and pain, as from excoriation, in the chest. esp. during inspiration and on being touched.—Burning in the chest.

19. Heart.—Palpitation of the heart, also at night, or after a meal, sometimes with anxiety and trembling movements of the heart.—Shootings, pressure, and contraction in the region of the heart.—Pricking shootings in the muscles of the chest.

20. Neck and Back.—Rigidity of the neck.—Hard and strumous swelling of the thyroid gland.—Hard and painful swelling of the glands of the neck.—Tumour between the shoulder-blades.—Suppuration of the axillary glands.—Pains, as of dislocation, in the loins, back, and in the neck, as if caused by a strain in lifting a weight.—Pain in the small of the back (as if sprained); he can scarcely rise from his seat, after being seated.—Shooting pains in the shoulder-blades, loins, and back.—Nocturnal pains in the back.—Pains in the lumbar region, when riding in a carriage.—Drawing between the shoulder-blades, or pressive pain, with sensation of suffocation.—Pressive pain between the shoulder-blades, impeding breathing, when moving.—Swelling, and distortion of the spine.

21. Limbs.—As if the parts would burst; were pressed, or pushed, asunder; as if cold, damp stockings were on the feet; sensation of crepitation; cramp pain in the muscles; creeping on the limbs like a mouse.

22. Upper Limbs.—Drawing pains in the arms, even at night.—Cramp, and cramp-like pains, in the arms, hands, and fingers.—Sudden attacks of paralytic weakness in the arms (l.).—Acute, cramp-like pains in the forearm.—Furunculi on the forearm.—Pains, as of dislocation, in the wrist-joint (r.).—Swelling of the hands.—Arthritic nodosities, swelling of the wrist, and of the joints of the fingers.—Swelling of the veins of the hands.—Sweating of the hands.—Perspiration of the palms of the hands.—Trembling of the hands.—Hands and fingers dead, even in a warm temperature, and esp. on taking hold of an object.—Warts on the arms and on the hands.—Furunculi on the hands and the fingers.—Tingling in the fingers, as when they are asleep.—Frequent paralytic weakness in the fingers.—Heavy movement of the fingers.—Contraction of the fingers.—Panaris.

23. Lower Limbs.—Drawing lancinations, or incisive, acute pains in the hips and in the thighs, chiefly when resting upon them.—Limping, which occurs when resting on the toes in walking.—Weight and stiffness of the legs.—Cramps in the legs.—Pain, as of dislocation, in the joints of the hips, knees, and the feet.—The legs go to sleep when one is seated.—Itching in the thighs and the feet.—Varices in the legs.—Tearing and stinging in the knee.—Drawings, shootings, and acute pains in the knees, esp. when standing or sitting, also when walking.—The child is late

learning to walk.—Swelling of the knees.—Tension in the ham, when in a squatting position.—Cramps in the hams, the calves of the legs, the soles of the feet, and the toes, chiefly on extending the legs, pulling on boots, or during the night.—Red spots on the legs.—Phlegmasia alba dolens.—Erysipelatous inflammation and swelling of the legs.—Ulcers on the legs.—Swelling of the malleoli and of the soles of the feet.—Inflammatory swelling of the instep.—Furunculi on the feet and legs.—Burning in the soles of the feet.—Sweating of the feet.—In the evening, coldness and numbness of the feet; esp. at night, in bed.—Painful sensibility of the great, toe.—Corns on the feet, with burning pain, as of excoriation.—Contraction of the toes.

24. Generalities.—Cramps and contractions of the limbs (which draw the limbs crooked), esp. of the fingers and toes.—Wrenching pains.—Pulsative pains.—Shootings and drawing pains in the limbs, chiefly at night, or in summer, and on change of weather.—Stinging and cutting in outer and inner parts.—Arthritic tearing in the muscles.—Arthritic nodosities.—Attacks of torpor and paleness of some parts of the body, which appear as if dead.—Great tendency to strain the back in lifting, often followed by pains in the throat, or stiffness and swelling of the nape of the neck, with headache.—Tendency of the limbs to numbness.—Bleeding from inner parts.—Sensation of dryness of inner parts.—Ebullition of the blood, mostly in plethoric individuals, and often with congestion in the head and chest.—Startings in different limbs.—Epileptic convulsions, also at night with cries; during the full moon; with hallooing and shouting.—The symptoms are aggravated or renewed after labouring in the water, as well as in the evening, at night, in the morning, after a meal, and every second day.—The sufferings are periodical and intermittent.—Great uneasiness, which forces the patient to move constantly and to walk much.—Visible quivering of the skin, from the feet to the head, with which he becomes dizzy.—Trembling of the inner parts.—Frequent trembling of the whole body, increased in the open air.—St. Vitus' dance.—Pain, as from a bruise, in the arms and in the legs, and also in the loins, esp. on moving, and on going upstairs.—General uneasiness in the evening, as preceding an attack of intermittent fever.—Want of strength, and dejection, chiefly in the morning early.—Fatigue and nervous weakness, often with paleness of the face, palpitation of the heart, vertigo, shivering, pain in the loins.—Fainting, esp. in the evening, with obscuration of the eyes, sweat on the face, and cold in the body.—Great fatigue after speaking, or after a moderate walk in the open air, as well as after the least exertion, with ready and abundant perspiration.—Strong desire to be magnetised.—Excessive dejection, sometimes with violent fits of spasmodic laughter.—Tendency in children and young persons to grow very fat.—Bloatedness of the body and of the face, with enlargement of the abdomen, in children.—Emaciation (with swelled abdomen), without failure of appetite.—Great plumpness and excessive obesity.—Sensation of coldness in inner parts.—Great tendency to take cold, and great sensibility to cold and damp air.—On walking in the open air, sadness with tears, headache, inflation of the abdomen, palpitation of the heart, sweat, great fatigue, and many other sufferings.

25. Skin.—Flaccidity of the skin.—Visible quivering of the skin from head to foot, followed by giddiness.—Burning, smarting, itching.—Ephelis.—Nettlerash, mostly disappearing in the fresh air.—Eruption of lenticular red and raised spots, with great heat, much thirst, and want of appetite.—Skin hot and dry during motion.—Skin of the body rough, dry, and as if covered with a kind of miliary eruption.—Furfuraceous coating of the skin; burning; chapped.—Humid, scabby eruptions and tetters, or in form of clusters, with burning pains.—Itching pemphigus over the whole body.—Skin excoriated in several places.—Skin unhealthy; every injury tends to ulceration; even small wounds suppurate and do not heal.—Ulcers deep; fistulous; carious.—Ulcers with too little pus.—Erysipelatous inflammations.—Furunculi.—Warts.—Corns, with pain as of excoriation, and burning.—Polypus (nose, ear, uterus).—Encysted tumours, which are renewed and suppurate every month.—Bloatedness.—Swelling and induration of the glands, with or without pain. Varices.—Arthritic nodosities.—Swelling; softening; curvature of; stinging in; caries and distortion of the bones.—Ulceration of the bones.—Panaris.—Flaws in the fingers.

26. Sleep.—Drowsiness in the day and early in the evening.—Retarded sleep and sleeplessness from activity of mind, or in consequence of voluptuous or frightful images, which appear as soon as the eyes are shut.—During sleep, talking, groans, cries, and starts, anxiety which continues after waking, or movements of the mouth, as if one were chewing or swallowing.—Snoring during sleep.—Dreams frequent, vivid, anxious, fantastic, confused, frightful, and horrible; or dreams of sick and dead persons.—Sleep disturbed, with tossing about and frequent waking.—Sleep of too short duration, from eleven in the evening till two or three in the morning only.—Waking too early, sometimes even at midnight.—At night, agitation, asthmatic suffering, anxiety, heat, pains in the stomach and in the precordial region, thirst, beatings of the head, toothache, vertigo, headache, ebullition of the blood, fear of losing the reason, pains in the limbs, and many other sufferings.—On waking, lassitude, exhaustion, and desire to sleep, as if the patient had not slept at all.—Fearful of fantastic dreams during sleep.

27. Fever.—Pulse full, accelerated or tremulous.—Excessive cold, internally.—Shivering and shuddering, principally in the evening, or in the morning after rising.—Heat with thirst, followed by chilliness.—Frequent attacks of transient heat, with anguish and beating of the heart.—Heat in the evening, or in bed at night.—Quotidian fever towards two o'clock in the afternoon, with yawning and cough, followed by general heat, with desire to lie down, at least for three hours, after which the hands become cold; all with absence of thirst.—Tertian fever in the evening, at first heat of face, followed by shivering.—Profuse sweat by day, after moderate corporeal exercise.—Sweat with anxiety.—Nocturnal sweat, chiefly on the chest.—Sweat in the morning.

Calcarea Caustica.

Aqua Calcis. $Ca H_2 O_2$. Quicklime is slaked in distilled water. Afterwards alcohol is added and the clear liquid decanted.

Clinical.—Back, pains in. Coccygodynia. Corns. Feet (pains in heels). Hoarseness. Jaw, affection of. Malar bones, pain in. Neuralgia. Paralysis. Rheumatism. Spleen, affections of. Stiff-neck. Tapeworm. Toothache.

Characteristics.—*Calc. Caust*. has been extensively proved. The most marked symptoms are: Thought very difficult. Confusion in the head. Vertigo; as if room turning in a circle. Sticking, tearing, throbbing pains in various parts. Pain in right eye as if a foreign body were in it. Burning and tearing in eyes. Tearing in right cheekbone; and in right articulation of jaw. Toothache every night, 2 a.m., with feeling as if teeth were *fuzzy* and too large (a fuzzy sensation was noticed in other parts). Mucus in throat; burning; sensation as if a bone were sticking in it. Burning in stomach. Tapeworm passes. Hoarseness, with pain in throat; rawness in trachea and cough. Stitches in chest. Stiffness and tearing in all regions of back and in coccyx. Tearing in either shoulder down arms. Tearing in left tendo Achillis; left heel. Sticking in corns. As an external application in the form of compresses, Lime-water has an ancient repute in allaying inflammation of many kinds. It has rapidly dispelled all inflammatory action in cases of appendicitis; and has removed all suffering in an aggravated case of phagedænic piles. As with *Calc. c*., there is < of most symptoms in the evening. Toothache 2 a.m. > From motion. < From hanging down limb. The *Calc*. < from working in water is paralleled by "pains in hands and feet after a foot-bath."

Relations.—*Compare:* Besides the Calcareas, Rhus (pain in joint of jaw); Mez. and Mag. c. (pain in malar bones); Valer. (pain in heel); Pic. ac. and Sep. (loins); Hep. and Nit. ac. (bone sensation in throat).

SYMPTOMS.

1. Mind.—Thought very difficult.—Weary and peevish on waking; as if he had been intoxicated.

2. Head.—Confusion of the head; esp. l. side.—Vertigo, as if room turning in a circle; thinks she will fall from chair.—Throbbing in frontal sinus > by contracting skin of forehead.

3. Eyes.—Burning in eyes, evening by candlelight.—Pain in r. eye as if foreign body under upper lid; in l. eye on rising in morning as if a thorn in it.

6. Face.—Tearing in r. cheek-bone.—Violent pain, swelling, stiffness of r. joint of Jaw.—Lips unusually red.

7. Teeth.—Severe toothache every night, 2 a.m., as if tooth was fuzzy and too large, with tensive pain in l. ear as if something was sticking in it.—Teeth feel too large; fuzzy.

8. Mouth.—Mouth offensive; palate feels as if mucus were upon it, but none is expectorated.

9. Throat.—Mucus in throat, difficult to raise, almost causing vomiting.—Hawking of granular, glutinous material like cooked rice.—Burning in fauces and œsophagus caused by water.—Sensation as of a bone sticking in pharynx.

11. Stomach.—Severe hunger three hours after eating.—Nausea followed by vomiting of some fluid.

12. Abdomen.—Sticking in both hypochondria, esp. severe in l.—Pain in l. side of region of spleen as if a ball were turning on its axis.—Constrictive pain in abdomen; griping; stitches.—Violent stitches in small intestines when bending forward.

13. Stool and Anus.—Three thin stools before breakfast and one immediately after.—Painful stool as if a nail were scratching in anus.—Thin, pasty stool with much mucus immediately after breakfast.—Passed many pieces of tapeworm.—Hæmorrhoids.—Sticking, tearing motions in rectum extending towards anus.—Crawling in rectum and anus.

16. Female Sexual Organs.—Menses eight days too early.

17. Respiratory Organs.—Stitches in larynx; l. half.—Hoarseness, with pain in throat; feeling of rawness in trachea; cough.—Cough with stitches in chest, expectoration of mucus and blood.—Sternum: oppression; pressive sticking under; stitches across.—Stitches in l. chest.

20. Neck and Back.—Stiffness of neck; of back of neck; of all neck muscles.—Tearing in nape.—Violent pains in scapulæ extending into small of back, when sitting; < on inspiration.—Tearing between shoulders.—Tearing in both scapulæ, between shoulders, then through neck and occiput as far as forehead.—Sensation in both shoulder-blades as if they were fuzzy and had gone to sleep (8 p.m.).—Pain in small of back; on waking > by moving about.—Pressive, drawing pains; sticking; tearing, in small of back.—Tearing in coccyx.

21. Limbs.—Trembling in limbs; could not continue work; > by eating a piece of bread.—Rheumatic pain alternating in all the joints.—Wandering pains.—Pains in hands and feet after a foot-bath.

22. Upper Limbs.—Tearing in shoulders, arms and axillæ.—Paralysed condition of r. hand.—Stitches and tearing in l. wrist.

23. Lower Limbs.—Severe tension in lower extremities.—Stitches in hip-joints.—Tearing in knees; in r. side of r. tibia down to toes; in l. tendo Achillis; in l. heel.—Sticking in a corn.

25. Skin.—Rash-like eruption on forehead.—Biting, itching vesicles; on neck and back extending later to occiput and behind ears.

26. Sleep.—Restless; many dreams; nightmare.

27. Fever.—Violent chill with chattering teeth 7 to 7.30 p.m.

Calcarea Chlorinata.

Chlorinated Lime. $CaOCl_2$. Hypochlorite of lime with Chloride of Calcium and a varying amount of Hydrate of Lime.

Clinical.—Boils. *Carbuncles*.

Characteristics.—This preparation has only been used as a local application, for boils and carbuncles chiefly, in the form of the *Liquor Calcis Chloratæ* of the British Pharmacopœia.

Calcarea Fluorata.

Calcium Fluoride. Fluor spar. $Ca F_2$. Trituration.

Clinical.—Adenoids. Aneurism. Bone affections. Breast, indurations of. Cataract. Catarrh. Cold sores. Corneal opacities. Cough. *Exostosis*. Flatulence. Glands, indurated. Hæmoptysis. Herpes. *Hodgkin's disease*. Joints, cracking of. Liver, affections of. *Lumbago*. Nodes. Ozæna. Parturition. Postnasal catarrh. Spavin (horses). Strains. Syphilis.

Characteristics.—*Calc. fluor*. is Schüssler's "bone salt." It is found in the surface of bones, the enamel of teeth, in elastic fibres and in the cells of the epidermis. It has been principally used for dispersing bony growths; ulcerations of bone; and for fistula. A giant-celled sarcoma of upper maxilla causing the deformity known as "frog-face" was very greatly relieved by *Calc. fluor*. in a short space of time, after *Silica* had failed to make much impression. W. P. Wesselhœft cured two

cases of syphilitic periosteal swelling, one on right radius, one on left ulna, one sensitive, one not, one patient male dark, the other blonde female. Each case received a dose of *Calc. fl.* c.m. G. P. Hale, with the 3x, has removed induration after typhlitis, also encysted tumour of eyelids. He regards induration threatening suppuration as a marked indication. Induration in epigastric region after a kick from a horse was cured. Also indurated glands (of neck; of breast, &c.) of stony hardness. The mental condition is one of depression; anxiety; indecision. Cephalhæmatoma. Spots on cornea. Senile cataract has been cured by it. Ozæna. Herpes (hard, small) on lips. Deficient enamel of teeth. Prickly, burning, suffocating sensation in throat. Bleeding piles. One prover, Dr. Sarah N. Smith, had among other symptoms this peculiar and constant one in the head: A sort of creaking, straining, and drawing, like the noise of a corn-stalk fiddle, greatly interfering with sleep. Dr. Sarah Hogan gave *Calc. fluor.* with complete success in a case of flatulency in a pregnant woman. The patient passed through the labour quite easily, whereas the previous labour had been very difficult. In many other cases Dr. Hogan found the remedy facilitate labour. She found flatulency a marked indication for the remedy independently of pregnancy. In hæmoptysis it has been used with success, its effect being apparently to cause contraction of the blood-vessels. Lumbago from strains; < after rest, > after moving a little and from warmth. Vivid dreams of death. Warmth >; warm drinks >, cold drinks < throat pain. < From damp weather, but > from fomentations. > By rubbing.

Relations.—*Compare:* Calc. ph. (ozæna; suppuration of bones); Nat. m. (cold sores); Sil. (swellings on skulls of infants; suppuration of bones; spavin); Phos. ac. (spavin). It cured lumbago < by rest, > by motion, after failure of Rhus.

SYMPTOMS.

1. Mind.—Indecision.—Anxiety about money matters; fear of want.

2. Head.—Exostosis.—Cephalhæmatoma.—A sort of creaking, straining, and drawing, like the noise of a corn-stalk fiddle, greatly interfering with sleep.

3. Eyes.—Flickering and sparks before eyes.—Spots on cornea.—Cataract.—Eye balls ache; > closing eyes and pressing tightly.

4. Ears.—Calcareous deposits on tympanic membrane.

5. Nose.—Copious, offensive, thick, greenish-yellow nasal catarrh; with bony growths.—Post-nasal catarrh.

6. Face.—Hard swelling on jaw; under jaw.—Cold sores, rather small, hard, on lips.

7, 8. Teeth and Mouth.—Deficient enamel of teeth.—Great dryness of mouth and throat, and dryness and harshness of skin.

9. Throat.—Prickling, burning, suffocative sensation in throat; < at night and from cold drinks; > from warm drinks.—Increased mucus in posterior nares.

11. Stomach.—Vomits undigested food.—Hiccough.

12. Abdomen.—Flatulence.—Paroxysm of lancinating pains in r. hypochondrium under 11th rib, awaking him about midnight; < lying on painful side, which causes a feeling of bursting outward; > lying on painless side, and by doubling up; with restlessness. At 8 a.m. frequent attacks of lancinating pain in hepatic region; < when sitting; > after lying down at night.—Dull weight and discomfort in r. hypochondrium.

13. Stool and Anus.—Slight diarrhœa with painful urging before stool.—Constipation with dizziness and dull headache.—Itching in anus awakening him at night.—Bleeding piles.—Fissure; fistula.

14. Urinary Organs.—Urine causes smarting along urethra, particularly at external orifice.—Urine diminished, high-coloured, offensive.

15. Male Sexual Organs.—Induration of testes.—Hydrocele.—Hunterian chancre.

16. Female Sexual Organs.—Excessive menses.—Prolapsus uteri.—Bearing-down; dragging pains in uterus and thighs.—Hard knots in breasts.—Flatulence in pregnant women.—Favours parturition.—After-pains from feeble contractions.

17. Respiratory Organs.—Hoarseness after laughing or reading aloud.—Soon after itching at anus, itching tickling in larynx, forcing a spasmodic cough, which was relieved after a few hours by hawking, a little mucus from larynx.—Hacking cough, from tickling in larynx as of a foreign body; not > by coughing.—Difficulty of breathing, as if epiglottis was nearly closed.

20. Neck and Back.—Goître.—Indurated cervical glands of stony hardness.—Lumbago from strains; severe backache after a long ride; < after rest, > after moving a little and from warmth.—Tired aching, as from a long ride; with restlessness.

21. Limbs.—Cracking in joints.—Synovial swellings.—Easy dislocations.—Exostoses.—(Spavili).

25. Skin.—Skin harsh and dry.—Chaps; fissures.—Fistulæ.

26. Sleep.—Vivid and distinct dreams, with weeping.—Jumped from bed in a dream and tried to get out of a window, which woke him.

Calcarea Hypophosphorosa.

Hypophosphite of Lime. Ca $_2PH_2O_2$. Trituration and solution.

Clinical.—Angina pectoris. Arteries, affections of. Asthma. Congestion. Headache. Paralysis. Sweating.

Characteristics.—This salt has been proved by A. R. Barrett and a friend, who each took one grain of 2x trit. The following are the chief symptoms it caused: Dull, heavy pressure from whole top of head between frontal and occipital bones; pain generally increased with increasing depression. Great fulness and oppression round heart, fulness throughout thorax and head; veins of upper parts and upper extremities stand out like whipcords. Dyspnœa; must have air. Profuse sweat all over. Complete loss of muscular power with loss of desire to move. Pallor of skin. With the first trituration Nash cured a boy of eight who had several abscesses in and around the knee-joint. The tibia was ulcerated, and the ragged edge of the bone protruded through the surface. There was emaciation, loss of appetite, and he was as pale as a corpse. The appetite returned at once in great force.

Relations.—*Compare:* Calc. phos., Glon., Baryt. c.; K. ca. (excessive sweating, weakness, pallor); Cact. (heart and arteries).

SYMPTOMS.

1. Mind.—Mental depression.—Indisposition to move.

2. Head.—Dull, heavy pain, pressive, across top of head, including whole of parietal bones, increasing gradually, mental depression increasing in proportion; general sense of fulness, with oppression round heart, followed.—As symptoms subsided, pain (dull, pressive) left vertex, passed to forehead, pain extending from r. to l. temple throughout whole frontal bone.

19. Heart.—Following headache, great fulness and oppression round heart; fulness throughout whole thorax and head, veins of hands, arms, neck, and head standing out like whipcords; no flushing or perceptible increase in pulse; dyspnœa, must have windows open; profuse sweat; complete loss of power.

24. Generalities.—Limbs perfectly powerless; unable to rise from chair or move either arms or legs in the least; generally unable to speak except in a low monotone.—Total loss of all desire to move or make any muscular exertion, with inability to do so.

27. Fever.—Profuse sweat all over.—When the symptoms had passed off, lips were dry and cracked, as from fever; considerable thirst.

Calcarea Iodata.

Iodide of Lime. Ca I_2.

Clinical.—*Cancer. Consumption. Flatulence. Glandular swellings*. Headache. *Mollities ossium*. Tumours of the breast.

Characteristics.—*Calc. iod*. has had a short proving, but it has been used mostly on indications suggested by its two components in the diseases named above. It is similar to *Baryt. iod*. in its action on enlarged glands, and is especially indicated for enlarged tonsils honey-combed with little crypts. Riding against a cold wind = headache. C. L. Nicholls has cured a number of cases of breast tumour with the 3x; nodular tumours, movable, tender to touch, painful on moving arm.

Relations.—*Compare:* Calc., Baryt., Calc. ph., Carb. v.

SYMPTOMS.

1. Mind.—Indifference.—Indolence.

2. Head.—Light-headed.—Giddy headache.—"Sensation as if the head wasn't, yet was.".—Headache whilst riding against a cold wind.—Constant, severe, dull headache, forehead and temples; < stooping.—Sharp, piercing pain in r. temple.

8. Mouth.—Dry, furred feeling on lips and tongue.—Bitter taste > by tobacco.—Astringent taste.

11. Stomach.—Eructations; hiccough; nausea.

12. Abdomen.—Rumbling in bowels.—Constant evacuation of large quantities of wind downwards.

25. Skin.—Itching in various parts, disappearing and reappearing in other parts, only > after much scratching.

Calcarea Lactica.

Lactate of Lime. $CA_6H_{10}O_6$, $5H_2O$. Trituration.

Clinical.—Chilblains. Headache. Migraine. Rhinitis. Sprue.

Characteristics.—With the introduction of colloidal preparations of the metals preparations of Calcium and its salts have come into much more general use in old-

school practice of late, and valuable experiences have resulted which may be utilised by homśopaths, since they are all in agreement with the uses of the *Calcareas* of the Materia Medica. Remedies for sprue are not very numerous, and as *Calc. lact*. has been credited with cures of this troublesome complaint it should be kept in mind. It has been prescribed in the crude, but homśopaths may begin with eight-grain doses of the 3x trit. three or four times a day. Migraine is another sphere of its action. A Danish writer, C. I. Baastrup (quoted *Homśopathic World*, September 1923), described a type in which he found *Calc. lact*. "dramatically successful." It is accompanied by slight śdema affecting the eyelids, upper lip, or one hand. This is apt to run in families. The śdema is associated with no abnormal sensations. Baastrup suggests that the migraine may be due to an śdema of the meninges. He gives 1 gramme of *Calc. lact*. once or twice a day for three weeks. It not only removes the headache, "but also such troublesome symptoms as vasomotor rhinitis." That the action is homśopathic is proved by an experience recorded in *British Medical journal*, December 22, 1923, and quoted *Homśopathic World*, July 1923. The writer was subject to a dull headache with sickness. Two years previously he took ten grains thrice daily of *Calc. lact*. "as a blood tonic." One day, "while conscientiously and methodically finishing my second bottle, I experienced a severe attack of migraine, starting with visual phenomena (zigzag lines and balls of light before the left eye), and finishing up with dizziness and a diabolical headache in r. temple." He had never had eye-symptoms with headache before, and a later repetition of the drug produced a similar effect.

Relations.—*Compare:* Kali bich. and Iris in migraine and Apis in śdema.

SYMPTOMS.

2. Head.—Migraine with śdema, visual disorders and dizziness.

3. Eyes.—Zigzags and balls of light before left eye, followed by dizziness and violent headache in r. temple.

5. Nose.—Vasomotor rhinitis.

6. Face.—Śdema of eyelids, upper lip and hand.

12. Abdomen.—Sprue.

Calcarea Lactica Natronata.

Lactate of Calcium and Sodium.

Clinical.—Alkaline blood. Asthma. Chilblains. Hæmorrhage. Hay fever. Urticaria.

Characteristics.—A colloid of metallic Calcium has been prepared by the Crooke's laboratory, and its use subcutaneously has met with success in checking hæmorrhages, notably of the lungs. The double lactate of Calcium and Sodium appears to possess these properties. It apparently acts on the blood, reducing its alkalinity, relieves chilblains, urticaria, asthma, and hay fever. It is given for all these conditions in old-school practice in tablets of the crude substance. Homœopaths may use it for similar conditions in the 3x and higher. I have done this with much success with *Calc. mur*. in chilblains.

Relations.—*Compare:* In asthma and hay fever, *Cr. k. s*.; in urticaria, Apis, Urt. ur., Ast. fl.; in chilblains, Calc. mur., Agar.

Calcarea Muriatica.

Calcium Chloride. Chloride of Lime. Ca CI2.

Clinical.—*Boils*. Glandular swellings. *Impetigo*. Scrofula. Vomiting.

Characteristics.—The following symptoms have been noted: Faintness, anxiety and weakness. Trembling and giddiness. Respiration quick and snoring; increased secretion of mucus (as with other chlorides), perspiration and urine. Nausea and vomiting; precordium tender; diarrhœa; pulse accelerated. Cold sweats; convulsions; paralysis. In scrofulous cases it promotes the action of mercury. Under its use glandular swellings and indurations soften and disappear. Hence its use in scrofula and boils. "C. W." has recorded a remarkable instance of the action of this remedy (*Hom. W*., March, 1891). A scrofulous and rheumatic woman had suffered from abscess of cornea, followed by rheumatic iritis, and a dense opacity was left. An old-school practitioner had treated her with mercurials during two years in a vain endeavour to "touch her mouth." C. W. put one grain of *Calc. mur*. in an 8-oz. bottle, and directed the patient to take a tablespoonful three times a day. The medicine had not been taken ten minutes before she felt it at her fingers' ends. The mercurial action was evoked, and she was in bed a fortnight, terribly salivated. The condition of the eye was unchanged. *Calc. Mur*., in the form of the liquor (1 part to 2 of distilled water), was one of Rademacher's "Stomach Remedies," and was used with great success by him in cases of obstinate vomiting. He gave 15 drops of the liquor in half a cup of water five times a day. The indications were: Vomiting of all food and drink; vomiting when no food had been taken; jaundice;

pain in left hypochondrium. He also found it indicated in gastric pain; bloating and eructations.

Relations.—*Compare:* Calc. iod., Calc. chlor., Nat. hyperchlor.

Calcarea Muriatica.

Calcium Chloride. Chloride of Lime. Ca CI2.

Clinical.—*Boils*. Glandular swellings. *Impetigo*. Scrofula. Vomiting.

Characteristics.—The following symptoms have been noted: Faintness, anxiety and weakness. Trembling and giddiness. Respiration quick and snoring; increased secretion of mucus (as with other chlorides), perspiration and urine. Nausea and vomiting; precordium tender; diarrhœa; pulse accelerated. Cold sweats; convulsions; paralysis. In scrofulous cases it promotes the action of mercury. Under its use glandular swellings and indurations soften and disappear. Hence its use in scrofula and boils. "C. W." has recorded a remarkable instance of the action of this remedy (*Hom. W*., March, 1891). A scrofulous and rheumatic woman had suffered from abscess of cornea, followed by rheumatic iritis, and a dense opacity was left. An old-school practitioner had treated her with mercurials during two years in a vain endeavour to "touch her mouth." C. W. put one grain of *Calc. mur*. in an 8-oz. bottle, and directed the patient to take a tablespoonful three times a day. The medicine had not been taken ten minutes before she felt it at her fingers' ends. The mercurial action was evoked, and she was in bed a fortnight, terribly salivated. The condition of the eye was unchanged. *Calc. Mur*., in the form of the liquor (1 part to 2 of distilled water), was one of Rademacher's "Stomach Remedies," and was used with great success by him in cases of obstinate vomiting. He gave 15 drops of the liquor in half a cup of water five times a day. The indications were: Vomiting of all food and drink; vomiting when no food had been taken; jaundice; pain in left hypochondrium. He also found it indicated in gastric pain; bloating and eructations.

Relations.—*Compare:* Calc. iod., Calc. chlor., Nat. hyperchlor.

Calcarea Oxalica.

Calcium Oxalate. Ca C_2O_4.

Clinical.—Cancer.

Characteristics.—*Calc. ox*. has been found useful in allaying the pains of cancer.

Relations.—*Compare:* Acet. ac., Oxal. ac., Citric ac., Euphorb., Euphorb. het.

Calcarea Phosphorica.

Phosphate of Lime. Tricalcic Phosphate. Ca_3 $_2PO_4$. A mixture of the basic and other phosphates of lime, made by dropping dilute phosphoric acid into lime water. Trituration.

Clinical.—*Anæmia. Ankles, weak. Back, weakness of*. Bones, affections of. *Brain-fag*. Bright's disease. Cholera infantum. *Chorea. Consumption*. Cretinism. *Debility. Dentition*. Diabetes. Dyspepsia. *Emissions*. Enuresis. Epilepsy. *Erotomania. Face, boils on. Fistula. Fracture*. Gleet. Gonorrhœa. Headaches. Hernia. Hydrocele. Hygroma. *Joints, affections of*. Leucorrhœa. Lumbago. Nymphomania. Phosphaturia. *Rheumatism. Rickets. Self-abuse. Spermatorrhœa. Spina bifida*. Stiff-neck. Strabismus. Testicles, swollen. *Throat, sore. Tobacco habit. Tonsils, enlarged*. Uterus, prolapsus of; polypus of. Yawning.

Characteristics.—*Calc. Phos*., whilst exhibiting strong points of resemblance with *Calc. carb*., has nevertheless a very distinct individuality. It has been proved and tested clinically, and, having been adopted by Schüssler as his leading "antisporic," a number of valuable indications have been added by him and his followers. The *Calc. phos*. patient is generally emaciated instead of fat like the typical *Calc. carb*. child. The *Calc. ph*. patient is less chalky-white and more dirty-white or brownish than the *Calc. c*. patient. Both have large abdomens, but that of the *Calc. Phos*. patient is flabby. *Calc. c*, has craving for eggs; *Calc. Phos*. for salt or smoked meats. "Craving for fat bacon" in children is a well-verified characteristic of *Calc. phos*. *Calc. ph*. has cured dyspepsia, pain > for a short time by raising wind, when fasting the pain goes to the spine, feeling as if one ought to raise wind and could not. Dyspepsia with indescribable distress in region of stomach, only temporarily > by eating. The stools of *Calc. phos*. are green and slimy, or hot and watery with fetid flatus; of *Calc. carb*., sometimes green, generally watery, white, and mixed with curds. *Calc. carb*. has an open anterior fontanelle; *Calc. Phos*. has both open, especially the posterior. The skull is thin and soft, almost cracks, like paper when pressed upon.

The mental state of *Calc. ph*. is one of weakness: weak memory; inability for mental exertion. Hence it is appropriate in effects of mental strain, such as school headaches in children, weak-minded children. In this it is like *Nat. m*. A schoolboy to whom I was giving *Calc. ph*. developed these new symptoms: "Tongue thickly coated white, taste pasty; felt absolutely silly; taking coffee whilst playing a game, he put the sugar on the draught-board instead of into the cup, and didn't know he had done anything foolish." Peevish and fretful. Wants to be at home, and when at home wants to go out; goes from place to place. Complaints are < when thinking of them. The sexual organs are the centre of many symptoms. Nymphomania; all organs in erection with irresistible desire, particularly before catamenia. Voluptuous feeling, as if all the parts were filled with blood; pulses in all the parts with increased desire; after urination. Many of the uterine symptoms are like those of *Sepia*. There is a weak, sinking sensation in the hypogastrium, and sinking, empty feeling in epigastrium; prolapsus < during stool or micturition. Aching in uterus. Cutting through to sacrum. Cream-like leucorrhœa. Burning in vagina with pain on both sides of bladder and uterus; burning like fire up into chest. Flushes of heat and faintness; sweats easily. But the menses are profuse, and the patient is weak and consumptive. She has partial profuse sweats, but less profuse than those of *Sepia*. Every exposure increases the rheumatic pains of *Calc. ph*. and the uterine distress. Defective bone growth; bones thin and brittle. It is useful in cases of fistula; and when fistula has been operated on and symptoms have appeared elsewhere; fistula alternating with chest symptoms. Enlargement of tonsils, acute and chronic. Short breath. Involuntary sighing. Contraction of chest and difficult breathing; evening till 10 p.m., > lying down, < getting up. Constant stretching and yawning. Crying out in sleep. Cannot get awake in morning. Grauvogl considered it the most important remedy in chronic hydrocephalus, and he very properly gave it as a prenatal remedy during pregnancy to women who had previously borne hydrocephalic children. The chills of *Calc. ph*. strike upward. Hering gives: "The chills run up the back; terrible muscular jerks in body, which almost throw him out of his chair."

Calc. Phos. corresponds to defective nutrition, whether of childhood, puberty, or of old age. Predisposition to glandular and bone diseases. Slow development of teeth. Spinal curvature. Slow walking; neck too thin and weak to support head. Rickets. Diabetes when the lungs are affected. Motion < and rest > most symptoms. < When thinking of his symptoms. A slight draught causes rheumatic pains; every cold causes pains in joints and sutures. Changes of weather, especially when the snow melts, or in east winds <. Damp, rainy, cold weather <. It is suited to scrofulous, gouty constitutions.

Relations.—Its nearest analogue is Carb. an. (which contains Calc. phos.). *Follows well:* Ars., Chi., Iod., Merc. *Is followed well by:* Sulph. *Complementary:* Ruta. *Compare:* In bone affections and fistula, Berb., Calc., Calc. fl., Fluor. ac., Ruta, Sil., Sul.; in joint affections, Berb., Kali ph., Nat. m.; in caries of teeth, Fluor. ac., Mag. ph., Sil.; in epilepsy, Calc., Fer. ph., Kali m.,

Kali ph., Sil.; in diabetes, Kali ph., Nat. ph.; in tabes, Ars., Iod., Merc.; hæmorrhoids, Fer. ph.; worms, Nat. ph.; in debility after acute disease; chest affections > by lying down, Pso.; in peevishness and fretfulness of children, Cham. School headaches; housemaid's knee, Nat. m.; in tonsillitis; weak-minded children, Bar. c.; chest affections after operation; in fistula, Berb.; uterine affections, Sep. (but in Calc. ph. the menses are more profuse; there is more sexual excitement; the patient is apt to be weak, emaciated, and consumptive); osteitis of diaphyses, Conchiolinum; in fractures, &c., Symphytum; < from motion, Bry.; < from wet, Dul., Sil., Sul., Caus., Rhus.

Causation.—Over-growth. Lifting. Ascending. Over-study. Sexual excesses. Sexual irregularities. Grief. Disappointed love. Unpleasant news. Operation for fistula. Getting wet.

SYMPTOMS.

1. Mind.—Great depression; slow comprehension; cretinism.—Children are peevish and fretful; difficulty in performing intellectual operations.

2. Head.—Large open fontanelles.—Delayed closure or re-opening of fontanelles.—Headache < from change of weather extending from forehead to nose; from temples to jaws; with some rheumatic feeling from collar-bone to wrists.—Vertigo, with nausea.—Head compressed, heavy, and painful, on waking in the morning.—Painful sensation of fulness in the head, as if the brain were pressed against the cranium, < by movement and by change of position, > by lying still.—Headache with craving for tobacco smoke, which >.—During the headache, face and head hot with indolence and ill-humour.—The headache is < in the open air, or on stooping.—Headache on vertex, behind ears, with drawing in muscles of neck to nape and occiput.—Headache, with flatulency in the abdomen.—Headache of school-girls with diarrhœa.—Crawling sensations run over top of head as if ice were lying on upper part of occiput; the head is hot with smarting of the roots of the hair.—Skull soft; crackling noise like paper when pressed, mostly in occiput.—Itching in the scalp every evening.

3. Eyes.—Sensation in the eye as if something in it, renewed if others talk about it.—Cannot read; light hurts, esp. candle or gaslight.—Cataract; amaurosis; ulcers on the cornea.—Squinting.—Lachrymation; most with yawning.—Pain in the eyes and nose, as if a foreign body were introduced into them.

4. Ears.—Singing or other noises in the ears.—Inner and outer ear red, sore itching.—External ear swells suddenly and appears as if it would burst with eczema.—Excoriating discharge from ears.

5. Nose.—Coryza: fluent in cold room; stopped in warm air and out of doors.—Swollen nose with sore nostrils in scrofulous children.—Large

pedunculated polypi.—Streaks of blood, nose-bleed in afternoon.—Frequent sneezing, with flow of mucus from the nose, and salivation.—Blood follows when the nose is blown.

6. Face.—Pain esp. in upper jawbone from r. to l.; extends from other parts to face or from face to other parts.—Coppery face full of pimples.—(Warts on mouth).—Acne in the face; red pimples, filled with a yellowish pus, with shooting pains on being touched.—Swollen upper lip; painful, hard and burning.

7. Teeth.—Teeth sensitive to chewing.—Pain in molars.—Tearing, boring pain at night; < from warm or cold things.—Slow dentition, with cold tumours and emaciation.—Too rapid decay.—Convulsions without fever during dentition.

8. Mouth.—Tongue: swollen, numb, and stiff.—Tip of tongue sore, burning, little blisters on it.—Tongue white furred at root, most in morning.—Accumulation of acid saliva in the mouth.—Insipid disgusting taste.—Bitter taste in the morning with headache.

9. Throat.—Sore aching (on waking in morning) < by swallowing.—Sensation of contraction in throat.—When swallowing, pain in tongue, fauces, pharynx, chest, and pit of stomach.—Chronic swelling of tonsils.

10. Appetite.—Unusual hunger 4 p.m.—Infant wants to nurse all the time.—Craves fat bacon salt meats.—Desire for tobacco smoke; smoking > headache.—Complete loss of appetite before and during catamenia.—Colic and diarrhœa from ice creams; juicy fruit or cider; every attempt to eat; drinking cold water (colic or diarrhœa).

11. Stomach.—Nausea, with vertigo, perplexity of head, and confusion of ideas.—After taking coffee, nausea, pyrosis, head confused and painful, and excessive ill-humour.—Heartburn and water-brash.—Sour rising.—Acute pains in the stomach, with great weakness, headache, and diarrhœa; the least morsel that is eaten renews the pains in the stomach.—After belching, a burning in epigastrium.—Empty, sinking sensation (at the epigastrium); 7 p.m.—Persistent vomiting of milk, whether of breast or other.—Vomiting from hawking phlegm.—Easy vomiting in children.

12. Abdomen.—Aching soreness and pain round navel; > after fetid flatus passes off.—Oozing of bloody fluid from navel of infants.—Violent colic with inflation of abdomen, and great accumulation of flatulency, or with headache.—Difficult escape of wind, without mitigation of suffering.—Burning in abdomen.—Aching soreness, cutting, drawing in l. groin, later in r.—Burning aching in groins.—Abdominal weakness in anæmic patients.

13. Stool and Anus.—Evacuations with much flatulency.—Stools in which there were many small white points or flakes, like pus, scarcely perceptible.—Offensive

pus with stools.—Daily watery, very hot stools.—Stools green and loose, sometimes slimy.—Diarrhœa, very fetid.—Offensive flatus.—Cutting, pinching, sharp colic, followed by diarrhœa.—Diarrhœa from juicy fruit or cider; from vexation.—Diarrhœa of dentition.—Hard stools, with mental depression.—Hard stools with much blood.—After stool, buzzing in ears; weak feeling in male sexual organs.—Bleeding after stool; protruding piles, aching, itching, sore; oozing of a yellow fluid and bleeding.—Itching in anus; most in evening.—Single stitches in rectum towards anus, or shooting in anus.—Sore feeling in anus, < one side, with shaking, burning, throbbing.—Fistula in ano, alternating with chest symptoms.—Fistula; in persons who have pains in joints with every spell of cold, stormy weather.—Fissures.—Hæmorrhoids oozing a watery fluid all the time.

14. Urinary Organs.—In region of kidneys violent pain when lifting, or blowing nose.—Frequent micturition.—Urine passed in large quantities with sensation of weakness.—Urine deep-coloured and sometimes hot.—After evacuation of fæces and emission of urine, the genital parts feel, as it were, fatigued.—Cutting in urethra before and after urinating; burning during.—Enuresis.—Phosphatic urine (Bright's disease).

15. Male Sexual Organs.—Increase of sexual desire in the morning, with unusual enjoyment in coition.—Nocturnal emissions.—Erections while riding in a carriage, without desire.—Shooting through the perineum into the penis.—Swelling of testicles.—Scrotum: itching; sweating; sore; oozing a fluid.—Hydrocele.—Chronic gonorrhœa in anæmic subjects.

16. Female Sexual Organs.—Nymphomania; esp. before catamenia.—Aching in uterus; weakness and distress in uterine region; < during defecation and micturition; uterine displacement.—Pressure upward over mons veneris, throbbing.—Voluptuous feeling as if the parts were filling up with blood; feels pulse in all the parts, with increased sexual desire.—Prolapse.—Polypus.—Menses: too early, light, or dark (esp. with rheumatic patients); labour-like pains.—Menses too early, blood bright, with girls; too late; blood dark, or first bright, then dark, in women.—Leucorrhœa, like white of egg, day and night; < morning after rising; of sweetish odour; increased whites with a stool of bad odour.—Burning, pain, swelling of vagina and external parts.—Pains in navel; sacrum; symphysis pubis; mammæ (sore and burning; nipples aching, sore) during pregnancy.—Child refuses breast, milk has a saltish taste.

17. Respiratory Organs.—Hoarseness; burning in throat; constant hawking and hemming to clear voice when talking.—Cough; tickling; with dryness of throat and hoarseness; with yellow expectoration, < morning; with stitches in chest.—Cough during difficult dentition.—Breathing frequent, short, difficult.—With inhalation; shooting in l. breast and r. temple; sudden jerking pain in back.—Involuntary sighing.

18. Chest.—Contraction of chest, and difficult breathing, evening till 10 p.m.; > lying down; < when getting up.—Obstinate pain through lower l. lung and l. hypochondrium (uterine disease).—Burning sensation in chest from below up into throat.—Sharp pain like an instrument through end of sternum.—Cracking in sternum.

19. Heart.—Sharp cutting pain, shooting in heart region interrupting breathing.—Dropsy from heart disease.

20. Neck and Back.—Rheumatic pain and stiffness of neck with dulness of head; from slight draught of air.—Cramp-like pain in neck first one side then the other (r. to l.).—Throbbing or jerking pains below scapula.—Violent pain in region of back when making the least effort.—Backache and uterine pains.—Sharp pains in sacrum and coccyx.—Soreness as if separate in sacro-iliac synchondrosis.—Curvature of the spine to the left; lumbar vertebræ bend to the left; spina bifida.

21. Limbs.—Aching in all the limbs with weariness.—Pains flying about, in all parts of rump and limbs after getting wet in rain.—Extensors more affected than flexors.

22. Upper Limbs.—Rheumatic pains in shoulder and arm, also with swelling of the diseased part and febrile heat.—Ulcerative pain esp. in roots of finger nails of r. hand; and in middle finger.—Gouty nodosities.—Soreness, torpor, and paralysis of the (l.) arm.—Paralysis of the joints of the hand and of the fingers, esp. in the thumbs, sometimes from a chill.

23. Lower Limbs.—Buttocks and back "asleep," with a sensation of uneasiness.—Lower limbs fall asleep; restless; anxious feeling; has to move them to jump out of carriage; also at night.—Abdomen, sacrum, and lower limbs asleep; cannot rise from seat.—Cramp in calves; on a small spot inside, when walking.—Legs tired, weak, restless, crawling, tingling.—Pains above knee.—Pains in joints and bones, esp. shin bones.

24. Generalities.—Large pedunculated polypi; copper-coloured face, full of pimples; tongue swollen.—Rheumatic pains of all kinds.—Pains in different parts of the body, proceeding along the muscles into the joints.—Rheumatism which gets well in summer and becomes bad again in cold weather.—The loins, knees, and thumbs are principally affected.—Veins swollen.—Burning itching over the whole body.—Ulcers.—Caries.—Weariness, when going upstairs; wants to sit down; hates to get up.—Ill-humour, and aversion to labour.—On every little cold she is much worse.—Sensations frequently on small spots.—Children do not learn to walk, or lose the ability; lose flesh.—Pains along sutures or at symphyses.—Flabby, shrunken, emaciated children.—Soreness of tendons when flexing or extending.—The heat of the room appears insupportable.

26. Sleep.—Constant stretching and yawning.—Cannot awake in early morning.—Sleep, early in the evening, with frequent waking during the night.—Restlessness for two or three hours after midnight.—Frequent dreams, sometimes with reflections, dreams of dangers and fires.—Transient, frequent shuddering.—Starting from sleep as from fright.

27. Fever.—Frequent creeping shiverings.—Copious night sweats, on single parts.

Calcarea Picrica.

Picrate of Calcium. 2 (C_6H_2 (NO_2)$_3$) OCa.

Clinical.—Ear, perifollicular inflammation of. Boils in meatus.

Characteristics.—"Indicated by clinical experience for perifollicular inflammation. The extreme prostration of Picric acid is relieved by this salt also" (Houghton). Minute and excessively painful boils in meatus. Picric acid and all its salts are curative in states of intense prostration and fatigue.

Relations.—*Compare:* Picric acid, Ferr. pic.

Calcarea Renalis.

Urate of Lime renal calculi. Also Phosphate of Lime renal calculi. Trituration.

Clinical.—Gout. Gravel. Joints, nodosities on. Renal calculi. Stone in bladder. Teeth, tartar on.

Characteristics.—*H. Recorder* (Aug., 1895) reprints a paper by Dr. Bredenoll, of Erwitte, in which he gives his experience with this remedy in his own case. Following a repercussed eruption he had among a host of other troubles renal colic of great intensity, with passage of uric acid calculi. One of these was triturated in the proportion of 5 parts to 95 of sugar of milk, and of this he took 1/2 grain doses for a considerable time, with the result that the formation of calculi ceased, the tartar which had formed on the teeth dropped off, and a nodosity of stony hardness disappeared from the extensor tendon of the right middle finger.

Calcarea Silicica.

Silicate of Calcium. Ca Si_2 O_5. Trituration.

Clinical.—Atrophy. Cornea, ulcer of. Scrofula. Ulcers.

Characteristics.—This preparation has been used by Ussher (*H. W.*, xxxiv. 491) in the 1x and 6x potencies in cases of atrophy of children. He has found it succeed where *Silica* has failed in these cases and in corneal affections. It causes absorption of corneal exudations. Ulcers with punched-out edges indicate it.

Relations.—*Compare:* Salufer, Fluoric acid, Lapis alb.

Calcarea Sulphurica.

Sulphate of Calcium. Gypsum. Plaster of Paris. Ca SO_4. Trituration.

Clinical.—Abscess. Anus, abscess near. Boils. Buboes. Burns. Carbuncles. Chilblains. Cornea, ulceration of. Cough. Crusta lactea. Cysts. Dropsy. Dysentery. Eczema. Fistula. Glandular swellings. Gonorrhśa. Hćmorrhages. Injuries, effects of. Pneumonia. Polypi. Scarlatina. Spermatorrhśa. Syphilis. Tonsillitis. Tumours. Ulcers.

Characteristics.—*Calc. sulph*. is closely related to *Hepar sulph. calc*., which is an impure sulphide of calcium, but has a wider sphere and deeper action in suppurative processes. It is Schüssler's "Connective-tissue salt," and most of the indications for its use are derived from his clinical experience. In the last edition of his *Biochemic Therapy* Schüssler discards *Calc. sul*. because it is not an actual constituent of the tissues, and he distributes its functions between *Silicea* and *Nat. Phos*. Homśopaths, having no Biochemic theory to support, may continue its use without scruple, especially as it has been proved by Hering and others. It is indicated in all kinds of cases *after pus has found a vent*. Nash has cured a case of suppurating kidney with it. It differs from *Hepar* in sensitiveness to air: *Hepar* cannot bear the slightest exposure; *Calc. sul*. has > in open air; better walking in it; desire for it. Both have < from change of weather. *Calc. sul*. has not the excessive sensitiveness to touch found in *Hepar*. Hansen recommends it in dry eczema in children. Cystic tumours, fibromata and polypi have been cured with *Calc. sul*.

Relations.—*Compare:* Calend., Hep., Kali mur., Nat. sul. (postscarlatinal dropsy); Sil. (hard, or suppurating glands, ulcers of cornea, tonsillitis, mastitis, frostbites). *Follows well:* Kali m., Nat. sul., Sil.

SYMPTOMS.

2. Head.—Sensation round head as if he had his hat on.—Painful pimples; hard swellings at edge of hair, bleeding when scratched.—Crusta lactea.—Cranio-tabes.

3. Eyes.—Sees only half an object.—Ophthalmia with purulent discharge.—Ulceration of cornea.—Eyes protrude.

5. Nose.—Coryza, with thick, yellow, lumpy, mattery discharge.—Influenza and sneezing > in open air; coryza r. side after a bath, > out of doors.—Edges of nostrils sore, excoriated.

6. Face.—Swollen cheek with toothache.—Herpetic eruptions; pimples; pustules.—Exceedingly pale, sickly appearance (gypsum workers).—Blister-like sores on lower lip.

7. Teeth.—Rheumatic toothache; swollen, tender, easily-bleeding gums.

8. Mouth.—Taste soapy.—Tongue coated yellow at base.—Glossitis.

9. Throat.—Diphtheria of soft palate; scarlatinal sore throat.—Tonsillitis with suppuration.

13. Stool and Anus.—Diarrhśa with discharge of pus or bloody pus.—Dysentery with pus-like slime.—Painful abscesses about anus in cases of fistula.—Costiveness with hectic fever; with difficult breathing.

14. Urinary Organs.—Chronic nephritis.—Red urine with hectic fever.

15. Male Sexual Organs.—Spermatorrhśa with impotency.—Gonorrhśa in suppurative Stage.—Chronic syphilis.

17. Respiratory Organs.—Croup.—Catarrh with thick, lumpy, white-yellow or pus-like secretion.—Asthma or cough with hectic fever.—Pain in chest and headache.—Pneumonia third stage.—Emphysema.

22. Upper Limbs.—Whitlow, when suppuration begins.

23. Lower Limbs.—Itching and podagra.—Pain in knee from a blow.—Stitches in knee.—Legs tender to touch, feet slightly swollen.—Burning and itching in soles of feet.

25. Skin.—Suppurating chilblains.—Burns and scalds when suppuration takes place.—Scarlet rash.—Skin affections with greenish, brownish or yellowish scabs.—Greyish lead-coloured skin.—(Dry eczema in children.)

Calendula.

Calendula officinalis. Marigold. N. O. Compositć. Tincture of leaves and flowers.

Clinical.—*Abscess. Balanitis. Breast, suppurating*; nodosities in. *Bubo. Burns*. Carbuncle. *Chilblains*. Deafness. *Eyes, inflamed*. Fever. *Fistula. Glandular swelling*. Jaundice. *Labour. Nails, pulp of, inflamed. Nipples, sore. Suppuration. Tetanus. Ulcers. Uterus*, inflammation of; cancer of; offensive discharge from. Varicosis. *Whitlow. Wounds*.

Characteristics.—*Calendula* belongs to the same family as those other great Vulneraries *Arnica* and *Bellis perennis*. The special kind of wounds indicating its use are *lacerated* wounds and *suppurating* wounds. It is the homśopathic antiseptic—it restores the vitality of an injured part, making it impregnable against the forces of putrefaction. Unlike *Arnica* it has no irritating property capable of producing erysipelas. It is therefore suitable to all cases of injury where the skin is broken. Jahr, who was in Paris during the *Coup d'État* of 1849, treated a number of cases of gun-shot wounds with comminuted bones, and saved several limbs by means of *Calendula*. It prevented suppuration and pyćmia. In some cases of carbuncle it acts with great promptitude, subduing pain and fever. In obstetric practice it is invaluable. The application of a sponge saturated with a hot solution of *Calendula* after delivery gives the greatest comfort to the patient.
Hot *Calendula* lotions are generally preferable to cold, as they conserve the vitality of the injured parts. Hot *Calendula* fomentations, intermittently applied, are far better than poultices as applications to forming abscesses. If they do not abort the process they favour the maturation and ultimate healing. C. R. Crosby (*H. R.*, xii, 370) gives it internally (in the 3x) as well as externally. He has also had excellent results from its use as a hot compress (an ounce to the pint) in pneumonia and other internal inflammations. It is an excellent hćmostatic in tooth-extractions. *Calendula* has not been largely proved, but very definite fever symptoms have been elicited, and cases of jaundice have been treated with it successfully. Some of the symptoms are Irritability; easily frightened; great tendency to start, nervousness hearing very acute. Drinking aggravates; also damp weather. Cooper gives this modality: < in cloudy weather. (The flowers close when a dark cloud passes over.) Drinking causes a shaking chill or creeping crawls; even during the heat. Very sensitive to cold air. Nodosities in breast. In Germany it is regarded as a "cancer cure." Almost all the symptoms make their appearance during the chilly stage of the fever; he feels most comfortable when walking about, or else when lying perfectly still. A correspondent of the *Hom. World*, "C. W." (1891), mentions that a friend of his who chewed for a few minutes a leaf of *Calendula* noticed that it entirely removed for some days a difficulty of passing water such as is commonly met with in old men. "C. W.," himself a pharmacist,

noticed the following effect on himself when making the fresh-plant tincture: "There was such a feeling as if some overwhelming calamity was hovering over me as to be almost unbearable. Three years ago, just after making the tincture, my old enemy the gout nipped me in the middle of the spine, and in three days spoiled all my powers of walking, and then the dreadful feeling became very much exaggerated." His experience led him to conclude that *Calendula* has an action on the spinal cord.

Relations.—Calendula contains much nitrogen and phosphoric acid. *Antidoted by:* Arn. *Incompatible:* Camph. *Complementary:* Hep. *Compatible:* Arn., Ars., Bry., Nit. ac., Phos., Rhus. *Follows well:* Ars. *Is followed well by:* Arn., Hep. *Compare:* Arn., Ars., Bry., Calc. sul., Carb. an., Carb. v., Ham., Hep., Hyper., Led., Nit. ac., Pho., Rhus, Ruta, Salic. ac., Sul. ac., Symph.

SYMPTOMS.

1. Mind.—Great irritability; easily frightened; hearing acute.—Intense depression.

2. Head.—Dulness of the head, as after a night's revel.—Heaviness of the head in the morning, as after a long illness.—Pressure and feeling of heaviness in the occiput.—Headache, and feeling of heat in the forehead after a meal.—Flushes of heat on the forehead, in the evening.—Inflammation of the white of the eyes, with pressure at times in the forehead, at times in the temples, only when lying down.

3. Eyes.—Dryness and biting in the margins of the lids, as from smoke.

4. Ears.—Hearing too acute; starts with a fright.—(Deafness < from drinking; < from damp weather.—Cooper.)

8. Mouth.—Small vesicles in the corner of the mouth.

9. Throat.—The submaxillary glands are painful to the touch, with sensation as if swollen; or actual swelling, and sensation as if ulcerated in the interior.—Drawing and tension in the submaxillary glands, when moving the head.—Pressure in the śsophagus during deglutition, from pain in the submaxillary glands.—Bitter-slimy taste in the throat, the food having a natural taste.

11. Stomach.—Diminished appetite at dinner, although he relishes his food.—Hiccough when smoking.

12. Abdomen.—Boring and digging deep in the umbilical region.—Sticking in the l. side of the abdomen, during movement, going off during rest.—Stool in the morning, accompanied with feverish chilliness, preceded by pinching and uneasiness in the abdomen.

14. Urinary Organs.—Frequent micturition, with emission of pale, clear, hot, and even burning urine.—Tearing in the urethra during the chilliness.

18. Chest.—Drawing pressure in l. side of chest, when standing, also in sternum, with stitches in r. side of chest, in evening when lying in bed.

20. Neck and Back.—Tearing with pressure between the scapulć.—Pain under the r. scapula as if ulcerated and bruised, with pressure.—Rheumatic drawing in the r. side of neck, < when bending the neck over to one side and when raising the arm.

21. Limbs.—The axillary glands are painful to the touch.—Pressure and drawing tension in the hand and in the tarsal joints, during rest.—Tearing burning in the calf, when sitting.—Spasmodic drawing in the inner border of the foot, when sitting.

24. Generalities.—Rheumatic drawing pains, only during motion.—The wound becomes raw and inflamed, is painful in the morning as if beaten, with stinging as if it would suppurate; the parts around the wound become red, with stinging in the wound during the febrile heat.—Great tendency to start, with great nervousness and extreme sensitiveness of hearing.—Drowsiness with ill-humour and delirium; restless night, constant waking, frequent micturition and drinking, and uneasiness in every position.—Almost all the symptoms make their appearance during the chilly stage of the fever, he feels most comfortable when walking or else in a state of perfect rest.

27. Fever.—Coldness and great sensitiveness to the open air, the whole morning.—Shuddering in the back, with pressure in the region of the last true rib of l. side, and movements in the stomach and abdomen as if he would faint.—Shuddering and goose-flesh, although the skin feels warm to the touch.—Feverish chilliness in the hands and feet, the whole morning, with rheumatic drawing and pressure in the whole body, and pain in the ribs as if pressed together and bruised, after sitting.—Heat in the afternoon, with frequent thirst, chilliness and shiverings intermixed, particularly after drinking.—Heat in the evening, with coldness of the head and hands, intermingled with shivering, and accompanied with aversion to drinks.—Feeling of heat in the face, hands, and feet, after a meal, succeeded by thirst.—Great heat, in the evening when in bed, accompanied with moisture on the feet, which are burning.—Great heat the whole morning, with copious perspiration, feeling of qualmishness in the chest, and burning in the axillć.

Calotropis.

Calotropis gigantea. (E. India.) The root-bark is called Mudar, Mirdar, Yercum. N. O. Asclepiadaceæ. Tincture or trituration of bark of root. Tincture of the milky juice.

Clinical.—Feet, pain in. Fever. Hands, pains in. Leprosy, tubercular. Lupus. Syphilis.

Characteristics.—The inspissated juice, root and bark have been extensively used in the East for their emetic, sudorific, alterative, and purgative qualities. The fresh juice is considered a valuable remedy in skin affections. A short proving brought out the following symptoms: Weak, tired feeling; coldness; dizziness; pain and confusion in head; nausea and vomiting of bile; frequent micturition; pain, soreness, and redness of thigh pain in both legs, swelling of knees, stiffness and inability to walk pains in hands and feet; first left then right, pains < movement or putting weight on them. Dr. Gramm, of Philadelphia (*Minn. H. Mag*., Aug., 1897), has used the tincture with great success in cases of syphilis when Mercury can no longer be given; in the anæmia of syphilis; secondary syphilis. A sense of warmth in the scrobiculus cordis is a leading indication for the remedy.—In one case of severe and advanced syphilis, with enormous thickening of the ends of all the nails, *Calo*. effected a cure. The remedy was given in one- to five-drop doses of the tincture, or in pellets saturated with equal parts of the tincture and 95 per cent. alcohol.

Relations.—*Compare:* Asclep. syr., Asclep. tub. (botanical relations). Ipec. (emetic). Berb. aquifol. (syphilis). Coffee caused vomiting when before there was only nausea, but antidoted many effects. Camph. also antidoted.

SYMPTOMS.

1. Mind.—Depressed, tired feeling.

2. Head.—Dizziness.—Dull occipital headache from 11 a.m. till midnight, very bad at times in evening.—Head painful, throbbing, and confusion.—Head and face hot.

6. Face.—Cheeks burning like fire.—Lips and throat dry.

8. Mouth.—Slight soreness and swelling of r. palate, paining on moving jaws.—Breath foul.

11. Stomach.—Constant eructations.—Faint and giddy with inclination to vomit; after strong coffee vomited a wineglassful of yellow bile.

14. Urinary Organs.—Frequent urination.—Urine dark red, like homebrewed beer, and with strong smell but no noticeable deposit.

17. Respiratory Organs.—Oppression at chest, and short breathing.

19. Heart.—Pulse quickened.

20. Back.—Frequent chills passing up spine.

22. Upper Limbs.—Cramp-like pain in centre of r. palm when grasping anything, lasting many days; pain in wrist when moving it.

23. Lower Limbs.—Slight pain when moving at inside of r. thigh just below groin: two days later back of thigh very sore and hard, making turning irksome; next morning thigh sore, swollen, and painful, so that he could not bend leg in walking, which gave him pain at every step.—Slight pain in l. foot on movement, or when bearing on it; with deep tenderness as if up tarsal bone.—Intermitting cramp-like pain, must keep foot moving about in bed.—Pain in foot when at rest so severe as to bring pain into eyes; > after coffee; later, instep slightly red and swollen but not tender; unable to put foot to ground except by very slow degrees, could then stand without pain, but pain returns when taking weight off again.—Some days after, r. foot began to pain and became the worse of the two.

26. Sleep.—Restless and feverish; tossing from side to side.

27. Fever.—Body cold, frequent chills passing up spine; at same time head and temples hot, cheeks burn like fire.—Chill returned towards bedtime though he was close to the fire; continued in bed, running from feet up spine, movement of feet seemed to excite them.—Fits of perspiration alternating with chills.

Caltha Palustris.

Marsh Marigold. N. O. Ranunculaceæ. Tincture of fresh shoots and flowers.

Clinical.—Cancer. Pemphigus.

Characteristics.—This is an unproved remedy, but it has irritant properties like the other Ranunculaceæ. Hansen gives as indications: "Pemphigus; bullæ are surrounded by a ring, much itching. On the third day they are transformed into crusts." Cooper has used it with excellent effect in a case of uterine cancer, giving single doses of the Ø tincture at long intervals.

Camphora.

Camphor. C_{10} H_{16} O. - N. O. Lauraceæ. A gum obtained from Laurus camphora. Solution in rectified spirit.

Clinical.—Angina pectoris. Bed-sores. *Cholera Asiatica*. Chordee. *Cold*. Convulsions. Epilepsy. *Eruptions, suppressed*. Erysipelas. Gonorrhœa. Heart affections. *Hyperpyrexia*. Influenza. *Measles. Memory, loss of*. Priapism. Rheumatism. Sexual mania. Sleeplessness. Snake-bites. Spasms. *Strangury*. Sunstroke. *Taste, disordered*. Tetanus. *Tobacco habit*. Twitching. *Urethra, spasmodic stricture of. Urine, suppression of*.

Characteristics.—"Chill; cramp; convulsion with mental anguish"—these give an idea of the essential action of *Camphor*. It causes retreat from the circumference to the centre; and its chief remedial action is in correcting just such conditions—cold, collapse, repercussed eruptive diseases. "Great coldness of surface, with sudden and complete prostration of the vital forces." Feeling as if a cold wind were blowing over body. In all kinds of sudden internal pains arising from chill, or other causes, *Camphor* in rapidly repeated doses will be very likely to prove Curative. In these conditions it is often prescribed on broad indications and given in the lower potencies, but those whose knowledge of *Camphor* is confined to its coarser actions will never understand what a great remedy it is when used according to its fine symptomatic indications and given in the higher potencies. *Camph*. produces tetanic spasms, with showing of teeth by drawing up the mouth corners (like *Nux* and *Phytolacca*, but the deathly coldness of *Camph*. distinguishes it from both). *Camph*. has internal heat and external coldness. In the collapse of cholera it corresponds rather to the initial chill before either vomiting or diarrhœa. (The collapse of *Carbo v*. is rather the result of alvine discharges.) The tongue is cold. If he can speak, the voice is either high pitched or husky. The cramps of *Camph*. are less pronounced than in *Cupr*.; but cramps with icy coldness of limbs is characteristic of *Camph*. The coldness of *Camph*. resembles that of *Verat*., but with the latter the discharges are copious, and *Camph*. has marked nausea, and the expression of nausea, upper lip drawn up. In some epidemics, *Camph*. given early has alone cured a large majority of the cases treated, and that whether given in drop doses of the tincture or in the 30th. Salzer (*On Cholera*, p. 68) says the cases calling for it are those in which "arterial spasm," with difficult breathing (spasm of pulmonary arteries), coldness and lividity are the leading features. In its actions on the genito-urinary sphere *Camph*. approaches *Canth*. in intensity, and is one of the antidotes to the latter. Strangury and priapism are among its effects. *Camph*. is indicated in many conditions of sudden collapse from overpowering influences acting on the nervous centres. For example, sunstroke: vitality ebbing away; fainting spells growing worse; body icy cold and bathed in cold sweat. Some characteristics are: Most pains are felt during a half-conscious condition, and *disappear when thinking of them*. Afraid of his own thoughts; wants to be

diverted from thoughts of himself. Fears to be left alone. Memory lost. Great sensitiveness to cold and cold air; which < pains takes cold easily. Surface cold to touch, *yet throws off all covering*. Extremities cold, with cramps. Awkwardness. Spasmodic movement of head; head drawn to r. side; rest of body relaxed; unconscious. Spasmodic drawing of head laterally or backwards with deathly coldness. Erysipelas spreading to central membranes. Repercussed eruptions. Soft parts drawn in. Skin painfully sensitive. In the form of the ordinary *Camphor* pilules, I have found it an excellent remedy for simple sleeplessness. In this, as in its effect on colds, it resembles Acon. Irritable, weakly blondes most affected. Scrofulous children most sensitive to *Camph*.

Relations.—*Camph*. has very important antidotal relations. *It is antidoted by:* Op., Sp. nit. dulc., Dulc., and Phos. *It antidotes:* Am. c., Canth., Carb. v., Cup., Lyc, Squil., Nat. m., so-called worm-medicines, tobacco, bitter almonds, and other fruits containing prussic acid; also the secondary affections remaining after poisoning with acids, salts, metals, poisonous mushrooms, &c. *Incompatible:* Nitrum. Tea, coffee, and lemonade, as a rule, do not interfere, but sometimes coffee <. *Compare:* Alo.; Carbo v. (coldness from undeveloped exanthema, collapse; epistaxis, dark, persistent; low hæmorrhages generally); Canth.; Cup.; Dulc.; Sec. (skin cold with desire to uncover); Lyc. (head drawn to one side-Lyc. to left, Plumb. and Stram. to right, Bufo to either); Op. (narcotism, heart affections); Pho. (anguish and burning in cholera). Sp. dul. nit., Squil., Verat. Teste puts Camph. in his Belladonna group, with Agar., Lach., Cedr., Stram., Tabac., and others. He notes that it acts much more powerfully on carnivorous animals than on herbivora.

Causation.—Shock from injury. Eruptions, suppressed. Cold air. Sunstroke. Vexation.

SYMPTOMS.

1. Mind.—Anxiety with fretfulness.—Great anguish and discouragement.—Afraid of his own thoughts.—Quarrelsome and combative humour; mania to dispute.—Dulness of the senses.—Loss of consciousness.—Confusion of ideas; delirium.—Rage.—Loss of memory.

2. Head.—Dizziness, as if from intoxication, esp. on walking.—Giddiness, with heaviness of the head and vanishing of the senses.—Vertigo, and heaviness of the head, which obliges the patient to incline the head backwards.—Headache, as if the brain were bruised, or sore from a wound.—Dull headache above the os frontis, with inclination to vomit.—Constrictive headache, esp. in the occiput and above the root of the nose, greatly aggravated by stooping, by lying down, or by the touch, and disappearing when the attention is directed to the pain.—Incisive shocks in the head on lying down.—Pulsative headache at night, with shootings in the forehead and heat of the body.—Congestion in the head.—Inflammation of the

brain.—Inflammation of the brain (after sunstroke), with pulsation and sensation of constriction in the brain, spasmodically turned head (to the side or backward), < from movement or in the cold air; > when lying down, or when thinking of it.—Spasms, which draw the head on one side.

3. Eyes.—Inflammation of the eyes.—Red spots on the eyelids.—Trembling of the eyelids.—Staring, wild look.—Eyes sunken.—Eyes haggard, and turned convulsively upwards.—Contraction of the pupils.—Obscuration of the sight.—Visions of strange objects.—Photophobia.—Everything appears too bright and brilliant.

4. Ears.—Heat and redness of the ears, esp. in the lobes.—Abscess in the meatus auditorius, with deep redness and pressive shooting pain.

5. Nose.—Dry coryza.—Coryza fluent or dry.—Sneezing, beginning of coryza.—Catarrhal affections with headache, from sudden change of weather.—Nose-bleed.—Nose cold and pointed.—Violent stitching or crawling, from root of nose almost to tip.

6. Face.—Face deadly pale; or deep red.—Icy-cold, livid, pale face.—Erysipelas in the face.—Convulsive distortion of the features.—Convulsive clenching of the jaws.—Hippocratic face.—Foam at the mouth.—Cold sweat on face, upper lip everted.

7. Teeth.—Toothache, as if from swelling of the sub-maxillary glands, with sensation of lengthening of the teeth.—Acute shocks in the roots of the incisors.—Painful looseness of the teeth.—Flying toothache, gnawing boring in molars, mostly in hollow ones; much < if even a soft little crust of bread touches the affected tooth; < from drinking coffee or spirituous liquors; > after drinking beer or cold water; but < from water kept in mouth; > by coition.

8. Mouth.—Breath fetid in the morning.—Foam at the mouth.—Abundant accumulation of a viscid and slimy saliva.

9. Throat.—Soreness in the throat on swallowing, as if from excoriation of the throat, which is felt even at night.—Dry, scraping sensation of the palate.—Burning heat in the throat, extending from the palate to the stomach.—More decided relish for all food, and esp. for broth.—Bitter taste of tobacco and of food, esp. of meat.—Dislike and repugnance to tobacco smoke.—Excessive thirst.

11. Stomach.—The pit of the stomach is very sensitive to the touch.—Almost continual eructations after dinner; nausea > by eructation.—Inclination to vomit, followed by attacks of vertigo.—Vomiting of bile or of blood.—At the commencement of the vomiting, cold sweat, chiefly on the face.—Sensation of

burning and heat in the stomach.—Pain, as from a bruise, in the epigastrium.—Strong pressure in the epigastrium.

12. Abdomen.—Cramps in the abdomen.—Cutting colic at night.—Belly-ache as if diarrhœa would follow.—Drawing pain, as from a bruise, on the entire of r. side of the abdomen.—Sensation of fulness in the abdomen.—Sensation of cold or of burning heat in the epigastrium and in the abdomen.

13. Stool and Anus.—Constipation.—Difficult evacuation, as if from inactivity of the intestines, or from contraction of the rectum.—The rectum feels narrow and swollen; is painful during the emission of flatulence.—Asiatic cholera, with cramps in calves, coldness in body, anguish, burning in œsophagus and stomach.—Diarrhœa: with colicky pain, esp. when caused by cold; attack very sudden; sudden and great sinking of strength.—Involuntary diarrhœa.—Blackish fæces.

14. Urinary Organs.—Retention of urine.—Strangury, with tenesmus of the neck of the bladder.—Urine flowing slowly and in a small stream, as if the urethra were contracted.—Urine of a yellowish green, turbid, and of a mouldy smell.—Hæmaturia.—Burning pain during the emission of urine.—Urine thick and red, with turbid and thick sediment.

15. Male Sexual Organs.—Inceased desire.—Erethism.—Attacks of violent priapism during dreams.—Absence of sexual desire, and impotence.—Sudden laxness of penis.—Nocturnal emissions.—Involuntary masturbation.—Sensation of contraction in the testes.—On l. side of root of penis, while standing, a pressure outwards as if a hernia would protrude.—Strangury from stricture.

16. Female Sexual Organs.—Sexual orgasm.—Erethism of sexual system.—Labour-like pains.—Menses too profuse; or absent.

17. Respiratory Organs.—Voice husky; weak; mucus in air passages, not removed by hacking; high and squeaky.—Constriction of larynx, feeling as if throat tied.—Cutting, cold feeling deep in windpipe; causes a slight cough.—Dry feeling at bifurcation of trachea. Breathing: anxious; oppressed; sighing; quiet; deep and slow; snoring; almost completely arrested.—Asthma, < from bodily exertion.—Hot breath (with acute eruptive diseases).—Cool breath.—A cold feeling in chest followed by cold breath.—Fatiguing, hacking, dry cough.—Every inspiration starts the cough.

18. Chest.—Suffocating oppression of the chest, and constriction of the larynx, as if from the vapour of sulphur.—Excessive accumulation of mucus in the respiratory organs, with danger of suffocation.—Cramps in the chest.—Shootings in the chest.

19. Heart.—Palpitation of the heart, which can be heard striking against the side, esp. after a meal.—Anxiety at heart.—Spasmodic stitches in region of heart, with oppression of chest when lying on l. side, > when turning on r. side.

20. Neck and Back.—Tension and stiffness of the neck on moving it.—Heat with an inward vibration spreads from neck and from between shoulders into limbs.—Drawing stitches through and between shoulder-blades, extending into chest when moving arms.—Pressure in small of back with leaden-like heaviness of lower limbs.—Coldness in small of back and loins; inner coldness < by walking a few steps.—Sensation as if cool air was blowing on back.

22. Upper Limbs.—Drawing lancinations between the shoulder-blades, while moving the arms.—Convulsive movement of the arms, which describe circles.—Pressure and acute drawing in the arm and forearm.—Hands icy cold.—Hands do not feel anything he touches.—Fingers stiff, open, distorted; thumb drawn back.

23. Lower Limbs.—Pains, as from a bruise, in the thighs and in the knees.—Great weakness of the legs.—Cramp-like pains and acute drawings in the legs, and in the instep.—Cramps in the calves of the legs; with icy coldness.—Acute drawing in the extremities of the toes and under the nails, on walking.

24. Generalities.—Convulsions and cramps of different kinds.—Tetanus, with loss of consciousness, and vomiting.—Attacks of epilepsy, with rattling in the throat; face, red and puffed; convulsive movements of the limbs, and even of the tongue, of the eyes, and of the muscles of the face; hot and viscid perspiration on the scalp, and on the forehead; after the fit, comatose drowsiness.—He falls down insensible.—Diminished circulation of the blood to the parts most distant from the heart.—Uneasiness, relaxation, and heaviness over the whole body.—Sinking of all strength.—Fainting fits.—Cracking in the joints.—Rheumatic lancinations in the muscles.—Difficulty in moving the limbs.—Painful sensibility of the periosteum of all the bones.—Sufferings in consequence of a chill.—Icy coldness of the whole body, with paleness of the face.—The majority of the symptoms appear during movement, or else at night, or are aggravated by cold, the open air, and contact.—The symptoms often disappear as soon as attention is called to them.

25. Skin.—Skin sorely sensitive, even to the slightest touch.—Erysipelatous inflammations.—Skin, bluish and cold, with coldness of the body.—Dryness of the skin.

26. Sleep.—Strong desire to sleep in the day.—Coma, with incoherent words.—Nocturnal sleeplessness, from nervous excitement.—Snoring and tossing during sleep.—During sleep, the inspirations are shorter than the expirations.—Dreams: anxious; fearful; visions of spirits; about what Is intended or what has happened in morning hours.—Extreme restlessness with anxiety.

27. Fever.—Excessive sensibility to fresh air, and tendency to take cold.—Cold over the whole body, with deadly paleness of face, shivering, and chattering of the teeth.—Icy coldness of the whole body, with congestion to the head and chest.—Heat of the body, with redness of face, esp. in the cheeks, and in the lobe of the ear.—General heat, which becomes excessive on walking.—Heat with distended veins, aggravated from every movement.—Pulse remarkably small and slow, or excessively quick and full.—The blood does not circulate to the parts distant from the heart.—Sensation of dryness on the whole cutaneous surface.

Camphora Bromata.

Monobromide of Camphor; a compound in which one atom of hydrogen of the camphor has been replaced by one of bromine. C_{10} H_{15} Br O. Trituration.

Clinical.—Cholera infantum. Chordee. Direction, sense of, lost. Gastric catarrh. Hysteria. Influenza. Irritation in acute eczema. Nervous excitability. Sleep, disorders of. Spermatorrhœa.

Characteristics.—Dr. Cooper has found *Camph. bro*. of wide utility in all cases where nervous excitability is present. He has given it chiefly in single doses of 3x trituration. In a case reported by Dr. E. M. Beard of a young man who suffered from gastric catarrh in convulsive paroxysms which were induced by the sight of physical deformity, the touch of a cold, clammy hand, and the *mention* of odours, the actual presence of which did not affect him, complete relief was afforded by 3 gr. doses of *Camph. bro*. every 3 or 4 hours. But the drug set up these singular symptoms: Directions appeared to be reversed; north seemed south, and east seemed west; innumerable black flies seemed to be flitting over the field of vision; he was sleepless; and when he did sleep it was restless and vexed with ghastly dreams. (*Camph*. has visions of spirits in sleep.) The reversal of directions lasted many days, and the strain on the faculty of attention was so torturing that he became prostrate in mind and body (*C. D. P*.). Hale mentions among the conditions relieved by it: Hysteria, weeping and laughter alternately. Headache in women and young girls due to mental excitement and excessive study. Delirium tremens. Chordee. Neuralgia of testes and prostate. Impotence. Spermatorrhœa.

Canchalagua.

Erythrća chironioides. N. O. Gentianaceć. Tincture of whole plant when in flower.

Clinical.—Influenza. Intermittents.

Characteristics.—This is a popular Californian remedy. It is indicated in intermittents of most severe type of hot countries; general sore, bruised feeling, nausea and retching, the skin becomes wrinkled like a washerwoman's. It was proved by Dr. Richter, who experienced the following among other symptoms: Head feels congested. Scalp tight; feels as if drawn together by indiarubber. Stitches, pain, buzzing and roaring in ears. Constipation, hard, knotty stools. Chills repeatedly down back < in bed, at night. Sleeplessness. After the proving, a cold wind could be borne better than before.

Relations.—*Compare:* The Gentians, Chi., Ipec.

SYMPTOMS.

2. Head.—Head feels congested.—Pressive pains in forehead.—Scalp feels tight, as if drawn together with indiarubber.

3. Eyes.—Burning in eyes, first l. then r.

4. Ears.—Piercing or stitches in ears.—Increased buzzing and roaring.

8. Mouth.—Spitting of white mucus, with trembling and nervousness.

11. Stomach.—Increased appetite.—Eructations.—Regurgitations.—Water-brash.

12. Abdomen.—Flatus.—Slight pain > by pressure.

13. Stool and Anus.—Several loose stools a day.—Constipation.—Hard, knotty, morning stool.

18. Chest.—It alleviated a catarrh produced by influenza.

24. Generalities.—That kind of pain in head and fingers which is concomitant with the attacks of intermittent fever.

26. Sleep.—Sleeplessness (from 1st trit.).

27. Fever.—Chills repeatedly, down the spine and all over, esp. in bed at night.—Heat in whole body; I could bear, after the proving, the cool trade wind, usually setting in, in San Francisco, in the afternoon, better than before.

Cannabis Indica.

East Indian Cannabis sativa (Cannabis sativa and Cannabis indica are botanically identical; the difference in their properties is solely due to the difference of soil and climate in which they are grown). Hashish. Bhang. Ganja. N. O. Cannabinaceæ. Tincture of young leaves and twigs.

Clinical.—*Catalepsy*. Chordee. Clairvoyance. Delirium tremens. *Delusions*. Epilepsy. Gonorrhœa. *Headache. Mania*. Menorrhagia. *Paralysis*. Prostatitis. Satyriasis. Stammering. Uræmia. Urinary disorders.

Characteristics.—The use of *Cannabis ind*. in the East as an intoxicant gives the leading note of its sphere of action. It produces a state of exaltation with sublime visions, delusions, and hallucinations in great variety. Time seems interminable, space illimitable. Imagines himself in a room of which the walls gradually close in upon him. Double consciousness. Fixed ideas. Apprehensive of approaching death; of becoming insane. Great agitation; anxiety; nervousness. Horror of darkness. Incoherent talking. Uncontrollable laughter. Inability to fix his thoughts on one subject. Forgets what he intends to write or speak. *Can. ind*. produces a sensation of levitation. Sensation as if in a dream. Vertigo on rising, with stunning pain in back part of head. (*Can. ind*. removed for me a vertigo in which the patient felt as if the house were falling in ruins about her.) Shocks through brain on regaining consciousness. Guided by this symptom, I removed with this remedy a "noise like a crash or explosion during sleep." Sensation as of brain boiling over and lifting cranial arch like a lid; opening and shutting sensation. Weight at occiput, from which pains start up sides of head to temples and vertex. Headache with flatulence; lasts till flatus can be passed up or down; throbbing of occiput. Scalp sore feeling; crawling on vertex; sensation as though skin tightly stretched over bones of face. Clairvoyance and clairaudience; extreme sensitiveness to noise. Grinds teeth whilst asleep. Stammering and stuttering. There is a sensation in anus as if sitting on a ball; as if anus and part of urethra were filled by a hard, round body. The urinary and generative organs are very strongly affected. There is constant dull pain in region of right kidney. Pains in kidneys when laughing. Urine loaded with slimy mucus after exposure to damp and cold. Frequent micturition with burning pain, in evening. Dribbling. Urging and straining, but cannot pass a drop. Burning, scalding, or stinging in urethra before, during, and after urination. Increased sexual desire, satyriasis, priapism. Erections: while riding, walking, or sitting still, not caused by amorous thoughts; violent; painful. Gonorrhœa; without pain; with light-headedness; very profuse yellowish-white discharge. Feeling as if discharge in urethra. Chordee. Very profuse, painful, dark menstruation, but without clots. Palpitation, awakens from sleep. Stitches in heart, with oppression, > deep breathing. Warmth of spine extending to head. Backache < during catamenia, which occur every two weeks and are scanty. Paralysis of lower limbs and right

arm. Nash relates the case of a lady suffering from cardiac dropsy, who, when relieved of the latter, suddenly lost the power of speech. In answer to a question she could begin a sentence, but could not finish it, as she could not remember what she wished to say. She was very impatient about it; would cry, but could not finish the sentence, though she could signify assent if any one did finish it for her. *Can. ind*. cured rapidly. [In one case of over-dose the observer experienced a modification of this: Absolute forgetfulness of the thought, speech, or acts of the previous moment; startled by hearing the echo of the last words of a sentence he has just spoken. Having suggested a walk to a companion and meeting him at the street door, wondered why they were there. Afterwards he could remember everything. < Lying down quietly: then thought succeeded thought only to be immediately blotted out: no inclination to sleep. > Walking about out of doors.] *Can. i*., like *Bell*., has: Wants to sleep but cannot. Very sleepy. During sleep: starting; talking; grinding teeth; nightmare. In paralysis there is tingling of the affected parts. The sensitiveness to noise is extreme; can hear a whisper in adjoining room and is irritated thereby. In some subjects a perfect condition of catalepsy is produced.

Relations.—Can. sat. In extreme sensitiveness to noise: Nit. ac. (to jarring and rumbling of waggon in street); Coff. (to all sounds); Borax (slightest noise, fall of door latch, rumpling of paper, rustling of silk). Asar. (to scratching of linen or-silk, or even the thought of it). Levitation (Asar., Calc., Coccul., Phos. ac., Sil., Sticta, Sul., Thu.). As if in a dream (Ambr., Anac., Calc., Con., Cup., Med., Rhe., Stram., Val., Ver., Zn.—the sensation of time being interminable distinguishes Can. i. from the others). Horror of darkness (Am. m., Bar. c., Calc., Carb. an., Phos., Stram., Stro., Val.). Noise like a crash or explosion in head (Alo.).

SYMPTOMS.

1. Mind.—Exaltation of spirit, with excessive loquacity.—Full of fun and mischief, and laughs immoderately.—Hallucinations and imaginations innumerable.—Anguish, accompanied by great oppression: > in the open air.—Constant fear of becoming insane.—Exaggeration of duration of time and extent of space; seconds seem ages, a few rods an immense distance.—Horror of darkness.—Fear of approaching death.—Inability to recall any thought or event, on account of different thoughts crowding on his brain.—Sudden loss of speech; begins a sentence but cannot finish it.—Stammering and stuttering.—Exaltation of spirits, with excessive loquacity.—Very absentminded.—Every few minutes he would lose himself, and then wake up, as it were, to those around him.—Constantly theorising.—Clairvoyance.—Delirium tremens; trembling; hallucinations; tendency to become furious; nausea; unquenchable thirst.—Laughs at merest trifle.—Sudden loss of memory.

2. Head.—Vertigo on rising, with stunning pain in back part of head.—Sensation as if the room were falling in pieces about her.—Frequent involuntary shaking of the

head.—Heavy pressure on the brain, forcing him to stoop.—Violent shocks pass through the brain; (noise like a crash or explosion during sleep).—Dull, drawing pain in forehead, esp. over the eyes.—Throbbing, aching pain in forehead.—Jerking in r. side of forehead, toward the interior and back part of head.—A sensation of the brain boiling over and lifting the cranial arch like the lid of a tea-kettle.—Opening and shutting sensation at vertex.—Aching in both temples, most severe in r.—Dull stitching in the r. temple.—Pain in the whole r. side of the head.—Head feels heavy, loses consciousness and falls.—Dull, heavy, throbbing pain, with sensation as from a blow, on back of head and neck.—Heavy weight at back of head, pains shoot up to temples and vertex; pain at midday forces her to cry.—Headache accompanied by flatulence, continuing until he can pass flatulence up or down; throbbing of occiput.—Migraine.

3. Eyes.—Fixed gaze.—Eyes bright and shiny.—Visual clairvoyance.—Jerking in extreme corner of the eye and eyelid.—Injection of vessels of conjunctiva of both eyes.—Letters run together when reading.—Twinkling, trembling, and glimmering before the eyes.

4. Ears.—Hearing very acute.—Aching in both ears.—Throbbing and fulness in both ears.—Ringing and buzzing in the ears.—Noise in the ears, like boiling water.—Periodical singing in the ears during a dreamy spell, ceasing when he came to himself.

6. Face.—Countenance dejected and careworn.—Wearied, exhausted appearance.—Drowsy, stupid look.—Skin of face, esp. of forehead and chin, feels as if drawn tight.

8. Mouth.—Lips feel as if glued together.—Gritting and grinding of the teeth while sleeping.—Dryness of the mouth and lips.—White, thick, frothy, and sticky saliva.—Every article of food is extremely palatable.—Stammering and stuttering.

9. Throat.—The throat is parched, accompanied by intense thirst for cold water.

11. Stomach.—Ravenous hunger.—Pain in the cardiac orifice, relieved by pressure.—Suffocative feeling while eating.

12. Abdomen.—Flatulence on rising in morning (with headache); rumbling in bowels at night.—Abdomen feels swollen; > by belching.

13. Stool and Anus.—Sensation in the anus as if he were sitting on a ball; as if the anus and part of the urethra were filled up by a hard, round body.—Painless yellow diarrhœa.

14. Urinary Organs.—Pain in the kidneys when laughing.—Burning, aching, or sharp stitches in the kidneys.—A white glairy mucus may be squeezed from the

urethra.—Burning and scalding, or stinging pain in the urethra before, during, and after urination.—Urging to urinate, but cannot pass a drop.—Profuse, colourless urine.—Has to wait some time before the urine flows.—Has to force out the last few drops with the hand.—The urine dribbles out after the stream ceases.

15. Male Sexual Organs.—Sexual desire excessively increased.—Satyriasis; priapism.—Erections not caused by amorous thoughts.—Violent painful erections.—Penis relaxed and shrunken.—Itching in the glans penis.—Sharp pricking, like needles, in urethra, so severe as to send a thrill to cheeks and hands.

16. Female Sexual Organs.—Very profuse menstruation; painful, dark but without clots.—Spasmodic uterine colic, pains returning like labour pains; great agitation and sleeplessness.—Threatened miscarriage in 8th month; burning on micturition with purulent discharge.

17. Respiratory Organs.—Rough cough, with scraping immediately under the sternum.—It requires a great effort to take a deep inspiration.

18. Chest.—Oppression of chest, with deep, laboured breathing.—He feels as if suffocated, and has to be fanned.—Stitches extending from both nipples through chest.

19. Heart and Pulse.—Palpitation of the heart, awaking from sleep.—Pressing pain in the heart, with dyspnœa the whole night. Piercing pain in the heart.—Sensation as if drops were falling from the heart.—Stitches in the heart, accompanied by great oppression; the latter relieved by deep breathing.—Pulse very slow (as low as 46).

20. Neck and Back.—Pain across the shoulders and spine; must stoop, cannot walk erect.—Chin suddenly drawn down to sternum, lasting three days.—Warmth in spine extending to head.—Backache, < during menses, which occur every two weeks and are scanty.

22. Upper Limbs.—Agreeable thrilling through the arms and hands.—Paralysis of the r. arm.—Coldness of r. hand, with stiffness and numbness of r. thumb.

23. Lower Limbs.—Entire paralysis of the lower extremities.—Weariness in limbs, and stiffness and aching in knees; almost paralysis.—Agreeable thrilling from the knees down, with a sensation as if a bird's claws were clasping the knees.—On attempting to walk, intensely violent pain as if treading on spikes, which penetrated the soles, and ran upward through the limbs to the hips; worse in r. limb, and accompanied by drawing pains in both calves.—Shooting pains in the joints of the toes of l. foot; worse in great toe; aching and stitching pain in ball of l. great toe.

24. Generalities.—Great desire to lie down in the daytime.—Thoroughly exhausted after a short walk.—Felt so weak that he could scarcely speak, and soon fell into a deep sleep.

26. Sleep.—Excessive sleepiness; sound sleep, with melancholy dreams.—Starting of the limbs while sleeping, causing him to awake.—Voluptuous dreams, with erections and profuse seminal emissions.—Talks during sleep.—Gritting teeth during sleep.—Dreams prophetic; vexatious; of dead bodies, of danger, and of perils to be encountered.—Nightmare every night as soon as he falls asleep.

27. Fever.—Loss of animal heat.—General chilliness.—Coldness of the face, nose, and hands after dinner.—Profuse sticky sweat, standing out in drops on his forehead.

Cannabis Sativa.

European or American Hemp. N. O. Cannabinaceæ. Tincture of male and female flowering tops.

Clinical.—Ascites. Asthma. Cataract. Cystitis. *Eyes; cortical opacity*. Fingers, contracted. *Gonorrhœa*. Headache. Hysteria. Infantile leucorrhœa. Nephritis. Nose-bleed. Palpitation. Phimosis. Pleurisy. Pneumonia. Post-partum hæmorrhage. Priapism. Stammering. Tetanus. *Trachea, mucus in*. Urethral caruncle.

Characteristics.—*Cannabis sativa* resembles closely Cannabis indica, but the mental symptoms and head symptoms are less pronounced and the eye and genito-urinary symptoms more so. Characteristic sensations are: "As if hot water were poured over him; over heart. As if drops of cold water were falling: on head; from anus; from heart." As if pinched with pincers in back. Pressure as with a sharp point in coccyx. Gonorrhœa, esp. when the patient walks with the legs apart. Sexual over excitement in either sex. Threatened abortion from too frequent sexual intercourse. Threatened abortion complicated with gonorrhœa. The urethra is very sensitive to touch and pressure; the patient cannot bear the legs close together. *Can. sat*. has cured many cases of urethral caruncle; and of phimosis. It resembles *Canth*. in its urethral symptoms, but has more burning and smarting (Canth. more tenesmus). Drawing pains in region of kidneys extending into inguinal glands, with anxious sensation of nausea at epigastrium. Unendurable fine stitching over whole body, as from a thousand needle points, at night, when sweating from warm covering, > uncovering. Feet feel heavy on going upstairs.

Relations.—*Antidotes:* of large doses—lemon-juice, *Strychnia*, faradization of respiratory muscles to maintain respiration; of small doses—Camph., Merc. *Compatible:* Bell., Hyo., Lyc., Nux, Op., Puls., Rhus, Verat. *Compare:* Can.

ind., Act. r., Arn., Bry., Canth., Petrol., Petros., Stan., Stram., Sul.; Sars. (< going up stairs); in phimosis (Merc., Sul., Nit. ac., Sep., Thu. Rhus, Sabi.); as if something alive in abdomen (Croc. s., Thuj.).

SYMPTOMS.

1. Mind.—Sadness and indifference.—The slightest contradiction gives offence.—Disposition to be easily frightened.—Mania, sometimes gay, sometimes serious or furious.—Irresolution and uncertainty, in consequence of too fickle an imagination.—As if in a dream.—Voices, including her own, seem to come from a distance; her own voice seems strange, as if it were somebody else speaking.—Lectophobia.—In writing, many errors are made.—Vanishing of thoughts.—Want of words.—Ideas seem to stand still; he stares in front of him; is absorbed in higher thoughts, but is unconscious of them.

2. Head.—Attacks of vertigo on walking, or when standing for some time, to such an extent as to cause falling.—Sensation as if intoxicated.—Headache, as if there were a stone pressing upon it.—Sensation of a heavy weight on the vertex.—Pressure and tension on the temples.—Compression in the sinciput, from the margins of the orbit to the temples.—Congestion in the head, with throbbings in the brain, cheeks red and hot; with pulsation, and not unpleasant warmth in it.—Sensation at the scalp, as if something were creeping on it, and frequent sensation, as if drops of cold water were falling on the head.

3. Eyes.—Aching pain in the balls of the eyes.—Cramp-like pulling in the eyes.—Weakness and confusion of sight, on viewing objects either distant or near.—Specks, and opacity of the cornea.—Appearance of a denticulated circle of whitish flames before the eyes.

4. Ears.—Throbbing and pressure in the ears; disappearing when stooping, and reappearing when raising the head again.—Buzzing in the ears, and sensation as if a skin were before them.

5. Nose.—Swelling of the nose, with copper-like redness.—Stupefying pressure on the root of the nose.—Heat and dryness of the nose.—Epistaxis, preceded by a sensation of burning in the nose.

6. Face.—Paleness of the face.—Tingling, itching, and smarting in the face, as if from salt.—Palpitation of the muscles of the face.—Heat of the face, and redness of the cheeks.

8. Mouth.—Dryness of the mouth, with viscid saliva, and absence of thirst.—Eruption in the vermilion border of the lips.—Embarrassed speech; at one time words are wanting, at another the voice fails.—The speech stops with extraordinary anxiety and agony on account of pain in the back.

11. Stomach.—Empty risings.—Regurgitation of acrid substances of a bitter sourness.—Nausea, with inclination for food.—Vomiting with sensation of strangulation, from the epigastrium to the throat.—Vomiting of green bile.—Pain in the stomach, on being touched, as if it were ulcerated, > by eating.—Attack of violent cramps in the stomach, with paleness, and sweat of the face; pulse almost extinct, and respiration rattling.—Aching, pinchings, and Cuttings in the epigastrium, and in the upper part of the stomach.

12. Abdomen.—Pain, as from a bruise, in the intestines.—Sensation of soreness in the abdomen (dropsy).—Hard and painful swelling of the hepatic region.—Cramp-like pains in the epigastrium.—Pulsation of the abdomen, as if from within outwardly.—Shuddering in the abdomen, as if cold water were running through it.—Painful jerks in the abdomen, as if it contained some living object.—Shaking of the intestines, as if they were detached, when the arms are moved.—Partial swelling of the abdomen, as from an encysted ascites.—Shocks and pressure towards the outside in the region of the groins.

13. Stool and Anus.—Diarrhœa, accompanied by cramp-like pains in the abdomen.—Pressure in the rectum towards the outside.—Sensation, as of a running of cold water from the anus.—Constipation, and hard fæces.

14. Urinary Organs.—Sensation of soreness and inflammation of the kidneys.—Urgent inclination to make water, with pressive pain.—Difficulty of making water, as if from paralysis of the bladder, and nocturnal strangury.—Obstinate retention of urine.—Stoppage of the urinary ducts by mucus and pus.—Urine, turbid, white, or reddish, and as if mixed with blood and pus.—Incontinence of urine.—Stream of water scattered.—Emission, drop by drop, of a scanty and sanguineous nature.—Burning pain in the urethra and in the bladder, before and during the emission of urine.—Urethra inflamed and painful to the touch.—Discharge of watery mucus from the urethra (gonorrhœa).—Yellow and mucous discharge from the urethra.—Ejection of a stone on making water.

15. Male Sexual Organs.—Genital parts cold.—Itching and inflammatory swelling of the prepuce, glans, and penis, with deep redness, and phimosis.—The penis feels sore and burnt when walking; walks with legs apart.—Aching in the testes, and tension in the spermatic cord, when standing upright.—Swelling of the prostate gland.—Erections, with tensive pains.—Repugnance to coition, or strong excitement of sexual desire.

16. Female Sexual Organs.—Profuse menstruation.—Sterility.—Miscarriage, with convulsions.—Threatened abortion, complicated with gonorrhœa; or on account of too frequent sexual intercourse.—Great excitement with sterility.

17. Respiratory Organs.—Loss of voice.—Accumulation of tenacious mucus in the larynx, with scraping, and difficulty of respiration.—Cough, violent and

dry.—Cough with greenish and viscid expectoration.—Difficulty of respiration, as if there were a weight on the chest, with wheezing and rattling in the bronchia.—Respiration short and oppressed.—Respiration difficult, and possible only when standing upright.—Difficulty of respiration, and oppression on the chest, with uneasiness in the throat; < lying down.—Respiration rattling.

18. Chest.—Shootings in the bottom of the chest, esp. on breathing or speaking, or during movement.—Inflammation of the lungs, with greenish vomiting and delirium.

19. Heart.—Painful strokes in the region of the heart.—Sensation as if drops were falling from the heart.—Inflammation of the heart.—Painful constraint and tension in the heart, with palpitation of the heart and anxiety.—Beatings of the heart, which are felt lower than their ordinary place.

20. Neck and Back.—Pains in the back, which impede speech and suspend respiration.—Shooting pain between the shoulder-blades.—Pressure towards the outside in the sacral region and coccyx.

22. Upper Limbs.—Pain, as from a bruise, in the shoulder and forearm during movement.—Cramps in the hands and the fingers.—Cramp-like contraction of the metacarpal bones, of the (r.) hand.—Sudden paralytic weakness of the hand, with trembling on laying hold of an object, and inability to hold it firmly.

23. Lower Limbs.—Cramps in the thighs, the calves of the legs, and the hams.—Weakness, staggering, and pains of the knees.—Displacement of the patella on going upstairs.—Pulsation and stretching pain in the feet, and in the joints of the foot, as after a long walk.—Spasmodic contraction of the the tendo Achillis, with violent pains.

24. Generalities.—Acute drawing, and contractive, pressive pains, with sensation of paralysis, or shocks and deep shootings in different parts, or else a sensation as if pinched with the fingers.—Rheumatic pulling during movement, apparently in the periosteum.—General dejection, with tottering and soreness of the knees.—Great fatigue, from having spoken or written.—Tetanus, chiefly in the upper limbs, and in the trunk.—Several symptoms are aggravated or provoked by touch, open air, and heat, as well as at night, and after midnight; by exercise, and after a meal.—Sensation, as if drops of cold water were falling (on head; from the anus; from heart).—Affections of ball of the foot or under part of the toes.—Typhoid fevers where strangury exists.

26. Sleep.—Invincible desire to sleep during the day.—Sensation of greater fatigue on waking in the morning, than when going to bed in the evening.—Nocturnal sleeplessness.—Great anxiety of heart.—At night, pricking and sensation of burning over the whole skin, as if from boiling water.

27. Fever.—Shuddering and shivering, with thirst.—Uneasiness and external cold.—Coldness of the body, with heat in the face.—Heat only in the face.—Pulse weak, slow, and scarcely perceptible.—Burning heat over the whole body at night.

Cantharis.

Cantharis vesicator. Lytta vesicator. Spanish fly. N. O. Insecta, Coleoptera. Tincture or trituration of living insects.

Clinical.—*Bladder affections. Burns*. Chordee. Diphtheria. Dysentery. Eczema. *Emissions. Erotomania*. Erysipelas. Eyes, inflammation of. Gastritis. *Gonorrhœa. Herpes zoster*. Hydrophobia. *Kidneys, affections of*. Mania. Neuralgia. Nymphomania. *Ovaries, affections of. Peritonitis. Pleurisy. Pregnancy, disorders of*. Retained placenta. Satyriasis. *Scarlatina. Spermatorrhœa. Strangury. Thirst. Throat, sore. Tongue, inflammation of. Urine, abnormal*. Vesication of skin.

Characteristics.—*Cantharis* belongs to the animal kingdom and finds its most prominent sphere of action in exciting the animal passions. There is anger in a very acute degree amounting to paroxysms of rage; and a corresponding condition of the bodily tissues. The word "*irritation*" best expresses the totality of the *Cantharis* effects. The pains are burning, and sharp, lancinating along the course of a nerve. Neuralgia of head and face from taking cold, with loud screams and jerking of muscles. The slightest touch or approach aggravates the mental symptoms. Violent spasms reproduced by touching larynx. There is also < from dazzling objects and by water—completing the hydrophobia picture. It may be well to remember in this connection the violent erotic action of *Canth*., for many have maintained that rabies only arises among domesticated animals where sexual functions are under more or less abnormal conditions. Guernsey gives as the special indications in hydrophobia: "Moaning and violent cries, interspersed with barking." *Canth*. produces amorous frenzy, unbounded sexual desire; also sexual erethism and excitability. It acts on the brain, producing inflammation of the tissues. The eyes are bright, pupils widely dilated. Erysipelas commencing in nose. The face is generally pale or yellowish, with an expression of deep-seated suffering. There is diphtheritic inflammation of throat, severe burning, constriction; thirst, with aversion to drinking. The stomach is inflamed. Pain in abdomen colic-like, doubling the patient up, cutting, burning, lancinating. Dysenteric stools with tenesmus. In the genito-urinary region the most intense action is developed. There is extreme superficial sensitiveness in hypogastrium (especially when the bladder is full), attended with unbearable tenesmus vesicæ. Cutting, burning pains from the kidney down to urethra. Strangury. Can pass only a few drops, like molten lead. Irritation of all grades. The sexual appetite is aroused to the point of mania. Coitus does not always reduce it. On the skin and serous

membranes the irritating effects of the remedy are equally pronounced. Pleurisy with effusion has been cured by the remedy given internally. Burning, stitches, shooting pains and exudation are the indications. So the fly-blister treatment of olden days had more to say for itself than those who used it knew. Vesication is the note of its effects on the skin and indicates its use in burns of the first degree, erysipelas, blisters. In burns the part may be treated with a lotion containing a few drops of the tincture to the ounce of water, a dilution being given internally. An ointment made with the 3x is a good application for herpes zoster. H. N. Guernsey observed that *Canth*. is almost always the remedy for whatever other sufferings there may be, when there is as well frequent micturition with burning, cutting pain; or if cutting burning pain attends the flow, even when micturition is not very frequent. Guernsey also pointed out that *Canth*. should be studied in treating affections of the air-passages when the mucus is tenacious. Nash records a case in which this observation led him to make a pretty cure. *Kali bich*. had completely failed to relieve a lady who had suffered long from bronchitis. The mucus was profuse, tenacious, and ropy. One day the patient mentioned that she had great cutting and burning on urinating, which she was obliged to do very frequently. *Canth*, made a rapid cure. *Canth*. has cured a case of malarial cachexia in which the symptoms were always < when the urine was scanty. "Burning" runs through the *Canth*. pathogeneses in a very striking way. Another marked feature of the remedy is its effect in increasing the secretions of membranes. *Canth*. "expels moles, dead fetus, placentæ; promotes fecundity" (Guernsey). The < is: from drinking; from coffee; from drinking cold water; whilst urinating; after urinating; from touch. > From rubbing; from warm applications.

Relations.—*Antidotes:* Camph. antidotes the strangury and retention of urine of Canth., Apis the cystitis, Kali nit. the renal symptoms. For its throat symptoms it is nearest to Capsicum. *Other antidotes:* Acon., Lauro., Puls. Canth. is *antidote to:* Camph., Vinegar, Alcohol. *Compatible:* Bell., Merc., Pho., Pul., Sep., Sul. *Incompatible:* Coffea. *Compare:* Doryph., Coccus cact., Coccionella, Apis, Bell., Bry., Can. s. (more burning and smarting; Canth. more tenesmus); Petros. (sudden urging); Caps; Puls. (retained placenta); Ars. (delayed urination after parturition); Thuja (erections; those of Canth. prevent urination; those of Thuja do not); Merc. (semen mixed with blood); Sarsapar. (urine burns like fire, shreddy particles and blood in it); Arum, Arn., Rhus, Ranunc. scel. (Teste classes Canth. with Senega and Phos. ac. in his Conium group.)

SYMPTOMS.

1. Mind.—Dejected and lachrymose humour.—Anxious inquietude, with agitation, which necessitates constant motion.—Want of confidence in one's self.—Pusillanimity and timidity.—Disposition to be angry, and to fly into a rage.—Paroxysms of rage, with cries, blows, and barkings, renewed on feeling the gullet, and at the sight of water.—Delirium.—Insanity.—Mania, with extravagant

acts and gestures.—Constantly attempting to do something, but accomplishing nothing.

2. Head.—Vertigo, with loss of consciousness, and mist before the sight, chiefly in the open air.—Headache, which interrupts sleep at night.—Pressive lancinations in the head, which disappear on walking.—Acute drawing pains in the head, with vertigo.—Congestion in the head.—Throbbing in the brain, and heat, which ascends to the head.—Sensation of burning in the head, as if the interior were raw, with inflammation of the brain.—Drawing, jerking, and gnawing in the bones of the head.—Headache, as if the hair were pulled.—Hair standing on end.—Headache, as if coming from the nape of the neck, and wishing to escape by the forehead.—Burning in the sides of the head, ascending from the neck, with soreness and giddiness; < in the morning and afternoon; when standing or sitting; > when walking or lying down.

3. Eyes.—Pain in the eyes, with sensation as if the eyelids were excoriated, chiefly when they are opened.—Inflammation of the eyes, with burning smarting.—Yellowish colour of the eyes.—Prominence, and convulsive movements of the eyes; fiery, sparkling, staring look.—Objects seemed to be tinged with a yellow hue.

4. Ears.—Inflammation and burning heat of the ears.

5. Nose.—Swelling of the nose, even in the interior, with redness and burning heat.—Erysipelatous inflammation of the dorsum of the nose, extending to the cheeks (r.) with hardness and subsequent desquamation.—Fetid and sickly smell before the nose.—Coryza of long duration, and catarrh, with copious flow of viscid mucus from the nose.

6. Face.—Paleness of the face.—Face hollow, hippocratic, with features which express anguish and despair.—Yellowish colour of the face.—Erysipelatous inflammation and desquamation of the cheeks.—Burning redness and swelling of the face.—Swelling at one side of the face (r.), with tension.—Swelling and inflammation of the lips.—Fissure and exfoliation of the lips.—Trismus.

7. Teeth.—Toothache, generally drawing, < by eating.—Fistula in the gums.—Ulceration of the gums.

8. Mouth.—Taste of cedar pitch in the mouth.—Inflammation of the mucous membrane of the mouth.—Inflammation of the mouth and pharynx.—Inflammation and suppuration of the tonsils, with inability to swallow.—Burning in the mouth, extending down the pharynx, œsophagus and stomach; < from drinking cold water.—Phlegmonous inflammation of the interior of the cheek.—Aphthæ in the mouth.—Frothy salivation, with streaks of blood.—Foam at the mouth.—Coagulated blood coming from the mouth.—Inflammatory swelling and suppuration of the

tongue.—Suppuration of the gums.—Fistula dentalis (suppurating) (upper incisors).—Weakness of the organs of speech, and languid diction.

9. Throat.—Sore throat, on swallowing.—Difficult deglutition, with strangulation in the throat, and nocturnal regurgitation of food.—Impeded deglutition, esp. in the case of liquids.—Burning in the throat, on swallowing.—Inflammation and ulceration of the tonsils and of the throat; with inability to swallow.—Burning pains in the throat, < by drinking water.

10. Appetite.—Loss of taste.—Taste of pitch in the mouth and in the throat.—Thirst, from dryness of the lips, with repugnance to all drinks.—Want of appetite, with disgust and repugnance to all sorts of food.

11. Stomach.—Risings, with burning sensation, as if from pyrosis, aggravated by drinking.—Sob-like risings, which seem to take an inverse direction and to return towards the stomach.—Vomiting of undigested food.—Vomiting of bilious and slimy substances, or of blood.—Great sensitiveness of the precordial region.—Pressive fulness, with anxiety and inquietude in the stomach.—Smarting and burning pains in the stomach.—Inflammation of the stomach.

12. Abdomen.—Pains in abdomen, after taking coffee.—Inflammation of the liver.—Shootings and contraction in r. hypochondrium.—Great sensibility of the abdomen to the touch.—Burning pain in the abdomen, from the gullet to the rectum.—Burning pain above the navel, on coughing, on sneezing, on blowing the nose, with yellowish spots on the part affected.—Inflammation of the intestines.—Dropsical swelling of the abdomen.—Incarceration of flatulency under the hypochondria.

13. Stool and Anus.—Constipation and hard fæces.—Diarrhœa, with evacuation of frothy matter, or of greenish mucus, with cutting pains after the evacuation and burning pains in the rectum.—During stool, burning in the anus; prolapsus ani.—After stool, chilliness and tenesmus.—Dysenteric diarrhœa, with nocturnal evacuation of whitish mucus, and of solid pieces, like false membranes, with streaks of blood.—Sanguineous evacuations.

14. Urinary Organs.—Retention of urine, with cramp-like pains in the bladder.—Urgent and ineffectual efforts to make water, with painful emission, drop by drop.—Difficult emission of urine, in a weak and scattered stream.—Increased secretion of urine.—Urine, pale yellow, or of a deep red colour.—Flow of sanguineous mucus from the bladder.—Emission of blood, drop by drop.—Purulent urine.—Burning smarting, on making water.—Incisive pains in the front part of the urethra, during the emission of urine, and afterwards.—Sharp, tearing, and incisive pains, successive pullings and pulsations in the urinary organs.—Burning, stinging and tearing in the kidneys.—Pressing pain in the kidneys, extending to the bladder; along the ureters; relieved by pressing upon the glans.—Inflammation and

ulceration of the kidneys, of the bladder, and of the urethra.—Exceedingly painful sensibility of the region of the bladder on its being touched.

15. Male Sexual Organs.—Draggings in the spermatic cord, on making water.—Inflammation and gangrene of the genital parts.—Painful swelling of the testes.—Sexual desire greatly increased, with painful, frequent erections (with gonorrhœa), of long continuance, as in priapismus.—Ready emission, during amorous caresses.—Spermatorrhœa.—After coition, burning pain in the urethra.

16. Female Sexual Organs.—Catamenia premature and too copious, with black blood and pains during the flow.—Voiding of moles, of fœtus, and of placentæ.—Inflammation of the ovaries.—Swelling of the cervix uteri.—Corrosive leucorrhœa, with burning sensation on making water, and excitement of sexual desire.

17. Respiratory Organs.—Hoarseness, with painful rattling of viscid mucus, copious, and coming from the chest, and with incisive shootings in the trachea.—Oppression of breathing, with sensation of constriction of the pharynx.—Stitches in the chest during air inspiration. (Inflammation of the lungs.).—Inflammation of the larynx.—Sensation of excessive weakness in the organs of respiration, on speaking and on breathing deeply.—Voice feeble, timid, and trembling.

18. Chest.—Respiration rendered difficult and oppressed by constriction of the throat, and dryness of the nose.—Suspension of respiration in going up a hill, with rattling in the chest and nausea.—Shootings in the chest, and in the sides.—Burning pains in the chest, from whence small clots of blood are at times detached.—Palpitation of the heart.

20. Neck and Back.—Stiffness in the nape of the neck, with tension when bending it over.—Acute drawing pains in the back.—Tearing in the back (after rising from a seat).—Sensation of constriction in the spine.—Emprosthotonos and opisthotonos.

21. Limbs.—Weakness and swelling of limbs.—Dropsical swelling of hands and feet.—Cold sweat of hands and feet.

22. Upper Limbs.—Acute tractive pains in the arms.—Want of strength in the hands.—Eczematous eruption on dorsum of hand and between fingers, itching and burning fearfully, < from cold water, > from warmth.

23. Lower Limbs.—Pains in the hips, with spasmodic sufferings in the urinary passages.—Acute tractive, piercing pains, in the legs, from the feet to the hips.—Trembling of the legs.—Darting pain from r. foot to r. side of h cad in paroxysms.

24. Generalities.—Burning pains, as from excoriation, in all the cavities of the body.—Acute shootings towards the interior in different parts.—Drawing, arthritic pains in the limbs, with affection of the urinary ducts, mitigated by rubbing.—Violent pains, with groans and lamentations.—Sensation of dryness in the joints.—Want of flexibility of the whole body.—Dejection and weakness, with excessive sensibility in all parts of the body, trembling, and desire to lie down.—Prostration of strength, proceeding even to paralysis.—Convulsions, tetanus.—The sufferings show themselves chiefly on the r. side, and are mitigated in a recumbent posture.—The symptoms are renewed every seven days.

25. Skin.—Itching vesicles, with burning pain on being touched.—Blisters, from burns.—Erysipelatous inflammations.—Acute drawing pains in ulcers, with increased suppuration.

26. Sleep.—Great drowsiness, esp. in the afternoon, with yawnings and stretching.—Sleeplessness without apparent cause.—At night, half sleep, with frequent waking.

27. Fever.—Pulse hard, full and rapid.—Fever, which manifests itself only by cold.—Cold and shivering, with cutis anserina and paleness of the face.—Thirst only after the shivering.—Perspiration; cold, esp. on the hands and feet; on the genitals.—Sweat, of the smell of urine.—Pulsation through the trembling limbs.

Capsicum.

Capsicum annuum. Cayenne Pepper. (South America and West Indies.) N. O. Solanaceæ. Tincture of the dried pods.

Clinical.—Amaurosis. Asthma. Brain, irritation of. Delirium tremens. *Cough*. Diarrhœa. Diphtheria. Dysentery. *Ear affections*. Glandular swellings. *Hæmorrhoids. Headache. Heartburn*. Hernia. *Home-sickness. Intermittents. Lungs, affections of*. Measles. *Mouth, ulcers in*. Neuralgia. *Nose, affections of*. Obesity. Œsophagus, stricture of. Paralysis. Pleuro-pneumonia. *Pregnancy, disorders of. Rectum, diseases of. Rheumatic gout. Rheumatism. Sciatica*. Scrofula. Seasickness. Stomatitis. *Throat, sore*. Tongue, paralysis of. *Trachea, tickling in. Urine, disorders of. Whooping-cough*. Yellow fever.

Characteristics.—*Capsicum* should be studied in connection with the other great members of the Solanum family, *Belladonna, Stramonium, Hyoscyamus, Dulcamara, Solanum Carolinense, Solanum nigrum, Solanum tuberosum* (Potato), and *Lycopersicum esculentum* (Tomato). It acts with great intensity on the mucous membranes, and also on the bones: affections of bones in general; pains in bones of face; inflammation of petrous bone. *Capsicum* corresponds especially to persons of light hair and blue eyes; also to persons of lax fibre and muscles; obesity; lazy, fat,

unclean persons who dread the open air; clumsy children; awkward persons; hæmorrhoidal troubles. Lack of reaction and bodily irritability. Symptoms generally appear on left side. As with *Dulcamara*, there is extreme sensitiveness to cold and damp which < most symptoms. The well-known burning effects of red pepper is a leading indication for its use Burning pains" wherever occurring demand that *Capsicum* should have the first consideration, if there are no other determining symptoms in favour of another remedy. The burning of *Caps*. is < from cold water. Redness of the skin, and even a scarlet eruption like *Belladonna*. Very characteristic is a cough with fetid breath, or bad taste. Cough causing splitting pain in head. Chill at 10.30 a.m., beginning between shoulders and running down back. A case of poisoning in a worker in a capsicum-plaister factory brought out: severe chill with shaking; and it ended in an intense coryza. *Caps*. 30 brought speedy relief in a case of tympanites following laparotomy, the concomitant symptoms being: cold nose and extremities, and cyanosis. *Caps*. is a notable fever remedy. The patient is thirsty—but drinking causes shuddering. Absence of thirst during heat. Burning, pungent pains, < by application of cold water, are very marked. Burning, pungent sensation in face < by slightest draught of cold air; burning in throat; burning blisters in roof of mouth (diphtheria or gangrene); constriction of throat, spasmodic closure, pain when not swallowing; burning in rectum, tenesmus, hæmorrhage; burning on urination; burning in bladder. *Caps*. is among the remedies of the front rank in stomatitis in inflammation of the middle ear, with involvement of mastoid cells in the sore throat of smokers and drinkers, with inflammation, burning, relaxed uvula, sometimes dry, sometimes with tough mucus difficult to dislodge. Local burning and general chilliness distinguish *Caps*. in a vast number of cases. *Caps*. is indicated where there is lack of reaction in persons of lax fibre. The mental state shows home-sickness. "Home-sickness, with red cheeks and sleeplessness; with hot feeling in fauces." (With a few doses of Caps. I cured completely an Australian girl, of florid complexion, who had come to London to study, and who was quite incapacitated by home-sickness.) There is awkwardness, fearfulness, obstinacy. Alternating states; laughs and weeps by turns; is now jocose and sings, but becomes angry from slightest cause. Delirium: it has been given with great success in delirium tremens, mostly in drachm doses of the tincture, given in milk. > From heat is the most important modality. Patients who cannot get to sleep without a hot bottle at their back. Rest < some forms of headache and > others.
Motion = headache as if skull would split; as if bruised; asthma; chilliness; stiff joints to crack. Ascending = asthma. < By touch. Shuns open air; dreads uncovering; dreads air, especially a draught. Spirits become lower as body becomes cooler. Sensation as if cayenne pepper were sprinkled on parts. Violent pains in various places; now here now there. Sensation as if parts would go to sleep. I had one patient on whom *Caps*. acted well in summer, but not in winter. Equal parts of tincture of Caps. and glycerine make an excellent liniment for external use in many cases of chronic rheumatism and neuralgia.

Relations.—*Antidoted by:* Calad., Camph., Cina, Chi., Sul. ac., or vapour of burning sulphur. *It antidotes:* Effects of Alcohol, Coffee, Opium, Quinine. *Compatible:* Bell., Lyc., Puls., Sil. *Compare:* Arn., Bell. (headache, &c.); Bry. (headache from cough); Canth. (burning pains, throat symptoms, dysentery, urinary symptoms); Pso. (lack of reaction; despair of recovery; Caps. in persons of lax fibre); Lach. (thirst before chill; continues into chill; drinking <; also Elaps); Nat. m., Carb. v. and Menyanth. (intermittents; Nat. m. is the "chronic" of Caps.); Carb. an. and Nit. ac. (inflammation behind ears, Aur. and Nit. ac. preferable in abscess; Sil. in chronic suppuration); Phos. ac. (home-sickness; Caps. has red face); Ars., Alum., Carb. v., Lyc. have burning pains > by heat. Merc., Nit. ac., Sul. have passage of blood from bowels. Crot. t. (after drinking urging to stool); Helleb. (colic with spasm of bladder); Plat. (burning, pungent pain in face, < slightest draught of air, warm or cold). Compare also Solanaceæ.

SYMPTOMS.

1. Mind.—Tendency to take alarm.—Discontent.—Opinionativeness.—Strong disposition to take everything in bad part, to fly into a rage, even on account of harmless jests, and to utter reproaches.—Capricious and exceedingly changeable humour.—Dulness of all the senses.—Want of reflection and awkwardness.—Nostalgia, with redness of the cheeks and sleeplessness.—Disposition to jest, and to utter witticisms, but gets angry at least trifle.

2. Head.—Bewilderment of the head.—Intoxication, as if from spirituous liquors.—Headache, as if the cranium were going to burst, on walking, or moving the head or coughing.—Attack of semi-lateral headache, pressive and shooting, with nausea, vomiting, and loss of memory, aggravated by movement of the eyes.—Shooting, or acute, drawing pains, esp. in the sides of the head.—Pain of pressive severing in the brain, as if from fulness.—Pulsative headache; (better in motion).—Gnawing itching in the scalp, with pain in the roots of the hair after scratching.

3. Eyes.—Pressure in the eyes, as if from a foreign body introduced into them.—Inflammation of the eyes, with redness, burning pain, and lachrymation.—Eyes prominent.—Confusion of sight, esp. in the morning, as if something were swimming on the cornea, mitigated for an instant by rubbing.—Objects appear black when brought before the eyes.—Sight entirely extinct, as if from amaurosis.

4. Ears.—Acute drawing pains in the ears.—Itching and pressure in the bottom of the auditory tube.—Painful swelling on the bone behind the ear; < by touch.—Tearing behind l. ear.—Diminution of hearing after previous burning and stinging in the ear.

5. Nose.—Epistaxis, esp. in bed, in the morning.—Painful pimples under the nostrils.—Dry coryza, with tingling and tickling in the nostrils.

6. Face.—Redness of the face (without heat), often alternately with paleness.—Many small red spots on the face.—Corroding, itching tetter on the forehead.—Pains in the face, in the bones, where they are aggravated by the touch, or in the nerves where they are aggravated during sleep.—Dull pressure on the cheek-bone.—Swelling of the lips.—Ulcerated eruptions, and fissures in the lips.

7. Teeth.—Pains in the teeth, as if they were set on edge, or elongated.—Pullings in the teeth, and in the gums.—Swelling of the gums.

8. Mouth.—Burning vesicles in the mouth and on the tongue.—Viscid saliva in the mouth.

9. Throat.—Sore throat with painful deglutition and pulling sensation in the pharynx.—Inflammation, with dark redness and burning of the throat.—Cramp-like contraction of the throat.—Uvula elongated, with sensation as if it were pressing on something hard.

10. Appetite.—Unnaturally increased appetite, alternated with aversion to food.—Aqueous and insipid taste.—Sour taste in the mouth, and also a taste of broth.—Want of appetite.—Desire for coffee, with inclination to vomit before or after taking it.—Pyrosis.—Nausea, felt generally in the epigastrium, with pressure on the part.

11. Stomach.—Pain in the stomach, which is inflated.—Sensation of cold in the stomach.—Burning pain in the stomach, and in the epigastrium, esp. just after a meal.—Shootings in the epigastrium, on breathing rapidly and deeply, on speaking, and on the part being touched.

12. Abdomen.—Abdomen inflated, almost to bursting, with pressive tension, and suspension of respiration.—Painless rumbling in the abdomen.—Colic about umbilicus, with mucous stools.—Draggings and movements in the abdomen.—Strong pulsations in the abdomen.—Flatulent colic.—Protrusion, flatulent hernia in the inguinal ring.

13. Stool and Anus.—Tenesmus.—Small dysenteric evacuations, with discharge of slimy and sanguineous matter, preceded by flatulent colic.—Nocturnal diarrhœa, with burning pains in the anus.—Blind hæmorrhoids, with pain during evacuation.—Hæmorrhoidal tumours, with burning (bleeding).

14. Urinary Organs.—Tenesmus of the bladder.—Frequent, urgent and almost useless efforts to make water.—Burning pains on making water.—Cramp-like and incisive contractions in the neck of the bladder.—Incisive and shooting pains in the

urethra, when not urinating.—Purulent running from the urethra, as in gonorrhœa.—Flow of blood from the urethra, which is painful to the touch.

15. Male Sexual Organs.—Impotence and coldness of the genital parts.—Purulent discharge from the urethra.—Dwindling of the testes.—Violent erections in the morning.—Trembling of the whole body, during amorous caresses.

16. Female Sexual Organs.—Disordered menstruation, with a pushing or sticking sensation in l. ovarian region.

17. Respiratory Organs.—Hoarseness.—Cough, more violent in the evening and at night, with pains in other parts of the body, esp. in the head and in the bladder, as if they were going to burst, or with pressure in the throat and ears, as if an abscess were about to open in them.—Cough, after taking coffee.—Cough, with fetid breath, and disagreeable taste in the mouth.

18. Chest.—Want to breathe deeply.—Deep breathing, almost like a sigh.—Oppressed respiration, sometimes as if proceeding from the stomach, or from fulness of the chest.—Asthma, with redness of the face, eructation and sensation as if the chest were extended.—Constrictive pain in the chest.—Shootings in the chest on breathing.—Pulsative pain in the chest, which suspends respiration, and which is increased by movement.

20. Neck and Back.—Stiffness of the neck.—Acute drawing pains in the back.

21. Limbs.—Rheumatic pain in limbs.—Tension in the knees and stiffness in the calves of the legs on walking.—Stiffness of the arms and legs, with tingling as when they are asleep.—Shooting-tearing from hip to knee and foot, esp. when coughing.—Caries of r. hip; l. leg atrophied, violent pains in atrophied leg.—Cold sweat on upper part of legs.

24. Generalities.—Aching pains.—Drawing pains in the limbs excited by movement.—Pain, as from dislocation, and stiffness in the joints, with cracking, esp. at the beginning of a walk.—Phlegmatic temperament, and relaxed fibres.—Cramps in the body, with stiffness in the arms and legs, with numbness and sensation of tingling.—Repugnance to movement.—The symptoms show themselves chiefly in the evening and at night, and are aggravated by the open air, by contact, and by cold, as well as on beginning to move, and after drinking or eating.—Great sensibility to fresh air, and to a current of air.—Symptoms generally appear on l. side; suited for light-haired people; tendency to get fat; laxness of the muscles.; bloatedness of the skin.—Affections of the bones in general; pains in bones of the face.

26. Sleep.—Sleeplessness, without apparent cause.—Sleeplessness after midnight.—Sensation as if falling from a height during sleep.—Sleep full of dreams.

27. Fever.—Pulse irregular, and often intermitting.—Febrile shivering and cold over the whole body, with ill-humour increasing with the cold, or else with anxiety, dizziness and dulness of the head.—Shivering, commencing at the back; between shoulders.—Cold and shivering whenever drink is taken.—Fever with predominance of cold, and with thirst, burning heat, and affections of the mucous membranes.—Shiverings, with much thirst, afterwards heat, (without or) with thirst and perspiration.—On the upper part of the legs cold perspiration.

Carbo Animalis.

Animal Charcoal. Made from charred ox-hide. Contains Calc. phos. C (impure). Trituration.

Clinical.—*Acne rosacea*. Aneurism. *Appetite, disordered*. Breast, cancer of. *Bubo*. Cancer. Cataract. Constipation. Coccygodynia. Cough. Empyema. *Eructations. Face, eruption on*. Gangrene. Glandular indurations. *Hæmorrhoids*. Headache. Home-sickness. Hypertrophy. Lactation, effects of. *Legs, pains in*. Leucorrhœa. Lumbago. *Nose, affections of*. Otorrhœa. Pancreas, indurated. *Perspiration, altered*. Pleurisy. Polypus. Scrofula. Strabismus. Syphilis. *Tongue, affections of. Trachea, affections of*. Ulceration. Uterus, cancer of. Vision, disorders of.

Characteristics.—*Carb. an*. is suited to old persons, greatly debilitated, especially when there is venous plethora, and blueness of skin. Complaints occurring in scrofulous or venous constitutions. Ulceration, gangrene, and decomposition are marked, and may be looked upon as the counterpart of the antiseptic properties of the crude substance. Copper-coloured eruptions show the appropriateness of the drug to many cases of constitutional syphilis. Glands of stony hardness. Buboes. It is often indicated in the last stage of pneumonias, bronchitis, phthisis. Right chest is most affected. Cancer of breast with burning, drawing pains through breast. Cancer of uterus, burning pains down thigh. Affections from loss of animal fluids, especially nursing women. Weakness of nursing women; can hardly walk across the room. "Gone" feeling from loss of fluids. Too weak to eat. Weeps when she eats. Nausea at night. Hunger in early morning. The goneness of *Carb. a*. is not > by eating (*Carb. v*. > eating). Constipation where patient thinks bowels will be moved but only wind passes. There is a smothering feeling on closing eyes. Aversion to dark. A peculiar symptom is: A feeling of looseness—of eyes in sockets; of brain on motion or coughing. Far-sighted (*Carb. v*. is near-sighted). Objects seem farther apart and brighter. Aversion to cold (*Carb. v*. to heat). There are many sensations of coldness: in chest; about stomach. Discharges are ichorous; but the discharge from piles is inodorous. *Carb. an*. 3x trit. has been used for insufflation in aural polypi. The leucorrhœa stains linen yellow. Sweat stains yellow. Expectoration is greenish, purulent, offensive (*Carb. v*. yellow, more fetid). Gnawing pains in tibiæ (during the night), such as usually followed cold

feet. A. W. K. Choudhury reports a case of cough of two years' duration, in an unhealthy boy of twelve, cured by *Carb. a*. The symptoms were: "Cough evening and morning, or *after lying down*, especially at *night*, thick or frothy whitish or yellowish sputa, sweetish when thick; < lying on r. side; < from exposure to air, to which he is very sensitive. Great tendency to catch cold." The pains in the coccyx are peculiar; a dragging, bruised pain, when touched it becomes burning. It has cured many cases of injured coccyx and of neuralgia of the bone. The lumbago of *Carb. an*. occurs when walking, standing, and lying; feels as if the back were broken. The mental state is one of low spirits, sadness; weeps when she eats; easily frightened, afraid in the dark; home-sick; wants to be alone. Fear of the dark and < on closing eyes is very marked. Hearing is confused; cannot tell the direction from which sounds come. There is an ichorous otorrhœa; and swelling of the periosteum over the mastoid bone is very characteristic. Tip of nose red; or blue. Disagreeable smoothness of the teeth. There is a hoarse, suffocating cough producing a shaking of the brain as if it were loose. Green, purulent, horribly offensive expectoration. Axillary glands inflamed buboes in groins. Pressure with hand > coldness of stomach. Symptoms are < in cold air; > in warm room. < From sprains from touch. < After shaving. Rest < head symptoms. < Lying on r. side (cough). After menses, throbbing headache, < in open air. Weakness < during menses.

Relations.—*Compare:* Calc. phos. (nearest analogue; Carb. an. contains Calc. ph.); in indurations, suppurations, &c., Bad., Bro.; loss of fluids, Chi.; Graph.; nostrils adhere to septum, Pho.; gone feeling, loss of fluids, induration of cervix, pressure an back, groins, and thighs during menses, Sep. (Sep. has not the venosity, the copper-coloured face, flatulent gastric disturbances, or offensive ichorous discharges, or throbbing headache after menses of Carb. an.; Carb. v. has not the indurations of Carb. an. or Sep.); Coccul. has the same weakness and prostration as Carbo an., but in the case of the latter the weakness is in consequence of the loss of fluid, whilst with Coccul. it is part of the general effect of the remedy. Puls.; Sil.; in vertigo with epistaxis, Sul.; aversion to darkness, Am. m., Bar. c., Calc., Stro., Stram.; hunger in early morning, Ant. c., Asar., Calc., Sabad.; swelling behind ear, Caps., Aur.; burning pains, Caps.; weakness of nursing women, Oleand. *Antidoted by:* Ars., Camph., Nux, Vinegar. *Antidote to:* Effects of Quinine. *Complementary:* Calc. phos.

Causation.—Loss of fluids. Lifting. Strain. Eating. Eating spoiled fish. Eating decayed vegetables. Quinine.

SYMPTOMS.

1. Mind.—Nostalgia and mournful feeling of isolation, with tears.—Weeps during a meal.—Fear and apprehension, esp. in the evening.—Discouragement and despair.—Disposition to be frightened.—Fright in the dark.—Alternate feeling of

gaiety and gloom, or of irascibility and ill-humoured taciturnity.—Confusion of ideas and dulness, esp. in the morning.

2. Head.—Vertigo, esp. in the evening or in the morning, and sometimes with nausea in the act of rising, after remaining long in a recumbent posture, or with obscuration of the eyes, on moving the head.—Headache in the morning, as after a debauch.—Headache at vertex as if skull torn open.—Headache in the open air, and aggravated by damp weather.—Heaviness, esp. in the occiput, with bewilderment.—Pressive headache, even after a meal, forces the closing of the eyelids.—Congestion and internal heat of the head.—Sensation of wavering of the brain, at every movement.—Sensation of torpor in the head.—Acute, drawing pains in the teguments of the right side of the head.—Tension of the skin of the forehead, and of the crown of the head.—Sensibility of the scalp to the pressure of the hat.—Scabs and eruption on the head.

3. Eyes.—Sensation as if the ball of the eye were detached from the socket, with weakness of sight.—Presbyopia with dilatation of the pupils.—A net seems to swim before the eyes.

4. Ears.—Running from the ears.—Discharge of pus from the ears.—Confusion of hearing; sounds reach the ears indistinctly, does not know from what direction they come.—Buzzing in the ears.—Swelling of the periosteum behind the ear.—Swelling of the parotids.

5. Nose.—End of the nose red and cracked, with burning pain.—Nose swollen, with scabby pimples (as at the commencement of a cancer?).—Desquamation of the skin of the nose.—Painful sensibility of the bones of the nose.—Epistaxis, preceded by vertigo, or pressive headache.—Stoppage of the nose.—Dry coryza.—Fluent coryza, with loss of smell, sneezing and frequent yawning.

6. Face.—Spots in the face, which are smooth, palpable to the touch, and rose-coloured.—Shootings in the cheek-bones, in the teeth and jaws.—Painless copper-coloured eruption in the face.—Erysipelas in the face.—Swelling of the mouth and of the lips, with burning pain.—Heat of the face and head in the afternoon.—Blisters on the lips.—Lips cracked and bleeding.

7. Teeth.—Pulling odontalgia on eating bread, or with dull pulsation after drinking anything cold.—Excessive looseness of the teeth.—Tractive pains in the gums.—Red and painful swelling and bleeding of the gums.—Purulent vesicles in the gums.

8. Mouth.—Fetid smell from the mouth.—Burning vesicles in the mouth and on the tongue.—Dryness of the tongue and of the palate.

9. Throat.—Sore throat, as from excoriation, with scraping and shooting from the throat to the stomach.—Accumulation of mucus in the throat, with coughing and rattling.

10. Appetite.—Bitterness in the mouth, esp. in the morning.—Acid and mucous taste.—Repugnance to fat and tobacco smoke, which cause nausea.—Great weakness of digestion, to such an extent that almost all food occasions suffering.

11. Stomach.—Risings with taste of food, or else acid.—Empty risings with pain.—Pyrosis, with scraping in the throat.—Hiccough after a meal.—Considerable inflation after a meal.—Flow of sour water from the mouth.—Nausea, also at night.—Faint, gone feeling; also from suckling child, not > by eating.—Water-brash.—Pressure at the stomach, as if from a weight, when fasting, and in the evening, after lying down.—Cramp-like or contractive pains in the stomach.—Burning pain in the stomach.—Squeezing in the stomach, as if by claws.—Noisy grumbling in the stomach.

12. Abdomen.—Pain in the liver, as if from excoriation, when the region is touched.—Pressure and cuttings in the hepatic region.—Abdomen inflated and extended.—Constriction and squeezing, as if by claws, in the abdomen.—Cuttings and shootings in the groins.—Inguinal hernia.—Loud rumbling in the abdomen.—Incarceration of flatus.—Fetid flatulency.

13. Stool and Anus.—Ineffectual efforts to evacuate; discharge of wind only.—During stool, pain in the small of the back, with inflation of the abdomen.—Fæces hard and knotty.—Frequent evacuations during the day.—Before the evacuation, traction from the anus to the vulva.—Sacral pains during the evacuation.—Burning hæmorrhoidal tumours in the anus.—Burning pains and shooting in the anus, and in the rectum.—Excoriation and oozing (inodorous) at the anus.—Discharge of tenia.—Viscid oozing at the perinæum.—Tendency to galling at the anus from riding on horseback.

14. Urinary Organs.–Urgent desire to make water, with abundant emission.—Emission of urine at night.—Involuntary emission of urine.—Fetid urine.—Burning urine.—Burning soreness in the urethra when urinating.

15. Male Sexual Organs.—Absence of sexual desire.—Frequent pollutions, followed by weakness and anxious inquietude.

16. Female Sexual Organs.—Premature catamenia.—Leucorrhœa burning, smarting, or which imparts a yellow tinge to the linen.—Serous and fetid lochia.—Painful nodosities and indurations in the mammæ.—Erysipelatous inflammation of the breasts.—Nausea of pregnant females, coming on principally at night; faint and empty sensation in the pit of the stomach is produced by

nursing.—Menses are followed by great exhaustion.—Uterine hæmorrhages where there is much affection of the glands.

17. Respiratory Organs.—Oppression of the chest, esp. in the evening and at night.—Aphonia at night.—Matutinal hoarseness.—Hoarse cough, with pain as of excoriation in the throat; in the morning, after rising.—Dry cough at night.—Suffocating cough, esp. in the evening, after having slept.—Matutinal cough with expectoration, excited by a sensation of dryness in the throat.—Cough, with purulent expectoration, and shootings in the r. side of the chest.—Cough, with discharge of greenish pus (suppuration of the lungs).—Cough < lying on r. side.

18. Chest.—Panting respiration.—Rattling in the throat, in bed in the evening.—Oppressed respiration, esp. in the morning and after a meal.—Suffocating constriction of the chest, esp. in the morning, in bed.—Sharp burning stitches.—Shootings in the chest, as from an abscess, esp. on breathing.—Pleurisy assuming a typhoid character, sickly bluish colour of skin, expectoration puriform, often putrid in character.—Far gone pleurisy.—In pleurisy where everything is cured but the stitch, and that remains.—Green pus from chest.—R. side most affected, stitches in r. side.—Sensation of cold in the chest.

19. Heart.—Palpitation of the heart, in the morning, in the evening, and on singing in a public place.—(Atheroma and aneurism.)

20. Neck and Back.—Painful swelling and induration of the glands of the neck, and of the parotid glands, with shooting pain.—Tetters under the arm-pit.—Moisture in the arm-pit.—Induration of the axillary glands.—Nocturnal pains in the back.—Pressure and shooting in the loins, esp. on breathing deeply.—Burning pain in the sacrum.—Contusive pain, with straining in the coccyx, or aching pain which increases towards evening, so violent as to force the patient to curve his body; with pain as of an ulcer when the part is pressed.—Burning in the coccyx, when it is touched.—Burning pain in the back.

22. Upper Limbs.—Aching in the bones, digging pains in the arms.—Pressure on the shoulders.—Pain as of dislocation in the wrist.—Torpor and numbness of the hands and of the fingers.—Painful tension and arthritic stiffness of the joints of the fingers.—Shootings in the fingers.

23. Lower Limbs.—Shooting pain in the (l.) hip when seated (the pain causes limping).—Tension and contraction in the groins, which do not permit the legs to be extended.—Tension in the hams and the instep, with contraction of the parts.—Drawing and sensation of contraction under the knee.—Pain as from excoriation in the knees.—Cramps in the calves of the legs the legs and the toes.—Pullings and shootings in the legs.—Loss of strength in the joints of the feet, which give way readily when walking.—Pain as of dislocation when walking or moving the limbs.—Coldness of the feet.—Inflammatory swelling of the feet and of

the toes, as if they had been frozen with heat and burning.—Burning pain in the toes.

24. Generalities.—Pressive pains in the joints, and the muscles of the limbs.—Burning pains.—Nocturnal pains in the joints.—Pain as from a bruise, want of strength, and cracking in the joints, which yield easily.—Arthritic stiffness and gouty nodosities in the joints.—Tension in some limbs, as if from contraction of the tendons.—Spasmodic contraction of several parts.—Tendency to strain the loins.—Numbness of all the limbs.—Torpor of all the members, esp. of the head.—Great fatigue and weakness, produced esp. by walking, with easily produced perspiration, chiefly on eating and on walking in the open air.—Excessive sensibility to the open air, and especially to the cold air of winter.—Ebullition of the blood, and tendency to become easily overheated.

25. Skin.—Itching over the skin of the whole body, esp. in the evening in bed.—Erysipelatous inflammations.—Chilblains.—Hard and painful swelling of the glands.—Swelling of the external parts, with burning pain.

26. Sleep.—Sleep deferred, and nocturnal sleeplessness, caused, by inquietude, anguish, ebullition of the blood, and fear of being stifled.—Frightful visions before going to sleep.—Sleep, with unquiet dreams, tears, talking, and hollow groans.

27. Fever.—Pulse accelerated, esp. in the evening.—Chill, esp. in the afternoon, in the evening, and after eating.—Shiverings, esp. in the evening, in bed, with perspiration during sleep.—Excessive cold in the feet and in the hands in the evening.—Nocturnal heat.—Easily produced perspiration during the day, esp. at a meal, or when walking.—Debilitating, and fetid sweat, esp. at night and in the morning, principally on the thighs.—Sweat, which stains the linen a yellow colour.

Carbo Vegetabilis.

Vegetable Charcoal. C (impure). Trituration.

Clinical.—*Acidity. Acne. Angina Pectoris*. Aortitis. Aphonia. Asthenopia. Asthma. Breasts, erysipelas of. *Bronchitis*. Burns. *Carbuncle*. Catarrh. Chilblains. Cholera. Constipation. *Cough*. Deafness. *Debility*. Diarrhœa. *Distension*. Dysentery. *Dyspepsia*. Emphysema. Erysipelas. *Eructations. Feet, cold. Flatulence. Gangrene*. Hæmorrhages. *Hæmorrhoids*. Hair, falling out. *Headache. Heart, diseases of*. Influenza. Intermittents. Intertrigo. *Irritation*. *Laryngitis. Lungs, congested*. Measles. Mumps. *Nose, bleeding of*. Œsophagitis. Orchitis. Otorrhœa. *Pregnancy, disorders of*. Purpura. Scabies. Scurvy. *Shiverings. Sleep, disorders of. Starting. Stomach, disordered*. Stomatitis. *Trachea, dryness of. Tympanites*. Typhus. *Ulcers*. Yellow fever.

Characteristics.—The deodorant and disinfectant properties of charcoal in bulk had already been discovered when Hahnemann was at work on his *Materia Medica*. Provings with the crude and the potentised substances showed that the latter were much more powerful in their effect on the animal organism. These brought out the fact that there is an exact correspondence between the effect of crude charcoal and potentised *Carbo veg*. Both are antiseptic and deodorant. The signs and symptoms of decay and putrefaction are the leading indications for its medicinal use: Decomposition of food in the stomach; putrid diseases and ulcerations; symptoms of imperfect oxygenisation of the blood. *Carbo veg*. antidotes the effects of putrid meats or fish, rancid fats, salt or salt meats, and also the pathogenetic action of *Cinchona, Lachesis*, and *Mercurius*. It is suited to conditions where there is lack of reaction (like *Opium*); to low states of the vital powers, where the venous system is engorged; debility of greater intensity than *Carbo an*.; to children after exhausting diseases; to old people. Leading symptoms are: Numbness of limbs. *Burning* pains (as also *Carb. an*.—both the products of a *burning* process). Great debility as soon as he makes the least effort. Guernsey considers *Carb. v*. especially suited to cachectic individuals whose vital powers have become weakened. In cases where disease seems to have been engrafted on the system by reason of the depressing influence of some prior derangement. "Thus, for instance, the patient tells us that asthma has troubled him ever since he had whooping-cough in childhood; he has dyspepsia ever since a drunken debauch which occurred some years ago; he has never been well since the time he strained himself so badly; the strain itself does not now seem to be the matter, but his present ailments have all appeared since it happened; he sustained an injury some years ago, no traces of which are now apparent, and yet he dates his present complaints from the time of the occurrence of that accident; or, again, he was injured by exposure to damp, hot air, and his present ailments result from it." Another form of debility is that following childbirth, causing falling out of hair.

Among other effects of *Carbo v.* are: Aversion to darkness. Fear of ghosts. Excessive accumulation of gas in stomach and intestines. "Stomach feels full and tense from flatulence." "Great pain in stomach on account of flatulence, < especially on *lying down*." Great desire for air; must be fanned; wants to be fanned *hard*. < From warmth: on the other hand it has cough < entering cold air from a warm room. < From brandy. Coldness is characteristic: cold breath (as in cholera); cold knees; cold, but wants to be fanned.

The mental state of *Carb. v*. is one of torpor and indolence, which distinguishes it from *Ars*. in many cases; slow thinking; < in morning on waking. Indifference. There is also peevishness; easily angered. Vertigo from stomach, with fainting, especially at meals. Lividity is a common indication; mottled skin round ulcers; indolent gangrene; varicose veins of arms, legs, vulva. Hippocratic countenance; cold breath. Collapse; with cold knees. Dull headache in occiput with confusion of mind; proceeding from occiput to forehead dull, heavy aching over eyes; in warm room; buzzing in ears very sensitive to pressure of hat. The congestive symptoms

of *Carb. v*. are those of poisoning by carbonic acid; pulse thready; face pale, covered with cold sweat; desire to be fanned; anxiety without restlessness; dyspnœa. Hæmorrhages are frequent; epistaxis; hæmorrhage from throat in dysentery; from bowels; menorrhagia and metrorrhagia, with burning pains across sacrum and spine; hæmorrhage from the lungs; dyspnœa from chronic aortitis. It corresponds to fever of many types: typhoid, intermittent, yellow fever, hectic, and cholera. In intermittents of long standing where quinine has been abused; thirst only during chill; feet ice-cold up to knees; heat in burning flushes; sweat sour or offensive; weak, mind befogged. A. H. Birdsall has recorded a typical case of *Carb. v*. intermittent. A man, 36, had had fever eight months, partially suppressed by *Arsenic* and *Quinine*. Type, tertian. Headache for one or two hours before chill. Chill always from 9 to 10 a.m., beginning in feet and hands, spreading over body; nails very blue. Thirst with chill. Cold stage lasts two to three hours, followed immediately by hot stage; much heat in head and face, which is flushed red; *thirstlessness*. Sweating stage short; sweat sour. Apyrexia: sweats easily, especially from least warmth; awakens in morning always with slight sour-smelling sweat. Weak; dispirited; flatulent. A single dose of *Carb. v*. cured. There were only three more attacks, each of diminished intensity. There is catarrh from warm, moist atmosphere. The cough of *Carb. v*. is < on entering cold air from a warm room. Hoarseness from damp air < morning or evening. Cough caused by a sensation as if sulphur fumes were in larynx. There is leucorrhœa, greenish yellow, < in morning. The leucorrhœa excoriates. Many symptoms occur during menses: headache; itching, burning soreness and smarting at vulva and anus; hæmorrhoids. A carbon ointment, made by carbonising a wine cork by plunging it into a clear fire and then, in its still glowing state, into vaseline and mixing thoroughly, is regarded as a sovereign remedy in anal irritation and hæmorroidal troubles. The menstrual discharge is corrosive and has a strong pungent odour. Premature and profuse. Preceded and followed by Leucorrhœa. Perinæum moist, raw, oozing. *Carbo v*. has weak digestion with enormous production of flatulence, > by eructations. Flatulence accompanies many other complaints, as asthma and heart affections. Heaviness, full feeling and burning. Aversion to fat, to meat; to milk, which causes flatulence. Desire for coffee (which does not relieve); for acids; for sweet and salt things. Effects of alcohol; of fish, especially if tainted; ice-water; vegetables; salt or salt meats. Disorder from high living, and especially *butter*-eating. Burning itching on skin; frozen limbs; chilblains; excoriations between toes. Tinea capitis or scald-head. Scalp very sensitive, feels as if bruised. Whooping-cough with pain at base of brain. Excessive gagging cough in the morning, compelling him to vomit everything in his stomach immediately after breakfast. *Dros*. is complementary to *Carbo v*. in this. Enuresis, which is < in morning after the first sleep.

Relations.—*Antidoted by:* Ars., Camph., Coff., Lach., Spir. nit. dulc, Fer. met. (Teste). *It antidotes:* Effects of putrid meats or fish, rancid fats, salt or salt meats; Chi., Lach., Merc. *Complementary:* China; Dros.; Kali c. (stitches in heart, &c.—Carb. v. contains potash). Carb. an. has more pronounced *induration* of

glands and is suited to cases which have been opened too soon; is more appropriate to cancer and syphilis than Carb. v. Carb. v. has weak digestion in nursing women; every particle of food disagrees; Carb. an. has coldness at stomach, > by hard rubbing or hard pressure; piles, with oozing of inodorous fluid. Carb. v. is near-sighted; Carb. an. far-sighted. In ear affections Carb. an. has swelling behind ear. Carb. v. is more suited to sequelæ of exanthemata. Many of the effects of Carb. v. are like those in Lycopod., and an occasional dose of Carb. v. assists the action of Lyc. Compare also Raphanus in flatulence. *Compatible:* Ars., Chi., Dros., Kali c., Phos. ac., Bell., Bry., Nux, Sep., Sul. *Compare:* Graphit. and all the carbons. Caust., Lach., Eup. perf., Pho. and Rumex in hoarseness (Rumex is < 4 a.m. and 11 p.m. Caust. < in morning; from dry cold. Carb. v. < evening; from damp evening air). Camph.; Chi. in hæmorrhages, intermittents, hectic, affections of drunkards; Ipec. in hæmorrhages and intermittents; Menyanthes in intermittents with coldness of legs; Op., Sul. and Pso. in deficient reaction; Sul. ac. in dyspepsia of drunkards (Carb. v. has more putridity; Sul. ac. more sourness); Pho. in easily bleeding ulcers; Puls., bad effect from fat food and pastry; Sul. in acrid-smelling menses; erysipelas of breasts; Ars. and Bellis in effects of ice-cream and ice-water in hot weather. Nux in dyspepsia, easily angered; effects of debauchery (Nux is thin, spare, yellow, wiry; Carb. v. sluggish, stout, lazy); Sec. in hæmorrhages, cold breath; coldness < by warmth. Calc., Carb. an., and Stram. in aversion to darkness; Lach. in weak digestion (Lach. craves milk; Carb. v. has aversion to it), intolerance of clothing round waist; intermittent fever, flashes of burning heat without thirst. Sep. in bearing-down in rectum and vagina (Carb. v. has strong odour of menses which Sep. has not). Rhus in strains; in typhus; Colch. in cholera; cold breath, prostration. Cupr.

Causation.—Alcohol. Bad food: eggs, wines, liquors, fish. Fat food. Butter. Salt or salt food. Poultry. Ice-water. Debauchery. Strains. Lifting. Over-work (asthenopia). Change of weather. Warm, damp weather. Hot air inhaled from fire. Overheating.

SYMPTOMS.

1. Mind.—Inquietude and anxiety, esp. in the evening (4-6 p.m.).—Fear of spectres, esp. at night.—Timidity, irresolution, and embarrassment in society.—Despair with lachrymose humour, and discouragement, with desire for death, and tendency to suicide.—Disposition to be frightened.—Irascibility and passion.—Sudden, and periodical weakness of memory.—Slowness of apprehension.—Fixed ideas.—Aversion to labour.

2. Head.—Vertigo, after the slightest movement of the head, or after having slept, as well as on stooping and walking.—Vertigo with nausea, obscuration of the eyes, trembling, buzzing in the ears, and even loss of consciousness.—Pressive headache, with tears in the eyes; they are painful when moving them.—Headache from being overheated.—Headache, with trembling of the jaw.—Nocturnal headache.—Cramp-like tension in the brain, or sensation, as if from contraction, of the teguments of

the head.—Heaviness of the head.—Pressive headache, esp. above the eyes, in the temples and in the occiput.—Drawing pain in the head, commencing at the nape of the neck, with nausea.—Shootings in the vertex.—Beating and pulsation in the head, esp. in the evening, or after a meal, with congestion of blood and heat, or burning sensation in the head.—The headache frequently extends from the nape of the neck to the brain, and is sometimes aggravated after a meal.—Acute tractive pains in the teguments of the head, esp. in the occiput and in the forehead, often commencing in the limbs.—Painful sensibility of the hairy scalp to external pressure (for instance, that of the hat).—Sensitiveness of scalp is < in the afternoon and evening, and after eating; < from taking cold, or when getting warm in bed.—Susceptibility to cold in the head.—Falling off of the hair, with itching of the scalp in the evening, when getting warm in bed.

3. Eyes.—Pains in the eyes, after having fatigued the sight, and from fine work.—Pains in the muscles of the eyes, on looking upwards.—Itching, smarting, heat, pressure and burning pain in the eyes, and in the corners of the eyes.—Nocturnal agglutination of the eyelids.—Bleeding of the eyes, often with strong congestion in the head.—Quivering and trembling of the eyelids.—Black, flying spots before the eyes.—Myopia.—Insensibility of the pupil.

4. Ears.—Otalgia in the evening.—In the evening, redness and heat of the (r.) external ear.—Want of cerumen.—Flow of fetid pus from the inner ear.—Obstruction of the ears.—Pulsations in the ears.—Tingling and buzzing in the ears.—Swelling of the parotids.

5. Nose.—Itching in the nose, with tickling and tingling in the nostrils.—Redness of the tip, and scabs at the point of the nose.—Obstruction of the nose, esp. towards evening, or serous flow, without coryza.—Violent coryza, with hoarseness and rawness of the chest, tingling and tickling in the nose, and ineffectual inclination to sneeze.—Frequent and continued epistaxis, esp. at night and in the morning, with paleness of the face, or else after having stooped, or after straining to evacuate.

6. Face.—Paleness of the face.—Complexion yellow, greyish, greenish.—Face hippocratic.—Tractive pains, acute pullings, piercings, and burning pains in the bones of the face.—Swelling of the face and of the cheeks.—Tetters in the face.—Furunculi before the ear, and under the jaw.—Red pimples on the face (in young persons).—Swelling of the lips.—Lips cracked.—Purulent blisters on the lips.—Fissures of the ulcerated lips.—Eruptions, like tetters, on the chin, and on the commissures of the lips.—Twitchings of the upper lip.

7. Teeth.—Toothache, with pulling or drawing pains; acute, or contractive, ulcerative, or pulsative pains, provoked by taking anything hot or cold, as well as by food too salt.—Obstinate looseness of the teeth.—The gums recede from the teeth (incisors).—Unfastening, retraction, excoriation, and ulceration of the gums.—Bleeding of the gums, and sockets of the teeth.

8. Mouth.—Heat and dryness, or accumulation of water in the mouth.—Dryness of the mouth, without thirst.—Roughness in the mouth and on the tongue.—Tongue coated white or yellow-brown.—Stomacace.—Excoriation of the tongue, with difficulty in moving it.

9. Throat.—Sore throat, as if from internal swelling.—Sensation of constriction in the throat, with impeded deglutition.—Smarting, scraping, and burning pain in the throat, the palate, and the gullet.—Feeling of coldness in the throat.—Pain of excoriation in the throat on coughing, on blowing the nose, and on swallowing.—Rattling from much phlegm in the throat, which is easily detached.—Swelling and inflammation of the uvula, with stitches in the throat.

10. Appetite.—Bitter taste.—Salt taste in the mouth, and of food.—Want of appetite, or thirst and immoderate hunger.—Chronic dislike to meat, milk, and fat.—Desire for salt food, or food sweetened with sugar.—Great desire for coffee.—After a meal, but esp. after taking milk, great inflation of the abdomen, acidity in the mouth, and sour risings.—Sweat, esp. during a meal.—Great heat after drinking wine.—After dinner, confusion of the head and pressure of the stomach, or headache, heaviness in the limbs and mental anxiety.—Weakness of digestion; the plainest food inconveniences him.

11. Stomach.—Empty or bitter risings.—Risings of food, and esp. of fat food.—Sour risings, esp. after a meal.—Pyrosis.—Hiccough after every movement.—Nausea, esp. in the morning, after a meal, or at night.—Continual nausea.—Flow of water from the stomach, like saliva, even in the night.—Vomiting of blood; of food in the evening.—Heaviness, fulness, and tension in the stomach.—Cramps in the stomach, contractive, or pressive and burning, with accumulation of flatus, and great sensitiveness of the epigastrium.—Sensation of scraping and of trembling in the stomach.—The pains in the stomach are aggravated or renewed by fright, opposition, a chill, as well as after a meal, or at night, and esp. after having taken flatulent food, also by suckling.—Colic, with the sensation of a burning pressure; much flatulence and sensitiveness of the pit of the stomach.—Pressure at the pit of the stomach, as if the heart were going to be crushed, esp. in suckling women.

12. Abdomen.—Pain in the hypochondria like that of a bruise, and esp. in the hepatic region, chiefly when it is touched.—Shooting pain under the ribs.—Tension, pressure, and shootings in the hepatic region.—Shootings in the spleen.—Pressure of the clothes on the hypochondria.—Pains in the umbilical region on its being touched.—Heaviness, fulness, inflation and tension of the abdomen, with heat in the whole body.—Colic, produced by the motion of a carriage.—Pressure and cramps in the abdomen.—Pain in the abdomen, as from lifting a weight, or from dislocation.—Burning pain and great anguish in the abdomen.—Pinching in the abdomen, coming from the l. side and tending towards the r. side, with sensation of paralytic weakness in the thigh.—Much flatulency, esp. after a meal, and sometimes with sensation of torpor in the abdomen.—Flatulent, cramp-like colic,

even at night.—Borborygmi and movements in the abdomen.—Excessive discharge of flatus, of a putrid smell.—Aggravation of the abdominal sufferings after eating the smallest portion of food.—The pains in the abdomen are often accompanied by anxiety and tears.—He cannot bear any tight clothing around his waist and abdomen.

13. Stool and Anus.—Constipation.—Hard, tough, scanty stool.—Insufficient evacuations.—Difficult evacuations, without being hard, with straining, burning pain in the anus, and pains similar to those of parturition, in the abdomen.—Evacuations liquid, pale or mucus-like.—Discharges of mucus and of blood instead of fæces during the evacuation, with cries (in children).—Involuntary evacuations of substances of a putrid smell.—Discharge of blood from the anus with every evacuation.—After the evacuation, aching pain in the abdomen.—Large painful hæmorrhoidal tumours of a deep blue colour at the anus.—Fluent hemorrhoids.—Shooting, itching and burning pain in the anus.—Discharge from varices.—Discharge of tænia.—Discharge of a viscous and corrosive serum from the anus and rectum, esp. at night.—Excoriation and oozing at the perinæum.

14. Urinary Organs.—Diminution of the secretion of urine.—Frequent, anxious, and urgent inclination to make water, day and night.—Wetting the bed.—Urine red, and very deep-coloured, as if it were mixed with blood.—Urine of a deep red, with a dark cloudy appearance.—Copious urine, of a clear yellow colour, or thickish and whitish (diabetes).—Smarting on making water.—Constriction of the urethra every morning.

15. Male Sexual Organs.—Extraordinary affluence of voluptuous thoughts.—Frequent pollutions.—Too speedy emission in coition; followed by roaring in the head.—Smooth, red, and oozing spots on the glans penis.—Discharge of prostatic fluid while at stool.—Itching and moisture at the thigh, near the scrotum.—Pressure in the testes.

16. Female Sexual Organs.—Premature and too copious catamenia; or too feeble, with pale blood.—Before the catamenia, cramps in the abdomen and headache.—During the catamenia, vomiting and pains in the teeth, head, loins, and abdomen.—Itching, burning, excoriation, aphthæ and swelling at the vulva.—Varices on the pudenda.—Milk-white, thick and yellowish, greenish and corrosive discharge from the vagina.—Leucorrhœa before the catamenia.—Disposition to miscarriages.—Inflammation of the mammæ.

17. Respiratory Organs.—Prolonged hoarseness, esp. towards the evening.—In the morning and in the evening hoarseness, aggravated by prolonged conversation, more esp. by cold and damp weather.—Loss of voice at night, or when talking.—Scraping, tingling, and tickling in the larynx.—Cough excited by a tingling in the throat, or with burning pain and sensation of excoriation in the chest.—Soreness and ulcerative pain in the larynx and pharynx.—Cramp-like cough,

also with retching, and vomiting, three or four times a day, or else in the evening, for a long time successively.—Spasmodic hollow cough (whooping-cough); four or five attacks every day, caused by a tingling irritation in the larynx; expectoration only in the morning, yellow, like pus; brownish; bloody; tasting putrid, sour, salt, and of offensive smell.—The cough is < in the evening; till midnight; from movement; when walking in the open air; from cold, wet weather: from going from a warm to a cold place; after lying; after eating and drinking; esp. cold things; from talking.—Cough in the evening before going to bed, and in bed.—On coughing, painful shootings in the head.—Cough, with expectoration of greenish mucus, or of a yellowish pus.—Cough, with spitting of blood and burning pain in the chest.—Cold breath.

18. Chest.—Laboured respiration and shortness of breath, while walking.—Wheezing and rattling of mucus in the chest.—Great difficulty of respiration, and oppression of the chest.—Fits of suffocation caused by flatulency.—On breathing, painful throbbing in the head and teeth.—Frequent want to take a deep inspiration.—Want of breath, esp. in the evening in bed.—Burning pain, shootings, and pressure on the chest (hydro thorax).—Compression and cramp-like constriction in the chest.—The chest is tight, with a sensation of fulness and anxiety.—Pains as from excoriation in the chest.—Sensation of fatigue in the chest.—Burning pain in the region of the heart, with congestion in the chest, and violent palpitation of the heart.—Rheumatic, drawing pains, acute pullings and pressure on the chest.—Brownish spots on the chest.—Brown-yellow blotches on the chest.—Erysipelatous inflammation of the mammæ.

20. Neck and Back.—Rigidity of the nape of the neck.—Swelling of the cervical glands.—Rheumatic, drawing pains, acute pullings and shootings in the back, the nape of the neck, and the muscles of the neck.—Continual shootings in the loins, esp. on making a false step.—Rigidity of the dorsal spine.—Painful stiffness of the back in the morning, when rising.—Itching pimples on the back.—Itching, excoriation, and oozing under the armpits.

22. Upper Limbs.—Acute drawing and burning pains in the muscles and in shoulder-joint.—Pulling and acute drawing pains in the forearms, the wrists, and the fingers.—Relaxation of the muscles of the arms and of the hands, on laughing.—Tension in the joints of the hand, as if they were too short. Cramp-like contraction of the hands.—Heat of the hands; burning in the hands.—Icy-cold hands.—The tips of the fingers are covered with cold sweat.—Paralytic weakness of the wrists and of the fingers, esp. on grasping an object.—Fine granulated, and itching eruption on the hands.—Extremities of the fingers become ulcerated.

23. Lower Limbs.—Torpor and insensibility of the legs and feet.—Drawing and paralytic pain in the legs.—Acute pulling, and drawing, burning pains in the hip and knees.—Strong tension and cramp-like pains in the coxo-femoral joints, the thighs, and the knees.—Aneurism in the ham, with tensive pain and pulsation.—Tetters in

the knee.—Cramps in the legs, and (esp.) in the soles of the feet, and at night, in the calves of the legs.—Fetid and easily bleeding ulcers, in the legs.—Obstinate torpor in the feet.—Perspiration of the feet.—Redness and swelling of the toes, with shooting pain, as if they had been frozen.—Ulceration in the extremity of the toes.—Senile gangrene, which begins in the toes and works all the way up the limb.

24. Generalities.—Pains with anxiety, heat and complete discouragement, or with dejection after the paroxysm.—Acute pullings and arthritic drawing pains, with paralytic weakness, chiefly in the limbs, and sufferings from flatulency, or with difficulty of respiration, when it is the chest which is attacked.—Pain as from dislocation in the limbs, or pain as if caused by a strain in the loins.—Burning pains in the limbs and in the bones, ulcers.—Pulsation in different parts of the body.—Sufferings from a strain in the back, or from riding in a carriage.—Trembling and jerkings in the limbs by day.—Numbness of the limbs readily induced.—The majority of symptoms appear while walking in the open air.—Emaciation, esp. of the face.—Contusive pain in all the limbs, esp. in the morning, immediately on rising.—Great weakness of the flexors.—Great debility and weakness as soon as he makes the least exertion.—Excessive dejection, frequently proceeding to fainting, even in the morning in bed, or else at the beginning of a walk.—Sudden prostration of strength.—General dejection towards noon, with necessity to support the head, and to be still.—Paralysis, and total absence of pulse.—Liability to take cold.

25. Skin.—Sensation of tingling of the skin, throughout the body.—General itching in the evening, and on becoming warm in bed.—Burning sensation in different parts of the skin.—Eruption of small pimples like miliary scabies.—Nettle-rash.—Tetters.—Streaks of a reddish brown.—Painless ulcers in the extremities of the fingers and of the toes.—Fetid ulcers, with burning pains, and discharge of corrosive and bloody pus.—Chilblains.—Varices.—Plexus of the veins, formed by a dilatation of the capillary vessels, with violent hæmorrhage, after the slightest injury.—Lymphatic swellings, with suppuration and burning pains.—Swelling and induration of the glands.—Gangrenous spots from lying in bed; old wounds having heated break out again; punctured wounds which won't heal.

26. Sleep.—Strong inclination to sleep during the day, disappearing on movement.—Sleep in the morning, or early in the evening (with sleeplessness at night).—Comatose sleep, with rattling in the throat.—No sleep, with inability to open the eyes.—Retarded sleep and sleeplessness caused by uneasiness in the body.—At night, or in the evening, when in bed, headache, anguish, with oppression of the chest, startings and pains in the limbs, cold in the hands and in the feet, &c.—Dreams frequent, fantastical, anxious and terrible, with tossing about of the body, or with starting and fright.

27. Fever.—Shivering and cold in the body.—Febrile shivering in the evening and at night, followed by transient heat.—Fever with thirst during the cold stage only,

or with profuse perspiration followed by shiverings.—Febrile state with comatose drowsiness, râle, cold sweat on the face and at the extremities, face hippocratic, pulse small and evanescent.—Pulse, small, weak, imperceptible; uneven; intermitting.—Febrile condition at night, with general heat, and burning heat in the hands and feet.—Frequent attacks of transient heat.—Nocturnal sweat.—In the morning, acid sweat.—Cold sweat on the limbs and on the face.

Carbolicum Acidum.

Carbolic Acid. Phenol. Monoxy Benzine. Phenic Acid. Phenyl Alcohol. C_6H_5 OH. Solution in rectified spirit.

Clinical.—Acne. Burns. Carbuncle. Cholera. Constipation. Diabetes. Diarrhœa. Dysentery. *Dyspepsia*. Eczema. *Eructations*. Erysipelas. *Flatulence*. Gangrene. Hydrocephalus. Influenza. Intermittent fever. *Irritation*. Leprosy. Meningitis. Neuralgia. Pneumonia. Psoriasis. Pityriasis versicolor. Scarlatina. *Small-pox. Smell, disordered. Stomach, affections of*. Toothache. Ulcers. *Uræmia*. Uterus, displacements of. *Vomiting*.

Characteristics.—Carbolic acid, like the Carbons, is a powerful antiseptic, and its use as such in surgery has led incidentally to the poisoning of both patients and surgeons. These experiences have provided a number of the symptoms indicating its medicinal use. The pains of carbolic acid come suddenly. They are burning and pricking, sticking. The urine is very dark, black or blackish olive-green; grass or olive-green. There is numbness and twitching. Putrid discharges are a marked indication. The skin is inflamed, and other symptoms appear, with burning, tingling, itching, and numbness. Gangrene has been caused by the application of 2 to 5 per cent. solutions. There is profound prostration and fatigue; convulsions; collapse; cold, clammy sweat. Constant yawning. R. K. Ghosh finds it admirable in cases (if cholera where *Verat. alb*. seems indicated and fails. There is intolerance of warm room; but also sensitiveness to cold air which < many symptoms. Many poisoning cases show pneumonia, single or double, affecting the bases principally. Dr. Proctor has recorded a brilliant cure of a double basal pneumonia with drop doses of the B. P. solution, after failure of more commonly used remedies. Nervous dyspepsia of intensely painful character has frequently been cured by it; and R. K. Ghosh has reported great improvement in a case of diabetes when the remedy was given for something else. Proell has recorded his own case of idiopathic erysipelas affecting the back of the right hand, first three fingers and arm, with violet-coloured swelling and roughness. *Rhus* removed the fever, but did nothing to stop the erysipelas. This *Carbol. ac*. 30 did promptly. It was prescribed by Dr. Streintz. Fahnestock reports a case of poisoning observed by himself from inhaling the fumes. The patient, a woman, feeling ill, ran across the street to a neighbour's. Before reaching the house she fell prostrate, pale, gasping for breath. When taken

in, she had to be propped up in order to breathe; trembled all over; wanted her hands held; "pricking like needles," all over body; unable to raise right arm. Cold hands and feet. Wanted a drink of water every few minutes; nausea but no vomiting; pain in lumbar region. Symptoms lasted four hours. It has been used with success in the vomiting of drunkards; of pregnant women with violent frontal headache. Great flatulent distension of the abdomen, with belching of wind and desire for stimulants, indicates the drug. Palpitation of the heart at night has been cured by it. It has relieved cases of cancer of the stomach, and has apparently cured epithelioma of the cheek and nose, with hæmorrhages (Allen). Deschere has found *Carbol. ac*. 30 of great service in uterine displacements, with or without discharges, but these, if present, are *always offensive*. The symptoms first relieved are the agonising backache across the loins with a dragging sensation down the buttocks into the thighs. Cooper regards it as specific in influenza, in the 3x for the attack, and 30th for resulting debility.

Relations.—*It is antidoted by:* Chalk; Saccharated Lime. In burns from carbolic acid, Elias C. Price found milk give immediate relief. He suggests copious draughts of milk in poisoning cases. *Compare:* Gels. Merc. and Sul. in band-like headache; Ars., Carb. v., Chi. and Kre. in burns, ulcers, unhealthy, offensive discharges; Pic. ac. (tightly drawn iron band at base of brain; *Carbl. ac*. has this round head); Ant. t. and Variol. in Small-pox.

SYMPTOMS.

1. Mind.—Irritability.—Disinclination for mental exertion.—Muddled, confused, bewildered.

2. Head.—Headache: heavy, dull.—Periodical sick-headache, as if enclosed in tight hand.—Dull frontal headache, as if an indiarubber band were stretched tightly over forehead from temple to temple, > by pressure.—Itching of scalp.—Headache > by green tea; while smoking; by tight band; by cold hand; by bending head forward.

3. Eyes.—Very severe orbital neuralgia over r. eye.—Pupils dilated.

5. Nose.—Tight and stopped up.—Tickling, prickling, itching in nostrils.—Sense of smell very acute.—Ozæna, with great fetor and ulceration.

6. Face.—Pale; or flushed and burning.—Jaws clenched.

7. Teeth.—Aching of teeth in r. upper jaw.

8. Mouth.—Lips dry, cracked, painful or black.—Tongue burning and tingling, as if a thousand pins were sticking in it.—Tongue dry and chippy, parched and fissured.—Throat and tongue black, tender and ulcerated patches in inside of lips and cheeks.—Intensely bad smell from mouth.

9. Throat.—Prickling and burning in throat and œsophagus.—Heat rising up from the stomach.—Spasmodic contraction of œsophagus.—Inability to swallow.—Sore-throat worse on r. side.—Hawking of clear white mucus.—Fauces red and covered with a mucous exudation.—Uvula whitened and shrivelled.

11. Stomach.—Wants a drink of water every few minutes.—Constant belching up of wind.—Vomiting of drunkards.—Excessive nausea, and inclination to vomit; while eating a little, after breakfast.—Vomiting of: Bright's disease; sea-sickness; cancer; pregnancy.—Weight in epigastrium as if burdened with flatulence.—Burning in stomach.—Total loss of appetite.—Desire for whiskey.

12. Abdomen.—Pain in r. hypochondrium; also in that region of both sides.—Rumbling and rolling in abdomen.—Burning in lower part of abdomen and top of head.

13. Stools.—Diarrhœa and dysentery; mucous stools like scrapings; stools like rice-water; thin, black; very offensive.—Cholera infantum, with putrid discharge like foul eggs.—Constipation with offensive breath.

14. Urinary Organs.—Urine: dark greenish brown; greenish; very dark; black or blackish.—Quantity increased and passed frequently.—Diabetes.—Albuminuria.—Urine of high specific gravity; urea abundant.—While urinating always an involuntary mucous discharge from anus.

15. Male Sexual Organs.—Itching, or burning-itching of scrotum, > scratching but it soon returns.

16. Female Sexual Organs.—Pain in region of l. ovary walking in open air.—Painful swelling of l. ovary.—Menses irregular; too profuse, dark colour, followed by headache and nervous irritability.—Puerperal fever, with putrid symptoms.—Ulceration of the cervix uteri.—Offensive discharges.

17. Respiratory Organs.—Unable to lie down, gasping for breath continually, wants hands held.—(Removed in a prover: short breath going up-hill, or upstairs.)—Short, hacking cough with tickling in throat; can hardly retain anything in stomach.—Stertorous respiration.

18. Chest.—Feeling of narrowness in chest as if diaphragm depressed the lungs.—Tight feeling, esp. in centre of chest.—Pneumonia of (r.) base.—Gangrene of lung.

19. Heart.—Stitches in region of heart.—Fearful palpitation < night, with great dyspnœa.—Jerking in l. common carotid artery while walking rapidly after dinner.

20. Neck and Back.—Neck stiff, lame and sore.—Severe pain in lumbo-sacral region, < latter part of night.—Pain in loins on straightening one's self and by jolting while riding.

21. Limbs.—Soreness of muscles of back and limbs.—Twitching in muscles.

22. Upper Limbs.—Aching, rheumatic pains in shoulders.—Unable to raise r. arm.—Aching, rheumatic pains in arms strongly flexed in tonic spasm.—Cold hands and feet.—Vesicular itching eruption on hand.—Erysipelas of back of r. hand, first three fingers and arm, violet-coloured swelling, rough skin.

23. Lower Limbs.—Rheumatic pain in r. hip-joint.—Dragging down buttocks and into thighs.—Paralysis of lower extremities; with dragging sensation.—Aching soreness beneath l. patella all day up to 4 p.m.; feels as if it would be stiff and sore to move it, but it is not felt during motion.—Sharp pain in l. shin.—Cramps.—Cold hands and feet.

24. Generalities.—Fainting and insensibility, lasting for hours.—Pricking like needles all over body.—Tonic spasm; arms flexed, difficulty in straightening them.—Prostration from a short walk.—Offensive discharges.

25. Skin.—Offensive odour from skin.—Erysipelas; violet colour swelling, roughness.—Miliary vesicles.—Malignant scarlatina.—Confluent variola.—(Acne; eczema; impetigo; scabies; psoriasis; prurigo; leprosy; pityriasis versicolor; lupus; carbuncles; cancerous sores; sloughing wounds; chronic ulcers; burns).

26. Sleep.—Yawning and sleepy.—Waking often in night.

Carboneum.

Carboneum. C. (A. W. 12). Lamp-black. Amorphous Carbon (obtained from the chimney of a coal-oil lamp). Trituration.

Clinical.—Convulsions. Sore-throat. Tetanus. Tongue, spasm of.

Characteristics.—This substance was proved by Dr. Burt in the 1x trit. It produced sore-throat, costiveness, great craving for acids, and a peculiar convulsive attack described as follows: Spasms, commencing on the tongue, passing down the trachea to the lungs which prevented him from breathing for about two moments; then gradually left and went to stomach, arms, hands, and legs. It took four persons to hold him—two at his hands and two at his feet. Spasms both tonic and clonic. Lasted two hours then gradually ceased. The hands had no feeling in them; they were closed and could not be opened. Wrists perfectly pulseless, hands shrivelled

and cold. At 2 p.m. the spasms came on very suddenly the same as the first time but not so violent. They did not affect the lungs this time but were much harder in the stomach. Lasted three hours then gradually ceased. He seemed at the point of death. The spasms left him so weak that he could not lift his hand to his head nor sit up.

Relations.—*Compare:* Carb. an., Carb. v., Carb. h., Carb. o., Nux v., Æthus., Œnanth.

SYMPTOMS.

2. Head.—Dull, heavy ache in forehead, during the spasms (lasted 2 1/2 days).

5. Nose.—Very profuse secretion of thick yellow mucus from nose. (lasted 8 days).

8. Mouth.—Tongue, coated white, morning (3rd day).—Spasms commencing in tongue.

9. Throat.—Throat very sore 4 a.m.

11. Stomach.—3rd day appetite lost; began to return 4th day with a great craving for acids which he could not allay.

13. Stool.—Bowels very costive (4th day)

19. Heart.—Pulse 80 to 90 weak and irregular.—After third day fell to 70 and was very weak.

20, 21. Back and Limbs.—Back and limbs ached much.

24. Generalities.—Spasms and convulsions, tonic and clonic.—Hands cold, shrivelled, pulseless, devoid of sensation.

25. Skin.—Every 10 to 15 minutes tingling, prickly sensation, passed all over body, esp. the numb, tingling sensation, until 2 p.m., when he went into spasms.

Carboneum Hydrogenisatum.

Carburetted Hydrogen. Ethene. Olefiant gas. $C_2 H_4$. Solution in alcohol.

Clinical.—Apoplexy. Eyes, convulsions of. Tetanus. Whooping-cough.

Characteristics.—This gas, which was experimented with by Sir Humphrey Davy, produces a condition almost resembling an apoplectic attack. Stupefaction:

comatose; surface cold and completely insensible. Spasm as in lock-jaw. Arms flexed at elbows. One mental symptom is peculiar: an extraordinary sensation of contentment, so that life seems exalted; all his thoughts appear in a moment as if seen in an inner mirror. Many eye symptoms were noted: steady and extreme oscillation of the eyeballs. Eyes distorted. Lids half closed. Dark bodies moving before eyes. > By open air (vertigo, convulsions). It is a popular custom to take children suffering from whooping-cough to breathe the air at a gas-works. A case has been recorded in which an accidental escape of gas in a child's bedroom affected a prompt cure of its whooping-cough. Illuminating gas is a complex gas, carburetted hydrogen being the leading ingredient. In the Schema are included some symptoms produced by illuminating coal gas.

Relations.—*Compare:* Chloroform, Æther, Amyl nit., Carboneum.

SYMPTOMS.

1. Mind.—Contentment; life seems exalted; all his thoughts appear in a moment as if seen in an inner mirror.—Answers questions slowly.—Fell unconscious.—Coma.

2. Head.—Vertigo; < going into open air; with nausea, loss of memory and sensation.—Excruciating pain in forehead and between eyes.—Pressure in brain.

3. Eyes.—Eyes distorted; half closed.—Eyeballs oscillate steadily; synchronously with breathing (illuminating gas).—Dark bodies moving before eyes.

6. Face.—Staring look.—Face turgid.—Cheeks flap.—Some degree of trismus; interrupted by yawning.

11. Stomach.—Violent cramps in stomach.—Nausea and vomiting.

13. Stool.—Involuntary passage of stool and urine.—Stools: rice-water; thin fæces mixed with dark blood and mucus.

17. Respiratory Organs.—Voice feeble and indistinct.—Paroxysms of cough.—Dyspnœa.—Violent tearing pains in thorax.

19. Heart.—Beating of heart scarcely perceptible.—Pulse: strong, rapid, regular; or small and extremely weak.

20. Back.—Violent spasm in the extensors of the back.

21. Limbs.—Spasmodic stitching and trembling of limbs; felt paralysed.

24. Generalities.—Rapid fluctuation of symptoms (coal gas).—Immovable; later regained power in l. arm and hand, but r. arm and leg remained paralysed (coal

gas).—Lying as if dead cold and pale, as soon as the windows were open violent convulsions set in.—Anæsthesia.

26. Sleep.—Sleep prolonged and very deep, interrupted by cramps in jaws and toes.

27. Fever.—Skin icy cold.—Sweating copiously; sweat smells of gas (coal gas).

Carboneum Oxygenisatum.

Carbonous Oxide. CO. Solution in water.

Clinical.—Cramps. Headache. Herpes zoster. Paralysis. Pemphigus. Sciatica. Trismus.

Characteristics.—The effects of *Carb. ox*. have been noted in persons poisoned by the gas. It produces a state like intoxication. The person is confused, stupid. There is loss of consciousness. Anæsthesia, but the slightest touch with a hot iron recalls sensibility. Convulsions and cramps. Great sleepiness lasting for several days; interrupted by cramps in cheeks and toes. Great coldness of surface, hands icy cold. Marked > of symptoms, especially of chest, in open air.

Relations.—*Compare:* Carb. hydro.

SYMPTOMS.

1. Mind.—Depressed: stupid; apathetic.—Anxiety, with desire for air but too paralysed to seek it.

2. Head.—Vertigo; inclination to turn in a circle.—Headache, violent, persistent, with throbbing in temporal arteries.—Frontal headache which extends over the whole head, but chiefly felt in forehead, which seems pushed out.—Weight; throbbing; compression; sticking headache.

3. Eyes.—Eyes protrude; sight dim with vertigo, and fluttering and flickering before sight.

4. Ears.—Roaring in ears.

6. Face.—Trismus; jaws firmly clenched.

8. Mouth.—Paralysis of tongue.

11. Stomach.—Stomach so irritable that everything eaten was immediately vomited.

13. Stool.—Involuntary evacuations.

14. Urinary Organs.—Paralysis of bladder.—Urine contains sugar.

17. Respiratory Organs.—Rattling of mucus in air-passages.—Bloody mucus raised.—Expired air feels cool to back of observer's hand.—Breathing stertorous, slow.—Sense of suffocation.

19. Heart.—Intolerable pain in region of heart.—Violent palpitation.

20. Back.—Burning pain at right scapula.

23. Lower Limbs.—Shooting pains in r. natis and down sciatic nerve to foot, not < by pressure or movement.

25. Skin.—Whole skin covered with large and small vesicles of pemphigus.—Purple maculation of skin.—Herpes zoster l. side of face along branches of trigeminus.

26. Sleep.—Great sleepiness for several days.—Never slept so long before.—Sleep deep, prolonged, interrupted by cramps in cheeks and toes.

Carboneum Sulphuratum.

Carbon Bisulphide. Alcohol Sulphuris. Alcohol Lampadii. CS_2. Solution in rectified spirit.

Clinical.—Acne. Amblyopia. Anæmia. Apoplexy. Burns. Clergyman's sore throat. Glandular swellings. Goître. Gout. Heartburn. Hemiplegia. Hernia. Herpes phlyctenoides. Herpetic dyscrasia. Impetigo. Itch. Liver affections. Memory, lost. Menière's disease. *Noises in the head*. Progressive muscular atrophy. Rheumatism. Scalds. Sciatica. Spinal sclerosis. Tetanus.

Characteristics.—*Carbon. sulph*. combines many characters of its two elements. It was first brought into notice by its effects on workers in rubber works. Here is an *acute* case: a girl, aged 15, employed in vulcanising works, was exposed to the fumes one whole day. Before this, she had had from the fumes, frontal pains and heaviness of the head. After this, the pains became more violent, and were accompanied by painful contraction of masseters, then by stiffness of neck and vertebral column; finally of legs and arms. The contracture was generalised, but nowhere complete, though the jaws could not be separated. Ulcerative stomatitis ensued and tartar accumulated on the teeth. Among the *chronic* effects are: Digestive disorders of extreme severity. Tremor, giddiness, ringing in the ears with

poor hearing; inability to sleep; muscular weakness, more or less ataxia, strong increase of mechanical muscular irritability, disturbance of sight and sensibility, Romberg's symptom (trophoneurosis; facial hemiatrophy); incontinence of urine; impotence. In the *Medical Argus* (July to December, 1891) H. H. Crippen has collected from several sources instances of intoxication of workers with *Carb. bisul*. The action on vision was very marked in many cases. Myopia, asthenopia; achromatopsia, dyschromatopsia, cloudiness and atrophy of optic disc, central scotoma for light and colours; retinal congestion, arteries and veins tortuous; veins distended, arteries contracted; optic discs pale. Everything seemed in a fog; as if a spider's web over objects; green or red. One patient had complete right hemiplegia, following sudden loss of consciousness, blindness of right eye and great impairment of vision of left. Loss of memory, especially for words, was a very frequent symptom; delusions were common: "Heard voices and believed he had committed a robbery"; "sensation of a hole close by, into which he was in danger of falling." E. E. Case has cured with *Carb. sul*. 30 in a slender, nervous woman, the following symptoms: "Sensation, as of a weight between the scapulæ, compelling her to bend forward. Throbbing in the dorsal spine as if a heart were beating there. Constipation with ineffectual urging to stool. Hæmorrhage of bright blood from rectum after stool. Itching of anus after stool, also in the night. Feet swollen, hot and throbbing in the evening." *Carb. sul*. has the flatulency of *Carbo veg*. and the abdominal soreness of *Sulphur*. It produces eruptions of herpes and impetigo, discharges excoriating and producing violent itching. It corresponds to the herpetic diathesis. The pains are burning, tearing, jerking, and stitching and are apt to return at regular intervals for a long time. Pains come and go quickly. The periodicity shows itself, as in diarrhœa, which comes every six weeks. The < from warmth common to *Carb. v*. and *Sulph*. shows itself in "Toothache brought on by warm food." Vision > in evening; in twilight; after eating. < From slightest motion; from walking. < At night. Sleep is restless with tossing in bed. A feeling of vibration and trembling in whole body, particularly in hands. Anæsthesia of skin and mucous membranes.

Relations.—*Compare:* Caust., Chi., and Nat. salic. in Menière's disease; Carb. v. in flatulence; Sulph. (sensitiveness of abdomen); Benz. dinit. (vision); Anac. (hears voices); Can. ind. (opening and shutting sensation in head). Kali bi., Sil., Sul. (hair sensation in throat).

SYMPTOMS.

1. Mind.—Difficult thinking.—Memory defective; cannot find the right word.—Great loquacity, but frequent loss of memory for words.—Sought for things lying before them.—Childish and idiotic.—Surly, morose; vehement, irascible.—Exhilaration bordering on drunkenness.—Indifferent to the surroundings.—Irritability followed by indigestion.—Laughter without cause.—Delusions; heard voices and believed he had committed a robbery.—Saw obstacles in front of him which did not exist.—Sensation of a hole close by into

which he was in danger of falling.—Attacks of semi-unconsciousness with convulsive movements of the limbs lasting half a minute.—Attacks resembling hysterical fits, with convulsive movements of the face.—Sudden loss of consciousness lasting seven days, with complete right hemiplegia, total blindness of r. eye and great impairment of vision of l.

2. Head.—Sudden attacks of vertigo while sitting.—Headache and vertigo.—Dull, muddled feeling in forehead as if contracting.—Frequent attacks of fainting.—Pressure most in forehead.—Headache of a compressive character with severe heavy pain in forehead and temples as if the head were compressed in a vice or supporting a heavy weight.—Violent headache, increasing till the mind is affected.—Very sharp pains in head, through temples, nearly every day, notably after dinner; numbness through to vertex.—Headache in the temples and occiput.—Severe pain in the occiput.—Headache as if the head was opening and shutting.—Penetrating pain < shaking head and heavy steps.—Fluctuations in head < moving head.—Painful, heavy feeling in head after breakfast.—Brushing hair is painful.—Itching on head; pimples sore to touch.

3. Eyes.—Dim sight; objects fade away.—Vanishing of sight.—Dimness of vision with vertigo.—Dimness of vision as from a fog or mist before the eyes.—Dimness of vision; objects appearing green, then red and foggy.—Makes mistakes as to form of objects.—Diplopia.—Complete achromatopsia.—Contraction of field of vision for white and blue; red and green totally absent.—Central scotoma for red.—Central scotoma for white and colours.—Dazzled by bright light.—Constant flashes and spots before the eyes.—Muscæ volitantes.—Appearance as of a spider's web before the eyes.—Reading brings tears to eyes.—Slight insensibility of the conjunctiva to touch.—Pupils dilated and sluggish.—Fine, floating filaments and specks in the vitreous.—Deposit of whitish, shining nodules in the macula lutea.—Ischæmia of the optic papilla.—Atrophy of the optic papillæ.—Optic disc pale, deeply cupped, less transparent than normal.—Congestion of the optic discs.—Retinal congestion, arteries and veins tortuous.—Dilation of retinal veins; arteries too small.—Small zone of circumscribed retinitis along the retinal vessels; blood-vessels have a double contour.—Vision > in the twilight.—Vision > by eating, < when fasting, could often read after a meal.—Obliged to wink to see clearly.—Vision > in the evening.—Pustule on upper lid, itches and burns.—Lids heavy; sore on moving; quivering.

4. Ears.—Stitches in ears; after stool.—Pain in l. ear when swallowing.—Ears as if stopped up.—Ringing lasting several days.—Singing and buzzing like an Æolian harp when walking in morning.—Deafness.

5. Nose.—End of nose burns, is pink red, burning as if raw.—Tickling in tip with irritation to sneeze.—Eruption.—Diminution of sense of smell.—Epistaxis.

6. Face.—Paleness of face.—Bewildered expression.—Eruption like the acne of drunkards on nose and cheeks.—Lips dry and burning.—Contractive feeling in muscles of lower jaw.—Lockjaw.

7. Teeth.—Tartar accumulates on teeth.—Toothache brought on by warm food.

8. Mouth.—Lisping, stammering speech like that of a child.—Saltish taste of phlegm hawked up.—Dry mouth with unquenchable thirst.—Salivation with nausea; glutinous saliva.—Accumulation of water of a sweetish taste in the mouth.

9. Throat.—Tickling back of palate after lying down.—Burning in throat extending to stomach.—Sensation as if a hair had lodged in throat; as if a piece of bone had lodged in upper œsophagus.—Swallowing difficult, causes pain in l. ear.

10. Appetite.—Voracious appetite.—Hunger with aversion to eating.—Loss of appetite and heavy satiety when eating.—Great thirst, desire for beer.—Many symptoms come on after eating.—Acrid burning eructations after eating.

11. Stomach.—Sour belching with passage of much sour flatus; > from belching.—Inclination to vomit when entering a room or going into open air.—Vomiting of bitter water.—Vomiting followed by immediate relief.—Pressing, stitching, burning pains in stomach.—Feeling in stomach as if tied together.—Extreme tenderness.—Heartburn.

12. Abdomen.—Vomiting; pains in the belly; painful cramps followed by such muscular weakness he could not stand.—Liver complaint with dropsy of feet.—Cutting in bowels.—Navel drawn in with pain.—Twisting, rolling, rumbling; distension; abdominal walls sore.—Strangulated hernia.

13. Stool and Anus.—Very offensive and frequent passage of flatus.—Stools: thin, papescent, small; yellowish, frothy, sour-smelling, fluid, with tenesmus and colicky pains; navel drawn in; came on in night.—Chronic diarrhœa coming on every four to six weeks and lasting one or two days.—After stool: headache; stitches in ears; pressure in stomach; burning; weakness and trembling.—Bright red blood with stool.—Constipation: with belching; with hunger.—Burning and itching at anus.

14. Urinary Organs.—Stitch-like cramping pain in bladder and neck of bladder, through to urethra, at same time similar pain in anus and rectum. (At midnight, on coming home and drinking a glass of wine.).—Frequent desire to pass water; tickling in fore part of urethra.—Involuntary micturition.

15. Male Sexual Organs.—Sexual excitement followed by complete loss of desire.—Desire lost without previous sexual excitement.—Burning in urethra: with

erections; when urinating.—L. testicle swollen and indurated.—Impotence in atrophied testicles.

16. Female Sexual Organs.—Menses five days early.—Ovaries almost obliterated.—Labour pains too weak.

17. Respiratory Organs.—Hoarseness, irritation to hawk; heat in larynx; scratching and scraped feeling.—Breath hot.—Breathing difficult; only > by breathing deeply in open air.—Flying stitches in chest, quickly passing over, but frequently returning.—(Asphyxia from alcohol and from coal gas).—Cough from irritation in larynx or at bifurcation of trachea.—Cough caused by heartburn.

20. Neck and Back.—Rheumatic pains and stiffness of neck.—Goître.—Feeling of heavy load hanging on back between scapulæ.—Pain in small of back and loins.

21. Limbs.—Crackling in joints.—Tearing, jerking, stitching, flying pains, returning at regular intervals.—Great weakening of the muscular forces of the limbs; beginning in the upper limbs, with cramps in the arms, calves and abdomen.—Weakness of limbs.—Pains in the limbs and joints.—Painful twitchings in the limbs.—Contracture of legs and arms, but nowhere complete.

22. Upper Limbs.—Formication in the hands and arms.—Gradual loss of sensation in the r. hand.—Numbness of the fingers and inability to hold small objects.—Weakness of the upper limbs to the elbow with considerable diminution of the sensibility and slight paresis.—Marked atrophy of the thenar eminence of the thumb and of the interossei.—Laming and pain in l. arm; arm goes to sleep.

23. Lower Limbs.—Sciatica l. thigh, from taking cold, with entire inability to walk.—Chronic sciatica r. thigh; movement impeded.—Stiffness of lower limbs.—Pains in lower limbs with cramp and trembling.—Pain in lower limbs accompanied by cramps and formication.—Cramps in calves of legs and in toes.—Stabbing, piercing pain from metatarsal bones through toes while walking.—Great difficulty in walking, l. leg more affected than r.

24. Generalities.—Incomplete contraction of all the muscles of the body.—Emaciation.—Athermia.—Cold sweats and general weakness.—Sudden attack of general trembling, with dimness of vision.—Twitching in single fibrillæ of muscles.—Fear of walking in the dark.—Anæsthesia of certain portions of the skin.—Peripheral neuritis.

25. Skin.—Boils.—Hyperæsthia of the integument.

26. Sleep.—Very drowsy.—Deep and prolonged sleep.—Disturbed sleep.—Nightmare.—Sudden waking from bad dreams or nervous starting.—Constant tossing about and throwing head about.

27. Fever.—Unusual chilliness.—Cold cheeks, hands, and feet.—Chills 7 p.m.—Skin hot and burning like nettles.—Warmth rises up from pit of stomach through chest to head, and also goes down to navel.—Absence of sweat.—Perspiration checked.—Dryness of skin and oppressive heat prevents sleep; head heavy.

Carcinosinum.

Carcinomin. The nosode of Carcinoma.

Clinical.—Cancer Melancholia. Worms.

Characteristics.—This is one of the principal nosodes of cancer, and is one of Dr. Burnett's preparations. I use it more frequently than any other as a diathesic remedy. Burnett had a number of different cancer preparations, and followed his instinct largely in their use and selection. In addition to *Scirrhinum*, of which I have given an account in the Dictionary, he had a preparation which he named Durum (a Latinised form of *Scirrhinum*, as I take it). This he used in treating depraved inherited conditions in children, such as infantile self-abuse, with good effects, which I have confirmed. I have met with a suicidal tendency in several cancer patients, so that the cancer nosodes may be appropriate in many mental cases, especially where the heredity points that way.

Relations.—*Compare:* Scirrhinum.

Carduus Benedictus.

Cnicus benedictus. Centaurea benedicta. N. O. Compositć. Tincture of whole plant when in flower.

Clinical.—Amaurosis. Diarrhśa. Eyes, affections of. Fever. Headache. Joints, cracking of. Śsophagus, stricture of. Varicosis. Vision, affections of.

Characteristics.—The proving of *Card. ben*. shows a strong action on the eyes: twitchings, and disturbance of vision; flickerings; muscć volitantes. The prover had "blackness before eyes for a short time." Eyeballs feel larger. "Burning" is a symptom which runs through the proving. There is a "bitter burning" in the stomach, as if it were much deranged; burning in hands after sweat; burning in the arms on exerting them. The gastro-abdominal disturbances of *Card. mar*. are observed, in less degree, in *Card. ben*. There is disordered taste, dysphagia;

yawning and hiccough; cutting pains in abdomen, vomiting and diarrhśa. The respiratory sphere is strongly affected and there is pain and contractive sensation in the trachea with hoarseness. Inspired air feels cold. Other symptoms are: Feeling as if buccal cavity were contracted. Tension in tendons. Aching and cracking in joints. Aching, cutting pain, slight swelling of veins. Red and afterwards yellow spots on skin. The most prominent of all the symptoms in the proving is the sensation of contraction which occurs in many parts. Symptoms are < by motion, by touch, by walking, by stretching the limbs.

[In two fatal cases of poisoning, of a boy and a girl, from eating the root of the *Carline* Thistle (*Carlina gummifera, Atractylis gummifera*), which has an enormous root, purple composite flowers, surrounded by radical spinous leaves, there was stertorous breathing, drowsiness, retching without actual vomiting, asphyxia and coma. After death the tongue protruded slightly between the lips; pupils were greatly dilated; there was evidence of general venous congestion. In one case (that of the boy) the veins of the brain were extremely congested.]

Relations.—*Compare:* Card. mar.; Bell., Atrop. (vision); Chi. and Salicyl. ac. (noises in ears); Agar. (twitching of eyelids).

SYMPTOMS.

1. Mind.—Anxiety, fear, starting at every noise, frequently breaking into cold sweat.—Fretful; during fever.—Cross humour.

2. Head.—Confusion of the head, interrupted stitches in temples, four times in succession (more l. than r.).—Vertigo on raising head, < on stooping.—Pressure in occiput from crown; for several days pressure on eyeball as if it would come out.—Pressure on forehead esp. when stooping.—Heaviness in head.

3. Eyes.—Sensation as if (l.) eyeball would be pressed outwards, rather a pleasant than a painful sensation.—Quivering movement in l. canthus, tickling in l. eye, very painful, with flow of tears; stitches in inner canthus.—Eyeballs feel larger.—Dimness and whirling before eyes.—Grey spots pass before eyes.—Blackness before eyes, for a short time.—Flickering before l. eye as if small fiery stars passed in front of it, removed by winking.

4. Ears.—Ringing in ears.—Roaring in r. ear, soon going off.—Feeling as if something were in ear., also as if something burst like a bladder, and then humming.

5. Nose.—Continued violent griping and tickling in nose as if coryza were coming on.

6. Face.—Flushes of heat in face.

8. Mouth.—Continued feeling, lasting for 8 to 10 days, as if buccal cavity contracted and narrowed, beginning and declining slowly; > after eating.—Much mucus in mouth.—Constant overflow of saliva.—Sour taste for six days, always getting worse and almost sulphurous, > for awhile by eating.—Mouth dry, morning and evening, with thirst.—Tickling on surface of tongue near root, lasts five minutes and changes to shoots like electric sparks; toothache r. side in periods, drawing more than shooting.—Flat taste, tongue sensitive as if swollen; much furred.

9. Throat.—Swallowing difficult.

11. Stomach.—Bitter burning, as though stomach very much deranged.—After eating, eructation.—Constant yawning and hiccough.—Though stomach is full it feels empty.—Appetite bad; nausea.—Vomiting.

12. Abdomen.—Constant drawing, cutting pain in abdomen.—Slight pinching in abdomen; curious sounds r. side of navel.

13. Stool.—Diarrhśa.

17. Respiratory Organs.–Hoarseness.—Pain in trachea as if inflamed; as if fatigued by long coughing; inspired air feels cold; coughs frequently, it sounds rough, like hissing.—Dyspnśa.—Breathes quickly, must draw in air with an effort, as the trachea feels closed up, each inspiration is like a low whistle, esp. evenings.—Feels as if too tightly laced; unable to sing or talk long for several days.—Constant dry cough.

18. Chest.—Throbbing below l. breast.

20. Neck, Back, and Trunk.—Dull shooting in sides over hip, now r. now l., at first only on stooping or moving, but afterwards at all times.

21. Limbs.—Cracking in joints, motion difficult.—Limbs heavy as if paralysed; < during the fever.—Sensation when touching the limbs as if there were bruised spots (veins painful and prominent).—Pains in all the bones, esp. when the limbs have been stretched.—Tension in tendons.

22. Upper Limbs.—When leaning on arms burning in them, but they are not hot to the touch.—Contraction in elbows; and arms.—Feeling in forearm, as if in the blood-vessels, like a long knife-stab, with continued burning.—Trembling of hands.

23. Lower Limbs.—Weakness and giving way of knees when walking, esp. during the fever.—Feet weak after sitting, soles feel sore when treading.

24. Generalities.—Aching and slight swelling of veins.—Long, knife-like stab in veins of forearm.

25. Skin.—Painless rash, like nettle-rash; a goose-skin, rather pointed, hard, preceded by cold creeping over the whole body, accompanied by feverish symptoms, lasting several days and slowly disappearing.—Small red spots on the finger, lasting several days, followed by a yellow spot lasting a long time.

27. Fever.—Febrile chill with goose-flesh several days from noon to evening, at times appearing earlier.—Fever consisting of flushes of heat in face; after eating, over whole body, without thirst, with dimness of vision and pressure in the eyes, hot breath, hot lips, hands, and feet.—Burning on exerting arms.—Burning under skin on face, afterwards in other parts of body.—Slight general sweat.—Sweat followed by burning heat in hands.

Carduus Marianus.

Silybum. N. O. Compositæ. Tincture or trituration of the seeds.

Clinical.—Bronchitis. Dropsy. Epistaxis. Fever. Gall-stones. Hæmoptysis. Hæmorrhages. Hæmorrhoids. Influenza. Intermittents. Jaundice. Liver, affections of. Metrorrhagia. Neuralgia. Phthisis. Pleurisy. Rheumatism. Sciatica. Spleen, affections of. Typhlitis. Varicose veins.

Characteristics.—To Rademacher we are principally indebted for this remedy. It is with him primarily an hepatic: all its manifestations originating in some disorder of the liver. According to Burnett the greatest effect of *Card. m*. is felt on the spleen and liver, especially the splenic end of the liver. G. F. Laidlaw (*H. M.,* xxxiv. 686) gives a condensed translation of Rademacher's remarks about *Card. m.:* He regards hæmatemesis as most frequently due to chronic disease of the spleen; less frequently to disease of the liver. People who have long suffered from pains in left hypochondrium are apt to vomit blood, after which they are relieved. Rademacher regards the bleeding as often beneficial, and says it should not be checked too soon. In the treatment of hæmatemesis he says it is best to use a remedy that acts on the epigastric region without irritating the stomach and interfering with the healing of the lesion. Such a remedy he found in a decoction of the seeds of *Card. mar*. He used to give *Opium* before, but this, he says, in some people "produces an array of symptoms similar to those seen in severe hæmorrhage, and might aggravate the condition." He adds: "It is probable that many small hæmorrhages of the stomach escape notice because there is no vomiting, and that it is in this manner that obscure abdominal complaints are sometimes suddenly relieved or cured."

The liver enlargement of *Carduus m*. is in the *transverse* direction (that of *Chel*. being more vertical). Burnett relates the case of a girl of sixteen who had had severe attacks of vomiting for three months, with pains in abdomen. The vomiting

was relieved by remedies symptomatically related, but the pains were not. An examination showed "liver and spleen both very much enlarged so that they seem to fill the abdomen." *Card. m*. Ø gtt. v. night and morning soon cured the patient. Dudgeon has given an account of Windelband's and Kunze's experience with the remedy. Windelband in treating a woman for chronic swelling of the liver with *Card. m*., incidentally cured at the same time some "colossal" varicose ulcers. This experience led him to cure a large number of like cases with the same remedy. He also cured gastro-intestinal catarrh; epistaxis; metrorrhagia; hæmorrhoidal flux; dependent on portal congestion. Tenderness of the liver; bilious fever; symptoms resembling peritonitis and stitch-in-the-side have been cured by it. Kunze commends the remedy, in addition, in cases of spasm of the stomach, pains contractive, vomiting occurring at the climax, cold rising from precordium to throat; feeling of spasmodic constriction; pressive, shooting pain right side of abdomen spreading to back or shoulder. He has cured with it pains in hepatic and splenic regions accompanied with hæmoptysis, or expectoration of viscid, lumpy mucus, and evening fever. Even phthisis pituitosa has been cured by it. Local muscular rheumatisms dependent on liver disease. E. A. Cook (formerly of Richmond) gave *Card. m*. 1 to a patient suffering from liver congestion, swollen veins of legs, piles, and headache, with great benefit to all the symptoms. On the second day the patient developed these new symptoms, which she had never had before and which alarmed her greatly: "Great giddiness with inclination to fall forward; and a sudden and profuse epistaxis followed by great relief." A striking cure by *Card. m*. in "Miner's Disease" is recorded by Proell.: An old miner in the gold mines of Bockstein suffered from the so-called "Bergsucht" (miner's disease). "His chief symptoms were: earthy complexion, eyes dim, hardness of hearing, mucous coating on tongue, loss of appetite even for his favourite food and tobacco; great dyspnœa and palpitation on going up-hill; spleen and stomach distended; much wind eructated, constant borborygmus, constipation alternating with diarrhœa, but the latter more frequent, evacuations grey, urine scanty and pale, skin dry as if withered, great weakness, pulse slow and weak. Especially remarkable was the disposition of this man. Formerly cheerful, he is now joyless and apathetic; the most important events he took no notice of, I gave him tinct. *Card. mar*., a few drops four times a day. I was unable to effect any alteration in his food, drink, or regimen. A month after this he returned looking much better. On asking him how he was, he replied: "You have made a new man of me." Almost all the former symptoms had disappeared and given place to the opposite. His complexion was fresh, his eyes sparkled, he was cheerful, wished to live and work, had good appetite, motions brown, more urine passed, pulse normal. He said he now for the first time knew what it was to be well, and he remained so for many years." (*Zeit., Berl. Ver.—Amer. Hom*., December 15, 1895) Proell also recommends it in affections of liver, spleen, and kidneys caused by abuse of alcoholic beverages and especially beer. He relates two cases: one in a cook who had symptoms of cirrhosis of the liver and general dropsy which made her features unrecognisable; and one in a worker in a brewery who developed dropsy. Both were cured by the tincture. The

brewery man, thinking the remedy was intended to be purgative, and thinking the 4 drops prescribed would not be sufficient, took the whole amount, 2 1/2 drachms, at one dose, without markedly bad effects, and was quickly cured. Proell adds that *Card. m*. is indicated where there is a relaxed state of the mucous membrane of the stomach as evidenced by flatulence and diarrhœa, especially when the stools are clay-coloured. Much fatigue is experienced, < after eating; when riding; on awaking; frequently accompanied by yawning. Chilliness is prominent, on awaking; at night; < uncovering. Coldness of knees. Head very sensitive to cold. Sweating of forehead and back after meals. Stitches, drawing pressure are prominent among the sensations, also radiating pains; constriction, band-sensation and cramps. Motion < most complaints.

Relations.—*Compare:* Bry. (epistaxis, &c.); Chel., Merc., Nux, Pod., Chelone.

SYMPTOMS.

1. Mind.—Forgets what he has just intended to do.—Disposition to become angry.—Melancholy with liver affections.—Joyless; apathetic.

2. Head.—Great giddiness, with tendency to fall forward, > by epistaxis.—Fulness in head with dull headache, esp. in forehead or temples, confusion, vertigo.—Pressure in forehead, over eye, in occiput.—Constriction around skull; over eyebrows.—Pain in l. parietal bone.

3. Eyes.—Burning and pressure in eyeballs and lids.—Pressure as if eyeballs were pressed against side of orbits.

5. Nose.—Tickling first in r. then l. nostril with watery discharge from same.—Burning in nostrils (r).—Epistaxis; habitual in psoric young persons.—Sudden profuse epistaxis, relieving vertigo.

6. Face.—Heat in face.—Earthy, yellowish-grey, dirty or florid complexion.

8, 9. Mouth and Throat.—Bitter taste.—Tongue white; white centre; red tip and edges; white-coated on side.—Collection of water in mouth.—Smooth sensation of mucous membrane of palate as though covered with fat.—Repeated eructations of air with burning in œsophagus.

11. Stomach.—Intense nausea, painful retching and vomiting of some greenish fluid.—Stitches in scrobiculum.—Contents of stomach and intestines sour.—Pressure in stomach; with eructation of air; at night on awakening; lasting all day; coming and disappearing during day.—Sensation of emptiness with headache before dinner, goes off after dinner.—Burning as of acidity with transient pressure.—Stitches in l. of stomach (spleen?) < on inspiration.

12. Abdomen.—Fulness in hypochondria necessitating deep inspiration.—Liver region sensitive to pressure.—Pressure, tension, and stitches in liver on lying on l. side.—Stitches in spleen < on inspiration and on stooping.—Swelling, sensitiveness, and induration of l. lobe of liver, causing by compression respiratory embarrassment, and cough with thick expectoration.—Liver disease affecting lungs and causing hæmoptysis.—Drawing pain between umbilicus and pit of stomach, coming and going, in peritoneum of abdominal wall, from r. to l., followed by pain and sensation of heat in spots as large as a hen's egg between umbilicus and inguinal region to l.—Sensation of motion in intestines on expiration, and extending breadth of a hand around umbilicus.—Distension; rumbling; cutting.

13. Stool and Anus.—Melæna.—Stool very hard and knotty; insufficient.—Paste-like, clayey stool.—Burning pain in rectum and anus which interferes with sitting.—Itching.—Hæmorrhoids with acidity of stomach and distension of bowels.

14. Urinary Organs.—Urging to urinate, without necessity of passing water.—Pressure on bladder, producing dribbling of urine after unavailing urging to stool.—Burning at meatus; in urethra.—Urine turbid, golden yellow, and acid.—Strangury; calculi.

16. Female Sexual Organs.—Catamenia too profuse or suppressed.—Chronic uterine hæmorrhage with portal derangement.

17. Respiratory Organs.—Irritation in posterior part of larynx causing cough. Expectoration: pure blood; mucus mixed with blood.

18. Chest.—Drawing pain on margin of l. rib, with pain during breathing.—Cough with stitches in sides of chest and bloody sputa.—Splenic or hepatic cough.—Pains in chest, going to front part, to shoulders, back, loins, and abdomen combined with urging to urinate.—Drawing pains through l. pectoral and l. intercostal muscles below axillæ.—Stitches in chest; from l. nipple to r. downward.—Pains extend over entire front of chest, motion almost impossible.

19. Heart.—Pain pressure and stitches in region of heart; oppression on deep breathing.

20. Neck and Back.—Sensitiveness in dorsal and cervical vertebræ.—Drawing pains in back; drawing; tearing; burning in l. shoulder-blade.

22. Upper Limbs.—Violent rheumatic pains in r. deltoid; in r. arm.—Drawing pain in muscles covering l. radius, alternating with pain in muscles of r. side.—Cramp-like pain in muscles of arms; hands; fingers; calves, and feet.

23. Lower Limbs.—Pain in hip-joints through buttocks, causing difficulty in rising, < from stooping.—Rheumatism and spasm of extremities.—Pain: in l. tibia; dorsum of foot; muscles of sole r. foot; lower part r. heel.—Varicose ulcers.

25. Skin.—Varicose ulcers.—Itching on lying down at night.

26. Sleep.—Restless sleep with frequent awakening and many dreams.—Nightmare from lying on back.—Fatigue with yawning.—Uncontrollable yawning.

27. Fever.—Chilliness on awakening with strong urging to urinate.—Chilliness at night < uncovering.—Sweat on forehead and back after meals.

Carlsbad.

The waters of the Sprudel and Muhlbrünnen Springs. Dilutions.

Clinical.—*Blushing after eating*. Constipation. Cramp. Debility. Diabetes. Gout. Rheumatism. Sciatica. Sprains. *Urine, urging to pass*.

Characteristics.—*Carlsbad* water is a very complicated solution containing the sulphite, bicarbonate and chloride of sodium in preponderating quantity, with carbonates, sulphates, phosphates, fluoride and oxides of Calcium, Magnesium, Strontium, Ferrum, Manganum, Potassium, Aluminium, Silicon, and Carbon, with traces of iodide and bromide of sodium, of Cćsium, Rubidium, Lithium, and Boracic oxide. Its chief fame has been gained by its action on the liver, and in the treatment of obesity and diabetes. Its action has been observed on some healthy persons, but the bulk of the symptoms, many of which are strikingly peculiar, have been obtained from patients under treatment. They are, however, sufficiently characteristic and have furnished the indications for many homśopathic cures. Most prominent are the following: Sensation of prostration; of weakness so that she trembled and could hold nothing securely. Tired, dejected, sluggish; anxious trembling. Weakness of all organs; of organs of speech (*Sermo abdominalis*); of bladder (stream weak and slow, only passed with assistance of abdominal muscles); of rectum (stool slow and only passed with help of distant parts of intestinal canal; peristaltic motion seemed to cease not far from end of intestines and no amount of pressure was of any avail; fćces seemed held back rather than pushed forward.) General discomfort. General anxious sensation as if blood in artery would stagnate, with constant flushes of heat. Pains: dislocated and spraining; drawing; tearing, stitching; burning; dull shocks and jerks. I have found *Carlsb*. in the potencies admirably respond to its indications. W. J. Guernsey cured with it sciatica in an old man, with cramp in left ankle. About a month after ceasing the remedy the patient complained that he felt paralysed in the loins for several hours after rising from bed, better as the day advanced. This was a new

symptom very like the *Carlsb*. effects. Periodicity is noted: effects repeated after from two to four weeks. The skin has red spots and streaks, frequently burning like fire. Pimples and pustules. Crawling and prickling on various parts, with breaking out of sweat. Itching on various parts. Much itching and increased sweat of genitals. Increased sensitiveness of the skin. Sensitiveness to cold air; great liability to take cold. Frequent alternations of shuddering, chilliness, and heat. Flushes of heat all over, especially in face, with sweat on forehead. Heat of head with redness of face and creeping shudders. Sweats more easily. Sweat, stains linen yellow. Symptoms < morning and evening; after eating and drinking; on ascending; after lying down in bed. > In open air; on motion. Even the headaches are > by motion.

Relations.—*Compare:* Nat. sul. (sensitive to cold); Carb. an. (sweat staining yellow); Cepa (lachrymation); Nux (< after eating); Puls., Carb. v. > in open air); Bell., Glo. (headache); Anac., Apis, Nux mosch., Pho. ac. (absent-minded); Alo. (cracking in head).

SYMPTOMS.

1. Mind.—Excited and peevish (in the morning on rising), often as if beside himself about trifles, with flushes of heat all over.—Self-satisfied, very talkative and uncommonly good-humoured.—Sensitive, affected to tears by the sorrows of others.—Painful dejection with full stomach.—Constrictive anxiety in a room; > open air.—Discouraged and anxious about domestic duties.—Difficult thinking; indisposition to all mental exertions.—Absent-minded; heedless; forgets names; great difficulty in expressing himself in writing; often omits letters.

2. Head.—Dizzy confusion and heaviness < after eating; > open air.—Momentary attacks of vertigo, had to hold himself up; also turning as if in a circle; > open air.—Rush of blood to head, with heaviness and confusion.—Cracking as if something breaking in head < evening on lying down.—Pressing, stupefying, tearing headache.—Tearing headache, now r. now l., in temples and occiput, > motion.—Throbbing and beating in head, vertex and occiput with bluish red face, < ascending.—Headache, forehead, and temples, with swollen temporal veins.—Headache < in room, > open air, > on motion.—Drawing creeping in cranial periosteum.—Sensitiveness of periosteum.—Hair falls out.—Smoothing down hair is very painful.—Sensation as if something cold ran over whole head, and hair bristled up.

3. Eyes.—Heat streams from eyes with burning and pressing in them and an appearance of black spots swimming about.—Burning and pressing, as if eyes were being pressed downwards; as if too large for orbits.—Violent pressure above orbits.—Twitching, quivering in upper lids, causing rubbing, as if a foreign body were there.—Excessive lachrymation, < using eyes.—Eyes weak, water; lids agglutinated; cannot do fine, near work.—Objects swim before sight.—Quivering,

flickering before sight; fiery sparks; zigzags; bifurcated bodies and grey spots; clouds; veils.

4. Ears.—Increased warmth in ear, which itches.—Fine twitching stitches from Eustachian tube to tympanum > boring with fingers.—Humming, roaring, ringing, changing at times into transient loss of hearing.

5. Nose.—Bluish colour of nose; swelling of nasal veins.—Habitual bleeding of nose.—Nose-bleed on suppression of menses.—Frequent sneezing; blowing out thick mucus.—Catarrh of nose and throat, with hoarseness.—Stopped catarrh.—Sensitiveness of nose, as in incipient catarrh.—Loss of smell after stoppage of nose.

6. Face.—Face yellow; sallow; changes colour; redness and heat; somewhat swollen.—R. cheek quivering and prickling; tearing, drawing; cutting drawing in zygomatic process below r. eye., as if zygomatic processes distended; r. zygomatic process, sensation of cobwebs as if he must constantly rub something away.—Lower jaw pressed against upper in sleep; even grinding of the teeth.

7. Teeth.—Thick pappy mucus coating on teeth.—Teeth loosen and fall out; prominent, gums painfully swollen.—Tearing in roots of upper molars; < after every meal > olfaction of Cham.).—Toothache < cold or warmth.

8. Mouth.—Tongue coated white with offensive smell from mouth.—Dryness of whole mouth, esp. roof, as if dried up with increased thirst.—Flow of saliva and frequent spitting.—In morning, after waking, the entire mouth is often lined with mucus which sticks like paste to the teeth and causes a furry sensation in the mouth.—Clayey, pappy taste with salivation.—Everythings tastes as if salted.

9. Throat.—Constantly much hawking up of mucus.

11. Stomach.—Appetite and thirst much increased.—Frequent eructations; sometimes smelling and tasting of the food, sometimes very bitter.—Hiccough and yawning at same time, < after drinking and eating.—Frequent heartburn with accumulation of much water in the mouth; also with eructation of almost corroding liquid and long-lasting sour taste in mouth.—Nausea with salivation and shuddering.—Sensation as of emptiness and afterwards canine hunger.—Pressure and heaviness after eating; contraction; distension; smarting; scraping, rancid sensation.

12. Abdomen.—Pressing, pinching now in hypochondria, now shooting thence towards navel.—Twitching stitches in jerks.—Burning pain in spleen.—Sensation of ring stretched round abdomen esp. on deep inspiration.—Transient stitches from region of small of back through pelvis towards the pubes and inguinal region.—Griping and wind colic.

13. Stool and Anus.—Flowing hćmorrhoids.—Burning in rectum with constant pressure; the rectum is often pressed out.—Shooting pain in rectum and anus frequently extending to penis.—Lumps as large as hazelnuts at anus, with burning after stool and impeded walking.—Discharge of bloody mucus with itching and burning in anus, extending up towards rectum.—Discharge of blood in drops or in a stream, even without stool when walking.—Mucous diarrhśa.—Pappy soft stools.—Stools green, or dark green.—Gall-stones passed.—Sensation during a thin stool as though it passed in pieces.—Constipation, stool missed for several days, hard lumps, very difficult.—Stool slow, only evacuated with help of distant muscles; peristaltic action seemed to cease near end of intestine: fćces seemed held back.

14. Urinary Organs.—Frequent urging with discharge of copious watery urine.—Urine flows slowly in a weak stream, with help of abdominal muscles.—Sediment at times brick-red, at times tenacious like frog-spawn; at times thick mucus, and even containing small lumps of blood.—Urine stains linen dark yellow.

15. Male Sexual Organs.—Testicles swollen without sign of inflammation; pressive pain.

16. Female Sexual Organs.—Three days after cessation of menstruation discharge of lumps of tenacious black blood, and later, uncommonly violent leucorrhśa.

17. Respiratory Organs.—Frequent hawking of mucus.—Sensation of soreness; sensitiveness; scraping and tickling.—Hoarseness and roughness of voice.—Difficult breathing on ascending steps; and on carrying a slight and customary burden.

18. Chest.—Weakness in the chest whilst writing, > walking.—Heaviness; fulness; oppression; anxiety.—Peculiar sensation of oppression in lower part of chest, as if lung had not room enough to expand, had to respire deeply.—Stitching in chest.—Painfulness in heart, frequent transient stitching and painful drawing.

19. Heart.—Tension and contraction in heart region.—Pressing and burning with warm ebullition and rush of blood.—Sudden momentary twitching stitches through heart without special cause, so that he has to stop while walking.

20. Neck and Back.—Drawing pain in nape of neck and shoulder-blade.—Stiffness; paralysis; pressure.—Heat and burning and at times a shudder over back.—Tensive and pressing pains from small of back towards the region of the privates.

21. Limbs.—Cracking in all the joints.—Trembling and crawling in the joints and limbs.—Restlessness; now extending, now flexing; with yawning.—Sensation of falling asleep; stiffness.—Heaviness of the arms after writing, with coldness and

going-to-sleep sensation in finger-tips.—Varicoses of superficial veins of lower limbs.

26. Sleep.—Constant yawning and sleepiness; < after a meal.—Dreams frightful with tossing.—Unremembered dreams.

Carya Alba.

Shellbark, or Shagbark Hickory. N. O. Juglandaceæ. Tincture of nuts.

Clinical.—Purpura. Scurvy.

Characteristics.—Like *Juglans Regia* and *Juglans Cinerea, Carya alba* appears to possess antiscorbutic properties. An exclusive diet of the nuts for three or four weeks, in a girl seven years old, produced pronounced symptoms of scurvy; hæmorrhages from all surfaces; on the least excoriation of skin very dark blood gushed out. Blood gushed from gums, nose, ears, and other parts.

Relations.—*Compare:* Arn., Carbo v., Pho., Merc., Ham., Bry., Rhus., Citrus lim., and Juglandaceæ.

SYMPTOMS.

6. Face.—Face clay-coloured; swollen.

8. Mouth.—Gums swelled, began to bleed and turn black; could not move lips without causing profuse discharge.

12. Abdomen.—Swollen abdomen.

13. Stool.—Discharge of black blood by stool.

17. Respiratory Organs.—Breath short, difficult; pulse quick.

21. Limbs.—Extremely swollen.

24. Generalities.—Whole body, including face, covered with livid spots from one inch in diameter to size of pin's head; largest like a bruise, smaller sometimes red like flea-bites.

Carya Alba.

Shellbark, or Shagbark Hickory. N. O. Juglandaceæ. Tincture of nuts.

Clinical.—Purpura. Scurvy.

Characteristics.—Like *Juglans Regia* and *Juglans Cinerea, Carya alba* appears to possess antiscorbutic properties. An exclusive diet of the nuts for three or four weeks, in a girl seven years old, produced pronounced symptoms of scurvy; hæmorrhages from all surfaces; on the least excoriation of skin very dark blood gushed out. Blood gushed from gums, nose, ears, and other parts.

Relations.—*Compare:* Arn., Carbo v., Pho., Merc., Ham., Bry., Rhus., Citrus lim., and Juglandaceæ.

SYMPTOMS.

6. Face.—Face clay-coloured; swollen.

8. Mouth.—Gums swelled, began to bleed and turn black; could not move lips without causing profuse discharge.

12. Abdomen.—Swollen abdomen.

13. Stool.—Discharge of black blood by stool.

17. Respiratory Organs.—Breath short, difficult; pulse quick.

21. Limbs.—Extremely swollen.

24. Generalities.—Whole body, including face, covered with livid spots from one inch in diameter to size of pin's head; largest like a bruise, smaller sometimes red like flea-bites.

Cascarilla.

Croton eleuteria. N. O. Euphorbiaceæ. Tincture of bark.

Clinical.—Anæmia. Anus, bleeding from. Constipation. Cough. Diarrhœa. Dropsy. Hæmoptysis. Hæmorrhages. Intermittents.

Characteristics.—*Cascarilla* has a family resemblance to the other Euphorbians. It acts prominently on the digestive tract. Its leading symptoms are: Sensation of swelling deep down in throat. Accumulation of mucus in throat. Hunger after

meals and feeling of emptiness. Aversion to smell of tobacco smoke. The concussion of every step is felt painfully in stomach. Griping preceding morning stool. The abdominal symptoms are > by warm drinks. Movings about in abdomen as if hot water undulating there. Boils in inguinal region. Diarrhœa with backache and lassitude. Lassitude and muscular weakness are marked throughout. Constant slight urging with gnawing pain high up in rectum. Constipation, stools hard, in pieces, covered with mucus. Passes bright blood with or without stool, in large quantities, causing weakness. Short, dry cough from tickling in trachea. Hæmoptysis. Stitch upward in l. side of chest. Backache and weakness. Inclination to lie down. Sleep with clear consciousness. Heat with thirst for warm drinks (intermittents).

Relations.—*Compare:* Crot. t. (> from warm drinks); Chi. (effects of loss of blood; intermittents); Graph. (mucus with stools).

SYMPTOMS.

4. Ears.—Buzzing in the ears.—Internal and external heat of the ears.

8. Mouth.—Roughness of the tongue.—Bitter taste in the mouth and of tobacco smoke, for which a repugnance is felt.

9. Throat.—Sore throat on swallowing, as if from an internal swelling.

11. Stomach.—Heat with thirst and desire for hot drinks.—Aversion to smell of tobacco smoke.—Abortive risings.—Pressure on the stomach, as if from fulness.—Pain in the stomach as from concussion.—Heat in the stomach and burning pain in the epigastrium.

12. Abdomen.—Tension and pressure on the hypochondria.—Movement in the abdomen as if hot water were undulating there.—Flatulent, aching colic.

13. Stool and Anus.—Evacuations difficult, hard, broken, and covered with mucus, preceded by pinchings in the abdomen.—Discharge of clear blood from the rectum, with the evacuations, during and after hard, brown stool in large lumps; and without stool.—Diarrhœa alternating with hard, lumpy stool.

14. Urinary Organs.—After the emission of urine, pain resembling excoriation in the glans.

17. Respiratory Organs.—Hæmoptysis.—Stitch upwards on l. side.

20. Back.—Backache and weakness; muscles pained violently.

Castanea Vesca.

Chestnut. N. O. Cupuliferæ. Tincture of leaves gathered in summer.

Clinical.—Diarrhœa. Whooping-cough.

Characteristics.—*Castan*. has been proved by Dr. H. C. Houghton and three others. The following are the principal symptoms observed: Slight acrid feeling in throat. Desire for warm drinks. Abdominal walls sensitive. Soft stools of short, small pieces like chopped tape; accompanied with severe pain and rumbling; pain > by stool. It has cured whooping-cough, early stage, violent, spasmodic; very dry ringing cough. Very free sweat after drinking.

Relations.—*Compare:* Am. bro., Mephit., Naphthal.

Castor Equi.

The Rudimentary Thumbnail of the Horse. A small, flat, oblongoval horn, wrinkled on surface, breaking off in scales, darker than the hoof, growing on inner side of leg above fetlock. Scales triturated.

Clinical.—Coccygodynia. Epilepsy. Nails, affections of. Nipples, cracked; ulcerated. Warts.

Characteristics.—This is a very ancient remedy, and was proved and introduced into homśopathy by Hering. It especially acts on the nipples, the nails, and bones, especially causing pains in right tibia and coccyx. Burnett has cured with it a case of wart on forehead.

Relations.—Hep. relieves the sore nipples; Thuja has removed warts caused by *Cast. eq*. *Compare:* Calc. oxal., Hippoman., Castoreum, Moschus.

SYMPTOMS.

1. Mind.—Unusual laughter about things not funny.

2. Head.—Vertigo, headache, and nausea in mornings, sour stomach, and lack of appetite.

10. Appetite.—Desire, to smoke tobacco.

12, 13. Abdomen and Stool.—Colic with urging wakes him in the morning, followed by a very thin, watery, somewhat burning stool; with passage of offensive flatus.—Pain in l. inguinal region.

16. Female Sexual Organs.—Cracked, sore nipples in nursing women, excessively tender, cannot bear touch of clothing; even in neglected cases, ragged, nipples almost hanging.—Breasts swollen, sensitive; itching internally, painful on descending stairs.

17. Respiratory Organs.—Disagreeable sick feeling in larynx.

19. Heart.—Peculiar sensation about heart as of something alive struggling.

20. Back.—Weak spine.—Pain in coccyx < every evening while sitting.

23. Lower Limbs.—Repeated pain in r. tibia.

24. Generalities.—Syncope.—Epilepsy.

25. Skin.—Warts.—Nails drop off.—Brittle nails.

Castoreum.

The Beaver. N. O. Rodentia. Tincture of secretion, found in preputial sacs of beaver.

Clinical.—Chorea. Convulsions. Digestion, disordered. Dysmenorrhœa. Eclampsia. Flatulence. Hernia. Hysteria. Ileus. Paralysis. Pregnancy, vomiting of. Reaction, deficient. Sexual organs, inflammation of; spasms of. Sycosis. Tetanus. Typhoid, lack of recuperation after. Typhus. Warts. Yawning.

Characteristics.—*Castoreum* resembles *Ambra, Moschus, Ignatia*, and *Valerian*. It is suited to nervous women, with pains, cramps, weakness after severe illness; hysterical individuals; abdominal soreness; nervous attacks when the aura starts from abdomen. The pains are > by pressure. Menstrual colic, with pallor and cold sweat. Prostration is a leading feature in the effects of the drug. There is also a feeling of fulness in the stomach as if too much had been eaten.

Castoreum when fresh is yellow and of the consistence of syrup when dry it is dark red or brown and of the consistence of hard wax. Teste remarks that it has been regarded as a resinous substance, and he observes, moreover, that the beaver feeds almost entirely on the resinous bark of pine-trees. In Siberia beavers feed on the bark of the birch, which may make a difference in the effects of *Castoreum* from

different countries. Caspari proved Russian *Castor*., Nenning that of Southern Europe. Teste concluded from analogy that *Castor*. would be an antisycotic, and he proved his point by initiating with it the cure of a case of pedunculated vegetations around the anus in a hysterical young woman. *Thuja* completed the cure. Teste places *Castor*. in the *Thuja* group with *Plat*. and *Bism*. He quotes from Trousseau and Pideux the following indications, which he confirms:—(*1*) "Amenorrhœa, accompanied with painful and tympanitic swelling of the abdomen. We mean the cases where only a few drops of blood escape from the uterus, with a sort of *uterine tenesmus*." (*2*) "The cases of colic to which *Castoreum* seems to be principally adapted are of the nervous kind, that seem to be particularly seated in the small intestine. They are accompanied with paleness and cold sweats, a sudden sinking of strength, as if the very principle of life had been struck down. They are without any alvine evacuations, come suddenly, after lively emotions, a cold on the bowels or by the feet, as after long exposure to a cold rain; they constitute a sort of that passion termed by authors *miserere*." *Castor*. causes jerking in small groups of muscular fibres; a sensation of heaviness of whole body; trembling of limbs.

Relations.—*Compare:* Ambra, Mosch., Nux v.; in lack of reaction, Pso.; Thuja (sycosis). *Antidoted by:* Colch.

SYMPTOMS.

1. Mind.—Peevish; indisposed to talk, very sensitive to all kinds of impressions.—Irritable in morning and cheerful abandon in evening.—Great sadness and excessive susceptibility, with easily provoked lachrymation.

2. Head.—Headache with giddiness and fainting; headache leaving head very sensitive to touch. Pain at the vertex and throbbing in the head as if there were an ulcer in the brain, aggravated by contact and external pressure.—Fulness and heaviness of the head as if it were going to burst.—Acute drawing pains in the forehead and eyes.

3. Eyes.—Pressure in the eyes, on viewing fixedly a distant object.—Nocturnal lachrymation and agglutination of the eyes.—Stars, clouds, and on viewing fixedly a distant object, mist before the sight.—Susceptibility of the eyes to the light of the sun, and to that of candles.

4. Ears.—Acute dragging in the ears.—Tinkling, buzzing, and gurgling in the ears, dispersed by boring the ear with the finger.

5. Nose.—Obstruction of the nose.—Flow of aqueous, acrid, corrosive mucus from the nose.

7. Teeth.—Toothache when eating, provoked by cold and mitigated by hot things.—Odontalgia, with acute drawing pains, or successive pullings, provoked or

aggravated by the touch.—Swelling of the gums at night, with acute pulling in the temples.

8. Mouth.—Fetid odour from the mouth, perceptible to the patient.—Pulling and quivering in the tongue.—Swelling of tongue.—Rounded elevation in centre of tongue size of pea, surrounded by angry, suspicious-looking base, size of a 5-cent piece, extremely sensitive to touch or food, with drawing sensation, as if a string were pulling centre of tongue towards hyoid bone, with burning in tongue.

9. Throat.—Dryness of œsophagus.—Burning pain in the throat, as from pyrosis.

10, 11. Appetite and Stomach.—Burning thirst.—Thirst so violent that she could not drink enough water after dinner.—Bitter risings.—Regurgitation of a bitter acidity.—Repugnance to food and constant nausea.—Vomiting of white, bitter mucus.—Weight, griping; tenesmus with constricting pains under sternum.—Sensation in stomach as though it would go to sleep.—Sensation of contraction, and pain of ulceration, in the epigastrium.

12. Abdomen.—Pressure in region of liver from within outwards.—Flatulent colic, painful inflation, esp. after a meal.—Colic, redness of face, and yawning in abdominal complaints, > by external heat and by bending oneself double.—Umbilical hernia with ulcer, in a screaming infant.—Pain and soreness in l. side of abdomen.—Constant violent rollings in abdomen.

13. Stool and Anus.—Urgent inclination to evacuate.—Diarrhœa accompanied by shivering and by yawning, with burning in the anus, and preceded by pain in the abdomen, with grumbling and borborygmi.—Evacuations of sanguineous mucus.—Stools: whitish, watery; greenish mucus; contain pus; patient is compelled to sit bent; feels gagged when lying down.—Before stool: cutting or pinching colic; painful rumbling; dragging in groin.—During stool: fetid flatus, burning at anus.—After stool: burning at anus.

14. Urinary Organs.—Frequent emission of urine, with burning thirst, day and night.—After the emission of urine desire to vomit, and disgust.

15. Male Sexual Organs.—Seminal emissions with great excitability.

16. Female Sexual Organs.—Menstruation premature, pains in head and loins, pale, sickly complexion.—Pain commences in middle of thighs, extending over limbs and more or less over whole body.—Uterine tenesmus, with scanty flow.—Leucorrhœa watery or thick; burning.—Nausea and vomiting of pregnancy.

17. Respiratory Organs.—Hoarseness, with disposition to clear throat.—Breathing: short, difficult; short breath when ascending; very deep with heat in heart and in face; slow, deep inspiration with short expiration.—Stitches in

chest; heat as if fire were burning in it.—On taking deep breath sensation as though something heavy lay under sternum.

20. Neck and Back.—Pain as from excoriation, in the sacral region and back.—Drawing pains in nape of the neck.

21. Limbs.—Nocturnal dragging in shoulders and arms.—Spasms of hands and feet.—Hands hot with swelling of veins.—Weakness of the lower limbs.

24. Generalities.—Jerking of small groups of muscular fibres.—Chorea; epilepsy; cramps in various parts.—Prostration after dinner, and annoying sensation as if she had eaten too much.—Internal restlessness.

26. Sleep.—Restless sleep at night, with anxious agitation and starts with fright.—Angry exclamations during sleep.—Jerking of the limbs while asleep.—Anxious and frightful dreams.

27. Fever.—Predominance of cold and shuddering.—Fits of shivering with icy coldness in the back.

Caulophyllum.

Caulophyllum thalictroides. Blue Cohosh. Squaw Root. N. O. Berberidaceæ. Tincture or trituration of root.

Clinical.—Abortion, threatened. After-pains. Amenorrhœa. Barrenness. Bearing-down pains. Chloasma. Cholera morbus. Dysmenorrhœa. False conception. *Feet, affections of*. Gonorrhœa. *Hands, affections of*. Inframammary pain. *Labour, abnormal*; false pains of. Leucorrhœa. *Menstruation, disorders of*. Ovarian neuralgia. Pityriasis. *Pregnancy, disorders of. Rheumatic gout. Rheumatism*. Uterine spasm. Uterine atony.

Characteristics.—*Caulophyllum*, "the Blue Cohosh," is closely related to *Actea racem*., "the Black Cohosh," in its action, though belonging to a different family of plants. It acts most markedly on the female generative organs and on rheumatic states. It has only had one proving, that by Dr. Burt, the majority of the indications having been derived from tradition and clinical experience. It has been given with success for chloasma or pityriasis versicolor, curing incidentally dysmenia at the same time. Reflex symptoms having a uterine origin; headache; vomiting; hoarseness; rheumatism; cramps and spasms. No other drug produces uterine spasms so markedly except *Secale*. Bearing-down pains. Paraplegia from disorders of the uterus. Left ovarian and left inframammary pains. Leucorrhœa in little girls. The pains are intermittent and paroxysmal, and fly about from place to place;

generally < at night. Great nervous excitement; tremulous weakness over whole body. Can scarcely speak. Sleepless, restless, nervous; recalling the effects of coffee, which is incompatible with it. In rheumatic affections the special sphere of *Caulo*. is the small joints and muscles. Its action on the muscular tissue of the uterus (whether gravid or not) is to cause intermittent spasms or contractions (differing from the continuous contractions of *Secale*). Its special sphere in labour is: (*1*) when pains do not come regularly; (*2*) when they disappear from exhaustion; and (*3*) when they are too painful. Nash prescribed *Caul*. 3 for a lady of forty, seven months pregnant, who was attacked with severe pain and swelling of all the finger-joints; wrapping them in mustard was the only thing that relieved her sufficiently to allow her to get sleep. Caul. relieved the finger pains, but caused such severe labour-like pains that it had to be discontinued for fear of causing miscarriage. The bearing-down then ceased, and the finger pains returned and continued till delivery, when they ceased for a few days. Then the lochia increased to a flooding—passive, dark, liquid; with great weakness and *internal trembling* (not visible externally); and now the terrible finger pains returned. Afraid to give *Caulo*., other remedies were tried, but in vain. At last Nash gave *Caulo*. 200, which rapidly cleared up the whole case. Nash regards "internal trembling" as a strong characteristic when associated with the weakness; he has cured long-continued passive hæmorrhage associated with these symptoms.

Relations.—*Compare:* Gels. in dysmenia (it is like Gels., and follows it well); Puls. in labour-pains, but the mental condition is opposite; Act. r.; Bell. in intermittent and paroxysmal pains; Calc. (Leucorrhœa in little girls); Lil. t., Lach., Sul., Ustil., and Vib. o. in left ovarian and inframammary pains; Mag. mur. in uterine spasms; Bry. in rheumatism; Secale, Sep., Gossyp.

SYMPTOMS.

1. Mind.—Fretful; irritable; apprehensive.

2. Head.—Headache; from uterine or spinal troubles; over l. eye; pressure behind eye; severe by spells; < stooping; from light; from noon till night.

6. Face.—"Moth spots" on forehead; with leucorrhœa.

11. Stomach.—Frequent gulping of sour, bitter fluid with vertigo; spasmodic vomiting.—Spasms of stomach from uterine irritations.

13. Stool.—Stool, soft white.—Watery stools, great quantity, runs a perfect stream from bowels, but no pain; 1 a.m.

15. Male Sexual Organs.—Every few minutes sharp, stinging pains in glans penis.

16. Female Sexual Organs.—Tension and fulness in hypogastrium; sensation as if uterus congested.—Spasmodic pains in uterus.—Painful menstruation; spasmodic, intermittent pains in bladder, stomach, groins, even chest and limbs; congestion and irritability of uterus; scanty flow.—Before menses: pain in small of back; great aching and soreness of lower limbs; bad breath; bitter taste; vertigo; chilliness; flow very scanty; blood very light; with intense nausea and vomiting of yellow bitter matter; pain unremitting for several hours; habitual cold feet became warm under the remedy.—Amenorrhœa, spasms, cramps or great atony.—Hysteric convulsions during dysmenorrhœa.—Leucorrhœa sharp, acrid, very weakening; with heavy eyelids; of profuse bland mucus; in little girls; with forcing-down pains; with sterility.—Threatened abortion; spasmodic bearing-down; severe pain in back and loins, but uterine contractions feeble.—Habitual abortion from uterine atony.—Spasmodic rigidity of os; pain like pricking needles in cervix.—Labour-pains short, irregular, spasmodic, patient very weak and irritable.—Weak labour-pains passing off with a shiver.—After-pains.—False conception.—Hæmorrhage.

17. Respiratory Organs.—Hoarseness and loss of voice.—Panting breathing.

20, 21. Neck, Back, and Limbs.—Rheumatic stiffness of nape.—Severe drawing insterno-cleido-mastoid drawing head to left.—Dull pains in lumbar region.—Rheumatic, drawing, flying pains in limbs; in hands; thighs, knees, ankles, feet and toes.—Severe drawing pain in wrists and fingers.—Cutting in joints when closing hands.—Fingers very stiff.—Joints crack walking or turning.—Paraplegia.

Causticum.

Tinctura acris sine Kali. Potassium Hydrate. Obtained by distilling a mixture of slaked lime and a solution of potassium sulphate. Tincture with spirit.

Clinical.—Acne rosacea. Agalactia. Amaurosis. Apoplexy. Arthritis deformans. *Bladder, affections of. Bronchitis*. Burns. Cataract. Chorea. *Coccygodynia. Constipation*. Convulsions. *Cough*. Deafness. Dentition. Diphtheritic paralysis. Ears, otorrhœa. Emaciation. Enuresis. Epilepsy. *Eyes, affections of*. Facial paralysis. *Fistula*. Fistula dentalis. Goître. Hæmorrhoids. Headache. Heart affections. Heel, blistered. Herpes zoster. Hip disease. Hydrogenoid constitution. Impotence. Influenza. Intermittent fever. Intertrigo. *Laryngitis*. Lead poisoning. Leucorrhœa. Locomotor ataxy. Menière's disease. *Menstruation, disorders of. Myalgia*. Nails, crippled. Neuralgia. Nose, crusts in; acne on. Paralysis. Pemphigus. *Pregnancy*. Prostatitis. Ptosis. Rheumatism. Scabies. Scrofula. Skin, eruptions of. Small-pox. Stammering. Syphilis. Tendons, contracted. Throat, affections of. Tongue, affections of; paralysis of. Ulcers. Urethritis. *Urine, disordered*. Varicose veins. *Voice, lost*. Warts. Whooping-cough.

Characteristics.—*Causticum* is one of the great polychrest medicines of the *Chronic Diseases*. It is both antipsoric and antisycotic and antisyphilitic. The leading feature of the *Causticum* effects is *Paralysis*, showing itself both in voluntary and involuntary muscles. The weakening effect of potassium in allopathic overdosing is well known, and is strongly brought out in the *Causticum* provings. Paralytic weakness. Paralysis of single nerves or single parts. Ptosis; facial paralysis; paralysis of tongue; of extremities; of vocal cords; of bladder; of rectum; lead paralysis. Allied to paralysis are convulsions, chorea, cramps, starting, restlessness, twitching. Contraction of flexor tendons. Trembling. Neuralgic and rheumatic affections; tearing, drawing pains. There is a headache which draws and tears through the body. Glandular indurations are prominent. In children there are many symptoms of scrofula. There is a weakened and emaciated appearance, especially about the face, the abdomen being large. Skin dirty-white. Scrofulous inflammations about eyes, ears, and scalp. The paralytic element comes out in slow learning to talk and walk, and stumbling on attempting to walk. In chorea the right side is more affected than left words seem to be jerked out. During the night the legs are constantly "on the go." This kind of restlessness is characteristic of *Caus*. The mental state is timid, nervous, anxious. Apprehensive of impending misfortune. Conscience-stricken as if she had committed a crime. Full of fearful fancies, < at twilight. Sees fearful images when closing eyes. Melancholy. Taciturn and distrustful; inclined to fits of anger with scolding. Memory fails (mental paralysis), any attempt at mental exertion = symptoms, such as stitches in temples, tension in head and scalp, especially forehead to temples. There is a sensation as if there was an empty space between the bone of the skull and the brain, > by warmth. Headache; cannot keep upper eyelids up. Vertigo, excitement of brain and spine, incapable, tends to fall forward or sideways (locomotor ataxy); with anxiety, weakness in head, sight as if through a fog; skin dry and hot; constipation. Eruptions on scalp behind ears. Sounds re-echo unpleasantly an ordinary voice sounds loud. Facial paralysis from cold draught neuralgia of right cheekbones to mastoid process < at night. Jaw joints affected with rheumatism. Sickly, sallow, low-spirited expression. Nash cured an obstinate case of prosopalgia with Caust. The patient was emaciated and debilitated by long Suffering; pains came in paroxysms, and were of a drawing nature. She had suffered from eczema at times before the neuralgia appeared. *Sulph*. had been given in vain. *Caust*. 200 rapidly cured. The *Caust*. weakness may result from grief of long standing or from disease. Accumulations of mucus in larynx and fauces; catarrh of throat and Eustachian tubes with tinnitus and reverberation. Difficult swallowing of liquids. Constant sensation as if lime were burning in stomach; with water-brash. Pressure and fulness in abdomen as if it would burst, much < by food. Griping cutting > by bending double, < after least food or tightening clothes; menstrual colic (*Caus*. will cure after failure of *Coloc*.). Obstinate constipation (paralysis of rectum); stools covered with shiny coating of mucus; piles, unbearable by walking, by thinking of them, by touch. No remedy has such well-marked aggravations of anal symptoms as Caus. A characteristic is "Passes stool

best standing." Spasm of rectum prevents walking. Painful pustules near anus discharging pus, blood, serum. Itching at orifice of urethra. Difficult, frequent micturition; with spasm of rectum. Paralysis of bladder is apparent. Enuresis, especially during first sleep; < winter, > in summer. Tendency to escape during the day, from any extra exertion, laughing, walking. Epilepsy has been cured by *Caust*., when fit occurs in sleep and urine escapes. Coughing expels urine. (Kraft has cured cases of incontinence following over-distension of the bladder owing to want of opportunity to attend to the call to urinate at the time, such as occurs in shop-girls and school-girls, who cannot leave their tasks.) Prostatitis and urethritis. Itching scrotum; cannot retain urine. Blood with semen. Sexual appetite in women is abolished. Constant indifference, the only time there is any inclination is after the period. Sadness during period. Period too early, too abundant; after it, a little blood passes occasionally, smelling badly. Nursing women lose their milk after exertion or long sleep. Hoarseness (with dry cough and redness of fauces), the result of weather or catching cold, < in morning. Aphonia: paralysis of vocal cords. Dry, hollow cough with mucus on chest; patient cannot expectorate, must swallow phlegm raised. A characteristic is: "Cannot cough deep enough for relief." Rawness and burning down throat and trachea. Rheumatism tends to stiffen joints and contract limbs. Warts are a notable feature in *Caust*.—on hands, on face, and especially on margins of eyelids. When on hands they are usually found on finger-tips or close to nails. Nails are crippled. Old, large, inflamed and indurated warts. Burning itching on face, discharging acrid fluid which forms crusts. Guernsey commends *Caust*. in the after-effects of burns and scalds. Patients say, "I have never been well since that burn." Its *caustic* properties may be its "signature" here. "Burning," indeed, is one of the notes of *Caust*. Guernsey gives "sensation as if lime were being slaked in the stomach." "Soreness" or "rawness" are also very characteristic, appearing in piles and anal affections (< walking or sitting), in which *Caust*. is in the very first rank among remedies. Soreness and rawness accompany cough symptoms and urinary symptoms. Malcolm Macfarlan confirms the following symptoms: "Forearms in front very sore to touch and pressure; muscles of extremities sore generally." "Sudden severe pain commences in *left hip-joint*; lasts a short time; feels as if it had been injured; legs very sore, or rather the lower extremities ache and feel tired." *Caust*. is a remedy to be remembered in intermittent fevers. One peculiar symptom is, "sweat coming after the chill without intervening heat." Teste places *Caust*. at the head of a group (including *Coccul., Coff. c., Corall., Nux v., Staph., Ars*.) the common characteristic being according to him: "Two series of successive and opposite phenomena; the former of short duration, consisting in a sort of universal exaltation of all the functions; the latter, which succeed the former more or less rapidly, consist in a general depression of the vital forces, and constitute the real and permanent action of the drugs of this group." Among instances, he gives mirthfulness followed by ill-humour; sleeplessness followed by yawning and drowsiness; moisture of skin followed by dryness; flow of saliva followed by dry mouth and throat; coryza fluent, then dry. Teste found *Caust*. of great efficacy in small-pox in alternation with *Merc. cor*.

Periodicity is marked: Periodic, paroxysmal attacks; twice a day to every two, three, or four weeks an attack; at new moon. Symptoms are < at night (great restlessness of body, especially legs). < Early morning (cramp). < On waking. < In morning: hoarseness. < Evening: 6 to 8 p.m. heat. *Causticum* is one of Grauvogl's hydrogenoid remedies, hence is a chilly medicine; < washing, bathing, open air, draught, becoming cold, after wetting; < every change of weather. Heat, especially getting warm in bed > (rheumatism ceasing on getting warm in bed, but beginning again as soon as he gets up.) On the other hand cold water > face and eruptions, and a swallow of cold water > cough; headache is < entering a warm room; damp weather > pains in scalp, ulcers; rhinitis. Heat < eruptions. < In dark; fear of darkness. < From coffee. < After stool. < From walking. < From taking hold of anything. < In clear, fine weather. Suited to dark-haired persons with rigid fibre; delicate skins; lymphatic, torpid temperament.

Relations.—Caust. *is antidoted by:* Asaf., Coff., Coloc., Dulc., Guaj. (rheumatic contractions); Nit. spir. dulc., Nux. *Is antidote to:* Asaf., Chi., Coloc., Euphras., Plumb. (lead poisoning); type-poisoning; abuse of Merc., and Sulph. in scabies. *Incompatible:* Acids, Coff., Pho. *Compatible: Before*—Calc.; Kali i. (facial paralysis from an abscess); Lyc., Nux, Rhus, Ruta, Sep., Sil., Sul. *Intercurrently*—Ars., Cupr., Ign., Pod., Puls., Rhus, Sep., Stan. After—Calc., Coccul., Coloc., Cup., Hyo., Ign., Petrol., Petrosel., Rhus, Sep., Stram., Sul. *Complementary:* Petrosel. Merc. cor. assists the action of Caust. and *vice versâ* (in small-pox, according to Teste). *Compare:* Nit. ac. is like Caust. in being at once antipsoric, antisycotic, and antisyphilitic. Phos. touches Caust. at many points, and is too near it to be compatible with it. (This only applies to cases in which either of the two has done good; if one has been given without any result the other, if indicated, will very likely succeed.) Both Caust. and Phos. are taciturn and distrustful, or inclined to fits of anger; both are < at twilight; both have sensations of tension. The hoarseness of Phos. (like that of Carb. v.) is < in evening. Phos. has extreme sensitiveness of larynx and dreads to cough or talk. The Caust. cough is > by cold drinks. Carb. v. has rawness and burning down throat (like Caus.) and hoarseness from damp evening air. *Compare also:* Calc. (images on closing eyes); Nat. m. and Sep. (spurting of urine with cough); Rhus (rheumatism from damp and cold; but With Rhus there is restlessness and > from motion always—Caus. has restlessness *at night only*); Eup. perf. (hoarseness < in morning; influenza with aching all over body; has more soreness on chest than Caust.); Salic ac., Chi., Carbo. sul. (Menière's disease); Coloc. (colic); Lyc. (sweat and heat < 6 to 8 p.m.); Bar. c. (mental weakness, paralysis; < damp weather); Sep. (enuresis in first sleep;—in deep sleep, Bell., Sul.); Calc. (scalding urine); Sars. (urine, especially in women, passed without patient's knowledge); Bell., Hyo., Ign., Lach., Lyc. and Pho. (difficult swallowing of liquids); Calc., Carb. an., Stro. and Stram. (fear of darkness); Tarentula (restlessness) Gels. (ptosis, paralysis, faint-like weakness and trembling, blindness) Ant. t. (laryngeal affections); Lyc. (contraction of brow with pain in head); Cepa (sore heel); Sep. (sadness, especially before menses. Face yellow); Am. c. (rawness and burning in chest); Aco. (paralysis from cold); Puls.

(cystitis; failure of milk after labour); Euphorb. (ptosis from cold); Nat. c. Sul. and Sul. ac. (falls easily); Kali bi. (blindness with headache;—Kali bi. has blindness >, as headache <).

Causation.—Burns or scalds. Fright. Grief or sorrow. Night-watching. Suppressed eruptions. Ulcers maltreated with lead.

SYMPTOMS.

1. Mind.—Mirthfulness sometimes, and soon after, ill-humour.—Melancholy and vexatious thoughts, day and night, with tears.—Hypochondriacal sadness.—Restlessness, apprehension, and great anguish.—Anxiety of heart.—Fearfulness, esp. at night.—Afraid at night (in the dark room; the child does not want to go to bed alone).—Mistrust of the future.—Discouragement.—Irascibility and passion, with great sensitiveness of disposition.—Quarrelsome and wrangling spirit.—Indisposition to labour.—Disposition to be frightened.—Weakness of memory.—Absence of mind.—Tendency to make mistakes when speaking.

2. Head.—Confusion in the head, as if it were compressed.—Feeling of intoxication, and as if momentarily on the point of falling.—Vertigo, with sensation of weakness in the head, and anxiety.—Attacks of headache, with nausea.—Headache in the morning, sometimes on waking, with sensation, as from a bruise, in the brain.—Nocturnal pain in the head, as if from an abscess in the brain.—Dull and pressive headache, which occasions gloominess, and is felt chiefly in the forehead or in the occiput.—Shooting pains, esp. in the temples.—Digging, with sudden shocks in the head.—Congestion in the head, with ebullition and noise internally.—Tensive or compressive pains in the head.—The headache sometimes exhibits itself only on one side (l.).—Heat and sensation of burning in the head.—Tightness and shootings in the head.—Tension and tightness in the head, and of the scalp (forehead and temples).—Sensation of torpor in the occiput.

3. Eyes.—Pain in the eyes, as if the eyeball were dilating.—Aching in the eyes, as if from sand, sometimes aggravated by the touch.—Itching, smarting, and burning pair, in the eyes.—Inflammation of the eyes, with burning and itching of the eyes and eyelids.—Ulceration of the eyes.—Lachrymation.—Difficulty in opening the eyes, with a sensation as if the eyelids were swollen.—Visible quivering of the eyelids.—Obscuration of the eyes, often sudden, and sometimes as if the eyes were covered by a skin.—Sight confused, as if a gauze or mist were before it.—Ophthalmia where there is opacity of the cornea which has spread over the pupil.—Movements before the eyes, as of a swarm of insects.—Dark nets, which seem to dance before the eyes.—Lights and sparks before the eyes.—Photophobia.—Warts of old-standing in the eyebrows; on the upper eyelid (and nose).

4. Ears.—Otalgia, with pressive pain outwards, as if the inner parts were pressed out.—Shootings, and pain, as of excoriation, in the ears.—Swelling of the ears, externally, with shooting and burning pain.—Stitches in the (r.) ear.—Discharge of fetid pus from the ear.—Itching in the lobe of the ear, as if from a tetter.—Words spoken and steps re-echo in the ear.—Tinkling in the ears.—Loud resounding noises in the ear, with hardness of hearing.—Rumbling and buzzing, rolling and murmuring in the ears, and in the head.—Sensation of stoppage in the ears.

5. Nose.—Itching at the point, and the alæ nasi.—Scaly nose, externally and internally, with burning and itching.—Eruption at the point of the nose.—Warts of long standing on the nose (orbits, upper eyelids).—Blowing of blood from the nose, every morning.—Epistaxis.—Loss of smell.—Obstruction of the nose.—Dry chronic coryza.—Coryza with hoarseness preventing loud speech.—Fluent coryza, with nocturnal cough, rough hoarseness and headache.—Discharge of fetid mucus from the nose.—Sneezing in the morning.

6. Face.—Yellow colour of the face, esp. in the temples, with bluish lips.—Burning sensation in the cheeks, and esp. in the cheek-bones.—Arthritic and tensive pains in the bones of the face, in the cheek-bones, and in the jaws.—Swelling of the cheeks, with pulsative pains.—Sensation of tension and of swelling under the jaw, which impedes its opening.—Itching eruption on the face.—Eruption of red pimples on the face.—Semi-lateral (r.) paralysis of the face, from the forehead to the chin.—Cramps in the lips.—Excoriation and eruption on the lips, and at the commissures of the lips.—Tetter on the lower lip.—Tensive, dragging pain in the jaws, with difficulty in opening the mouth.—Inflammatory swelling of the chin, with burning pain.

7. Teeth.—Odontalgia, provoked by the introduction of air on opening the mouth.—Pain, as from excoriation, or tractive pains, and acute pulling, throbbings, or shootings in the teeth; in the under jaw, in the lower teeth, (particularly on the (l.) side).—Painful loosening and elongation of the teeth (incisors).—Fistula in the gums.—Prolonged ulceration of the gums.—Painful sensibility, swelling, and ready bleeding of the gums.

8. Mouth.—Dryness of the mouth and tongue.—Accumulation of mucus in the mouth.—Pain, as of excoriation and burning in the mouth, in the palate, and at the point of the tongue.—Stuttering, embarrassed, wheezing, and very indistinct speech.—Paralysis of the tongue.—Swelling of the inner side of the cheek; he bites it when chewing.—Distortion of the mouth and of the tongue, when speaking.—Burning ulcer on the inner surface of the upper lip.

9. Throat.—Sore throat on using exertion, as if it were lacerated internally.—Pain as of excoriation, roughness, scraping, and burning pain in the throat.—Shooting pain in the throat on swallowing.—Audible cracking in the throat.—Constant urging to swallow, with sensation of swelling or of contraction of the gullet.—Difficulty in

swallowing, from paralysis of the organs of deglutition.—Sensation of cold which ascends to the throat.—Dryness of the throat, without thirst.—Accumulation of mucus in the throat, and behind the palate, with expectoration by hawking.

10. Appetite.—Putrid, greasy, rancid, or bitter taste.—Burning thirst for cold drinks and for beer.—Sensation as if lime were being slaked in the stomach.—Dislike to sweet things.—At the commencement of a meal, loss of appetite and disgust.—Fresh meat causes nausea; smoked meat agrees.—Sensation of suffering as from indigestion.—Pressure in the stomach, after eating bread.—After every meal, pressure on the whole abdomen, or on the stomach, or else nausea and inflation of the abdomen, or else, again, shivering or heat in the face.

11. Stomach.—Empty risings, with a taste of undigested food.—Abortive risings, with strangulation in the gullet.—Nausea, esp. after a meal, or during one, or else in the morning.—Sensation of faintness, as though about to swoon.—Water-brash.—Vomiting of acidulated water, followed by acid risings.—Vomiting of food.—Nocturnal vomiting of coagulated blood.—Pains in the stomach with heat in the head, increased by every quick movement, mitigated by a recumbent posture, and shuddering when the pains are aggravated.—Pressive squeezing, as if from claws, constriction and cramp-like pains in the stomach, and in the epigastrium.—Shooting pains in the epigastrium.

12. Abdomen.—Pressure of the clothes on the hypochondria painful.—Tension and shootings in the hepatic region.—Pains in the abdomen in the morning.—Pressure on the superior and inferior part of the abdomen.—Painful and tensive inflation of the abdomen.—Violent distension of the abdomen after a meal (breakfast).—Swelling of the navel, which is painful on being touched.—Enlargement of the abdomen in children.—Contractive pains in the abdomen.—Susceptibility to cold in the abdomen, whence results diarrhœa, or pressure at the stomach.—Incarceration of flatus, with hard fæces.—Frequent expulsion of offensive flatus, in small quantities.

13. Stool and Anus.—Chronic constipation.—Frequent and ineffectual efforts to evacuate, with pains, anxiety, and redness of the face.—The fæces are passed more easily, in an erect posture.—Fæces knotty, or of a very small size.—Fæces hard, tough, covered with mucus; viscid, and shining, as if with fat, or of a bright and whitish colour.—Diarrhœa in the evening and at night.—Diarrhœa, with tenesmus and burning in the rectum.—Diarrhœa, after the abdomen has been chilled.—Flow of blood and incisive pains in the rectum, during the evacuation.—After the evacuation, anguish, with palpitation of the heart and burning in the anus.—Itching in the anus.—In the anus, appearance of hæmorrhoidal tumors, which are hard, swollen, painful, and which impede evacuation.—Walking and meditation aggravate the hæmorrhoidal pains, so as to render them insupportable.—Varices of the rectum, hindering stool; large; painful; stinging; burning when touched.—Pressure in the hæmorrhoidal tumors of the rectum, so as to cause them

to protrude.—Pulsation in the perineum.—Fistula in the rectum.—Abscess in the anus.—Pain of excoriation, and moisture in the anus.

14. Urinary Organs.—Frequent inclination to urinate, with thirst and scanty emission.—More copious emission of urine.—Emission of urine at night, and wetting the bed.—Involuntary emission of urine (as in cases of children who wet the bed at night; in women, when urine spouts from them in walking, coughing, &c.), day and night.—Acrid and corrosive urine, or pale, aqueous, of a deep-brown, or reddish colour.—Stringy mucus in the urine.—The urine becomes turbid, after settling.—Sensation of burning in making water.—Itching of the orifice of the urethra.—Flow of blood from the urethra.

15. Male Sexual Organs.—Increase of sexual desire.—Absence of erections.—Frequent pollutions.—Escape of prostatic fluid after a stool.—Emission of sanguineous semen, during coition.—Pressure and shooting in the testes.—Ulcers and itching scabs on the interior part of the prepuce.—Red spots on the penis.—Copious secretion of smegma behind the glans penis.—Itching at the scrotum, glans, and prepuce.

16. Female Sexual Organs.—Catamenia retarded, but more copious, with flow of blood in large clots.—Difficult first menstruation.—During the menses no blood is passed at night.—Before the catamenia, melancholy, sacral pains, and colic.—Catamenia too feeble; sexual desire too weak.—During the catamenia, pains in the loins, cuttings, and paleness in the face; yellowness of the face; vertigo.—Excoriation between the legs, at the vulva.—Dislike to coition.—Cramps of the matrix.—Profuse leucorrhœa, having the smell of the catamenia, or which flows in the night.—Leucorrhœa flows at night and not during the day.—Nipples excoriated, cracked, and surrounded with tetters.—Want of secretion of milk.

17. Respiratory Organs.—Rough hoarseness, morning and evening.—Prolonged hoarseness, with voice weak and stifled.—Aphonia from weakness of the muscles of the larynx.—Sensation of excoriation in the larynx, when not swallowing.—Hawking up of abundant mucus, esp. in the morning.—Cough, with short breath, and difficulty of respiration.—Cough, excited by speech and by cold.—Cough is worse: in the evening till midnight, from exhaling; drinking coffee; cold air; draught of air; when awaking from sleep.—Cough is relieved by a swallow of cold water.—Matutinal or nocturnal cough.—Short cough, provoked by a tickling and a sensation of excoriation in the throat.—Cough, dry, hollow, shaking, with sensation of burning, and pain as of excoriation in the chest.—Rattling in the chest while coughing.—Pains in the hips while coughing.—Cough with involuntary passage of some drops of urine.—Inability to expectorate the mucus, which is detached by coughing (the expectoration comes up far enough apparently, but it cannot be spat out; greasy taste of the expectoration. The inability to expectorate is found in every species of cough, whooping-cough, &c.).

18. Chest.—Breath short.—Attacks of spasmodic asthma.—Asthma, esp. when sitting or lying down.—Fits of suffocation on speaking and walking quickly.—Oppressiveness of clothes on the chest.—Pressure on the chest.—Shootings in the chest and thorax, on making a full inspiration, and during corporeal exertion.—Burning, stitches, and soreness in the chest.—Attacks of cramp-like compression and of constriction in the chest, with feeling of suffocation.

19. Heart.—Palpitation of the heart, with languor.—Oppression of the heart, with melancholy.—Shootings in the heart.

20. Neck and Back.—Stiffness and tension in the nape of the neck.—Pain, as from a bruise in the nape of the neck.—Miliary eruption at the nape of the neck, between the shoulder-blades.—Itching and humid tetters at the nape of the neck.—Goître-like swelling of the cervical glands.—Pains in the loins which render the least movement exceedingly painful.—Aching pains in the loins when seated.—Painful stiffness (between the scapulæ and) in the back, esp. on rising from a chair.—Pulling and acute drawing pains in the shoulder-blades.—Itching and tingling in the back.

22. Upper Limbs.—Pains in the arms at night.—Drawing pains and acute pulling, in the arms and hands.—Convulsive movements and shocks in the arms.—Itching and eruptions on the arms.—Warts on the arms.—Pressure on the shoulders.—Shooting pains in the front part of the arms, from the fingers to the elbow.—Paralytic feeling in the r. hand.—Sensation of fulness in the hands, on grasping an object.—Tearing in r. wrist-joint.—Drawing pains in the hands, and the joints of the fingers.—Spasmodic weakness and trembling of the hands.—Paleness and painful torpor of the fingers.—Tension of the posterior joints of the fingers when bending them.—Contraction and induration of the tendons of the fingers.—Itching tetters on the fingers.

23. Lower Limbs.—Pain as from dislocation in the coxo-femoral joint, with inability to walk and to continue standing.—Pain as from a bruise in the thighs and legs, whilst in bed, in the morning.—Tensive stiffness in the joints of the legs, and of the feet.—Contraction and tension in the heel and tendo Achillis.—Drawing pains and acute pulling in the thighs, the legs, the knees, and the feet, with swelling of the parts.—Unsteady walk, and tendency to fall in children.—Skin marbled, on the thighs and on the legs.—Tension and cramp-like pain in the legs and calves of the legs.—Cramps in the feet.—Pains in the instep, in the ankle bones, in the soles of the feet, and in the toes, on walking.—Neuralgic pains in the soles of the feet.—Contraction in the instep, with tensive pain when stepping.—Coldness of the feet.—Swelling of the feet.—Pains in the varices.—Tingling in the soles of the feet.—Festering vesicles and ulcerations on the heels.—Whitlow on the great toe.

24. Generalities.—Arthritic and rheumatic drawing and tearing pains, esp. in the limbs.—Acute and violent pulling in the joints and the bones, mitigated by the heat of a bed.—Contraction of the tendons, and stiffness in the flexor muscles of the limbs.—Cramp-like contraction of several limbs.—Torpor and paleness of some parts, or of the entire l. side of the body.—Paralysis.—Jerkings and convulsive movements.—St. Vitus' dance.—Convulsive attacks, with cries, violent movement of the limbs, grinding of the teeth, smiles or tears, eyes half-closed, fixed look, and involuntary emission of urine; the fits are reproduced by cold water, and are preceded by pain in the abdomen and in the head, frequent emission of urine, irascibility, and tears; after the fit the eyes are closed.—Epileptic convulsions (at night during sleep).—Aggravation of the symptoms, generally in the evening, or in the open air, while those which have appeared in the open air disappear in a room.—Coffee seems also to aggravate all the symptoms.—Semi-lateral sufferings.—Insupportable uneasiness in the whole body in the evening, and when seated, with anxiety in the region of the heart.—In the evening, great dejection and oppression of the whole body.—Paralytic weakness, with trembling and tottering of the limbs.—Paralysis (one-sided).—Great sensibility to currents of air, and to cold.

25. Skin.—Violent itching, esp. in the back, and in the calves of the legs.—Itching of the whole body at night (Itch).—Injuries of the skin, which had been healed, become sore again.—Itch suppressed by mercury or sulphur; burning itch.—Tingling (or stinging) swelling (sometimes called "buzzing" swelling) (Guernsey).—Eruptions resembling scabies.—Miliary eruptions and nettle-rash.—Itching and humid tetters.—Ulcerative vesicles.—Burning ulcers, with yellowish-looking skin; ulcers burning, with corroding pus, with thin or watery pus, suppurating; jerking pains running through the ulcers.—Excoriation in children.—Painful corns in the feet.—Warts, also with pain and inflammation.—Panaris.—Painful varices.

26. Sleep.—Drowsiness in the day, like coma.—Nocturnal sleeplessness, caused by anxiety, inquietude, dry heat, and other annoyances, with frequent starts.—Starts on going to sleep.—Frequent movements of the arms and legs during sleep.—Anxious dreams, about grievous things, or about quarrels, or confused and voluptuous, with talking and laughter.—At night, vertigo, headache, dryness of the mouth, and painful heaviness of the legs.

27. Fever.—Pulse only accelerated towards evening.—Much shivering.—Chilliness predominating, frequently with coldness of the l. side.—Internal chilliness, followed by perspiration, without previous heat.—Nocturnal shivering, with pains in the back, and followed by general sweat.—Heat in the evening, from 6 to 8 p.m.—Flushes of heat, followed by chilliness.—Copious sweat while walking in the open air.—Nocturnal sweat, sometimes of an acid smell.—Morning sweat (smelling sour).

Ceanothus Americanus.

New Jersey Tea, or Red-root. N. O. Rhamnaceæ. Tincture of fresh leaves.

Clinical.—Diarrhœa. Heart, disordered. *Intermittent fever*. Jaundice. Leucorrhœa. *Leucocythæmia*. Menses, suppressed. *Side, pain in*. Spleen, affections of.

Characteristics.—Burnett, following Hale, is our chief authority for *Ceanothus*. It has been recently proved by I. C. Fahnestock (*Hom. News*, March, 1900), but its place had already been made clear by clinical use; and definite clinical symptoms have been observed. *Ceanothus* is a spleen remedy *par excellence*; deep-seated pain in left hypochondrium; pain and fulness in left side; cutting pain. Pain, inflammation, enlargement of spleen, either alone or with other affections, indicate its use; chilliness, principally down back; shivering; rigors; must sit over fire; < in cold weather. Low spirits with splenic affection. Headache, right side, with spleen pain. Diarrhœa and dysentery (compare *Cascara* and other Rhamneæ) have been frequently observed in patients taking *Cean*. for spleen affections. Leucorrhœa, profuse, thick, yellow, with pain in left side; (I have frequently confirmed Burnett's experience in this last particular, as in most others, with this remedy.) P. C. Majumdar cured with *Cean*. 3x a case which had been diagnosed as one of heart-disease (there was palpitation and dyspnœa on exertion). Majumdar found the spleen enormously large. R. K. Ghosh has cured with it many cases of suppression of menses and leucorrhœa in patients from malarial districts. Menses too profuse and too early with pain in left side. Cannot lie down for pain in left side. Fahnestock's two provers took repeated doses of the Ø tincture, and both had severe symptoms. One had had malaria five years before, treated with Quinine allopathically. This prover suffered more acutely than the other, and in the end had to be treated. *Nat. m*. 30 soon put an end to his symptoms. The other prover had practically identical symptoms but less severe. The symptoms of the provers are marked (F.) in the Schema.

Relations.—Ceanothus *is followed well by:* Berberis, Conium, Myrica cerif., Quercus. *Compare:* Ced., Agar., Chi., Nat. m., Oxal. ac. (pain in left side). Cascara (diarrhœa. Syphilis). *Antidote:* N.—Lt. m.

SYMPTOMS.

1. Mind.—Low-spirited, fears he will become unfit for work.—Great nervous excitement, with chilliness and loss of appetite; felt as if nerves were shaken; at dinner could scarcely hold knife and fork.—Don't-care feeling all the time, and cannot work (F.)

2. Head.—Headache, r. side, with pain in region of spleen.—Head seems to move with every beat of the heart (F.).—Head feels as if the brain were too large (F.).—Dull frontal headache, > lying down (F.).

3. Eyes.—Eyes feel too large; lids swollen; dry sensation of cornea; with a dull pain in orbital region (F.).

6. Face.—Cheeks and ears feel hot, with cold fingers (F.).

8. Mouth.—Aphthous affections of mouth and fauces.—Mouth dry (F.).—Tongue, white coat down centre (F.).—Food tasteless, unless highly seasoned (F.).

9. Throat.—Throat dry; raw sensation on swallowing (F.).

10. Appetite.—Loss of appetite (F.).—Craving for something sour (F.).—Thirst for water, but it made him sick (F.).—Cannot eat pastry (very unusual)(F.).

11. Stomach.—Wanted to drink water but it made him sick (F.).

12. Abdomen.—Deep-seated pain in l. hypochondrium.—Pain and fulness in l. side, with inability to lie on it.—Severe pain in region of spleen, with low spirits.—Pain in l. side, for a long time, with leucorrhœa and chilliness.—Pain in l. side, headache r. side; severe pain r. side, with inability (for years) to lie on it.—Swelling in l. side, with cutting pain, < in cold weather, with constant chilliness, must sit over a fire.—Chronic hypertrophy of spleen.—Dull pain in region of spleen (F.).—Immediately after dinner, dull pain in region of liver (F.).—Full feeling in region of liver (F.).—Pain in liver < lying on r. side (F.).—Sensitiveness in umbilical region with desire to relax abdominal muscles (F.).—Whole abdomen moves with beat of heart (F.).—Bearing-down in abdomen < after eating (F.).

13. Stool and Rectum.—Diarrhœa.—Dysentery.—Stool light brown, with loud flatus (F.).—Continual bearing-down in rectum with constricting sensation (F.).

14. Urinary Organs.—Sharp pain above pubes, in region of bladder, before urination (F.).—Urine: alkaline; increased phosphates; high specific gravity; trace of sugar (F.).—After urinating feeling as if all had not passed (F.).—Urine: quite green; contains bile; strong odour, frothy (F.).—Pain in back and irritation of urethra (F.).—Constant urging to urinate (F.)

15. Male Sexual Organs.—Syphilitic complaints.

16. Female Sexual Organs.—Leucorrhœa, profuse, thick, yellow, with pain under l. ribs.—Menses ten days too early, and very profuse.—Metrorrhagia with spleen pain.

18. Chest.—Congested feelings in lungs; chest sore internally, < deep inspiration (F.).—Soreness behind sternum (F.).—Constricted feeling in chest.

19. Heart.—Palpitation and dyspnœa, with enlarged spleen.—Pulse full and very strong, heart's pulsations visible through the clothes (F.).—Heart beat so hard it shook him all over (F.).—Chest feels too small for heart (.F).

20. Neck and Back.—Carotids throbbing in neck (F.).—Pain under r. scapula (F.).—Chilliness down back.—Weakness in small of back and legs (F.).—Dull pain in lumbar region (F.).—Constant dull pain in kidneys and up back (F.).

22. Upper Limbs.—Pains down forearms and fingers (F.).

23. Lower Limbs.—Weakness of knees; must lie down (F.).—Dull pains in anterior part of thighs (F)

24. Generalities.—Aversion to move; feels too weak (F.).—Great weakness, walking or standing (F.).—Lost several pounds in weight (F.).

26. Sleep.—Awake all night (F.).—Dreamed all night (unusual); of snakes; of robbers (F.).

27. Fever.—Shivering; loss of appetite, and nervous excitement.—Rigors at frequent intervals.—Intermittents with splenic enlargements.—Cheeks and ears hot, with cold fingers (F.).—At 4 p.m., six chills in succession, with constant chilliness up and down back; after chill very hot; fever; pulse 120; throbbing carotids (F.).

Cedron.

Simaba cedron. N. O. Simarubaceć. Tincture of seeds.

Clinical.—Brow ague. Cerebro-spinal meningitis. Ciliary neuralgia. Chorea. Coitus, complaints after. Epilepsy, menstrual. Glaucoma. Gout. Hydrophobia. Hysteria. *Intermittent fever*. *Neuralgia*. Neuritis. Rheumatism. Snake-bites. Toothache.

Characteristics.—Petroz and Teste introduced *Cedr*. into homśopathic practice, having received the seed from Panama, with an account of its powers of entrusting snake-bite when chewed immediately after being bitten; and also of its traditional reputation in intermittent fevers. Hellert was bitten by a coral snake. "During the few seconds which it took him to take the antidote out of the little bag which he wore suspended round his neck, he was siezed with violent pains at the heart and throat; but he had scarcely chewed and swallowed a small portion of *Cedron*, of

the size of a small bean, when the pain ceased as by magic. An oppression and general prostration remained. He chewed another portion of the same fruit, and applied it to the wound externally, and in another quarter of an hour all he felt was a slight colic, which disappeared after eating a little. This colic was followed almost immediately by a copious evacuation of a substance that looked like curdled milk, white, with a slightly yellowish tint" (Teste). Other cases were reported. The great characteristic of *Cedron* is a clock-like periodicity in the recurrence of the symptoms; accurately periodic neuralgias; intermittent fever commencing the same hour every day or every other day. In fever there is: Red face in hot stage; thirst with desire for warm drinks. Profuse perspiration. "Excitement before chill" is peculiar to *Cedr*. Fevers of low, marshy regions in warm seasons and tropical countries. General debility, languor, and fainting. Malaise. Trembling. Complaints after coition (chorea in women; neuralgia in men). Epileptiform convulsions during catamenia. Swollen sensations; numbness of whole body. Adapted to persons of a voluptuous disposition, and of an excitable nervous temperament; especially to females. < After sleep; lying down; night; (objects appear red at night, yellow by day); in open air; before a storm; chills in persons returned from tropical climates. > Standing erect.

Halbert relates a case of malarial fever in a soldier. Chills and fever were clock-like in regularity of recurrence. Liver and spleen were much enlarged. Anćmia was extreme; and there was this additional peculiarity: intermittent gastralgia occurring with the febrile crises. In conjunction with these conditions there was a manifestation of choreic symptoms, involving face and shoulders mostly, the twitchings being troublesome in the interfebrile state; often there were debilitating hysterical spasms; the heart became irritable and sometimes irregular. After other remedies had failed to make any impression, *Cedr*. cured in three weeks, the improvement setting in *immediately*. Rapidity of action appears to be a characteristic as with *Bell*. The great predominance of nervous symptoms will be evident in the symptoms of *Cedr*., also the strong sexual excitement it causes. Numbness; enlarged sensation; malaise; sensation as if paralysed. A large number of symptoms appear on l. side, but r. side of head, face, r. elbow, and r. deltoid are affected.

Relations.—*Compare:* Chi., Ars., Aran. d., Bell., Cedr. removes roaring in ears of Chi. Bell. removes "Objects appear red at night, and yellowish by day" of Cedr.; Ars. and Sabad. (complaints return same hour every day); Aran. (ague—Aran., chill predominates). Teste includes Cedr. in the Bell. group, with Agar., Lach., Stram., Op., Ruta, Can. i., Hyo., &c. (action on brain; red, hot, face; febrile excitement). Ced. is *antidote to:* Lach. *Is antidoted by:* Lach., Bell.

SYMPTOMS.

1. Mind.—Nervous excitement, followed by depression.—Restlessness, as driven from place to place; urine dark yellow, increased quantities.—Lectophobia.—Body heavy, mind depressed.—Mental symptoms < at night.

2. Head.—Slight dizziness 11 a.m.—On rising from bed, dizzy, could not see to light a candle, and could not tell when it was lighted.—Intense frontal headache; sharp pains from above eyes to temples and occiput, < before a storm.—Pain across eyes from temple to temple.—Sick headache every other day 11 o'clock.—Bending the head backwards, with pressure on occiput and parietal regions as if they were going to burst.—Headache: < during night; < in open air.—Head feels as if swollen.

3. Eyes.—Severe shooting pains over l. eye.—Tic-like pain over l. eye, only after coitus.—Objects seem red at night, yellow by day (Bell. cured).—Vision dim.—Flashes of light before eyes.—Loss of sight with dizziness.

4. Ears.—Tinnitus.—Hardness of hearing at night.

5. Nose.—Point of nose cold; with chilliness and yawning, 9 a.m. Secretion profuse.—Glassy-looking mucus; or thin, clear, acrid.

6. Face.—Animated red face.—Flying heat of face alternating with chills.—Prosopalgia (r.), wandering pains, spasmodic distortion of muscles.—Tumid face, pupils much dilated.—Lips cold, bluish, dry; during menses.

7. Teeth.—Toothache every night during catamenia; bleeding gums.—Sudden toothache in l. upper molars; on inspiration, sensation as if cold air touched the teeth.

8. Mouth.—Prickling itching of tongue.—Painful pricking of tongue with sensation of heat (during catamenia).—Feels paralysed.—Difficulty of speech.—Stammering after coitus (woman).—During catamenia: mouth and tongue dry; breath fetid.—After catamenia: profuse ptyalism.

9. Throat.—Burning and constriction; difficult swallowing.—Prickling and tingling in throat and fauces, extending some way down śsophagus.—Pain on small spot next root of tongue, as of a foreign body, < from pressure.

10. Appetite.—Longing for cold drinks in some, for warm in others.—Great thirst during menses.—Loss of appetite.

11. Stomach.—Sensation as of a stone on stomach.—Nausea, with distension of stomach.

12. Abdomen.—Abdomen hard and distended.—Stitches in spleen and liver.—Flatulence, colic, and cramp.—Borborygmi (l. side).

13. Stool and Anus.—Involuntary stool (in choreic attack).—Ineffectual urging.

14. Urinary Organs.—Pain in kidneys.—Burning along ureter and in urethra.—Feeling as if a drop of urine in urethra, or a constant dripping from it.

15. Male Sexual Organs.—After coitus pain over l. eye.—Gonorrhśa-like discharge, lasting three days.—Gleet with formication over whole body.—Desire with firm erections; all night; on waking.

16. Female Sexual Organs.—Many symptoms appear after coitus, and during the catamenia.—Leucorrhśa in place of catamenia.—Profuse ptyalism and leucorrhśa after catamenia.—Genital excitement at daybreak, with discharge like leucorrhśa, and swollen mammć, with some pain.—Menstrual epilepsy.—Puerperal eclampsia.

17. Respiratory Organs.—Larynx constricted and tender.—Intermittent laryngitis.—Difficult respiration, with partial loss of voice, recurring at different intervals.—Suffocative fits recurring regularly every day ten to twelve o'clock.—Suffocating fits; < after coitus; < after sleep; > by eating.—Troublesome cough every morning at six, lasting two hours.—Respiration much affected after coitus.—Breath cold.

18. Chest.—Oppression.—Sharp, darting-cutting pains under floating ribs and scapula (r.).

19. Heart.—Palpitation and hurried breathing; with headache.—Action irregular.—Pulse quick and full, with animated red face.—Pulse uncountable.

20. Neck and Back.—Stiff neck, pains all along spine.—Pain in neck and loins on rising in morning.—Pain under scapula and in pelvis.

22. Upper Limbs.—Pain at insertion of r. deltoid and rheumatic pain in r. side.—Sharp cutting pain in both elbows.—Numb, dead feeling in r. hand and forearm.

23. Lower Limbs.—Numb, dead feeling in legs; they feel enlarged.—Lancinating pains in joints.—Cramps; contracting pains; bruised sensations.—Twitching in tendons; of tendo Achillis.—Icy coldness of extremities.

26. Sleep.—Yawning and stretching.—Drowsy; sometimes very profound sleep.—Restless; frequent waking.—< After sleep.—Dreamed (he seldom dreamed) of pleasant social interviews with female acquaintances.—Dreamed of a quarrelling with a dead sister and other dead friends; cried, about it and awoke with a nightmare, with sensation of a stone in the stomach.

27. Fever.—Chilliness and yawning; point of nose cold.—Prodrome: For 20 to 40 minutes mental excitement; exaltation of vital energy; florid, animated countenance; sensation of general heat.—Chill 4 a.m., followed by sweat; at 4 p.m., after washing in cold water, chill alone.—Shivering and chill, followed by profuse perspiration every evening.—Chill, with congestion to head; hands, feet, and nose remain icy cold.—Regular paroxysms of fever, coming at same hour, commencing every day 6 p.m. by chills in back and limbs, or cold feet and hands.—Hot stage: dryness; heaviness of head; redness of face; burning heat in hands; pulse full and accelerated; thirst, with desire for warm drinks.—Profuse perspiration.—During sweat: coldness and heat, and heat and coldness irregularly, intermingle.—Bluish-red face; forearm to elbow and hands and feet cold; sweat beneath axilla and on chest.—Quotidian or tertian fever with marked regularity.

Cenchris Contortrix.

Ancistrodon contortrix. Copperhead snake of North America. N. O. Ophidians. Solution of venom.

Clinical.—Amaurosis. Catarrh. Diarrhœa. Eyes, swelling over. Headache. Heart, affections of. Leucorrhœa. Menorrhagia. Nightmare. Ovary, pain in. Throat, affections of. Vulva, throbbing in; eruption on.

Characteristics.—*Cenchris* has the main features of all the serpent poisons: Coma; semi-consciousness; insensibility of cornea; swelling of upper lip; general swelling; paralysis; cold, clammy sweat. Distinctive symptoms are: a marked alternation of moods; and dreamy absent-mindedness. The dreams of *Cenchris* are very vivid and horrible, cannot be shaken off during waking hours; often lascivious. Swelling above eyes, below brow, like an over-hanging bag of waters. Diarrhœa has been cured having the following characters: "Pain before stool; stool papescent cold but not chilly." Yellow Leucorrhœa; pain in right ovary herpetic eruption on labia. Hard, dry tickling cough, < 3 p.m. Restlessness and sense of suffocation; palpitation; sensation of dying. Must lie with head drawn back, she chokes so. Tight clothing unbearable. Chill or fever beginning in afternoon. Feeling as if whole body were enlarged to bursting; < in region of heart. "Awoke with throbbing in vulva and anus, followed by a dull aching in the sacral region, > by walking about." Symptoms < lying down; < afternoon; < evening and all night; < on waking.

Relations.—*Laches*. is nearest, but affects left ovary more than right; *Cench*. has difficult empty swallowing with easy swallowing of solids and liquids; *Lach*. can swallow solids but not liquids; *Crotal*. (lost sense of position and direction); Crocus (alternating moods); Kali c. (swelling of upper lids). *Antidoted by:* Cham. (internal hæmorrhage); Am. c. (general symptoms). *Antidote to:* Puls.

SYMPTOMS.

1. Mind.—Memory lost.—Lethargy.—Anxiety, feels she will die suddenly.—Alternating moods.—Dreamy, absent-minded.—Took the wrong car without realising where she was going.—When riding in the car rode past the place she intended to get off at.—Suspicious, thinks her husband is going to put her in an insane asylum; every day, 3 to 8 p.m., for ten days, yet she knew it was a delusion.

2. Head.—Hard aching pain, commencing l. frontal eminence, spreading down l. side to teeth, thence to r. frontal eminence, then to teeth r. side.

3. Eyes.—Swelling like bags over eyes and under brows.—Aching and itching in eyes; dim vision, redness of margins and twitching.—L. eye waters; from concussive cough.

5. Nose.—Catarrh; scabs; obstruction.

6. Face.—Expression bloated, besotted.—Face sallow.—Burning face.—Blue circles round eyes.

9. Throat.—Accumulation of mucus; glossy, thick, tough.—Difficult empty swallowing, but easy swallowing of solids and liquids.—Warm drinks grateful.

11. Stomach.—Nausea > by ice; < by water which = vomiting.

12. Abdomen.—Intolerance of tight clothing.

13. Stool.—Diarrhœa early in morning, on, waking.—Stool, gushing, frequent, watery, at first without pain; after several hours, great pain before the motions.

15. Male Sexual Organs.—Violent sexual desire.

16. Female Sexual Organs.—Increased desire.—Yellow leucorrhœa.—Pain in r. ovary.—Herpetic eruption on labia.—Menstrual flow very profuse; light with dark clots.

19. Heart.—Feels as if heart were distended, or swelled to fill the whole chest.—Strongly conscious of heart.—Hard aching and sudden sharp stitching in heart.—Throbbing or fluttering under l. scapula.—At 3 p.m. sensation of fluttering followed by feeling that heart fell down into abdomen; then pulse became feeble, with heat lasting until after midnight.

17. Respiratory Organs.—Hard, dry, tickling cough, < 3 p.m., even causing escape of urine.

27. Fever.—Chill or fever beginning in afternoon.

Centaurea Tagana.

Centaurea tagana. N. O. Compositæ. Tincture of root.

Clinical.—Coryza. Diarrhœa. Eyes, inflammation of. Fevers. Home-sickness. Influenza. Intermittents. Sight, vanishing of.

Characteristics.—The *Centaureas* are allied to the Thistles. Dr. Chagon, Duc de Sorentino, experimented with the root of *Cent. t*. The symptoms of congestion are very marked: "Blood surges pain fully at every movement." A bright servant-girl who took it seemed stupefied for several days. "The earliest symptoms appeared a quarter of an hour after taking the medicine, viz., those of the arms together with dull pains in the hypogastrium, shiverings and general heat, especially on forehead, which was covered with sweat. These were followed by a stupefying pain in temples, frontal protuberances, orbital arches and eyes. Next came the following symptoms: Dimness of sight; appetite alternating with nausea; increase of saliva and vomiting; running of the nose; lachrymation; eructations; rapid sinking of strength; general uneasiness; confusion of mind; weariness; dull sunken eyes spasmodic sweating; itching, and pricking in the skin; drowsiness and thirst. A state of reaction, after four or six hours brought some quiet. Next day, in the forenoon or towards evening, the above symptoms reappeared but with less violence, and some of them assumed a periodic form. Then ensued coryza, colic, diarrhœa, fevers of various types, pains in the arms, dry cough, &c. The action ended with the symptoms of catarrh, of angina, and of fever in the forenoon, and with confusion and pain in the forehead" (Allen). The above gives a general idea of the action of this remedy. The symptoms are < at night; in the morning on waking; by movement; during and after urinating. > By eating.

Relations.—*Compare:* Bell., Cedron, Card. b., Card. m.

SYMPTOMS.

1. Mind.—Home-sick.—Easy temper, alternating with contrary mood.—Hilarity.—Absent-minded.—Idiocy.—Confusion of mind.—Stupefied for several days.

2. Head.—Stupefying confusion towards forehead.—Stupefying pain in temples, frontal protuberances, orbital arches and eyes.—Uneasiness in brain.—Deep-seated extensive pain in forehead.—Pain in and under occiput.—Pain in forehead preceded by sweat; < by walking.

3. Eyes.—Wandering look.—Eyes sunken and dim.—Pain in l. eye; burning above eyebrows; in lids; in sclerotica.—Lids heavy.—Smarting, itching, inflammation.—Lachrymation.—Sight vanishes entirely for a moment.

4. Ears.—Itching and tingling in ears.—Pricking behind ears.

5. Nose.—Sneezing and coryza; almost complete loss of smell.

6. Face.—Face looks earthy; with a stupid expression.

8. Mouth.—Red streak along middle of tongue.—White streak l. side of tongue.—Dry mouth not relieved by drinking.—Mouth bitter in morning.—Taste impaired.—Continual salivation.—Increase of saliva alternating with dry mouth.

9. Throat.—Uvula and tonsils inflamed.—Raw pain preventing swallowing.

11. Stomach.—Appetite alternating with nausea.—Thirst: not allayed by drinking; with dry throat; before and during fever.—Difficult eructations, which stop in the chest, with burning.—Nausea. with cold sweat.—Vomiting.—Pricking and burning in epigastrium.

12. Abdomen.—Pain in r. hypochondrium.—Griping at night with continual discharge of flatus.—Colic.—Dull burning in hypogastrium.

13. Stool.—Diarrhœa on waking in morning.—Yellowish diarrhœa at night.—Copious stools.

14. Urinary Organs.—Pain in bladder, < by movement.—When urinating: pain in bladder; weight in bladder.—Ardor urinæ.—Burning in urethra after urinating.—Urine: at first scanty, afterwards abundant; deposits a flaky mucous sediment.

15. Male Sexual Organs.—Firm nocturnal erections.—Desire without erection.

16. Female Sexual Organs.—Dryness of vagina.—Itching and heat in labia majora and minora.—Whitish leucorrhœa.

17. Respiratory Organs.—Tickling in larynx; in throat causing cough.—Cough: on waking in morning; dry, in evening or at night.

18. Chest.—Pain in r. clavicle.

19. Heart.—Lancination as from a thorn in heart.—Sensation of dilatation of heart, with anxiety.—Pulse slower.—Pulsation stronger in some arteries than others.

20. Back.—Burning pain in l. scapula.

22. Upper Limbs.—Inclination to stretch out the arms.—Arms so weak, can hardly lift them.—In bed, arm lain on becomes numb.—Extensor muscles seem too short.—Pain all through arms.—Swelling of veins of hands.—Thumb cannot be clenched.

23. Lower Limbs.—Wants to stretch legs.—Paralytic weakness of legs, walking difficult.—Pain in hips and thighs when walking.

24. Generalities.—Remains for an instant as if thunderstruck; staggers as if drunk.—Prostration, rapid sinking of strength.—General uneasiness.

25. Skin.—Miliaria.—Sudden eruptions on loins.—Violent itching and pricking all over: nose; hypogastrium; backs of hands, chiefly fingers; loins and thighs; preventing sleep.

26. Sleep.—Drowsy night and day; cannot keep eyes open.—Voluptuous dreams.

27. Fever.—General or partial coldness.—Shiverings and general heat, esp. on forehead.—Warmth with sexual excitement.—Heat: internal; with or without subsequent sweat; with pain and fulness in forehead.—Sweat: profuse; cold; cold on forehead; at night.

Cereus Bonplandii.

A variety of Cactus grandiflorus. N. O. Cactaceæ. Tincture of stems.

Clinical.—Eczema. Emaciation. Eyes, neuralgia of. Heart, affections of. Insanity. Kidneys, affections of. Neuralgia.

Characteristics.—The principal symptoms of *Cer. bon*. are in connection with the heart, as in the case of *Cactus*, with which it must he compared. The symptoms are < at night; < from pressure of clothing, > undressing. *Cer. bon*. was proved by John H. Fitch in substantial doses (*H. P*., xii. 533). The prover lost 7 1/2 lbs. in weight. He felt weighed down by an incubus. When mental symptoms subsided, bodily symptoms increased and *vice versâ*. Could not bear contact of clothes; felt better on undressing. Among the marked symptoms were: Wants to be at work; on something useful. Pains through globe of eyes and orbit. Pain through heart; in left great pectoral muscle; left side of chest. Expanding sensation in chest followed by sudden collapse. The effect on the nervous system passed off in four or five days. The pains of *Cer. b*. have a tendency to spread to other parts. Most appear on left side. "Itching in right popliteal space" lasted eight or nine years after the proving. "Itching with roughness of the skin like eczema above left knee anteriorly." "Itching, with eruption like herpes below left scapula remained permanent." Fitch

(who regards *Cer. b*. as an "antipsoric of remarkable power") cured with it: (*1*) a case of eczema of both hands extending up to elbows. (*2*) Deposits in urine. (*3*) Dropsy of cardiac and renal origin. (*4*) Left intercostal neuralgia. (*5*) Anterior crural neuralgia. Also two cases of insanity—(*6*) one in a young woman, gloomy, restless, inclined to curse, swear, and throw things at persons, if resisted; (*7*) the other in a married woman who had spiritual delusions—that she had committed the unpardonable sin, &c. This came on originally after confinement.

Relations.—*Compare:*—Cact., Anhalon. (visions of colours), Graph.; Anac. (tendency to swear).

SYMPTOMS.

1. Mind.—Desire to engage in work; to have all time employed; to be engaged in something useful.—Desire to be dissolved.—Disposition to pray.—Apathetic; difficult to keep attention fixed.—Irritable; inclined to curse and swear.—Time seems to pass slowly.—Spiritual delusions; thinks she has committed the unpardonable sin.

2. Head.—Feeling as if head suspended from some support under skull and base of brain.—Head felt drawn to l. backward.—Pain extending through forehead (l.) to occiput.—Painful stunning feeling in r. frontal bone.—Sensation as of a board bound to back of head, more l.—Severe pain in occiput; running through to brain; < walking or descending steps.—Profuse failing off of hair.

3. Eyes.—Heavy feeling in eyes; soreness.—Pains through globe of r. eye; of l. eye and orbit.—Strong light painful.—Perception of a cluster of orange-coloured spots, round and symmetrical.

4. Ears.—Pain behind l. mastoid process extending upward and backward; through ear and head.

5. Nose.—Sneezing.—Discharges hardened mucus, greenish.

6. Face.—Haggard look.—Pain along r. malar bone, running to temple, through to occiput.

8. Mouth.—Tongue: red; deep purple.—Watery sensation in mouth.—Salivation.

9. Throat.—Persistent mucus in throat, pale greenish or clear.

12. Abdomen.—Pain in l. groin sharp and cutting as from calculus in ureter.

13. Stool.—Copious urgent evacuation.—Felt very well after.—Ineffectual urging.

14. Urinary Organs.—Pain in kidneys; as from calculus.—Sticking pain r. ureter.—Deep-coloured, strong-smelling urine.

15. Male Sexual Organs.—Priapism in presence of opposite sex.—Anæsthesia of genitals.

17. Respiratory Organs.—Clearing the larynx of mucus.—Breath fetid.—Long, deep, uneasy respirations, < before rising.—Cough on throwing off outer garments.

18. Chest.—Chest expands itself seemingly to its utmost capacity, in an instant collapsing, to be repeated.—Deep inspiration at intervals; as from oppression.—Intercostal neuralgia.—Somewhat persistent pain in cartilages of lower l. false ribs.—Chest feels empty.

19. Heart.—Irritable heart.—Heart symptoms < lying l. side.—Pains in chest l. side and through heart.—Pains in left pectoralis major.—Convulsive pains at heart on going to bed at night. Sensation as of a great stone laid on heart; soon after as if chest broken out just in front of heart.—As if heart transfixed by a bolt.—Pricking pain.

20. Neck and Back.—Pain on l. side of neck; and along clavicle; at night.—Pain in upper portion of spine and medulla, running upwards and expanding to surface of brain, < stooping or bending head forward.—Pains running along back down to arms.—Vertebral spines tender to touch.—Pain in r. scapula.

22. Upper Limbs.—Pain in both upper arms.—Pain with numbness in arms and hands.

23. Lower Limbs.—Pain in r. hip.—Pain inner side l. knee.—Itching in r. popliteal space.

24. Generalities.—Lost 7 1/2 lbs. in weight.—Ill at ease, restless.—When mental symptoms subside, bodily ones are <, and conversely.

25. Skin.—Pustules on body, esp. on nates.—Intolerable itching.—(The skin symptoms persisted for nine years.)

26. Sleep.—Fits of yawning.—Drowsy; slept all night without undressing.—Dreamed: of large assemblies; of forgotten scenes.—Re-dreamed old dreams.

Cereus Serpentinus.

N. O. Cactaceæ. Tincture of stems.

Clinical.—Anger, fits of. Enuresis. Epistaxis. Heart, pains in. Impotence.

Characteristics.—The heart was less prominently affected by *Cer. serp*. than by the other *Cacti*; but pains in head and a paralysed feeling were experienced. A voluptuous feeling; dwindling of sexual organs; mental irritations were prominent. < On exposure to cold, to which there is great sensitiveness. J. H. Fitch proved *Cer. s*., as well as *Cer. b*. Kunze also proved *Cer. s*.

Relations.—*Compare:*—Cact. g., Cereus bon., Coni.; Pso. (sensitiveness to cold). Anac. (inclined to swear).

SYMPTOMS.

1. Mind.—Angry at trifles.—Fits of sudden ungovernable rage.—Inclined to swear.—Prays all night.—Makes mistakes, reading or writing.

2. Head.—Dizzy in morning, with mucus in throat.—Tensive pain in head and brain.—Feeling as if back part of brain were detached from front, and rotten.

5. Nose.—Epistaxis.

8. Mouth.—At dinner bites inside mouth, r. cheek.

9. Throat.—Much tenacious mucus in throat and back of nose.

14. Urinary Organs.—Pain in region of r. kidney.—Urging to urinate.—Enuresis.—Urine yellowish; or pale tea-green.

15. Male Sexual Organs.—Genital organs small and dwindled.—Excited genital condition.—Emission, seems as if passed in a lump.—Emission followed by cutting pain first in one, then in other testicle.

19. Heart.—Paralysed feeling in heart.—Pain after exertion, followed by short breath, > by full breath.—Afterwards, short sharp pains through heart.—Thrusting pains at heart followed by sighing respiration.

27. Fever.—Very sensitive to cold.

Cerium Oxalicum.

Oxalate of Cerium. $Ce_2(C_2O_4)_3\ 9H_2O$. Trituration.

Clinical.—Cough, reflex. Dysmenorrhœa. Pregnancy, vomiting of. Seasickness. Vomiting.

Characteristics.—Originally introduced by Sir James Simpson as a remedy for the morning sickness of pregnancy and chronic cases of vomiting, which he supposed to be due to some eruption on the mucous membrane of the stomach, *Cer. ox*. has fairly maintained its reputation. Hale found it of most use in cases of vomiting of half-digested food. It has mostly been given in the lower triturations by homœopaths, and in five to ten grain doses by allopaths. In the latter doses it has produced decidedly narcotic effects in two cases. Some have obtained great success with it in sea-sickness. Spasmodic coughs of nervous or reflex origin have been successfully treated with it; and dysmenorrhœa in fleshy and robust women, scanty flow, pain coming before, or at commencement, with feeling of tenesmus, > when the flow is established (like *Lach*.).

Cervus.

Cervus campestris. Cervus brasilicus. Brazilian deer. Triturations of the fresh hide covered with hair.

Clinical.—Sciatica. Taste, altered. Tongue, painful.

Characteristics.—Mure proved this substance, and one symptom appears to be peculiar: "Taste of doughy bread in the mouth."

Relations.—*Compare:*—Carb. an. (charred ox-hide).

SYMPTOMS.

3. Eyes.—Sensitive to light, esp. sunlight.

6. Face.—Face mottled.

8. Mouth.—Taste of doughy bread.—Coppery taste with heat in throat when taking the drug.

12. Abdomen.—Pricking in navel when lying.—Needle-like pain, intermitting in r. groin, in direction of joint, after walking.

22. Upper Limbs.—Numbness of arm on which he lies; of hand and legs.

23. Lower Limbs.—Frequent pain, now in l. buttock now in thigh.

26. Sleep.—Drowsiness and yawning.

Cetraria Islandica.

Iceland Moss. N. O. Lichenes. Decoction and tincture.

Clinical.—Atrophy. Catarrh. Diarrhœa. Phthisis. Scrofulous emaciation. Scurvy. Ulcers.

Characteristics.—*Cetraria* has been used in decoction and as a food, and has been found curative empirically in the diseases named above. Symptoms indicating its use are: Bitter slimy taste. Feels full and satisfied after eating a little. Habitual vomiting. Chronic diarrhœa (of consumptives). Frequent catarrhs. Tickling and spasmodic feeling in windpipe on waking. Copious expectoration. Fetid taste and smell causing nausea. All kinds of bloody expectoration. Weak lungs. Emaciated people.

Relations.—*Compare:* Sticta pul.

Chamomilla.

Matricaria chamomilla. N. O. Compositæ. Tincture of whole fresh plant.

Clinical.—Acidity. *Anger*. Asthma (from anger). Blepharospasm. Catarrh. Coffee, effects of. *Colic. Convulsions*. Cough. Cramp. Croup. *Dentition. Diarrhœa*. Dysmenorrhœa. Dyspepsia. *Earache*. Eyes: blepharitis; ophthalmia. *Eructations*. Erysipelas. *Excitement. Excoriation*. Fainting fits. Fevers. Flatulence. Flatulent colic. Gout. *Gum-rash. Headache*. Hernia. *Hysterical joint*. Influenza. *Jaundice*. Lienteria. Labour: disorders of; after-pains. Mastitis. *Menstruation, disordered*. Miliary eruption. Milk-fever. *Miscarriage*. Mumps. Neuralgia. Parotitis. Perichondritis. Peritonitis. *Pregnancy, disorders of. Red-gum*. Rheumatism. Salivation (nocturnal). Sciatica. *Screaming. Sensitiveness*. Spasms. *Speech, affections of. Toothache*. Ulcers. *Uterus, diseases of. Waking, screaming on*. Whooping cough.

Characteristics.—"There is in *Chamomilla* a little thread of symptoms, and nearly always found running through it. This is a *spiteful, sudden*, or *uncivil irritability*"

(Guernsey). Teste puts *Cham*. at the head of one of his groups, which includes *Grat., Viol. t., Hell. n*. The common feature of this group is: "A particular derangement of the cerebral functions and even of the whole nervous system; a painful increase of the sentient action, followed by a considerable depression of the vital forces, and a certain disorder of the mental faculties." In spite of its obvious analogies with *Puls., Ipec., Acon*., and *Coni*., it has marked and exclusive characteristics of its own. "It increases the general nervous sensibility, and stimulates the cerebral functions: a property that seems to give rise secondarily to the various organic alterations that *Cham*. is capable of producing, and for which it has so often been given with success." "It appears," says Hahnemann, quoted by Teste, "to diminish" [*i.e*., curatively] "in a great degree, the excessive sensitiveness to pain and the violent derangements which pain occasions in the moral condition of the patient. This is the reason why it appeases a multitude of sufferings to which coffee-drinkers, and persons who have been treated with narcotic palliatives are subject. And this is likewise the reason why it ought not to be given to those who bear pain patiently and with resignation. I mention this rule here, for it is of very great importance." Teste remarks an this that *Cham*. antidotes not only *Coffea*, but also *Causticum*, and most of the members of the *Causticum* group. Over-sensitiveness, with great irritability and crossness, is the leading note of the *Chamomilla* effects. The pains are *unbearable* and drive to despair; the patient insists that the doctor shall cure them at once. Prostrating debility as soon as the pains begin. The senses are too acute. Bad temper (*Nux is malicious*). Peevishness; ill-humour; anger, with rage, violence and heat. Cannot bear to be looked at. Cannot be civil to doctor. Impatience. *Cham*. also corresponds to the *effects* of anger: colic, diarrhœa, jaundice, twitchings, and convulsions. Child cries, and must be carried about to be quieted. There is *hot* sweat on head. Stopped up colds, with dripping of hot water from nose. One cheek red, the other pale. Face sweats after eating or drinking. The patient is hot and thirsty with the pains. *Cham*. is almost typical of the dentition state. The toothache of *Cham*. comes on when entering a warm room or from drinking anything warm. There is fetor of breath, and of discharges in general. Biliousness preceded by anger. Gastralgia, food eaten lies like a load on stomach, hypochondria distended. Tongue yellowish white. Bitter taste. Colic > by drinking coffee. The diarrhœa of *Cham*. is: stool hot, yellowish green; like chopped egg; offensive; excoriation round anus. Intertrigo of children. Wind colic; belching of wind < the condition (this is characteristic). Menorrhagia dark clots; fetid; temper always < before and during flow (N*u*x also, but Nux is conscious of it, *Cham*. is not). Threatened abortion caused by anger. The pain of labour or at menses is centred in the womb, bearing down, painful contractions, *unbearable*; they extend down thighs and are felt in the back. Leucorrhœa is acrid, watery, corrosive, smarting. *Cham*. has inflammation of the parotid glands, nocturnal salivation. Rheumatism compelling to get up and walk about; thirsty, hot, almost beside himself. Muscles of face and hands twitch. Insomnia of children; start in sleep; twitching of hands and face; hot sweat of head and face; one cheek red. Puts feet out of bed; soles burn. Aggravation by heat is

one of the most prominent features of *Cham*. < By warm food. *Cham*. may be the remedy in croup, or croupy cough, if mental symptoms and time conditions correspond. W. H. Baker (Rochester) has recorded such a case. A chubby boy, light hair, blue eyes had a croupy cough. *Acon*. and *Spong*. at first controlled it, but afterwards failed. The cough became a loose, rattling, suffocating cough; the mucus came up in the throat and nearly suffocated him. Paroxysms at midnight. During the day he was hoarse; ever impatient, nothing seemed to suit him. *Cham*. c. m. cured, improvement setting in within two hours. "Chamomile tea" has removed the night-sweats of phthisis. Dr. Anderson, of Dover, Delaware, relates the case of a man who had to change three to five times every night. A cup of weak chamomile tea was ordered every night. The second night there was slight diminution, the third he only had to change twice, the fourth once, and after that there was no more trouble. The plant in this case was probably *Anthemis cotula*, or wild chamomile of U.S. Dr. Anderson learned its use from "an old woman." But the sweats of *Chamomilla* are also very marked, Nash mentions a characteristic in the association of *numbness* or alternation of it with pains. He relates the case of a man who had very painful rheumatism of left shoulder, and who got no better from the usual remedies, but was speedily cured by *Cham*., the indication being: "Numbness with the pains." Nash differentiates the restlessness of *Aco*. and *Ars*. from that of *Cham*. by the absence in the case of the last of fear of death. The *Cham*. patient "would *rather* die than *suffer so*." Lying in bed <. Walking > backache and rheumatic pains. > Being carried about. Touch, and even looking at the patient, <. Covering <. Pains recur in evening and are < before midnight. Symptoms generally < night. Warmth < most symptoms. Cold > ulcers; a finger dipped in cold water and applied to the part > toothache. < From music. Heaviness and fulness of whole body from playing piano. There is desire for open air, and yet over-sensitiveness to open air, especially about ears. Damp cold weather <. Windy weather <. Great dread of wind. *Cham*. is particularly suited to diseases of pregnant women, nurses, and little children. Light or brown-haired persons. Arthritic diathesis.

Relations.—Cham. *antidotes:* Coffee, and the narcotics. Especially opium as it corresponds to its secondary effects (useful in nerve storm when morphia is discontinued); the nightly headaches of Thuja. *It is antidoted by:* Aco., Alum., Borax, Camph., Coccul., Coff., Coloc., Coni., Ign., Nux v., and especially Puls. Puls. and Cham. antidote one another, and precede and follow each other well. *Compatible:* Merc. sol., Sul., Puls. *Complementary:* Bell. in diseases of children (Cham. acts more on nerves of abdomen, Bell. more on cranial nerves.) *Compare:* in dentition, Bell., Borax, Calc., Tereb.; in over-sensitiveness, Aco., Coff., Hep., Hyo., Ign.; diarrhœa, parotitis, toothache, Merc. (Merc. has hard, pale swelling of face, Cham. red and hot); sour breath, constrictive gastralgia in coffee drinkers, Nux (Cham. has bad temper during menses; Nux has malicious temper); toothache < in bed at night; < from warmth, Sul., Merc., Puls.; distension of abdomen unrelieved by eructation, Chi.; indignation and its effects, Coloc., Staph., Nux, Bry.; aversion to be looked at, Ant. c., Chi., Stram.; > by moving

about, Rhus., Fer., Verat., (Ver. has maddening pains compelling to walk about, but there is none of the feverishness and excitement of Cham.); stopped catarrh, Nux, Samb., Sticta.; nocturnal salivation, Nux., Pho., Rhus.

Causation.—Dentition. Anger. Indigestion. Pain.

SYMPTOMS.

1. Mind.—Attacks of great anguish, as if the heart would break, with complete discouragement, excessive inquietude, agitation and tossing, groans and tears, accompanied often by drawing colic, and pressure at the pit of the stomach.—Disposition to weep, and to be angry, with great sensitiveness to offence.—Crying and howling.—The child cries and wants to be carried on the arm.—Quarrelsome and choleric humour.—Mischievous disposition in children.—Mental excitement, with strong tendency to be frightened.—Hypochondriacal humour.—Patients neither endure to be addressed by others, nor to be interrupted when conversing.—Peevishness, ill-humour, absence of mind, taciturnity and repugnance to conversation.—State of mental abstraction and inadvertence, as if plunged in meditation, with diminished comprehension.—A sort of stupidity, and apathy to pleasure and to external objects.—Desire for different things, which, when once possessed, are no longer cared for.—Tendency to misapply words when speaking or writing.—Frantic and furious delirium.

2. Head.—Intoxication and staggering, on getting up in the morning.—Vertigo, with fainting.—Vertigo, with obscuration of the eyes.—Vertigo chiefly in the morning, or in the evening, or after a meal, or after taking coffee.—Headache on waking in the morning, or while asleep, sometimes with a sensation as if the head were going to burst.—Pain as if caused by a bruise, and pressive heaviness in the head.—Pullings, shootings, and beatings in the head, often only semi-lateral, with one red cheek; worse at night; in the open air; in the wind; better from warm coverings and when walking about.—Cracking in one side of the brain.—Hot, clammy sweat on the forehead, and on the scalp.—Starting pain in the forehead, chiefly after a meal.

3. Eyes.—Pain as of a wound, in the corners of the eyes.—Shootings, burning, and heat in the eyes.—Eyes inflamed, and red, with pressive pains, chiefly on moving the eyes and on shaking the head.—Great dryness in the margin of the eyelids.—Inflammation of the margin of the eyelids (esp. of the lower, which are swollen), with mucous secretion, humour in the eyes and nocturnal agglutination.—Yellow colour of the sclerotica.—Ecchymosis in the eye, and hæmorrhage of the eyes.—Spasmodic closing of the eyelids.—Quivering of the eyelids.—Distortion of the eyes.—Pupils contracted.—Sparkling before the eyes.—Confused sight, more frequently in the morning than in the evening.—Semi-lateral obscuration of the sight, on looking at anything white.—Aversion to bright light.

4. Ears.—Otalgia, with drawing and tensive pains.—Shootings extending to the ears, chiefly on stooping, with disposition to be angry at trifles, and to take everything in bad part.—Tinkling and buzzing in the ears.—Sensation as if the ears were stopped, and as if a bird were scraping and fluttering in them.—Sensibility of hearing; music appears insupportable.—Inflammatory swelling of the parotids, as well as of the sub-maxillary glands, and those of the neck.—Discharge of thin pus from the ears.

5. Nose.—Wrinkled skin of the nose.—Coryza, with obstruction of the nose.—Ulceration and inflammation of the nostrils.—Epistaxis.—Coagulated blood from nose; viscid nasal secretion.—Very acute smell.

6. Face.—Face hot, red, burning or redness and heat of one cheek, with coldness and paleness of the other; or face pale, hollow, with distortion of features from pain.—Heat of the face, while the rest of the body is cold.—Swelling of the face.—Erysipelas in the face, with hard and bluish swelling of one cheek.—Swelling of one temple, with pain on being touched.—Shooting, drawing, and pulsative pains in one side of the face.—Red miliary eruption on the cheeks.—Yellow colour of the skin on the face.—Convulsive movements of the muscles of the face and of the lips.—Lips cracked, excoriated, and ulcerated.—Spasms in the jaws, with compression of the teeth.—Wrinkles on the forehead.

7. Teeth.—Odontalgia, most frequently semi-lateral, and chiefly at night, when warm in bed, with insupportable pains which almost induce despair, swelling, heat, and redness of the cheek, swelling, burning of the gums, and painful swelling of the sub-maxillary glands.—The toothache recommences when entering a warm room.—Toothache, after a cold and suppressed perspiration.—Affects teeth on l. lower side; under jaw.—The pains are commonly drawing and pulling, or pulsative and shooting, or searching and gnawing, in the hollow teeth, appearing frequently after drinking or eating anything hot (or cold), and chiefly after taking coffee.—Toothache > by dipping finger in cold water and applying it to affected part.—Loosening of the teeth.—Dentition, with convulsions.

8. Mouth.—Dryness of the tongue and mouth (with thirst), or flow of frothy saliva.—Putrid smell of the mouth.—Tongue red and cracked, or loaded with thick and yellowish coating.—Blisters on the tongue and also under it, with shooting pains.—Aphthæ in the mouth.—Convulsive movements of the tongue.

9. Throat.—Sore throat, with swelling of the parotids, of the tonsils, and of the sub-maxillary glands.—Inflammation of the soft palate and tonsils, with dark redness.—Pains in the pharynx, shooting and burning, or a sensation as if there were a plug in the throat.—Inability to swallow solid food, esp. when lying down.—Burning heat in the throat, from the mouth to the stomach.—Deep redness of the parts affected.

10. Appetite.—Putrid or clammy taste.—Acid taste in the mouth, and of rye-bread.—Bitter taste in the mouth (early in the morning), and of food.—Want of appetite, and dislike to food.—Aliments cannot descend.—Aversion to, or great longing for coffee, sometimes with nausea, or even vomiting, and attacks of suffocation, after having partaken of it.—After eating, heat and sweat of the face, inflation and fulness of the stomach, and of the abdomen, risings and inclination to vomit.—Excessive thirst for cold drinks.

11. Stomach.—Risings, which aggravate the pains of the stomach and of the abdomen.—Acid rising (the existing pain is *aggravated* by eructations).—Regurgitation of food.—Nausea after eating, and chiefly in the morning.—Uneasiness, and a sort of flabbiness in the stomach, as if the patient were about to faint.—Vomiting of food, and of sour substances, with mucus.—Bitter, bilious vomiting.—Excessively painful pressure on the precordial region, as if the heart were going to be crushed, with cries, sweat, and anguish.—Pressive gastralgia, as from a stone on the stomach, with difficulty of respiration, chiefly after eating, or at night, with inquietude and tossing, either renewed or mitigated by coffee.—Burning pain in the pit of the stomach, and in the hypochondria.—After eating or drinking, heat and perspiration of the face.

12. Abdomen.—Tension and anxious fulness in the hypochondria, and in the epigastrium (in the morning), with a sensation as if everything was ascending towards the chest.—Colic, after anger.—Flatulent colic, with inflation of the abdomen, and accumulation of flatus towards the hypochondria, and the inguinal ring.—Excessively painful colic, pullings and cuttings in the abdomen, sometimes in the morning, at sunrise.—Sensation of emptiness in the abdomen, with constant movement in the intestines, and blue circles round the eyes.—Burning cuttings in the epigastrium, with difficulty of respiration, and paleness of the face.—Shooting in the abdomen, principally on coughing, on sneezing, and on touching it.—Painful sensibility of the abdomen to the touch, with sensation of ulceration in the interior.—Pressure towards the inguinal ring, as if hernia were about to protrude.—Abdominal spasms.

13. Stool and Anus.—Constipation, as from inertia of the rectum.—Diarrhœa during dentition (green mucus).—Diarrhœa from cold, from anger, from chagrin.—Diarrhœa chiefly at, night, with spasmodic colic, mostly with slimy, and whitish or watery, or yellowish and greenish fæces, or mucus mingled with excrement, like eggs when beaten up; or hot corrosive fæces, of a fetid odour, like rotten eggs; or evacuation of undigested substances.—Hæmorrhoids, with very painful fissures and ulcerations in the anus.—Excoriation about anus (intertrigo).

14. Urinary Organs.—Inclination to make water, with anxiety.—On making water, itching and burning in the urethra.—Urine hot and yellowish, with fleecy sediment; or turbid urine, with yellowish sediment.—Involuntary or feeble emission of urine.—Excoriation at the edge of the prepuce.

15. Male Sexual Organs.—Itching, stinging pain in the margin of the prepuce.—Swelling of prepuce (Sycosis).—Excited sexual desire.

16. Female Sexual Organs.—Catamenia suppressed, with swelling and pressive pains in the pit of the stomach, and in the abdomen.—Pains like those of labour, and general dropsy.—Menstrual colic, before the catamenia.—Pressure towards the uterus, as if from the pains of child-birth.—Pains may occur by which the fœtus is forced up instead of down.—The labour-pains are not sufficient, but cause great restlessness and anguish (over-sensitive to the pains).—Violent after-pains.—Metrorrhagia, with discharge of deep-red blood, and of clots, accompanied by labour pains.—Discharge of blood between the regular catamenia.—Burning pains and smarting in the vagina.—Corrosive leucorrhœa, with smarting.—Scirrhous induration of the mammary glands.—Suppression of milk (milk is cheesy or mixed with pus; milk fever).—Puerperal fever.—Erysipelas of the mammæ and soreness of the nipples.

17. Respiratory Organs.—Catarrh and hoarseness, with accumulation of tenacious mucus in the throat.—Stitches and burning in the larynx, with hoarseness.—Burning pain in the larynx.—Spasmodic constriction in the gullet.—Dry cough, produced by a constant titillation in the larynx, and under the sternum, chiefly in the evening, and at night in bed, continuing during sleep, and sometimes accompanied by a fit of suffocation.—Wheezing and rattling in the trachea.—Anger provokes the cough (in children).—Expectoration of mucus of a bitter or putrid taste.

18. Chest.—Respiration short, croaking, or wheezing and stertorous.—Deep respiration, with sensible rising of the thorax.—Fit of suffocation, as if from constriction of the larynx or of the chest.—Attacks of flatulent asthma, with anxiety and fulness in the precordial region.—Oppression of the chest.—Shootings in the chest, chiefly on breathing.—Burning in the chest, with dizziness and anxiety.—Shooting in the regions of the heart, with difficulty of respiration.

20. Neck and Back.—Tensive stiffness of neck muscles.—Glands swollen, often very sensitive; painful when turning neck.—Aching pain in the sacrum, chiefly at night.—Pain as of a bruise in the sacrum, with pulling pains, like those of labour, extending to the thigh.—Shooting, pulling, tearing pain in the back.—Painful stiffness in the loins, after having been seated some time.—Insupportable pain in the loins and in the hip, in the morning, on the side opposite to that on which the patient is reclining.—Convulsions in the back, with a throwing backwards of the head, and stiffness of the body as in tetanus.

21. Limbs.—Cracking in joints, with pain in them as if bruised.—Pain in periosteum of limbs with paralytic weakness.—Convulsive single jerks in limbs.—All joints sore as if bruised and tired out; there is no power in hands or feet, though without corresponding weariness.

22. Upper Limbs.—Numbness and stiffness of the arms on grasping an object.—Convulsions of the arms, with clasping in of the thumb.—Nocturnal pains, with paralytic weakness in the arms.—Swelling; or coldness; and paralytic stiffness of the hands; with cold perspiration in the palms of the hands.—Numbness or convulsive movements of the fingers.—Finger-joints red and swollen.—Retraction of thumbs.

23. Lower Limbs.—Paralytic and drawing pain in the hip and in the thigh, extending to the feet, chiefly at night.—Tension of the muscles of the thighs, and of the legs.—Cramps in the calves of the legs, chiefly at night.—Tearing sensation, with a paralytic condition of the feet, at night.—Cramp.—Cracking of the knee during motion.—Burning in the soles of the feet (at night, he puts his feet out of bed).—Sensation of numbness in the toes.—Burning and itching in the feet, as from chilblains.—Swelling of the foot and of the sole of the foot.

24. Generalities.—Rheumatic, drawing pains, chiefly at night in bed, with paralytic state, and sensation of torpor in the parts affected, and inclination to move them continually; mitigated by external heat.—Pain with thirst, heat, and redness (of one) of the cheeks, and hot sweating of the head.—Pulsative pains, as from an, abscess.—Over-excitement, and excessive sensibility of the nervous system, with great sensibility to pain, which appears insupportable and induces despair.—Over-sensitiveness of the senses (esp. from coffee and narcotics).—Great sensibility in the open air, and principally to wind.—The extremities feel, as it were, stiff and paralysed.—Great weakness and inclination to fall, with prostration of strength to fainting as soon as the pain commences.—Syncope, with sensation of sinking and faintness in the precordial region.—Attacks of catalepsy, with hippocratic face, extremities cold, eyes half-closed, pupils dilated and dull.—Attacks of spasms and of convulsions, with face red and bloated, and convulsive movements in the eyes, the eyelids, the lips, the muscles of the face, and of the tongue.—Epileptic convulsions, with retraction of the thumbs, and foam before the mouth, preceded by colic, or followed by a lethargic state.—Urgent inclination to remain lying down; a child will neither walk nor be carried in the arms.—Cracking, and pain resembling a bruise, in the joints.

25. Skin.—Miliary eruption, with itching and nocturnal tickling.—Unhealthy skin; every injury tends to ulceration.—In the ulcers, tingling, itching, burning, and jerking shootings, with excessive sensibility to the touch.—Itching pimples form around the ulcer, covered with scurf, and suppurating.—Yellow colour of the skin (over the whole body).—Rash of infants and during nursing.—Red rash on the cheeks, on the forehead.—Inflammatory swelling of the glands.

26. Sleep.—Yawning and stretching.—Sleepiness, during the day, without being able to sleep, on lying down.—Coma, and coma-vigil, with pulling pain in the head, and nausea, or with feverish restlessness, short respiration, and thirst.—Nocturnal sleeplessness, with attacks of anguish, visions, and illusions of the sight and

hearing.—Snoring breathing when asleep.—On sleeping, starts with fright, cries, tossing, tears, talking, raving, groans, snoring, and constant separating of the thighs.—Fantastical, lively, quarrelsome and vexatious dreams, with morose and sullen aspect.—Nocturnal delirium.

27. Fever.—Pulse small, tense, accelerated.—Constant alternation of cold, or of partial shuddering, with partial heat, in different parts of the body.—Chilliness and coldness of the forepart of the body, while the back part is hot, or *vice versâ*.—General heat, esp. in the evening, or at night in bed, with anxiety, thirst, redness of the cheeks, hot perspiration of the head, at the forehead, and the scalp; and sometimes, chiefly on uncovering the body, mixed with shivering or shuddering.—After or during the heat, sour sweat, which causes an itching on the skin.—Burning heat and redness (often only in one) of the cheeks, chiefly at night, with groans, tossing, and cold or heat in the rest of the body.—Intermittent fever, with nocturnal aggravation, pressure on the pit of the stomach, nausea or bilious vomiting, colic, diarrhœa, and painful emission of urine.—Chilliness, with internal heat.—Chill and coldness of the body, with burning hot face and hot breath.—Nocturnal sweat, when asleep.—Continuous burning heat, with violent thirst, and starts during sleep, and furious delirium.

Chaparro Amargoso.

Chaparro Bush. Goat-bush. Bishirandi Amargoso. Castila Nicholsoni. N. O. Simarubaceć. Fluid extract from bark of stem.

Clinical.—Diarrhśa. Dysentery.

Characteristics.—Dr. M. J. Bleim, of San Antonio, Texas, communicates to the *North American Journal of Homśopathy*, of March, 1899, an article in praise of this Mexican plant, a small, thorny bush, three to five feet high, with a small, saffron-coloured flower. Dr. Bleim reports the following cases cured: (*1*) Mr. A., of New Orleans, eighteen months ill with dysentery, was sent to Dr. Bleim under suspicion of tuberculosis. Before seeing the doctor he met a stockman who said he could cure him, having been himself cured with the remedy after a like experience. *Chapar*. was the remedy, a teaspoonful of the extract three times a day. After three doses there was considerable improvement. He took no more medicine, and had no further trouble. (*2*) Boy, 12, had been treated for several months by Dr. Bleim with indifferent results. *Chapar*., half a teaspoonful three times a day. In forty-eight hours the discharge ceased, and the bowels became normal. (*3*) An acute case had improved rapidly under *Merc. cor*. and colon-douches, but came to a standstill at a certain point: three or four stools a day, more or less pain; no appetite; very weak. *Chapar*. was ordered, a teaspoonful three times a day; immediate general improvement; in forty-eight hours the bowels were normal;

within a few weeks strength was entirely restored. Dr. R. T. Knox, of Gonzales, narrates his own case: Dysentery three years. Nothing gave more than temporary relief. Discharge after discharge of quantities of bloody matter accompanied with much pain. Ravenously hungry all the time in a land of plenty. Under the advice of a farmer he was persuaded to drink freely of a tea made of the shrub, before each meal. The infusion had the appearance of sparkling beer, and was most intensely bitter. In three days there was great improvement. In two weeks the bowels were under control, stools consistent, partly moulded, sleep good. Recovery was perfect. *Chaparro* is prized by Mexican doctors as a tonic and antiperiodic.

Relations.—*Compare:* Cedron; Merc., Nux, Nit. ac., Caps.

Cheiranthus Cheiri.

Common Wallflower. N. O. Cruciferæ. Tincture.

Clinical.—Deafness. Wisdom-teeth, effects of cutting.

Characteristics.—Our knowledge of the medicinal use of *Cheiranth*. is due to Dr. Cooper. The cases cured with it are as follows: (*1*) Young man, deafness and Otorrhœa left side. Is cutting three wisdom teeth. Cured by two doses of Ø given at six weeks' interval. (*2*) Girl, 22, deaf after measles, cutting wisdom teeth. Greatly improved. (*3*) Girl, 20, used to taking purgative pills, had pain in lower back, jaundiced appearance, bilious feeling, sickness of stomach. *Cheir. ch*. removed the symptoms at once. Cooper considers as a keynote of the remedy, "Nose stopped at night from irritation of cutting wisdom teeth."

Relations.—*Compare:* (Botan.) Armor., Sinap., Brassica, Raphan. (wisdom teeth) Mag. c., Fer. pic.

Causation.—Cutting wisdom teeth.

Chelidonium.

Chelidonium majus. Greater Celandine. N. O. Papaveraceæ. Tincture of entire fresh plant, at time of flowering.

Clinical.—*Antrum of Highmore, inflammation of*. Cancer. *Chest, affections of*. Chorea. Constipation. Cough. Diarrhœa. Dyspepsia. Gall-stones. Gonorrhœa. Hæmoptysis. Hæmorrhoids. *Headache*. Influenza. Jaundice. Lachrymal fistula. Laryngismus. *Liver, affections of*. Nephritis. *Neuralgia. Nose-bleed. Pleurodynia*.

Pneumonia. Rheumatism. Scald-head. *Stiff-neck. Taste, altered*. Tumours. Warts. Whooping-cough. Yawning.

Characteristics.—*Chelidonium* is a poppy and therefore allied to *Opium* and *Sanguinaria*, with both of which it has many features in common. But its closest analogue is *Lycopodium*, with which it holds a complementary relation. I have often cured with *Chel*. when *Lyc*. was apparently indicated and failed to act well. The juice of *Chel*. causes vesication when applied to the skin. An extract injected locally in cancer cases has gained a reputation in the old school. The juice is yellow, resembling bile. Probably on the "signature" of the bile-like juice it was recommended as a remedy in jaundice by Galen and Dioscorides. Given on the broad ground of organ-homœopathy, in material or semi-material doses, it has achieved notable results in cases of liver disease. But it has also fine indications. The chief "keynote" for its employment is a continued, bruised, aching pain at the inferior angle of the right scapula: *Chel*. acts on spleen and kidneys as well as liver. It is also a venous medicine. Paralytic symptoms are prominent. There is great debility and drowsiness after eating and on waking. Prefers hot things. Desire to lie down after a meal. Aversion to move, feels tired on least exertion. There is the *Opium* sleepiness and yawning. Yellowness of the skin; ulceration. *Chel*. is a predominantly right-side medicine (like *Sang*. and *Lyc*.), and besides the right infra-scapular pain and the action on the liver it has neuralgia over the right eye and in right malar bone, and also an action on the cæcum and right ovary; and on the base of the right lung. In pneumonia with bilious symptoms it is one of the chief remedies. *Chel*., like *Lyc*., has fan-like movement of alæ nasi in chest affections. There may be either constipation (clay-coloured stools), or diarrhœa with bright yellow stools. There is nausea (of pregnancy) with desire for food > by drinking milk. Desire for hot drinks, only water almost boiling will stay on stomach. Chills or creeps accompany the headache or the jaundice. The dirty yellow complexion produced by *Chel*., with other signs of cachexia, strongly suggest cancer, and the action of *Sang*., its relative, in cancer of the breast is well known. Also *Opium*, in addition to its narcotic influence, is believed by Snow to have a retarding effect on cancerous growth. A somewhat typical *Chel*. case, simulating cancer, is recorded by C. M. Foss. A man, 45, had catarrh of the nose, and, at the same time, of the stomach: had been told he had cancer of the stomach. Tenderness over stomach with sinking, gone feeling, at times reaching a state of painful anguish; sickness at stomach, all symptoms > by eating. *Chel*. 6x cured at once. "Aversion to cheese" is an indication for *Chel*. in many gastric conditions. Teste, who proved *Chel*., places it at the head of a group which includes *Caps*. and *Viola. od*. He mentions the analogy between the juice of *Chel*. and the juice of *Garcinia morella*, Gamboge. Both are bright yellow and pass to orange and brown on drying. Some old-school authorities have recommended the juice of *Chel*. as a substitute for gamboge as a hydragogue cathartic. Among its ancient external uses was, as an application in eye affections, to chronic ulcers, and to warts. In Teste's proving he emphasised the following symptoms: "1.30 p.m.: dull and heavy, deep-seated pain in whole right side of chest and right shoulder,

without cough, but with embarrassed respirations. This pain, which is at times accompanied by dull beatings in the chest, does not allow him to draw a long breath; it is not perceptibly aggravated by the motions of the arm. The pain is particularly felt in the axilla and under the shoulder-blade; a sort of numbness of the muscles in the region of the liver, and in the whole right side of the neck, face, and head; apprehension of threatening pneumonia; great anxiety; constant desire to stir and change one's position (lasts an hour and decreases gradually)."-"Extremely profuse emission of a whitish and foaming urine."-"2 p.m.: drowsiness which is so marked, even in the open air, that she is near falling asleep while walking; lasts half an hour." According to Rademacher *Chel*. acts on the *centre* of the liver. *Chel*. has a strong action on the respiratory sphere. A characteristic cough is caused by a sensation of "dust" in the air passages. St. Clair Smith relates a case. A young lady had had for several weeks a dry, racking, fatiguing cough night and day, < night, no expectoration and no pain. She looked completely worn out. The cough was excited by a sensation as if throat and larynx were full of dust. *Chel*. 3, a powder every two hours, was given. She only took three when the "dust" left the throat and with it the cough, and never returned. Carleton Smith cured this: "Dry cough through day with pain and stitches right side; severe hoarseness 5 p.m., voice scarcely audible." In rheumatic affections *Chel*. has a large field. Œdema, heat, tenderness and stiffness are the leading indications. Here is a case: A baby girl had had rheumatism of both ankles for a week, when it settled in the right one, which became greatly swollen, very tender, painful and hot. Constipated for two months previous, whitish stools. *Chel*. improved in twelve hours, and entirely cured in a week. In another case of acute rheumatism of feet and ankles, supervening on a slow, remittent fever, *Chel*. cured after the failure of *Rhus* and *Bry*. The patient was a girl of six. Both ankles were affected, feet much swollen and extended. The slightest movement or touch extorted screams. The only relief was constant bathing with hot water. W. A. Burr cured a case of right sciatic rheumatism, of ten years' history, in a very corpulent woman, æt. 55. In her case there were aggravations coming on in the afternoon and evening of each day, and lasting into the middle of the night. During the paroxysms the outer ankle and lower leg became cyanotic, swelling around ankle, constriction above, great sensitiveness to touch and motion. Very nervous during the spells. Great external sensitiveness; aversion to touch, and < from it. Pressure > some symptoms and < others. Eating > stomach symptoms: all complaints lessen after dinner. Change of weather <; warmth <; cold water >. Open air < headache; pain in right eye; and causes chill; and drowsiness. Motion < most symptoms. Coughing and blowing nose > headache. Rest >. Lying on face > pain in kidneys and bladder. Lying on left side > pain in stomach. Many symptoms are < 4 a.m.; also 4 p.m. and afternoon.

Relations.—*Antidoted by:* Acon.; acids; wine and coffee; Camph. (Teste). It is *antidote to:* Bry. *Compatible:* Ars., Bry., Coral. r. (whooping-cough); Led., Sul. (hepatised lung); Ipec. (spasm of glottis). *Compare:* In pain below angle of scapula, Juglans cin., Chenop. (lower than angle and nearer spine), Ran. b. (edge of

left; through to chest), Lob. cerul. (inside edge right scapula), Angust. (cutting from just beneath right scapula to breast, near nipple), Bry.; Bry. is a close analogue in many symptoms—yellow tongue, swelling of liver; Lyc. is complemented by Chel. (some differences are: Lyc. has sour taste, Chel. bitter, Lyc. has rumbling in left hypochondrium, and fulness after a small quantity of food. Lyc. and Bell. have symptoms beginning and ending suddenly; Chel. has headache ceasing suddenly). Merc. (bilious pneumonia. Sharp pains through right lung to back; Merc. has slimy stool and great uneasiness before and after, the stool of Chel. being free); Kali c. (pneumonia in later stages, copious exudation into lungs, rattling with cough, < 2-3 a.m.); Colch. (nausea with desire for food); Carb. an. (leucorrhœa staining yellow); Act. r. (waving sensation in brain); Aco., Ars., Bell., Bry., Calc., Caps., Chi., Gamb., Graph., Ign., Nit. ac., Nux, Pho., Pod., Puls., Rhus, Sep., Spi., Sul., Viol. o.

SYMPTOMS.

1. Mind.—Remarkable tranquillity of mind for two or three days, followed after a while by ill-humour.—Low-spirited, desponding, with inclination to weep.—Forgetful, absent-minded.—Restlessness and uneasiness of conscience; felt she had committed the unpardonable sin.

2. Head.—Confusion.—Whirling vertigo; with shivering; with nausea; with vomiting of bile; on awaking; from 6 to 9 p.m.—Rush of blood to head and face, throat and upper chest.—Heaviness of head, extending to r. side of head, whence a rheumatic drawing extending into r. side of neck, wrist, and chest.—Headache in afternoon, disappearing suddenly.—Headache > closing eyes; > after eating (severe on rising, > after breakfast).—Headache, throbbing in temples; pressing from within outwards esp. towards forehead, < open air; coughing; blowing nose; stooping; > while eating.—Waving sensation in brain.—Waving in brain and heaviness in forehead and vertex, extending to temples, and very unpleasant after drinking white beer.—Pressure in forehead extending to orbits, which are painful as if sore on moving the eyes.—Pressing pain. r, side of forehead.—Band sensation across forehead and temples, > closing eyes.—Tearing in forehead above eyes, extending into the (l.) eye, into the lids, and root of nose.—Pressive pain in r. temple, r. parietal bone, and at last over r. eye.—Beating in temples synchronous with pulse on lying down in bed at night.—Stitches in vertex, esp. when walking fast.—Occiput heavy as if it could not be raised from pillow at night; with drawings in neck from above downward.—Sensation of coldness in occiput ascending from nape; < moving; > at rest.—Soreness; sensitiveness; itching; tingling; crawling on scalp.—Hair falls out, esp. on occiput.—Scald-head.

3. Eyes.—Painful pressure on upper eyelid.—Tearing pain in and above eyes.—Neuralgic pain above r.—eye.—Stitches between eyebrows.—Pressive, burning headache between eyebrows which presses lids together; > after eating, but returning after three-quarters of an hour.—Margins of eyelids red.—Clonic

spasms of lids.—Redness of conjunctiva.—Whites dirty yellow.—Aching in eyeballs on moving them.—Pupils contracted.—Vision dim.—Mistiness of sight of r. eye, morning on waking.—A blinding spot seems to be before the eyes, and if he looks at it the eye waters.

4. Ears.—Pain behind r. ear.—Tearing from r. cheek-bone to ears and around ears extending to upper part of occiput along lamboidal suture.—Sensation in both ears as if wind were rushing out.—Loss of hearing during cough.—Roaring as of a distant wind-storm.

5. Nose.—Tip swollen and red.—Dry coryza with (one-sided) stoppage.—Fluent coryza.—Discharge of black blood with mucus on waking in morning.—Obstruction with liver complaints.—Hallucinations of smell (on stooping).

6. Face.—Red without heat.—Remarkably yellow, esp. forehead, nose, and cheeks.—The usual red has a mixture of dark yellow.—Tension and drawing in (l.) malar bone.—Sensation of swelling in r. cheek-bones.—Burrowing-tearing in antrum.—Itching in face and on forehead.—Herpes on face, esp. chin.—Lips swollen; dry, cracked, crusty, feeling.

7. Teeth.—Tearing pains r. ear to r. teeth, afternoons.—Toothache with facial neuralgia; < warmth; and in bed at night; > cold water; l. lower molar, jerking, tearing in antrum.—Gums bleed.

8. Mouth.—Taste: mucous, pappy; bitter; food tasting natural.—Bitter taste when not eating.—Tongue: nervous, pointed; thickly coated, yellow with red margin; teeth—indented.—Mouth dry.—Salivation: bitter; oozing of blood.—Bad odour.—Mucus flies from mouth when coughing.

9. Throat.—Sensation as if larynx were pressed on œsophagus impeding deglutition.—Sensation of choking in throat, as if too large a morsel had been swallowed.—Fauces red; swelling of uvula and tonsils; shooting in tonsils; burning and scraping in throat.

10. Appetite.—Appetite lost.—Thirst with dry mouth and throat.—Desire for milk, which agrees; for sour things.—Aversion to cheese; to meat.—Prefers hot drinks, which >.—All complaints > after dinner.

11. Stomach.—Hiccough.—Frequent belchings.—Eructations tasting like juniper berries.—Nausea with sensation of heat in stomach.—Bilious vomiting.—Gnawing in stomach relieved by eating.—Sensation of coldness in stomach.—Cutting pain in stomach when yawning; soon after eating.

12. Abdomen.—Colic, navel drawn in.—Stitches in liver and spleen.—Shooting stitching through liver to back; crampy pain inner angle of scapula.—R. (and l.)

hypochondrium and scrobiculus cordis tense and painful on pressure.—Pains across umbilicus as if abdomen constricted by a string.—Abdominal plethora; distension, rumbling.

13. Stool and Anus.—Mucous diarrhœa at night.—Stools white; bright yellow; like clay.—Constipation, stool hard, in hard lumps.—Some blood with stool.—Periodic straining and pressing on rectum, as if before a stool without result.—Burning; cutting; drawing; crawling and itching; sticking and itching in rectum and anus (hæmorrhoids).

14. Urinary Organs.—Pressure in bladder with scanty emission.—Spasmodic pain in r. kidney and liver.—Burning, darting and cutting in urethra.—Frequent desire and urging to micturate.—Urine: profuse, whitish, foaming; red and turbid; dark.—(Diabetes.)

15. Male Sexual Organs.—Drawing pains in spermatic cord; in testicles.—Eczematous excoriation on male parts and anus.—Painful swelling r. testicle with tension and drawing in spermatic cord.

16. Female Sexual Organs.—Menses too late; too profuse; lasting too long.—Pain in r. ovary.—Milk diminished.

17. Respiratory Organs.—Hoarseness.—Spasm of glottis.—While coughing pain in larynx and sacrum.—Pricking; sticking; tickling; constriction in larynx.—Pressure as if air could not pass through; as if swollen (r.).—Pressure, heat or irritation in trachea.—Short breath and tight chest.—Nightly attacks of asthma with sense of constriction in region of diaphragm.—Cough in paroxysms; throws up lumps of mucus.—Cough after waking and on rising, with sensation of dust under sternum.—Paroxysms of cough with copious expectoration; with pain behind sternum, esp. at night.—Paroxysms of dry cough 4 p.m.

18. Chest.—Stitches beneath r. ribs; l. side of chest.—Deep-seated pain in whole r. side of chest.—Soreness of lower ribs r. side.

19. Heart.—Stitches and lancinating pains in cardiac region and heart; in pectoral muscles.—Periodic palpitation.—Violent palpitation with tightness of chest.

20. Neck and Back.—Drawing in nape and occiput.—Stiff-neck, head drawn to left.—Stitches beneath r. scapula (hindering motion of arm).—Fixed pain under inner and lower angle of r. scapula.—Violent pains at lower angle of l. scapula.—When bending forwards or backwards, tearing, pressing pain in back as if vertebræ were being broken asunder.—Drawing from, sacrum to r. side of scrobiculus.

21. Limbs.—Twitching in arms and legs.—Neuralgia in limbs.—Rheumatism.—Least touch anywhere is exceedingly painful; sweat without relief.—Limbs feel heavy, stiff, and lame; flabby; trembling.

22. Upper Limbs.—Pain in r. shoulder; in l. shoulder.—Inability to use r. (also l.) arm and forearm with freedom, sometimes attended with tearing pain.—Stiffness in wrist.—Stiffness, stitches in wrists.—Tips of fingers cold.

23. Lower Limbs.—Shooting in r. hip.—Drawing pains in hips, thighs, legs, and feet, more r. side.—Weight in lower limbs.—Swelling of feet, most round ankle.—Toes feel dead.—Intolerable pains in heels, as if they had been pinched by too narrow a shoe.

25. Skin.—Yellow, yellowish-grey shrivelled skin.—Itching.—Burning like nettles, preceding eruption like measles.—Red painful pimples and pustules on various parts.—Red miliary eruption on neck, chest, and arms.—Eczema.—Old, putrid, spreading ulcers.

26. Sleep.—Frequent yawning.—Lethargic.—Sleepy, wants to lie down but cannot sleep.—Sleep dreamful, unrefreshing.—Dreams of corpses and funerals.

27. Fever.—Yawning and shivering before attacks.—Icy coldness of r foot.—Violent shivering fit, 3 p.m. daily.—Rigor followed by heat and sorrowful, anxious mood.—Heat of head, dark red cheeks, pulsation in arteries; full pulse; faintness; difficulty of speech; nausea; short breath; cold feet.—Burning heat of hands, spreading thence over body.—Moist, burning skin.—Sweat during the night, esp. towards morning.—Sweat on least exertion.

Chelone.

Chelone glabra. Balmony. Snake-head or Turtle-head. N. O. Scrofulariaceæ.

Clinical.—Debility. Dumb-ague. Jaundice. Liver, diseases of. Quinine cachexia. Worms.

Characteristics.—*Chelone* has been used by old-school practitioners and eclectics as a cholagogue and vermifuge. Burnett has used it as an organ-remedy in liver affections. His indication is "pain or soreness of the left lobe of the liver and extending downwards." This I can confirm. *Chelone* acts in a line between the hilus of the liver and the fundus of the uterus. According to some observers it antidotes the Quinine cachexia; and is a remedy for "dumb-ague," *i.e.*, ill-defined paroxysms of aching and fever following severe malarial fevers. "Soreness of external parts, as if the skin were off, especially about elbow," has been confirmed

as an indication. "Debility from loss of tone of digestive organs, or liver, or from exhausting diseases" (Hale). One to five-drop doses of the tincture have been given.

Relations.—*Compare:* Chi., Chenop., Cina, Helon., Hydrast., and (according to Burnett), especially Carduus mar. (left lobe of liver). Compare also other Scrofularias, Grat., Dig., Tabac., Scrof. nod.

Chenopodium Anthelminticum.

Worm-seed. N. O. Chenopodiaceæ. Tincture of fresh plant. Solution of oil of seed.

Clinical.—Aphasia. Apoplexy. Asthma. Cerebral deafness. Convulsions. Dropsy. Epilepsy. Headache. Hemicrania. Hemiplegia. Leucorrhœa. Menses, suppressed. Paralysis. Scapula, pain in. Tinnitus. Tonsillitis.

Characteristics.—The most characteristic pain of *Chenopodium* is a dull pain below the angle of right scapula, and nearer the spine than the analogous pain of *Chelidonium*. *Chenopodii glauci Aphis* (see *Aphis*) has a similar pain below angle of left scapula. Several cases of poisoning have been reported in which all the symptoms of apoplexy and consequent right hemiplegia with aphasia were reproduced. Stertorous breathing, with a very peculiar rattle as of a ball rolling loose in the trachea. Heavy breathing with flapping of cheeks. Other symptoms are: Vanishing of sight and roaring in ears with (right) hemicrania. Roaring in ears as of cannons going off, also ringing; deafness. Subacute and chronic enlargement of tonsils in pale, scrofulous children. Caseous deposits with painful inflammation of tonsils. Rough, furry feeling in throat. Menses suppressed; leucorrhœa instead. Pains through heart; under right scapula, and in right shoulder. Fever after a fright. In three cases of poisoning reported by Allen the following symptoms were produced: (*1*) Insensible, convulsed, foaming at the mouth. All remembrance of taking the poison was lost on his recovery. (*2*) Deep, heavy, stertorous breathing accompanied by a very peculiar rattle, as if there were a ball rolling loose in the trachea; pulse small, weak, frequent and feeble; eyes insensible to light or external objects; convulsive movements of right half of body; extremities cold; any attempt to swallow threatened instant suffocation. (*3*) (This patient took 1 1/2 oz. of worm-seed oil and 30 drops of turpentine.) Disagreeable eructations; nausea; staggering like a drunken man; deafness to the sound of the voice, but exquisite sensitiveness to the sound of passing vehicles, they sounded like cannons in his ears; also annoying buzzing. In smoking he would scarcely light his cigar before he would lay it down again and take a fresh one, arguing perversion of taste. By afternoon the mantelpiece was strewn with cigars only partly used. No disposition to engage in conversation. Aphasia: he clearly wanted his attendant to get or do something but could not make him understand. The attendant wrote, "Don't understand," showed it to him, and gave him paper and pencil. After great efforts he wrote

distinctly words with no meaning. Voice-hearing became progressively worse, but he heard the tea-bell three storeys below promptly, and, to the astonishment of the family, got up and walked deliberately into the dining-room.—He did not seem to know his accustomed seat, and sat in the wrong place. During the afternoon became completely aphasic. Finding himself unable to express his ideas, this seemed to amuse him much, and he laughed heartily. Whatever he did he would keep repeating. When the doctor entered he arose and shook him heartily by the hand, and then sat down. In about a minute he arose, solemnly came forward and again shook hands. This he repeated twenty times in as many minutes. He then went through the performance of washing his hands in an empty basin and repeated this many times. Sitting at tea he ate with apparent relish, taking singly tea and bread. While grasping a piece of bread, there was a distinct spasm of right forearm and hand; fingers firmly clenched, hand forcibly flexed on forearm. Assisted to his room, his walk was entirely natural; when put to bed showed some resistance, striking at the doctor. He at once commenced to groan, tossed from side to side of the bed, suggesting abdominal distress. Soon became unconscious; right arm paralysed; dragging helplessly. Next day continued impairment of motion and sensation right side; right eyeball insensitive to touch. Third day, frequent twitching and stiffness of right limbs, culminating in a one-sided convulsion in early morning of fourth day. At noon of third day, copious involuntary urination in bed. This continued to the end, except when drawn off. In afternoon, heavy breathing and flapping cheeks of apoplexy appeared. More or less constant regurgitation of yellow frothy material from mouth, smelling of worm-seed, as also did the perspiration. This material was at times so profuse as to embarrass respiration. During one of the attacks of dyspnœa, and while in a drenching sweat, which suggested dissolution, he was gently turned in bed; immediately a general convulsion set in, markedly opisthotonic, lasting ten minutes, despite the use of chloroform. By this time jaundice appeared, having been only noticed the day before. Five days from taking the dose he died in profound coma with high temperature. The significance of these symptoms needs no pointing out. The peculiar deafness corresponds nearly to the "cerebral deafness" described by Cooper in which the watch-hearing is good whilst the voice-hearing is bad or absent. Hemiplegia with contractions of limbs, and certain epileptic seizures are strongly portrayed in the poisoning. When given as a vermifuge it frequently produces progressive and long-lasting deafness. Linnell has cured with it two cases in which there was deafness to voice-hearing but sensitiveness to other sounds. In one case there was implication of left labyrinth with slight chronic otitis media of both ears; deafness left ear several years; no tinnitus; consciousness of the ear; sensitive to musical sounds; deaf for watch and voice; perosseous hearing diminished. He has also cured: Roaring tinnitus synchronous with heart. Sensitiveness to cold. Hearing better for high-pitched than low-pitched sounds. (*H. W.*, xxxii. 295.)

Relations.—*Compare:* Aphis, Chel., Chen. v. In apoplexy and puffing respiration, Chi., Op., Lyc. In deafness, Chi., Chi. sul., Chi. salicyl., and Salicylates in general.

SYMPTOMS.

1. Mind.—Weeping mood.—Insensible, convulsed, foaming at mouth.—Complete aphasia (poisoning by the oil).—Loss of memory of attack after it is over.

2. Head.—Vertigo with transient vanishing of sight.—Pain in whole r. side of head with roaring in ears, dim sight, or complete loss of vision.—Dull, pressive pain in vertex extending through head.

3. Eyes.—Impaired movements of r. eyeball; loss of sensitiveness.—Vanishing of sight.

4. Ears.—Roaring in ears as of cannons; deafness.—Progressive deafness to human voice, extreme sensitiveness to other sounds (cerebral deafness?).—Tinnitus synchronous with heart-beats.

6. Face.—Flapping cheeks with stertorous breathing.

9. Throat.—Chronically enlarged tonsils; caseous desposits.—Furry feeling in throat.

11. Stomach.—Perversion of taste.—Disagreeable eructations; nausea.—Constant profuse regurgitation of yellow frothy material smelling of worm-seed.

14. Urinary Organs.—Slight pain in region of kidneys.—Involuntary urination, very copious.

16. Female Sexual Organs.—Menses suppressed; has leucorrhœa instead; rough furry feeling in throat.

17. Respiratory Organs.—Stertorous breathing; flapping cheeks dyspnœa; peculiar rattle as of a ball rolling loose in trachea.—Respiration embarrassed by quantity of yellow frothy material which he constantly regurgitated.

18. Chest.—Pains through heart, under r. scapula, and in r. shoulder.—Pain throughout r. chest, beginning at attachment of 6th rib to its cartilage, and extending to front of r. scapula.

20. Back.—Pain beneath point of r. scapula, with giddiness in forehead, ringing in ears and pale face.—Slight dull pain a little lower down than point of r. scapula, but nearer spine.

21. Limbs.—Twitching and stiffness in r. limbs.

22. Upper Limbs.—Paralysis and spasm of r. forearm and hand in flexion.

24. Generalities.—Staggering gait.—Constantly repeats an action.—R. sided convulsion and paralysis.—Frequent twitching and stiffness of r. limbs.—Hemiplegia with contraction of limbs.

25. Skin.—Jaundice.

Chenopodium Vulvaria.

Stinkender Gänsefuss. N. O. Chenopodiaceæ. Tincture of fresh plant.

Clinical.—Constipation. Enuresis. Scapula, pain under. Spleen pain.

Characteristics.—*Chenop. v.* has an odour of decaying fish, and contains Trimethylamene. It constantly gives off ammonia. It has been proved, and seems to affect the left side more than the right, but the following recalls the characteristic of *Chen. anth.*: Pain in middle of back on right side of spinal column, increasing gradually to a pressing wedge-like pain, beneath right scapula, < when sitting. There is also a pain over spine of left scapula. Pressure on the left side of the head. Constipation with external piles. Nocturnal enuresis. Sensations of dulness and fulness appear in many parts. Cold saliva; cooling sensation in abdomen. There is restlessness caused by pricking pains. Sitting < pain in back; this is > by bending backwards. Walking < stitches in spleen and pain in right knee.

Relations.—*Compare:* Am. c., Trimeth., Chen. a., Aphis.

SYMPTOMS.

2. Head.—Feeling of dulness, beginning both sides of head behind ears, going upward; in upper occiput; returning in waves.—Tenderness left parietal region.

4. Ears.—Dull, muffled, obstructed feeling in ears.

8. Mouth.—Peculiar sensation in tongue, as if enveloped by saliva.—Constant cold saliva.—Saliva feels cold, esp. left side of mouth.

11. Stomach.—Unusual thirst.—Dulness and yawning,> after eating.—Better after drinking wine.—Acidity with pain in stomach and epigastrium, extending to l. side into chest.

12. Abdomen.—Stitches in upper part of region of spleen while walking.—Cooling sensation, felt first in mouth, then hypochondriac region, then abdomen.—Twitching in l. abdomen, extending toward groins, followed by pain in l. forearm.

13. Stool and Anus.—Urging to stool; stool softer than usual.—(Constipation improved.).—Constipation for three or four days and then with difficulty; external piles.

14. Urinary Organs.—Urine increased, offensive.—Urging to urinate.—(Nocturnal enuresis improved the first night.)

15. Male Sexual Organs.—Increased desire, followed by diminished desire and erectile power, but undiminished secreting power.

16. Female Sexual Organs.—Amenorrhœa.

18. Chest.—Fulness in chest, in region of last ribs.—Feeling in lower lobe r. lung as if some fluid wanted to discharge itself into region of duodenum.

20. Neck and Back.—Severe stitching-pressing r. side of back, > bending backward.—Sensitive spot in back, region l. hypochondrium, soon after having eructated.—Pain directly over spinous process of l. scapula, as if pressed by two or three fingers.—Pain middle of back r. side spinal column, increasing gradually to a pressing, wedge-like pain beneath r. scapula, < when sitting.—Painful weariness and weakness in lumbar and lower dorsal region.

22. Upper Limbs.—Weakness in hands and arms.—Twitching in l. forearm while sitting still.—Jerking pain like electric shocks through l. forearm, from forearm to fingers, but without muscular contraction.—Pain deep in inner side l. forearm.—Pain in middle of l. radius, particularly severe in small spot.

23. Lower Limbs.—Pricking here and there in legs and other places, compelling him to move.

26. Sleep.—Yawning; preceding lassitude and heaviness.—Somnolence.

Chimaphila Maculata.

Spotted Wintergreen. N. O. Pyroleć, a tribe of the Ericaceć. Tincture of root and leaves, or of fresh plant in flower.

Clinical.—Angina pectoris. Diarrhśa. Headache. Sore-throat. Tongue, stiffness of. Toothache. Worm-fever.

Characteristics.—*Chim. mac*. has been proved independently of *Chim. umb*. Some symptoms of *Chim. rotund*. are included. An intense gnawing hunger is a leading symptom. Burning fever; blood feels heated. The throat and tonsils are strongly

affected. Headache < on lying down. Feels better in warm room. Suited to mild, amiable, refined, sensitive, intellectual persons.

Relations.—*Compare:* Puls., Chim. umb.

SYMPTOMS.

1. Mind.—Becomes partially unconscious, feels like fainting, as if brain paralysed, mind gone (*Chim. rotund*.).

2. Head.—Sudden headache above eyes; with dim vision; light-headed; lying down.—Frontal headache with fulness in stomach and belching; with pain in bowels; wants head pressed on.

7. Teeth.—Hollow teeth ache, < eating.

8. Mouth.—Tongue feels stiff and thick in middle, cannot raise it Chim. rotund).

9. Throat.—Tensive pain in throat on swallowing; swollen tonsils.

10, 11. Appetite and Stomach.—Extreme gnawing hunger.—Feels drunk as if stomach burnt up with liquor; as if hard, dry, and tough, and as if rennet would be good for it (*Chim. rotund*.).

13. Stool.—Diarrhśa, with worm-fever.

14. Urinary Organs.—Rises in night to urinate.

19. Heart.—Angina with stupor.

21. Limbs.—Limbs feel full, as if distended.—Sensation of swelling in armpits; pain from armpits to scapulć.

27. Fever.—Fever with burning hot skin and thirst.—Blood as if heated with prickling.—Cold, damp feet in evening.

Chimaphila Umbellata.

Pipsissewa. Prince's Pine. Ground Holly. N. O. Pyroleć, a tribe of the Ericaceć. Tincture of root and leaves, or of fresh plant in flower.

Clinical.—Acne. Breast, atrophy of; cancer of; tumour of. Cataract. Cystitis. Diabetes. Dropsies. Fevers. Glands, enlarged. Gleet. Gonorrhśa. Intermittents. Jaundice. Kidneys, disorders of. Lactation, disorders of. Liver disorders. Nephritis.

Proctitis. Prostatitis. Pterygium. Ringworm. Scrofula. Stricture. Syphilis. Toothache. Ulcers, malignant. Urinary disorders. Whitlow.

Characteristics.—*Chimaph. umb*. is a medicine used by many North American Indians in gravel and urinary disorders. It has also been used as a vulnerary. Among the eclectics it is used as an "alterative" in skin affections, *e.g*., acne, herpes, eczema, in enlarged lymphatic glands, in articular rheumatism. It is said by them to act mainly as an eliminative through the bowels and kidneys. They use it in cases of chyliferous urine, cystitis, strangury, smarting, burning pains on urination, turbid urine and frequent micturition, and diabetes. Also in passive renal, uterine and intestinal hćmorrhages, leucorrhśa and gonorrhśa. From its property of increasing the renal secretion they give it in cases of calculus and prostatic irritation. Catarrhal states, with mucus, muco-pus, pus and blood, offensive or not, indicate its use. *Chim. u*. has been proved by Jeanes, G. Bute, and H. P. Gatchell. It causes flushing of cheeks with some general heat and accelerated pulse. Toothache < after eating, and from exertion; > by cold water. Cannot close jaws at night; jaws feel stiff; sleeps with mouth open. Palate sore; very sensitive to warm drink or food; rawness of upper and back part of palate. Increase of appetite. It has been used with success in cases of: inflammation of liver with ascites; abdominal and renal dropsies; enlarged mesenteric glands; obstinate constipation and hćmorrhoids. A peculiar symptom is: shooting pain, deep-seated, left side of anus. The symptom: "Sensation of swelling in perineum on sitting, as if a ball was pressing against it," shows its appropriateness in prostatic disorders. There is also loss of prostatic fluid. Constant pain in region of kidneys, as if something fluttering in kidney region, first one side, then the other. Pressing fulness in region of bladder. Vesical tenesmus; strangury. Constant desire to urinate; must rise several times in the night. Great quantities of thick, ropy mucus in urine. Blood in urine. Smarting pain (also painful irritation) from neck of bladder, whole length of urethra to meatus. Bruised pain in testicle is a leading indication in stricture. Leucorrhśa. Rapid atrophy of breasts or tumours. Acute rheumatism of shoulder. Śdema of arms (right). Inward trembling without mental disturbance. In homśopathic practice Coburn reports the following cures: (*1*) Stricture: Man, 30, dysuria, severe pain, scalding and burning. At times urine voided in a large gush; at others in thready stream, and, towards the end, drained off drop by drop. (After *Merc. c*. and *Canth*. had relieved temporarily.) (*2*) Prostatitis after sitting on cold stone: Pain and a sensation in the parts, as if he had bruised one of the testicles. (*3*) Cancer of breast: Patient, 2l. Tumour in left breast, hard, movable; sharp pains at site. For four months, under *Arn., Ars., Cicut., Thuj*., the tumour increased, skin became contracted, nipple drawn in. In eight months it broke out into an irregular ulceration with lacerated edges, fetid discharge. Axillary glands swollen. *Chim. umb*. Ř gtt. x. every four hours was given, and the same locally applied. The pains diminished, swelling decreased, and in six months the patient was well. The symptoms of *Chim. u*. are < In damp weather; after washing in cold water; from sitting on a cold, wet stone. (Though evergreens and "winter-

lovers"—hence the name—the Chimaphilas are generally < by cold). Suited to cachectic, scrofulous individuals and broken-down constitutions.

Relations.—*Compare:* Chim. mac.; Apocy. (dropsy); Agnus (gonorrhśa, lactation); Con.; Coff. (toothache > by cold water); Led., Rhod., Kalm., Uva ursi, Sabal. In pterygium Calc., Zn. Ball in perineum, Can. ind. In kidney-ache, Santalum.

SYMPTOMS.

2. Head.—Tinea capitis.

3. Eyes.—Halo round lamp flame.—Stabbing shooting in l. eyeball.—Itching and smarting of edges and insides of lids.

6. Face.—Flushing of cheeks with some general heat and quickened pulse.

7, 8. Teeth and Mouth.—Toothache, < after eating and from exertion; cannot close teeth at night, jaws feel stiff, sleeps with mouth open.—Toothache > by cold water.—Tongue: smarting; sore, full of vesicles, great thirst and desire to cool the tongue; furred, more towards root, no appetite.—Vesicular ulcers in mouth.

9. Throat.—Palate sore, very sensitive to warm drink or food.—Rawness of upper and back part of palate.

11. Stomach.—Agreeable sensation in stomach soon after taking the drug, followed sometimes by an extraordinary increase of appetite.

12. Abdomen.—Aching pain below r. hypochondrium while writing.—Organic disease of liver with ascites.—Abdominal and renal dropsies in broken-drown constitutions and intemperate subjects.—Ascites.—Scrofulous mesenteric glands.—Worms.

13. Stool and Rectum.—Griping after stool.—Sticking pain in l. side rectum, deep in.—Bloody mucous stools.—Diarrhśa.—Inclination to stool, either ineffectual or attended with great pain.—Obstinate constipation; with hćmorrhoids.

14. Urinary Organs.—Acute prostatitis with dysuria and retention, sensation in perineum as if sitting on a ball.—Constant pain in region of kidneys; urine scanty, dark, fetid, thick, with copious sediment.—Strangury; constant desire to urinate.—Cutting, scalding pain, divided stream; stricture.—Urethritis with purulent or profuse mucous discharge.—Great quantities of thick, ropy, bloody mucus in urine.—Greenish-black urine.—Urine scanty; frequently voided, pressing pain before, burning prickling, scalding and smarting during and after, and vesical tenesmus; < sitting, > walking about.—Albuminuria; hćmaturia, from long-lasting gonorrhśa; clots of coagulated blood pass with urine.—Renal dropsy.

15. Male Sexual Organs.—Smarting from neck of bladder the whole length of urethra to meatus; excessive itching.—Atrophy of testicles.—Sensation as if he had bruised one of testicles.—Sensation of swelling in perineum, as if sitting on a ball.—Gonorrhśa; gleet; syphilis; prostatorrhśa.

16. Female Sexual Organs.—Prolapsus and slight uterine leucorrhśa.—Vaginal prolapsus.—Rapid atrophy of breasts.—Tumours (scirrhous) of breasts.—Painful tumour of breast in young unmarried women.—Undue secretion, or suppression of milk.

20. Neck and Back.—Uncommon sensation in region of kidneys, sometimes one side the spine, sometimes the other, as if something were fluttering within, without pain or uneasiness.

22. Upper Limbs.—Acute rheumatism of shoulder.—Pain in r. arm, about upper half of biceps and shoulder-joint.—Fistulous ulcer on r. forearm, with stinging and crawling.—Paronychia.

23. Lower Limbs.—Opening and shutting pain, slow, pulsating, in middle of anterior part of thigh, leaving a severe aching and tenderness on pressure, whilst lying down.

25. Skin.—Redness, vesication or desquamation.—Eruption of dark red spots without sensation.—Malignant ulcers.—Scarlet fever.

26. Sleep.—Would have slept well, if he had not been constantly waked by calls to make water.

27. Fever.—Hectic fever and night sweats.—Flushing of cheeks with general heat.

China Boliviana.

Cinchona Boliviana (a variety of Cinchona calisaya growing further north). N. O. Rubiaceæ. Tincture of bark.

Clinical.—Aphthæ. Corns. Coryza. Hands, red. Mouth, commissures ulcerated. Pneumonia. Wry-neck.

Characteristics.—*China Bol*. was proved by Modiedo, and the proving is accepted by Hering. It presents the main features of *Chi. off*., but some are peculiar and deserve separate mention. Among these are: Ulceration of commissures of mouth. Cough with dagger-like pains in base of right lung. Rigidity of nape of neck. Hands red; hot; or cold and sticky. There is also sticky sweat about anus.

Flatulence, disturbed and dreamful sleep, and sensitiveness to touch are common to both.

SYMPTOMS.

1. Mind.—Cowardice.—Gloom alternating with serenity.—Alternation of bad and good humour.—Fits of rage, blasphemes.

2. Head.—Vertigo as after a drunken fit, voracious appetite.—Headache in morning on awaking; leaves during the day, or lasts all day and leaves during sleep.

3. Eyes.—Violent pains like a stab in l. eye, followed by itching and tears.

4. Ears.—Detonation as of a cannon in r. ear.—Ringing, humming, whistling sounds.

5. Nose.—Much sneezing on awaking with smell of fresh pus.—Sensation of incipient cold with tight feeling and pain in throat.—Violent cold in head.—Mucus from posterior nares.

6. Face.—Aphthæ on inner surface of lips; ulceration of commissures.

8. Mouth.—Mouth bitter, morning on waking.

9. Throat.—Constriction and burning in throat.

10. Appetite.—Hunger, or lack of appetite; repugnance to meat.—After eating: weight in stomach; cold; sneezing; sleepy and desire to sleep in evening.

11. Stomach.—Much gas rises from stomach.

12. Abdomen.—Pain in both hypochondria and under ribs on waking in the morning.—Pain in splenic region.

13. Anus.—Biting in anus as from worms; excoriated sensation.—Viscous sweat on anus.

15. Male Sexual Organs.—Pollutions exceedingly weakening.—Excoriation on inner and lower part of prepuce.—Gleet and ulceration of prepuce.

17. Respiratory Organs.—Cough with pain in r. lung, as from a dagger buried there; at times makes breathing laborious; burning in eyes; extremities cold.—Unbearable pain in r. lung, extends to region of liver, sensitive to touch.

20. Neck and Back.—Nape of neck rigid, cannot turn head to r.; any sudden movement causes a snap or crack.—Wry-neck.—Pain in: l. shoulder; in l. buttock, and also in r. hip-bone on sitting up in bed.

22. Upper Limbs.—Hands red; vessels distended.—Hands hot, even in cold and rainy weather.—Hands cold, sticky.

23. Lower Limbs.—Legs and feet icy cold, as if blown on by wintry wind.—Painful corns.

26. Sleep.—Dreams: of sea; of fishes; of swimming; of bathing; of journeys by land and sea; of vomiting worms.

China Officinalis.

Cinchona officinalis. Cinchona calisaya. Peruvian bark. N. O. Rubiaceć. Tincture of the dried bark.

Clinical.—*Abscess*. Alcoholism. *Amblyopia. Ańćmia*. Aphthć. Apoplexy *Appetite, disordered*. Asthma. *Back, weakness of. Bilious attack*. Catarrhal affections. Coma. *Constipation*. Cough. *Debility*. Delirium. *Diarrhśa*. Dropsy. Dyspepsia. *Ears, deafness; noises in. Emissions*. Empyćma. *Erysipelas*. Facial neuralgia. Gall-stone colic. Hćmorrhages. Hćmorrhoids. *Headache. Hectic fever. Hip-joint disease*. Ichthyosis. Impotence. Influenza. *Intermittent fever. Jaundice. Labour. Lactation*. Leucorrhśa. *Lienteria. Liver, diseases of*; cirrhosis of. *Menićre's disease. Menstruation, disordered*. Mercury, effects of. *Muscć volitantes. Neuralgia. Peritonitis. Perspiration, excessive. Pleurisy*. Prosopalgia. Psoriasis. *Pylorus, disease of*. Rheumatism. *Self-abuse*. Sleep, disordered. *Spermatorrhśa*. Spleen, affections of. Suffocation, fits of. *Taste, disordered. Tea, effects of. Thirst*. Tinnitus. *Tobacco habit. Traumatic fever*. Tympanitis. Varicose veins. Vertigo.

Characteristics.—*Kina* is the Peruvian name for "bark," and "Kina-Kina" is the "Bark of barks." The story of its introduction into European medical practice is one of the romances of the Healing Art; as the story of its frightful abuse is one of its many tragedies. "According to Humboldt," writes Teste, "about 500,000 lbs. of this bark are annually exported to Europe for the purpose of being converted into sulphate of quinine." Well may Teste add the exclamation, "Poor patients!" As with almost every other good thing that comes into its hands, allopathy has contrived to do an infinity of harm with quinine to make up for the good. Some forms of intermittent fever it will cure, if too much of it is not given; others it will suppress or change from intermittent to continuous. The result of suppression is thus sketched by Hahnemann's master-hand: "True, he [the patient] can no longer

complain that the paroxysms of his original disease occurs any more on regular days and at regular hours; but behold his livid earthy complexion, his bloated countenance, his languishing looks! Behold how difficult it is for him to breathe, see his hard and distended abdomen, the swelling of the hypochondria; see how his stomach is oppressed and pained by everything he eats, how his appetite is diminished, how his taste is altered, how loose his bowels are, and how unnatural and contrary to what they should be; how his sleep is restless, unrefreshing, and full of dreams. Behold him weak, out of humour and prostrated, his sensibility morbidly excited, his intellectual faculties weakened; how much more does he suffer than when he was a prey to his fever!" (*M. M. P.*) The number of patients who have been consigned to an early grave by quinine probably falls short only of the number that mercury can claim. When first introduced it was (as chloral and hundreds of other poisons have been since) declared on the highest authority to be incapable of harm "in whatever dose it may be taken." It is only at the end of the nineteenth century that some allopathists are discovering that it is more deadly than the deadliest West African fevers. Every homśopath knows from experience how true is Hahnemann's picture of quinine effects from the victims of it he has been called upon to treat.

China is placed by Teste in the Ferrum group with *Plumb., Phos., Carb. an., Puls., Zinc*, and others, which "have the property of remaking the altered blood, or increasing for the time being, in a healthy person, the relative amount of hćmatin, globulin, fibrin, &c.," but also, "after a certain lapse of time, they produce opposite results─impoverishment, discoloration, and liquefaction of the blood. From this antagonism arise their characteristic effects: Short-lasting, sanguineous congestions (primary effect), and later, discoloration of tissues; fulness of veins; torpor of all functions; dryness of mucous membranes; mucous or purulent discharges; engorgement of the glands which are immediately connected with the circulatory apparatus, as spleen and liver; passive hćmorrhages; inertia of involuntary muscles (bowels, uterus); śdema, atonic ulcers, &c.; finally, more or less obstinate nervous disorders, from derangement of sympathetic rather than the cerebro-spinal axis." And it is in cases presenting just such phenomena as these, that *China* proves its greatest efficacy, as Hahnemann was the first to point out. The glory of Hahnemann and the interest of homśopathists are inseparably bound up with the history of this drug. It was the first medicine Hahnemann proved; and the one that opened up to his mind the idea of homśopathy. *Cinchona Bark* was to Hahnemann what the falling apple was to Newton, and the swinging lamp to Gallileo. Dissatisfied with the explanations of the action of Bark in curing ague that were current in his time, Hahnemann took the powdered Bark himself, being in health, and lo ! an ague attack ensued. A repetition of the experiment produced the same result. Further experiments revealed that action of Bark which is the opposite of "tonic"─positively debilitating, in fact─already referred to.

It is useful to remember that *Ipecac*. (as well as *Galeum* and *Mitchella*) belongs to the same natural order of plants as *China*, and the relation of the two to intermittent

fever, hćmorrhages, and gasto-enteric disturbances is very similar. *Coffea* also belongs to the *Rubiaceć*, and is nearly allied in many of its nervous symptoms to *China*. The tincture of *China* is antiseptic, destroying amćboid motion and retarding tissue change. It weakens the heart and impairs the circulation, produces congestions and hćmorrhages, anćmia and complete relaxation and collapse. The debility in which *China* is particularly indicated is such as is caused by an excessive drain of animal fluids, as great loss of blood, excessive suppuration, loss of semen; also after prolonged strain of overwork, mental or bodily. A "pumped-out" condition, and the sensitive, irritable state of mind that accompanies such. The typical fever of *China* is the intermittent from marsh miasm, tertian, or quartan in type. Chill and heat without thirst, thirst occurring either before or after chill. The chill is followed by long-lasting heat, generally with desire to uncover; face fiery red, often delirium; profuse and debilitating sweat following. In the apyrexial period the face is a sallow dingy yellow, the spleen is enlarged and painful, the appetite is totally lost; or else there is canine hunger; the feet swell, and as soon as the patient closes his eyes for sleep he sees figures. Hectic fever is also characteristic of the drug. Typhoid and gastric fever. Periodicity is a leading characteristic both in fever and neuralgias. "< Every other day" is characteristic. Nash cured a case of acute rheumatism with *Chi*, on this modality. Hćmorrhages occur from every orifice of the body. Koch and others have attributed the hćmaturia of African intermittents to quinine. There is terrible always < at night. Loss of sight, deafness, ringing in the ears. Great sensitiveness to touch. Even a current of air blowing on the part = great pain (compare *Plumb*.). Everything tastes bitter, even water (everything *except* water, *Acon*.). *Chi*. is suited to persons of thin, dry, bilious constitution; or to leucophlegmatic persons with a disposition to dropsical affections, to catarrhs or diarrhśa; to affections of women. The mental state shows, in addition to the irritability, the following among other symptoms: "Aversion to be looked at." "Pumped out" (*Sil*.), unable to think. Delirium from loss of fluids (as hydrocephaloid). Fixed ideas. There is a desire for suicide: "Intolerable anxiety about 8 p.m. and 2 a.m.; he springs out of bed and wishes to take his own life, but does not go near the window or take a knife (compare *alum*.); with heat of the body without thirst." The sensitiveness accompanies the headache, which is congestive, throbbing, like many hammers hammering on temples, ringing in the ears, < by slightest contact > by hard pressure); by draught of air; by open air. Weak eyes and ringing in ears, such as follows depletion. The nose, ears, and chin are cold, complexion sallow, dingy, yellow. Neuralgia is generally infra-orbital. Thick dirty yellow coating on tongue; bitter taste on waking. Aphthć of weakly people. Canine hunger, especially at night. Hunger after meals with feeling of emptiness. If a meal is late, he is sure to suffer from it. Total loss of appetite. Full feeling after the least food, but belching only > temporarily. After eating, a lump under mid-sternum. After fruit, diarrhśa. Dyspepsia after loss of fluids. Nausea < on sitting up. Stomach so weak it cannot tolerate any food at all. Very sour stomach. The digestion of *Chi*. is slow. *Chi*. is one of the most flatulent of medicines. Guernsey describes it thus: "Uncomfortable distension of abdomen with

a wish to belch up, or a sensation as if the abdomen were packed full, not in the least > by eructation." Gastric troubles of children who are always wanting dainties; irritable on waking, bad taste, white tongue. Tympany coming on early in a case. Spleen aching, sore. Liver swollen, sensitive. Feeling of subcutaneous ulceration. Gall-stone colic; duodenal catarrh; jaundice. Fermentation in bowels, frothy, sour diarrhśa. Yellow, watery, undigested diarrhśa with much flatus and no pain. Diarrhśa of dark, inky fluid; stools frequent at night, only after food during the day. (It is useful in cases where purgatives have been abused if *Nux* fails to cure.) Excessive seminal losses. Menorrhagia; metrorrhagia; post-partum hćmorrhages. Leucorrhśa before period, painful pressure towards groins and anus, fetid or bloody leucorrhśa before period; with contractions in inner parts. The breathing has important characters: Asthma; wheezing; suffocative catarrh and paralysis of lungs in old people. Respiration laboured, loud and stertorous, with puffing, blowing out of cheeks on each expiration. [E. Carleton relates the cure of a case of spasm of the glottis in a middle-aged man. Attacks sudden, 3 a.m., suffocation seemed imminent. At length with one tremendous effort, whilst sitting bent forward, a little air would be forced into the lungs in spite of the epiglottis with a noise audible at a distance. After each succeeding expiration the inspiration would become less difficult. *Chi*. 200 cured. Among this patient's other symptoms were: Unhappy, idea that he is pursued by enemies in business. Scalp sensitive. Humming, throbbing in ears. Thirst for cold water. Saliva found on pillow in morning. Stomach sore to touch. Flesh sore to touch.] The sleep also should be carefully noted, especially the dreams: he cannot get rid of his dreams even after waking; the impression continues. He cannot get wide awake; head remains confused and stupid. *Chi*. corresponds to hectic and to many conditions of the lungs which are attended with hectic. Suppuration of the lungs, especially in drunkards. Weakening night-sweats. Prostration, chilly, wants to be wrapped up but cannot bear the fire. A. Villers cured with *Chi*. 30 a girl, twenty, who had, after a chill, a pain in right hip, < by every movement, and which she could only describe as being like the pain in the legs which occurred before the menses. She was pallid and had had much hard nursing work. The catamenia were scanty and she was weak. Three days after taking *Chi*. the pain was gone, after having persisted for five months. With *Chi*. I removed the dropsy and relieved all the other symptoms of a case of cirrhosis of the liver in a hard drinker. He remained at his work for many months; but in the end his old habits proved too much for him, and he died from an acute illness following a cold. In this connection may be mentioned the effect of the tincture of *China* (*Cinchona rubra* especially) in removing the craving for alcohol in drunkards who wish to reform. Ten to thirty drops two or three times a day is the usual close for this, though where the general symptoms correspond the potencies would probably do better. I have confirmed P. Jousset's recommendation of Chi. Ř in cases of facial erysipelas without vesication. The rheumatism of *Chi*. is characterised by soft swelling, pale red, very tender to touch. C. M. Boger had such a case in second and third metatarso-phalangeal joints of left foot. The patient said: "With my slippers on I am in agony; but if I put on

tight shoes the feet feel pretty comfortable." The *Chi*. symptoms are generally < from lightest touch; Whereas hard pressure >. < Periodically: 1 a.m. to 10 or 12 or 1 p.m. from 8 a.m. to 2 or 3 p.m. Every other day; every fourteen days every night at midnight; during increase of moon; every three months; in autumn. Rest < pains in limbs. Colic > by bending double. Motion > pains in limbs; < vertigo; headache; nausea. Moving eyes < headache. Open air or draught of air <. < During and after stool. > In room or from warm applications. Want to be near a stove; but this < the chill. Neuralgic headache < from anything cold in mouth. Summer = diarrhśa. Sun < headache. Windy, foggy, or wet weather <. Autumn <. After a meal: fulness of stomach. During and after dinner: prosopalgia >. Effects of eating: fish; fruit; bad meat or fish. Effects of drinking: beer; sour wine; new beer; impure water; milk. Drinking < the chill. Warm drinks impede digestion. < From smoking.

Relations.—Botanical, Coffea, Ipec., Galeum, Mitchella. *Antidoted by:* Ferr., Ars., Nat. m., Carb. v., Aran. d., Eup. perf., Ipec., Merc., Nux, Puls., Rhus, Sep., Sul., Ver. *Antidote to:* Ars., Calc., Cham., Coff., Fer., Hell., Iod., Merc., Sul., Ver. Is useful in bad effects of tea-drinking and after abuse of chamomile tea (uterine hćmorrhage). *Compatible:* Calc. phos., Fer. *Incompatible:* After Dig., Selen. *Complementary:* Fer. *Compare:* Ars. (prostration without pain, black stools); Carb. v. (flatulence, diarrhśa, great weakness; Chi. stool is caused by every attempt to eat and drink); Coloc. (beer intoxicates easily); Cedr., Caps., Cupr. acet. (black, thin stools); Pso. (rapid exhaustion following acute diseases; Pso. has despair of recovery); Puls. (bitter taste. < Eating at night. As if food lying in śsophagus); Caust. (Menićre's disease); Salic. ac. (Menićre's disease); Phos. ac. (lientery; seminal emissions; diarrhśa—but this does not exhaust with Phos. ac.); Merc. (chronic salivation); Stram. (black stools); Sul. and Sul. ac. (sensation as if brain were balancing to and fro and striking against skull, occasioning the pains). In aversion to be looked at (Ant. c., Cham., Stram.); < from brandy (Ars., Carb. v., Nux); diarrhśa immediately after eating (Ars., Alo., Lyc., Pod., Staph., Tromb.—Fer. *whilst* eating); hepatitis with great tenderness (Aco., Ars., Lyc., Merc.); hunger after meals with empty feeling (Lauro., Calc.).

Causation.—Fluids, loss of. Onanism. Chill. Anger. Coryza, suppressed. Tea. Alcohol. Mercury.

SYMPTOMS.

1. Mind.—Apathy and moral insensibility.—Hypochondriacal dejection.—Great anxiety.—Disposition too scrupulous.—Disposition to be alone.—Discouragement.—Ill-humour, with disposition to hurt other people's feelings.—Discontent; the patient deems himself unfortunate, and ill-used by the whole world.—Excessive irascibility, with pusillanimity, and inability to bear the least noise.—Disobedience.—Contempt for everything; everything appears insipid.—Slovenliness, with easily provoked tears, or with irritability.—Fear of dogs

and of other animals, esp. at night.—Nervous irritation, with slowness of ideas.—Great abundance of ideas, and of projects, with slow progress of thought (esp. in the evening and at night).—Dread of labour.

2. Head.—Dull confusion of the head, as from prolonged watching.—Sensation of emptiness in head.—Vertigo after losses of fluids; with fainting; ringing in ears; loss of sight; cold surface.—Vertigo on raising the head, esp. in the occiput, as if the head were going to sink backwards.—Vertigo with nausea.—Attacks of headache, with nausea and vomiting.—Headache as from suppressed coryza.—Heaviness in the head with faintness.—Cephalalgia in the forehead, on opening the eye.—Pain, as from a bruise in the brain, with pressive piercing in the crown of the head, aggravated by meditation and conversation.—Pressive headache, esp. at night, with sleeplessness; or by day, and < in the open air.—Acute starting, or pressive pains in the head.—Headache, as if the head were going to burst, with sleeplessness at night; ameliorated in the room, and when opening the eyes.—Shooting pains in the head, with strong pulsations in the temples.—Congestion in the head, with heat and fulness.—Movements and painful throbbings of the brain, compelling movement of the head up and down.—Headache, increased by touch, movement, and walking, also by a current of air, or by walking against the wind.—Headache often attacks only one side.—Sensibility to the touch of the exterior of the head, and even of the roots of the hair.—Headache, as if the hair were torn out, or the scalp were contracted.—Shooting pressure in the frontal protuberances.—Sweat on the scalp.

3. Eyes.—Pressure in the eyes, as from drowsiness.—Pains in the eyes, as from pressure on the margins of the socket.—Pain, as if a grain of sand were introduced into the eye, during movement.—Painful smarting in the eyes.—Inflammation of the eyes, with heat, redness, burning and pressive pains, and aggravation in the evening.—Eyes dull.—Prominent eyes.—Cornea dull, as if there were smoke in the posterior part of the eye.—Yellowish colour of the sclerotica.—Weeping, with tingling on the internal surface of the eyelids.—Weakness of sight, permitting only the outline of proximate objects to be seen.—On reading, confusion of the characters, which appear pale and surrounded by a white edge.—Pupils dilated, and deficient in sensibility.—Blindness, as if from amaurosis.—Sparkling, black, dancing spots, and obscuration before the eyes.—Sensitiveness of the eyes to the bright sunlight.—Photophobia.

4. Ears.—Tearing in the ears, mostly in the external ear.—Intolerance of noise.—Shootings, buzzing, and tinkling in the ears.—Hardness of hearing; humming and roaring in ears.—Ringing in ears, with headache in temples.—Redness and heat of the external ear, and esp. of the lobes.—Eruption in the concha auris.

5. Nose.—Nose hot and red.—Tearing in the dorsum of the nose.—Bleeding of the nose; after blowing it.—Bleeding of the nose and of, the mouth.—Dry coryza, with

toothache and lachrymation.—Coryza, with sneezing.—Suppressed coryza (headache from it).

6. Face.—Heat and redness of the face, esp. of the cheeks and of the lobes of the ears.—Complexion pale, earth-like (face sunken), sometimes of a blackish yellow.—Face dejected, with the eyes sunk and surrounded by a livid circle, and nose pointed.—Face bloated.—Rheumatic pains in the face.—Lips dry, blackish.—Lips cracked.—Swelling of the lips.—Burning, itching pustules on the lips and on the tongue.—Pain and swelling of the sub-maxillary glands.

7. Teeth.—Odontalgia, with starting or drawing pains (in the upper molar teeth), provoked by the open air, or by a current of air.—Dull and distressing pains in carious teeth.—Throbbing toothache > by external warmth.—The toothache manifests itself chiefly after a meal, and at night (< by smoking), and is mitigated by strong pressure, or by closing the teeth; a slight touch aggravates it excessively.—Loose teeth painful only when masticating.—Teeth covered with a black coating.—Swelling of the gums.

8. Mouth.—Dryness of the mouth.—Clammy mouth with insipid watery taste.—Accumulation of mucus in the mouth.—Putrid taste of the mouth.—Tongue cracked, black, or loaded with a yellow or white coating.—Thick, dirty coating of the tongue.—Burning shootings in the tongue.—Burning biting, as from pepper, on the tip of the tongue, succeeded by ptyalism.—Ptyalism (with nausea, from the abuse of mercury).—Painful swelling of the tongue towards the root.—Failure of speech.—Flow of blood from the mouth.

9. Throat.—Dryness of the throat.—Shootings in the throat, esp. on swallowing, provoked by the least current of air.—Swelling of the palate and of the uvula.

10. Appetite.—Sickly, mucous, or watery taste, esp. after drinking.—Aliments appear insipid or too salt.—Sweetish taste in the mouth.—Acid, or bitter taste in the mouth; also of food and drink.—Repugnance to food and drink, with a sensation of fulness.—Sour taste of coffee and of rye-bread.—Bitter taste of beer, and of wheaten bread (beer, tobacco).—The food tastes too salt.—Dislike to butter, beer, and coffee.—Great desire for wine; for acid fruit.—Dislike to water, with desire for beer.—Burning thirst; the patient drinks often, but little at a time.—Bulimy, with sickly taste in the mouth, nausea, and inclination to vomit.—Voracity.—No desire for eating and drinking.—Appetite only while eating, with indifference to all food.—Desire for a variety of food, and confused longing for dainties, without knowing exactly which.—Violent thirst for cold water (drinks but little at a time, but often).—After each draught of liquid, shuddering or shivering, with corrugated skin, shootings in the chest, or colic.—Acid risings, and derangement of the stomach, after drinking milk.—Great weakness of digestion; after the most moderate meal, uneasiness, drowsiness, great fulness in the stomach, and in the inferior part of the abdomen, lassitude and indolence, insipid taste in the mouth,

hypochondriacal humour and headache.—Weakness of digestion; the food is not digested, if taken too late in the day.—Bitter, acid, or tasteless risings, esp. after eating.—Indigestion after a late supper.

11. Stomach.—Risings, esp. after a meal, mostly bitter, acid, or tasteless.—Risings, with taste of food.—Pyrosis, accumulation of water in the mouth, inclination to vomit, and pressure on the stomach after eating the least thing.—Vomiting of acidulated slimy matter, of water and of food.—Vomiting of blood.—Pressure at the stomach and cramp-like pains, esp. after having eaten.—Sensation of excoriation and pressure on the epigastrium, esp. in the morning.

12. Abdomen.—Pains in the hypochondria.—Shooting and pressive pains in the hepatic region, esp. when it is touched.—Hardness and swelling of the liver.—Swelling (inflammation) and hardness of the spleen.—Shootings in the spleen when walking slowly.—Cuttings in the umbilical region, with shuddering.—Pulsations in the pit of the stomach.—Strong pressure, as if from a hard body, and fulness in the abdomen, esp. after a meal.—Fermentation after eating fruit.—Dropsical swelling of the abdomen (meteorism), with asthmatic sufferings and fatiguing cough.—Partial swelling of the abdomen, as from encysted ascites.—Excessive inflation of the abdomen, as from a kind of tympanitis.—Hardness of the abdomen, as from induration of the viscera.—Colic, with insatiable thirst.—Excessively painful colic; cramp-like and constrictive pains in the abdomen.—Inflammation and ulceration of the abdominal viscera.—Pressive shooting colic (under the navel) esp. on walking quickly.—Incarceration of flatus, which escapes neither upwards nor downwards.—Flatulent colic in the depth of the abdomen, with contraction of the intestines, and pressing forward of flatus towards the hypochondria.—Escape of fetid flatus.—Pressure towards the inguinal ring, as if a hernia were about to protrude.

13. Stool and Anus.—Fćces small, and evacuated slowly.—Difficult evacuation of soft fćces, as if from inactivity of the intestines.—Frequent evacuations of the consistence of pap, or frothy.—Putrid or bilious evacuations.—Slimy, watery, yellowish diarrhśa.—Diarrhśa after eating fruit.—Diarrhśa, particularly after meals, at night, involuntary.—Loose evacuations, with excretion of all the undigested food.—Painless diarrhśa, accompanied by great weakness.—Blackish evacuations.—White fćces, sometimes with urine of deep-red colour.—The loose evacuations take place chiefly after a meal or at night.—Involuntary, liquid and yellowish evacuations.—Discharge of mucus from the rectum.—Pressure and shootings in the rectum and the anus.—In the rectum, stitches, also during stool.—Bleeding of the hćmorrhoidal tumours.—Crawling in the anus, as of worms.—Discharge of lumbrici.

14. Urinary Organs.—Frequent and almost ineffectual urging to make water, followed by pressure on the bladder.—Urine: turbid, dark, scanty; white, turbid, with white sediment.—Urine scanty, greenish-yellow, with sediment like

brickdust.—Slow emission of urine, with feeble stream and frequent inclination to urinate.—Wetting the bed.—Hćmaturia.

15. Male Sexual Organs.—Excitement of sexual desire, with lascivious ideas, day and night.—Impotence, with excited lascivious fancy.—Swelling of the testes and of the spermatic cord.—Drawing pains in the testes.—Pollutions frequent, with too ready an emission, followed by great weakness.

16. Female Sexual Organs.—Congestion in the uterus, with fulness and painful bearing-down, esp. when walking.—Constant discharge of clotted blood from the vagina.—Catamenia scanty.—Painful induration of the neck of the matrix.—During the catamenia, startings with cramps in the chest, and in the abdomen, or congestion in the head, with pulsation in the carotid arteries, face puffed, eyes prominent and watery, convulsive movements of the eyelids, and loss of consciousness.—Metrorrhagia, with discharge of black blood; with fainting and convulsions.—Leucorrhśa, even before the catamenia, and sometimes with cramp-like contraction of the uterus, and painful sensation of bearing-down towards the groins and the anus.—Watery and sanguineous flux from the vagina, with clots of blood or of fetid pus; itching and excoriation in the thighs.

17. Respiratory Organs.—Hoarseness, indistinct speech, and low voice when singing, in consequence of mucus difficult to detach from the larynx.—Shootings and scrapings in the larynx.—Sensation of soreness in the larynx and trachea.—Short, dry cough, as if produced by the vapour of sulphur, in the morning, after rising.—Suffocating, nocturnal cough, with pains in the chest and in the shoulder-blades, so as to extort cries.—The cough is < in the evening, or after midnight from laughing; from continued talking; from lying with the head low from slightly touching the larynx; from a draught of air, after awaking; from loss of fluids.—Cough, with difficult expectoration of viscid mucus of a clear colour, painful shocks in the shoulder-blades and vomiting of convulsive cough, sometimes even with inclination to vomit.—Cough, provoked by laughing, drinking, eating, speaking and by breathing deeply, as well as by movement.—Expectoration of whitish mucus, mixed with blackish particles.—Suppuration of the lungs, after hćmoptysis (or frequent venesections) with stitches in the chest, which are < by pressure.—On coughing, expectoration streaked with blood.—Expectoration of purulent matter on coughing.—During the cough pressure on the chest, and pains as of excoriation in the larynx.—Spasm of the glottis.

18. Chest.—Breathing, wheezing, crowing, rattling, tight, oppressed and painful.—Difficult inspiration and quick expiration.—Inclination to take a deep breath.—Difficulty of respiration and great oppression on the chest, with excessive anguish, as if from fulness of the stomach, or as if excited by too long a conversation.—Fits of suffocation from mucus in the larynx, esp. in the evening, and at night on waking.—Respiration difficult, and possible only when lying with

the head very high.—Wheezing and groaning respiration.—Breathing laboured, loud and stertorous, with puffing, blowing out of cheeks.—Respiration short and quick.—Pressure on the chest, sometimes as from a hard body, esp. on the sternum, and after a meal.—Stitches in the chest; diaphragm.—Nightly suffocative cough, with stitches in chest.—Shootings in the chest, on coughing and on breathing.—Cough, with pain in the larynx and sternum.—Stitches in the side; with great heat, pulse strong and hard, and fixedness of look.—Great congestion in the chest, and violent palpitation of the heart.

20. Neck and Back.—Tension in the muscles of the nape, and of the neck.—Pains, as from a bruise, in the back and sacrum, on the least movement.—Pain in the loins at night, when lying on the back.—Pulsative, shooting pains in the back.—Readily excited perspiration, at the back and the nape of the neck, on the least movement.—Pressure between the shoulder-blades, as from a stone.—Tractive and starting tearings in the loins, the back, the shoulder-blades, and the nape of the neck, with pains on moving the parts, provoked by the least movement.

22. Upper Limbs.—Paralytic, starting tearings, in the muscles, and in the bones of the arms, the hands, and the fingers, provoked by the touch.—Tension and weakness in the arms and the hands.—Trembling hands (when writing).—Icy coldness of one hand, while the other is warm.—Extension of the arms, with contraction of the fingers.—Swelling of the dorsum of the l. hand.—Swelling, stiffness, and pains in the joints of the fingers.—Blue coloured nails.

23. Lower Limbs.—Paralytic starting, tearings in the muscles and in the bones of the legs, the thighs, the knees, the feet and the toes, esp. on the parts being touched (rheumatic pains, not worse from motion).—The legs become soon benumbed when seated.—Weakness and want of stability in the coxo-femoral joint, the knees, and the ankle-bones, which yield when walking.—Red and hard swelling of the thigh, painful on being touched.—Arthritic swelling of the knees, and of the feet, with heat, and painful sensibility to the touch.—Hot swelling of r. knee, painful to the touch.—Hard abscess, of a deep-red colour, in the calf of the leg.—Uneasiness in the legs; it is found necessary to move them constantly; to curve them and draw them up.—Swelling of the feet, sometimes with red spots, hardness, tension, and deep-coloured urine.—Soft swelling of the soles.—Paralysis of the feet.

24. Generalities.—Tensive pullings, or starting and shooting tearings, esp. in the large bones of the limbs, with paralytic pains, and weakness of the parts affected.—Tearing rheumatic pains in the limbs, on beginning to walk.—Pains and sufferings provoked or aggravated by touch, at night, or after a meal.—Uneasiness in the parts affected, which obliges the patient to move them.—Sensation of torpor in different parts.—Numbness of the parts which are pressed, on lying down.—Arthritic swelling, which is hard and red in some parts.—Dropsical swelling of some parts, or of the whole body.—Erysipelatous swelling of the whole body.—Great general weakness, with trembling, difficulty in walking, and great

tendency to perspiration during movement and sleep.—More than ordinary vivacity, with fixedness of the eyes.—Convulsive movements of the limbs.—Over-sensitiveness of the nerves (from loss of fluids).—Congestions.—Veins are much enlarged.—Emaciation.—Over-excitability of the whole nervous system.—Aversion to mental and bodily exertion.—Fainting-fits; esp. if resulting from loss of animal fluids.—Attacks, of asphyxia.—Atrophy and emaciation, esp. of the arms and legs.—Great sensibility to a current of air, and sufferings on being exposed to it even slightly.—Heaviness of the whole body.—Spermatorrhśa.—Nasal secretion bloody, mucous.—Affections of the shoulder-blades, bones of the arm; thighs; knee joints.—There may be bleeding from every infernal part of the body; coldness and passive hćmorrhage.—Newly-born children lose much blood during parturition; the mucous membrane looks very bloody if there is only a slight bleeding going on; deficiency of blood; congestion of single parts; distension of blood vessels (Guernsey).—Contraction of inner parts; also dropsy of inner parts.—Induration after inflammation.

25. Skin.—Excessive sensibility of the skin of the whole body.—Yellow colour of the skin (Jaundice).—Skin flabby and dry.—Piercing shootings and beatings in ulcers.—Burning, itching, or gnawing sensation, esp. in the evening in bed, sometimes with eruption of pimples, or prominent spots, as if from the sting of nettles.—Rheumatic, hard, red swellings.—Humid gangrene (of external parts).—Swelling of the limbs.

26. Sleep.—Drowsiness during the day (and after eating), often with palpitation of the heart.—Frequent yawning, with stretching.—Retarded sleep, and sleeplessness, caused by a great influx of ideas.—Confused dreams when falling asleep.—Sleeplessness with pressive pain in the head, or bulimy.—Disturbed, unrefreshing sleep.—Starting with fright, on going to sleep.—On sleeping, the patient lies on the back, with the head turned back, and the arms extended over the head, with slow respiration, and with full and quick pulse.—Groans, snoring, and blowing expiration during sleep, even in children.—Painful, frightful dreams, which continue to produce agitation after waking.—Disordered, senseless dreams, after midnight, with a sort of stupidity on waking.—Dreams of failing from a height.

27. Fever.—Shiverings, with shuddering, or feverish trembling, commonly without thirst.—Cold in the body, with congestion in the head, heat and redness of the face, and forehead hot.—General increase of heat, with veins swollen, without thirst.—After the heat, violent thirst.—Shiverings with headache, nausea, adypsia, vertigo, congestion in the head, paleness of the face, cold in the hands and in the feet, and vomiting of mucus.—Shivering more violent after drinking.—Heat, with dryness of the mouth, and of the lips, which are burning, redness of the face, headache, morbid hunger, delirium, pulse full and quick.—Heat, with prickings here and there, and burning thirst.—Heat, with strong inclination to be uncovered, or shivering as soon as one is uncovered.—Quotidian fever, or every two days, or

tertian, commencing chiefly in the evening or in the afternoon, or in the morning, by shivering with trembling, followed by heat and nocturnal sweat.—Internal violent chill with icy cold hands and feet, and congestion to the head.—In the evening, in bed, he cannot get warm.—Fever, with pressive pain, and congestion in the head, soreness and swelling of the liver and of the spleen, bitter and bilious risings and vomitings, yellowish colour of the skin and of the face, short, convulsive cough, great weakness, pains in the limbs, and painful stitches in the chest.—The attacks of fever are often preceded by sufferings, such as palpitation of the heart, sneezing, anguish, nausea, excessive thirst, bulimy, headache, pressive colic, &c.—Chilliness over the whole body.—The thirst is generally felt only before or after the shiverings, or during the sweat, rarely during the heat (or only desire for cold drink), and scarcely ever during the shiverings.—Pulse small, weak, hard and rapid, less frequent after eating; irregular.—Ready perspiration during sleep, during movement (and from exercise in the open air).—Perspiration very profuse, and very debilitating.—Perspiration on the side on which he lies.—Suppressed perspiration.—Nocturnal debilitating sweats.—Oily sweat in the morning.

Chininum Arsenicosum.

Arsenite of Quinine. (C_{20} H_{24} N_2 O_2) $_3H_3$ As O_4 $_2H_2O$. Trituration or solution.

Clinical.—Angina pectoris. Asthma. Bright's disease. Diarrhœa. Diphtheria. Epilepsy. Gastralgia. Hectic fever. Hemicrania. Intermittent fever. Keratitis. Ophthalmia. Scarlatina. Sore-throat, malignant. Spinal irritation. Syphilis. Tobacco, effects of. Tuberculosis.

Characteristics.—The *Arsenite of Quinine* combines many of the properties of its two components, but having been proved it can be treated as a separate individuality. The periodicity is intensified, and this is especially noted in the neuralgias. An irritable mood precedes the headache, which is < by mental and bodily exercise. The gastralgia of *Chi. ars*. is pressure in solar plexus with tender spine just at back of it. Nausea and vomiting are followed by sleep. Bonino (*H. R*., iv 210), who gave it a prolonged proving, found the symptoms < at rest; in the morning; and when the stomach was empty. They were > by motion (vertigo); and by eating (gastralgia). The chief effects were manifested on the stomach, solar plexus, ligaments and skin. According to him it corresponds to tobacco intoxication and its effects; indigestion from unripe fruits; gastralgia from coarse food or ill-baked bread; chronic rheumatism of joints without swelling; tertiary syphilis of periosteum; colic from incarcerated flatus; intermittent fever with predominating chills, little thirst and continuous almost convulsive yawning; effects of severe and depressing influences on the mind; to convalescence from long-lasting sickness. The circulation was slow, and limbs relaxed. Weakness, prostration, and disinclination for mental exertion were marked in several provers.

Relations.—*Compare:* Apis (diphtheria); Æthusa (sleep after vomiting); Cact. (constricting sensations).

Causation.—Tobacco.

SYMPTOMS.

1. Mind.—Dislike of mental occupation in spite of clear-headed lightness about head and feeling of exhilaration.—Memory impaired.—Anxiety.—Child sits up in bed lamenting.—Irritable mood precedes headache.

2. Head.—Sudden attacks of vertigo, < by looking up.—Severe darting, tortuous pains, running up into head and preventing sleep.—Head full as if it would burst.—On sitting down, head seems to be covered with an iron cap.—Hemicrania (l.) from fright; flickering before l. eye and lachrymation, ringing in ears, pain tearing, boring.—Penetrating pain in region of l. temple.—Dull, heavy headache, frontal and occipital; in cerebellum, < from slightest motion.

3. Eyes.—Intense photophobia and orbicular spasm gushing hot tears, ulcers attacking each eye, < from midnight to 3 a.m. (Keratitis.).—Flickering before l. eye, with pain and lachrymation. (Hemicrania.)

4. Ears.—Ringing in ears like bells; with congestion towards head.—Noise in ears and dulness of hearing.

5. Nose.—Profuse coryza > erect position and out of doors.—Post-nasal catarrh < l. side.—Copious epistaxis.

6. Face.—Trembling of facial muscles, esp. orbicularis palpebrarum (immediately).—Dull pain in l. temporal region at articulation of lower jaw.—Face pale, sallow, bloated.

8. Mouth.—Tongue thickly furred; appetite bad.—Yellow, slimy coating on tongue, with bitter taste.—Fetid breath.—Dryness in roof of mouth, gnawing and nausea.—Metallic bitter taste, without changing taste of victuals.

9. Throat.—Throat feels sore and raw, < coughing and sneezing.—Diphtheria.

11. Stomach.—Appetite gone.—Violent thirst for cold water.—Desire for sweets.—Empty sensation.—Hiccough and belching; followed by urging to stool.—Sudden, indescribable general nausea, with flying heat and waning strength, esp. of lower limbs.—Nausea and vomiting followed by sleep.—Eggs or fish cause painless diarrhœa at once.—Gnawing and nausea as before vomiting as at beginning of tobacco-poisoning.—Pain in stomach as if it had contracted itself round an uneven stone.—Disturbed in night by severe pain in stomach as if it were pressed against spinal column; > by eating, for a few moments; repeated several

mornings.—Contracting gastralgia, as if pushed up; > only for a moment by tasteless eructation.

12. Abdomen.—Pain in epigastrium as from foul stomach.—Pain as from flatus wedged into flexure of colon.—Aching around navel and in ilium.—In evening severe colicky pains > by pressure.

13. Stool and Anus.—Violent urging to stool, evacuated in prolonged rush till bowel empty; stool thin, brown, painless.—Diarrhœa, morning, hardly had time to dress, brown, liquid with jelly-like lumps: pain in l. iliac region, quite severe when walking.—Towards morning, frequent, bad-smelling flatus.—Stool pappy; watery, fetid.—Stool, fecal, with mucus and blood, preceded and followed by tenesmus.—Stool hard, voided with difficulty; aided by pressing finger on coccyx.—Could eat no breakfast, but took some dinner, and immediately thereafter great urging to stool, which was watery and blackish; some pain in hypogastrium.

14. Urinary Organs.—Urine scanty; frequent urging.—Urine increased, urging tiresome.

15. Male Sexual Organs.—A peculiar burning ache about sphincter vesicæ and throughout urethra.

17. Respiratory Organs.—Breathing unsatisfactory, wants more air than he can take into his lungs.—Respiration very free, as if thorax were hollow.—Suffocative attacks beginning in morning and lasting till noon; > sitting bent forward at open window, < every other position.—Senile subacute bronchial catarrh with periodical fever, generally < at night.

18. Chest.—Severe stitching pain, in chest; later in precordia; < on inspiration.—Asthmatic breathing on ascending.—Tightening sensation in mediastinum, in front at l. of breast-bone.—Peculiar pain, dull with pressure, as if caused by flatulence, base of l. chest, coming and going rapidly and frequently repeated.

19. Heart.—Angina pectoris.—Palpitation on leaning against back.—Sensation as if heart had stopped.—Heart began to tremble, with a rumbling noise; I was unable to distinguish the pulsations (lasted one hour).—Slow pulse.—L. intercostal neuralgia as if torn with hot tongs.

20. Back.—Pain in muscles between l. shoulder and neck, as if sprained, on rising from sleep, 4 p.m.—Back feels weak as after a long journey.—Pressure in solar plexus (usually only felt after eating tough meat or hard nuts, of which I had not partaken) extended toward the back, when it changed to a pinching sensation; spine painfully sensitive to touch at this point.

22. Upper Limbs.—Pain in l. wrist, stiffness of l. arm.—Pain of fatigue in r. wrist.—Burning pain as in periosteum of l. elbow.—Annoying feeling of fatigue in r. shoulder, as if humerus were torn out of its socket.—Sore, tired aching in joints, bones and muscles: in l. biceps for some hours.

23. Lower Limbs.—Dull pain in r. temporal region, at articulation of jaw and r. hip.—Pain in r. astragalo-tarsal joint as if bones drawn in opposite directions; > walking.—Pressure on tuberosity of tibia, which is somewhat swollen.—Pain in r. knee as from a fall.—Cramp in calf.—Pains back of r. thigh and in calf.—Numbness of legs after hardly having lain down.—Weakness of lower limbs.

24. Generalities.—In different parts of body burning fluttering beats, as from electricity.—Stiffness of all bones, even while walking.—Burning pains deep in joints.—Burning pains as in periosteum.—Nervous restlessness, unable to remain in the house.—While walking, dizziness and collapse.—Desire to lie down.—Complete relaxation of muscles as from tobacco-poisoning.

25. Skin.—Goose flesh, esp. of lower extremities.—Periodical furuncles, which relieve the head.—Burning, erysipelatous redness and violent itching < by warmth > by cold.

26. Sleep.—Night full of visions; heavy sleep till morning.—Nervous restlessness, anxious dreams.—Sleep frequently interrupted.

27. Fever.—General chill and cold.—After the feverish cough in the chill, no reaction of warmth.—Flying heat with nausea.—Cold, clammy sweat.

Chininum Muriaticum.

Muriate of Quinine. (C_{20} H_{24} N_2O2 HCl $2H_2O$.) Trituration or solution.

Clinical.—Alcoholism. Eye: neuralgia of. Gastritis. Headache. Intermittents. Iritis. Keratitis. Neuralgia. Pannus. Sclerotitis. Tobacco, effects of. Trachoma.

Characteristics.—*Chi. mur*. resembles *Chi. ars*. very closely. An excellent proving by old-school authorities was published in *Virchow's Archiv*., and is translated in *C. D. P*. It has been used in eye affections, especially when accompanied by severe neuralgic intermitting pains in and around eyes, with chills; lachrymation, photophobia, ulceration of cornea of malarial origin. Intermittent fever following broncho-pneumonia; shaking chill 5 a.m. accompanied by fatiguing cough, rattling in bronchi without expectoration. In one prover it caused an exaggerated sensitiveness to alcohol and tobacco. Two glasses of beer make him tipsy.

Prostration and weakness are marked in all provers and accompany the headaches and other symptoms. There is a feeling of enlargement—in eyeballs, in tongue, head symptoms are > after a walk.

Relations.—*Compare:* Chi. sul., Chi. ars., Nat. m. (headaches). *Antidoted by:* Fer. oxid.

SYMPTOMS.

1. Mind.—Exhausted, apathetic, listless.—Anxiety and excitement, with increased heart-beat.—Depressed.—Restlessness increased to anxiety; startled by every step on the stair or knock on the door.—Disinclination to work.—Irritable, depressed.—Weakness and stupidity.

2. Head.—Confused head, pressure, vertigo; < on looking at bright objects.—Great thirst, noise in ears, vertigo on rising.—Headache recurs every morning, esp. severe over l. supra-orbital border.—Slight l. sided headache every morning lasting till noon.—Headache reappeared at same hour, with flashing before eyes.—Feeling of weight about head, extreme drowsiness.—Violent raking pains in head, only slightly > by a walk.—Orbital pain recurred regularly 3 p.m. to 5 p.m.—Numbness and fatigue in head.—Headache > by beer.

3. Eyes.—Conjunctivæ injected, lids adherent; feeling as if eyeball too big for orbit as if sand in eye.—Fatigued by reading.—Eyes feel as if not open enough as if something pinched upper lids down preventing distinct vision; flickering before eyes.—Intense pain in and around eyes, periodic, accompanied by chills.—Lachrymation, photophobia, violent paroxysms of pain daily 5 p.m.—Ulceration of cornea from malaria, or anæmia.—Trachoma, with and without pannus.—Eyelids heavy.—Weight in eyes.

4. Ears.—Noise in ears with dulness of hearing.—Roaring in ears with itching of skin of back.—After dinner, sensation in ears as if stopped with cotton wool.—Shooting pains in r. meatus.

5. Nose.—Epistaxis.

6. Face.—Congestion of blood to head, face red and bloated, as from alcohol.—Neuralgia of fifth pair of nerves; agonising 3 to 6 a.m.; the pains began in teeth, spread over head and ended in nape; increased rapidly in intensity, and were only > by acupuncture and cold water.

8. Mouth.—Rheumatic toothache in sound teeth, < by cold, or cold food.—Pain in teeth recurs, < by closing jaws.—Tongue thickly furred, appetite bad, all food disrelished.—Tongue furred and pale; too large for mouth.—Great fetor from mouth.—Gums sensitive, bleed from least touch.

11. Stomach.—Voracious appetite; completely satisfied by a little piece of bread.—Extremely sensitive to alcohol and tobacco.—Easily made drunk.—Inability to smoke (in a great smoker).—Half a cigar made him feel extremely ill; cold perspiration broke out; inclination to vomit.—Fulness in epigastrium, colicky pains in abdomen, flatulence.—Appetite very bad, inclination to vomit.—Inclination to vomit, > after dinner.—Thirst, satisfied with a very little drink.

13. Stool and Anus.—Diarrhœa three times a day (probably caused by too new beer).—After dinner liquid stool.—Bowels irregular; every other day opened two or three times.—Flatulence, constipation.—At noon, very hard stool, transient cutting in bowels.

14. Urinary Organs.—Frequent urging, but urine not very copious; turbid, deposits sediment.—Constant urging; quantity markedly increased.—No desire to urinate, but forced himself to do so, and passed a litre of dark urine of intensely sour smell.

15. Male Sexual Organs.—Inclination to erections; mucous secretion in urethra.—Strong erections.

17. Respiratory Organs.—Fatiguing cough with rattling in bronchi until exhaustion.

19. Heart.—During dinner transient palpitation.—Severe palpitation after dinner.—Pressure, anxiety, and palpitation in afternoon.

24. Generalities.—Intolerable restlessness; driving him out of the house.—Extensive prostration.—Symptoms recurred at regular periods; returned long after drug was discontinued.

25. Skin.—Itching of skin of chest and back.

26. Sleep.—Sleep disturbed by confused dreams.—Anxious dreams, woke in fright.—Dreams of worms, lice, vermin.—Strange, confused dream, then great fear.—Sleep disturbed by pain in head and teeth.

27. Fever.—Disagreeable chilliness all over body.—About 8 a.m., profuse perspiration of disagreeable sour smell broke out and lasted till 11 a.m.

Chininum Muriaticum.

Muriate of Quinine. (C_{20} H_{24} N_2O2 HCl $2H_2O$.) Trituration or solution.

Clinical.—Alcoholism. Eye: neuralgia of. Gastritis. Headache. Intermittents. Iritis. Keratitis. Neuralgia. Pannus. Sclerotitis. Tobacco, effects of. Trachoma.

Characteristics.—*Chi. mur*. resembles *Chi. ars*. very closely. An excellent proving by old-school authorities was published in *Virchow's Archiv*., and is translated in *C. D. P*. Chininum Sulphuricum.

Sulphate of Quinine. $(C_{20}H_{24}N_2O_2)_2\ H_2SO_4\ 15H_2O$. Trituration.

Clinical.—Angina pectoris. Asthma. *Brow ague*. Cancerous ulcers. Cholera. Delirium. Diarrhœa. Dropsy. Dysmenorrhœa. *Ear affections*. Gangrenous and fetid suppurations. *Gravel*. Hæmaturia. Hæmoglobinuria. Hæmorrhages. *Headache. Intermittent fever. Menière's disease. Neuralgia. Noises in the head*. Parotitis. Pruritus vulvæ. Puerperal convulsions. *Pyæmia*. Rectum, prolapse of. *Remittent fever. Rheumatism*. Scarlatina. Spinal irritation. Spleen, enlarged. *Typhus-fever*. Urticaria. Varicose veins. *Variola*.

Characteristics.—*Sulphuric acid* and *Sulphur* are themselves in the first rank of periodic remedies, and combined with the chief alkaloid of *China* they enhance the powerful periodic properties of that drug. In old-school practice the Sulphate of Quinine has almost entirely taken the place of the crude Bark as a remedy. *Chin. sul*. closely resembles *China* in its effects, but as it has been proved separately, and as observations of the effects of over-dosing have supplied many additional symptoms, the homœopathist has plenty of guidance in the selection of one in preference to the other. *Chi. sul*. is even more powerful as an antiseptic than *China*, and it is probable that it is in virtue of its property of antagonising the malarial poison that it *suppresses* intermittent fever when it does not cure. It only cures when the fever corresponds to its own type. When a fever is "suppressed" there is generally air unholy alliance between disease-force and drug-force, which is expended on some part of the organism, resulting at times in lifelong ill-health. The "Quinine cachexia" is well known—sallow complexion, emaciation, deafness and singing in the ears, enlarged spleen, disposition to shiver, and great debility. Periodicity is extremely well marked, the attacks returning at the same hour each day. In intermittents the onset may anticipate. Skin flaccid and sensitive to touch. Red rash over whole body, with severe stinging, followed by desquamation. Other prominent symptoms are: Headache extending from occiput to forehead. Whirling in the head like a mill-wheel. Twitching of left eyelid, < in the evening. Aphthæ in weakly people. Tartar on teeth. Hunger at night. Prolapse of rectum, especially in children. Hæmaturia and hæmoglobinuria. ("Black-water fever" has been developed through administering *Chi. sul*. in intermittents. Koch deserves much credit for showing that the worst features of African fevers are due to over-dosing

with Quinine and not to the disease). E W. Sawyer (*Med. Advance*, 1887) relates this instructive history: He learned from his cook that her brother (æt. 16) could not take a particle of Quinine without causing a profuse flow of blood with the urine, sometimes within half an hour, always without pain. This had followed every time his doctors had tried to "break his ague" with Quinine. A year later a farmer's wife, æt. 60, came to Dr. Sawyer to be treated for bloody urine unattended with pain or uneasiness. She attributed it to strain from walking two miles on a slippery road. She had been for months under Hygienist treatment without benefit, and was alarmingly weak from loss of blood. *Rhus* 200, *Ham*. 1x, *Erig*. 1x, *Chi*. 1x, *Fer. mur*. 2x were given in succession in vain. At last, calling to mind the case of the youth, he gave *Chi. sul*. in 1 / 16 gr. doses three times a day, and a prompt cure was effected. *Chi. sul*. causes painfulness and swelling of varicose veins during a chill. (Julius E. Schmitt cured a case on this last indication.) Great sensitiveness to external influences. All discharges debilitating. Weak and nervous; a little exercise = sweat from least exertion. Head gradually breaks into sweat when perfectly quiet. *Chi. sul*. is one of the medicines which have the "sinking sensation." Tyrrell had a patient in whom in any potency it caused her to become "deathly sick and faint, thought she would die, could not raise her head, *felt she would sink through the bed*." *Sacch. alb*. produced in her the same symptoms, and she accused the doctor of having given her Quinine. (*Arsen*. has "sinking sensation," "as if bed had gone from under her and she had alighted on the floor." *Bell., Dulc., Rhus, Lach*., have "sinking through the bed.") Palpitation. Touch <; pressure >. Wants to lie down. Motion = chilliness. Stooping = giddiness. Bending forward >. Sleeplessness and over-stimulation of nervous system.

Relations.—See China. *It is antidoted by:* Arn., Ars., Carb. v., Ferrum, Hep., Lach., and especially Nat. mur., which antidotes effects of over-dosing with Quinine; Puls. *Compare:* Cinchon sul., Apis. (chill 3 p.m.); Ars. (pyæmia, spinal irritation, periodically returning neuralgias); Bry. (sweat from least exertion); Carb. an. (all discharges debilitating); Eup. perf. (sweat relieves all symptoms but headache); Nux (blue lips and nails with chill); Puls. (rheumatic erratic pains); Stann. (supra-orbital neuralgia); Staph. (head gradually breaks into sweat while perfectly quiet). In headache from before backward (Gels., Lac. c., Sang., Sil.).

SYMPTOMS.

1. Mind.—Fits of anxiety; great anguish, sometimes in the morning while in bed, obliging the patient to get up sooner than he would otherwise wish, or soon after midnight, with cries, and a necessity for getting up.—Great moral depression; speechless melancholy; discouragement; inclination to weep and to despair.—Moroseness and ill-humour, with yawning and extreme dislike to labour.—Great indolence with lassitude.—Excitement like that which follows taking coffee, or wine.—Great liveliness.—Feeble apprehension; with weakness which induces falling, great heat of the skin, dryness of the mouth and of the throat, and constipation.—Inability to pronounce substantives, and slowness of reflection.

2. Head.—Sensation of emptiness in the head, with heat in the face, thirst, or tinkling in the ears; head confused, with humming in the interior, with a feeling of intoxication and dulness, stupor with cephalalgia in l. side of the forehead; a sort of furor in the head, almost preventing walking, with loss of power to guide the limbs.—Delirium.—Great exaltation, with a kind of dementia.—Vertigo: on stooping; whirling, as if the head were failing backwards, aggravated by motion; least felt when lying down; as if intoxicated, with buzzing in the ear, heat of the skin and accelerated pulse; with cephalalgia and giddiness.—Cephalalgia, esp. in the evening, or else on walking in the sunshine, with lassitude, yawning, drowsiness, and moroseness.—Dull pain, with deafness, anguish, sweating, trembling of the limbs, and slowness of pulse, on l. side esp., with pulsation of the temporal arteries.—Great bodily excitement, paleness of face, violent thirst, nausea, weakness of the feet, and general perspiration in l. temple, with necessity for lying down, and amelioration on pressing the head against cold things.—Frontal cephalalgia: in the morning on awaking; esp. in the evening; in the afternoon, with heaviness of the head, and heat in the face; with tingling in the ears, and general heat; or else on the l. side, with vertigo, increase of appetite, thirst, nausea, flatulency, and great lassitude.—Aching of the head, in the occiput, on awaking in the night, and disappearing on getting up; in the forehead and orbits, < on turning the head or the eyes, from morning till evening, with heat in the forehead.—Expansive pain, esp. in the temporal region, < by motion and in the open air, as well as at night, with disturbed sleep.—Pulsation in the head.—Bubbling towards the head in the evening, esp. with pulsation of the arteries.—Pain as though the head were bursting.—Heat in the face.—Vertigo, tinkling, and buzzing in the ears.—Hardness of hearing.—Sparks before the eyes.—Pulse quickened and rapid.—Sleep disturbed and full of dreams, and escape of wind above and below.—Sensitiveness of the scalp.

3. Eyes.—Sensibility of the eyes, with lachrymation.—Sight dimmed as by a fog, with dryness of the eyes.—Sparks before the eyes, black spots; sometimes only one side of an object is seen.—Obscuration of the sight, esp. when looking fixedly at an object.—Transient amaurosis.

4. Ears.—Tinkling in the ears.—Buzzing, esp. in l. ear, sometimes occasioning deafness on that side.—Hardness of hearing, sometimes with violent headache.

5. Nose.—Frequent bleeding at the nose.—Frequent sneezing.

6. Face.—Pale colour, sickly look, air of suffering, with sunken eyes.—Earth-coloured face.—The white of the eyes discoloured and eyes dull.—Complexion icteric.—Redness of the face, sometimes with heat round the eyes, and lachrymation on looking at the light.—Heat of the face, esp. in the evening, also after taking coffee.—Bluish-coloured lips.—Eruption on the upper lip.

8. Mouth.—Dryness, with heat, thirst, flesh-like smell in the mouth, and sensation of constriction in the œsophagus, of the mouth and gullet, with constipation and weakness of intellect.—Great paleness of the buccal cavity.—Erosion of the gums, and of the wall of the buccal cavity, with violent pain and gangrenous crusts.—Accumulation of mucus in the mouth, with nocturnal angina, augmented secretion of saliva.—Salivation.—Tongue coated with white mucus.—Yellow mucus at the posterior part.—Thick coating of a yellowish white.—Yellowish coating, esp. at the root, or else with dryness of tongue.

9. Throat.—Pains in the throat: in swallowing, in the morning on getting up; in swallowing, and on moving the neck, violent in the morning.—Tickling in the gullet and the larynx.—Scraping in the throat, sometimes with dartings, or else with hoarseness (afternoon).—Sensation of dryness in the pit of the throat, with a feeling as though a foreign body were lodged there.—Burning in the throat, accumulation of viscid mucus in the throat, sometimes, esp. at night, awakening the patient and exciting coughing.

10. Appetite and Taste.—Taste: bitter, sometimes with a clean tongue; clammy, sickly; earthy; empyreumatic.—Bread appears bitter.—Want of appetite, sometimes for many days.—Indifference for food and drink.—Want of appetite, with increased hunger.—Great appetite, with disagreeable taste of food; also with much thirst (sometimes chiefly in the evening).—Hunger with faintness, as from fasting, with good appetite, or want of appetite.—Great hunger, sometimes after a full meal, succeeded by insipidity of taste, and nausea.—Hunger after supper, accompanied by nausea.—Bulimy, sometimes at night.

11. Stomach.—Risings: after a meal, with pressure in the abdomen and stomach, and oppression of the chest; empty, sometimes with nausea.—Bitter hiccough and retching.—Nausea with risings (empty or bitter).—Movement in the abdomen, and emission of wind, after a meal, with violent risings.—Disgust, with headache.—Disgust before a meal, with nausea, vomiting, cephalalgia, sleeplessness, nocturnal bulimy, diminished appetite, and tongue loaded, yellowish, dry, after a meal, with vomiting and increased bitterness in the mouth.—Nausea, with inclination to vomit.—Vomiting: during an intermittent fever, with pressure on the stomach; with disgust, pyrosis, sensation of constriction in the stomach, and swelling of the abdomen, which remains many days; insipid vomiting in the afternoon.—Fulness in the stomach, and tension of the abdomen.—Pressure on the stomach: with retching, borborygmi in the abdomen, and liquid stools; after every kind of food, even the lightest, causing restlessness at night; in the pit of the stomach, with diminution of appetite.—Cardialgia (cramp in the stomach), sometimes with inclination to vomit.—Pulling pain in the œsophagus, borborygmi in the abdomen, and emission of wind.—Sensation of heat in the pit of the stomach, and the precordial region, extending to the duodenum, with empty risings.—Heat in the stomach, throughout the cardiac region, and extending to the abdomen and chest.

12. Abdomen.—In the hypochondria, tension, aching in the precordial region.—In the hepatic region, pains sometimes increasing towards evening; aching relieved by pressure; sensation as of subcutaneous ulceration, swelling.—In the region of the spleen: dull pain, dissipated by pressure; aching pain, tightness which compels the loosening of the clothes (sometimes in the two hypochondria); lancinations, swelling, with darting pains while walking, and on pressure.—Swelling and hardness of the splenic and hepatic regions, with lacinations, esp. on breathing deeply, sneezing, &c.—Pains in the superior part of the abdomen, from the stomach to the umbilical region, aggravated by pressure.—Violent colic.—Colic in the morning near the region of the stomach.—Tearing pains in the abdomen, with frequent, small, irritable pulse.—Cutting pains in the abdomen, without evacuation in the superior part of the abdomen, sometimes with great lassitude, in the superior part of the abdomen and umbilical region; sometimes in the evening with flatus, and movement in the abdomen, with loose, fetid stools, like pap, and emission of fetid wind, sometimes chiefly in the morning, on rising.—Inflation of the abdomen, sometimes with tension, risings, and emission of wind.—Tension of the abdomen, with pain on pressing upon it; sometimes, esp. in the evening, with incarceration of flatus, or else with emission of fetid wind.—Flatulent colic, meteoric swelling.—Movements in the abdomen, as if caused by diarrhœa, with emission of wind.—Great movement in the precordial region, with inflation of the abdomen.—Borborygmi in the abdomen; emission of wind.—Protracted inflammation of the mucous membrane of the intestines.—Intestinal phthisis, with nausea, retching, want of appetite.—Abdomen tense.—Continuous aching in the umbilical region.—Constipation.—Emaciation.—Hectic fever and alienation of mind.

13. Stool and Anus.—Obstinate constipation, with great heat of the skin.—Falling in the street, momentarily, alternating with frequent stools.—Stools white and pap-like.—Stools hard, insufficient, indolent, sometimes in small fragments.—Stools soft, difficult to eject, sometimes with urgent want to evacuate, or else with a sensation as of something passing up from the hand to the shoulder.—Urgent inclination to evacuate, sometimes fruitless, or else with cutting pains, followed by an evacuation.—Evacuation copious, soft, sometimes with borborygmi in the abdomen, and abundant emission of wind; pap-like, loose, with cuttings, sometimes with abundant emission of wind, or else (in the morning after getting up) with fetid stools.—Many stools during the day.—Diarrhœa, sometimes with drawing and incisive pains in the small intestines.—Involuntary diarrhœic stools.—At the anus, sensation of heat, extending to the other intestines.—Increase of hæmorrhoidal phenomena, itching at the rectum, and tenesmus; flowing of arterial blood from the anus; bloody flux by the rectum.

14. Urinary Organs.—Pressing inclination to urinate, with copious emission of urine like water.—Increased secretion and emission of urine; saturated, deposits crystals; like whey; pale, clear, with urgency to urinate, preceded by inflation of the abdomen, with difficulty of respiration.—In dropsical cases, copious, saturated,

cloudy; or else with a very strong smell.—Diminution of urine, which is sometimes saturated, and with crystallisations.—Urine turbid, red, or else with a strong urine-like smell, readily becoming turbid, with mucous flocks, sediment clay-coloured and fatty; decomposing readily, with sediment of yellow sand and crystals.—Like water, sometimes crystallising.—Frothy urine, with a fine yellowish-white sediment, on taking cold.—Sediment yellowish-white, of a strong odour, clay-coloured, from urine clear as water; reddish yellow, in copious urinations.—Brick-dust sediment.—Gravel.—Crystals in the urine, which is copious; clear as water; with clay-coloured sediment, precipitated in urine as clear as water; with sediment of a reddish yellow, and urine more copious; in urine saturated, and more scanty.—Contractive smarting at the orifice of the urethra, after passing water in the evening.—Profuse hæmorrhage.—Hæmaturia and hæmoglobinuria.

15. Male Sexual Organs.—Suppression or diminution of sexual desire.—Forcing pain in the direction of the groins.

16. Female Sexual Organs.—Premature catamenia.—During the catamenia, violent shocks and squeezing in the abdomen, extending upwards from the umbilical region to the chest, with forcing pain in the direction of the groins.—Flow of blood from the vagina, with great heat and turgid condition of that part, following leucorrhœa during menstruation.

17. Respiratory Organs.—Hoarseness every afternoon (4 o'clock), with constriction, or else swelling which closes the throat.—Irritation which provokes coughing.—Tickling at bifurcation of trachea.—Cough caused by a small painful spot in the throat.—Irritation in the throat, which provokes coughing, sometimes with difficulty of expectoration.—Violent cough, during the day, or else at night, difficult to loosen, both in the day and night.—Dry cough.—Loose cough.—On coughing, expectoration of gelatinous mucus.

18. Chest.—Respiration short and difficult, on taking much exercise.—Oppression of the chest.—Respiration laboured, with swelling of the abdomen, disappearing quickly after making water.—Fits of nocturna! suffocation towards midnight, with swelling of the throat, which is almost closed.—Respiration difficult, rumbling, panting.—Calm sleep after the fit, and tendency of the symptoms to be reproduced by a prolonged cough.—Pains in the chest, on the r. side, all the morning.—Pain across the chest.—Pressure on the l. side of the chest, painful, esp. on breathing deeply, and on throwing the arms back; mitigated on leaning upon the arm, and bending the body forward.—Sensation as of being grasped by the hand behind the sternum.—Lancinations in the chest, in the direction of the heart, immediately after a meal; in the l. side of the chest, preventing a deep inspiration; which seem endeavouring to pass out of the chest, esp. on lying or sitting down, disappearing while walking or standing upright; in the r. side of the chest, extending upwards towards the shoulder, cutting short the breath, mitigated by bending forward.—Lancinating pains above the sternum, on breathing deeply, and moving

quickly.—Palpitations of the heart.—At the exterior of the chest, pricking dartings on the skin (sometimes of the back and thighs, at night) in walking in the open air, followed by perspiration on the chest and back.

20. Neck and Back.—At the neck, pains on both sides of the lateral muscles, extending to the larynx, with sensibility to pressure.—Indolent swelling in the neck.—Painful sensitiveness of the dorsal vertebræ to pressure, in lying down, esp. during the shivering stage of fever.

22. Upper Limbs.—In the arm, after every stool, as if drops glided from the hand to the arm-pit.—Paralysis of the superior extremities; cracking of the shoulder-joint; tearings and shootings in the hand.

23. Lower Limbs.—Paralysis of the inferior extremities; tearings in the legs.—Painful sensitiveness in the malleoli, and trembling of the limbs.—Œdematous swelling of the feet.

24. Generalities.—It acts primarily on the nutritive system, afterwards on the other parts; affects chiefly the intestinal canal, then the brain, the genital and urinary organs, and finally the extremities and the skin.—Aching pains.—Darting and incisive pains.—Pulsative, tensive, burning, and expansive pains.—Tractive or jerking tearings.—Cracking of the joints.—Tearing pains, esp. in the legs.—Jerkings in the limbs, drawing pains in the hands, the feet, the forehead, &c.—Increase of symptoms every second day, or else every day at the same hour.—Every second day, there occur (amongst other symptoms) traction in the forehead, with anorexia, and stools of the consistence of pap; frontal pain at night, or rather in the afternoon, with heat, thirst, and perspiration.—Nervous crises; over-excitement of the nerves, with anxiety, lassitude, and even hysterical symptoms.—Spasms in the limbs; convulsions in the l. side, with vomiting of bile; diarrhœa, congestion in the head, and very severe cephalalgia.—Paralysis, at first of one side, afterwards general.—Lassitude, with continual yawning, attended by incapacity for, and extreme dislike to labour; and trembling of the limbs.—Great weakness and shattered condition of the system.—Wasting of the body, also with hectic fever, anorexia, constipation.—Abdomen tense, pressure in the umbilical region, nausea, vomiting, and dementia.—Falling away of flesh, and dropsy.—Trembling of the limbs, esp. of the feet, with painful affection of the malleoli.—Trembling, with general coldness.

25. Skin.—Skin flaccid, or very sensitive to the touch.—Red rash over whole body with severe stinging, followed by desquamation.—Gangrenous inflammations; livid redness of the skin, with formation of a gelatinous membrane, or of scabs, on the surface.—Formation of a thick scurf, livid and humid, which becomes black and dry; now red and moist at the edges of the scabs, afterwards yellowish and softened.—Urticaria ab ingestis.

26. Sleep.—Frequent yawning, esp. at night, or with stretching, shivering, oppression.—Arm as though bruised.—Pain in the back and tenderness to the touch of the cervical and dorsal vertebræ.—Drowsiness during the day.—Sleep profound and unrefreshing, agitated, with debilitating sweats, tossings, and extravagant dreams.—At night, in bed, much heat, with great thirst, headache and tinkling in the ears.—Sleeplessness, sometimes with copious sweat, also with dry heat, pricking in the skin, and sweat on the face.

27. Fever.—Coldness of the limbs, sometimes with trembling.—Sensation of coldness with internal tremblings, paleness of the face, urgent inclination to urinate, with paleness of the urine in the evening.—Shiverings, even in a warm temperature.—Shivering in the afternoon, with heat in the face and urine, which deposits crystals.—Shivering and trembling in the evening, with accelerated rapid pulse, dryness of the mouth, thirst, disturbed sleep, and brick-coloured deposit in the urine.—Febrile attacks, with vertigo, dizziness, frontal pain, bitter taste of bread, nausea, vomiting, diarrhœa, colic, violent shivering, much heat, yawning, sneezing, and copious sweat; violent attacks with trembling and shivering, copious sweats, hæmorrhage, and pains in the left hypochondrium.—Attacks of one hour in duration, characterised by pallor, shivering and shuddering, with lips and nails of a bluish colour, and pulse spasmodic and small; afterwards general heat and redness of the face, pulse more marked (than before) and thirst, ending with a gentle perspiration.—During the shiverings, paleness of the face, cephalalgia, tinkling in the ears, thirst, increased appetite, difficult and painful evacuations, with great mental dejection; painful swelling of varices.—External heat, with dryness of the mouth and the gullet, obstinate constipation, and tendency to fall while walking in the street; also with perspiration on the chest, redness of the face, convulsive movements of the muscles, and rapidity of pulse.—Heat, which gives place to perspiration, chiefly in the evening.—Pulse: slow, esp. in the afternoon, or while the attack continues; full or small, but yielding and slow; frequent, like palpitations of the heart; quickened, esp. in the morning, or an hour after dinner (*i.e.*, after dinner taken at noon, as the custom is in Germany, where this medicament was tested).—Sweat easily provoked, viscid, running down the chest, with speedy exhaustion after every exertion.—Sweat over the whole body, with general shivering (esp. at the back).

Chionanthus Virginica.

Fringe Tree. Oleaceć, The bark, which is the part employed, contains Saponin. Tincture.

Clinical.—Constipation. Debility. Emaciation with liver-disorder. Gall-stone colic. Headache. Jaundice. Liver, disease of; hypertrophy of. Malaria. Neurasthenia. Nursing women, complaints of.

Characteristics.—*Chion*. acts powerfully on the liver and is indicated in hypertrophy; obstructed liver in malarious districts. The following are the leading indications: Enormous liver, constipation, clay-coloured stool, jaundice, and high-coloured urine. Liver region sore. Chronic jaundice. Jaundice recurring every summer. Sensation of contraction of stomach as if something alive moving in it; with uneasy sensation in liver and spleen. Rheumatic pains in left ankle and tarsal bone. A proving of *Chionanth*. was made by Dr. John Z. Lawshe, and was communicated, with additions, to the *Southern Journal of Homśopathy* by H. C. Morrow. *Chion*. is suited to so-called bilious temperaments. One observer (*H. Recorder*, xii. 369), who gave *Chio*. to a nursing woman who had liver disorder with jaundiced tint, noticed that whilst rapid improvement of the liver symptoms occurred, at the same time the milk disappeared and the menses returned. The medicine was stopped and *Sabal. serr*. given and the milk returned. Six weeks later *Chio*. was again given and identically the same result took place. "jaundice with arrest of menses" should be a strong indication.

Sherbino cured a case of neurasthenia in a clergyman who complained of: Perspiration all summer. Weakness in arms and legs. Prostrated after preaching mind: ran on sermon and kept him awake. Stupid, drowsy all the time appetite poor; all food gave distress.

Relations.—*Compare:* Bry., Chi., Carduus m., Euonymus, Chel., Merc., Pod. In bilious vomiting, Bry., Eup. perf., Iris., Nux; in green frothy stools, Elat., Grat., Kali bi., Mag. c., Iris., Merc. v; in weakness, bruised and sore feelings, Arn., Bap., Bry., Eup. perf., Gels., Nux, Rhus; in headache, Bell., Bry., Caps., Gels., Nux; sensation of something alive, Croc. s., Thuj.

SYMPTOMS.

1. Mind.—Feels "played out" generally.—No desire to do anything; wants to be let alone.—Hypochondriacal, inclined to look on the dark side.

2. Head.—Very severe headache, chiefly in forehead and just over the eyes, esp. the l.—Feels sore and bruised all over and through the head (after severe symptoms had subsided).—Heavy, dull feeling in forehead.—Sore constricting feeling in the temples, with throbbing of the temporal arteries.—Head feels sore and bruised; bruised feeling seems to go some way into the brain.—Every time he moves, coughs or laughs head seems as if it would split open and fly in every direction.—Drawing and pressing at root of nose with headache.—Woke up many times with pains in head, abdomen, and back.—Headache < by motion, coughing, laughing or walking; < after sleep; > by lying down, keeping quiet and pressure.—Forehead very hot and dry; seems like a hot coal of fire to prover's hand, during fever.—Forehead becomes hotter from pressure of hand, although it > headache.—Head feels very sore and bruised all over.—Perspiration on head

during fever, while asleep.—Cold perspiration standing in beads on forehead, after vomiting and during stool.

3. Eyes.—Eyeballs exceedingly painful; feel sore and bruised.—From outer to inner canthus, a reddish-yellow streak about 1/4 inch wide in whites of eyes.—Blood-vessels of sclerotic very much enlarged and distinctly visible.—Whites of eyes have a yellowish cast all over.—Whites of eyes greenish-yellow.

5. Nose.—Drawing or pressing at root of nose during headache.—Pressing or squeezing sensation in bridge of nose.

6. Face.—Face has a yellowish appearance.—Skin of face as yellow as a mulatto's.—Perspiration on face during fever, while asleep.

8. Mouth.—Tongue heavily coated, of a dirty greenish-yellow colour.—Very heavily coated in the centre with a thick yellowish fur.—Tip of tongue slightly red.—On each side of tip several little places that look as if the blood were about to ooze from them.—Tongue feels drawn and shrivelled up in centre.—Tongue and roof of mouth feel very dry, though usual quantity of saliva.

10. Appetite.—Complete loss of appetite.—Tried to eat, but food nauseated.—Eating and drinking relieved empty, weak feeling in stomach to some extent.—Eructations, nausea, and vomiting; "never before felt so sick at my stomach."

11. Stomach.—Bitter eructations.—Eructations, tasting as if food were fermenting in stomach.—Eructations so bitter and sour that I had to hold my mouth open to permit their escape.—Hot, bitter, sour eructations, setting teeth on edge.—Great nausea and retching with desire for stool.—Very violent attack of nausea and a great deal of retching before he could vomit.—Vomiting of very dark green, ropy, and exceedingly bitter bile with a single gush.—Eructations, nausea, and vomiting.—Sensation of a double action in stomach while vomiting, one trying to force something up, and the other sucked it back.—Vomiting followed by cold sweat, standing in beads on the forehead, and by extreme weakness.—Sensation of contractions in the stomach, as if some living thing was moving in it.—Stomach feels weak and empty, somewhat relieved by eating.—Sensation in stomach as if food were fermenting.—At 3 p.m. sensation like spasms or palpitation of the heart in the stomach.

12. Abdomen.—Cutting and twisting pains all through the abdomen, somewhat relieved by lying on it.—Cutting and griping pains in and about umbilical region.—Dull, sore, aching feeling in umbilical and iliac regions.—Severe griping in umbilical and iliac regions, relieved by emission of flatus.—Passage of offensive flatus during the day, but more after retiring at night.—Uneasiness in r. hypochondrium, extending to l. iliac region.—Uneasy sensation in region of

sigmoid flexure, as if caused by flatulence.—Uneasy sensations in region of spleen and liver.—Griping and cutting pains in abdomen about and below umbilicus during stool.—Heavy, all gone sort of feeling low down in hypogastrium.—Pains in abdomen after 5 p.m., and all night.—Sensation like a string tied in a slipknot around intestines in umbilical region; and every once in a while as if it was suddenly drawn tight, and then gradually loosened.—Abdominal pains somewhat > by lying on stomach and abdomen.—Nausea and vomiting of pregnancy.—Uneasy sore feeling in region of r. hypochondrium.—Hypertrophy of liver.—Obstruction of liver in malarious districts.—Enormous liver, constipation, stools clay-coloured, skin very yellow, urine very dark, almost black.—Soreness in region of liver, quick, weak pulse, stools undigested and showing entire absence of bile, urine almost black.—Chronic cases of jaundice.—Jaundice recurring every summer.—Bilious colic.—Gall-stone colic.

13. Stool and Anus.—Constipation, stools clay-coloured.—Stools undigested and showing an absence of bile.—Diarrhśa.—First part of stool watery, but last more solid in appearance, 10.30 a.m.—Stool copious, watery, dark brown, 8.50 p.m.—Stools terribly offensive, like carrion.—Stool copious, watery, dark brown, with pieces of undigested food in it.—Stool thin, watery, blackish-brown and very offensive.—Stool flakey, thin, watery; flakey portion dark yellow; fluid portion dark green, with light green foam or froth on top, streaked with a white mucous-looking substance.—Emission of flatus during stool.—Hot, scalding sensation in anus during stool, which continued fifteen or twenty minutes after stool.—Took quite a while to pass the stool and then there was only a small quantity passed.—Evacuation at bedtime of black tarry-looking fćces.—Desire for stool passed off after vomiting.—Cold perspiration broke out on forehead and back of hands during stool.

14. Urinary Organs.—Urine, orange yellow colour; reddish.—Urine almost black, thick, syrupy.

19. Heart.—Pulse markedly smaller and weaker.—Quick, weak pulse.—Radial pulse 114, fever.—Carotid and temporal arteries pulsate hard and rapidly.

20. Back.—Sore, weak, bruised feeling all over small of back.—Sore and weak in sacral and lumbar region, could scarcely walk.—Small of back exceedingly weak, and feels when touched as though the skin was all off.—Pain from seventh to tenth dorsal vertebra, on waking.

22. Upper Limbs.—Cold perspiration on back of hands during stool.—Rheumatic pain in articulations of l. thumb.

23. Lower Limbs.—Rheumatic pain in l. ankle and tarsal bones.—Sore, aching, tired feeling in lower limbs.

24. Generalities.—< Motion and walking; > sitting or lying down.—Abdominal symptoms > lying on abdomen.—Every step seemed to jar the whole body.—Exceedingly nervous, cannot lie still.—Feels very tired and sore.—Involuntary jerking in various parts of the body.—Feels very sick and weak all over on waking at 8 a.m.; had to sit down before he could dress.—Weak feeling, < standing or walking about, > sitting or lying down.—So nervous he can scarcely keep still, and can scarcely write down his symptoms, 9 a.m.

25. Skin.—Yellow all over body.—Jaundice of years' standing recurring annually.—Jaundice caused by drinking too much cider; cured in three days.

26. Sleep.—Could not go to sleep before midnight.—Nervous and restless after going to bed, woke up many times before daylight.—Woke many times with pains in head, abdomen, and back.—Feels very badly and sick all over on waking in the morning.—Sleepy during the day, could hardly keep awake.—Perspiration on head and face during sleep.—Great emaciation.

27. Fever.—Chill at 12 noon.—Chilly sensations darting through body from front to back, causing a sort of shivering or involuntary jerking.—Aching in back or limbs before and during fever.—Head feels like a ball of fire to prover's hand; cheeks very hot and dry.—Wants to be covered during chill and fever; becomes chilly if clothing is removed during fever.—No thirst during chill or fever.—Slept during the fever; profuse perspiration on head and face while asleep during fever.—Throbbing of temporal and carotid arteries during fever.—Headache and backache during fever; eyeballs very sore.

Chloralum.

Hydrate of Chloral. C_2 HCl_3 OH_2O. Solution; trituration.

Clinical.—Anæmia. Angina pectoris. Apoplexy. Asthma. Bedsores. Bronchitis. Chorea. Conjunctivitis. Dropsy. Dysmenia. Enuresis. Erysipelas. Hæmorrhagic diathesis. Heart, hypertrophy of; paralysis of. Hydrophobia. Keratitis. Labour, abnormal. Leucorrhœa. Night-terrors. Palpitation. Ptosis. Puerperal convulsions. Purpura. Urticaria.

Characteristics.—Introduced as a hypnotic, *Chloral* soon showed that it possessed wide powers of disturbing the organism, and many persons (including the late Professor Tyndall) have been fatally poisoned by overdosing. The brain, eyes, urinary and sexual organs and skin are most affected. W. S. Gee cured with it a terrific headache of several days' duration: dull, heavy aching in forehead; coming on each morning 8 a.m.; < sudden motion; < lying down; > in, open air. The 6th gave great relief though it aggravated at first, the aggravation occurring ten

minutes after each dose. One dose of the 25x cured permanently. A person under the influence of *Chloral* hears voices, sees visions of arches, &c., when in the dark or when the eyes are shut. Night-terrors in children have been cured with it. The brain tissue is probably congested in the same way as the skin in the urticaria of the drug. Urticaria gives a good illustration of the effect of the drug on the minute tissues. The brain is congested; hard, full, pressing pains in head. Eyes injected; the eyeballs feel too large; lids swollen, heavy, can hardly lift them. Asthma and wheezing respirations are probably due to an urticarious condition of the lung tissue. A symptom that is very significant is this: When lying on back, inspiration was through the nose, while expiration was blown from the lips as in apoplexy. The heart's action is increased, with oppression. Palpitation, hypertrophy. Later there is paralysis of heart. Heart dilated or weakened, with peculiar fulness and lightness of chest and sense of emptiness in stomach. The sense of sinking and oppression at the pit of the stomach is marked and shows a profound action on the solar plexus. The insomnia for which *Chloral* is suited is that due to over-fatigue. Snoring in sleep. Lying down <. Wants fanning; open air >. < Night and evening.

Relations.—*Antidoted by:* Ammon., Atrop., Digit. (heart), Moschus, Electricity. *Compare:* Bell., Chlorof., Chi., and Opium in stertorous breathing and puffing out cheeks; Gels., Nux.; in urticaria, Astac.

SYMPTOMS.

1. Mind.—Comatose for days, ending in cerebral congestion.—Melancholia, idiocy, and insanity.—Constantly hears voices.—Hurried and excited, walking up and down the room conversing with imaginary beings.

2. Head.—Hard, full pressing pains in head, long-lasting.—Dull, heavy headache in occiput and forehead over eyes; < moving about and lying down, slightly > by going into open air.—Headache in forehead, extending to occiput.—Headache over eyes running down into eyes; < l. side; eyes feel constricted.

3. Eyes.—Retinal hyperæsthesia.—Dim sight.—Eyelids feel too large.—Burning in eyes and lids.—Conjunctiva injected; great pain.—Ulcer on cornea; phlyctenæ; catarrhal ophthalmia: intense itching of inner canthi and edges of lids.

14. Urinary Organs.—Enuresis, passes water in bed copiously without knowing it.

16. Female Sexual Organs.—Pruritus during pregnancy.—Chorea during pregnancy.—Tedious labour; nervous, irritable, hysterical; pains apparently forcible have no effect.—Puerperal convulsions.

17. Respiratory Organs.—Gasping breathing and confusion of thought.—Dyspnœa and suffocation, pressure at base of chest in front, urgent thirst.—Slow respiration;

imperceptible pulse.—When lying on back, inspiration through nose, expiration blown from lips as in apoplexy.

19. Heart.—Increased action with dyspnœa.—Violent palpitation; hypertrophy with dilatation.—Angina pectoris.—Threatened paralysis.

21. Limbs.—Foul-smelling foot-sweat.

24. Generalities.—Anæmia and emaciation.—Coagulability of blood destroyed; hæmorrhagic diathesis.—Bedsores.—Muscular prostration and somnolence.

25. Skin.—Violent stinging-itching over whole body.—Diffuse inflammatory redness like scarlatina.—Urticaria, coming out at night, disappearing by day.—Wheals come on suddenly from a chill; so long as she remains in the warmth is not troubled with them.—Purpura hæmorrhagica.—Desquamation in patches.—Bedsores.—Dropsy.

26. Sleep.—Insomnia from over-fatigue.—Night-terrors, esp. in teething children.

27. Fever.—Sensation of heat all over body, particularly on face.

Chlorum.

Chlorine, the element. Cl. Solution.

Clinical.—Aphthæ. *Asthma*. Catarrh. Chlorosis. Cold. Convulsions. Croup. Dentition. Diphtheria. Gastritis. Hæmoptysis. Impotence. Laryngismus. Phthisis. Pleurisy. Sore-throat. Typhus. Ulcers.

Characteristics.—*Chlorum* has been proved in the form of "Chlorine water, and has been tested clinically. It produces spasms and convulsions, coryza and catarrh. Laryngeal spasm is especially pronounced; the chief difficulty is in *exhaling*, can *draw in* the air well enough. Convulsive attacks on cutting eye-teeth. Mouth inflamed; ulcerated. Rapid emaciation. Acute rheumatic pains. Excessive sensitiveness of skin. Nettlerash, with fever. Cutis anserina. Skin dry, yellow, shrivelled. Malignant pustule and carbuncle. Typhoid state. The mental state is noteworthy. Fears he will go crazy; that he won't be able to make a living. Cannot remember names of people he sees, or if he sees the names cannot remember the person. E. Z. Bacon has recorded (*Med. Visitor*, Dec., 1893) two cases of chlorine poisoning. The first was in a boy of five, who, after passing through diphtheria to apparent complete recovery, was suddenly seized with symptoms of croup: loss of voice, crowing inspiration, prolonged expiration; incessant dry cough; great restlessness, high fever, profuse perspiration. The symptoms were < lying on a

lounge by the fire; > when lying in his mother's lap, and still more relieved by being carried about. During the previous illness Platt's chlorides had been placed in the room as a disinfectant, and it occurred to the doctor that chlorine vapour is much heavier than air. He himself lay down on the lounge, and in a few minutes felt the irritating vapour, and began to cough and hack. This soon passed away on sitting up. The removal of the chlorides had a remarkable effect on the child; cough and respiration were greatly relieved. But the relief came too late, as the cause was not discovered for several days, during which time the patient had become steadily weaker, and he died the same afternoon. The other case was that of an old lady who suffered from chronic bronchitis, and on January 2, 1892, developed an attack of laryngitis. In three days she was well; but the two subsequent weeks, on exactly the same day, a fresh attack occurred. The fact was, as the doctor discovered, his patient went to the back room, where chlorides were kept, every Monday to wash a few things she did not care to send to the laundry. The chlorides were banished, and though the washing was continued there were no more attacks of laryngitis. Dr. Bacon adds, that since giving up the use of disinfectants, other than plenty of fresh air, he has never had laryngeal complications in scarlatina or diphtheria, though his neighbours have had plenty. Whitman recommends chlorine water as an efficient palliative in a fit of asthma. He begins with 10 drops, then in five minutes 20 more, and then in another five minutes, half-a-teaspoonful, always in a little water. It greatly facilitates expectoration. In typhus fever Goullon, senior, recommends chlorine water, five drops every two or three hours until the tongue is dry. I have had excellent results from the 12th and 30th in nasal catarrh, and in breathlessness remaining after acute bronchitis. The symptoms are < from midnight to 7 a.m. (spasm of glottis). Lying down < nasal complaints. Inclination to lie down, with headache. Restless; < walking up and down. Sitting with sun shining on back = shuddering. Open air > chest affections; = running of tears. Damp air = loss of voice.

Relations.—*Compare: Mephitis* (inability to exhale); closely resembles Bromine, and, less closely, Iodine. Nat. mur. (sore-mouth); and other chlorides. It is an *antidote to:* Hydrocyanic acid and Sulphuretted hydrogen. *It is antidoted by:* Sulphuretted hydrogen, Albumen, Lycopod. (impotence); Plumb acet. (blood-spitting and pleurisy). *it follows well:* Phos.

SYMPTOMS.

1. Mind.—Apprehension.—Irritability, inclined to anger.—Forgets names and persons.—Effects of excitement.—Coma, fainting with cold, viscous sweats.

2. Head.—Painful aching in vertex and down l. side, with inclination to lie down.—Warm sweat breaks out on forehead while coughing.

3. Eyes.—Running of tears < in open air.—Suddenly numerous fantastic images appeared before the eyes, disappearing with lightning-like rapidity.

5. Nose.—Coryza with headache.—Sneezing, violent; in morning.—Dryness in nose.—Nose smoky or sooty.—Corrosive feeling in corners of nose.—Sudden running in drops of sharp corroding fluid, with tears in eyes, dry tongue, palate, and fauces.—Thin coryza, soon changing to yellow, copious mucus.—Loss of smell.

6. Face.—Face swollen, with protruding eyes.—Face pale, often greenish.—Heightened colour.

7. Teeth.—Sensation as if teeth were too full; as if injured by acids.—Teeth black.

8. Mouth.—Tongue black.—Tongue as if burnt.—Mouth dry.—Very acid saliva.—Aphthæ.—Putrid odour from mouth.

9. Throat.—Dry.—Sore from uvula to bronchi.—Choking sensation; inability to swallow.

11. Stomach.—Acid stomach and other gastric troubles (in workmen exposed to fumes of chlorine, and who eat chalk for it).—Desire to vomit when coughing, without nausea.

13. Stool.—Diarrhœa: in the morning; with dry mouth, after the eruption appears in typhus.—Stools of bright blood.—Hæmorrhage in typhus, blood black, coagulated, or thin, smelling like carrion.

15. Male Sexual Organs.—Sudden impotence and aversion to sexual intercourse.

17. Respiratory Organs.—Aphonia from damp air.—Great difficulty in articulating or breathing.—Spasms of glottis; air enters easily, but cannot be expelled.—Feeling as if rima glottidis were stiff, as if composed of an iron ring.—Sudden tightness of chest.—Expiration easy, inspiration a little difficult and accompanied by râles (this is less characteristic than the opposite).—Any attempt to cough = spasm of the glottis.—Desire to cough from tickling and sensation of rawness behind thyroid cartilage, but the cough is abortive, as he cannot expel the air from the chest.—A continuous little dry cough.—At each cough a spot in chest (region of r. bronchus) feels sore, as if the cough jarred and hurt it.—Phlegm raised with difficulty; soon collects again.—Cough with spitting of blood; with pleuritic pains.—Sensation of warmth in respiratory organs.—Sensation in lower and inner third of r. lung as if it were ruptured and as if air escaped from lung into pleural cavity at each inspiration.

19. Heart.—Heart's action much increased.—Râles frequent.

27. Fever.—Chilliness and crawls; 10 a.m. to 2 p.m.—Burning, dry heat, with anxiety and raving.—Genial glow all over, with night-sweat.—Cold sweat.—Viscous sweat.—Typhus.

Cholesterinum.

Cholesterine. C_{26} H_{44} O. Trituration.

Clinical.—Gall-stones. Jaundice. Liver, cancer of; diseases of. Vitreous, opacities of.

Characteristics.—*Cholesterine* is a substance crystallising in leaflets with a mother-of-pearl lustre and a fatty feel. It is soluble in alcohol and ether. It occurs in the blood and brain, yolk of eggs, seeds and buds of plants, but most abundantly in the bile and biliary calculi. Ameke, who did much to introduce the proximate principles of the tissues as remedies, anticipating the practice now so much in vogue in the old school, recommended *Cholesterine* as a remedy in cancer of the liver. Burnett has recently adduced conclusive evidence in support of the correctness of this assertion; and I have myself cured, mainly with this, a case described to me (I did not see the patient, a man over 50) as in the last stage of liver disease. He had been given up by his medical attendant, who ordered him to make his will without delay. Burnett uses the 3x or the 3 trit. and substantial doses. He commends it in "obstinate hepatic engorgements, which by reason of their obstinacy make one think interrogatively of cancer," also in "cases in which there appears to be a semi-malignant affection, involving the left lobe of the liver and what lies between it and the pylorus and the pancreas." In such cases Burnett gives alternately *Cholest*. 3x and *Iodoform* 3x. It has been used with success in the removal of opacities of the vitreous.

Chromicum Acidum.

Chromic acid. Anhydrous chromic acid. Chromic anhydride. Cr O_3. Solution.

with

Chromium Oxidatum.

Chromium sesquioxide. Chromic oxide. Cr_2 O_3. Trituration.

Clinical.—Angina pectoris. Brain, inflammation of. Cough. Diarrhśa. Eyes, affections of; pains in. Gangrene. Gout. Hćmorrhoids. Lumbago. Lupus. Phthisis laryngea. Ranula. Rheumatism. Stiff-neck. Syphilis. Throat, sore. Toothache. Trismus. Ulcers. Warts.

Characteristics.—The symptoms of these two substances are nearly identical, and may be taken together as Hering has taken them. Symptoms of the Acid are distinguished by (A.) after each; those of the Sesquioxide by (S.). Symptoms common to both are unmarked. *Chromic acid* is a powerful antiseptic, and has been used for disinfecting purposes, to arrest fetid discharge, and correct fetid odours. "Foul smelling, sanious lochia" is an indication. Allopaths have used it in

10 per cent. solution for checking excessive foot-sweat—a very dangerous practice, but to homśopaths it may suggest a possible internal use. It causes, in strong solution, inflammation and destruction of epithelium and mucous membranes; a false membrane; gangrene. On the skin it has been used to destroy warts. Cutting pains in eyes. Cough, hard, sometimes deep; swallows sputa. Vomits breakfast. Symptoms appear and disappear suddenly and return periodically.
(The *suddenness* of many of the symptoms is very marked.) Disagreeable pricking and itching here and there, with uneasiness in limbs. On turning to right side, pain in left side goes off (S.). Pains suddenly shifting to various parts of trunk, on waking (S.). Sensation of a vacuum at heart; of emptiness in chest. The rheumatic symptoms are well-marked, and I have frequently obtained good results in rheumatic cases with both preparations. The symptoms are < least draught of air (A.); and by cold water (A). < Night and early morning, 2 to 6 a.m. Pain < left side.

Relations.—Both should be studied along with Kali bichrom. *Antidotes:* Daphne indica has cured the rheumatic pains. Merc. cor. in small doses has counteracted the general effects in workmen. The restlessness and relief from motion suggest Rhus.

SYMPTOMS.

1, 2. Mind and Head.—Confusion for two days; memory so bad he did not know how to make several letters of the alphabet (S.).—At 10 a.m., whilst walking, lightness in head which inclined him continually to r. side (A.).—Pain extends into anterior portion of brain from r. eyeball and from aching teeth (A.).—Shooting pain l. temple (S.).—Fulness in head, with lightness at heart, as if a vacuum there; giddiness going down stairs (A.).—Pulsative, throbbing sensation from region of heart to l. eye or l. side of head; general fulness of fore part of head, with occasional slight pains in l. hypochondrium (A.).—Heavy pain along coronal suture (A.).

3. Eyes.—Dull pain over l. eye, as if headache would set in (A.).—Cutting pains across l. eyeball at night in bed; with flow of tears in morning in bed; smarting and heaviness in lids in evening (S.).—Sudden momentary jerk in both eyeballs (S.).—Itching and smarting round eyes, esp. in inner canthi (S.).—Dull, pressive pain over r. eye on waking in morning.

4. Ears.—Occasionally sensation in r. ear, as if water was in it; it appears and disappears suddenly (A.).—Sudden jerking pain in l. ear, and a cold feeling in a small spot in meatus (S.).—Pain from toothache extends into ear (A.).

5. Nose.—Fetid, musty smell in posterior nares, chiefly perceived during expiration, after breakfast and dinner (A.).—Ozćna.

6. Face.—Face rose-red; during coughing spells (A.).—Quivering of lower lip.

7. Teeth.—Toothache; pain extending into ear; with restlessness; teeth feel too long; < from cold water; in sudden attack; < night (A.).

8. Mouth.—Metallic taste in mouth before dinner (S.).—Prickling in tongue (S.).

9. Throat.—Tough, white phlegm in throat, with hawking < mornings (A.).

11. Stomach.—Unusual hunger in middle of day (S.).—While eating, sensation as if expelled air smelled putrid (A.).—Vomiting of food, bile, and blood (A.).—Sudden inclination to vomit in morning, while dressing, with flow of water in mouth and dull pressure in stomach (S.).—Quick walking about > nausea (A.).

12. Abdomen.—Pressive pain r. hypochondrium in morning on waking (S.).—Abdominal symptoms > after rising in the morning.—Wakes early morning (4 to 5 a.m.), sick feeling in abdomen, which is tender to touch, esp. along colon; restless; sharp pains in hypogastrium along colon; > profuse diarrhśa (A.).—Flatulence and rumbling in abdomen (S.).—In evening, disagreeable, violent pain, like flatulence, r. side, from lumbar region down to cćcum, caused by any movement of trunk or deep inspiration; not felt in sitting or lying still (S.).

13. Stool and Anus.—Fulness about rectum, and difficult evacuation of a soft, scanty stool (S.).—After tea, sudden pressing desire for stool; scanty, thin, lumpy evacuation (S.).—Small stool of mucus and knotty fćces (A.).—Fulness and slight shooting pains about anus, morning (S.).—Watery diarrhśa, with nausea and dizziness (A.).—Blind piles, with costiveness (A.).—Copious discharge of hćmorrhoidal blood; with weakness in back (A.).—External piles disappeared, became internal and bleeding (A.).

17. Respiratory Organs.—Consumption of larynx, with very red face during attacks of coughing.—(Śdema of glottis.).—Cough hard, sometimes deep, swallows sputa, vomits breakfast (A.).—Pains over whole upper l. chest, with deep cough (A.).

18. Chest.—In the night, severe boring pain in l. side of chest below axilla, about the fourth rib, not < by motion or respiration, > turning on r. side (S.).—Deep-seated pain in back of l. chest and corresponding place in front, with a feeling on deep inspiration as if rest of lung could not expand and was painful (S.).

19. Heart.—Angina, waking at night, pains much, short hacking and retching (A.).—In evening, in bed, pain in region of heart, a fine drawing, nervous pain, at times reaching through chest to shoulder and neck; on lying on heart, a sort of clucking, painful sensation on deep inspiration (S.).—Fixed pressive pain at apex of heart (S.).—Pain under apex of heart awoke him (S.).—Suddenly, a violent stitch in region of heart; pain disappears gradually after several minutes (A.).

20. Neck and Back.—Turning head to left and backward was impossible (A.).—Cold sensation on back of neck, 10 a.m. (A.).—Heavy pains in muscles of neck and shoulders, and various parts of trunk, soon went off, and were only slightly felt in back during day (S.).—Pains in l. shoulder and shoulder-blade; with sensitiveness of all muscles attached to scapula; pain extends to occiput; later, moved to pelvis; lumbar region sensitive (A.).—Dull pain at inner angle of l. scapula in evening, and at inferior angles of both in morning (S.).—Rheumatic pains in r. shoulder and various parts of back (S.).—Superficial burning pains about middle dorsal spine (with sudden jerking pains in l. ear, and cold feeling in small spot in meatus).—Lumbar pain, most painful morning in bed (S.).—Shooting pain from small of back into l. hip-bone.

21. Limbs.—Uneasiness, stiffness and dull pain in muscles in morning; chiefly in shoulder-blades and back of neck, also between shoulders and in hips; coming occasionally during day till evening (A.).

22. Upper Limbs.—Itching in armpits at night (S.).—Transitory pains in either elbow; in morning.

23. Lower Limbs.—Pain in upper thigh-bone, extending to l. hip-joint (A.).—Pains in knee.—Knee-joints weak and knocking.—Pains in balls of feet.

Chromium Kali Sulphuratum.

Chrome Alum. Potassic-Chromic Sulphate ($Cr_2K_2S_4O_{16}$, $_{24}H_2O$).

Clinical.—Catarrh. Hay asthma. Hay fever.

Characteristics.—*Cr. k. s.* was introduced into homœopathic practice some years ago by Dr. Mersch, of Brussels, and in my experience it is by far the most valuable remedy for hay fever that we possess. I use it on Dr. Mersch's indications in the 6x trituration and downwards. Because it sometimes succeeds in the 3x, and even the 1x, when higher numbers fail. I generally give eight grains of the 5x to begin with, three or four times a day. There is no proving that I am acquainted with, but it can be used on general indications for coughs and catarrhs which its constituents will readily suggest.

Relations.—*Compare:* Cep., Psor., Sabad., Naphthal., Sang. Ka. bi.

Chrysophanicum Acidum.

Chrysophanic acid. (CH_3 C_{14} H_5 $(OH)_2$ O_2). (An organic acid obtained from rhubarb and some lichens. A constituent of "Goa powder.")

Clinical.—Ophthalmia. *Psoriasis*. Ringworm.

Characteristics.—Tried as a local application in the form of ointment in bad cases of psoriasis on one limb *Chry. ac*. has caused the disappearance of the eruption on the other limb as well, showing a constitutional action. It has been used with some success in the lower triturations internally in psoriasis, ringworm, and other skin affections, also as a local application in ringworm. It is a powerful irritant of the skin and mucous membranes. Given internally in crude form it has caused nausea, vomiting, and purging. E. W. Beebe, of Milwaukee, relates the effect on a professional friend, troubled with blepharitis, who applied to his eyelid a one-in-ten ointment made with vaseline. The effect was immediate: marked conjunctival inflammation of globe and lid, contraction of pupils, intense photophobia, the least ray of light producing great pain, increased by a throbbing sensation synchronous with the pulse. This was accompanied with phosphorescent flashes of light. On forcing eyes to look at objects, retinal impressions remained some time after closing them. Swelling of lids and irritation of skin around. After lasting a week there was marked improvement, and a second, milder application completed the cure. Beebe regards the condition set up as one of "Retinal asthenopia," or, as Graafe called it, "optical hyperæsthesia." *Physostigma* and *Pilocarpin* are its analogues. A. B. Norton has used it successfully, internally and externally, in blepharitis, conjunctivitis and keratitis of the phlyctenular variety; also in eczema behind ears. G. C. McDermott confirms this. Used locally (gr. iv. to gr. viii. with vaseline one ounce) or internally, or both, it is a magnificent remedy in eye and ear cases where a filthy, scabby condition exists, and a tendency to form thick crusts. Cases in which the whole ear and surrounding tissue appeared to be one great scab from the centre of which oozed the pus which came from a suppurative otitis media cleared up in two or three weeks under internal and external use of *Chry. ac*.; also cases where a similar condition of eyelids and skin of face obtained. I have often seen a ringworm disappear rapidly from a few applications of the ointment.

Cichorium.

Cichorium intybus. Chicory. Endive. N. O. Compositæ. Tincture or trituration of dried root.

Clinical.—Amblyopia. Constipation. Headache.

Characteristics.—Chicory is the well-known salad, the root of which is used for mixing with coffee. It has been proved, and the following symptoms have been observed: General heaviness. Headache. Weight at stomach and great indisposition to bodily and mental exertion. Want of energy. Bowels relaxed. When taken in infusion like coffee, it acts as a gentle aperient. A chicory-roaster observed that he "could not read at night, not from any external irritation of the eyes, but from a feeling of deadness in them."

Cicuta Maculata.

Cicuta maculata. Water Hemlock. Spotted Cow-bane. Beaver-poison. N. O. Umbelliferæ. Tincture of root gathered in summer.

Clinical.—Epilepsy. Tetanus.

Characteristics.—The effects of the *C. maculata* are very like those of the *Virosa*, the most prominent symptom being: Falls unconscious, tetanic or clonic convulsions. Body covered with sweat. For comparisons see *Cic. v*.

SYMPTOMS.

1. Mind.—Fell on their way, and were picked up unconscious.

2. Head.—Dizziness.—Head hot.

3. Eyes.—Astonishing mobility of eyeballs and eyelids with widely dilated pupils.

6. Face.—Face bloated like that of a drowned person, deathly pale.—Face livid, even purple.—Jaws rigid.

8. Mouth.—Bloody foam from nose and mouth.

9. Throat.—Spasm of muscles of deglutition on presenting anything to mouth.

11. Stomach.—Nausea and vomiting; frothy, glairy fluid.

12, 13. Abdomen and Stool.—Pain in bowels; ineffectual desire for Stool.

20, 21. Back and Limbs.—Falls backward in convulsions.—Every muscle in the body in powerful clonic spasm.—Body and extremities cold.

26. Sleep.—During intervals of vomiting lay in deep sleep.

27. Fever.—Head hot.—Profuse sweat over whole body.

Cicuta Virosa.

Cow-bane. Water Hemlock. N. O. Umbelliferć. Tincture of fresh root gathered at time of flowering.

Clinical.—Bladder, paralysis of. *Cancer. Catalepsy*. Cerebro-spinal meningitis. *Coccygodynia*. Concussions. Convulsions. *Eczema. Epilepsy*. Epithelioma. Eyes, inflammation of. *Face, eruption on. Hiccough*. Hysteria. *Impetigo. Meningitis. Myelitis. Numbness*. Śsophagus, stricture of. Paralysis. *Psoriasis*. Puerperal convulsions. *Screaming*. Strabismus. Stuttering. Tetanus. Trismus. *Waking, weeping on*. Worm complaints.

Characteristics.—*Cicuta v*. is one of the most active of the poisonous Umbelliferć. Its chief influence is excited on the medulla oblongata, the gastro-intestinal tract, and the skin. Twitching and spasmodic jerks are a keynote of *Cicuta*. "Bending the head backward" is very characteristic. The remedy has cured many cases of cerebro-spinal meningitis, the opisthotonos being the leading indication. Violence is a leading feature: violent spasms; moans and howls; great agitation; makes gesticulations; odd motions; strange desires, as to eat coal. "Head turned or twisted to one side" is no less indicative of the drug in convulsions of children or adults. (See cases referred to below.) It corresponds to falls and the effects of concussions. Utter prostration follows the convulsive attacks; sudden rigidity, then jerks and violent distortions; then prostration. "jerking of the left arm all day" is a very characteristic symptom. Tremor when touched. Trembling palpitation. Convergent strabismus; from fall or blow. Soporous sleep, weeps on being roused, distorts facial muscles and stares vacantly. Pupils dilated. Shocks from head down body. Face bluish. Froths at mouth. Jaws locked. Bites tongue. Hiccough. Hungry immediately after a meal. Tearing, jerking in coccyx. *Cicuta* has a marked action on the skin: eruption of pustules which run together with yellowish honey-coloured scabs, especially about mouth, and matting the whiskers. Nash cured eczema capitis in a young woman with *Cic. v*.—whole scalp was covered as with a solid cap. Epithelioma, growths covered with honey-coloured scabs. Suited to old people and children. Teste places *Cicuta* in the *Sulphur* group. He regards it as antipsoric, and considers that as its eruptions are mostly found in the head and face, so its symptoms, when repercussion of skin eruptions occur, are chiefly felt in the brain. *Bovista* and *Ćthusa* are like *Cic. v*. in this. Teste mentions the case of a lady of fifty-eight who ceased to menstruate at thirty in consequence of a fright, and who was "of robust constitution, irritable, nervous, and excessively fanciful and odd." She had a chronic swelling of the left ovary. *Cic. v*. had a remarkably quieting effect for several weeks, and during that time the swelling diminished considerably. The patient had to leave Paris, so the treatment could not be followed up. The two following cases illustrate the action of *Cicuta* in a striking way. The first, a case of acute meningitis, is quoted from *N. A. J. H*. by *Amer. Hom*. of January 1, 1898: Dr. H. von Musits treated J. N. R., ćt. 43; male; married; a user of

alcohol and tobacco; bookkeeper. After the intense summer heat, these symptoms developed: Convulsion; distortion of limbs; head turned backward. Trismus. Froth from mouth. Biting of the tongue. Oppression of breathing. Entire loss of consciousness and of power of swallowing. Convulsions, followed by complete exhaustion. Stupor. Swelling of face. Inability to move the tongue. The whole body seems to be of enormous size. The patient had three attacks of convulsions during twenty-four hours, followed by the swelling of the tongue and body. Extreme trembling of the hands. Articulation difficult. Next day profuse watery diarrhśa stools < by any noise, sudden entrance of any person into the room or loud talking. > By rest and in a dark room. Several times previously he had had symptoms of nervous exhaustion. His brother, a physician, died the previous spring from paresis in consequence of excessive use of alcohol and drugging. After two doses of *Cicuta vir*. 200 there were no more convulsions and the patient was perfectly cured in two weeks. There was no relapse. The next case, one of cholera, is quoted from the *Indian Hom. Rev*. by *Amer. Hom*., December 15, 1896. Banerjee records the case: "A lad, aged five years, had an attack of cholera three days before my visit. Had been treated by a homśopath from beginning of attack. The patient was suffering from convulsions, when I first saw him on the fourth day. The convulsive fits were very severe since the third day of the attack of cholera. The symptoms were: eyes half turned, head drawn toward the left side, and the hands and feet of the same side were contracted. He was given *Bell., Hyos., Cina*, and *Bryonia* without effect. *Cicuta virosa* was then given. The first dose mitigated the severity of the fits, the second dose put the child to sleep, and thus he was saved from imminent death." The chief Conditions are: < From concussions, especially of brain and spine; from turning the head; from slightest touch (renews the spasms); from cold. > From warmth. Immediately after eating: bellyache and sleepiness. Immediately after commencing to eat: feels satisfied. Soon after a meal-great hunger.

Relations.—*Antidoted by:* Arn., Op. for massive doses, Tobacco. *Antidote to:* Opium. *Compatible after:* Lach; after Ars. and Con. (cancer of lip); Cupr. (aphasia ill chorea). *Compare:* Con., Ćthus, Śnanth. croc.; Hyperic. (spinal concussion); Hyo. (twitchings); Helleb; Hydrocy. ac. (body thrown back, cramps in neck); Nux and Strychnia (tetanus; but with Nux there is not the utter prostration and great oppression of breathing of *Cic*., nor the loss of consciousness; Nux is less epileptiform and has more excitability).

SYMPTOMS.

1. Mind.—Strange desires, as desire to eat coal, &c.—Anxiety, and great tendency to be deeply affected by mournful stories.—Groans, complaints, and howling.—Discontent and ill-humour.—Suspicion and mistrust, with misanthropy.—Disposition to be frightened.—Mania, with dancing, laughing, and ridiculous gestures; with heat of the body and longing for wine.—Forgets his own name.—Dementia.—Giddiness and absence of mind.—He confounds the present

with the past.—He thinks himself a young child.—Want of confidence in and dread of man, retires into solitude.

2. Head.—Vertigo, and staggering, to the extent of falling.—Giddiness, with falling forward.—Whirling vertigo on rising in the bed, with obscuration of sight.—Feeling as of intoxication.—Headache above the orbits.—Congestion of the brain with vomiting and purging.—Attacks of semi-lateral cephalalgia, with nausea.—Semi-lateral headache, as from congestion to the head; relieved when sitting erect.—Heaviness of the head with dizziness.—Compression from both sides of the head.—Stupefying pressure on the forehead.—Diminution of pain in the head on rising, and on passing flatus.—Affections of the brain, from concussion of the brain.—Headache, as from commotion of the brain.—Feeling of looseness of the brain, as if it were shaken in walking; early in the morning; disappearing when thinking of the pain intensely.—Severe headache in occiput, like a dull pressure; as with coryza.—Suppurating eruptions on the scalp, with burning pain.—Startings and spasmodic shocks in the head, with drawing backward of the head.—Staring at an object, the head inclines forward; is frequently bent back again, with twitching, trembling, and tension in the neck while moving it.—Jerking and twitching of head.

3. Eyes.—Burning pain in the eyes.—Pupils either much contracted or dilated.—Suspension of the sight, with vertigo, on walking.—Look fixed, sometimes from a sort of absence of mind.—Wavering of all objects before the sight.—Iris-like circles round candle.—Mobility of the characters on reading; the letters turn, and are surrounded with a coloured areola, the same as round the light.—Diplopia, or obscuration of the eyes, sometimes alternately with hardness of hearing.—The objects appear double and black.—Luminous and coloured circle around all objects.—Photophobia.—Nocturnal agglutination of the eyelids.—Twitching of the orbicularis muscle.

4. Ears.—Sensation of excoriation, and pain, as of contusion, behind the ears.—Purulent eruption before, behind, and on the ears.—Discharge of blood from the ears.—Hearing indistinct, sometimes alternating with obscuration of the eyes.—Detonation in r. ear when swallowing.

5. Nose.—Pains as of excoriation and of a bruise, in the (r.) ala nasi.—Scabs in the nostrils.—Yellowish discharge from the nose.—Obstruction of the nose, with abundant secretion of mucus.—Frequent sneezing, without coryza.

6. Face.—Pallor and coldness of the face, with coldness of the hands.—Cheeks pale, with eyes sunk, and surrounded by a livid circle.—Redness and swelling of the face and of the neck.—Eruption on the face, confluent, purulent, and of a deep red colour, with lenticular pimples on the forehead.—Burning scabs, with yellowish serum, on the upper lip, cheeks, and chin.—Thick, honey-coloured scurf on the chin, upper lip, and lower portion of the cheeks (milk crust), burning soreness and oozing, accompanied with swelling of the sub-maxillary glands, and insatiable

appetite.—Painful ulcer on the lips.—Painful swelling of the sub-maxillary glands.—Trismus.—Disposition to grind the teeth.

8. Mouth.—Foam before and in the mouth.—Whitish pustules, painful on being touched, and ulcers on the edge of the tongue.—Swelling of the tongue; white, painful, burning ulcers on the edges of the tongue.—Speech embarrassed, with convulsive movements of the head (from before backwards) and of the arms at every word that is uttered.

9. Throat.—Throat dry.—Inability to swallow; the throat is, as it were, closed, and feels bruised when touched externally (with eructations).—Stricture of śsophagus.—Strangling on attempting to swallow.—Constriction after being hurt by swallowing a splinter of bone.

10. Appetite.—Want of appetite, caused by a sensation of dryness in the mouth.—Satiety, and aching in the stomach, after the first mouthful.—Great inclination to eat coal.—Continual hunger and appetite, even shortly after a meal.—Burning thirst, esp. during the cramps.—After a meal, colic, cuttings, pressure on the epigastrium, and drowsiness.

11. Stomach.—Violent and noisy hiccough; with crying.—Bitter and yellowish regurgitation on stooping, and followed by a burning sensation in the throat.—Nausea in the morning and during a meal, sometimes with headache.—Vomiting of blood.—Vomiting, alternately with tonic spasms in the muscles of the chest, and convulsive movements of the eyes; (the vomiting does not relieve the lock-jaw).—Burning pressure on the stomach and abdomen.—Pulsative pains in the epigastrium, which is much inflated.—Oppression and anxiety in the epigastric region.—Swelling and throbbing in the pit of the stomach.

12. Abdomen.—Colic, with convulsions (in children from worms).—Cuttings, immediately after a meal, with drowsiness.—Pinchings and borborygmi in the abdomen.—Accumulation of flatus, with anguish and ill-humour.—Distension and painfulness of the abdomen.—Pain, as from ulceration in the groins.

13. Stool and Anus.—Constipation.—Liquid and too frequent evacuations.—Itching in the rectum, with burning pain after friction.

14. Urinary Organs.—Retention of urine.—Frequent micturition; the urine is propelled with great force.—Involuntary urination as from paralysis of the bladder.

15. Male Sexual Organs.—Testes drawn up.—Sore drawing pain in urethra as far as glans, obliging one to urinate.—Stitches in fossa navicularis with nightly emissions.—Pollutions without lascivious dreams.—Strictures (spasmodic) sometimes after gonorrhśa.

16. Female Sexual Organs.—Menses delayed; spasmodic symptoms.—Tearing and drawing in coccyx during menses.—(Painful tumours of mammć.)

17. Respiratory Organs.—Hoarseness.—Difficult respiration, and want of breath.—Cough with copious expectoration.

18. Chest.—Tightness in the chest; she is scarcely able to breathe all day.—Pressure on the chest, as from a weight, with difficulty of respiration.—Sensation in chest and throat as though something the size of a fist were lodged there.—Tonic spasms in the muscles of the chest, alternately with vomiting.—Heat in the chest.—Pain, as from a bruise, and from excoriation, in the lower extremity of the sternum.—Burning pain in the nipples.—Burning in the chest.

19. Heart.—Trembling palpitation of heart.—Feels as if heart stopped beating; and sometimes faint feeling therewith.

20. Neck and Back.—Tension, as from a wound, in the muscles of the neck, on bending the head back.—Swelling of the neck.—Tonic spasms of the cervical muscles.—Neuralgia of neck with tendency to draw head backwards and dull occipital headache.—Tearing jerking in coccyx.—Coccygodynia coming on for first time during catamenia, after parturition.—Spasmodic bending backwards of the back, like an arch.—Tension above the shoulder-blades.—Pain of ulceration in the shoulder-blades.

21. Limbs.—Great weakness in arms and legs after slight exertion.—Trembling in limbs.—Spasmodic contortions and fearful jerking of limbs.

22. Upper Limbs.—Pain, as from a bruise, or of excoriation, in the joints of the shoulder, and in the forearms.—Sensation of heaviness and want of strength in the arms.—Jerking in the l. arm all day.—Startings and convulsive movements (involuntary) in the arms and in the fingers.—Deadness of the fingers.—The veins on the hands are enlarged.

23. Lower Limbs.—Involuntary starting of the lower limbs, jerks and twitches.—Painful stiffness of the legs.—Trembling of the legs.—Yielding of the feet, when walking; they turn inwards.

24. Generalities.—Pains, as from excoriation, or from a bruise, on various parts.—Trembling of the limbs.—Shocks, as from electric sparks, in the head, the arms, and the legs.—General convulsions, and fits of epilepsy, sometimes with cries, paleness or yellow colour of the face, pressing together of the jaws, numbness and distortion of the limbs, suspension of respiration, and foam at the mouth.—After the fit, the body remains insensible, and, as it were, dead.—State of insensibility and immobility, with loss of consciousness and of strength.—Attacks of catalepsy, with relaxation of all the muscles, and absence of

respiration.—Tetanus.—Drawing pains in the limbs.—Affections of the r. side of the back.—Spasms during parturition; children have convulsions from worms.—Strictures after inflammation, sometimes after gonorrhśa.

25. Skin.—Burning itching over the whole body.—Purulent eruptions, with yellowish and burning scabs.—Lenticular pimples, of a deep red colour.—Long-lasting purulent eruptions, confluent, forming thick yellow crusts, with burning pain.

26. Sleep.—Sleeplessness and nocturnal sweat.—Half-sleep, with restless movements and confused dreams.—Frequent waking, with profuse sweat, which, however, alleviates.—Vivid dreams of the events of the day.—Vivid dreams which cannot be recollected.

27. Fever.—Pulse weak, slow, trembling.—Shivering, and perpetual desire to be near the fire.—The chilliness begins in the chest and extends down the legs and into the arms.—Coldness in the thighs, and in the arms, with fixedness of look.—Heat only internally.—Perspiration at night (in the morning hours), principally on the abdomen.—Worm fever with colic and convulsions.

Cimex.

Acanthia lectularia. Cimex lectularius. Bedbug. N. O. Hemiptera. Tincture or trituration.

Clinical.—Constipation. Cough. Hæmorrhoids. Intermittent fever. Liver, complaints of. Muscles, contraction of. Seminal emissions. Skin, affections of. Yawning.

Characteristics.—*Cimex* is an ancient remedy for intermittent fever. A characteristic symptom is: "Weariness and inclination to stretch." The flexors are most affected; pains in all joints as if tendons were contracted and too short; every motion or stretching of arms or legs causes tightening pain in them. (Nash records the following cure by Dr. Brewster, of Syracuse. After driving a fractious horse that tried to run away over a very rough road a man was so bruised and sprained about the buttocks and legs that he was confined to the house for a long time in consequence. It settled finally into what appeared likely to be permanent contraction of the lower limbs. No remedy relieved till Dr. Brewster remembered a case of intermittent fever that he had cured twenty years before, being guided by this symptom. *Cimex* 600 (Jenichen) promptly cured.) Irresistible sleepiness. Frequent yawning; sensation as of a cold wind blowing on knees. Pains in all joints as if tendons contracted during chill. Chill commences with clenching of hands and violent raging. Before chill, thirst and heaviness in legs; less thirst with chill, still

less with dry heat; none with sweat. After the chill, thirst, but drinking causes violent headache; tickling in larynx causing dry, continuous cough. Gagging and belching at end of cough. Heat with gaging; œsophagus feels constricted. Musty-smelling sweats. Night-sweats. Tertian and quartan intermittents. A. W. K. Choudhury relates a case of intermittent (quotidian) cured with *Cimex* 30, the chief indications being: "Chill slight; thirst some days, none other days; shiverings; passed water twice during chill; *chill < by lying down; increase of cough if he drinks water during chill.*" Stools with hæmorrhoidal sufferings. Stools hard in small balls; urging to stool; after the discharge of a small piece of white stool, rectum closes firmly. Incontinence of urine. Urine hot; brown or red sediment. Frequent erections in morning; seminal emissions. Urticarious eruption. Motion <. Stretching or extending the part <. Weariness compels to lie down. Sitting < pain in small of back. During rest: in morning, sweat on nose. Symptoms < in morning. < By drinking. The whole right side is especially affected.

Relations.—*Compare:* Nat. m. (headache lessens in the sweating stage); Ars. (headache remains or increases in the sweating stage); Bell. (throbbing of the head in intermittents). Ars. and Bry. (gagging at end of cough).

SYMPTOMS.

1. Mind.—Anxiousness.—Sensation as if he could creep into himself and on that account could not sufficiently crouch together.—His own sweat is disgusting to him.—Clenching of hands with violent rage at beginning of chill.—Anxiety after chill.

2. Head.—Confusion of head as if headache would ensue.—Pain like needle stitches in vertex with cough.—Headache, almost depriving him of the power of thinking; most violent during the chill; caused by drinking.—Sweating on head, nose and chest.

5. Nose.—Annoying dryness of nostrils.—Fluent coryza with pressure in frontal sinuses.—Constant sneezing in forenoon.—Sweat on nose, morning, during rest.

8. Mouth.—Tongue coated white.—Swollen feeling of the tongue.—Feeling as if burnt on the tongue, in the region of the palate and the upper anterior gums.

9. Throat.—Dryness of the throat, causing him to drink all day.—Œsophagus constricted; during the hot stage.

11. Stomach.—Sour eructations.

12. Abdomen.—Pain in the liver, as if it had been strained by bending the r. side inward; the spot is painful when touching it and when coughing.—Colic, followed by emissions of flatulence or liquid stools.

13. Stool and Anus.—Stools hard, in small balls.—After the discharge of a small piece of white stool the rectum closes firmly.—Stools with hæmorrhoidal sufferings.

14. Urinary Organs.—Urine brown, with a deposit of sediment (during the fever, when he drinks).

17. Respiratory Organs.—Dry cough, with gagging, as if he would vomit, with perspiration.—Breathing oppressed after chill.

18. Chest.—Chest feels oppressed during chill.—After chill, heaviness in middle of chest; anxiety.

20. Back.—Pain in the small of the back, extending over the abdomen, with distension of the abdomen.—Pain in the small of the back; worse when sitting.—Weariness in loins, must sit down.

21. Limbs.—Painfulness in all joints; sensation as if the tendons were too short (during the chill).

22. Upper Limbs.—Pain in r. shoulder and the anterior muscles of the chest, extending through the whole arm down to the nails; the fingers feel as if they had gone to sleep.—At beginning of chill, draws fingers together making a fist.

23. Lower Limbs.—During chill knee-joints most contracted; the leas cannot be extended.—At the end of chill, the legs feel tired; the position of legs must be changed constantly; this ceases during the hot stage.—Hamstrings feel too short, knees flexed; attempting to stretch them = pain in thighs.—Knees feel cold as from a cold wind.

24. Generalities.—Pain in recti muscles of thighs, with oppression of the chest, shortness of breath, and frequent, deep inspiration, with a sensation as if he would creep into himself, and on that account could not sufficiently crouch together; every attempt to stretch out arms or legs causes tensive pain in these parts, and he suffers thirst rather than move.

26. Sleep.—Great drowsiness; falls asleep when sitting in the morning.—Irresistible sleepiness during chill.—Frequent yawning; with cold feeling on skin.

27. Fever.—Pulse feeble; intermitting.—Before the cold stage, thirst; heaviness in the lower extremities.—At the beginning of the chill, clenching of the hands and violent rage.—Chilliness over the whole body, followed by dry heat, which is succeeded by some moisture over the skin.—During the chill painfulness in all the joints; sensation as if the tendons were too short; the knee-joints are most contracted; the legs cannot be extended; the chest feels oppressed, obliging one to

take a long breath frequently; irresistible sleepiness.—At the end of the chill the legs feel tired; the position of the legs has to be changed constantly; this ceases during the hot stage.—After the chill thirst, and when he drinks he is attacked with violent headache, which almost deprives him of the power of thinking; tickling in the larynx, causing a continuous dry cough; oppression of breathing; heaviness in the middle of the chest; anxiety.—Amelioration if he does not drink.—During the hot stage gagging in the œsophagus, which impedes inspiration; thirstlessness; the water drunk to allay the gagging goes down at intervals only; the œsophagus feels constricted.—If he drinks during the fever he passes soon after very hot brown urine, depositing a good deal of sediment.—The perspiration, after the hot stage, is accompanied by hunger.—Perspiration mostly on the head and chest.—During the intermittent fever, constipation; stools dry.

Cina.

The unexpanded flower-heads (commonly called "seeds") of several varieties of Artemisia maritima. Semen cinæ. Flores Cinæ. Artemisia contra. Wormseed. N. O. Compositæ. Tincture.

Clinical.—*Abdomen, distended*. Anæmia. *Anus, irritation of*. Asthenopia. Asthma. Bronchitis. *Borborygmi*. Chorea. *Colic*. Convulsions. *Cough*. Dentition. Diarrhœa. Enuresis. *Eyes, affections of*. Hydrocephaloid. Intermittent fever. *Leucorrhœa*. Neuralgia. Remittent fever. Scarlatina. Sight, affections of. Spasms. Strabismus. Twitchings. *Urine, milky*. Whooping-cough. Worms.

Characteristics.—*Cina* is the source of the alkaloid *Santoninum*. It is pre-eminently a worm medicine, as it causes all the symptoms which characterise helminthiasis both mental, nervous, and bodily. It corresponds more to the effects of lumbrici than to those of other worms. There is irritation of the nose, causing constant desire to rub, prick, or press into it. In children there is extreme ill-humour and naughtiness. Nothing pleases them for any length of time; gritting teeth during sleep; wetting the bed (when accompanied by picking nose, great hunger, restless sleep); tossing all about the bed in sleep; crying out as if in delirium Sherbino has found "getting on hands and knees in sleep" a strong indication for it. But *Cina* is much more than a mere worm-medicine. Many symptoms appear to be reflex from abdominal irritation. A characteristic feature is: Extreme sensitiveness of mind and body: offended by the slightest thing; peevish and obstinate; aversion to be caressed. Over-sensitiveness of surface: cannot endure to be approached, touched, or pressed upon; touch induces or aggravates spasms. Child cannot bear to have head combed or brushed. Aversion to light. Strabismus; with sickly look and dark circles round eyes; yellow vision. Asthenopia, defective accommodation; yellow vision. Ravenous hunger; sinking immediately after a meal. Difficult swallowing of liquids; clucking noise from throat to stomach. Nocturnal enuresis; urine white,

turbid, at times fetid. Larynx extremely sensitive, touching it causes suffocative spasm. Cough excited by sensation of feather down in throat. Reflex cough; caused by writing or reading (to oneself). In fever there is thirst with chill; face pale and cold; hands warm; nausea or vomiting of bile or ingesta. Charles Mohr (*H. M.*, January, 1898) commends it for: anæmic persons suffering from indigestion and non-assimilation of food; or after acute illness when they have headache, vertigo, and neuralgia. In the cachectic who have pains in the belly and deranged abdominal functions, and suffer nervously. For asthenopia from onanism, when reading by artificial light is next to impossible; eyes feel veiled, need constant wiping. Spasmodic strabismus from abdominal irritation. Spasmodic asthma after food that disagrees, "sensation as if sternum lies too close to back, embarrasses breathing and causes anxiety and sweat." Prosopalgia of supra- and infra-orbital region and zygoma chiefly, pains pressing, screwing, with hyperæsthesia. Gastralgia, enteralgia, and fevers when the leading symptoms are present. Nash (*Leaders in Typhoid Fever*) mentions two cases of typhoid in which Cina proved curative, the indications being "Intense *circumscribed redness of the cheeks*, and frequent and *violent rubbing of the nose*." S. C. Ghose has recorded (*H. W.*, September, 1899) a striking cure by *Cina* 6 and 200 of a case of infantile remittent fever, in which the classical symptoms of the drug were present; the fever came on very irregularly. The symptoms of *Cina* are < night; before midnight child wakes up frightened. < From open air; cold air; cold water. < Yawning. Child lies on belly, or on hands and knees, during sleep. Guernsey says *Cina* is suited to complaints which are concomitant to yawning, which come on whenever one yawns.

Relations.—*Antidoted by:* Camph., Caps., Chi., Pip. nig. *Antidote to:* Caps., Chi., Merc. *Follows well:* Dros. and Ant. t. *Compare:* In aversion to be touched, Ant. c., Ant. t., Hep. Sil., Thu. gurgling along œsophagus when swallowing fluids, Helleb., Cupr. difficult swallowing liquids, Bell., Caust., Hyo., Ign., Lach., Lyc., Pho.; in cough < by reading or writing, Mang., Meph., Nux, Plat. in white stools, Dig.; in ravenous hunger, Ars., Calc., Iod., Sil. Staph.; aversion to be caressed, Ars., Lach.; in squint, Alm.; in asthenopia and defective accommodation, Artem. v. (but Art. v. has dizziness from coloured light; and Cina has > from rubbing). Teste places Cina in the Arsen. group from its analogy in the digestive sphere. Cham. has many points of contact with Cina and some opposite conditions.

Causation.—Worms. Yawning.

SYMPTOMS.

1. Mind.—Lachrymose and plaintive humour.—A child cries when it is touched; is averse to being caressed.—Continual inquietude, with desire for things of all kinds, which are rejected some moments after.—Disposition to be offended by trifling jests.—Great anguish and anxiety on walking in the open air.—Delirium.

2. Head.—Headache, alternately with pressure on the abdomen.—Numbing pressure, as from a load, which weighs upon the head, esp. when walking in the open air.—The head falls to the side and is jerked backwards, with twitches in the limbs and cold perspiration of the face.—Tearing, drawing cephalalgia, aggravated by reading or meditation.—Headache before and after the epileptic attacks; after attack of intermittent fever.—Dull pains in the head, with eyes fatigued, chiefly on waking in the morning.—Cold perspiration on the head (forehead) and on the pale, cold, bloated face, with blueness around the mouth; twitching of the limbs and sleepiness, worse at night (after attacks of whooping-cough and epilepsy).

3. Eyes.—Aching in the eyes, when fatiguing them by reading; when using them at night by the candle-light.—Convulsive movements of the muscles of the eyebrows.—Confusion of sight, on reading, which disappears on rubbing the eyes.—Pupils dilated.—Weakness of sight (from onanism).—Weak sight, with photophobia and pressure on the eyes, as if sand had been introduced into them.—When looking at a thing steadily (reading) he sees it as through a gauze, which is relieved by wiping the eyes.

5. Nose.—Epistaxis; also bleeding from the mouth.—Inclination to put the fingers into the nose.—The child rubs the nose constantly, and bores with the fingers in the nose until blood comes out.—Flow of pus from the nose.—Violent sneezing, which provokes a sensation of pressure on the temples, and seems as though it would burst the chest.—Fluent coryza, with sensation of burning in the nostrils.—Stoppage of the nose, in the evening.—Fluent coryza at noon.—The nose burns.

6. Face.—Paleness of face, with livid circle under the eyes.—Earth-coloured complexion.—Face, puffed and bluish, esp. round the mouth.—Face alternately pale and cold, or red and hot.—Pale, cold face, with cold perspiration.—Cramp-like pains and successive pullings in the cheek-bones, aggravated or renewed by contact and pressure.

7. Teeth.—Toothache, provoked by the air and cold drinks.—Pains, as from excoriation, in the teeth.—Grinding of the teeth.

8. Mouth.—Sensation of dryness and roughness of the mouth, esp. of the palate.

9. Throat.—Inability to swallow, esp. liquids.

10. Appetite.—Increase of thirst.—Hunger shortly after a meal.—Voracity.—Bulimy.—Aversion of the sucking child to the milk of its mother.—Hunger may come on in the middle of the night, as in children, or one may feel hungry a few minutes after a hearty meal.—Bitter taste of bread.—Vomiting, or diarrhœa immediately after eating or drinking, esp. drinking.—Vomiting of mucus and of ascarides.—Vomiting during the fever, with tongue clean.—Bilious vomiting.—Disagreeable risings.

11. Stomach.—Audible gurgling from the throat into the stomach when drinking.—Frequent hiccough.—Pain in the precordial region oppressing the breathing.

12. Abdomen.—Obstinate pinchings in the abdomen.—Pinching or cramp-like pressure transversely across upper abdomen, after a meal.—Painful twisting about navel.—Cutting and pinching pain in the abdomen from worms.—Painful rolling in the region of the navel, which is very sensitive to the touch.—Cramp-like, frequently recurring pains in the abdomen, as when the catamenia are about to appear.—Unpleasant sensation of warmth in the abdomen.—Bloated abdomen, esp. in children.—Feeling of emptiness in the abdomen.

13. Stool and Anus.—Stool with maw-worms (short, thick worms).—Loose evacuations of the consistence of pap.—Discharge of ascarides, and of other worms by the anus.—Itching of the anus.—Diarrhœa of bile, and of stercoraceous matter.—Loose, involuntary, whitish evacuations.

14. Urinary Organs.—Frequent want to make water, with profuse discharge.—Wetting the bed.—Urine soon becomes turbid.—Involuntary emission of urine (at night).—Urine milky.

16. Female Sexual Organs.—Catamenia premature, and too abundant.—Metrorrhagia.—Womb-troubles in general.

17. Respiratory Organs.—Short, interrupted breathing.—Respiration wheezing and panting.—Abundance of mucus in the larynx, which is constant, and compels continual hawking.—Gagging cough in morning after rising; irritation thereto (as from dust); is renewed by inspiration after a long interval.—Cough, excited by taking a deep inspiration.—Dry, tickling cough induced by reading (to oneself).—Hoarse, transient cough in the evening.—Dry cough, with cramp, want of breath, anxiety, paleness of face, and groans after the paroxysm; or with stiffness of the body, and bleeding from the nose and mouth.—Cough, with sudden starts, and loss of consciousness.—Before coughing, child raises herself suddenly, tosses wildly about, the whole body becomes stiff, she loses consciousness, just as if she would have an epileptic fit, then follows the cough.—Whooping-cough in violent, periodically returning attacks, from a titillating sensation in the throat, as of a feather, and much tough mucus:—in the morning without expectoration, in the evening with difficult expectoration of white, occasionally blood-streaked mucus, which is tasteless; worse in the morning and in the evening; better during the night, aggravated by drinking, walking in the open air, pressing on the larynx, when lying on the right side, in the cold air, and when awaking from sleep.

18. Chest.—Difficulty of respiration, and anxious oppression of the chest, as if the sternum were compressing the lungs.—Respiration short, often interrupted, or

rattling.—Spasmodic digging in the chest, as if it were going to burst.—Jerking and digging shootings in the chest.—Burning, stitches., and soreness in the chest.

20. Back.—Pains, as from a bruise, in the loins, < by motion.—Drawing-tearing pain along whole spine.—Drawing or jerking pains in middle of spine.

22. Upper Limbs.—Tearing and paralytic pullings in the arms.—Cramp-like tearings in the arms and in the hands.—Contraction and starting of the hand and of the fingers.—Sprained feeling in the wrist-joint.—Weakness of the hand, which suffers everything to escape from it.

23. Lower Limbs.—Paralytic or cramp-like pains, and pullings in the legs.—Spasmodic stretching and twitching of the feet.—Cramp-like extension of the legs.

24. Generalities.—Paralytic, tractive pains in the limbs.—Pressure and squeezing, with dull shootings, or cramp-like tearings, pullings and jerkings, or burning shootings in different parts.—Twitching of limbs.—Convulsions, and distortion of the limbs.—Nocturnal epileptic convulsions, followed by headache.—Epileptic convulsions (esp. at night, with or without consciousness) with cries, bending backwards of the back, and violent movements of the hands and feet.—Tetanic stiffness of the whole body.—External pressure <, or renews the sufferings.—Painful sensibility of all the limbs, on movement, and on being touched.—Affections of the l. side; l. lower extremity.—The majority of the sufferings appear at night, or when seated, and are < in the morning and in the evening.—Heaviness in the limbs.

26. Sleep.—Frequent yawning, with trembling and shuddering.—Nocturnal sleeplessness, with agitation, tears, cries, heat, and anguish; in children.—Wakes in the morning, restless and lamenting, in a start.—Child gets on hands and knees in sleep; on abdomen.

27. Fever.—Pulse small, hard, and rapid.—Frequent shuddering, with trembling, even near the fire.—Quotidian fevers, or tertian, with bulimy, nausea, tongue clean, diarrhœa, pupils dilated, and emaciation.—Shivering in the evening.—Strong febrile heat, with delirium, tossing, and agitation.—Chilliness, with shaking or trembling, ascending from the upper part of the body to the head.—Chill, with coldness of the pale face and heat of the hands.—Heat at night, with thirst.—Chilliness with thirst.—After the perspiration (sometimes before the chill) vomiting of food (with a clean tongue); at the same time canine hunger.—Heat, esp. in the head, with paleness, or yellowish colour of the face, and livid circle under the eyes, or with redness of the cheeks.—After the fever, headache.—Cold sweat on the forehead, around the nose, and on the hands.

Cinchoninum Sulphuricum.

Sulphate of Cinchonine. ($C_{19}H_{22}N_2O$) H_2SO_4.

Clinical.—Amblyopia. Constipation. Diarrhœa. Epistaxis. Fever. Hair falling off. Headache. Heartburn. Sexual excitement. Spinal irritation. Urinary disorders. Veins distended.

Characteristics.—*Cinchon. sul*. has been extensively proved, but it appears to have been little used in practice, from having been overshadowed by the better known alkaloid, *Chinin. sul*. The general outline of symptoms is the same in both. Some of the most peculiar symptoms of *Cinch. s*. are the following: Bursting headache on waking. Pain in anterior lobe of cerebrum, as though a net were drawn through the whole substance of the brain. Darkness before the eyes on exerting them. Sensation as if the throat were burnt with hot drink. Cold feeling at pit of stomach. Pasty taste; and pasty stools. The sexual organs are excited: voluptuous dreams and painful erections at night. Menses a week too soon and more copious than usual. The chest seems hollow and distended so that breathing seems especially easy. Many symptoms of fever are present; and there is recurrence of symptoms. Sweat between shoulder-blades in the night, followed by itching. Symptoms < after eating; by motion. Weariness, sleepiness, general aching; especially in eyes, ears, and genitals.

SYMPTOMS.

1. Mind.—Sort of transient intoxication; complete disinclination for work.

2. Head.—Confusion in head with pressure in eyes.—Morning headache; bursting headache on waking.—Pain in anterior lobe of cerebrum as though a net were drawn through the whole substance of the brain.—Profuse falling out of hair.—Tension in scalp, with soreness at roots of hair, as if there were pus under scalp (mostly r.).

3. Eyes.—Accumulation of mucus before eyes.—Attacks of darkness before eyes; on exerting them.

4. Ears.—Roaring in ears; during the night.

5. Nose.—Sudden nose-bleed of thin, bright red blood while sitting.

8. Mouth.—Ptyalism; esp. in forenoon.

9. Throat.—Sensation as if throat were burnt with hot drink, and something were sticking in pharynx.—Sticking pains in throat, as with fine needles, on swallowing.

11. Stomach.—Sudden heartburn.—Pains at pit of stomach < by pressure.—Great heat in stomach; extending into abdomen, and up into chest, throat, and head, esp. in throat, with burning thirst.—Cold feeling at stomach; fulness; pressure; throbbing; sensitiveness.

13. Stool and Anus.—Dull cutting in anus, extending thence to navel, with fine stitches in pit of stomach.—Pasty diarrhœa.—Constipation; hard, scanty stools with tenesmus.—Pasty stool passed slowly with much pressing, sphincter very much relaxed, while the rectum is more contracted than usual.

14. Urinary Organs.—Burning sensation in urethra after passage of urine.—Excessive urging.—Urine thick sediment; brownish green; dark red; reddish yellow; white.—Iridescent film.

15. Male Sexual Organs.—Great excitement, erections.

16. Female Sexual Organs.—Menstruation a week too soon and much worse than usual.

18. Chest.—Chest seems hollow and distended so that breathing seems esp. easy.—Stitches mostly extending from r. side to pit of stomach at insertion of diaphragm.—Pressive pain under sternum; waking in night it seems as though lower portion of sternum were pressed inward.

20, 21. Neck, Back and Limbs.—Painful stiffness of neck; < moving it.—First dorsal vertebræ painful to pressure.—Trembling of limbs and weakness.—Pains, drawings, bruised sensation.

24. Generalities.—Periodic sticking pains in chest, > standing or sitting, < lying or during deep cough.

26. Sleep.—Sleepiness.—Quiet sleep without dreams, but without being refreshed.—Voluptuous dreams and painful erections.

27. Fever.—Chilliness.—Shaking chill 10 a.m. to noon without subsequent fever or sweat.—Burning skin.—Great heat of body with turgescence of veins (evening).—Heat of head 4 p.m. with cold extremities.—Sweat with excessive thirst in night.—Skin dry, veins distended.—Sweat between scapulæ at night, followed by itching compelling him to scratch.

Cineraria Maritima.

Senecio cineraria. Dusty Miller. N. O. Compositæ. Tincture or succus of the fresh plant, growing wild, gathered just before the flower-buds open.

Clinical.—Cataract. Corneal opacity.

Characteristics.—This is an unproved drug, but it has been used with a good deal of success in cases of cataract as an external application. The method adopted is to instil one drop, four or five times a day, into the eye affected, and to keep this up for several months. Traumatic cataract and corneal opacities, as well as senile cataract, have been removed in this way. I have seen no reports of cures by internal use of the remedy alone, but in some cases it was given internally as well as used externally. Generally the patients have received specific homœopathic treatment internally at the same time.

Cinnabaris.

Mercuric Sulphide. Red Sulphide of Mercury. Hg S. Trituration.

Clinical.—Albuminuria. Bubo. Catarrh. Chancre. Cystitis. Dysentery. Eye, inflammation of. *Gleet*. Gonorrhœa. Gout. Nose, external, sensitive. Priapism. Rheumatism. Sciatica. Scrofula. *Sleep, abnormal*. Sycosis. Syphilis. Tapeworm. Warts.

Characteristics.—*Cinnabar*. corresponds to sycosis as well as to syphilis, and to combinations of the two. In warts on the prepuce it is more specific than *Thuja*; especially for fan-shaped warts. In the mental sphere there is indolence and indisposition to mental labour. Forgetful. Fretful, easily provoked. Headache with nosebleed. General sensitiveness to touch: bones of skull, scalp, roots of hair; bridge of nose; warts bleed when touched. Sensation on bridge of nose as if touched with metallic substance, uneasy creeping and pressing sensation about nasal bones as from wearing spectacles when not used to them. Jerkings and pullings are frequent. Berridge reports this symptom cured: "Left leg feels shorter than right whilst walking." jerking in penis; occurring during sleep. Tearing stitches in glans. Burning, stinging, itching of corona glandis. Leucorrhœa, the discharge of which causes a pressure in vagina. Hæmorrhages are frequent: nose-bleed; bleeding piles. In addition to dysenteric symptoms there is obstinate constipation, stools hard and too large. Protrusion of anus during stool. Formication as from a large worm. Little pimples round anus with burning and itching. The skin is much affected. Redness predominates (colour of the drug). Red spots. Heat, redness, and swelling of face, especially about eyes. "We are led to use this for very red and very fiery-looking ulcers, which may occur in the throat or on

any other part of the body, in the mouth, on the legs; particularly if there be nodes on the shin-bones. In very angry-looking chancres" (Guernsey). Eruption on posterior cervical region; on inner and lower part of thigh with itching. Warts; pimples; pustules; ulcers; violent itching and pricking, especially about joints. The back of the neck is much affected. Pain extending to occiput when head is thrown back. Pain r. side of neck on turning head. Muscles seem contracted. Glands enlarged. The symptoms are > in open air. Cold and chilly in warm room. < In summer. Most symptoms are < at night. Sweat < at noon. Generally rest >; walking <. Headache < after sleep. After dinner >. Symptoms intermit in severity.

Relations.—*Antidoted by:* Hepar, Nit. ac., Opium, and Sulphur. *Compare:* Camph. (red spots); Lach., Merc., Nit. ac., Thuja (Cinnab. is better than Thuja in warts on prepuce); compare also Sep. (warts on margin of prepuce); Ant. t. (warts at back of glans). Seneg. has > bending head backward, Clem. has headache < from same; Clem. also has vertigo on lifting head up or moving head; Cinnab. has pain in back of neck when head is thrown back.

SYMPTOMS.

1. Mind.—Indisposition for mental labour.—Sensation of fulness in the head from mental application.—Forgetfulness (forgets things he has to do).—Fretful, easily provoked.—Desire to be alone.

2. Head.—Violent and frightful attack of cephalalgia, in the sinciput and in the temples, mitigated by compression of the head.—Stupefying buzzing in the head, a little after dinner, and in the evening before lying down.—Giddiness in the morning after rising, when stooping, with nausea.—Congestion of blood to the head, particularly to the vertex; worse after eating.—Intense headache; he cannot raise his head from the pillow; relieved by external pressure.—Dull pain in the forehead, which is cold; relieved by heat.—In the morning, after waking, pain in the forehead and top of the head; < when lying on the l. side and back; > and going off, when turning on r. side, and after rising.—Shooting pain in the l. side of the head, with increase of saliva and great flow of urine.—Shooting in the teguments of the head.—Painful sensitiveness of the cranium and of the hair on being touched.

3. Eyes.—Inflammation of the eyes, with pressive shootings and constant lachrymation when fixing them on an object.—Shooting pains in inner canthus of r. eye, with burning and itching.—Inflammation of r. eye, with profuse discharge of mucus from the nose.—Flow of tears.—Sticking pain about the punctum lachrymale of the upper eyelid.—Redness of the whole eye, with swelling of the face.

4. Ears.—Roaring in the ears with swelling of the face (after eating).—Scurfy eruption in r. external ear.—Itching in r. ear.

5. Nose.—Violent fluent coryza, with secretion of burning serum.—Sensation as if touched by a cold metallic body, on a small space over the root of the nose.—Itching of the nose, with bleeding (very dark blood) after blowing it.—Coryza, with lameness of the thighs and aching in the small of the back; lumps of dirty yellow mucus are discharged from the posterior nares.

6. Face.—Heat of the face, which is much swollen, mostly about the eyes.

8. Mouth.—Both corners of the mouth are chapped.—Tongue coated white in the morning.—A small ulcer on the roof of the mouth, on the r. side of the tip of the tongue; on the tip of the tongue.—Burning, constrictive sensation in the palate; taste bitter in the morning.—Salivation and increased flow of urine.—Putrid taste in the mouth.

9. Throat.—Dryness and irritation of the throat (posterior nares, tonsils, fauces) at night, with soreness during the day.—In the morning, secretion of tenacious mucus from posterior nares, in lumps.—Increased dryness of mouth and throat, being obliged to moisten and rinse the mouth every time he wakes.

10. Appetite.—Nocturnal dryness and heat in the mouth and in the throat, with much thirst.—Scanty, tenacious, frothy saliva in the mouth, without thirst; better after drinking.—Pressive contractions in the throat during deglutition.—After a meal, disagreeable sensation of swelling over the whole body, with tightness in the chest and in the stomach.—Appetite increased.

11. Stomach.—At night, heat, which extends upwards from the stomach towards the neck and the head, and disperses on rising up in bed.—Soreness in the stomach, with dizziness and lightness in the head and tightness in the temples.—Nausea, alleviated by eructations.—Nausea, with water-brash (in the evening).

12. Abdomen.—Flashes of heat confined to the abdomen, with great flatulence (worse in the forenoon).

13. Stool and Anus.—Evacuations, soft and frequent, preceded by pinchings in the abdomen; less afterwards.—Bloody dysentery.—Greenish mucous diarrhœa.—Sensation of formication in the anus, as if from a large worm.—Little pimples around the anus, with burning and itching; thin stools and tenesmus.

14. Urinary Organs.—Frequent and increasing emission of watery urine; also during the night.—Pain, as if from a sore in the urethra, when urinating; this pain wakes him up at night.

15. Male Sexual Organs.—Swelling of the penis.—Pseudo gonorrhœa, with redness and swelling of the prepuce.—Violent itching of the corona glandis, with profuse secretion of pus.—Small, shining red points on the glans

penis.—Condyloma.—Blennorrhœa.—Sycotic excrescences.—Sexual desire strongly excited, and great inclination for coition, with great appetite for eating and drinking.—Strong erections in the evening in bed.—Fetid and corrosive sweats, between the scrotum and the thighs when walking.

16. Female Sexual Organs.—Leucorrhœa, causing, during its discharge, a; pressure in the vagina.

17. Respiratory Organs.—Hoarseness in the evening.—Dyspnœa, with heat.—Cough from tickling in the throat.—Dry cough, in single shocks, when lying down; > by sitting up.

18. Chest.—Chest oppressed, feels contracted; relieved by stretching himself.—Pain running over the ensiform cartilage, from the seventh rib on the r. side diagonally through the chest.—Pulsative and shooting pains in the chest, esp. when walking.

20. Neck and Back.—Pain in back part of neck when head is thrown back, extending to occiput.—Wrenching pains in the vertebræ of the neck.—The muscles of the back part of the neck seem as if contracted.—Tearing in the side of the back, even at night on moving in the bed, > by the heat of the fire.—Aching in the small of the back, as if bruised.—Pain all over the back down to the loins, aggravated on drawing a long breath.

22. Upper Limbs.—Pain in the l. shoulder, between the clavicle and scapula, interiorly.—Pain in the middle of the upper part of r. arm, as though it would break.—Periodical shooting pains in the arms.—Tearing in the arms when writing, > by the heat of the fire.—Sensation of lameness in r. arm.—Numbness of l. arm, from elbow to end of little finger, it feels as if the "crazy-bone" was struck.—The joints of the fingers and knuckles are red (and hot).

23. Lower Limbs.—Painful jerking in the leg, in the evening, after sleeping.—Shooting, drawing, and aching pains in the thighs, from the hip-joints nearly down to the condyles; < at night.—Violent itching on the inside of thighs, knees, and legs; worse in the knees, esp. at night.—Profuse perspiration between the thighs (when walking).—Rheumatic pain in r. knee-joint; < when walking (ascending), > at rest.—Pain in the tendo Achillis and os calcis after walking.—Coldness in the joints.—Coldness of the feet, day and night.

24. Generalities.—Sensation of lameness in all the limbs.—Pulling and shuddering in the arms and the legs.—Paralytic pains in the limbs, with indolence and drowsiness.—Weariness, languor, tired and prostrated; worse before eating, better when riding in the open air.—General nervous, uneasy sensation.

25. Skin.—Itching: of the nose (bleeding after blowing it); of eyelids; canthi (outer); ears; face (l. side) palms of hands (r.); thighs (inside); knees; legs; at the

anus (at night), on the shoulders (evening).—Sensation as if pimples were coming out over the body.—Red papulous eruption, without itching, on both elbows.—Redness of the skin.—Red, fiery-looking ulcers, which may occur in the throat or in any other part of the body, in the mouth, on the legs; particularly if there be nodes on the shin-bones.—Very angry-looking chancres.

26. Sleep.—Sleepiness in the daytime and sleeplessness at night; unconquerable desire to sleep after dinner, early in the evening (during the day).—Restlessness and sleeplessness at night, from a constant flow of ideas changing from one thing to another.—Nightly sleeplessness, without causing fatigue.—Restless sleep, with vivid dreams and much talking.—Nightmare after midnight.

27. Fever.—Pulse slower in the forepart of the day, accelerated in the evening.—Coldness and chilliness in the warm room.—Internal and external heat of the body during the whole night.—Profuse perspiration between the thighs.—Perspiration most at noon.

Cinnamomum.

Cinnamomum Zeylanicum and Cinnamomum Cassia. N. O. Lauraceæ. Tincture.

Clinical.—Ascites. Caries. Constipation. Diarrhœa. Hæmorrhages. Headache. Hysteria. Leucorrhœa. Menorrhagia. Metrorrhagia.

Characteristics.—A leading feature of *Cinnamon* is hæmorrhage. The hæmorrhage is bright red and clear and < by any physical exertion. *Cinnam*. also causes gastric disturbance and hysterical attacks; pains in bones and in muscles, and great weakness as after loss of fluids. Hysterical attacks, going off with eructations; with nausea or vomiting. The symptoms are < while riding; from exertion; from talking; in afternoon and evening up to midnight. Talking = hysterical attacks. It has been used in large doses by the old school in cases of uterine cancer, and some success has been claimed for it.

Relations.—*It is antidoted by:* Acon. *It antidotes:* Opium. *Compare:* Sil., Ipec.

SYMPTOMS.

11. Stomach.—Nausea while riding, with gagging and vomiting of mucus.

13. Stool and Anus.—Diarrhœa < after drinking, with acidity.—Long-continued constipation; stool in hard balls.—Hæmorrhage from bowels occurring esp. after any physical exertion; blood, bright red and clear.

16. Female Sexual Organs.—Menorrhagia; in females troubled with itching at nose; blood bright red < after false step or strain; blood bright red.—Metrorrhagia.—Repeated small hæmorrhages during gestation and puerperal state; < on any exertion, lifting, straining, over-stretching arms; false step.

Cistus Canadensis.

Helianthemum canadense. Rock-rose. Ice-plant. Frost-weed. N. O. Cistaceć. Tincture of whole plant.

Clinical.—Bone affections. Cancer. Diarrhśa. Erysipelas. Follicular pharyngitis. Glandular swellings. Hip-joint disease. Hospital gangrene. Lupus. Panaritium. Parotitis. Scorbutus. Scrofula. Sore-throat. Ulcers. Zona.

Characteristics.—*Cistus* is a very ancient remedy for scrofulous affections, and also in scorbutic states and gangrenous ulcerations. The provings and homśopathic uses confirm its suitability in these respects and bring out clearer indications. It is most suited to scrofulous subjects who are very sensitive to cold air. "Sensitive to cold air" runs through the pathogenesis and also feelings of coldness, of which its peculiar property of favouring the formation of ice about its roots in early winter is strangely suggestive. Cold feelings: in larynx; in abdomen. "Inhaling the slightest cold air causes sore-throat, which he has not when inhaling in a warm room." Inhaled air feels cool. Cold breath. Stitches and cold feelings are very prominent; there is also a soft or spongy feeling which is very characteristic. (I cured with *Cistus* a case of sore-throat that had lasted for years under allopathic treatment with local swabbings. There was an accumulation of thick yellow, leathery phlegm that had to be cleared away by local means. The patient complained of a "spongy" feeling in the throat, and that led me to the remedy.) Trembling (with the fever). Sensation as if ants were running through the whole body (in evening, with anxious, difficult breathing). There is also great sensitiveness to touch: < from touch. Throat symptoms > by swallowing. < By motion. < Evening; night; morning. < By drinking coffee (diarrhśa). > By expectoration.

Relations.—*Antidoted by:* Rhus t., Camph., and Sepia. *Compatible:* Magnesium (the plant grows on a magnesium soil), Bell., Carb. v., Phos. *Incompatible:* Coffee. *Compare:* Arg. n., Lach., Carb. v. (cold breath); Sul. (morning diarrhśa).

SYMPTOMS.

1. Mind.—Bad effects from vexation.—All mental excitement <; (stitches in throat; cough).

2. Head.—Headache in sinciput after being kept waiting for dinner; > eating; < towards evening and lasts all night; in r. side, with piercing pain in eye.—Forehead cold, and sensation of coolness inside forehead, in a very warm room.—Pressive pain at root of nose with headache.—Head drawn to one side by swellings in neck.

3. Eyes.—Stitches in eyes; scrofulous inflammation; feeling as if something were passing around in the eye, with stitches.—Weight above eyes.

4. Ears.—Discharge of water and bad-smelling pus.—Inner swelling of ears with discharge.—Tetters on and around the ear, extending into meatus.—Swelling of parotid glands.

5. Nose.—Cold feeling, or burning in nose.—Chronic catarrh; frequent and violent sneezing evening and morning.—Inflammation, swelling and burning l. side of nose.—Tip of nose painful.—Eczema.

6. Face.—Feeling as if facial muscles would be drawn to one side.—Flushes of heat in face.—Heat and burning in bones of face.—Half-way up cheek, swelling beginning at ear.—Vesicular erysipelas.—Lupus.—Sharp shooting, intolerable itching, and thick crusts; with burning on r. zygoma.—Caries of lower jaw; with suppurating glands on neck.—Open, bleeding cancer on lower lip.

8. Mouth.—Scorbutic, swollen gums, separating from teeth; easily bleeding, putrid, disgusting.—Dry tongue and palate.—Tongue sore, surface as if raw.—Impure breath.—Sensation of coldness of tongue, larynx and trachea.—Saliva cool; breath feels cool.

9. Throat.—Coolness in throat.—Soft or spongy feeling in throat.—As if sand in throat.—Continuous feeling of dryness and heat < after sleeping, eating and drinking.—Small dry spot in gullet; < after sleeping, must get up and drink; > after eating; throat looks glassy; on back of throat stripes of tough or leathery mucus.—Must swallow saliva to relieve unbearable dryness, esp. during night.—Periodical itching in throat.—Dry, without feeling dry.—Burning high up behind uvula.—Stitches cause cough; when mentally agitated.—Cough causes tearing pain in throat.—Sore throat < from inhaling least cold air.—Hawking of mucus, tough, gum-like, thick, tasteless; mostly mornings.—Expectoration of (bitter) mucus, relieving throat.—Scrofulous swelling and suppuration of glands of throat.

11. Stomach.—Desire for acid food and fruits, but pain and diarrhśa follow eating them.—Desire for cheese.—Eating and drinking > dry throat and pain in sinciput.—After eating: pain in stomach; cold feeling in stomach.—After drinking coffee, diarrhśa.—Empty and cool eructations.—Frequent nausea; with diarrhśa.

12, 13. Abdomen, Rectum, and Stool.—Stitches in l. hypochondrium.—Cool feeling in whole abdomen.—Pain in groin coming from back.—Thin, greyish-yellow, hot stools, squirting out; irresistible urging, < from midnight until noon.—Diarrhśa: from coffee; fruits; with goître; chronic; in wet weather; in scrawny scrofulous children.—Chronic dysentery.

15. Male Sexual Organs.—Itching in scrotum.

16. Female Sexual Organs.—Induration of mammć; sensitive to cold air; cancer.

17. Respiratory Organs.—Larynx and trachea: inhaled air feels cool; itching in; feeling as if windpipe had not space enough.—Asthmatic in evening after lying down and at night.—Cough: < by mental agitation; from stitches in throat; with painful tearing in throat.—Raw feeling in upper chest extending into throat.—Expectoration of bitter mucus.—After raising phlegm feels very much relieved.

20. Neck and Back.—Glands of neck and throat swollen; suppuration.—Itching on back.—Eruption like zona.—Burning, bruised pain in coccyx preventing sitting, < from contact.

21. Limbs.—In evening, pains in knees, in r. hand, in l. shoulder.—Drawing pains in muscular parts of hands and of lower extremities, with pains in joints, fingers, and knees.—Tearing and drawing pains in all the joints, knees and fingers.

22. Upper Limbs.—Sprained pain in wrists.—Pain in fingers (r. hand) while writing.—Tearing in finger-joints.—Tips of fingers very sensitive to cold.—Tetter on hands.

23. Lower Limbs.—Pains in knee and r. thigh when walking or sitting.—Tearing in knees.—Piercing pain in r. great toe (evening).—Cold feet.

25. Skin.—Itching all over body without eruption.—Vesicular erysipelas of face.—Lupus on face.—Tetter.—Hard swelling round mercurial syphilitic ulcers on lower limbs.

26. Sleep.—Very restless at night.—Sleepless from dryness of throat.—Night sweats.

27. Fever.—Chilliness; followed by heat with trembling, accompanied by a rapid swelling and great redness of glands below ear and in throat.—Heat with thirst, causing to drink frequently.—Night sweats.—Sweats easily.

Citrus Limonum.

Lemon. N. O. Rutaceć. Expressed juice.

Clinical.—Cancer. Constipation. Convulsive fits (Stramonium and other poisonings). Diarrhśa. Dropsy. Dysentery. Dyspnśa. Hćmorrhage. Rheumatism. Scurvy. Splenitis. Sunstroke.

Characteristics.—In the observations with this plant the expressed juice of the fruit has been used containing citric acid. Lemon-juice and citric acid are traditional remedies for and preventives of sea-scurvy. That their action is homśopathic has been proved by the occurrence of scurvy from the excessive use of the acid when taken for other purposes. Used as a local application (in one part of citric acid to eight of water) it has relieved the pains of cancer. It has a powerful effect on the circulation and on the blood itself, producing faintness, weak pulse, hćmorrhages, and dropsies. Inflammation and painful enlargement of the spleen; dyspnśa. Daily headache. Stiffness in the joints, particularly in the fingers; bruised feeling, particularly in the feet. Herpetic eruptions.

Relations.—Citrus *is antidoted by:* Acon., Asarum, Datura, Euphorbia, Hepar, Sepia. *It antidotes:* Acon., Euphorb., Stramon., snake-bites, and all animal poisons. It *increases the curative effects of* Bell. *Compare:* It should be compared with Acetic acid; and the "bruised pain in the joints" recalls the action of its congener, Ruta; Bell., Lach. As an antidote against Stram. it has be

en employed with great success, the juice of the fruit being administered by the teaspoonful. The symptoms removed were: Convulsive fits with violent movement of the hands and of the feet, eyes convulsed, fixedness of look, salivation, pupils dilated, face red and puffed. Loss of reason, and disposition to be frightened. Pulse small and quick. Convulsions renewed or provoked by light.

Clematis Erecta.

Upright Virgin's Bower. Flammula Jovis. N. O. Ranunculaceæ. Tincture of leaves and stems.

Clinical.—Cancer. *Eyes, affections of. Face, pimples on*. Gonorrhœa. Headache. Rheumatism. *Testicles, inflammation of*. Toothache. *Urethra, stricture of.*

Characteristics.—*Clematis*, like other Ranunculi, is a direct irritant of the skin producing inflammation and vesication. It was used by Stoerck before

Hahnemann's time in cancerous and other foul ulcers, inveterate skin eruptions, syphilis, and rheumatism. In the provings, the external head (left), eyes, teeth (left), skin, urinary and male sexual organs show the greatest number of symptoms. Inflammation of eyes (< left), smarting, burning, stitches, redness, lachrymation, photophobia. Sensation as if fire were streaming from eyes. There is mucus in the urine, but not pus. Flow of urine by fits and starts; or has to wait a long time before he can urinate, with intense pain along fore part of urethra. Beginning of inflammatory stricture. "Affections of urethra; penis in general; prepuce in particular." Swelling of inguinal glands. Painful, inflamed, swollen testicles. *Clematis* acts best on light-haired people; torpid, cachectic conditions; swellings and indurations of the glandular system; syphilitic taint. Great debility; twitching of, muscles; vibrating sensation through body. The symptoms are < by touch and generally by motion; headache and toothache < lying down in evening. Eyes < on closing them. Headache < bending head backward. Great debility 3-5 p.m.; nearly all symptoms < night. Weakness after eating. Aversion to be washed. < By cold water; cold air; cold weather; moist poultices. Toothache, temporarily > by drawing in cold air; < from heat of bed. < During increasing, > during waning moon. Giddiness when lifting up head, or when moving head.

Relations.—*Antidoted by:* Bry. (toothache, urinary symptoms), Camph. *Antidote to:* Merc. *Compatible:* Sil. *Compare:* Ars. (skin; Clem. has more redness, is < from washing; has moist, alternating with dry scabs); Puls. (gonorrhœal orchitis, testicle tender and hard as a stone); Bell., Bry., Calc., Canth., Con., Caust., Dulc. (syphilitic ulcerations); Graph., Merc. (iritis, sensitive to cold); Petr. (impetigo on neck and occiput); Sars. (syphilitic ulcers). In "aversion to be washed," compare Ant. c., Hep., Pho., Sep., Spi., Sul. In bending head back, Cinnabar. *Cobalt*. has < bending head forward.

SYMPTOMS.

1. Mind.—Sadness and apprehension.—Moroseness.—Aversion to conversation.—Indifference.—Fear of being alone, but disinclined to meet otherwise agreeable company.—Memory impaired.

2. Head.—In the morning, confusion and heaviness of the head.—Giddiness if he lifts his head up, or when moving the head.—Head feels full and heavy, hanging down.—Headache, aggravated by bending the head backwards.—Pressive tension in the forehead and sides of the head, as well as in the bones of the cranium.—Digging pressure on the brain.—Piercing in the temples.—Boring pains in the temple.—Hammering and strokes in the head.—Purulent pimples on the forehead, painful on being touched.—Burning, incisive pains in the skin of the forehead.—Eruptions on the head.—Moist phlyctenæ on the occiput and at the nape of the neck; sore, tingling and stinging-itching; often drying up in scales; when

getting warm in bed, violently itching; only temporarily relieved by scratching; with soreness and rawness.—Itching on the hairy scalp.

3. Eyes.—Pressure on the ball of the eye.—Smarting in the eyes, and in the margins of the eyelids, esp. on closing them.—The closed eye is very sensitive to the air (cold air), and when it is opened very sensitive to the light.—Shootings in the corners of the eyes.—Itching in the canthi.—Burning and heat in the eyes, with dryness, as if fire were streaming from the eyes.—Inflammation of the iris.—The white of the eyes has a yellow tint.—While writing, the letters momentarily run into one another; at times, double vision, with flickering before the eyes.—Inflammation of the eyes, with profuse lachrymation.—Inflammation and ulceration of the margins of the eyelids.—Photophobia.

4. Ears.—Burning pain in exterior of the ear.—Tinkling in the ear.—Ringing, as from bells in the ear.

5. Nose.—Purulent pimples, painful on being touched at the root, and on the point of the nose.—Fluent coryza (with sneezing), with abundant secretion of mucus, streaked with blood.

6. Face.—Face pale and sickly.—Sensation of burning in the skin of the cheeks (momentary flushes).—Incisive burning pains in the lower lip.—Cancer of the lips.—Phlyctenoid eruptions on the lip.—White vesicles on the nose and on the face, as from a sunburn.—Moist eruption on the face, preceded by stinging pain.—Purulent pimples on the chin.—Swelling of the submaxillary glands, with nodosities, hard, tensive, pulsative, and painful on being touched.

7. Teeth.—Toothache, < by smoking tobacco.—Toothache in a decayed molar tooth, much < from a crumb of bread coming into it; much > by cold water.—Nocturnal pains in the teeth, which, in a horizontal position, are aggravated so as to occasion despair, with tossing, weakness, anxiety, and insupportable suffering on being uncovered.—Shooting pains or successive pullings in the teeth, extending even into the head and producing incapacity for intellectual labour.—Sensation as if the decayed tooth were too long; the least contact is exceedingly painful, with an excessive flow of saliva.

8. Mouth.—Dryness of the tongue in the morning.—Dull shootings and piercings in the root of the tongue.—Small blisters on the tongue and in the throat, which soon become ulcers.—Expectoration of sanguineous saliva.

9. Throat.—Heat and burning in the mouth and throat.—Sensation of roughness in the throat.

10. Appetite.—Prolonged satiety, though the food continues pleasant to the taste.—After eating, nausea, and sleepiness.—Nausea on smoking tobacco, with weakness of the legs.—Aversion to beer.—Increased thirst, with desire for ice.

11. Stomach.—Disagreeable sensation of coldness in the stomach.—Tension of the stomach.

12. Abdomen.—Pains, as from a bruise in the hepatic region, on touching the part, and on stooping.—Stitches in the liver.—When walking, incisive contractions in the regions of the loins.—Pressure towards the exterior of the inguinal ring, as if a hernia were about to protrude.—Swelling and induration of the inguinal glands, with jerking pains.—Sensation of constriction in the lower abdomen, which is hard.—Stitches: shooting up, < on breathing and urinating.

13. Stool and Anus.—Frequent, liquid, or loose evacuations, without colic.—Loose stools, with burning at the anus.—Burning heat, and itching at the anus (in the evening); better after an evacuation.—Hæmorrhoids, itching, discharging some mucus.—Hard stool, difficult to discharge (in the evening).

14. Urinary Organs.—Increased secretion of urine.—Purulent urine.—Urine turbid, milky, dark, with flakes of mucus and frothy.—Secretion diminished; the last drops cause violent burning.—Secretion slow and in a small stream.—During the emission of urine, pulling in the spermatic cord.—Burning sensation and smarting in the urethra, on commencing to urinate.—Stitches in the urethra; stitches from the abdomen into the chest.—Contraction of the urethra, with the urine stopping suddenly, or only flowing drop by drop; jerk-like tearing in fore part of urethra in the intervals.

15. Male Sexual Organs.—Itching on the genitals.—Violent, long-continuing erections, with stitches in the urethra.—Swelling of the r. half of scrotum.—Drawing pains, in the testes and in the spermatic cord, extending to the groins and the thighs.—Painful inflammation and swelling of the testes.—Induration of the testes.—Thickening of the scrotum.—Aversion to sexual enjoyment, as after excessive indulgence.—Burning pain in the penis, during emission in coition.

16. Female Sexual Organs.—Swelling and induration of the mammary glands; cancer of the breast; and womb.—Menses too early.

17. Respiratory Organs.—Violent cough, with irregular respiration, at times too slow, at times too rapid; barking cough, with burning pain in the sternum and stitches in both sides of the lungs.

18. Chest.—Violent shocks, with dull shootings in the sides of the chest and of the abdomen.—Shootings in the chest, aggravated by breathing.

19. Heart.—Sharp stitch in the heart, from within to without.

20. Neck and Back.—Itching pustules round the neck, with excoriation after scratching.—Humid tetters from the nape of the neck to the occiput.—Eruption of pustules in the lumbar region.

22. Upper Limbs.—Swelling and induration of the axillary glands.—Pressure or pullings in the muscles of the arms and of the hands.—Gnawing blisters on the hands and fingers, with swelling; cold water aggravates the sufferings.—The hands feel as if they were too large; they are dry and hot.—Arthritic nodosities in the joints of the fingers.

23. Lower Limbs.—Tearing in the thighs.—Scaly tetters in the thigh.—Furunculi in the thigh.—Itching of the toes and perspiration between them.

24. Generalities.—Convulsive movements of the muscles in different parts of the body.—Relaxation of the muscles.—Great emaciation.—Fatigue of all the limbs, esp. after a meal, with beatings in all the arteries.—Vibration through the whole body, after lying down.—Great debility and weakness, 3-5 (p.m.).—Lancinations from below upward, < on breathing, or urinating, concomitant with uterine or other affections.

25. Skin.—Obstinate miliary eruptions.—Vesicular eruptions on the body.—Scaly tetters, discharging a sanious pus, yellowish and corrosive, and with redness, heat and swelling of the skin.—Obstinate tetters, red and moist, with insupportable itching in the heat of the bed, and after washing.—Itching over the whole body.—Aggravation of all skin symptoms by the heat of the bed and from washing.—The tetters (painful, not itching over the whole body) are red and humid while the moon is increasing, and pale and dry when the moon is waning.—Burning or tingling, and pulsation in the ulcers, with shootings in the edges when touched.—Psoric pustules over the whole body.—Painful swelling and induration of the glands.

26. Sleep.—Great drowsiness during the day, even in the morning after rising.—Sleeplessness in the evening and, at night.—Sleep, with frequent dreams, agitation, and tossing; vivid, lascivious dreams; profuse perspiration after midnight.—In the morning, sensation of not having slept enough.

27. Fever.—Pulse accelerated.—Quartan fever, characterised by shuddering, followed by sweat.—Sweat on waking, and sensitiveness of the skin, which the patient cannot bear to be uncovered.—Dry heat, with sensation of general heat (at night).

Cobaltum.

Cobalt. Co. (A. W. 58.6). Trituration.

Clinical.—Constipation. Eye, affections of. Gonorrhœa. Hæmorrhages. Headache. Impotence. Liver disorders. Lumbago. Masturbation, effects of.

Characteristics.—The most characteristic symptom of *Cobalt* is a very pronounced backache < sitting; > rising up, walking, or lying down. Backache with seminal emissions. Other symptoms are: Frequent nocturnal emissions; with lewd dreams; With partial or no erections; impotence. Headache < bending head forward (*Clematis* < bending head backward). Pimples on the head and elsewhere; itching of the skin when warm in bed at night. Smarting, darting pains in eyes. Lachrymation in open air. Pain in hollow tooth, which feels too long and is sensitive to touch. Tongue thickly coated white; cracks across middle. No appetite for supper. Urine has strong pungent smell. Drowsiness; unrefreshing sleep. Sitting and stooping <; Lying down, rising from sitting, walking >. Most symptoms are < morning. Cold air = lachrymation, and < pain in teeth. Warmth of bed = itching all over. Jarring < headache.

Relations.—*Compare:*—Zinc. (in pain in back < sitting); Agn. (impotency); Nux (effects of masturbation); Selen., Titan., Thallium. Dr. Jos. Anthal, of Budapesth, has discovered that Nitrate of Cobalt is a perfect antidote to Cyanide of Potassium, the two forming an insoluble compound.

SYMPTOMS.

1. Mind.—Great exhilaration of spirits.—Great vivacity and rapid flow of thoughts (evening).—More disposed to study.—Feeling of great uneasiness, had to move about and could not keep still (with pain in the stomach and abdomen).

2. Head.—Dizziness during stool.—Dulness in the head, with hard stools.—Fulness in the head; feels too large, worse from stooping and bending forward.—Pain in the forehead soon after rising.—Bruised pain in the head.—Headache as if it would burst, had to lie down, with sour stomach after supper.—As if the top of the head would come off.—When stepping, sensation as if the brain went up and down.—Headache worse in the room, going off in the open air.—Headache, with severe pain in the small of the back.—Great itching in the hairy scalp, in the beard and under the chin.

3. Eyes.—Loss of vision on writing, dimness of sight; while reading the letters look blurred.—The eyes smart in the light.—On writing, dartings in the eye.—Pain in the back part of the eyes, with headache.—Darting pains in the eyes on coming to the bright sunshine.—The eyes ache at night.—Profuse lachrymation in the open air

with water from the nose, with pain in the eyes in cold air.—Sensation as if something (sand) were under the upper lid, obliging him to rub it.

4. Ears.—Stinging through the l. ear from the roof of the mouth.

5. Nose.—Putrid, sickish smell before the nose.—Thin discharge from the nose, water from the nose.—The nose feels obstructed.

6. Face.—A large, very painful boil on r. side of the chin.—Peeling of the lips with soreness, they bleed easily.—Disposition to keep the jaws tightly closed.

8. Mouth.—Flat mucous taste in the mouth.—Tongue coated white with cracks across the middle (morning).—Stinging pain in the roof of the mouth.—Constant secretion of water in the mouth with swallowing.

9. Throat.—Throat feels dry and raw.—The throat is filled with white mucus.—Soreness of the throat when hawking.—Sensation of fulness in the throat from the stomach.

11. Stomach.—Hiccough after eating, with soreness in the pit of the stomach.—Belching of wind (in the morning), (during stool).—Rising of bitter water, with pain in the stomach, afterwards dryness in the throat.—Feeling in the stomach as if it contained undigested food.—Fulness of the stomach as if it were filled with air.—Soreness in the pit of the stomach caused by hiccough.

12. Abdomen.—Shooting pain in region of liver.—Sharp pain in region of spleen, < on taking a deep inspiration.—Feeling of emptiness in abdomen and umbilicus.—Colic (5 a.m.) followed by watery stool and tenesmus.—Rumbling in the bowels (before stool).—Fulness in the abdomen after a slight meal.

13. Stool and Anus.—Constant desire for stool while walking, worse when standing still, followed by diarrhœa.—Soft, thin stool with severe colic in the lower bowels, followed by tenesmus, pain in the sphincter ani, and headache.—Small, hard, dry stool.—Feces like hazel-nuts, with dulness in head.—Pressure in the rectum.—Constant dropping of blood from the anus (no blood with the stool).

14. Urinary Organs.—Increased secretion of pale urine, frequent micturition, after drinking coffee early in the morning.—Frequent discharge of small quantities of urine. Scanty urine with a greasy pellicle and yellow, flocculent sediment and strong pungent smell.—Smarting in the end of the urethra during micturition.—Burning in the urethra.—(Secondary) gonorrhœa, with a greenish discharge.

15. Male Sexual Organs.—Frequent nocturnal seminal emissions with lewd dreams, waking him up from sleep; with headache.—Impotence and nocturnal

emissions without erections.—Severe pain in r. testicle; > after passing urine.—Yellow-brown spots on the genitals (and abdomen).

17. Respiratory Organs.—Frequent sighing.—On taking a deep inspiration, stitches in the chest, soreness in the stomach and pain in the spleen.—Cough with soreness in the throat and rawness when hawking.—Stitches in anterior part of larynx.—Short hacking cough, with frequent eructation of a quantity of bright red blood, it feels as if it came from the larynx.—Raising of much thick, tough mucus mixed with a considerable quantity of bright red blood; with the sensation of fulness and pressive pain in the larynx, accompanied by a sensation of scratching and rawness, with occasional burning pains, and a disposition to keep the jaws closed tightly; these sensations are increased by pressure, empty deglutition and cold water.—Copious expectoration of frothy white mucus.

20. Neck and Back.—Pain between the shoulders, in the lumbar region and small of the back.—Aching pain in the small of the back, worse when sitting, going off when rising, walking or lying down.—Pain in the back (spine), increasing while sitting, better on walking or lying down.—Backache with seminal emissions.

22. Upper Limbs.—Stitches in the arms (wrist-joints).—Aching pain in the wrist-joints.

23. Lower Limbs.—Shooting in the thighs from the liver.—Excessive weakness of the knees.—Foot-sweat, mostly between the toes, smelling sour or like sole leather.—Flushes of heat along the legs.—Stitches in the legs.—Bruised pain in all the limbs.—Jerks in the limbs when falling asleep.—Trembling of the limbs, esp. the legs, aching when sitting.—Tingling sensation in feet as if asleep, sometimes like pricking of needles; circulation imperfect (Cob. muriat.).

25. Skin.—Itching all over when getting warm in bed.—Itching of the shoulders; outside of the knee.

26. Sleep.—Difficulty of falling asleep.—When falling asleep jerks in the limbs.—Wakens from lewd dreams and pollutions.—Can do with less sleep than usual, wakefulness.—Unrefreshing sleep.

27. Fever.—Chilly from 11 to 12 a.m.; headache with nausea and languor from noon to 2 p.m.; followed by fever and perspiration.—Chilliness with yawning from 4 to 5 p.m.; feels dull and weak with aversion to mental exertion.—Flushes of heat with perspiration.

Coca.

Erythroxylon coca. N. O. Lineæ (suborder Erythroxyleæ). Tincture of leaves. Solution or trituration of the alkaloid, Cocaine.

Clinical.—Angina pectoris. Asthma. Constipation, chronic. Cough. Deafness. Debility. Fever. Heart disease. Hæmorrhoids. Mountain-sickness, or Veta. Rheumatism. Scrofula. Scurvy. Voice, weakness of.

Characteristics.—*Coca* has been used for centuries by natives of West South America as an intoxicant; and also as a remedy for "Veta," the condition induced in persons on coming to live in high tablelands:—faintness, throbbing heart and head, dysentery, &c. It is like tea and coffee in arresting tissue-change, and enabling those who take it to undergo unusual fatigues. Like *China* it produces ringing in the ears and deafness and also fever. The alkaloid *Cocaine* is the well-known local anæsthetic. A characteristic symptom of *Cocaine* poisoning is a sensation as if small foreign bodies were under the skin, generally like grains of sand; or else as of a worm under the skin. This is undoubtedly *the* keynote symptom of *Coca*. It is known as "Magnan's Symptom," named after the eminent neurologist who first described it. His description is "a sensation as if foreign bodies were under the skin, generally small round substances like grains of sand." Korkasoff reports a case of multiple neuritis in which this symptom was present. The patient was a woman who was being treated for a uterine affection by means of vaginal tampons containing *Cocaine*. A discontinuance of these caused the disappearance of the symptom. Cooper cured a case of chronic rheumatism in an aged woman who had this symptom, with the fraction of a grain of *Cocaine* given in single doses at long intervals. Dr. J. W. Springthorpe described (*H. W.*, February, 1896) a variety of this symptom experienced by himself, and recorded in a paper entitled "The Confessions of a Cocainist." He called it "Hunting the Cocaine bug." "You imagine," he says, "that in your skin are worms, or similar things, moving along. If you touch them with wool, and especially with absorbent wool, they run away and disappear, only to peep cautiously out of some corner to see if there is any danger. These worms are projected only on the Cocainist's own person or clothing. He sees them on his linen, in his skin, creeping along his penholder, but not on other people or things, and not on clothes brought clean from the laundry." In a case reported in *Lancet*, June, 1886, a man who had a 4 per cent. solution of *Cocaine* applied to a tooth, swallowed twenty to thirty drops of the solution. Half an hour after, he was seized with: (*1*) Feeling of faintness and giddiness; (*2*) next, an attack of palpitation with a sense of flushing, especially up the back. There was marked diminution of smell; great difficulty in producing vomiting; a scarlatina-like rash over the body, especially about the neck; dimness of vision; relaxation of sphincters and weakness of extremities; the mind remained clear, but the pulse was fast, weak and intermittent. A striking case was recorded in the *British Medical Journal* of December 13, 1890: "At a meeting of the Paris Académie de Médecine

on December 2nd, M. Hallopeau presented a communication, in which, after distinguishing two forms of cocaine poisoning-namely, the acute, in which the symptoms are produced immediately after a dose and speedily pass off, and the chronic, in which they are due to the prolonged use of the drug─he related a case which in his opinion showed that the poisonous effects, while coming on acutely, might last for a considerable time. On March 7, 1890, a man had about eight milligrammes of hydrochlorate of cocaine injected into his gum as a preliminary to the extraction of a tooth. Toxic symptoms at once supervened. There was intense precordial oppression, with thready pulse, extreme excitement and loquacity; the patient walked about the room, hitting out at random with his fists and crying out that he was dying. In ten minutes he became quiet and the tooth was extracted, after which he was able to walk home, arriving there however, in a state of extreme prostration. Then ensued a train of nervous symptoms, such as continual headache, intractable sleeplessness, bad taste in the mouth, with occasional attacks of excitement accompanied by giddiness, faintness, and a sense of impending death. All brain work was impossible; the patient could not do the simplest sum in arithmetic, and was in a state of profound depression. A sense of formication and numbness in the hands and forearms was almost incessant. This condition lasted four months, and it was two months after the injection before the least improvement was observed, and then progress towards recovery was very slow. M. Hallopeau thinks the symptoms indicate a poisonous action of cocaine on the nervous centres, and especially the brain. As it is impossible to suppose that so small a quantity of the drug should have remained in the circulation, he is driven to conclude either that it was stored up in the cells of certain nervous centres or that it produced in them persistent lesions." Homœopaths have no such difficulty in understanding the prolonged effect of a single dose. Among other effects observed from its use in dentistry are "mental depression and drowsiness," and "intense oppression in chest; dilatation of pupils; acceleration of pulse and breathing, and mental excitement." W. J. Guernsey quotes in *H. P.*, November, 1888, from *Med. Register*, August 11, 1888, the experience of J. E. Shadle, who applied pledgets of a 4 per cent. solution of *Cocaine* to the nasal cavities of a man of 35, preparatory to operation. On each occasion he complained of a "cold, 'gone,' relaxed feeling about the external genitals, and a sensation *as if the penis were absent*. Towards the end of treatment he noticed a permanent weakness of the sexual organs, and finally seminal losses and impotence set in and continued until the *Cocaine* was entirely withheld." Compare this with the experiences of R. K. Ghosch (*H. R.*, vi. 15, 49) with Coca Ø (which he finds, in drop doses, act better in such cases than in the potencies) in palpitation and dyspnœa on ascending, when arising from nervous causes, especially self-abuse; in complaints from self-abuse generally; excessive secretion of urine with or without sugar; enuresis nocturna; nymphomania after childbirth, during menses, from irritation of eczema or other affections of the vulva; in satyriasis. The homœopathicity of *Coca* in enuresis is shown by its effect in relaxing the sphincters in one of the cases named above. There are some characteristic headaches of *Coca*. In general "headaches of high altitudes" may be

taken as a strong indication. *Coca* has also a "tight" headache, as if a rubber band were stretched across the forehead. After the invigorating effects, the sense of lightness and ability to climb a mountain without fatigue, have passed off, or when the intoxication has been carried to a further degree, a sense of heaviness, numbness, and drowsiness succeeds, with a disinclination to move. There is extreme weariness, and especially weakness of the legs. A peculiar symptom is: Sensation as if œsophagus would be rent by force of rising flatus. *Coca* suits persons who are wearing out under mental and physical strain; bashful, timid people; old people; short-breathed people; effects of dissipation; weakly, nervous, fat or plethoric people; children with marasmus. Effects of cold; cough from cold air; rheumatism from slightest cold. Symptoms < climbing, walking or sitting; < cold air.

Relations.—*Compare:* Arsen. (effects of climbing); Stram. likes company and light; Coca likes solitude and darkness; Paullinia, Scutel., Cypr., Valer., Can. ind., tea, coffee, tobacco. Gundlach discovered the best *antidote* to be Gels.

SYMPTOMS.

1. Mind.—Melancholy.—Hypochondriasis.—Mental depression with drowsiness.—Bashfulness.—Prefers solitude and darkness.—Muddled feeling in brain.—Loss of energy.—Great mental excitement.

2. Head.—Vertigo and fainting.—Tension over forehead as from a rubber band.—Headache just over eyebrows; not constant; < raising head or turning eyes up.—Shocks in head; dull, full feeling in occiput with vertigo, < lying down, the only possible position is on the face.—Occiput painful, tender to touch; pains < on coughing.—Headache with chilliness; with dryness in throat; > after eating; > at sunset.

3. Eyes.—Intolerance of light with dilated pupils.—Dark cloud before eyes; eyes deeply reddened until bloody tears gushed out.—White, dark, and fiery spots before eyes; flickering or flashing.—Indistinct vision soon followed by headache and nausea.—Aching pain behind eyes causing feeling as if squinting inwards.

4. Ears.—Ringing, buzzing, and humming in ears; with fever.

5. Nose.—Epistaxis passing from r. to l.—Sense of smell greatly diminished.

8. Mouth.—Mouth dry, esp. on waking.

9. Throat.—Uvula feels swollen; swallowing difficult.—Dryness early in morning.

11. Stomach.—Retards hunger and thirst.—Loss of appetite esp. for solid food.—Craves spirits and tobacco.—Ailments from salt food.—Flatus rises with

such force, it seems as if œsophagus would be rent by it.—Empty feeling or full feeling in stomach.—Confirmed dyspepsia, esp. in hypochondriacs.

12. Abdomen.—Pressure and tension in hypochondria after meals.—Flatulence.—Violent bellyache, with tympanitic distension.

13. Stool and Anus.—Flatus from bowels, smells like burnt gunpowder.—Dysentery.—Constipation from inactivity of rectum; stools dry; like walnuts.—Piles painful on walking or sitting.—Sphincters relaxed.

14. Urinary Organs.—Fine stitches in female urethra before urinating.—Frequent desire, with increased flow.—Disturbed frequently at night.—Nocturnal enuresis.—Film on urine.—Urine smells like sweat.—Yellowish red flocculent deposits; oily scum on surface.

15. Male Sexual Organs.—Sensation as if penis were absent.—Coldness, "gone" sensation, relaxation of external parts.—Emissions.—Nervous prostration from sexual excess.—Spermatorrhœa and partial impotence.—Satyriasis.

16. Female Sexual Organs.—Menses flow in gushes awakening her from sound sleep.—Nymphomania, during menses; and after parturition.

17. Respiratory Organs.—Weak voice.—Phthisis laryngea, when from irritability of pharynx stomach will retain no food.—Rapid breathings.—Painful shortness of breath; at night.—Short breath in athletes, or in those taking alcohol or tobacco in excess.—Hæmoptysis.—On coughing, pain in occiput.—Cough from cold air or fast walking.—Expectoration of small lumps like boiled starch, immediately after rising in morning.

18. Chest.—Sudden attack of cramp in chest; became cold and unable to continue the ascent.—Intense oppression in chest.—Rush of blood to chest with slight headache.—Emphysema.

19. Heart.—Palpitation with flushing.—Violent and audible palpitation; angina pectoris; from climbing or over-exertion.—Pulse greatly accelerated, intermittent.—Pulse extremely slow and intermittent, loses one beat in four.

21. Limbs.—Feeling of internal cold with numbness of hands and feet.—Weakness of extremities.

25. Skin.—Scarlatina-like rash over body, esp. the neck.

26. Sleep.—Inclination to sleep, but can find no rest.—Great drowsiness.

27. Fever.—Sense of flushing, esp. up the back (With palpitation). Chilliness and headache in afternoon.—At night heat and sleeplessness, with throbbing in

arteries.—Flushes of heat on the back and burning in abdomen.—Extreme weariness accompanies the fever.—Night sweats.

Coccinella.

Coccinella septempunctata. Ladybird. Sun-chafer. N. O. Coleoptera. Tincture of freshly crushed beetles.

Clinical.—Face, neuralgia of. Hydrophobia. Tic douloureux. Toothache.

Characteristics.—Most of the symptoms of *Coccinella* appear in the teeth and nerves of the face and mouth. It has been used in hydrophobia, and therein its actions would appear to be analogous to that of *Cantharis*. Symptoms indicating it are: < by any bright object. Is awakened by profuse accumulation of Sativa; vomits and complains of sore throat. The neuralgia of *Coccin*. is < at night, accompanied by icy cold extremities and cold, moist skin; the right side is most affected. Pains extend from one part to another, and may jump from side to side. Its attacks recur periodically; are often of brief duration but quickly recurring, generally < at night; but may be entirely absent in the night. Returning every eight, ten, twelve, fourteen, or twenty days.

Relations.—*Compare:* in tic douloureux, Spi., Thuj.

SYMPTOMS.

2. Head.—Dull headache, as from an enlargement of the brain towards the occiput.—Semi-lateral, tearing and shooting pains in the sinciput.

6. Face.—Faceache, the disappearance of which is attended by faintness, oppressed breathing, and intermittent pulse.—Flush of blood (congestion) to face, like a transient heat; cheeks red, esp. r.—Pressure and heaviness, esp. over r. eye, which is sensitive to least touch.—During paroxysm, cannot open eyes, pain < by any bright object.—Tearing, rhythmical with pulse, extending from r. upper jaw to the lobule of ear.

7. Teeth.—Chronic pain extending from superior molars to forehead; affected part paler; attack lasts only a minute but is instantly repeated, < at night, preventing sleep.—Sensation of coldness in all the teeth; in the entire buccal cavity.—Rhythmical, violent drawing in both rows of teeth while eating.—Sensation as though the teeth would be drawn out; severe drawing in jerks.—Jerking and tearing with stitches, extending to occiput with warmth through whole head.—Painful sensation in back teeth as if they were hollow and air were forced into them.—Pulsative jerking in back teeth.—Swollen gum.

8. Mouth.—Tobacco bites the tongue severely.

9. Throat.—Sensation in the throat as though the uvula was too long (Nux vom. has this same sensation, when the uvula is bluish and inflamed).

10. Appetite.—Appetite lost.

17. Respiratory Organs.—With disappearance of pain in face respiration becomes oppressed.

26. Sleep.—Nocturnal attacks of pain entirely preventing sleep, but could not sleep even when pain did not appear.—Attack ends in a general heat and sleep of two or three hours, from which he wakes without any pain.

Cocculus.

Cocculus Indicus. N. O. Menispermaceæ. A tincture is prepared from the powdered seeds, which contain a crystallisable principle *Picrotoxine* (which see), a powerful poison.

Clinical.—Anger, effects of. Bones, affections of. Cerebro-spinal meningitis. Chorea. *Colic*. Convulsions. Debility. Faintness. Fear, effects of. Hæmorrhoids. *Headache*. Hernia. Intermittent fever. *Knee, weakness of; cracking in. Memory, weak*. Mental excitement, effects of. Menstrual headache. *Menstruation, painful*. Overstrain, bodily or mental. Palpitation. *Paralysis*. Parotitis. Phthiriasis. Rheumatism. Riding in carriage, effects of. *Sea-sickness. Sleep, affections from loss of*. Somnolence. Spasms. Spinal irritation. Tympany. *Vertigo. Vomiting*.

Characteristics.—*Cocculus* has been used from ancient times as a poison for stupefying fish, and making them easy to catch. Correspondingly we find it produces great disturbance of the sensorium in human beings, and all the symptoms of intoxication. It is commonly used as an adulteration of beer to heighten its intoxicating properties. A very characteristic symptom is a sensation of hollowness or emptiness in the head or other parts. Allied to this is a sense of lightness of body. Another characteristic is an opening and shutting sensation, especially in the occiput. Along with the vertigo is nausea and vomiting which bring it into close relation with sea-sickness and carriage-sickness. *Coccul*. corresponds perfectly to the sensitive condition caused by loss of sleep and night-watching, and is the first remedy to think of for removing this. "Irritable weakness" is a leading note in the *Cocculus* effects. The *Cocculus* patient is very sensitive to fear, anger, grief, and all mental disturbances; also to noise and touch. Enlargement of liver after anger. Easily startled. Fear of ghosts and spectres. Stinging pains, stitches, constriction; in the hands a pithy feeling. Many symptoms are < at menstrual period; piles during menses. *Cocculus* has cured a case of delirium at

onset of menses during first and second days; the patient said, "I always see something alive, on wall, floor, chairs, or anywhere, always *rolling*, and will roll on me." *Cocculus* is suited to persons of mild and sluggish temperament; light-haired persons; hypochondriacal, timid, fearful, and nervous persons. Other prominent features of *Coccul*. are: Paralytic pains, or pains as of dislocation. Paralytic weakness; lax-muscles. "Weakness of neck muscles with heaviness of head." Sensation as if single parts had gone to sleep. Immovability of parts affected. Of localities, the right hypochondrium (especially liver), inner hypogastrium, inner forehead, back, upper arm, and bones of arm are chiefly affected. This has been verified: "Spasmodic, flatulent colic, about midnight, flatus passed without relief," recurring several nights; promptly cured by *Coccul*. 3x. Lippe cured a case of enlargement of the liver after parturition, the indication being "the liver was more painful after anger." The sensitiveness to touch is very great and serves to indicate *Cocculus* in preference to other remedies in many affections where this is pronounced, in articular rheumatism, in ulcers, in neuralgic affections of bones. The least jar is unbearable (travelling by land or sea). < By touch, pressure, or jar. < From motion generally; moving body; rising from bed; bending over or stooping. < Kneeling; walking; swallowing saliva. Sitting > some symptoms. Many symptoms are < evening and night, especially about midnight and 1 a.m. Sensitive to air either hot or cold. Longs for cold drinks, but eating or drinking anything cold = tearing in limbs. < Open air. < From sun. < By warmth of bed. > In a room. A decoction of Cocculus is a domestic remedy used locally for destroying head- or body-lice.

Relations.—*Antidoted by:* Camph., Cham., Cupr., Ign., Nux v., Staph. *It antidotes:* Alcohol, Tobacco, Cham., Cup., Ign., Nux v., and the fever of Thuj. *Incompatible with:* Caust., Coffee. *Compatible:* Follows well Aco. (endocarditis with fearfulness); Cham., Nux, Ign. *Compare:* Aco., Act. r.; Ant. c. (gastralgia), Agar. (somnolency), Ant. t., Ars., Bell., Calc., Carb. v. (parotitis), Cham., Coff., Cupr., Ign. (headache), Ip., Iod., Lach., Merc., Mosch., Nitr., Nux mos. (somnolency), Oleand., Petr., Puls. (headache), Rhus, Sabi., Sassafras, Scutel., Silic., Stram., Tab., Val., Ver. In effects from noise, Nux, Nit. ac. Sense of lightness, Asar., Can. ind., Calc., Gels., Sticta, Sil., Thuj.; menstrual sick headache, Lac. def.; fear of ghosts, Aco., Ars., Bro., Carb. v., Lyc., Pho., Pul., Sul., Zn. Umbilical hernia, Nux (without urging, Bry., Nat. mur., Ver.); < from kneeling, Mag. c., Sep.; nausea constant, Ip., Kali c., Sul., Ign., Acet. ac.; uterine spasm, dysmenia, dark flow, Ign. (Coccul. is distinguished by having weak, lame feeling in small of back; as if about to be paralysed; trembles on beginning to walk); weak from talking, Ver., Sul., Calc.; functional paralysis from fatigue or mental emotions, Ign., Pho., Nat. m., Collins.; in occipital headache, Gels., jug. c. Weakness of neck muscles, Ant. t.; > putting head back, Seneg. (<, Clem., Cinnab.). *Compare also:* Picrotoxin and Picric acid in paralytic sensations and effects of fatigue. Teste places Coccul. in his Causticum group.

Causation.—Anger. Fright. Noise. Sleep, loss of. Seasickness. Travelling. Over-strain, mental or bodily. Sun. Tea-drinking.

SYMPTOMS.

1. Mind.—Pre-occupation of mind, and sad and melancholy reflections, as if the patient had sustained wrongs.—He sits as if wrapped in deep sad thoughts, and does not take notice of anything; anxiety.—Loss of will and power to decide on any action.—Hypochondriacal humour; despair.—Strong, anxious apprehension, inquietude, and fear of death.—Disposition to be frightened.—Excessive susceptibility.—Disposition to take everything in bad part and to be angry.—Mania.—Mistakes concerning the lapse of time; it passes too quickly.

2. Head.—Confusion of the head, esp. after eating or drinking.—Dulness in the head, increased by reading or meditation.—Vertigo, as from intoxication, or on rising up in the bed, with inclination to vomit, which forces the patient to lie down again.—Fits of vertigo, with nausea and loss of consciousness.—Headache, with inclination to vomit or vomiting, and pain as from a bruise in the intestines.—The headache is aggravated after sleeping, eating, or drinking (coffee), in the open air, while riding in a carriage; and is relieved in a warm room, or when becoming warm in bed.—Violent aching pains, esp. in the forehead.—Stupid feeling in the head (cold perspiration on forehead and hands).—During motion, headache, as if the eyes were being torn from the sockets, with vertigo.—Pain in the head, which seems, as it were, empty and hollow, or sensation of constriction in the brain.—Pulsative pains, sometimes in the crown of the head, sometimes in the temples.—Convulsive trembling of the head, caused by weakness of the muscles of the neck; worse after sleeping and in the open air, from coffee and tobacco; better in the warm room.

3. Eyes.—Pressure and pain, as from a bruise, in the eyes, and difficulty in opening the eyelids at night.—Pain in the eyes, as if they were torn out of the head (with headache).—Convulsive rolling of the balls of the eyes during the spasms.—Pupils very much dilated; or contracted.—Dryness of the eyelids.—Inflammation of the eyelids.—Eyes prominent and glassy.—Dim-sightedness (after reading a short time the print is all blurred).—Confusion of sight, with black spots before the eyes.—Phantoms before the eyes.

4. Ears.—Buzzing in the ears, with hardness of hearing, and sensation as if the ears were stopped; with noise as from rushing water.—The r. ear feels closed.—Swelling of the parotids.

5. Nose.—Swelling of the nose, sometimes semi-lateral (r.).—Coryza, with ulcerated nostrils.—Very acute sense of smell.

6. Face.—Face of a burning red, puffed and hot.—Transient heat in the cheeks.—Flushes of heat in the face after drinking.—Blue circles round the eyes.—Face convulsively contracted.—Cramps in the cheek-bone and in the masseters.—Swelling and induration of the sub-maxillary glands.

7. Teeth.—Pains in carious teeth, but only when eating.—Looseness of the teeth, with swelling of the gums.

8. Mouth.—Dryness of the mouth (in the night), without thirst.—Foam before the mouth, forming bubbles.—Tongue loaded with a yellow coating.

9. Throat.—Difficulty of speech, as from paralysis of the tongue.—Dryness of the throat.—Excessive sensitiveness of the palate; the food seems to be too strong, or too salt.—Constriction in the gullet, which seems to be paralysed.—Burning pain in the œsophagus, and in the throat, with sulphurous taste in the mouth.

10. Appetite.—Metallic, copperish taste.—Acid taste, esp. after a meal, or when coughing.—Acid taste of bread.—Bitter taste of tobacco.—Desire for cold drinks, and esp. for beer.—Thirst during a meal.—Excessive loathing of all food and drink.—Repugnance to all acids.—Bulimy.

11. Stomach.—Risings, with pain in the stomach and in the epigastrium.—Risings with inclination to vomit.—Frequent empty eructations, leaving a bitter taste in the mouth and throat.—Eructations with nausea and sticking pains in the pit of the stomach.—Empty, or fetid and putrid risings.—Attacks of nausea inducing syncope.—Inclination to vomit on rising up in the bed, which compels the patient to lie down again.—Inclination to vomit during a meal, or in consequence of a chill, with abundant accumulation of saliva.—Vomiting and nausea from the motion of a carriage, or of the sea.—Sensation of fulness in the stomach, with difficulty of respiration.—Violent cramp-like pains, squeezing, as if from a claw and cramps in the stomach, sometimes a short time after a meal.—Anxious oppression and pinchings in the epigastrium, with difficulty of respiration.

12. Abdomen.—Pain in the hypochondria as from a bruise.—Pressive pain in the hepatic region, aggravated by coughing or stooping.—Shootings in the hepatic region.—Abdominal pains, as if the intestines were bruised, or as from an internal abscess, when moving.—Pressure, as from a stone, in the umbilical region, and in the abdomen.—Sensation in the abdomen, as if it were hollow and empty.—Inflation of the abdomen.—Contractive pinchings in the upper part of the abdomen, with suspension of respiration.—Burning pains, pullings and tearings in the abdomen.—Cramp-like pains in the abdomen.—Hysterical spasms in the abdomen, in women.—Flatulent, cramp. like colic, esp. at night, aggravated by coughing, or by stooping forwards.—Tendency to protrusion of inguinal hernia.

13. Stool and Anus.—Constipation, with tenesmus.—Evacuation hard and difficult.—Ineffectual desire for stool, with constipation.—Contractive pain in the rectum, preventing sitting (in the afternoon).—Diarrhœa, with emission of flatulency before the stool.—Loose evacuation of a putrid smell.—Fæces soft and yellow, which cause burning in the anus.

14. Urinary Organs.—Aqueous urine with urgent inclination.—Frequent want to make water, even in pregnant women.—Frequent desire to urinate, with small discharges.

15. Male Sexual Organs.—Itching in the scrotum.—Pulling pains as from a bruise in the testes, on their being touched.—Great sensibility and excitability of the genital parts, with desire for coition.

16. Female Sexual Organs.—Premature catamenia, with cramps in the abdomen.—Painful catamenia, with abundant discharge of coagulated blood, followed by hæmorrhoids.—Suppression of catamenia, with spasmodic and pressive colic, flatulency, paralytic debility, oppression, anxiety, cramps in the chest, fits of nausea, even to fainting, and convulsive movements of the limbs.—Catamenia too scanty and irregular, with leucorrhœa in the intervals.—(Metrorrhagia.).—Discharge of sanguineous mucus from the uterus, during pregnancy.—Leucorrhœa like blood.—Leucorrhœa, similar to water in which meat has been washed, intermixed with a sanious and purulent serum.—Cramps in the uterus.

17. Respiratory Organs.—Fatiguing cough, from oppression of the chest, which manifests itself only during the cough.—Oppressed breathing, from contractive sensation in the trachea, as if irritated by smoke, causing constant coughing.—Periodical cough, every fourth night, towards midnight, or about two o'clock in the morning, with constriction in the throat which brings on coughing.

18. Chest.—Suspension of respiration, which stops in the pit of the throat, as if from constriction of the throat.—Tightness and constriction of r. side of chest.—Stitches in the chest (sternum) when walking.—Short, intermittent respiration.—Pressure on the chest, as if from a stone.—Hysterical spasms in chest.—Cramps in chest, with sighs and groans.—Tensive constriction in the chest, sometimes on one side only, with difficulty of respiration.—Gurgling and sensation of emptiness in the chest.—Fatigue of the chest, from reading aloud.—Congestion in the chest, with anxiety.—Red spots on the chest.

19. Heart.—Palpitation of the heart; nervous, with anxiety.

20. Neck and Back.—Cracking of the vertebræ of the neck, during movement.—Weakness of the muscles of the neck, which are inadequate to the support of the head.—Red spots on the neck.—Paralytic tearings (in the back and) in

the loins.—Pullings and tearings in the back, esp. when speaking, walking, and stooping.—Tremor in the back.—Shootings between the shoulder-blades, and in the loins.

22. Upper Limbs.—Lancinations in the shoulder-joint, and in the arm, during repose.—Lancinating pains in the arm, proceeding from a wounded finger.—Convulsions of the arm, with retraction of the thumbs.—Paralysis of the arms.—Palpitation of the muscles of the arm.—Pain, as from a bruise, in the bones of the arm, during movement (when lifting them up, and when touching them).—Lameness of the arm (cannot write).—Hot and arthritic swelling of the hands.—Numbness, or heat and cold alternately, of one or other of the hands.—Tingling of hands and paralytic trembling.—Torpor of the hands.—Cramp-like contractions, and starting of the fingers.

23. Lower Limbs.—Paralysis of the lower limbs, proceeding from the loins.—Drawing tearings in the knees, feet, and toes.—Pain as if from a bruise in the thighs, during movement.—Pain in the heel (os calcis) as if bruised.—Cracking in l. hip-joint.—Cracking of the knees, during movement.—Inflammatory swelling of the knee, with transient lancinations.—Burning sensation in the feet.—Hot and itching swelling of the feet, sometimes in the evening.—Numbness in the feet.—Cold and perspiration of the feet.

24. Generalities.—Pullings and paralytic tearings, by fits, or continuous, in the limbs and in the bones.—Paralytic immobility of the limbs, with drawing pains in the bones.—Convulsive movements of the muscles in different parts.—Aching, digging pains in the limbs.—Pains, as from a bruise, even in the internal organs.—Sensations of hollowness; as if bruised in outer parts; same in bones; numb feeling of outer parts; sensation as if single parts had gone to sleep.—Affections of the r. hypochondrium (particularly of the liver); inner hypogastrium, inner forehead, back, upper arm, bones of the arm.—Aversion to open air; hysterics; paleness of the skin, red spots; shuddering in general.—Sensation of hollowness or of constriction in the internal organs.—Painful sensibility of the limbs to the slightest touch.—Painful stiffness and crackings in the joints.—Semi-lateral sufferings.—Rheumatic pains, with hot swelling of the parts affected.—Attacks of gout, with swelling of the affected parts.—Shooting pains in lymphatic swelling.—Engorgement and induration of the glands.—Hæmorrhage.—Cramps and convulsions of the limbs, and of the whole body, sometimes induced by ulcers, or by wounds, painfully sensitive to the touch, or on using the parts affected.—Convulsive movements of the limbs and of the muscles, as in St. Vitus' dance.—During the convulsive fits, face red, puffed, and hot.—Trembling of the limbs.—Attacks of epilepsy.—Paralysis, chiefly semi-lateral, with insensibility of the parts affected.—Aggravation of the sufferings by sleep, speech, drinking, and eating, but esp. on taking coffee or smoking tobacco, as well as by cold air.—Hysterical spasms, with anguish.—Weakness and loss of strength, after the least bodily fatigue, movement, or the interruption of sleep.—Want of vital

energy.—Fainting fits.—Numbness, sometimes of the hands, sometimes of the feet, in transient fits.—The open air is insupportable, whether it be warm or cold.—Emaciation.

25. Skin.—Great itching, esp. in the evening, or when undressing, or at night in bed.—Red pimples, like grains of millet, with itching in a warm temperature.—Eruption of hard and knotty pimples, with red areolas and burning pain.—Induration, cold swelling of the glands, with stinging pains.—Ulcers very sensitive to contact.—Red spots in the chest and on the side of the neck.—Pale (chlorotic) colour of the skin.

26. Sleep.—Obstinate inclination to sleep in the morning.—Sleeplessness on account of anxiety and bodily restlessness.—Spasmodic yawning.—Sleep retarded in consequence of a great flow of ideas.—Half sleep, like coma vigil.—Sleep interrupted by frightful anguish and inquietude.—During sleep, starts, cries, convulsive movements of the hands, of the eyes, and of the head.—Vivid dreams, exciting fear.—Anxious, frightful dreams, dreams of death, of disease, &c.—Fear of ghosts at night.—Sleep unrefreshing, with frequent waking.

27. Fever.—Shivering, and sensation of cold, with trembling.—In the evening, shivering and shuddering in the back.—Chill in the afternoon and evening, principally on the legs and in the back; not relieved by heat.—Dry heat during the night.—Perspiration during the night, which is only cold on the face.—Morning sweat, esp. on the chest.—Intermittent fever, with colic and lameness of the small of the back.—Fever, with tendency to become chilly, though the skin is hot to the touch.—Chilliness alternating with heat.—Burning heat and redness of the cheeks, often with cold in the feet.—Fever with cramp-like pains in the stomach, and paralytic weakness in the loins.—Easy perspiration during movement, with great fatigue.—Sweats night and morning.—Pulse full, hard, and frequent.—Pulse small and spasmodic; sometimes it cannot be felt.

Coccus Cacti.

Cochineal. N. O. Hemiptera. An insect infesting cactus plants. The dried bodies of the female insects are used for making a tincture or trituration. They also constitute a well-known dye. (*Coccus Cacti* has sometimes been confounded with *Coccinella septempunctata*, both insects being known as "Cochenille" in French.)

Clinical.—Asthma. Backache. Catarrh. Gonorrhœa. *Gravel*. Hæmorrhages. Heart, affections of. Impotence. *Irritation. Labia, inflammation of*. Menorrhagia. Nephritis. Phthisis. Spasms. Tinnitus. Uric acid diathesis. *Whooping-cough*.

Characteristics.—*Coccus cacti* acts more especially on mucous membranes. It compares with *Cantharis* in its action on the renal organs, and with *Cactus* in causing hæmorrhages, in disturbing the heart and in causing lancinating, stitching, and pricking sensations. Itching, sticking and biting in various parts of the skin; red spots and itching pimples. Sensations of irritation predominate, especially in throat and respiratory organs, eyes and urino-genital organs. In the throat there is a sensation as if a hair or crumb were lodged behind larynx, and as if a thread were hanging down the back of the throat causing a cough. Hæmorrhages are apt to be in large black clots, especially hæmorrhages from kidneys and uterus. Lancinating pains and itching of glans penis, symptoms of the passage of small calculi. The cough exactly corresponds to the whooping-cough type, there is no remedy which has a wider range in this affection. "Cough < in morning; the child awakens and is immediately seized with a paroxysm of coughing ending in vomiting clear, ropy mucus hanging in long strings from the mouth," Hoarseness. Fatigue of vocal organs. Violent tickling in larynx. Stitching and ulcerating pains below clavicles, especially left. *Peculiar sensations* are: As if a ball or stone lying in stomach; raging pain as though a fluid were injected into a small blood-vessel; as if something ascending towards stomach; as of mucus ascending and descending trachea; as of a plug of mucus moving in chest; as if head would split. Kunkel records the case of a man, 75, an who had suffered from nocturnal enuresis up to the age of seven. When almost 20 he frequently passed large quantities of uric acid, and at the same time he began to have symptoms of chronic catarrh of the colon, frequent scanty stools, much mucus, cross humour, itching anus, threatening of piles but no bleeding. Insomnia soon followed. *Coc. c*. 2 and 3 was given without benefit. *Aqua calcis* did some good but not much. In three successive years he was sent to Carlsbad with good result to the intestinal catarrh, but the sleeplessness was untouched. Gradually all kinds of arthritic symptoms developed, especially in knees. There was occasionally considerable flow of urine, and the more copious it was the better the patient slept, and the less pain in the joints. The same relief followed an attack of diarrhœa. Four weeks at Assmanhausen caused the excretion of large quantities of uric acid one year, but had no effect the next, and the knee got worse. Wiesbaden did good one year and none the next. Half a tumbler of Kronenquelle water drunk every morning did good to the knee and enabled him to walk better than he had done for a long time. In three or four years the excretions of uric acid had ceased and the patient's state grew worse: insomnia recurred, diarrhœa became much more frequent. A fortnight previous to such attack, patient noticed he had great aversion to butcher's meat. *Coc. c.* 30 gtt. i. morning and evening was given. Gradually sleep returned. There was almost daily excretion of uric acid, sometimes in the form of large shot; the diarrhœa ceased and the patient went about his work with pleasure. Berridge cured with *Coc. c*. a case of gonorrhœa, guided by the symptom: "Excruciating pain in left iliac region extending to groin and halfway down thigh, *as if a fluid were forcing its way there*."

There is general sensitiveness to touch and pressure; rinsing mouth or brushing teeth causes cough and vomiting. Warmth < most symptoms; cough < entering warm room; throat < by warmth of bed. Tickling in trachea and cough > open air. Teeth very sensitive to cold. Catarrh < on slightest exposure. Catarrh from autumn till warm weather. Symptoms < night and early morning; cough < on waking. Symptoms are often periodic. The symptoms are < lying down. But the least exertion causes lassitude and tendency to perspire or cough, < during exercise. Mental exertion < pain in occiput. Rising up = hæmorrhage with passage of large clots from uterus.

Relations.—*Compare:* Canth., Cact., Ocim. can., Sars.; apices of lungs sore, tenacious mucus, Kali bi. Many of the Cactus symptoms -pricking and sticking pains, heart disturbances, &c.—reappear in the pathogenesis of this Cactus-fed insect.

SYMPTOMS.

1. Mind.—Ill-humoured, irritable, apprehensive.

2. Head.—Giddiness; the head feels dull (pressive headache, also in frontal region), as if he had drunk too much, with a white-coated tongue.—Congestion of blood to the head when entering a warm room; > in the open air.—Throbbing, pressing, or sticking pains in temples.—Violent raging pain extending from r. eye along squamous portion of temporal bone on its inner side to occiput; it seems as though a fluid were injected paroxysmally into a small blood-vessel.—Sensation as though a hot constricting band extended from one mastoid process across occiput to the other; this region seemed tense and constricted; the condition became worse, until at last it affected the whole skull, in which the pain seemed to fix itself, and it seemed as though the bones became drawn closer and closer together; the whole scalp was also involved and seemed to be drawn tighter about the skull.

3. Eyes.—Sensation as if a foreign body were lodged between the eyelid and the eye.—Sensation as if the edges of the eyelids were swollen.—Conjunctivitis; increased lachrymation.

4. Ears.—Sudden violent stitch in l. internal ear, extending into l. side of neck and into sternum.—Intolerable itching in l. ear.—Tickling and itching in ears.—Cracking in ears on swallowing.—Great roaring in ears as from a storm.

5. Nose.—Dryness of the nose, with inclination to sneeze.—Swelling of nose, with itching, violent sneezing, and increased secretion of mucus.—Redness on the edges of the nostrils.—Crusts (yellow) on the edges of the nostrils.

6. Face.—Crawling sensations in the face.

7. Teeth.—Sensation as if cold air were blown on the teeth.—Great soreness of the teeth to contact.—Drawing and jerking pains in teeth; teeth sensitive to cold things.—Loud speaking or brushing teeth causes cough and vomiting.

8. Mouth.—Sweetish, metallic taste in the mouth (with accumulation of water in the mouth).—Taste: metallic; bitter; sweetish; sour.—Dry, brown-coated tongue.—Mouth and tongue dry, with much thirst.—Burning in mouth and throat.—Rawness of mouth and throat.—Stitches and burning in the throat and on the tongue.—Great sensitiveness of mouth and fauces, so that rinsing of the mouth caused cough and vomiting of thick masses of mucus.—Sensation as if the palate were elongated, with continuous hawking.—The arches of the palate are very irritable.

9. Throat.—Swelling of the tonsils, with continuous desire to swallow, and sensation as if a plug were lodged in the throat.—Swelling and redness of r. tonsil.—Dryness and burning in throat and fauces.—Rawness and scraping in throat, with expectoration of mucus.—Sensation as if uvula were elongated, causing constant hawking.—Throat symptoms < from warmth, esp. in bed.—Difficult deglutition.

10. Appetite.—Desire to eat often and much at a time; much thirst.—After dinner much thirst, and when he drinks water then chill.—Sensation of hunger, with colic.—Canine hunger.

11. Stomach.—Spasmodic empty eructations.—Heartburn.—Sensation as if something indigestible were lying in the stomach.—Nausea and vomiting; vomiting of mucus.—Retching; inclination to vomit.—Distension of stomach.—Heaviness and pressure in stomach; sticking pains.—Stitches in the pit of the stomach when inhaling.—Epigastric region sensitive to touch.

12. Abdomen.—Fulness in the abdomen, as if he had eaten too much, with swelling and tenderness of the pit of the stomach.—Pains in l. hypochondrium, as from incarcerated flatulence; pains extend to l. side of back and lumbar vertebræ.—Burning drawing in region of spleen.—Flatulent distension of abdomen, with much rumbling.—Griping in abdomen followed by diarrhœa.

13. Stool and Anus.—During stool, burning in rectum; stitches in rectum.—Itching in anus, with tenesmus from slight exertion.—Stitch from the anus, extending into the urethra.—Copious, soft or pasty stools.

14. Urinary Organs.—Stitches extending from the kidneys through the urethra into the bladder.—Dull, pressive pain and soreness in region of kidneys.—Pressure in bladder.—Spasmodic pain in the bladder, with alternate coldness and heat.—Itching at the end of the urethra.—Stitches and itching in urethra.—Burning pain in urethra while urinating.—Frequent and great desire to urinate.—Great desire to urinate in

the morning (with erection).—Frequent micturition.—Frequent and copious urination, urine clear as water.—Red sediment like brickdust.—The discharge of urine is slow, in small quantities, with violent burning pain.

15. Male Sexual Organs.—Genitals hot, red, swollen.—Frequent erections, with increased desire.—Lascivious mood, nocturnal emissions.—Loss of sexual power with constant dull burning pains in l. hypochondrium and pains across loins as if broken.

16. Female Sexual Organs.—Swelling and heat of pudenda.—Soreness of vulva; cannot bear pressure of clothing.—Inflammation of labia.—Great tenderness and irritation in extreme lower part of vagina, < when urinating; can walk a long distance, but is < after sitting in the house all day.—Menses too early; too profuse; and last too long.—Hæmorrhage from uterus, with passage of large clots, which escape when quiet, or when getting up to pass water.—Enormous black clots pass from vagina.—Mucous leucorrhœa, preceded by drawing, thrusting pain in inguinal, vesical, and pubic regions.

17. Respiratory Organs.—Fatigue of the vocal organs, even after speaking without exertion; the voice becoming rough and hoarse; respiration somewhat laborious.—Scraping sensation in the throat.—Hawking and coughing, with increased thirst.—The bronchial tubes are loaded with mucus.—Rawness in air-passages, causing cough.—Sensation of a crumb the size of a walnut sticking behind the larynx, obliging him to swallow constantly.—Whooping-cough; nightly, periodical attacks of cough from tickling in the larynx, ending with expectoration of a large quantity of viscid, stringy mucus.—Morning cough (6 am.); first barking, dry cough, followed by expectoration of viscid mucus; the difficult expectoration causes retching and vomiting.—Cough with expectoration of viscid, stringy, yellow, sour-tasting or reddish mucus.—Cough, in a warm room; > in a cold room.—Short paroxysms of cough, followed by easy expectoration of globules of mucus.

18. Chest.—Burning under the sternum.—In the chest sensation of heat, of soreness.—Oppression and soreness in chest.—Stitches and sticking pains in sides of chest.

19. Heart and Pulse.—Pressive pain in precordial region.—Sensation as if everything were pressed towards the heart.—Heavy pressure in the region of the heart.—Irregular beating and palpitation of the heart, with anxiety after eating.—Pulse accelerated.

20. Back.—Stitches between the shoulders.—Bruised pain in small of back and region of kidneys.—Violent pressive pain in region of kidneys.

21. Limbs.—Drawing, tearing pains in the limbs.

22. Upper Limbs.—Sensation as if a fine glass splinter were sticking in the tips of the fingers, under the nails.

23. Lower Limbs.—Violent stitches in the r. hip-joint.—Hot swelling of the knees.—Pain in the r. patella when walking.

24. Generalities.—Great weariness and prostration.—Itching and prickling sensations in the skin.

26. Sleep.—Irresistible desire to sleep.—Great sleepiness (after dinner). Vivid dreams.—Uneasy, restless sleep, interrupted by vivid dreams.—Frequent awaking during the night, with excitement, as if he had taken too much coffee.

27. Fever.—Chilliness all day; cold feet in the morning, with perspiration of the whole body.—Chilliness all over the body, esp. in the afternoon and evening.—Increased warmth of body.—Greatly overpowered by moderate heat.—Chilliness in the evening, with heat in the head, followed by general heat, and then perspiration all night, which relieves.—Perspiration when walking; on the lower extremities; in the morning.

Codeinum.

An Alkaloid of Opium. C_{18} H_{21} NO_3.

Clinical.—*Blepharospasm*. Chorea. Cough. Diabetes. Eczema. Gastralgia. *Numbness*. Pruritus. Restlessness. Spasmodic twitchings. Vomiting of pregnancy.

Characteristics.—*Codein* possesses many of the properties of opium, from which it is derived, but it has characters sufficiently distinctive to entitle it to a separate description. *Codein* seems to possess in great degree the exhilarating properties some persons experience on taking opium, though it is not without strong soporific effects as well. There are many disorders of sensation, notably troublesome itching. The characteristic here is "Itching with warmth." "Itching and heat of face and head." "A sensation of agreeable warmth" is another characteristic symptom. Convulsive twitchings of muscles and limbs, and especially of orbital muscles, are very marked. Twitchings prevent sleep at night. Numbness and prickling. *Codein* has in many cases controlled diabetes. Headache is < in morning; restlessness and cough < at night. Symptoms in general are < by motion and > by rest.

Relations.—*Compare:* Opium in sickness, pains in stomach and region of solar plexus, constipation, sexual excitement. Agar. (twitching of eyelids; Ars. (pains in

legs, nightly restlessness); Hyo. (twitching of eyelids after reading); Lach. (sensitiveness of surface); Rhus, Sul., Sul. ac. (trembling); Culex (vertigo on blowing nose).

Causation.—Fatigue and excessive mental excitement = headache.

SYMPTOMS.

1. Mind.—Great exhilaration of spirits.—Depression with desire to sleep, frightful dreams and dull headache on awaking.—Increased or diminished power of fixing attention or applying mind.—Bewildered on waking.—Confusion.

2. Head.—Dizziness on blowing nose.—When closing eyes objects appear to turn round.—Dull headache in morning, gradually diminishes towards noon when it disappears.—Dull headache soon after rising, < l. side, lasting about two hours.—Dull headache with dry lips and constant desire to moisten them.—Headache from fatigue and excessive mental excitement.

3. Eyes.—Involuntary twitching of l. eyelid, sometimes > by rubbing.—Involuntary twitching of both eyelids whenever he attempted to read or write.—Pupils contracted.—Sudden failure of vision.—On blowing nose sparks before eyes.

5. Nose.—Mucous discharge with irritation of the Schneiderian membrane.—Entire loss of smell for several days.

8. Mouth.—Mouth dry.—Unable to articulate.

9. Throat.—Strong pulsations in both carotids.—Tickling sensation in throat, in afternoons and evenings.

11. Stomach.—Great thirst with a particular desire for bitter substances.—Empty eructations with acute pains in stomach.—Nausea and vomiting; sometimes preceded by an agreeable glow at epigastrium.—Tenderness in stomach with violent pulsations of heart and carotids.—Violent spasmodic pain at pit of stomach (solar plexus).

13. Stool.—Constipation, with tenderness of bowels, esp. transverse and descending colon, and some flatulence.

14. Urinary Organs.—Semi-paralysis of bladder.—Quantity of urine increased and saccharine.

15. Male Sexual Organs.—Sexual excitement during the night, leading to pollutions.

17. Respiratory Organs.—Tickling in larynx which causes a cough.—Short, irritating cough < during night.—Troublesome cough with copious mucous, and sometimes purulent, expectoration; with nervous excitability.—Night cough of phthisis.—On inspiration, pain in r. lung; pain below scapula; stitching pains in l. lung.

19. Heart.—Uneasy feeling about heart.—Fluttering and oppression with great desire to walk in open air.—Painful pulsation when attempting to study or write.—Violent pulsations of heart and carotids.

20. Neck and Back.—Neuralgic pains from occiput to back of neck.—Convulsions in muscles of back.—Sharp pains extending from stomach and chest through to back, between shoulders, < on r. side.

21. Limbs.—Paralytic weakness in arms and legs.—Spasmodic twitches in arms and legs.—Numbness of hands and feet; prickling and numb sensation in various parts of the body.

22. Upper Limbs.—Pains in deltoids on moving arms.—Jerking pain in arm.—Pulsating pain in l. upper arm.

23. Lower Limbs.—In lower limbs involuntary twitchings; spasmodic jerkings; neuralgia and rheumatic pains.—Paralytic affections with extreme restlessness.

24. Generalities.—Extreme restlessness.—Trembling of whole body.—Marked sensitiveness of surface.—Choreic movements.—Symptoms are periodic, paroxysmal; at times sudden.

25. Skin.—Itchy; prickling.—Eczematous eruption with troublesome itching.—Itching with feeling of warmth.

26. Sleep.—Sleepy and drowsy.—Twitchings in sleep.—Cough disturbing sleep.—Frightful dreams.

Coffea Cruda.

Coffee. N. O. Rubiaciæ. Tincture of raw berries.

Clinical.—Apoplexy. Asthma. Aural neuralgia. Colic. Convulsions. Diarrhœa. Ecstasy. *Excitement*. Headache. Heart, hyperæsthesia of. Hernia. Hyperæsthesia. Hysteria. Intermittents. *Joy, ill-effects of*. Labour pains. Metrorrhagia. Neuralgia. Over-sensitiveness. Sciatica. Shock. Sleeplessness. Toothache.

Characteristics.—The effects of *Coffea cruda* have to be considered separately from those of *Coffea tosta*, since the roasting converts much of the Coffeine into

Coffeone or Methylamine, which gives to coffee its aroma. But the effects are scarcely distinguishable, and I have not attempted to keep them strictly apart. The provings of *Coff. c*. were made with the raw berries. *Coffea* belongs to the same family as *China, Ipecacuanha*, and like these remedies has many symptoms of intermittent fever. It has been noticed that coffee-drinkers who do get ague are more difficult to cure than those who do not drink coffee. The great characteristic of *Coffea* is exaltation of the senses and sensibility in general. Sight is improved, fine print can be read easily; hearing is more acute, and noises are intolerable. The sense of smell is heightened. All kinds of pains are intolerable; and are accompanied with fear of death. The mental activities are exalted. Sudden emotions, especially joy, produce dangerous symptoms. Great sensitiveness to touch or contact. These symptoms will recall *Acon*. Guernsey places it in the front rank of remedies for irritability. He compares four others with it, all of which have irritability in high degree, but have different concomitants: *Acon*., "fearful and anxious; dreads things"; *Aur*., "suicidal, will thrash around in bed (as females in confinement) as if wishing to injure or kill themselves"; *Cham*., "spiteful, uncivil"; *Coff*., "wakeful, on the constant move"; *Nux v*., "sullen, keeps the eyes shut; doesn't wish to speak or have anything to do with any one." *Staph*. and *Coloc*. deserve mention also. Teste groups *Coff*. with *Causticum*. He remarks that dynamised *Coff. crud*. prevents or neutralises, in many persons, the effects of roasted coffee. This quasi-isopathic action, as Teste truly remarks, is by no means confined to *Coffea*; dynamisations of many other drugs being antidotal to secondary effects of the crude substances. Hahnemann describes the migraine of coffee-drinkers thus: "It comes in the morning after waking, increasing little by little. The pain becomes intolerable, and sometimes burning, integument of head very sensitive and painful on slightest touch. Body and mind excessively sensitive. Patients look exhausted, retire to dark places, close their eyes to avoid light of day; remain seated in an armchair or stretched on a bed. The least noise or motion excites the pain. They avoid talking, being talked to, or hearing others talk. The body is colder than usual though no chills are experienced; the hands and feet are especially cold. They loathe everything, especially food and drink, on account of a continual sickness at the stomach. If the attack is very violent a vomiting of mucus takes place, which, however, does not relieve the headache. There are no alvine discharges. This kind of megrim scarcely ever leaves before evening. If the paroxysm is less violent, a little strong coffee which was the first cause of such a headache will produce a temporary palliation of the pain, but the disposition to relapse becomes so much greater. The attacks come irregularly, every fortnight, or every few weeks, without any apparent cause, and quite suddenly, so much so that the patient often does not feel a single unpleasant symptom the evening preceding the attack. Such a headache has never been seen by me except in real coffee-drinkers." It is well to inquire carefully into the dietary of patients who come complaining of headaches of this kind. More recently Dr. Gilles de la Tourette (*Lancet*, July 20, 1895) has described the effects of coffee. In his opinion they are very frequently mistaken for the effects of alcohol: "morning vomiting of glairy

mucus, pain in the pit of the stomach, thickly-coated tongue, loss of appetite. The disgust excited by even the idea of solid food is such that these patients eat nothing else but bread soaked in their poison-coffee. There supervene then nausea, vomiting, and painful acid eructations." The pulse is slowed. Insomnia is common, and if there is sleep it is disturbed by dreams of a terrifying nature, like those met with in alcoholism. The effects of coffee are less deep than those of alcohol, and quickly disappear when the habit is discontinued. *Peculiar symptoms* are: as if head too small; as if something hard pressing on surface of brain; as if head would burst and fly to pieces if she moved; as if intestines were being cut; as if body would burst; "tight" pain; sensation of warmth. *Coffea* is suited to tall, lean, stooping persons, with dark complexions. Sanguine choleric temperament, complaints during infancy and dentition. Diarrhœa in housewives who have much care and trouble in managing their households. The symptoms are > by warmth, and < in open air (though in toothache warm drinks <, cold drinks >). Touch <; would like to rub the part but it is too sensitive. Slight passive movements are perceived as enormous; children at times cannot bear to be carried about. Most symptoms are < at night, sleeps till 3 a.m., after which he only dozes.

Relations.—*Antidoted by:* Acon., Cham., Ignat., Nux, Merc., Puls., Sulph., and especially Tabac. (Teste). *Antidote to:* Bell., Cham., Cicut., Coloc., Lyc., Nux v., Strych., Valer. It is *incompatible with:* Canth., Caust., Coccul., Ignat. *Followed well by:* Aur., Bell., Op., Nux v., Lyc. *Compare:* Cypr. (ecstasy); Bry. and Cham. (toothache > by cold); Aco. (predicts hour of death); Coca, Codein, Coff. tost.

Causation.—Effects of sudden emotion, especially pleasurable ones. Fear or fright. Wine (wine-drinkers should take coffee; beer-drinkers should take tea). Over-fatigue and long journeys.

SYMPTOMS.

1. Mind.—Over-sensitiveness; weeping mood.—Great anguish; cannot be composed; is not able to hold the pen; trembles.—Sentimental ecstasy; excited imagination; increased power to think.—Excessive weeping and lamentations over trifles.—The pains seem insupportable, driving to despair.—Fright from sudden pleasant surprises.

2. Head.—Pains in the head, as if the brain were bruised (as if the brain were torn or dashed to pieces).—Semi-lateral cephalalgia, as if a nail were driven into the parietal bone.—In the vertex he feels and hears a cracking, when sitting quietly.—Heaviness of the head.—Congestion in the head, esp. when speaking (or after a pleasant surprise).

3. Eyes.—Eyes lively and red, with unusually clear sight; can read small writing more distinctly.

4. Ears.—Excessive sensibility of hearing.—Musical sounds seem to be too loud, and too sharp.—Hardness of hearing, with buzzing in the ears.

5. Nose.—Epistaxis, with heaviness of the head.—The sense of smell is more acute.

6. Face.—Heat of the face, with redness of the cheeks.

7. Teeth.—Successive pullings, and sharp pains in the teeth, with inquietude, anxiety and tears, esp. at night and after a meal.—Toothache, > by cold water.

9. Throat.—Sore throat; with great and painful sensibility, and swelling of the velum palati; < when swallowing.

11. Stomach.—Taste of hazel nuts, or sweet almonds, in the mouth.—Tobacco-smoke appears particularly agreeable.—Sensation of immoderate hunger, with rapid, hurried eating.—Thirst increased, esp. at night, it wakens him.—Bilious vomiting.—Cramps in the stomach, with pressive, shooting pains.

12. Abdomen.—Anxiety and oppression in the region of the epigastrium.—The clothes are oppressive.—Colic, as if the stomach had been overloaded, as if the abdomen would burst; cannot suffer the clothes to be tight on the abdomen.—Pressure in the abdomen as from incarcerated flatulence.—Abdominal pains which induce despair, esp. in women.

13. Stool.—Fæces soft, with frequent evacuation.—Diarrhœa, also during dentition.

14. Urinary Organs.—Abundant emission of urine, esp. towards midnight.

15. Male Sexual Organs.—Great excitement of sexual desire, with flaccidity or strong irritation of the genital parts; without emission of semen, and with dry heat of the body.

16. Female Sexual Organs.—Immoderate irritation of the sexual parts of females, with voluptuous itching, great secretion of mucus, and frequent flow of blood.—Metrorrhagia.—Labour and after-pains insupportably painful.

17, 18. Respiratory Organs and Chest.—Short, jerking, dry cough, with great irritation in the larynx, and anxious tossings.—Oppression of the chest; obliged to take short inspirations; the breathing heaves the chest visibly.—Night cough (cough with measles).—Fits of suffocation.

19. Heart.—Palpitation of heart; violent, irregular, with trembling of limbs.—Nervous palpitation.—Palpitation after excessive joy, surprise.

22. Upper Limbs.—Trembling of the hands, while grasping anything.—Cramp-like contractions of the fingers.

23. Lower Limbs.—Cramps in the calf of the leg, on bending the knee.—Cramps in the soles of the feet on bending the instep.—Trembling of the feet.

24. Generalities.—Painful sensitiveness of the parts affected.—Great flexibility of the muscles, and activity of the whole body.—Mental and physical excitability.—Aversion to the open air, with uneasiness and aggravation of the symptoms during a walk in the open air.—Twitching of the limbs.—Convulsions, with grinding of the teeth, and coldness in the limbs.—Violent shivering, with feverish increase of bodily heat.—Fever with inconsolable anguish.—Shuddering with colic and violent agitation.—The pains are felt intensely, driving to despair, and inclination to weep.—Tears, howls, cries, tossing and discouragement, esp. during the paroxysm of pain.—Cries of children.—Anxiety of heart and of conscience, with apprehensions.—He feels unusually well.—Vivacity and excessive loquacity.—Vivacity and elevation of the imagination, with acuteness of the intellectual faculties.

25. Skin.—Eruptions (measles), with over excitability and weeping.

26. Sleep.—Sleeplessness, from over-excitability of mind and body (sleeplessness of lying-in women).—Sleeplessness from excitement of the imagination, flow of ideas, and fantastic visions.—Inclination to lie down and to shut the eyes, without being able to sleep.

27. Fever.—Chilliness increased by every movement.—Internal chilliness, with external heat of the face and body.—Chills running down the back.—Dry heat in the evening after going to bed, with chilliness in the back.—Nightly, dry heat, with delirium.—Perspiration on the face, with internal chilliness.

Coffea Tosta.

Coffee. N. O. Rubiaceć. Infusion of the well-roasted berries.

Clinical.—Antidote to poisons. Labour pains. Migraine. Nervous excitement, effects of. Seminal emissions. Urinary affections. Vertigo.

Characteristics.—The symptoms of *Coffea t.* have been principally obtained from sensitive persons on whom strong coffee has acted injuriously; and the clinical uses have been mainly based on these. But a word must be said about the antidotal effects of *Coffee*. As an allopathic antidote to *Opium* in poisonous doses its value is well known. In addition to Opium and its derivatives it counteracts the effects of *Nux vomica, Belladonna*, narcotic mushrooms, poisonous sumach, tobacco, bitter almonds, Prussic acid, *Coloc., Valer., Cicuta, Chamom.*, salts of *Antimony, Lead, Phosphorus, Phosphoric acid*. On account of its extensive antidotal

properties *Coffee* has largely been condemned by homśopathic practitioners; but it should be remembered that it does not antidote all other medicines, and it is questionable if it counteracts the effect of many of the above-named drugs when they are given in high potencies. In any case it is desirable to forbid its use when *Bell., Cham., Coloc., Ignat., Lyc*., and *Nux* are being given. *Coffea tost*. is serviceable against both cold and heat. Beneficial to persons who live in the open air. It has caused and cures dynamically a toothache like that of *Coff. crud*. when > by cold; "cold water > intense pain in sound teeth of right lower jaw." (I have several times cured a toothache like this with *Coff. c*. 30.) *Coffea tost*. is useful in confinements to relieve the excess of suffering which some women experience—"pains intolerable." It is useful also in heart affections where there is troublesome palpitation from heart-irritability; and in general nervous excitement. Whilst it is generally given in the form of black coffee in such conditions it is also available for use in the attenuations. Other indications for its use are: Tense arteries. Periodic headaches in hysterical women. Nervous and gastric headaches. Vomiting on least exertion. Diarrhśa from overwork and too much care. Gout and rheumatism with tendency to form chalk-stones. There is a definite and extensive proving of *Coff. t*. given in Allen.

Relations.—*Compare:* Coff. crud., Coffein. *Antidoted by:* Caps.; see also Coff. c.

SYMPTOMS.

1. Mind.—An agreeable mental excitement causing wakefulness.—Vivacity of thought, versatility.—Symptoms would Come Suddenly and take away all mental energy.

2. Head.—Vertigo, with whirling sensation in head, causing a general faint feeling, < when thinking; has to banish reflection; with burning in stomach; partial > by change of position.—Sensation as if everything in the head were going in circles, now in one direction now in another; with incessant noises in the ears.—Rush of blood to head.—Violent headache; < by motion.

3. Eyes.—Intolerance of candle-light; it is surrounded by a halo.—Sensation of fog before eyes.—Muscć volitantes.

4. Ears.—Every step, or loud word, is painfully felt in the ears.—Ringing, roaring, buzzing, singing in ears.

6. Face.—Face pale; puffy; anxious.

7. Teeth.—Seized with such an intense pain in r. lower (sound) teeth, that it nearly drove him crazy.—Nothing relieved but cold water. So soon as the water became warm in the mouth the pain returned.

11, 12. Stomach and Abdomen.—Nausea with faintness; with ineffectual efforts to vomit.—Vomiting with difficulty.—(Vomiting without the least exertion.).—Heaviness and distress in epigastrium; sensitive to touch and pressure; < by cold food or drink.—Extreme sensitiveness of hepatic region.—Sticking pains in abdomen.

13. Stool and Anus.—Hćmorrhoids.—Discharge of exceedingly bright blood, every morning, with the regular stool.—Copious evacuation after the first dose followed by constipation.

14. Urinary Organs.—At close of micturition, a slight milky discharge.—It diminishes all the solid constituents of the urine, except the existing phosphates.

15. Male Sexual Organs.—Weakness of sexual power.—Seminal emissions, 3 a.m., with voluptuous itching; followed by chill and cold, clammy sweat.

16. Female Sexual Organs.—Spasmodic sensation deep in uterine region, it seems as if something tried to press outward and could not, because it constantly gave rise to spasms.—(Severe labour pains, patient becoming greatly excited; severe pains in small of back.).—Menstruation increased and prolonged.

17. Respiratory Organs.—Diminution of amount of expired carbonic acid.—Asthma; with oppression of chest.

19. Heart.—Palpitation: from irritable heart; with vertigo and fainting.—Arteries tense.

21. Limbs.—Trembling of limbs.—Jerking of limbs (secondary effect).

24. Generalities.—Great excitement.—Trembling.—Hćmorrhages: (from nose, lungs, stomach, and rectum).—L, side most affected.—Aversion to open air, which <.—General > from moderate outdoor exercise.

26. Sleep.—Complete sleeplessness.—Wakefulness, with ecstatic excitement, intermitting with dreams.—When going to sleep, starts up suddenly in affright, with groans and fear of falling, or of seine impending danger.—Visions of enchantment; followed by dreams of death of dear friends, which do not abate the cheerfulness or exhilaration, but he looks at all with supernatural indifference.

27. Fever.—Chilliness, with general shaking and chattering of teeth cannot get warm; chills, ascend from fingers and toes, and thence to nape of neck and vertex (> by cayenne pepper taken internally).—Excessive heat, threw off clothing and sat in a draught.—Orgasm of blood.—Flushes of heat.—Sensation of alternate warmth and coldness moving about in the bowels.—Sweat: general; profuse; cold, clammy, esp. in palms of hands.

Coffeinum.

Coffein or Caffein, an alkaloid obtained from Coffea arabica. $C_8 H_{10} N_4 O_2$. Trituration of the alkaloid, and also of the Citrate of Coffein.

Characteristics.—A proving has been made with this alkaloid, but has brought out no symptoms not included in the pathogenesis of *Coffea*. Pulsation of the arteries on head and temples was very marked. Sparks before eyes—roaring in the ears. Vomiting with relief of all symptoms. The *Citrate of coffein*, which is used largely in allopathic practice, has occasioned dangerous poisonous symptoms in a number of cases. These seem the most characteristic: Restlessness and dizziness; unable to keep erect. Violent precordial anxiety. Palpitation. Abdominal pulsation. Violent trembling of all the extremities. Grating of the teeth. Features expressive of the greatest anxiety. Feeling of constriction of the neck and throat, recurring periodically every fifteen minutes. Pulse very rapid.

Colchicinum.

Alkaloid of Colchicum autumnale. $C_7 H_{23} NO_6$. Trituration.

Clinical.—Diarrhœa. Fever. Intestinal catarrh. Prostration. Sleeplessness. Spasms.

Characteristics.—This alkaloid has been proved and the symptoms are sufficiently distinctive, though I am not aware of any clinical experience with it. The symptoms point strongly to its use in that form of intestinal catarrh characterised by the appearance of shreddy membranes; and the symptom, "convulsive jerkings of right hand," should prove a valuable indication, if not a keynote.

Relations.—*Compare:* Ars., Caust., Colch.

SYMPTOMS.

3. Eyes.—Pupils widely dilated.

6. Face.—Tearing pains in face.

9. Throat.—Increased secretion of saliva.

11. Stomach.—On rising from bed, at night, nausea suddenly increased, and was followed by vomiting of undigested food, and afterwards of a bitter greenish fluid; the vomiting was repeated early in the morning.—Vomiting of blood for nine or ten days.—Pains and excessive sensitiveness in epigastrium.

12. Abdomen.—Distension and sensitiveness.—Frequent rumbling.

13. Stool and Anus.—Urging, causing him to leave his bed, followed by copious pasty evacuation, with excessive tenesmus; this was repeated three times within a short period.—Stools accompanied with tenesmus and consisting of a thin fluid with numerous flakes looking like the cooked white of egg in pieces from two to four inches long.—Stools thin, yellowish green, slimy, accompanied by pain.—Liquid stools.

14. Urinary Organs.—Urine turbid, depositing a copious white sediment.

19. Heart.—Pulse during the first two hours sank about eleven beats.

22. Upper Limbs.—Convulsive jerkings of r. hand.

24. Generalities.—Very great exhaustion on second day, increasing to feverish excitement lasting two days.

26. Sleep.—Slight somnolency and collapse.—Awakened from sleep soon after midnight by uneasy dreams.

27. Fever.—Chill about noon on first day, followed by violent heat lasting several hours, with increased thirst, very rapid pulse, confusion of the head, uneasiness and sleeplessness.

Colchicum.

Colchicum autumnale. Meadow Saffron. N. O. Melanthaceć of the Liliaceć. Tincture of the bulb dug in spring.

Clinical.—Appendicitis. Asthma. *Cataract*. Cholera. Colic. *Cough. Cramp*. Debility. Diabetes. *Diarrhśa*. Dropsy. Dysentery. *Eye, affections of. Feels, painful. Gout*. Heart affections of. Ileus. Intermittent fever. Intestinal catarrh. *Lumbago. Myalgia*. Nephritis (rheumatic and gouty). Pericarditis. Proctalgia. *Prostatitis*. Rectum, prolapse of. *Rheumatism. Stiff-neck*. Tongue, sensibility lost. Typhlitis. Typhoid fever.

Characteristics.—*Colchicum* is best known as a remedy in gout and rheumatism, and the provings show its specific relation thereto. It acts on muscles, bones, and joints. It causes extreme relaxation of the muscular system—the head falls forward on the chest; or falls back when the patient is raised from the pillow; arms fall helpless by the side. Stitching, jerking, drawing pains in muscles; periosteum, and joints. Extreme disinclination to move; < from motion. Mind befogged; but answers correctly. Absence of apprehension, no fear of death. Results of getting wet and Letting chilled; changes to damp weather; autumn dysentery, spring

rheumatism. (The flowers of the plant appear in autumn; the leaves not till the following spring.) It corresponds to the gouty constitution; leuco-phlegmatic and melancholic temperament; venous constitutions; uric acid diathesis, the sediment being pale yellow and rather like fine flour than sand. Also, urine black as ink; urine loaded with albumen and casts. There is the irritability and aversion to touch so common in gout; pain in small joints, and especially the great toes. The stomach is acutely disordered, nausea and vomiting. "Nausea at thought, sight, or smell of food, especially of cooking," is a characteristic symptom. (Nash records a striking cure by *Colch*. 200, to which he was led by this symptom. The patient was an old lady who was vomiting blood, and passing as many as sixteen bloody stools in the day. *The doors of the room had to be most carefully kept closed* to prevent any smell of cooking reaching her as that immediately provoked nausea.) Sensation of icy coldness in stomach; or burning. Coldness is a common symptom: abdomen; stomach; extremities. Profuse cold sweat; marked chills with or without periodicity. Burning also is not uncommon: in cavities, especially abdomen. The characteristic stool of *Colchicum* is jelly-like mucus; membranous shreds being also marked; violent tenesmus accompanies. Protrusion of rectum. "After evacuation, as in dysentery, there is *generally* relief (but in typhus fever, *e.g.*, sometimes a terrific spasmodic pain of the sphincter ani comes on after stool. This may occur in common diarrhśa)" (Guernsey). The rice-water stool, hippocratic face, coldness, cramps, prostration, led Salzer to find in it the specific for certain epidemics of Asiatic cholera. All functions, mental and bodily, are slow; nutrition and digestion are at a stand, and yet the patient does not emaciate rapidly. There is great prostration; debility from loss of sleep; the prostration of typhoid fever and typhoid states. On the other hand there are convulsions, cramps, and sometimes restlessness. The pains of *Colchicum* are very acute and unendurable. The *Colch*. dysentery and rheumatism are exceedingly painful. Very sensitive and irritable. Cannot endure strong smells. Gouty diabetes, the uric acid reappearing as the sugar disappears. The heart is affected as other muscles. Oppression and anxiety > by walking. Heart-beating. Stitches about heart and loss of consciousness. Heart affected (pericarditis) on disappearance of symptoms from extremities; rheumatism appears on disappearance of uric acid from urine. *Colch*. will reverse this. J. R. Simson, of Tonawanda, N. Y., cured a very bad rase of typhoid presenting among other symptoms, this: "his left pupil was contracted so as to be almost imperceptible, while the right was dilated to the full extent." This is peculiar to *Colch*., and no remedy relieved the patient till he received this. B. Simmons calls attention (*H. P*., August, 1889) to the *powerlessness* of the affected parts which accompanies many *Colchicum* affections, especially when occurring in leuco-phlegmatic subjects and when there is śdematous swelling of the parts. He cured a woman, 36, mother of two children, of leuco-phlegmatic temperament, who complained of rheumatism of the hands, which were swollen; joints stiff and powerless, pain as if bruised; the arms being affected but in less degree. "She was unable to brush her own hair, not so much from the pain as from the extreme weakness and powerlessness of the parts affected." T. F. Allen gives "Tingling in

finger-nails" as characteristic of *Colch*.; no other remedy has it. As usual with allopathic specifics, *Colchicum* has been terribly abused. Here is an instance. I was called suddenly to see an old gentleman of 72, whom I found in a state of collapse, pallid, surface was cold and clammy, almost pulseless. He had been taken suddenly ill when in the water-closet, vomiting "black bile," and had fallen on the floor when trying to walk along the passage. The history of the attack was this: He had formerly been "a martyr to gout." Four years previously he began to take, on lay recommendation, a powder which analysis showed to be composed of equal parts of *Colchicum* and Jesuit's bark. He kept this up for six months and had no more gout. But at the end of the six months he had the first attack of this kind. It came quite suddenly and was, as far as I could learn, identical with the one in which I saw him. In addition to the symptoms named there was looseness of the bowels, the stool being black like the vomit. He was compelled to lie absolutely still, the least attempt to raise the head exciting nausea. Recovery took place in a few days. This is not exactly a case of what our friends would call "*médecine substitutive*," but I am inclined to name it "*maladie substitutive*," the substituted malady, *Colchicism*, being considerably worse than the gout it replaced. These attacks had recurred every few months, although the powders were discontinued. The < from motion is as marked as that of *Bry*. The patient must rest and lie down. Cannot lie on left side. < From any exertion mental or bodily. Bending forward > oppression and colic. Symptoms are < night and evening. Warmth > generally; but warm food < toothache; and damp, warm weather = profuse watery stools; warm stove or warm room = chilliness. Symptoms generally are < from cold or damp; from getting wet; from bathing, living in damp dwellings; change to damp weather; from change of weather; also complaints from getting overheated. Pains in gout go from left to right; headaches right to left. Complaints of old people; asthmatic people.

Relations.—*Antidoted by:* Bell., Camph., Coccul., Nux v., Puls., Spigel., honey and sugar. In poisoning give Ammon. caust. in sugar water. *Follows well:* Lyc. *Followed well by:* Carb. v. (ascites). *Compare:* Aco., Arn., Ars. (Colch. has the prostration of Ars., but without its restlessness); Cact. and Abrot. (metastasis to heart); Bry. (gout, rheumatism, serous effusions, < by movement); Chi., Coccul., Merc., Nat. m., Nux, Op., Pod. (painless cholerine); Puls. (derangement of stomach by eggs; gout; nausea at smell or thought of food, especially if rich or fat); Sep., Calc., Ars., and Ambra. (icy coldness in stomach); Lach. (black urine; < smell of food; cholera); Ver. (cholera, cold sweat on forehead); Bar. c. (paralysis of tongue; cold, loss of sensibility); Nux (debility from loss of sleep; irritability, all external impressions annoy; the debility of Colch. is more profound and there is dislike of all food, and nausea from smells). Colch. is botanically allied to the Veratrums, the Alliums, and Iris. Teste includes it in his Zincum group. *It antidotes:* Thuja.

Causation.—Grief. Misbehaviour of others. Wetting. Checked perspiration.

SYMPTOMS.

1. Mind.—Great dejection.—Ill-humour.—Peevish; dissatisfied with everything.—The sufferings appear insupportable.—The least external impression (bright light, strong smells, bad manners) drives him to distraction.—Weakness of memory.—Great desire for rest and disinclination to every mental exertion; absence of mind.—Forgetfulness and distraction.

2. Head.—Giddiness when sitting down after walking.—Pulsations in the head.—The headache is relieved, after supper, from warmth and lying quiet in bed.—Pressure on the occiput, during intellectual exertion.—Cramp-like pains in the head, esp. above the eyes.—Semilateral tearing in the head.—Tingling in the forehead and upon the head.

3. Eyes.—Pupils much dilated, only slightly sensitive to light, or immovable or slightly dilated.—L. pupil contracted, while r. is dilated (typhoid).—Pains in the eyes, like a digging pulling, deep in the eyeball.—Swelling of the lower lids.—Watering of the eyes in the open air.—(lritis; keratitis; maculć).—Suppuration of the Meibomian glands (ulceration, left lower lid); burning and redness of the edges of the eyelids.—Visible traction in the lower lids.

4. Ears.—Otalgia, with tearing shootings (after measles).—Tingling in the ears, as if they had been frozen.—Sensation of obstruction in the ears.—Purulent discharge from the ears, with drawing pains.—Dryness of the ears.

5. Nose.—Aching pain in the bones of the nose.—Tingling in the nose.—Pains as from excoriation in the septum narium, aggravated by touch.—Bleeding of the nose in the evenings.—Excessive sensibility of smell.—Obstinate coryza, with snuffling of a great quantity of viscid mucus, proceeding from the nose.

6. Face.—Features disfigured.—Aspect sickly, sad, suffering.—Face spotted with yellow.—Very great paleness of the face.—Cheeks red and hot (afternoon).—Śdematous swelling of the face.—Sensation of separation in the bones of the face.—Sensation in the masseters, as if they were distended, with difficulty in opening the mouth.—Drawings and successive pullings in the muscles and bones of the face.—Semi-lateral tearing in the face, extending to the ear and the head.—Tingling in the skin of the face, as if it had been frozen.—Lips cracked.—Tearing in the lower lip.—Cramp-like pain in the maxillary joint.

7. Teeth.—Odontalgia, with tearing pains.—Sensibility of the teeth, when they touch on closing the jaws.—Acute pains in the gums.

8. Mouth.—Heat in the mouth.—Tearing in the palate.—Abundant, serous salivation, with dryness of the throat.—Heaviness, stiffness, and insensibility of the

tongue.—Tongue coated white.—Smarting and sensation of dryness of the tongue and throat.

9. Throat.—Sore-throat, as if from swelling of the orifice of the śsophagus.—Tingling in the palate.—Constriction of the gullet.—Inflammation and redness of the palate, of the fauces.—Inflammations, tearings and shootings in the palate, and in the throat.—Accumulation of greenish mucus in the throat, and in the mouth.

10. Appetite.—Appetite suddenly ceasing, merely from the sight or smell of food, with loathing, when merely looking at it, and still more from smelling it; the smell of broth nauseates, and that of fish, eggs, or fat meat almost makes him faint.—Insipidity of food.—Great thirst, esp. for coffee.—Taste bitter; violent thirst.

11. Stomach.—Frequent eructations.—Constant hiccough.—Nausea, increased, so as to occasion loss of consciousness, by the smell of fresh eggs, or fat meat.—Nausea, during a meal.—Nausea, after swallowing the saliva.—Nausea, in an erect position, when moving at table, with inclination to vomit, with constant flow of saliva.—Vomiting of food, or of bile, or mucus, of the ingesta, with trembling, violent gagging, colic, succeeded by bitterness in the mouth and throat; every motion excites or renews the vomiting.—Stomach very sensitive to the touch.—Sensation of excoriation, and tingling in the stomach.—Sensation of cold, or of burning in the stomach, with heavy pain.—Shooting in the pit of the stomach.—Sensation of gnawing hunger in the stomach.

12. Abdomen.—Inflation and fulness of the abdomen.—Pressure towards the outside in the upper part of the abdomen.—Colic, with tearing pains.—Pain, as of excoriation, in l. side of abdomen, on its being touched.—Dropsical swelling of the abdomen, with a fold over the pubic region.—Pain, as of burning and pressure in the abdomen, in the region of the bladder, and in the internal genital parts.—Pulsation in the abdomen.

13. Stool and Anus.—Constipation.—Evacuations slow, difficult, scanty, with urging, even of the soft stool, with pain in the small of the back.—Involuntary evacuation of fćces.—Watery discharges, going off without sensation.—Diarrhśa, consisting of mucus like rice-water.—Dysenteric diarrhśa, of white, transparent, gelatinous mucus.—Ineffectual pressing to stool; he feels the fćces in the rectum, but cannot expel them.—Discharge of much mucus from the rectum.—Extremely painful stools.—Sanguineous evacuations, mixed, as it were, with false membranes.—Prolapsus recti.—Tingling itching, burning, and tearing in the anus.—During stool sensation as if the sphincter ani were torn to pieces.—Cramps in the sphincter ani.

14. Urinary Organs.—Urgent want to make water, with increased discharge of clear urine.—Scanty discharge of urine of a deep colour, with tenesmus, and a

burning sensation.—Painful and scanty emission of urine of a bright red colour.—Brownish or blackish urine.—Whitish deposit in the urine.—Burning sensation and pressure in the urinary organs, and the bladder, with diminished secretion.—Pullings, tearings, and incisive pains in the urethra.—Frequent micturition.

17. Respiratory Organs.—Tingling in the trachea.—Tickling in the pharynx, which excites a small dry cough.—Frequent short and dry cough.—Nocturnal cough, with involuntary emission of urine.—Hoarseness in the morning with roughness of the throat.

18. Chest.—Difficulty of respiration, and oppression at the chest, with anxiety; relieved by bending forward.—Tensive, pressive, and periodical oppression of the chest; frequent pressure in small spots in the chest.—Shootings in the chest, sometimes on breathing.—Tearings in the chest, with obtuse lancinations.—Pain, as of excoriation in the chest, on being touched and during movement.—Tingling in the chest.

19. Heart.—Violent palpitation of the heart.—Pressure and oppression in the region of the heart, as if an attack of apoplexy threatened; > by walking.—Hydrothorax.

20. Neck and Back.—Shooting tension between the shoulder-blades.—Tearings in the back.—Pain, as from excoriation in the loins, during movement.—Drawing in the small of the back; worse during motion.—Soreness in the small of the back when touching it.

22. Upper Limbs.—Stitches in the r. shoulder.—Painful lameness in the arms, which makes it impossible to hold the lightest thing.—Trembling of the r. hand preventing writing.—Tearings in the arms, the hands, and the fingers.—Paralytic pain in the arms.—Trembling of the hands.—Heat of the palms of the hands.—Cramp-like contraction of the fingers.—Tingling in the fingers, as if they had been frozen.—Tingling in the finger-nails.—Torpor in the extremity of the fingers.

23. Lower Limbs.—Tearings in the legs, the feet, and the toes.—Paralytic pullings in the thighs.—Hot (śdematous) swelling of the legs, with acute pains during movement.—Tingling of the toes, as if they had been frozen.

24. Generalities.—Rheumatic and arthritic tearing in the limbs, and other parts of the body, esp. in warm weather.—Tingling in many parts of the body, as if frost-bitten, when the weather changes.—Tearing twitches, like electric shocks, through one side of the body, with sensation of lameness.—Starting, shootings in the muscles, and in the periosteum of the limbs, esp. in cold weather.—Frequent starting of the body.—Shooting in the joints.—Paralytic weakness, of the muscles.—Pains accompanied by paralytic weakness, and real paralysis.—Great

weakness, with sensation of lameness through all the limbs.—Dropsical swellings.—The sufferings are singularly aggravated by intellectual fatigue, by touch, by too brilliant a light, and by the smell of pork.—Aggravation of the symptoms from the commencement of the night till morning.—General sinking, and consequent painful sensibility of the whole body, so that the patient cannot move without groaning.—Nervous fatigue and weakness from nocturnal labour.

25. Skin.—Itching, as from nettles.—Tingling in different parts, as after being frozen.—Śdematous swelling and anasarca.—Suppressed perspiration.

26. Sleep.—Drowsiness in the day, with unfitness for exertion.—Irresistible sleepiness, drowsiness.—Sleeplessness from nervous excitability.—Sleeplessness, without entire unconsciousness.—Sleeplessness, because he cannot lie on the l. side, on which he is accustomed to sleep.—Frequent waking with fright.—Nocturnal heat, with violent thirst.

Collinsonia Canadensis.

Horsebalm. Richweed. Stone-root. N. O. Labiatæ. Tincture of fresh root. Trituration.

Clinical.—Constipation. Diarrhœa. Dropsy (cardiac). Dysentery. Dysmenorrhœa. Dyspepsia. Hæmorrhages. *Hæmorrhoids*. Heart, affections of. *Irritation. Labour. Pregnancy, affections of*. Proctitis. Pruritus vulvæ. Rheumatism.

Characteristics.—*Collinsonia* is native to North America. It has a very tough, hard, knotted root. It has been proved twice, first by Burt and later by Dowla. The former took the tincture, the latter the powder. Both experienced headache, the former in connection with abdominal and rectal disturbance, the latter with flushing, sensation of heat, numbness, feeling of enlargement. The legs felt light, as if he could run like a deer. *Nux vomica* relieved the sensations, the symptoms passing off from above downwards. In Dr. Burt's case the symptoms generally passed from above downwards. As a domestic remedy, and among the eclectics, it is known as a remedy for chronic catarrhal conditions, especially of stomach, bowels, and bladder; also of nose, pharynx, and larynx, and in tubular and capillary bronchitis. It is, according to Hammond, "a stimulant, a most valuable tonic, a positive diuretic and mild laxative." Hammond also commends it in the palpitation of the menopause. F. S. Smith mentions that it has a domestic reputation in rheumatism. He records a case (subacute) in a woodsman of 30. It began in foot and ankle, and travelled over nearly every joint in the body. A few drops of Collins. Ø was mixed in a tumbler of water, and a teaspoonful given every two hours. Rapid cure resulted. He utters a caution against using low potencies where there is organic heart affections. It is useful in heart affections alternating with

suppressed hæmorrhoidal bleeding; sensitiveness about the heart, fulness, oppressed breathing, faintness. Dewey mentions that it cured a case in which there was severe constrictive pain about the heart in a man who habitually passed blood by stool, the heart symptoms coming on when the bleeding ceased, and disappearing when it was re-established. *Collins*. cured both. It has cured inveterate cases of dyspepsia with weight in epigastrium and piles.

Neuralgia and rheumatic pains were experienced by the provers in many parts: upper jaw, arms, hands, knees, joints. The greatest number of Dr. Burt's symptoms were experienced in the bowels and rectum: Pains in umbilicus and hypogastrium, constipation with hard light stools, great straining, faintness; stools of mucus and blood. These symptoms suggested the use of the remedy in cases of piles, where it has proved most efficacious. Piles during the catamenia. Prolapse of the rectum with piles. The heart was markedly affected: irritation of cardiac nerves; palpitation, faintness, oppression. Nash has cured cases of the most obstinate constipation with *Collins*. In one there was severe colic, which had recurred for several years, the concomitant symptoms being great flatulence and hæmorrhoidal troubles. He differentiates between *Æsc. h*. and *Collins*. (both of which have sensation as if rectum was full of sticks) thus: *Æsc*. has sense of *fulness in rectum*, which *Collins*. has not. *Æsc*. piles do not bleed as a rule; those of *Collins*. bleed persistently, *Æsc*. has pain, soreness, and aching in the back [and, I may add, < by walking.—J. H. C.]. *Collins*. has more persistently constipation, with colic on account of it. *Æsc*. may have constipation or may not. *Collins*. has shown marked power of disturbing the circulation and causing hæmorrhages, and also of disturbing cutaneous sensation. The symptoms are < evening and night, and > in morning. < By slightest emotion or excitement.

Relations.—*Antidoted by:* Nux. *Compare:* Lycopus (botanical; heart); Æsc. h., Ham., Alo., Nux, Sul. and Ign. in piles; Carb. v., Graph., Ign., Lach., Pul. and Sul. in piles during menses; Pod. (prolapse of rectum); Op., Coloc., Arn., Diosc., Hydrast.; in functional paralysis from fatigue in mental emotions, Stan., Coccul., Ign., Pho., Nat. m.

SYMPTOMS.

1. Mind.—Gloomy.

2. Head.—Dull, frontal headache with constipation or piles; or from checked hæmorrhoidal discharge.

6. Face.—Flushing with heat of face and lips numb; pricking as if with needles.

8. Mouth.—Whitish coating of tongue, with loss of appetite.—Tongue coated yellow along centre or base, with bitter taste.

11, 12. Stomach and Abdomen.—Nausea, with cramp-like pains in stomach; with cutting pains in hypogastrium; with constipation during pregnancy.—Vomiting with pains and heat in stomach.—Weight in epigastrium.—Sharp cutting in stomach every few minutes while sitting.—Heavy dragging ache in pelvis.—Colic with flatulence and nausea.

13. Stool and Anus.—Pure mucous stools, or mucous stools mixed with dark substances; before stool, severe pain in lower abdomen; during stool, tenesmus; after stool, little pain; vomiting.—Dysenteric stools.—Hæmorrhoidal dysentery with tenesmus.—Obstinate constipation with hæmorrhoids; stools very sluggish and hard, accompanied by pain and flatulence.—Hard, lumpy, knotty stools.—Light dry balls.—Bowels more apt to act in evening than in morning.—Bowels not moved for days, constant pressure in rectum with a heavy dragging ache in pelvis.—Piles with constipation, or even with diarrhœa, bleeding or blind and protruding.—Feeling of sticks, or gravel, or sand in rectum; evening and night; > in morning.—Flowing piles, hæmorrhage incessant though not profuse, with alternate constipation and diarrhœa.—Itching or burning in anus with swelling.

15. Male Sexual Organs.—Varicocele with extreme constipation.—Spermatorrhœa kept up by piles and constipation.

16. Female Sexual Organs.—Uterine diseases depending on diseases of rectum and bowels.—Dysmenorrhœa with hæmorrhoids.—Pruritus vulvæ with hæmorrhoids; during pregnancy.—Diarrhœa after confinement.

17. Respiratory Organs.—Hæmorrhage from lungs with short, hacking cough, dark, tough, coagula enveloped in viscid mucus; uneasiness in chest, but no pain; with rectal symptoms.—Pains in chest alternating with piles.

19. Heart.—Cardiac hyperæsthesia.—Periodical attacks of faintness and oppression, < slightest motion.—Palpitation in pile subjects; piles return as heart is relieved.

21. Limbs.—Tearing pain in arms, hands, and legs; frontal headache.—Tearing in both knees, passing down inside of legs to feet while sitting; dull frontal headache.

24. Generalities.—Sensation as if face and limbs were enlarged, with warmth, numbness and pinching as from innumerable needles lower extremities seemed not to belong to him.

Colocynthinum.

An active principle (glucoside) of Citrullus colocynthis. C_{56} H_{84} O_{23}. Dilutions in alcohol.

Clinical.—Colic. Cough. Debility. Diarrhœa. Feet, burning in. Genitals (male), congestion of; pain in. Headache. Neuralgia. Spinal pains. Travelling, effects of.

Characteristics.—Having had a separate proving, *Colocynthinum* must be considered apart from *Colocynth*., from which it is derived, although the symptoms of the two bear a close resemblance. Neuralgic symptoms are prominent. Stitches and sensations of heat are found in many parts. Pulsation in the pit of the stomach, with prickling stitches on back in neighbourhood of middle thoracic vertebræ. Diarrhœa and colic > bending forward. Congestion to male genital organs and pain in them. Burning pains in soles of the feet. < Evening; by motion; riding in cars. > By rest; bending over; black coffee. < By motion; > by rest:—herein appears the relationship of the glucoside to *Bryonia*, the botanic relative of *Colocynthis*.

SYMPTOMS.

1. Mind.—Depression.

2. Head.—Painfulness of whole head, esp. temporal and frontal regions, scalp, and eyeballs, < moving eyes, straining sight, or bending forwards.—Headache < by riding in railway cars, obliging to move slowly, and tread softly, otherwise the brain seems to shake about as if loose against the skull (in the median vertical region); accompanied by very sore pain and causing very bad humour.—Stitches in brain; through occiput on heavy treading; through cerebellum, like lightning, on coughing.—Sensitiveness of cerebellum on turning head.

3. Eyes.—Vision sharper.—Painfulness and aching in eyeballs < straining sight, moving eyes rapidly, or turning head.

6. Face.—Pressure in left cheek-bone.

8. Mouth.—Pain in hollow molar and drawing in incisors, with sensation of swelling of l. cheek.—Persistent, disgusting, bitter taste.—Prickling and metallic taste on tip of tongue.

11. Stomach.—Continual burning pressure in stomach up into œsophagus.—Sticking in epigastrium; which was tense and inflated.—Pulsation in epigastrium accompanied by pricking stitches on back near middle thoracic vertebræ.

12. Abdomen.—Warm feeling followed by copious discharge of flatus.—Colic with inflation in umbilical region; colic below umbilicus.—Slight colic drawing from hypogastrium to hepatic region, with shuddering in scrotum, erections, and pain in buttock.—Tension in r. groin and drawing along spermatic cord into r. testis, which was somewhat sensitive towards evening; < next morning, and < walking, bending over, and going upstairs.—Stitches from small of back to groin when walking.

13. Stool and Anus.—Tickling in rectum.—Feeling of moisture at anus.—Irresistible inclination to stool; scanty brownish-red evacuation with painful tenesmus lasting ten minutes.—Brown pappy evacuations, rapidly and easily discharged in quick succession, without tenesmus.

14. Urinary Organs.—Tenesmus in urethra and rectum after urinating.

15. Male Sexual Organs.—Congestion towards genital organs, esp. scrotum, with feeling of heat and burning in small spot on same, without erections.—Cramp-like pain in penis with sensation as if it were bent double.—Dark redness and painfulness of frenum.—Crawling on penis with sexual desire.—R. testis swollen and painful to touch.—A pollution at night (very unusual with him).

17. Respiratory Organs.—Short hacking cough excited by tickling in throat; whitish yellow mucus.—Frequent cough in early morning.

20. Neck and Back.—Sharp in-pressing pain in some spots on nape, as if from a sprain < by movement; sensitive to pressure.—Painfulness and feeling of heat along whole spine.—Stitches in region of lowest dorsal vertebræ.

22. Upper Limbs.—Tearing in l. shoulder.—Frequently repeated stitches from l. axilla down to l. elbow.—Paralytic weakness of r. forearm while writing.—Cramp-like pain in muscles of l. wrist.

23. Lower Limbs.—Stiffness and heaviness in tibiæ.—Burning, sticking, and sensation of warmth in dorsum of r. foot; pressing digging pain in external side of second toe of l. foot.—Burning pain in both soles with feeling as if they were swollen.

24. Generalities.—Great desire to lie down; which relieves.—Unusual debility towards evening.

26. Sleep.—Restless sleep with vivid dreams.

Colocynthis.

Citrullus colocynthis. Cucumis colocynthis. Bitter Apple. N. O. Cucurbitaceæ. Native of Turkey. Tincture of pulp of fruit.

Clinical.—Cataract. Ciliary neuralgia. *Colic*. Coxalgia. Diabetes. *Diarrhœa. Dysentery*. Dysmenorrhœa. Glaucoma. Headache. Hoarseness. Menstrual colic. *Neuralgia. Ovaries, affections of*. Paraphimosis. *Peritonitis*. Rheumatism. *Sciatica*. Toothache. Tumours. Uterus, pains in. Vagina, pains in.

Characteristics.—"The strongest characteristic calling for the use of this remedy is an agonising pain in the abdomen causing the patient to bend over double. Relief is obtained by motion, such as twisting, turning and wriggling around, and the motion is kept up steadily while the pain lasts; the pain is < by eating or drinking the least amount. This pain may occur alone, or in the dysentery, cholera, &c. The doubling over of the patient is the chief characteristic" (Guernsey). The patient bends double or presses something hard against the abdomen. He leans over chairs, the table, or bedposts to get relief. According to Nash *Mag. Phos*. comes nearest to it in colic and neuralgic affections. *Cham*. is also very close, both having colic from disturbing emotions, but the *Cham*. child does not double up, it tosses about. The *Staph*. patient is likely to have black or decayed teeth and sore eyelids, and there is chronic tendency to colic. *Verat*. has colic > bending double, but it has also cold sweat. *Dioscorea* has wind colic, but is > by stretching out. The *Stan*. child wants to be carried with the abdomen on the mother's shoulder.

The nearest analogue to *Colocynthis* in its entire action on the human body is its botanical congener *Bryonia*, with which it should be compared. Both have the same general features—pain in muscles, nerves, and joints, gastro-enteric disturbance, and the same condition in regard to rheumatic joints, < by movement. Both have great irritability and ailments from mental emotion, though the latter feature is more marked in *Colocynth*. Arthritis and gouty headaches with ophthalmia, facial neuralgic pains extending to eye.

Coloc. has diarrhœa from grief, indignation or chagrin. Suppressed lochia from indignation. Diabetes with milky, gelatinous, or colloid urine. The characteristic griping of *Coloc*., forcing the patient to bend double, may be accompanied by cramps in other parts, which may occur with or without stool; if a stool occurs it gives immediate relief (*Nux* the opposite); any attempt to eat or drink <. Cramps occur in the legs, uterus, and ovaries. A sensation as if clamped with iron bands is very characteristic in (coxalgia; dysmenia, &c.). Dragging in uterus and vagina. Griping, cutting, tearing, and spasmodic pains in the body; burning pains; pulsations through the body; sensation as of hard stones or potatoes in the body. Easily intoxicated by stimulants. Affections of right side generally. The pains are often accompanied by stiffness and retarded motion of the affected parts; often affect the hip-joints; pains affecting joints are much < by motion; many neuralgic

pains are > by rest. Abdominal pains are > by violent exertion. > Lying with head bent forward. Rheumatic pain in the limbs is > by discharge of flatus. Touch <, and pressure > many of the pains. Warmth > most pains. < Evening and night. *Coloc*. has, like *Lyc., Helleb*., and *Caust*., a 4 p.m. aggravation. One prover had: "At 4 p.m. the colic came on, six days in succession." This has been verified clinically. *Coloc*. is suited to blondes; persons of choleric temperament; and those liable to cramps and colic, from fruit, lead-poisoning, or excessive venery.

Relations.—Coloc. *is antidoted by:* Camph., Caust., Cham., Coff., Op., Staph. Large doses are counteracted by tepid milk, infusion of galls, Camph., and Op. *It antidotes:* Caust., Magnes. *Compatible:* Staph., Cham. *Complementary:* Merc. (dysentery) with much tenesmus). *Compare:* Bry. (nearest analogue), Elater., Cucurbita pepo. Diosc. (griping, tearing, cutting, spasmodic pains in body, but > stretching body and motion); Dig. (paraphimosis); Caust. (Joint rheumatism; follows Coloc. in colic); eyes feel hard, Can. ind.; Canth., Cham., Chel.; Chi. (beer intoxicates easily); Coccul., Gamb., Lyc., Merc.; Nux; Plumb. (inclination to assume strange attitudes in bed). Staph. (anger with vexation, abdominal pains, neuralgia—they follow one another well); Verat.; Pul. (hoarseness 4 p.m.). From emotions, Cham., Bry., Gels., Pho. ac. Ign.; stiffness of knee-joints and all joints, Colch.; stiffness after acute rheumatism, hinders squatting, Graph. Compare also Guaiac.; Crot. tig.

Causation.—Anger. Indignation. Chagrin. Grief. Catching cold.

SYMPTOMS.

1. Mind.—Mental dejection with taciturnity.—Aversion to talk; disinclined to answer questions.—Inclined to be angry and indignant.—Lachrymose humour.—Anxiety and inquietude, with an inclination to run away.—Want of religious feeling.—Disinclined to occupy oneself, even averse to visit his otherwise well-liked friends.

2. Head.—Easy intoxication (from drinking beer).—Vertigo, which occasions falling, on turning the head quickly, with tottering of the knees.—Headache, as from a draught of air, which is dissipated by walking in the open air.—Compressive pain in the sinciput, aggravated by stooping, or lying on the back.—Pressing pain in the forehead and root of the nose, as if a coryza would appear.—Attacks of semi-lateral headache, drawing and cramp like, or pressive, with nausea and vomiting, sometimes daily, towards five o'clock in the afternoon.—Pain in the forehead and in the eyes, as if proceeding from the outside inwards.—Headache with violent pains, which do not permit a recumbent posture, and occasion cries or weeping.—Attacks of headache, followed by suffocation.—Congestion in the head.—Burning pain in the skin of the forehead, and the scalp.—Heat in the head.—Profuse perspiration on the head, itching, smelling like urine (also on the hands, thighs, and feet); worse at night in bed; relieved after rising and walking in the warm room.

3. Eyes.—Sensitive pressure in the eyes, esp. when stooping.—Obscuration of the sight.—Great white light at side of and below r. eye.—Shimmering circle with rays before r. eye.—Inflammation of the eyes.—Burning and incisive pains, and shootings in the eyes (and forehead).—Eyes feel hard.—Aching in upper and outer portions of r. eyeball in evening, < by rubbing it with finger; it feels harder than usual there; this aching lasted some days.—Smarting in eyes; painfulness of eyeballs.—Pressive feeling in orbits, towards root of nose.—Painful pressure in eyeballs, esp. on stooping.—Pains in eyes, sharp cutting in r. eyeball.—Stitches as with knives in r. eyeball, extending to root of nose.—Pain as from pressure on both eyelids from above downward.—External strabismus of r. eye, with smarting lachrymation.—Dryness; burning; smarting; lachrymation.—Discharge of acrid serum from the eyes.

4. Ears.—Warmth in r. ear.—Obstruction before l. ear.—Itching, sticking deep in ear, extending from Eustachian tube to tympanum; > by boring in ear with finger.—Crawling within ear > by boring.—Difficult hearing; everything heard is accompanied by a roaring noise.—Constant roaring and throbbing in both ears, esp. l.

5. Nose.—Fluent coryza.—Severe burning above the nose.—Throbbing burrowing pain in nose extending from l. side to root.

6. Face.—Pale and wasted face, with downcast (sunken) eyes.—Tensive, tearing, burning or shooting pains (prosopalgia) in the face, often on l. side only, and extending to the ears and into the head.—Cramp-like sensation in the l. malar bone, extending into l. eye.—Scabs on the face.—Face of a deep red colour (during the fever).—Face puffed, with heat and redness of l. cheek, and tearing pains.

8. Mouth.—Pains in the teeth, as if the nerve were pulled or stretched.—Pulsative pains in the teeth on l. side.—Burning at the tip of the tongue.—Sensation as if the tongue had been scalded by some hot fluid.—Roughness of the tongue.—Tongue loaded with a white or yellow coating.—Cramps in the gullet, with empty eructations and palpitations of the heart.

11. Stomach.—Diminished appetite, without thirst, though accompanied by a strong desire for drink, with a sickly taste in the mouth.—Constant nausea with risings.—Bitter taste in the mouth, and of all food and drink.—Colic and diarrhœa, however little is eaten.—Pains in the stomach sometimes after a meal.—Vomiting of food, or of greenish matter.—Vomiting, with diarrhœa.—Painful sensitiveness of the epigastrium to the touch.—Violent pressure on the stomach (with sensation of hunger), and in the precordial region.

12. Abdomen.—Inflation of the abdomen, as from tympanitis.—Feeling in the whole abdomen as if the intestines were being squeezed between stones.—Cramp-like pain and constriction in the intestines, esp. after a fit of anger.—Excessively

violent colic, with incisive, cramp-like, or contractive pains, which compel the patient to bend double (< in any other position), with restlessness in the whole body, and with a sensation of shuddering in the face, which seems to proceed from the abdomen.—Pain in the abdomen when walking (navel).—Colic, with cramps in the calves of the legs.—Colic, as if from a chill.—Colic after a meal.—The colic and abdominal pains are relieved by bending double, by violent exercise, by coffee and tobacco-smoke; every other food or drink causes an aggravation.—Pinching, and sensation of clawing in the abdomen, mitigated by violent exertion.—Cuttings and shootings in the abdomen, as from knives, with shiverings and tearings along the legs.—Great sensibility, soreness, and sensation of emptiness in the abdomen.—Grumbling in the abdomen.—Inguinal hernia.

13. Stool and Anus.—Constipation.—Constipation, and evacuations retarded (during pregnancy).—Loose evacuations of a greenish yellow, frothy and of a sour smell, putrid or mouldy.—Slimy diarrhœa.—Sanguineous evacuations.—Dysenterical evacuations, with colic.—During the evacuation, contraction in the rectum.—Painful swelling of the hæmorrhoidal tumours of the anus, and of the rectum.—Discharge of blood from the rectum, with stinging, burning pain in the small of the back and anus (daily).—Hæmorrhage from the anus.—Paralysis of the sphincter ani.

14. Urinary Organs.—Tenesmus of the bladder, with but small discharges.—Diminished secretion of urine.—Abundant discharge of urine of a bright colour, during the pains.—Urine (like that in dropsy after scarlet fever) of a faint flesh colour, with a white-brown flocculent, transparent sediment, depositing on the chamber small, red, hard, solid crystals, which adhere firmly to the vessel.—Fetid urine, which soon becomes thick, gelatinous, and glutinous.—Itching at the orifice of the urethra, with desire to urinate.—Burning in the urethra after micturition.

15. Male Sexual Organs.—Sensation as if everything were flowing towards the genital parts, from both sides of the abdomen, occasioning a discharge of semen.—Excitement of sexual desire, as in priapism.—Complete impotence.—Retraction of the prepuce behind the glans.

16. Female Sexual Organs.—Cramp-like pain in l. ovary; in uterus; as if parts were squeezed in a vice.—Ovarian cyst, paroxysm of acute pain in abdomen, sacrum, and hip, > by flexing thigh on pelvis.—Metritis; metrorrhagia; suppressed catamenia, with cramping pains > by bending double; or caused by indignation or chagrin.—Stitches in the ovaries.—Lochia suppressed; puerperal fever after vexation.—Painful nodosities in the mammæ.

17. Respiratory Organs.—Small dry cough, excited by irritation in the larynx, or by tobacco smoke.—Constriction in the larynx, which induces frequent deglutition with oppressed breathing; > in the open air.—Fits of asthma at night.

18. Chest.—Oppression of the chest, as if it were compressed.

19. Heart.—Palpitation of the heart.—Stitches in cardiac region.

20. Neck and Back.—Tension in the neck and shoulder-blades.—Drawing pains in the back, as if the muscles were stretched.—Great weakness in the back, esp. in the small of the back, with pressing headache (morning).—Congestion and suppuration of the axillary glands; subsultus of muscles.

22. Upper Limbs.—Bruise-like pain in the joint of the shoulder, esp. after a fit of passion.—Aching, pressive, and shooting pain in the arms.—Cramp-like pain in the hands, which with difficulty suffers the fingers to be opened; < when at rest.—Pulling in the tendons of the thumbs.

23. Lower Limbs.—Pain in the coxo-femoral joint, as if it were fastened with an iron clasp, the pelvis and sacral region, with pains extending from the lumbar region to the legs.—Tensive lancination, in the lumbar region and of the hips, esp. when lying on the back.—Pain (in the r. thigh) while walking, as if the psoas muscles were too short; on stooping it ceased, but began again when he commenced to walk.—(Spontaneous dislocation of the coxo-femoral joint.).—Want of flexibility in the knee, which prevents the bending of it.—Cramps in the legs.—Shootings in the legs, esp. during repose.—Stitches in the knee-joints.—Sensation of coldness in the knees (in the morning).—Great heaviness and trembling of the legs.—The feet go to sleep (first the l., then the r. foot).—Swelling of the feet.—Tearing in the soles of the feet during repose.

24. Generalities.—Semi-lateral pains.—Painful cramps, and cramp-like contractions, in the internal or external parts.—Sensation as though stones were being ground together in the abdomen, working upon the soft parts.—Contraction of the tendons in some parts only, or throughout the body, with a drawing up of all the limbs.—Twitching of the muscles.—Stiffness in all the joints.—Tearing shootings, traversing the whole body longitudinally.—Physical depression while walking in the open air.—Fainting, with coldness of the external parts.—Swelling of various parts, with oppression of breathing.—Pulsations through the body.—Burning pains.

25. Skin.—Troublesome itching, with great restlessness in the whole body, esp. in the evening in bed, followed by perspiration.—Desquamation of the skin over the whole body.—Carbuncles, with continuous burning pain.—Small ulcers, with itching and burning.—Eruptions which resemble scabies.—Skin hot and dry.

26. Sleep.—Disturbed sleep at night (by dreams).—Sleepiness, alternately with delirium, with the eyes open.—Sleeplessness following a fit of indigestion.—Very wakeful and sleepless.—Lying on the back when asleep, with one hand under the occiput.—Frequent vivid and lascivious dreams.

27. Fever.—Cold and shivering, with heat in the face, without thirst.—Coldness of the hands and soles of the feet, while the rest of the body is warm.—Pulse hard, full and quick.—Strong pulsation in the arteries.—External dry heat.—Internal heat, with attacks of flushes of heat.—Nocturnal sweat, of the smell of urine, on the head, hands, legs, and feet, causing itching of the skin.—Perspiration principally on the head and on the extremities.

Colostrum.

The milk first secreted after childbirth. Solution.

Clinical.—Diarrhœa.

Characteristics.—The symptoms of *Colost.* are purely clinical. Its use in diarrhœa was probably suggested by the purgative effect of *Colostrum* on the infant. Bell gives the indications as follows:—STOOLS: *Green, watery; yellow; watery*; mucous; bilious; profuse; sour-smelling; excoriating. AGG.: *In nursing infants*; during dentition. DURING STOOL: Colicky pains in hypogastrium. *Accompaniments:* Great nervous irritability, or listlessness. Pale face. Tongue coated white or yellow. Vomiting of sour or bitter substances. Loss of appetite. *The whole body smells sour*. Fever. Emaciation.

Comocladia.

Comocladia dentata. Guao (Cuba). N. O. Anacardiaceæ. Tincture of leaves and bark.

Clinical.—Antrum of Highmore, affections of. Breasts, affections of. Ears, affections of. Eczema. Erysipelas. Eyes, affections of. Herpes. Leprosy. Neuralgia. Skin, malignant inflammations of. Toothache. Ulcers. Zona.

Characteristics.—*Comocladia* shows its botanical affinity with the *Rhus* family by the virulence of its effects on the skin, the slightest contact, and, at times, even walking in the neighbourhood of the growing tree, being sufficient to cause violent inflammation. The trunk and branches of the tree contain a milky fluid, turning black on exposure to sunlight, discolouring the skin, linen, &c. (Compare the "Marking Nut" Anacardium.) The plant causes tormenting itching, swelling, redness, vesication, ulceration. Hale quotes from Navarro cures of ulcers: "Sloughing ulcer of right breast." "Indolent ulcer, lower third right leg," deep, discharging sanious fetid pus. "Inflammation of left leg and foot, with enormous swelling and fever." A cough, with pain under left breast going through to left scapula, has several times been cured with *Comocl.* The eye symptoms are peculiar: pain in right eye, sensation as if it were larger than left, and more protruded. There are also rheumatic pains, and, as with *Rhus*, these and the symptoms in general are > by motion and < by rest. In contradistinction to *Rhus*,

heat < and open air > most of the symptoms. Most symptoms are < at night as with *Rhus*. Pressure >.

Relations.—*Compare:* Anac., Rhus, Euphorb. (red stripes on skin); Apis (eye symptoms < near stove).

SYMPTOMS.

2. Head.—Giddiness on rising from bed; everything looks dark; > motion; < heat.—Severe pain at intervals from posterior portion of eyeballs to occipital protuberance; < near warm stove; when stooping; > in open air.—Corrosive itching with shooting pains, > by movement.

3. Eyes.—Eyes protrude; feel sore; feel heavy; as if pressed out from above.—Eyeballs feel worse on moving them.—R. eye painful, feels much larger and more protruded than l. (3 or 4 p.m.).—Eyes < near warm stove.—Sees a red ring round flame of lamp.

4. Ears.—Heat and fulness in interior of r. ear.—L. ear all cracked, and desquamating a substance like powered starch.

6. Face.—Burning; extreme swelling; heat and itching of face.—Aching first in l. and then in r. maxillary joint on entering a warm room.—Aching in base of r. antrum of Highmore, afterwards in l., sense of heat and fulness, sensation as of a pimple on r. antrum.—Lower lip blistered and swollen.—Sensation as if the skin was puckered or drawn up from the face and about the nose, causing slight giddiness.

8. Mouth.—Sensation as if a tooth were being drawn out of its socket, putting the nerve on the stretch.—Pains in teeth > by pressure.—When toothache stops, head feels large.—Second r. molar carious, pain commences in it 4.30 to 5 p.m.; at times shoots down in line with larynx, leaving sore track; pain < in bed, > by external warmth and pressure.—Gums of lower jaw inflamed.—Tongue coated dirty yellow.—Mouth dry.

11. Stomach.—Some eructations two hours after eating.—Pressure and heaviness in region of stomach.

13. Stool.—Severe flatulent pain in abdomen preceding and during a diarrhœic stool; followed by a feeling of weakness and perspiration on face and neck.

15. Male Sexual Organs.—Intense itching on lower part of penis, also on inner side of prepuce.—Continued tingling, itching of scrotum during night.

17, 18. Respiratory Organs and Chest.—Spasmodic dry cough at night, with tickling in throat, and constant dull pains under l. nipple, extending through to l.

scapula.—Cannot draw a long breath on account of sharp pain at centre of thorax on l. side.—Soreness in l. lung.—Sharp pain in l. breast, about one inch above nipple, and leaves a burning sensation; it goes to r. side and down r. arm.—Sloughing ulcer on r. breast.

20. Neck and Back.—On moving head, sense of fulness, rigidity and lameness of muscles of neck.—Rheumatic pains and stitches in back; stitches leave a burning.

22. Upper Limbs.—Sharp pains through r. shoulder to scapula.—Painful burning on arms.—Crampy sensation in muscles of r. upper arm.—Numb, tensive pain in forearm and rheumatic stiffness of shoulders and elbow-joints.—Drawing aching in forearm.—Drawing, cramping in fingers.—Vesicular eruption on arms and hands.

23. Lower Limbs.—Intermittent, pressing-outward pain in l. sacro-iliac synchondrosis, sensitive to pressure, > by walking, but feels lame and sore.—Pulsating pain in neck of r. femur and in r. thigh.—Severe pains in both knees; pressing down to feet on inside of legs.—Drawing in r. knee extending into anterior muscles of thigh.—Drawing, cramping in hollow of r. foot, passing along outer border of gastrocnemius to knee, then in tibia, where it becomes a numb aching, then in tarsus as if foot would cramp.—Inflammation of leg and foot with violent fever; swelling increased enormously when pain subsided; skin became white and covered with thin scales, which cracked and discharged a sanious fluid.—Vesicular eruption changing to pustules and ulcers.—Herpes on legs.

25. Skin.—Tormenting itching and burning over whole body.—Red all over like scarlet fever.—Red stripes on skin.—Enormous swelling; vesicles; desquamation; ulcers.—Malignant erysipelas; herpes; zona; leprosy.

26. Sleep.—Dreamy, refreshing sleep with pleasant dreams, almost clairvoyant.

Conchiolinum.

Mother-of-Pearl. Trituration.

Clinical.—Osteitis. Pyæmia.

Characteristics.—Observations made on workers in mother-of-pearl factories show that inhalation of the dust produces catarrh of the respiratory organs, and, later on, inflammation of the ends of bones. This always begins in the diaphyses, but may spread to the epiphyses. It always attacks young subjects. First there is a more or less intense pain in the bone; comes suddenly; at first continuous; later intermittent. Soon after the appearance of the pain there is fever; thirst; loss of appetite; sleeplessness; dark-coloured urine with sediment. Then swelling occurs.

The swelling always develops on one or the other end of a diaphysis, never in the middle of it nor in the epiphysis. The swelling has a clear, sharp margin; it is extremely painful to the slightest touch; at first soft, elastic and slightly fluctuating, it may become as hard as a bone. Suppuration may occur. The bones that have been affected are lower jaw, scapula, humerus, radius, ulna, tibia, fibula, tarsal, and metatarsal bones. I cured with *Conch*. 3 a delicate boy who at three different times had had pain in left knee. The left inner condyle was swollen and tender. The cure was rapid and the general health much improved at the same time. *Conch*. has, no doubt, a wide range of action in affections of bones, especially when the growing ends are affected. *Calc. Phos*. and *Calc. c*. are its nearest analogues.

Coniinum.

Conicine. An alkaloid from Conium maculatum. $C_8 H_{17} N$. Tincture.

Clinical.—Eyes, heavy. Hearing, illusions of. Hemiplegia. Numbness. Tongue, paralysis of. Vertigo. Vision, disordered.

Characteristics.—*Coniin*. is a poison rivalling prussic acid in the intensity of action. It has had rather an extensive proving. It causes numbness, muscular paralysis, vertigo, disorders of sight, hearing, and touch, lethargy and overpowering sleepiness. A feeling as if one had been up all night, or after a debauch. Cramp in calves on ascending steps or drawing off boots. Vertigo is > in open air.

SYMPTOMS.

1. Mind.—Calm and tranquil; slowness of mental process.—Inability to think or fix the attention.—Loss of consciousness.

2. Head.—Vertigo and confusion with prostration > in open air.—Weight, fulness, and pressure in head.—Open air caused pain in supra-orbital and cutaneous malæ nerves.

3. Eyes.—Lids heavy.—Vision confused; objects swim.—Dazzling of sight.—Complete blindness.—Objects seem large; one thinks he sees his own nose a shapeless mass.

4. Ears.—Hearing weakened; ears feel as if stopped with cotton wool.—Illusions of hearing.

6. Face.—Face sunken, pale.—Numbness of muscles about the jaws.—Head and face very warm.

8. Mouth.—Tongue pale, paralysed, and numb.—Epithelium denuded in many places, papillæ very prominent.—Violent burning in mouth.—Accumulation of saliva.

9. Throat.—Scraping in throat.

11. Stomach.—Eructations; nausea; vomiting.

12. Abdomen.—Rumbling with distension of abdomen.—Tendency to diarrhœa.

17. Respiratory Organs.—Voice thick; muddled words when speaking.—Respirations frequently yawning.

20. Neck and Back.—Spasmodic distortion of neck with spasms of face which draw the mouth up to a point.—Pain in l. lumbar region.

21. Limbs.—Heaviness of arms and legs, esp. l. arm.

22. Upper Limbs.—Numbness with tingling of arms.—Tense cramp in muscles of ball of thumb with painful sensation on strongly adducting thumb.—Hands bluish, cold.—Moisture on finger-tips.—Fingers and hands wet.

23. Lower Limbs.—Gait unsteady; weakness esp. marked on going out to walk.—Carries body forward.—Legs felt independent as if they did not care for him or anybody else.—Cramp in calves on ascending steps.

Coniinum Bromatum.

Crystallised Bromohydrate of Conicine. C_6 H_{17} NHBr.

Clinical.—Head, empty sensation in. Inactivity. Mental apathy.

Characteristics.—*Conii. bro*. has produced symptoms of mind and head. Coffee dissipated them.

SYMPTOMS.

1. Mind.—Difficulty in intellectual work.—State of inactivity, rather than a tendency to sleep.

2. Head.—Cerebral emptiness and vertigo.

Conium Maculatum.

Conium Maculatum. Poison Hemlock. N. O. Umbelliferć. Tincture of fresh plant in flower.

Clinical.—Asthma. Bladder, inflammation of. *Breast, affections of*; painful. *Bronchitis. Bruises. Cancer. Cataract*. Chorea. *Cough. Depression of spirits*. Diphtheritic paralysis. Dysmenia (membranous). Erysipelas. *Eyes, affections of*. Galactorrhśa. Herpes. *Hypochondriasis*. Jaundice. Liver, enlarged. Melancholia. *Menstruation, disordered. Numbness. Ovaries, affections of. Paralysis*; Landry's. Peritonitis. Phthisis. *Pregnancy, painful breasts during.* Prostatitis. Ptoses. Scrofula. *Spermatorrhśa. Sterility*. Stomach, affections of. *Testicles, affections of*. Tetters. Trismus. Tumours. Ulcers. *Vertigo*. Vision, disordered. *Wens*.

Characteristics.—According to Hahnemann *Con*. is one of those drugs of which it is exceedingly difficult to distinguish the primary and secondary effects. He thinks, nevertheless, that the primary action is one of "rigidity, condensation, and constriction of the fibres, with swelling of the glands and diminution of the senses." In this Teste concurs, adding that the action is primarily inflammatory, and that this accounts for its suitability for "persons of a lively, quick, sanguine disposition, with a marked development of the glandular system;" and explains why it is characteristically adapted to painful glandular affections, "principally such as result from a strain or blow, but the precise cause of which may have escaped our recollection." Teste places *Con*. at the head of the analogues of *Acon*. It is to the glands and capillary system what *Acon*. is to the heart and arterial system. In many cases *Con*. may be regarded as the "*Aconite of chronic diseases*." The other *Aconite* analogues, according to this author, are *Cham., Seneg., Canth*., and *Phos. ac. Con*. corresponds to chronic or subacute inflammation with sanguineous engorgement of the parenchyma, induration, and even subsequent ulceration of the tissues. *Thuja* represents the slow and progressive hypertrophy of certain tissues, certain constituents of our organs. Stoerck used *Conium* in his heroic fashion and made with it some notable cures of scirrhous tumours, ulcerating and otherwise; but it was Hahnemann who first showed how the remedy could be used safely as well as effectively. Guernsey writes: "This remedy is characterised by a great dizziness, brought on when lying down, and moving the head ever so slightly, or even the eyes—all the contents of the room appear to whirl around; patient wishes to keep the head *perfectly still*. In urinating the water flows at first in a full stream, then stops, flows again, again stops," &c. Nash illustrates the modality: < by moving the head. He thinks "turning the head sideways" is the most characteristic form of it. Some give it as "Lying down in bed and turning over," but he regards the "lying down" as the least important part. He cured a patient who had all the symptoms of locomotor ataxy, and who could not, when walking, turn the head the least bit sideways without staggering or falling. A case

of lumbago was cured with *Con*. in six days, after seven months' suffering, this symptom being present: Cannot turn over in bed without being dizzy. < Ascending; by exercise.─Feeling of ball pressing into back over left hip, pain shooting clown left leg, ending in a spot that felt as though pricked by a bunch of hot needles. Under "Sensations" Guernsey gives these: "Heartburn; *e.g*., in pregnant women where an excessive heartburn comes on, when going to bed at night. Attacks of *sick* feeling. Sensation as if a hoop, band, or something tight was around the parts. Deficiency of irritability of the body; the body has very little sensation. Darting from within outwards, in the bones; tension in inner parts, also in outer parts; pricking in the bones." Another symptom is "yellow nails." Proell (*H. R*., xxx. 541) mentions a use of *Con*. which illustrates the symptom: "Interrupted flow." He has had excellent results with *Con*. 10 in strangury and ischuria, when the urine cannot be discharged, from nervousness, or swelling of the prostate. (*Nat. sul*. 5 trit. was effective where the bladder could not be entirely emptied.) *Con*. has a very marked action on the pelvic organs. Constipation is very pronounced; or there may be diarrhśa. Faintness after stool. Burning, or coldness, in the rectum. Sircar has recorded (*Calcutta J. of Med*., May, 1896) a striking case illustrating the latter. A patient had severe diarrhśa, for which the doctor was about to give *Sulph*., when he asked if the stools were hot. "On the contrary, they are *cold*," replied the patient. Sircar found "cold flatulence" under *Con*., and gave it on analogy with brilliant effect. On the sexual sphere *Con*. has profound action, often meeting quite contradictory conditions─hypertrophy or atrophy of glands; excess of function or abrogation. "Unsatisfied sexual desire" is a very leading indication; and sufferings therefrom in either sex are effectually allayed by *Con*. I have used the remedy with very great good in numberless cases of weakness from masturbation in men and youths. "Emission on the slightest stimulus, such as merely being in the society of a woman," is very typical. Many "engaged" young men have been helped by the remedy. It corresponds more to scanty menses than the opposite. Goodno (*Hoyne's Theurapeutics─Amer. Hom*., xxi. 386) cured a girl of 25 of severe dysmenia (which had existed since the periods commenced) with scanty, almost arrested flow. She had also epistaxis, cough, and stitches through left lung at times. Two years previously, after unusual excitement, she had bearing-down pains, prolapse, and anteversion. The dysmenia pains were relieved by *Sepia* and other remedies, but prolapse increased, with bearing-down as though the womb would be forced from vulva, < standing and walking before and during menses; intermittent flow of urine, with cutting after micturition obstinate constipation of long standing; stool (once in seven days) large, hard, followed by tremulous weakness; she must lie down; dull pain below left mamma. Prompt relief and speedy cure were effected by *Con*. 1m. Scanty menses (especially in old maids) is an indication. Checked lochia. Pains in breast before menses, < by every step, is a strong indication for *Con*. Also all effects of hurts to the breast by falls or blows. After a blow on the breast a course of *Con*. should always be given. Nash mentions another characteristic of *Con*.: "Sweats day or night; as soon as one sleeps, or even on closing the eyes." This enabled Lippe to cure a man of 80 of hemiplegia. R. C.

Markham cured with *Con*. 1m. an obstinate cough, dry, hard, frequent, with asthmatic wheezing or fine rattling in chest on deep breathing, < slightest exposure to cold air; getting into cold bed, or out of a warm one, or even putting arms out was sufficient to bring on severe coughing. The guiding symptom which appeared last and led to the remedy was this: "Pain in the apex of left lung, with soreness in a small spot, midway between neck and shoulder just back of clavicle. *The pain, cutting and stitchlike, ran downward and inward toward the sternum*. A. H. Birdsall reports a case of contusion of testicle. He found the patient writhing in agony, the pain complained of being "sharp, cutting, running up spermatic cord to lower part of back, and also through scrotum to root of penis". *Con*. 200 relieved in five minutes, and at the end of twenty minutes the pain was gone (*H. P*., ix. 190.) *Conium* corresponds to: light-haired persons; old persons; old, feeble men; old maids and bachelors; women of rigid fibre and easily excited, and also to those of the opposite temperament; persons of strong, sedentary habit more than to lively, slender persons and children; persons who are easily intoxicated with stimulants; women who have scanty menses; scrofulous constitutions; cancers and glandular enlargements. The effects of blows or falls; effects of grief; of over study. Patients who are < when idle. *Conium* is said to have been, and almost certainly was, the poison with which Socrates was executed; and whether or not this was the case ascending paralysis, which occurred in his poisoning, is an indication for *Conium*. Benumbed sensation; inability to sustain mental effort; weak memory; tired sensation in brain; imbecility. Hot spots on head. Erysipelas, pain piercing to brain. Red vision. Weakness; tremulousness and palpitation after every evacuation. Sensation of unreality, as if in a dream. Insanity, periodical or alternating. Vertigo < on turning in bed. Accumulation of earwax. Craving for salt, coffee, and sour things. There is the same flatulent tendency as with *Ammoniac* and *Asafśtida*, its relatives. Numbness and deadness of limbs. Stabbing pains are a great indication for *Conium*. Weak-spells; faintness; sudden loss of strength while walking. Paroxysms of hysteria and hypochondriasis from abstinence from sexual intercourse. In phthisis patients cannot expectorate, must swallow sputa. The eye symptoms are very pronounced: photophobia; ptosis, &c. These symptoms are < night and early morning. Most symptoms appear when at rest, especially in the night and in periodical attacks; some when walking in the open air. < During eating; while standing; while lying down (cough); when at rest, when lifting the affected part; when turning in bed (vertigo) moving the head ever so little; turning head sideways. > In the dark; from letting the affected limb hang down; from moving; when walking; by stooping. Aversion to open air. Desire for warmth, especially that of sun. Liability to take cold from least exposure of feet. Great liability to take cold. Night and morning sweat, with offensive odour and smarting in skin; or offensive odour without sweat. Touch <, cannot bear the pressure of tight clothing. Jar, shock, or fall <.

Relations.—Conium should be compared with Ćthusa, Śnan., Phell., Petrosel., Ammoniac., Asafśt., and other Umbelliferć. *It is antidoted by:* Coff., Dulc., Nit. ac., and Nit. Sp. dulc. *It antidotes:* Merc., Nit. ac., Sul. *Compatible:* Arn., Ars.,

Bell., Calc., Lyc., Nux, Phos., Puls., Rhus, Stram. *Incompatible:* I have sometimes found Con. disagree with patients who had been taking Psorin. *Compare:* in swelling and painfulness of breasts before and during menses, Calc. (Con. precedes and follows Calc. well in Calc. subjects who have scanty menses; Bell. corresponds to Calc. in other respects); in scanty menses, Graph.; in suppressed lochia, Nux, Hyo., Pul., Secal.; as if in a dream, Ambra, Anac., Calc., Can. ind., Stram.; ascending paralysis, Hydrocy. ac., Mang. (descending, Merc.); paralysis, post-diphtheritic, Gels.; sexual melancholia, Zn. ox.; vertigo when turning in bed, Sil. (Sil. has vertigo when turning to left, whilst lying down); < beginning to move, > by continued motion, Rhus; bruised glands, Sul. ac. Impotence, Phos.; weakness after stool, Phos. (most marked), Nux.

Causation.—Contusions. Blows. Grief. Sexual excess. Sexual abstinence. Excitement. Over-work. Snowy air. Spring.

SYMPTOMS.

1. Mind.—Hysterical anguish, with sadness and great inclination to weep, from suppression of, or from too free an indulgence in, the sexual instinct.—Anthropophobia, and yet fear of solitude.—Timidity of character (fear of robbers).—Superstitious ideas.—Disposition to be frightened.—Ill-humour and moroseness.—Hypochondriacal indifference.—Want of mental energy.—Inaptitude for labour.—Irritability, and disposition to be angry.—Derangement of ideas and mania.—Confusion of ideas, as from drowsiness.—Slowness of conception.—Weakness of the intellectual faculties, and of the memory.—Ready forgetfulness; excessive difficulty of recollecting things.—Delirium.

2. Head.—Intoxication, after having taken the smallest quantity of spirituous liquid; even wine and water in small quantities intoxicates him.—Vertigo when turning in bed; feels as if the bed were floating.—Whirling vertigo on rising, and sometimes so as to cause a fall, sideways, on looking behind (on looking around); or when lying down in bed, esp. in the morning.—Attacks of headache, with nausea, and vomiting of mucus.—Lancinating pain, esp. in the vertex.—Stupefying pains in the head, esp. when walking in the open air, first in the fore-part of the head, later in the back part, with coryza; relieved on stooping and moving the head.—Excessive sensibility of the brain, even to talking, and to any other noise.—Quotidian headache, on account of insufficient evacuations.—Semi-lateral pains in the head, as if it were bruised.—Tearing in the temples and sides of the head, with the sensation as if the brain were gone to sleep; worse from contact, motion, and after eating; better in a recumbent position, or while stooping.—Headache as if the head were beaten to pieces, or would be pressed asunder.—Downward pressure as from a stone on top of the frontal bone.—Sticking in head while coughing.—Sensation as if there were a large foreign substance in the head.—Heaviness and fulness in the head, esp. on waking in the morning.—Pulling in the head, with numbness of the brain.—Hydrocephalus; the pains are < when

awaking, after eating, in the open air; > on external pressure, on lying down, and on closing the eyes.—Attack of tearing headache, which forces the patient to lie down.—Obstinate shooting pains in the sinciput, which seem coming through the forehead.—Hot flush in occiput; later in head.—Heaviness, and squeezing, as from a claw, in the forehead, and as if proceeding from the stomach.—Apoplexy with paralysis (in old people).—Falling off of the hair.

3. Eyes.—Aching of the eyes when reading.—Itching below the eyes, with burning and smarting pain when they are rubbed.—Itching, shootings, or smarting in the internal canthi.—Sensation of cold, or burning, in the eyes, when walking in the open air.—Pain, as of burning in the eyes, with aching in the orbits in the evening.—Inflammation and redness of the sclerotica.—Hordeolum.—(Specks in the cornea.).—Cataract from contusion.—Short-sightedness.—Yellow colour of the sclerotica.—Eyes dull.—Eyes prominent.—Tremulous look.—Obscuration of the sight.—Momentary blindness by day in the brightness of the sun.—Myopia.—Presbyopia.—Diplopia.—The lines seem to move while reading.—Black spots and coloured bands before the sight, in a room.—Red appearance of objects.—Dazzling of the sight by the daylight.—Aversion to light without inflammation of the eyes.—Photophobia, with pale red colour of the ball of the eyes.

4. Ears.—Tearings and shooting in the ears, and round the ears, esp. when walking in the open air.—Accumulation of cerumen, which resembles mouldy paper, and which is mixed with purulent mucus.—Blood-coloured cerumen.—Roaring and humming in both ears.—Buzzing, tinkling, and rumbling in the ears.—Painful sensibility of hearing.—Diminution of hearing, ceasing when the cerumen is removed, and until it is renewed.—Swelling and induration of the parotids.

5. Nose.—Swelling of the nostrils.—For several days tip of nose thick red, hot, painful, < l. side; later a yellow blister full of pus appeared l. side of lip.—Purulent discharge from the nose.—Nasal hćmorrhage, frequent when sneezing.—Increased acuteness of smell.—Too frequent sneezing.—Troublesome sensation of dryness in the nose.—Obstinate stoppage of the nostrils.—Stoppage of the nose in the morning.

6. Face.—Heat in the face.—Complexion sickly, pale, and bluish, sometimes even with swelling of the face.—Fissures in the skin of the face, with pain as from excoriation after washing and wiping.—Nocturnal pains in the face, tearing and shooting.—Itching, eruptions, tetters and gnawing ulcers on the face.—Moist and spreading herpes in the face.—Eruptions of pimples on the forehead.—Dryness and exfoliation of the lips.—Blisters and ulcers on the lips.—Cancerous ulcer on the lip (from the pressure of the pipe).—Spasmodic clenching of the jaws.—Grinding of the teeth.

7. Teeth.—Odontalgia, generally drawing, provoked by walking in the open air, or excited in hollow teeth by cold food.—Shootings, jerks, gnawing, and piercing in the teeth.—Gums swollen, ecchymosed and bleeding.

8. Mouth.—Dryness of the mouth and of the throat; or salivation.—Embarrassed speech.—Tongue stiff, painful, swollen, dry; covered with dirty mucus.—Horribly offensive tongue.—(Cancer of tongue.)

9. Throat.—Sore throat, as from a ball (globus hystericus) mounting from the epigastrium.—Impeded deglutition.—Involuntary deglutition, esp. when walking in the wind.—Constant want to swallow, when walking against the wind.—Cramps in the gullet.—Scraping in the throat.—Spasmodic constriction of the throat.

10. Appetite.—Bitterness in the mouth and in the throat.—Putrid or acid taste in the mouth.—Total absence of appetite, and great weakness of digestion.—Bread will not go down, and does not please the taste.—Bulimy.—Desire for coffee or for acid or salt food.—During a meal, and esp. after taking milk food, a sensation of inflation in the stomach, and in the abdomen, and speedy satiety.—After a meal, sourness, pyrosis, pressure and fulness in the stomach, risings, colic, flatulency, nausea, deadness in the fingers, weakness, fatigue, and sweat.

11. Stomach.—Empty risings, frequent and noisy, sometimes during the entire day.—Abortive risings, with sensation of fulness in the hollow of the throat.—Risings, with taste of food.—Suppressed eructations, with subsequent pain in the stomach.—Pyrosis, ascending up into the throat, sometimes after a meal.—Acid regurgitation, esp. after a meal.—Nausea with inclination to vomit, and complete loss of appetite, or else with eructations and lassitude.—Nausea after every meal, or in the evening.—Nausea and vomiting during pregnancy.—Vomiting of mucus.—Pressure on the stomach, even during a meal.—Inflation of the stomach.—Cramp-like, contractive pain, shootings, and pain as from excoriation, in the stomach and in the epigastrium.—Sensation of soreness and rawness of the stomach and of the abdomen when walking on the stones.—Pain, with sensation of cold in the stomach.

12. Abdomen.—After taking milk sensation of inflation of the abdomen.—Tensive pain in the hypochondria, as from a band tightly fastened.—Hardness of the abdomen from swelling of the mesenteric glands.—Pressure, traction, tearings, and shootings in the hepatic region.—Lancination in the left hypochondrium, even in the morning in bed, with oppression.—Lancinations in the abdomen, as if knives were plunged in; stitches in the spleen.—Fulness of the abdomen, even in the morning on waking.—Swelling of the mesenteric glands.—Contraction of the abdomen, with oppression.—Spasmodic colic.—Incisive and tearing abdominal pains.—Movement and digging in the umbilical region.—Sensation as of excoriation in the abdomen, esp. when walking on the pavement.—Noise and

borborygmi in the abdomen.—Expulsion of cold wind, with cuttings.—Incarceration of flatus.—Cuttings on expelling flatus.

13. Stool and Anus.—Constipation with tenesmus.—Constant urging without stool.—Hard evacuations, only every second day.—Hard stool, with tenesmus (headache; discharge of prostatic fluid).—Loose, undigested evacuations, with cuttings, and frequent risings.—Debilitating diarrhśa.—(Stools undigested, with colic.).—Lancinations in the anus.—Heat and burning sensation in the rectum, while evacuating, and at other times.—Emission of fetid or cold flatulence; (stool feels cold).—Fćces, with streaks of blood.—After the evacuations, weakness, palpitation of the heart, frequent expulsion of flatulence, and trembling.—Involuntary discharge of fćces during sleep.

14. Urinary Organs.—Pressure on the bladder, as if the urine were going to issue forth with violence (with stitches); worse when walking, better when sitting.—At night, emission of urine, frequent, and sometimes involuntary.—Flow of urine, attended by violent pain.—Urine thick, white and turbid.—Urine red.—Retention of urine.—Difficult emission of urine, which flows only drop by drop.—Nocturnal urination.—Wetting the bed.—Diabetes, accompanied by great pain.—Frequent inclination to emit urine, which is clear and aqueous.—Viscid mucus, mixed with the urine, which cannot be passed without great pain.—Discharge of pus from the urethra.—Emission of blood, sometimes with difficulty of respiration.—The urine stops suddenly, and does not begin to flow again for some moments.—Incisive pains in the urethra during the emission of urine.—Burning sensation and shootings in the urethra, esp. after the emission of urine.

15. Male Sexual Organs.—Swelling of the testes (after contusion).—Cutting pain through scrotum to root of penis.—Lasciviousness.—Impotence, insufficient erections, and absence of erections.—Want of energy in coition.—Erections imperfect, and of too short duration.—Easy emission of semen, even without firm erections.—Dejection, after coition.—Immoderate pollutions.—Flow of prostatic fluid during evacuation, and after any mental emotion.—With weakness of sexual organs, much sexual erethism, amatory thoughts, even emissions provoked by mere presence of women.

16. Female Sexual Organs.—Cramps in the uterus, with pinchings or contracting, or with digging above the vulva, accompanied by tension in the abdomen, and shootings extending into the l. side of the chest.—Itching in the external and internal genital parts.—Shootings in the vagina, and sensation as of bearing down.—Shooting in the labia.—Catamenia premature and too weak.—Suppression of catamenia.—Before the catamenia, pains in the breasts; anxious dreams, dry heat, pain as from fatigue in the limbs, lachrymose humour, inquietude, and hepatic pains.—During the catamenia, sensation of bearing down and dragging in the thigh, or painful cramps in the abdomen.—Suppressed menstruation (with barrenness).—Burning, acrid, corrosive, and pungent leucorrhśa, accompanied or

preceded by colic.—Breasts flabby.—Inflammation of the mammć, with stitches; scirrhus of the mammć after contusion.—Scirrhous induration of the mammary glands, with itching and shooting pains.

17. Respiratory Organs.—Catarrh, with fever, sore throat, and want of appetite.—Hoarseness.—Dryness in one small circumscribed place in the larynx, and tickling which excites coughing.—Cough provoked by tickling and scraping in the throat.—Dry cough, provoked by a tickling, with oppression of the chest, and fever in the evening.—Suffocating cough, with flushes of heat in the face.—Dry, convulsive cough.—Cough, like whooping-cough, with sanguineous expectoration, or in violent fits during the night, caused by itching in the chest and throat, or from a small dry spot in the larynx, without expectoration at night, and difficult, bloody, purulent, offensive expectoration during the day.—The cough manifests itself generally at night or in the evening.—Shortness of breathing when walking; suffocative attacks; oppressed breathing, in the morning, when waking.—Cough provoked by taking a deep breath, or by taking acid or salt things.—Loose cough, but without expectoration; he must swallow what he coughs up.—Yellow and purulent expectoration, of a putrid smell.—Cough increased by lying down.—During the cough, pains in the head or in the abdomen, with shootings in the l. side aggravated by movement.—Cough during pregnancy.

18. Chest.—Short respiration when walking, and on the least movement, often with convulsive cough.—Cough relieves the tightness of the chest.—Difficulty of respiration, even in the morning on waking.—Respiration difficult and slow, esp. in the evening in bed.—Difficulty of respiration, with pains in the chest, in the evening in bed.—Fits of suffocation, as if there were an obstruction in the throat.—Shooting in the sternum, or in the side of the chest.—Beating stitch, with pain in upper and l. part of chest towards the centre of the chest.—Pressure behind sternum and desire to breath deeply.—Violent pains in the chest, with violent cough.—Pressure on the chest, in the sternum, and in the region of the heart.—Drawing pains in the chest.—Shocks in the chest.—Caries of the sternum.

19. Heart.—Palpitation of the heart, esp. after drinking.—Frequent shocks in the region of the heart.

20. Neck and Back.—Tension in the nape of the neck.—Pain as from excoriation in the vertebrć of the neck.—Enlargement of the neck.—Pains in the loins on bending backwards.—Aching and compression above the hips.—Pressive, cramp-like, and tractive pain in the back.—Pain, as from a sprain in the l. side of the back and neck.

22. Upper Limbs.—Shoulders painful, as if they had been bruised and excoriated.—Humid, scabby, and burning tetters in the forearms.—Numbness of the hands, and esp. of the palms of the hands.—Cracking in the wrist-joint.—Sweat in the palms of the hands.—Torpor of the fingers.—Itching in the back of the fingers.—Yellow spots on the fingers and yellowish nails.—Panaris.

23. Lower Limbs.—Drawing pains in the hips.—Arthritic pains in the knee, tearing, and tensive, aggravated on beginning to walk after sitting down, with a sensation as if the tendons were too short (during the suppression of catamenia).—Restlessness and heaviness in the legs.—Lassitude in the knees.—Cracking of the knee-joint.—Painful swelling of the legs and of the feet.—Red spots on the calves of the legs, sometimes painful, becoming subsequently green or yellow, as after a blow or bruise, and impeding the movement of the foot, which is drawn back, as if the tendons were contracted.—Cramps in the calves of the legs.—Coldness, and strong disposition to take cold in the feet (even from a slight exposure of the feet).—Torpor and insensibility of the feet.—Pustules in the feet.

24. Generalities.—Cramps and cramp-like pains in different parts.—Pain, as from fatigue in the limbs and joints, while at rest.—Nocturnal pains and sufferings, which disturb sleep.—The symptoms appear during repose, and are aggravated on beginning to walk, or by any movement.—Tendency to strain the lower part of the back.—Attacks of hysteria and hypochondriasis.—Shocks in the tendons, trembling and convulsive shakings in the limbs.—Ebullition of blood.—Dropsical swellings.—Swelling and induration of the glands, with tingling and shooting pains.—Fainting fits.—Great general dejection, with involuntary laughter.—Sensation of fatigue esp. early in the morning in bed.—Restlessness in the body, esp. in the legs.—Want of energy, and nervous debility.—Consumption.—Sudden sinking, while walking.—Great liability to take cold.—Great fatigue and other sufferings, from walking in the open air.—Continued deprivation of natural vital heat.

25. Skin.—Shootings, and pricking itching in the skin.—Swelling of the glands, with tingling and stitches after contusions and bruises.—Bluish colour of the skin over the whole body.—Painful inflammation of the skin.—Nettle-rash in consequence of violent bodily exercise.—Pimples, like those in scabies, which become scurfy.—Brownish, or red and itching spots, over the whole body, which disappear and return.—Humid, or scabby and burning tetters.—Blackish ulcers, with sanious, sanguineous, and fetid discharge, and tingling tension.—Gangrenous ulcers.—Ulceration of the bones.—Panaris.—Petechić.—Reddish and greenish spots, as from ecchymosis.

26. Sleep.—Drowsiness during the day, even very early in the morning.—Somnolence.—Inclination to sleep in the evening, with falling down of the eyelids.—Tardy sleep.—Disturbed and unrefreshing sleep, with lachrymation, and frequent, anxious, and frightful dreams.—Dreams of disease, mutilation, death, danger, and quarrels.—At night, headache, nausea, gastralgia, bleeding of the nose, pains in the limbs, &c.—Half-waking after midnight, with great anguish.—Nightmare.—Starting of the limbs during sleep.

27. Fever.—Shivering, frequent coldness and shuddering.—Coldness and chilliness in the morning and forenoon.—Chilliness, with desire for heat, esp. in the sunshine.—Heat internally and externally, with great nervousness.—Dry, internal heat.—Slow fever, with total want of appetite.—Inflammatory fever with great heat, abundant sweat, anorexia, diarrhśa, and vomiting.—Fever with inflammation of the throat, and cough.—Pulse irregular; generally slow and full, alternating with small and frequent beats.—Nocturnal sweat, even at the commencement of sleep.—Heat with profuse perspiration.—Perspiration day and night, as soon as one closes the eyes and goes to sleep.—Local, fetid, and acrid sweats.

Convallaria.

Convallaria majalis. Lily of the Valley. N. O. Liliaceæ.

Clinical.—Diarrhœa. Heart, affections of. Herpes. Pruritus vulvæ. Vomiting (of pregnancy).

Characteristics.—*Convallaria* is a popular remedy in Russia for heart affections, and it has been introduced into old-school medicine principally as a heart remedy. It compares closely in its action with *Lilium tigrinum*, and also resembles its other botanical relatives, *Aloe, Allium cepa*, and *Allium sativum*. It is strongly purgative and causes morning vomiting. It has been proved, and the symptoms produced snow that its nearest analogue is *Lilium tigrinum*. Nash has used it in 30th with very satisfactory results in women complaining of great soreness in uterine region with sympathetic palpitation of the heart. He has also removed cardiac dropsy when this uterine soreness has been present as well. Berridge credits it with this symptom: "Movement in the abdomen as from the fist of a child," like *sul., Thuj., Croc*. In the case of *Conval*. the symptom occurs "*when lying on the back*." Sleepiness accompanies many symptoms. > In open air, < in warm room (like *Cepa*).

SYMPTOMS.

1. Mind.—Depression.—Mind wanders from subject when reading.—Dull, can hardly think.—Irritable when asked a question.

2. Head.—Dull, heavy pains at vertex > open air.—Headache with fever, < jarring, > rest.

3. Eyes.—Sees imaginary grey spots about 3 in. square in different parts of the room on coming in from a walk.—When reading sees small words (as "the," "it," "too,") before beginning of sentence, when they are not there.—P is substituted for

other letters.—About every fifteen minutes, dull pains from r. eye over top of head and down r. side of neck.—Eyelids heavy.

6. Face.—Face and lips sore, crop of small hydroa, feel raw.

8. Mouth.—Fine red points on tip of tongue.—Intense redness and soreness of tongue, looks like raw beef; granular and quite clean, with tenderness of stomach.—Coppery taste in mouth.—Water tastes bitter.

11. Stomach.—Morning sickness and vomiting.

12. Abdomen.—Severe colic; pains come quickly and pass off slowly.—Dull aching pain and sore feeling in hypogastrium, < when coughing.—Labour-like pains.—Movement in abdomen like the fist of a child.

13. Stool and Anus.—Tenesmus.—Slightly thin stool, brown, offensive with tenesmus and heat at anus after stool.—Sensation in rectum as if full of gas, not > by passing flatus.

16. Female Sexual Organs.—Labour-like pains in sacro-iliac joints, worse r. side, running down leg intermittently.—Sensation as if a large cord extended from sacro-iliac synchondrosis to inguinal region, and this cord was pulled down by pelvic organs (< r. side); sensation as if uterus descended and retroverted, pressing on rectum and anus, pain continuous and unbearable.—Soreness in uterine region with palpitation of the heart.—Itching at urinary meatus and orifice of vagina.

19. Heart.—When exercising, fluttering at heart, lasting about a minute, then face would get red, with sensation as if heart stopped beating and would start again very suddenly, with faint, sick feeling.—Pulse full, compressible, intermittent.—Symptoms > after lying down.

20. Back.—Bruised aching in back.—Pain in back and wrists, gradually passing off.—Chills run along back at every movement.

21. Limbs.—Aching in wrists and ankles.

25. Skin.—Blotches like mosquito-bites, itching violently, on undressing scratches till the skin comes off.

Convolvulus Arvensis.

Convolvulus. Bind-weed. N. O. Convolvulaceæ. Tincture of root.

Clinical.—Colic. Diarrhœa.

Characteristics.—Very few, experiments have been made with this plant, and in those the resinoid of the root, and pure *Convolvulin* were used. The few symptoms recorded are all in the gastro-intestinal sphere.

SYMPTOMS.

11. Stomach.—Eructation after eating.

12. Abdomen.—Colic and liquid stool.

13. Stool.—Soft, semi-fluid evacuation, preceded by flatulence and violent colic.—Stools with pain.

Convolvulus Duartinus.

Ipomśa bona-nox. Morning Glory. N. O. Convolvulaceć. Tincture of Flowers.

Clinical.—Eye, inflammation of. Headache. Rheumatism. Vertigo.

Characteristics.—*Convol. d.* was proved under Mure, and some symptoms that are peculiar have been recorded: Reveries in daytime. Numbness in limbs. Dreams of dead persons. Symptoms are < in morning and > after cold bath.

SYMPTOMS.

1. Mind.—Moral weakness.—Reveries in the daytime.

2. Head.—Vertigo with faintness.—Burning in frontal region, ceasing after a cold bath.—Pain in frontal region with heat at root of nose.—Pain in l. temple (corresponding to inflamed l. eye).

3. Eyes.—Inflammation of l. eye.

8. Mouth.—Toothache.—Swelling of gums.—Tongue feels swollen.

9. Throat.—Heat and dryness at anterior and upper part of śsophagus.

12. Abdomen.—Pain in abdomen with internal heat.—Violent colic with drawings.

13. Stool.—Constipation.

14. Urinary Organs.—Red urine.—Yellow sediment in urine.

22. Upper Limbs.—Numbness of arms,< when hanging down.—Pains in l. shoulder; in l. wrist.—Numbness of r. index and middle fingers.

23. Lower Limbs.—Lancinating pain in r. knee.—Pain fore part of l. leg for four days.—Deep-seated pain in calves.

26. Sleep.—Drowsiness in daytime.—Dreams: about quarrelling; about dead persons; falling out of his front teeth; of flying along a lighted street; appearance of a ghost; wakes with a start.

Copaiva.

Copaiva. Copaifera officinalis. N. O. Leguminosæ. Tincture of the balsam.

Clinical.—Acne. Anus, itching of. *Bladder, irritable*. Blenorrhagia. Bronchitis. Catarrh. Cough. Cystitis. Dysentery. Fistula. Gastritis. Gonorrhœa. Hæmorrhoids. Measles. Nose-bleed. Prostatitis. Pruritus. Urethritis. Urticaria. Vulva, inflammation of.

Characteristics.—*Copaiva* is an old-world remedy for gonorrhœa, and it has also been used for other blenorrhagic conditions. It has been proved; and observations have been made on patients who have overdosed themselves with the drug. The chief incidence of the drug's action is on the genito-urinary organs, and rectum. It is suited to the irritable bladder of old women. Irritation accompanying thickening of bladder. Burning at neck of bladder and in urethra; discharge milky, corrosive; meatus tumid and inflamed. It affects the skin and mucous membranes generally. In chronic bronchitis it is useful when there is profuse, greenish-grey, disgusting-smelling sputa. A. P. Bowie (*Med. Adv*., xx. 14) has verified this indication: "In old persons (men, I should say) who from cold or other causes cannot urinate; or where there is frequent desire and only a few drops pass with much straining—frequently with a mucous discharge from the bowels, with much rumbling and rolling in the bowels." He gave 5-drop doses of the first dilution. He commends also an ointment of gtt. x of the balsam to one ounce of vaseline, "to relieve the burning and itching at the anus caused by piles."

Relations.—*Antidoted by:* Bell., Calc., Merc., Sulph. *Compare:* Cannab., Canth., Cubeb., Eriger., Kali bro., Kali i., Sep., Senec. It has less violent action than Canth. Teste says he is unable to find any difference between the therapeutic properties of Copaiv. and Sep. Both are antidoted by the same drug: Merc. cor. in the male, and

Merc. sol. in the female, according to Teste, neutralise the action of Copaiv. almost instantaneously.

SYMPTOMS.

1. Mind.—Depression with anxious sadness.—Excessive sensitiveness of whole nervous system; least noise causes starting and anger.—A young girl weeps on hearing a piano.—Uneasiness on account of one's health.—Misanthropy.—Deficient memory.—Loathing of life, and at the same time fear of death.

2. Head.—Heaviness of head, esp. of occipital region, which is instinctively pressed against collar of coat, which relieves.—Pulsative, deep stitches in occiput.—Dull pain in occiput.—Every step jars the head.—Hemicrania (l.) with burning pains, sense of coldness in part, weeping and constant moaning (in young man of twenty-two, disposed to be hypochondriacal. It was so violent that Teste had to give Merc. to relieve him).—Pressure at forehead.—Headache > pressing head back against collar of coat; gentle pressure with hand < evening and night; intolerable when leaning on pillow; washing face with cool water in morning (sudden stitches in both temples).—Falling out of the hair.—Sensitiveness of hairy scalp.

3. Eyes.—Formication in canthi of eyes in evening.—Black points hovering before eyes.—On alternately closing eyes objects look much paler to l. eye than to r.

4. Ears.—Excessive sensitiveness of hearing, esp. to sharp sounds.

5. Nose.—Epistaxis of small boys; also after wounds.—Profuse yellow and green, thick, fetid discharge from nasal passages running down throat at night.

6. Face.—Face pale and sickly-looking.—Acne.—Urticaria.—Red humid tetter on upper lip, which is swollen and painful when touched.

8. Mouth.—Teeth set on edge.—Sense of coldness in teeth.—Foul breath in morning.—Tongue covered with whitish coating, greenish at base.—Tenacious phlegm in mouth and throat, which is constantly reproduced.

9. Throat.—Chronic catarrh of throat.—Sensation of foreign body in pharynx.—Swelling of both tonsils (< r.).

11. Stomach.—Thirst and diminished appetite.—Bitter taste.—Hungry in evening on going to bed.—Every article of food seems too salt.—Rush of blood to head and face when eating or after a meal.—Spitting up of ingesta with large quantities of mucus.—Inclination to vomit.—Distension and fulness after eating; gastric troubles during menstruation or following urticaria.

12. Abdomen.—Pressing pain in region of spleen, becomes pulsative from time to time.—Tearings in the abdomen preceded by pullings in the bones of the thighs.—Sensation of burning in the abdomen.—Borborygmi and movements in the intestines.

13. Stool and Anus.—White, loose evacuations, chiefly in the morning, with cold and drawing tearings in the abdomen, which force the patient to bend double.—Involuntary evacuations.—Stools like sheep's dung.—Insufficient stools.—Fluent piles.—Bloody stools.—Stools with tenesmus.—Stitches; spasms in rectum.—Intolerable burning at the anus.—Burning, itching at anus.

14. Urinary Organs.—Constant, ineffectual desire to urinate; contraction of the urethra; emission of urine in drops.—Itching, soreness, and sensation of scalding in the urethra, before and after the emission of urine.—Inflammation of the urinary organs; swelling, dilatation, and inflammation of the orifice of the urethra.—Pain as from excoriation in the orifice of the urethra, which remains wide open, with throbbing pain in the penis generally.—Hæmaturia.—Urine foaming; greenish-turbid, smelling like violets.—Yellow, purulent gonorrhœa.

15. Male Sexual Organs.—Burning and sensation of dryness in the region of the prostate gland; induration of the prostate gland.—Swelling of testes.—Swelling and induration of the testes.

16. Female Sexual Organs.—Burning and itching of urethra; itching of vulva; burning red spots in vulva.—Milky, acid, excoriating discharge with painful menstruation.—Profuse gonorrhœal discharge.—Metrorrhagia.

17. Respiratory Organs.—Dry, painful cough, with dryness in the larynx.—Profuse expectoration of a greenish-grey purulent mucus, of a disgusting smell.—Spitting of blood.

19. Heart.—Palpitation of the heart.

23. Lower Limbs.—Pain and swelling of the knees and malleoli.

24. Generalities.—Burning pain (skin, abdomen, urethra, prostate gland, chest).—Heaviness and pressure (abdomen, chest, perineum).

25. Skin.—Large red blotches all over the body, with constipation and some fever.—Dark-coloured or bright red, elevated, intolerable itching, lentil-sized, measle-shaped exanthema, in clusters, flowing into one another.—Nettle-rash, pale red or bright red, with violent itching.—Jaundice.

26. Sleep.—Drowsiness in daytime.—Restless sleep at night.—Frightful, or lascivious dreams.

27. Fever.—Quotidian fever, shiverings and cold in the forenoon, with pain in the dorsa of the feet; then, in the afternoon, general heat and thirst, with desire for cold water.—During the febrile cold, the instep is painfully sensible to motion.—Perspiration profuse of a pungent smell.—Sour-smelling sweat at night.—Profuse inodorous sweat in morning.

Coqueluchinum.

Pertussin. The nosode of Whooping-cough.

Clinical.—Cough, paroxysmal. Whooping-cough.

Characteristics.—In 1906 Messrs. Epps published a little book of mine dealing with this nosode, to which I then gave the name of *Pertussin*. But it appeared that a German firm of chemists had registered in England a patent medicine under that name, and threatened the publishers with an action unless the book was withdrawn! As the matter was not worth a law-suit, I adopted the French name for the nosode, and a second revised and enlarged edition was brought out by the Homśopathic Publishing Co. under the title *Whooping-cough Cured with Coqueluchin*. Since that date later experience has fully confirmed all that was then written, and many patients, old as well as young, have experienced the virtues of Coqueluchin. In all cases of whooping-cough suspected or defined I give the remedy in the 30th attenuation every four hours as a matter of routine, and as a rule it quickly assumes control of the case and does all that is necessary. In my experience it agrees well with all other whooping-cough remedies, and when their specific indications appear I give them also in alternation, or else alone. *Coqueluchin* is an "unproved" remedy, except in the sense that every case of the disease is a "proving," but I have noted a few special symptoms removed by it, and I have arranged them in a subjoined "Schema." It is equally applicable to cases of cough of the same type, though not caused by the same infection, such as appear in some cases of influenza.

Relations.—*Compare:* Bell., Cocc. c., Coral. r., Dros., etc.

SYMPTOMS.

3. Eyes.—Coryza with hacking cough.

6. Face.—Intense flushing with cough.

8. Mouth.—Itching of the palate on lying down at night.

9. Throat.—Intense tickling in throat causing cough.

11. Stomach.—Vomiting or nausea at end of cough.

17. Respiratory Organs.—Dyspnśa with cough.—Sobbing or sighing at end of cough.—Strangling sensation with cough on waking.—Cough provoked by intense tickling in throat-fauces or trachea.—Hacking cough; with coryza.—Deep-sounding croupy cough.—Spasmodic choking cough.—Spasmodic cough with intense flushing of face.—Cough in frequently repeated paroxysms.

18. Chest.—Stinging pain in or on the chest with cough.

Corallium Rubrum.

Gorgonia nobilis. Class, Zoophytes. N. O. Gorgoniaceæ. Trituration.

Clinical.—Asthma milleri. Catarrh. Chancre. *Cough*. Eruptions. Glands, inflamed. Hysteria. Measles. Post-nasal catarrh. Psoriasis. Purpura. Syphilis. *Whooping-cough*.

Characteristics.—Red coral, the product of a coralligene zoophyte, contains carbonate of lime, oxide of iron (whence its colour), gelatin, and other elements. In old physic it was considered to have "strengthening properties," and to be astringent, sudorific, diuretic, and absorbent. In homœopathic practice *Corallium* corresponds to a combination of syphilis and psora. Is suited to persons of nervous temperament; nervous coughs. It causes eruptions which are for the most part of its own colour, coral-red. Red spots on the palms of the hands, at first coral colour, then darker, and finally coppery. The chancres to which it corresponds are coral-red. The cough is of the whooping-cough type; smothering sensation before, and great exhaustion after cough. Cough in "minute-gun" paroxysms. Crowing inspiration; sensation as if inspired air was icy cold. There is much drowsiness with *Coral*., and many symptoms appear during sleep. J. N. Lowe cured with *Coral*. an infant, almost a year old, suffering from laryngismus stridulus, the indications being < during sleep and after waking. *Lach*., given first, failed to relieve. Guernsey's indication is: "Whooping-cough, or any other kind of cough when the attack comes on, with a *very* rapid cough, and the attacks follow so closely as to almost run into each other." I have found it most effective in the nervous "minute-gun" cough where the patient gives an isolated cough at regular intervals through the day. Nash finds it the most useful of all remedies in post-nasal catarrh. Guernsey's other indication is: "Red, flat ulcers on the glans and inner surface of the prepuce, with secretion of a quantity of yellow ichor." In the head there is a sensation of emptiness or hollowness. Head feels very large. Sensation as if forehead were flattened. Change of air causes coughing. Feels cold when uncovered and too hot when covered.

Relations.—*Antidote to:* Mercury. *Complementary:* Sulph. *Compare:* Bell., Caust., Coff., Coc. c., Con., Hyos.; Hydrphb. (inspired air feels cold—also Cistus.); Nit. ac., Nux v., Mephit., Staph.; Dros. (cough always moist—Coral. always dry); Petrol., Selen., Graph.; teeth feel too close together, Tuberc. (Koch). Teste, who proved Coral. and elicited its respiratory symptoms, groups it with Caustic.

SYMPTOMS.

1. Mind.—Grumbling humour, with oaths in consequence of the pain.—Irascibility and ill-humour.—Wine has a natural taste, but immediately stupefies him.

2. Head.—Head bewildered, as if in consequence of drunkenness.—Confusion in the head, which feels empty and hollow.—Intoxication after drinking very little wine.—Pressive cephalalgia, as if everything were going to protrude through the forehead, compelling motion of the head, and mitigated only by uncovering the body, which is burning hot.—Pressing headache in the forehead; she cannot keep the eyes open; relieved by walking in the open air.—Violent cephalalgia with nausea, greatly aggravated on sitting down.—Pain in the sinciput as if it were flattened.—Aggravation of the headache, and congestion in the head and in the face, on stooping.—Sensation, as if wind were traversing the head, on moving it rapidly (or rocking it).—Sensation, as if the head were increased in size (three times its size).

3. Eyes.—Pressure, as from sand, in the reddened eyes (evening).—Sensation of compression in the orbit.—Pain, as from excoriation in the eyes, on moving the balls or the eyelids.—Sensation of heat in the eyes, on closing the lids, with a sensation as if they were swimming in tears.—Sensation of burning in the eyes, by candle-light.

5. Nose.—Semi-lateral swelling of the nose, with heat, pulsation and sleeplessness.—Painful ulcer in the nostril (on the inside of the r. wing, with the sensation as if the nasal bones were pressed asunder).—Epistaxis, sometimes at night.—Bleeding of the nose, from one nostril at a time (at night).—Great dryness of the nose.—Fluent coryza, with excessive secretion of an inodorous mucus, resembling tallow.—Profuse secretion of mucus through the posterior nares, obliging one to hawk frequently.

6. Face.—Heat in the face, < by stooping.—Pain, as from a bruise in the cheek-bone, < by touch.—Pain, as from dislocation in the maxillary joint, on masticating, and on opening the mouth wide.—Painful swelling of the sub-maxillary glands; < when swallowing and on bending the head forward.—Lips cracked and painful.

7. Teeth.—Every tooth on the l. side feels as if set on edge; it feels as if the teeth were too close to one another, or as if a tenacious body were lodged between them.

9. Throat.—Great dryness of the fauces.—Constant hawking, owing to an accumulation of mucus in the posterior nares.—Great dryness of the palate and of the throat, with sensation of excoriation on swallowing.

10. Appetite.—Insipidity of food.—Sweetish taste of beer.—Violent thirst; longing for acids and salt food.—After a meal, the head turns round, as during intoxication.—After dinner, hot cheeks and forehead, with cold feet.

11. Stomach.—Nausea, with dryness of the tongue and violent headache; < when sitting up.

13. Stool and Anus.—Constipation (for six days), followed by copious papescent stool.

14. Urinary Organs.—Loam- or clay-coloured urine, with similar sediment.—Burning urine.

15. Male Sexual Organs.—Copious sweat on the genital parts.—Swelling of the prepuce, with pain as from excoriation when it is touched.—The margin of the prepuce feels sore when the linen touches it.—The frænum is painful, as if pricked by needles.—Pseudo gonorrhœa (balanoblennorrhœa) with fetid secretion of a yellowish-green colour.—Red and smooth ulcers on the glans, and in the internal surface of the prepuce, with sanious and yellowish secretion.—Pollutions.—Involuntary seminal emissions during sleep (without dreams or erections).

17. Respiratory Organs.—Painful cough, as if a stone were depressing the pleura.—Yellow, puriform expectoration, in consequence of the cough.—Sensation of cold in the respiratory organs, on taking a deep inspiration; inclination to cough, with difficult hawking up of bronchial mucus (in the morning).—Crowing during inspiration.—Violent, spasmodic cough, "firing minute-guns" of short, barking cough all day.—Whooping-cough, or other rapid cough, attacks following so closely as almost to run into one another; cough till patient falls back exhausted.—Cough with morning aggravation; smothering sensation before paroxysms.—Cold expectoration.

20. Neck and Back.—Stiffness in nape of neck.—Pain, as if the small of the back were broken.

22. Upper Limbs.—Pressive pain in the shoulder-blades, aggravated by coughing.—Pain in the wrists, as if he had been writing much and rapidly.—Pains in the shoulder-joints, as if the head of the humerus were pressed violently outwards.—Smooth spots of a deep-red colour, in the palms of the hands and in the fingers.

23. Lower Limbs.—Pain in the knees, tibia and tarsal joint, as if he had walked a great deal.

24. Generalities.—Failing of the limbs, after the least exercise in the open air.—Sensation of cold in the hot parts, on uncovering them.—The symptoms of heat and cold are > by artificial heat.

25. Skin.—Red and smooth spots on the skin.—Smooth spots on the palms of the hands and fingers, first of a coral colour, then dark-red, and lastly copper-coloured.—Measles; purpura; psoriasis.

26. Sleep.—Yawning, violent, frequent and in rapid succession, with pain in the articulation of the jaw.—Great sleepiness; falls asleep while standing.—As soon as she falls asleep she starts up, on account of frightful dreams.—Cannot sleep before midnight tosses about; if he uncovers himself, he feels too cold, and when covered, he feels too hot.

27. Fever.—Pulse full and hard.—Chill; the skin is of the ordinary temperature, with headache and violent thirst; > by external heat.—Febrile shivering, with burning thirst, and pains in the forehead.—Dry heat, internally and externally, with full and hard pulse.—Dry heat without thirst, and not followed by perspiration.—The hot parts feel cold when uncovered.

Coriaria Ruscifolia.

Toot-berry Tupa-kihi or Tutu (New Zealand). N. O. Coriarieæ (between Anacardiaceæ and Rutaceæ). Tincture or trituration of the berries.

Clinical.—Delirium tremens. Mania. Memory lost. Vomiting.

Characteristics.—*Coriaria* produces intoxication very like that of alcohol. Great muscular activity as in acute mania, requiring several persons to hold a person when under the influence of the drug. The most marked feature is complete loss of memory, which ensues after coming out of the acute stage of the poisoning. A prover who ate 1 1/2 gr. of the resin experienced the following: Disagreeable, irritating sensation in throat, extending to stomach, with pain across region of stomach, accompanied by nausea (in five min). In a quarter of an hour vomiting came on, continuing more or less for two hours. Very unpleasant sensations continued for two hours more, when, after great flushing of the face, with all but intolerable heat, the effects passed away.

Cornus Alternifolia.

Swamp Walnut. Alternate-leaved Cornel. N. O. Cornaceæ. Decoction or tincture of leaves.

Clinical.—Eczema. Intermittent fever.

Characteristics.—F. H. Lutze communicated to *H. Recorder*, (x. 501) a Long Island farmer's cure for eczema with a decoction of the leaves of this tree. His method was to give three times a day a wineglassful for three days. Then for the next three days apply it locally or wash the part with it; then administer it internally for another three days, and so on. He cured, thus, all his cases in eighteen days. This was the first acquaintance Lutze had with the remedy. Later on he made a proving (*H. R.*, xi. 346) on himself and another, eliciting symptoms of fever, restlessness, and sleeplessness, skin eruptions, and emaciation. A striking symptom was a cold feeling in chest as if full of ice. Symptoms > after walking in open air; after supper.

Relations.—In the skin effects it compares more closely with Cornus circinata. In fever with drowsiness and gastro-enteric disturbance it is practically identical with the other Cornels. All three have greatly disturbed sleep.

SYMPTOMS.

1. Mind.—No ambition to do anything.—Awful, uneasy feeling, that something terrible is going to happen.

2. Head.—Dull pain across forehead (esp. r. side) with aching in l. shoulder.—Dull, heaving feeling, accompanied with a nauseous and dizzy feeling.—Violent pressing headache in forehead, lasting all day; < on motion, on stooping felt as though everything would come out.

5. Nose.—Sneezing; head partially stopped up towards night.

6. Face.—Eruption on chin r. side, small pustules, one blind.—Ring-worm on forehead (r. side).—Pustules on face and neck.

8. Mouth.—A little sore inside mouth became very annoying; when food came in contact with it, or only moving the mouth in a certain direction, sticking, pricking pain.—Tongue yellowish white.

9. Throat.—Raw feeling in throat.—Raw feeling in throat, with frequent desire to clear, sensation as though something lodged there and should come out.

11. Stomach.—Sick sensation an hour after dinner.—On waking, desire to vomit, with chills; an hour later vomited, which gave relief, and heat followed.

12. Abdomen.—Dull pain r. side, in region of liver, about 11 a.m.

13. Stool.—Two loose evacuations in quick succession in afternoon.—About 5 p.m. diarrhœa set in, continued all night every half-hour to an hour; lasted a week, during which time Lutze lost six pounds in weight.—Stool scanty, hard and difficult.—Stool hard at first, then loose.—Stool scanty or absent.

15. Male Sexual Organs.—Dreams of coitus and has an emission.

17. Respiratory Organs.—Cough, with a feeling as though something heavy was lying on chest and throat.

18. Chest.—Cold feeling in chest, as if it were filled with cold air or ice; (lasted two days, was very disagreeable, but did not affect respiration or heart).

19. Heart.—Dull ache in region of heart (afternoon).

20. Neck and Back.—Transient pain across small of back.

22. Upper Limbs.—Aching in l. shoulder.

24. Generalities.—Can hardly pull one foot after the other.—Tired and drowsy.

25. Skin.—Eruptions of small pustules on face and neck.—Eruption on r. wrist, and r. side of chin, small pustules, one of them blind; next day another pustule, ringworm on forehead.—(Decoction internally and externally has cured eczema; skin cracked everywhere, esp. where it had a fold or crease, exuding a sticky watery fluid.).

26. Sleep.—Sleep much broken and full of exciting dreams; hears all the clocks strike; hears every little noise and sound; when once awake mind becomes active and it is difficult to get to sleep again.—Tossed and turned all night; could not get into a comfortable position.—Dreams: of dead rats mashed to a pulp; of coitus and has an emission.—Awakes tired.—Drowsy and tired during the day.

27. Fever.—Towards evening felt very tired and drowsy, with heavy sensation in head; about 9.30 lay down on lounge and dropped off into a doze; awake half an hour after with a feeling as though he wanted to vomit, and chills which continued for an hour; then he vomited, which seemed to relieve somewhat, after which fever took the place of the chill, which abated somewhat towards morning.

Cornus Circinata.

Round-leaved Cornel. Green osier. N. O. Cornaceæ. Infusion or tincture of fresh bark.

Clinical.—Aphthæ. Bilious headache. Diarrhœa. Dysentery. Eczema. Intermittent fever. Jaundice. Liver derangement. Mucous membranes, ulcers of. Pruritus vulvæ.—Urticaria.

Characteristics.—A popular remedy for aphthous and ulcerated conditions of mucous membranes. Hale says he has seen it cure chronic ulceration of mouth and throat, which had recurred for many years. *Corn. c.* has had an extensive proving. It has caused liver derangement with aching eyeballs. Disturbed sleep. The symptoms are < at night; on waking; by motion of any kind; from catching cold; from summer heat; > by coffee. The fever symptoms are identical with those of *Cornus f.*

Relations.—*Compare:* Nux v., Hydrast., Chi., Eup. perf., Ars.

SYMPTOMS.

1. Mind.—Forgetful.—Indifferent; with drowsiness.—Indolence with loss of mental and physical energy.—Unable to concentrate attention.—Mind confused, particularly on rising in the morning.—Depression and petulance.

2. Head.—Dulness and weight in head, esp. temples, > by coffee.—Heaviness of head, with nausea.—Aching and throbbing pain over l. eyebrow.—Dull pains over eyeballs; unusual pulsation extending to back of head.—Pulsating headache in temples.—Headaches, with drowsiness and confusion of ideas; semi-lateral headaches; deep-seated pains under vertex; dull, heavy pains over whole head, with drowsiness, lassitude, nausea, and general sweat.—Headache; < by walking, stooping, shaking head; > by coffee.

3. Eyes.—Eyes sunken, hollow, as after a debauch; dark circles under them, conjunctiva tinged yellow.—Soreness of eyeballs; aching pains through them.—Eyeballs and lids heavy, as if pressed down by a weight; inclination to close eyes in sleep.—Herpes of lids.

4. Ears.—Ringing in ears.

5. Nose.—Prickling in nose and nasal bones.—Coryza early in morning.

6. Face.—Heat and burning in face; without redness.—Countenance yellow, or pale, sallow, and sunken, indicating suffering and debility.

8. Mouth.—Pungent, bitter, or insipid taste; yellowish or white fur on tongue.—Ulceration of tongue, gums, and mouth; from cold, or gastric derangement; aphthæ.—Sweating and burning in mouth, throat, and stomach, with desire for stool.

11. Stomach.—Thirst for cold drinks.—Eructations.—Acid pyrosis; painful and slow digestion.—Gagging as if to vomit in morning.—Nausea, with confused and heavy pain in head.—Nausea with bitter taste and aversion to all kinds of food, and desire for sour drinks.—Sense of faintness and emptiness in stomach and bowels.—Distension; burning; oppression: pulsating pain in stomach.

12. Abdomen.—Chronic hepatitis and bilious derangement.—Constant working in bowels as if all in motion.—Borborygmus.—Distension > after loose stool.—Griping in umbilical region; < during stool.

13. Stool and Anus.—Urgency to stool; early in morning in bed; with fulness and uneasiness of bowels; frequent but ineffectual.—Diarrhœa with excessive debility and nervous irritability.—Stools: dark, bilious, watery, mucous, with griping, burning, and tenesmus, nausea, drowsiness, dulness of the head, and general perspiration; dark green, thin and offensive; greenish slimy; mucous, bilious or watery; frequent and scanty; offensive flatus.—Bearing-down pains in rectum and bowels, with urgent desire for stool.—Hard, dry, scanty stool, with pressing in rectum.—Ulceration of rectum.—Bowel complaints with pains before, during, and after discharges.—Dysenteries and diarrhœas with inactivity of liver.

14. Urinary Organs.—Frequent desire to pass water.—Urine scanty and high-coloured.

15. Male Sexual Organs.—Increased desire, but lack of power.—Frequent strong and persistent erections during the night.—Pruritus.

16. Female Sexual Organs.—Leucorrhœa.—Pruritus.

17. Respiratory Organs.—Frequent inclination to expand chest by taking a long breath.—Cough with sharp stitches in chest.—Dry, spasmodic cough, or tedious, chronic cough, with mucous expectoration.

18. Chest.—Choking sensation in upper part of thorax.—Soreness of chest on rising in morning.—Stitches; bruised feeling; in chest and back.—Dragging down on each side of chest.—Shooting pains from centre of thorax to lower abdomen.—Intermittent shooting pains in chest and abdomen.—Rheumatic or neuralgic pains in chest, back, and limbs.—Fine scarlet rash on chest, with, itching.

19. Heart.—Perceptible pulsations in chest.—Palpitation of heart.—Circulation accelerated.

20. Neck and Back.—Drawing pains at nape of neck.—Dull pains in back.—Sore pains in lumbar region, < bending forward.

21. Limbs.—Weakness of extremities.—Coldness of hands and feet after a loose stool.

22. Upper Limbs.—Weakness and fatigue of arms.—Burning and itching sensation in hands and arms.—Coldness of hands following a loose stool.

23. Lower Limbs.—Pain in r. hip while lying in bed.—Legs weak and tremulous, particularly when ascending.—Itching on legs and thighs; burning sensation in feet.

24. Generalities.—General debility and impaired mental energy, with great drowsiness; in heat of summer.

25. Skin.—Yellow or earthy appearance of skin.—Heat of whole surface with itching, burning, or prickling sensations; < by scratching or rubbing.—Eczema, pruritus and similar affections of external genitals.—Itching in paroxysms < at night.—Dry or moist eruptions; with cough.—Vesicular eruptions; urticaria; miliaria; roseola.

26. Sleep.—Drowsiness with entire loss of mental and physical energy; heavy feeling in head; depression of spirits; tendency to perspire.—Sleep unrefreshing and disturbed by unpleasant dreams.

27. Fever.—Chilliness, with nausea, dull pain in head, debility, and languor.—Chilly sensation, followed by transient flushing.—Flushes of heat and coldness in alternation, followed by cold perspiration.—Transient flushes of heat pervading whole body, with shooting pains through brain.—Paroxysm preceded for days by sleepiness, dull, heavy headache, sluggish flow of ideas; slight exercise causes sweat and great fatigue: during apyrexia, debility and painful diarrhœa; first moderate heat, then light sweat, ending with a crawling sort of chill; when all the stages seem aborted, and the patient says the chills amount to nothing; weak, languid, and loss of appetite.—General clammy sweat, with headache, nausea, pain in back, lassitude, and confusion of ideas.

Cornus Florida.

Dogwood. N. O. Cornaceæ. Tincture of fresh bark.

Clinical.—Dyspepsia. Intermittent fever. Pneumonia.

Characteristics.—Hale commends *Corn. f.* in obstinate intermittents where quinine has been abused and where the following group of symptoms is present: For days before chill sleepiness; sluggish flow of ideas; dull, heavy headache. Paroxysms attended with nausea; vomiting and sometimes watery or bilious diarrhœa. In the chill, cold, clammy skin; in the fever, violent headache, with throbbing, stupor, confusion of intellect and vomiting. He also commends it in old cases of dyspepsia where the chief symptom is acid pyrosis. *Corn. f.*, which has had a separate proving, has some very remarkable neuralgic pains in arms, chest, and trunk, and a sensation as if broken in two. It has been used successfully in a case of pneumonia on the indication of the stitches in the chest.

Relations.—*Compare:* The other Cornels., Eup. perf., Nux, Chi., Kali c., Abies n., Abies can.

SYMPTOMS.

2. Head.—Constant dizziness.—Severe headache and quick pulse and violent pains in bowels.—Fulness and pains in head with gastric disturbance; constant tendency to sleep.

3. Eyes.—L. eye weak, like a cloud over it.

11. Stomach.—Drinks little and often; hunger soon after eating; desire for sour things, pickles, pastry, cakes, &c.—Nausea, vomiting, and violent pains in bowels; with headache.—Acid pyrosis; painful and slow digestion.—Indigestion and heartburn.

12. Abdomen.—Violent pain in bowels with purging.

13. Stool and Anus.—Ineffectual urging, followed by cutting in l. ribs and under scapula; later copious stool.

14. Urinary Organs.—Difficult urination in morning in old men.

18. Chest.—Stitches in region of l. clavicle extending towards r. side, < by taking deep breath; constant tickling in chest compelling him to cough, with difficult expectoration; constant dizziness; chilliness, followed by heat with thirst and finally sweat; drinks little and often; hunger soon after eating (inflammation of the lungs).—Stitch in r. chest as from a knife thrust, with vertigo.—Ineffectual urging to

stool, followed by cutting pains in ribs, l. side, with pain under l. scapula as if a piece of flesh were being forcibly twisted out; later, copious stool.

19. Heart.—Increased strength and frequency of pulse with fever heat; pulse quick and hard.—Pain beginning in elbow, settled about heart causing feeling of pressure and palpitation.

20. Neck and Back.—Sensation like a jerk or shock in nape of neck.—Pains at waist as if she would break in two; pains run up whole l. side of trunk or body like lightning; seems as if they would give her a twist while running up; pains in elbows and wrist.

21. Limbs.—Cramps in popliteal spaces with tension in flexor muscles, also in l. arm.—Hands and feet swollen.

22. Upper Limbs.—Neuralgic sharp pains begin in r. elbow, extending to hand and shoulder, passing down r. and then up l.; pain settled about heart causing feelings of pressure and palpitation; could not raise arm because of pain and lameness; hands and feet swollen, pains of a darting, needle-like kind, very severe; difficulty in passing water.—Pains in wrist.—Numbness and stitches in wrists.—Blueness of fingers.

26. Sleep.—Sleepy, but couldn't sleep all night.

27. Fever.—Chill with cold, clammy skin, followed by heat with thirst, and finally sweat.—Chill followed by heat with thirst, drinks often, but little at a time, then sweat; constant giddiness; hungry soon after eating; desire for sour things, later for sweets.—First moderate heat, then light perspiration, ending with a crawling sort of chill, beginning in back and going upward.—Increase of body temperature; hot sweat, fulness in head.—Heat: with violent headache; thirst hot, but moist skin; stupor.—Sweat rolls down from her; chilly, but warm cramps from sides of waist running toward pubes; Sleepy but couldn't sleep all night; had to get up and look out of window, she was so sleepless; could not sleep in daytime, sweating all the time.

Corydalis.

Corydalis formosa. Wild Turkey-pea. Stagger-weed. N. O. Fumariaceæ. Tincture of bulbous root gathered when plant is in flower. Trituration of dried root. Triturations of Corydalin.

Clinical.—Gastric catarrh. Scrofula. Syphilis. Ulcerations.

Characteristics.—This is an unproved remedy, but clinical experience has revealed a specific relation to the manifestations of syphilis: Hunterian chancre; syphilitic nodes; falling of the hair; syphilitic and scrofulous ulcerations of scalp; syphilitic and non-syphilitic ulcerations of fauces—all these have been reported cured by it. Hale also commends it in: Scrofulous dyscrasia; obstinate skin diseases; cachexia of intermittents with enlargement of liver and spleen. In massive doses it has cured, according to eclectic authorities: "A derangement of the stomach, attended with profuse morbid secretion of mucus, there being always a coated tongue, with fetor of the breath, and loss of appetite and digestion." It is therefore indicated, as Hale remarks, in gastric catarrh, being an analogue, in this respect, of *Hydrastis*. It has not been used in the potencies; ten drops of the tincture four times a day has been a usual dose.

Relations.—*Compare:* Kali iod., Phytolac., Stilling.; Berb. aq., Merc., Lobel. cærul.

Coto Bark.

Coto Bark. A bark of unknown botanical origin (N. O. Lauraceæ?) obtained from Bolivia. Tincture. Trituration of alkaloid Cotoin.

Clinical.—Diarrhœa. Tubercular diarrhœa.

Characteristics.—The bark has been used in medicine as a diarrhœa remedy, probably from aboriginal tradition. Hansen says it is especially valuable in "chronic tubercular, watery diarrhœa, very copious and exhausting." Substantial doses only have been used.

Cotyledon.

Cotyledon umbilicus. Umbilicus pendulinus. Pennywort. Navelwort. Kidneywort. Le Nombril de Venus. N. O. Crassulaceć (Houseleek-family). Tincture of the plant.

Clinical.—Heart affections. Hysteria. Sinuses. Spleen, affections of. Rheumatism.

Characteristics.—*Cotyledon* has had a considerable proving, but I am not aware of any clinical experience with it having been recorded. The whole houseleek family are deserving of careful study by homśopathists. Among the most peculiar symptoms of *Cotyl*. are: a feeling as if some part of the body—a foot or the head—were absent. The senses of sight and hearing are dulled. A yellow patch follows the sight. Disagreeable surging in ears; ears feel stuffed. A number of pains in the region of the spleen appear. The breathing is oppressed, the heart is disturbed. Rheumatic symptoms are prominent. Weak, faint feeling. Stitching, pricking, jerking pains are predominant sensations. Cooper considers it a cancer remedy. He has cured with it sinuses in buttock. A patient to whom he gave it for polypus said it made him "stagger as if drunk." Symptoms are < morning and evening.

Relations.—*Compare:* Sedum acre.

SYMPTOMS.

1. Mind.—On waking disagreeable sensation running down back of r. thigh and leg, with a feeling, as if there were no foot.—Head felt exceedingly light for some time as if there were no solid head; could not articulate for some time though she tried; followed by pressing vertical headache > by tea.—On waking, sensation as if going out of, mind, followed by trickling as of blood down l. arm from shoulder to finger-joints.—Exhilaration.—Difficulty of collecting ideas.—Feels lost before headache comes on.

2. Head.—Headache, causing desire for open air, which >.—Dull headache with cold feet.—Dull, heavy, stupefying pain in forehead and vertex, shifting suddenly between them.

9. Throat.—Constant choking in throat-pit, and feeling as if he would burst into tears.—Back of throat feels as if covered with thick mucus.

11. Stomach.—Pain at epigastrium through to shoulder with nausea.—On swallowing, the morsel seems to pass and press against some swelling in cardiac region (in evening) recurring during the pain.

12. Abdomen.—Long stitch in l. hypochondrium.—Dull pains in l. hypochondrium.—Dull pushing in region of spleen recurring at intervals.

13. Stool.—Bowels freely opened, later, constipation.

14. Urinary Organs.—Calls to urinate frequent.—Increased flow of clear urine.

17. Respiratory Organs.—Tickling in larynx with dry cough.—Oppressed breathing.—Shooting in all directions in chest, particularly under r. scapula and l. nipple during evening.—Stitches below both nipples.

19. Heart.—Heat about heart.—Uneasiness.—Clawing, dragging pain, on riding, > by compressing side.—A troublesome palpitation and fulness at sternum on walking up-hill, consisting of one or two jumps or rolls of heart with occasional intermission.

22. Upper Limbs.—Between attacks of headache, gnawing, rheumatic pain in r. shoulder.—Aching, bruised pain in wrists.—Aching, tingling in hands, esp. at night, preventing sleep; tingling down arm when the nerve is struck.

23. Lower Limbs.—Aching in l. thigh followed by numbness.—Stinging pain under l. gluteus maximus in region of sciatic nerve.

24. Generalities.—Occasionally during the day attacks of faintness with green shadows before the eye.—Creeping in the flesh, and feeling as before severe cold or rheumatic attack.

Cratægus Oxyacantha.

Cratægus oxyacantha. Hawthorn. N. O. Rosaceæ. Tincture of the ripe fruit.

Clinical.—*Angina pectoris. Heart, affections of*; failure of; hypertrophy of.

Characteristics.—*Cratægus* was introduced into medicine as a heart remedy by Dr. Greene, of Ennis, Ireland, and it has been used empirically with much success in cases of heart failure. It has usually been given in 5-drop doses of the tincture. Weak and rapid pulse; dyspnœa and dropsy, dependent on failure of heart-power whether from valvular affection or from anæmia, appear to be the leading indications. Heart-failure threatened from slightest exertion. The drug may cause nausea when given in the tincture unless given during or immediately after a meal. The mental state is that of irritability, crossness, and melancholy. *Cratæg*. is the nearest approach to a *positive heart tonic* that I know of. It has produced some heart symptoms and has, doubtless, a homœopathic relation; but it is not a heart-poison like *Digitalis*, and has no cumulative action. Here are some cases: Halbert in *Clinique*, March, 1899, records this case: "Mr. S., a young man sixteen years of

age, had worked hard at manual labour since his twelfth year to support a widowed mother. He had, in fact, done a man's work before his physical maturity would permit it. For some time he had shown some signs of cardiac hypertrophy, and had been cautioned by physicians to take good care as to his heart. About a year ago, during some gymnastic extreme in the nature of sport, he was suddenly admonished that something had "given way," and for relief was obliged to take to his bed. When I first saw him he was obliged to lie down, respiration was laboured and irregular, and the heart's action was greatly exaggerated and erratic. There was decided precordial bulging; the apex beat was considerably displaced, downward and to the left, and the whole cardiac dulness was greatly extended; the impulse was heaving in character, with considerable mitral systolic blowing and the corresponding diastolic intensification; there were also signs of considerable pulmonary engorgement and some pain in the chest region. The patient was put into a warm bath for twenty minutes, and then carefully returned to bed. *Aconite* 3x was administered every half-hour, and continued hourly for a day or two afterward until he was somewhat relieved. *Cratægus*, five-drop doses of the tincture, was then administered five times daily for a long time. The effects of this remedy were most remarkable; the cardiac irritation gradually lessened; the area of dulness decreased and the rhythm improved; at the same time all the general symptoms improved rapidly. He has now been using the remedy for several months, and the result is most satisfactory. I have every reason to expect a cure of the extreme symptoms, and believe the heart will be reduced to a safe hypertrophy, which will virtually be a cure." A girl of twelve had a sudden collapse in third week of typhoid (*Clinique*, vii. 52). *Cratæg*. gtt. v. every two hours was given on these indications: Great pallor, irregular breathing, cold extremities, pulse 120, very weak and irregular. *Strychnia, Digit*. and *Cact*. had failed to give more than temporary relief. Under *Cratæg*. she rallied at once. Cases of hypertrophy with failing power, dilatation, alcoholic heart, and nervous palpitation have all been relieved by the remedy. T. C. Duncan (*H. Recorder*, xii. 199) gave complete relief in a case of angina pectoris, the pain being above and to left of stomach; pulse strong and forcible; indications of hypertrophy were found. A very tender spot on left side of spine. *Cratægus* removed at the same time it a hurried, flurried feeling" and the anxious expression of her face. Dr. Duncan produced in himself when proving *Cratægus* a "flurried feeling," which he attributed to the rapid action of the stimulated heart. A nervous lady medical student who also proved it had "an unusual rush of blood to the head with *confused* feeling," followed later by "a feeling of quiet and calmness mentally." The remedy is well worth a thorough proving.

Relations.—*Compare:* Other members of the Rose family, notably *Prunus Virginianus* and *Amygdala amara*, and also, *Laurocer., Camphor, Hydrocy. ac., Digitalis, Arsen. iod., Strophanthus, Phaseolus*, &c.

SYMPTOMS.

1. Mind.—Irritability, crossness, melancholy.—Hurried, flurried feeling; with rapid action of heart.—An unusual rush of blood to the head with confused feeling; followed by a feeling of quiet and calmness mentally.

11. Stomach.—Nausea.—Dyspepsia and nervous prostration, with heart failure.

19. Heart.—Faintness and collapse.—Heart failure in hypertrophy and valvular disease.—Palpitation and rapid action of heart.—Angina pectoris, pain above and to l. of stomach, pulse strong and forcible; indications of hypertrophy; very tender spot l. side of spine.—Hypertrophy from overexertion; from alcoholic, venereal and other excesses.—Heart collapse in typhoid.—Heart dropsy.

Crocus.

Crocus sativus. Saffron. N. O. Iridaceć. Tincture of dried stigmas. Cooper makes a tincture of the fresh young shoots.

Clinical.—Abortion, threatened. After-pains. *Anger*. Asthenopia. Blepharospasm. Brain, congestion of. Chorea. Dysmenia. Fainting. Gastric affections. Hćmoptysis. Hćmorrhages. Headache. Heart, affections of. Hysteria. Lachrymation. *Laughter*. Leucorrhśa. Mania. *Menstruation, profuse*. Metrorrhagia. *Nose, bleeding of*. Operations, effects of, Ophthalmia. Pregnancy, imaginary; affections of. Tumours. Ulceration. Wounds.

Characteristics.—*Crocus* has three characteristics which clearly call for its use when met with. The first is hćmorrhage from various parts (nose, uterus, &c.), when the blood is black, viscid, clotting, forming itself into long black strings, hanging from the bleeding orifice. The second is a peculiar sensation as if something alive were moving about in the abdomen or chest. This may be a definite sensation, or it may be a hallucination or fixed idea. A curious circumstance in this connection is the fact that *Crocus* has often been successfully given to pregnant women who have complained of violent fśtal movements, as well as in cases of imaginary pregnancy. The remaining characteristic is in the mental sphere. It is a rapid alternation of mental conditions: anger with violence rapidly followed by repentance; laughter quickly followed by tears. I once cured with a few doses of *Crocus* a young artist who had become subject to violent outbursts of rage in which he would take up a knife to throw at his mother, with whom he lived, and almost immediately after would be abjectly repentant. The household was on the point of being broken up when the trouble was completely removed by *Crocus*. Uncontrollable laughter is also in the *Crocus* symptomatology. Hysterical laughter is one of the effects observed by the older physicians. Teste cites from Murray the case of several children "who were seized with an extraordinary laughing mania, from having smelled of leather

bottles that had contained essence of saffron." On one occasion, in hospital, I happened to see a young girl who was really desperately ill with heart failure and valvular disease, in a fit of hysterical laughter. This made me think of *Crocus*. The only definite sensation she complained of in the heart region was a "jumping" sensation. *Crocus* 30 was given, and very soon she was able to lie down flat (after having been propped up for weeks), and from that time she made a rapid recovery. Another *Crocus* symptom is: Sensitive to music, involuntarily joins in on hearing any one sing. Stitches, shocks, throbbings, broad thrusts, cuttings and jerkings are among the commoner sensations. Twitchings of single sets of muscles (chorea). A warm sensation ascending to the heart, impeding breathing and > by yawning is a peculiar symptom. Tingling, crawling, pricking and itching are met with in the skin. Scarlet redness of the whole body, or scarlet spots on skin. (It is a domestic remedy for "bringing out" the eruption of measles.) Painful suppuration of bruised parts; old cicatrised wounds re-open and suppurate. Lipoma and encephaloma of scalp. Tumours with ulceration and characteristic bleeding. The reputation of *Crocus* in the cure of tumours is also an old one. It was used externally "to scatter indolent tumours and ecchymoses." Cooper has given it new confirmation. He has given it in single doses of the Ř tincture in a case of malignant disease of the side following extirpation of cancerous kidney, with the result of arrest of progress after an initial aggravation, and complete relief of pain. The patient was a woman, who had formerly had hćmorrhage with dark clots at the periods and feeling of weight towards womb. She had had also the sensation of something moving in the abdomen. Cooper agrees with Culpepper in thinking *Croc*. very similar to *Calend*. in its action. It is a vulnerary and corresponds to the effects of blows (deafness; tumours, &c.). *Crocus* is especially suited to women and hysterical men. The symptoms are < fasting; evening and night; during new and full moon; looking fixedly at an object; during pregnancy; in a hot room; in hot weather. > By yawning (desire to take a long breath, > by yawning); in open air (for which there is craving); after breakfast. Great thirst for cold drinks.

Relations.—Crocus should be studied along with the other Iridaceć, the Alliaceć and the Liliaceć. *It is antidoted by:* Acon., Bell., Op. *Compatible:* Chi., Nux, Puls., Sul. *Compare:* Plat. in dark or black clotted flow; Croton (pain through left chest to back); Staph. (> by yawning); Fluor. ac. (sensation of cold wind blowing across eyes); Codein (twitching of muscles, especially of eyeballs); Lach. (pains in eye to top of head); Tarent. (contractions of single groups of muscles); Calc., Ipec., Ign. Tarent. (hysteria hearing music wants to join in.—In Tarent. music subsequently > in Croc. it does not). Wants to jump (Tarent., Stram., Sticta, Asar., Agar.); wants to kiss, Agar. In miscarriage at third month, Sabi., Kreas. In violent movements of fśtus, Op., Sil., Thu., Sul.; in heat in heart, Rhod., Lachn., Op.

SYMPTOMS.

1. Mind.—Great tendency to sadness, sometimes alternating with great gaiety and joyousness.—Great inclination to laugh, to jest, and to sing, sometimes with

excessive weakness.—Loquacious.—Sings involuntarily, and then laughs.—Immoderate, improper laughter; changeable disposition.—Frolic-some and jesting mania, with paleness of face, headache, and obscuration of the eyes.—Abandonment of free will.—Choleric passion and violence, frequently followed by prompt repentance.—Alternate austerity and mildness of character.—Forgetfulness and distraction.—Quickness of memory.

2. Head.—Stupefying cephalalgia, as during intoxication, with downcast eyes.—Giddiness, as if intoxicated, in the forehead; in the room, but not in the open air.—Vertigo, with fainting.—Confused vertigo on rising from a reclining posture.—Vertigo when raising the head, with heat of the whole body.—Cephalalgia above the eyes, with burning pain, sensation of burning and aching in the eyes, esp. in the evening, by candle-light.—Head heavy in the morning, with aching at the vertex.—Drawing pain in the forehead, with nausea.—Semi-lateral pulsation in the head, and in the face (l. side, extending into the eye).—Blows in the forehead and the temples.—Sensation of looseness of the brain, during movement (as if it were tottering to and fro).

3. Eyes.—Itching in the eyelids.—Tingling in the eyebrows.—Pressure, pain as from excoriation, and sensation of burning in the eyes, and in the eyelids, esp. on closing them, and or, reading, or in the evening by candle-light.—Sensation of swelling in the eyes, as from much weeping.—Dryness of the eyes.—Lachrymation on reading.—A quantity of tears rush from the dim eyes as soon as he begins to read.—Lachrymation in the room; not in the open air.—Heating and lancinating pains in the eyes after surgical operations.—Nocturnal agglutination of the eyelids.—Visible quivering of the eyelids.—Heaviness and cramp-like contractions of the eyelids.—Nocturnal cramps in the eyelids.—Constant winking of the eyes (inclination to wipe the eyes, as if a pellicle of gum were drawn over them).—Pupils dilated.—Constant necessity to rub the eyes.—Confused sight, as when looking through a veil, esp. in the evening, when reading by candlelight.—When reading, the white paper seems of a pale rose colour.—Sparkling before the eyes.—Sudden flashes like electric sparks (during the day).

4. Ears.—Otalgia, similar to a cramp.—Tinkling in the ears, in the evening, after lying down.—Buzzing in the ears with hardness of hearing, esp. on stooping.

5. Nose.—Epistaxis of black and viscid blood, often only from one nostril at a time; with cold perspiration on the forehead, and occasional fainting.—Violent and frequent sneezing.

6. Face.—Face of an earthy colour.—Redness and paleness, alternately, in the face.—Circumscribed, burning red spots on the face.—Burning heat in the face, esp. in the morning.—Lips cracked and ulcerated.—Pulsation on one side of the face.

8. Mouth.—Scraping and roughness in the mouth.—Accumulation of water in the mouth.—Tongue moist, and charged with a white coating, with erection of the papillć.—Unusual warmth in the mouth.

9. Throat.—Sore throat as if caused by elongation of the uvula, or as if there were a plug in the throat, during deglutition, and at other times.—Scraping and roughness in the throat (in the evening before and after, but not during the time he takes his food).

10. Appetite.—Nauseating, acid, sweetish taste.—Nausea, disappearing in the open air.—Sweet or bitter taste in the bottom of the gullet.—Constant thirst in the evening, with uneasiness in the abdomen after drinking.—Absence of appetite, with sensation off fulness, however little be eaten.

11. Stomach.—Empty risings, while fasting in the morning.—Pyrosis after eating with a good appetite.—Heartburn after eating.—Qualmishness, uneasiness, and sensation of oppression, in the epigastrium.—Burning pain in the stomach.—Borborygmi, and fermentation in the epigastrium.—Great sinking sensation at epigastrium.—Drawing in the pit of the stomach, back and forth, and up and down.—Some violent stitches in pit of stomach.

12. Abdomen.—Abdomen inflated, with sensation of fulness.—Distension of the stomach and abdomen (the stomach feels distended in the morning before eating anything).—Cramp-like pains in the abdomen.—Pinchings in the abdomen after drinking (water).—Pains in the abdomen from taking cold.—Movements in the abdomen, stomach, pit of the stomach, arms, and other parts of the body, as of something alive hopping about.—Shocks above l. hypochondrium.—Sensation of heaviness in the inguinal region.—Sensation of heaviness in the abdomen, with pressing towards the uterus.

13. Stool and Anus.—Itching and tingling in the anus.—Creeping in the anus, as from ascarides.—Obtuse shooting in the side, and above the anus.—Stitches and itching at the anus (stitch extending from the anus through the small of the back into the left groin, increasing during an inspiration).

15. Male Sexual Organs.—Excitement of the sexual desire.

16. Female Sexual Organs.—Sensation of something living and moving in the abdomen; abdomen swollen; (these symptoms, when occurring in females, as they often do at the change of life and at other times, may lead to the erroneous idea of pregnancy).—Urging of blood towards the genital parts, as if the menses were commencing.—Catamenia too frequent and copious.—Catamenia painful.—Metrorrhagia of black and slimy blood.—Flow of blood, during the new and full moon.—Hćmorrhage from the uterus (during the least movement); blood

viscid, black, smelling badly (miscarriage third month).—Threatened abortion, esp. where there is a hćmorrhage of dark, stringy blood.—Post-partum hćmorrhage.

17. Respiratory Organs.—Violent dry, shaking cough, much mitigated by passing the hand over the epigastrium.—Cough, with spitting of blood.—Disagreeably smelling breath.—Difficulty of respiration.—Inclination to breathe deeply, occasioned by a sensation of heaviness about the heart.—Oppression of the chest, with desire to draw a long breath; > by yawning.—On breathing, a sensation is felt as from the vapour of sulphur in the throat.

18. Chest.—Shootings in the chest and esp. in the sides.—Movements, as if something alive were hopping in the chest.—Shocks in the chest, which suspend respiration.—Peculiar jerking pains in interior of l. breast (chest) as if drawn towards the back by a thread.

19. Heart.—Sensation of heat, which ascends to the heart, with anxiety and difficulty of respiration, mitigated by yawnings.—Sensation of heaviness at the heart.—Sensation of great emptiness in precordial region.—Drawing in precordial region extending to stomach.—Stitches beneath heart, < on inspiration.—Frequent palpitation.—Anxiety at heart, with sense of weakness extending thence through abdomen to soles of feet.

20. Neck and Back.—Sensation of stiffness in the neck during movement.—External swelling of the neck.—Pulling in the loins, with pains in the groins.—Sensation of coldness in the back.

22. Upper Limbs.—Pain in the shoulder-joint, on moving the arms, as if it were out of joint, or on the point of being dislocated; cracking.—Numbness of the arms and of the hands, with immobility, esp. at night, during sleep.—Digging pulling in the forearms.—Heaviness and pain, as from a bruise in the forearms, after any slight movement of them.—Burning pricking, and tension in the tips of the fingers, as from stagnation of the blood, after a walk in the open air.—Chilblains in the hands, and in the fingers.

23. Lower Limbs.—Sensation of weakness in the thighs, when seated.—Violent cracking of the hip-joint, of the knee-joint (when stooping).—Nocturnal tearing in the leg, with uneasiness in that part.—Pain, as from a bruise, in the calves of the legs.—Fatigue in the soles of the feet (from standing), with burning pain and tingling.—Chilblains on the toes.

24. Generalities.—Movements, as of something alive (hopping and jumping) in various parts of the body.—Tingling in different parts of the body.—Convulsive attacks, like chorea (every seven days), with laughter, dancing and leaping, alternately with violent paroxysms of whooping-cough.—Sensation of relaxation and bending in the joints.—Numbness of some of the limbs, at night, during

sleep.—Amelioration of symptoms in the open air; several of them *appear at night*, and are generally *aggravated in the morning*.—Ebullition of blood, sometimes throughout the body.—Discharge of a black viscid blood from different organs.—Epistaxis.—Dark stringy blood from the nose; mucous blood from the same.—Cough with bloody (dark) expectoration.—Heaviness and failing of the limbs, after light exercise.—Striking alternation of the most opposite, physical, and mental symptoms.—Symptoms generally appear on the l. side.—Excessive general weakness, with fainting fits, during movement.—Desire for open air.—Great depression in the morning.—Trembling of all the limbs.

25. Skin.—Pricking, crawling, burning, and tingling in skin.—Red (scarlet) colour of the body.—Chilblains.—Suppuration, painful, of old wounds (old cicatrised wounds open again and suppurate).

26. Sleep.—Continuous yawning and desire to sleep.—Great inclination to sleep in the day, esp. after a meal, sometimes in the evening.—Sings while sleeping.—Drowsiness, with eyes dull and glassy.—Cries, and starts, while sleeping.—Frightful, or gay and pleasant dreams.

27. Fever.—Pulse accelerated; feverish.—Chill in the afternoon, growing worse in the evening, with chilliness extending from the back into the legs, with trembling.—During the chill (and heat), thirst.—Chilliness, only of the back part of the body.—Flushes of internal heat, with pricking and tingling of the skin.—Heat, mostly of the head and face, with paleness of the cheeks and thirst.—Perspiration very little, and only at night; cold and debilitating.—Perspiration only on the lower part of the body.

Crotalus Cascavella.

A Brazilian Rattle-snake. N. O. Crotalidć. (Proving by Mure, together with effects reported by Higgins.) Trituration of the virus with Saccharum lactis.

Clinical.—Goître. Headache. Mania. Metrorrhagia. Nose-bleed. Uterus, neuralgia of.

Characteristics.—The poison of *Cascavella* is as deadly as that of the other Crotalidć, and the general symptoms are like those of the other members of the group, but the mental symptoms are more pronounced and peculiar. Lancinating pains are frequent, and are < by cold washings. Many symptoms are < at night. Pains in bones. Hallucinations are marked and peculiar; a magnetic state is induced. There is headache after sleep as with *Lach*. *Compare:* Crotal. hor., Lach., &c.

SYMPTOMS.

1. Mind.—Magnetic state; she hears nothing, and again sees the spectre of death, as a gigantic black skeleton.—Hears a strange voice to l. and behind her, and follows it, throws herself against closed doors, and scratches them with her nails.—Attempts to throw herself out of window.—Fancies her eyes are falling out.—He fancies he hears groans.—Thoughts dwell on death.—Fright at night about indefinite things.—Clairvoyant.—Anxiety and inquietude.—Involuntary groaning.

2. Head.—Entire skull compresses the brain like an iron helmet.—Sensation as if something alive were walking inside the head in a circle.—Headache, epistaxis and great excitement, caused by starting out of sleep.—Shocks in head which almost throw her off her balance.—Acute lancinations in r. temple.—Sensation as if a red-hot iron were stuck into vertex.

3. Eyes.—Feels a blur before her eyes.—Dazzling blue light.—Pressive sensation of r. eyeball, which felt as if drawn out.—L. eye feels as if drawn towards temple.—Cutting sensation all round eyeball as if it was being taken out with a pen-knife.

4. Ears.—Swelling of r. ear.—Very deaf.—Buzzing in ears while going downstairs.

5. Nose.—Bloody serum runs from nose.—Epistaxis of bright blood.—Tip of nose feels drawn up as by a string and fastened to centre of forehead.—Smell, like that of the snake; as of a hospital.

6. Face.—Face red; or yellow.—Crawling sensation in face.—Difficult to move lips.

8. Mouth.—Tongue scarlet red; paralysed.—Pain in tongue and larynx extending to abdomen.—Burning and prickling at tip.—Itching of tongue.—Thick, viscid, dark saliva.—Discharge of white mucus from mouth.—Taste, very salt; of onions; putrid.—Speech difficult.

9. Throat.—Feeling of dust in throat; of lump.—Burning; constriction; formication.—Constrictive pain as if a string were tied round thyroid body.—Pain in śsophagus extending to abdomen.—Swallowing difficult.

11. Stomach.—Great desire for snow, without wanting either water or wine.—Feeling of coldness in stomach after eating.—Sensation of an opening in stomach through which air passes.—Each mouthful of food falls suddenly into stomach, like a stone, with pain felt even in the back.—Epigastrium sensitive, cannot bear clothing.—Violent blow in epigastrium.

12. Abdomen.—Feeling as if a peg were sticking in middle of liver.—Weight at diaphragm; and in hypogastrium.—Sensation of a band round abdomen.

13. Stool and Anus.—Prolapsus ani; urging and tenesmus, followed by discharge from anus of mucus like white of egg.—Yellowish diarrhśa.—Obstinate constipation.

14. Urinary Organs.—Copious urination.—Involuntary emissions during sleep.

16. Female Sexual Organs.—Violent lancinations in uterus when washing with cold water; terrible lancinations if the water is warm, with weight in uterus.—Lancinations like knife-stabs in uterus and anus, esp. when washing with cold water.—Intermitting metrorrhagia (vermilion-coloured).

17. Respiratory Organs.—Dry cough at night from tickling in throat.—Green expectoration in morning.—Suffocative feeling with dread of another attack.

18. Chest.—Intolerable pains in thorax.—Sensation as if head and chest were compressed by iron armour.—Sensation of water in chest, with efforts to throw it up, and faint feeling as if heart were dipped in a liquid.—Bone-pain and swelling of l. clavicle.—Stitches in l. side on drawing breath.

19. Heart.—Feeling as if heart were beating from above downwards.—Palpitation if any one stands at her r. side.—Faintness > in open air.

20. Neck and Back.—Full feeling in carotids.—Pain in sacro-lumbar articulation.

21. Limbs.—All limbs tremble and are weary.

22. Upper Limbs.—Knife-stabs under r. axilla, arresting breathing.—Cramp in arms.—Pain in palm of hands extending to wrist.—Numbness and swelling of arms.

23. Lower Limbs.—Sensation as if r. hip, from hip to heel, were shortened; this sensation, though illusory, causes him to limp.

25. Skin.—Skin red.—Eruption of small red pimples.—Prickling formication, itching.

26. Sleep.—Somnolence.—Dreams of corpses and ghosts.

27. Fever.—General coldness, not relieved by energy.—Feet icy cold.

Crotalus Horridus.

Rattle-snake. N. O. Crotalidæ. The Rattle-snake of North America. Symptoms of C. Durissus as well as C. Horridus are included in the pathogenesis. Trituration of sugar of milk saturated with the venom. Solution of the venom in glycerine.

Clinical.—Amblyopia. Apoplexy. Appendicitis. Bilious fever. Boils. Cancers. Carbuncles. Cerebro-spinal meningitis. Chancre. Ciliary neuralgia. Convulsions. Delirium tremens. Dementia. Diphtheria. Dysmenorrhœa. Dyspepsia. Ears, discharges from. Ecchymosis. Epilepsy. Eyes, affections of. *Erysipelas*. Face, eruption on; distortion of. Hæmaturia. *Hæmorrhagic diathesis*. Headache. Heart, affections of. Herpes. Hydrophobia. Intestinal hæmorrhage. *Jaundice*. Keratitis. Liver, disorders of. *Lungs, affections of*. Mastitis. Measles. Milk-leg. *Meningitis*. Ovaries, affections of. Ozæna. Palpitation. Peritonitis. Perityphlitis. Phlebitis. Psoriasis palmaris. *Purpura*. Pyæmia. *Remittent fever*. Rheumatism. *Scarlatina*. Sleeplessness. *Small-pox*. Stings. Sunstroke. Syphilis. Tetanus. *Thirst*. Tongue, inflammation of; cancer of. *Ulcers*. Urticaria. Vaccination, effects of. Varicosis. Varicocele. Vomiting, bilious. White-leg. Whooping-cough. *Yellow Fever*.

Characteristics.—The first regular proving of *Crotalus* was made by Hering and under his direction. Stokes also contributed a proving; but the most complete account of the remedy is to be found in the monograph of J. W. Hayward, forming part of *Materia Medica Physiological and Applied*. This includes provings made by Hayward and his provers. *Crotalus* produces profound nervous shock and prostration with trembling, mental alienation, and disorganisation of the fluids and tissues. It causes bleeding from all orifices and surfaces, and it corresponds to the hæmorrhagic diathesis; to diseases caused by previous low states of system, by zymotic or septic poisoning, by abuse of alcohol, &c. Low, typhoid states, with oppressed nervous system, and degraded blood-supply often require it. Neuralgia occurring as a sequel of septic toxæmic, or even miasmatic disease; or chronic bilious, climateric, or albuminuric conditions. Broken-down constitutions.
The *Crotal*. patient is readily moved to tears. Weeping mood; agony, despair. In one prover perception was so clouded that she was in danger of being run over in the street; and memory was so impaired that on entering a shop she forgot what she had come for. Sleepy, but cannot sleep. Grinds teeth. "*Crotal*. is preferable in fluid hæmorrhages, yellow skin (hence in yellow fever with black vomit), epistaxis of diphtheria. *Naja* has more nervous phenomena. *Lach*. has skin cold-clammy rather than cold and dry; hæmorrhage, with charred-straw sediment; and more markedly ailments of the left side. *Elaps*. is preferable in otorrhœa and in affections of the right lung. The cobra poison (*Naja*) coagulates blood into long strings. *Crotalus* poison is acid; the *Viper* neutral. The Rotton-snake ["Birri"] causes more sloughing than any other" (Hering). But Hayward observed that sloughing is a strong indication for *Crotal*., and the cure by this remedy of his own

daughter of scarlatina maligna, with gangrenous-looking sore-throat, was a dramatic outcome of his researches. A case of rattle-snake bite and its isopathic cure, related by Dr. J. S. M. Chaffee, in *Hom. News*, Sept., 1892, gives a good general idea of the action of the venom: "I was called to see James Wright, aged 54 years, who, while binding wheat, was bitten on third finger of right hand by a rattlesnake. I found him bleeding from the bitten finger, and from eyes, nose, ears, mouth, rectum and urethra; pulse 110, small, wiry; respiration 40; temperature 105; haggard expression; whole body bathed in hot perspiration; delirium. This patient had had the regular routine treatment of whisky, quinine and carbonate ammonia for ninety-six hours, when the attendants withdrew and pronounced the case beyond the reach of medical aid. A marked characteristic symptom was a *mouldy smell of breath*, with scarlet red tongue, and difficult swallowing. Great sensitiveness of skin of *right half* of body, so much so that the slightest touch would produce twitching of muscles of that side. I prescribed *Crotalus hor*. 30th trituration, 30 gr. in four ounces of water, a teaspoonful every hour, until my return visit, twenty-four hours later, when I found marked improvement. Temperature normal; pulse full, soft and regular; delirium gone; saliva and urine slightly tinged with blood; appetite returning, he having asked for food for the first time since the accident." The medicine was continued for two more days, when recovery was practically complete. The action on the right side is noteworthy, as *Crotal*. is predominantly a right-side medicine (*Lach*. is more left); it acts strongly on the liver and corresponds to jaundice and yellow fever. *Crotalus* has been used with great success in the treatment of yellow fever, and also as a prophylactic against it. For this, inoculation with diluted virus has been practised.
The *pains* of *Crotalus* alternate rapidly with each other, and frequently recur; also (except headache) appear and disappear suddenly after lasting some time. Swelling of whole body. Fetor of evacuations and discharges. Hæmorrhages from all the orifices and even pores of the skin. *Peculiar sensations* are: as from a blow on occiput; as if tongue and all round throat were tied up; as of a plug in throat to be swallowed; of choking; as if the heart turned over like a tumbler pigeon. Periodicity marks many of the symptoms. Metastasis of erysipelas to brain. Many symptoms are < in morning on waking; or wake the patient up in the night. Orbital pains < in evening. Rest >, and motion and exertion <. Open air > head and stomach symptoms. Cold air < throat and respiratory symptoms. Dry air < cough.

Relations.—*Antidoted by:* Lach. Its effects are modified by Ammon., Camph., Opium, Coffea, Alcohol, and radiant heat. *Compare:* C. Cascavella (thoughts dwell on dead and dreams of the dead); Tarent-cub., Arsen., Lauroc. (tetanus, whooping-cough); Apis., Carb. v., Silic. (vaccination effects); Camphor (coldness; Crotal. has more marked genuine collapse with confused speech), Hyos. Op., Nux v., Cupr., Bell. (sleepy but cannot sleep); Cad. s. (yellow fever).

Causation.—Fright. Sun. Lightning. Alcohol. Foul water. Noxious effluvia.

SYMPTOMS.

1. Mind.—Memory weak; stupid, cannot express himself; makes ridiculous mistakes; with coldness of skin.—Inability to hold her mind to a subject; perception clouded, on walking street would have been run over but for her sister's watchfulness; entering a shop she forgot what she came to purchase.—Torpid, sluggish, incoherent, hesitating, quiet indifference.—Delirium: with drowsiness; with wide-open eyes; loquacious with desire to escape; delirium tremens.—Sadness; thoughts dwell on death continually.—Oppression of brain, as if from carbonic acid.—Excessive sensitiveness, easily moved to tears by reading.—Weeping, with timidity, fear, anxiety.—Snappish temper.

2. Head.—Vertigo: with faintness; with weakness and trembling; with pale face; epileptic; auditory cardiac with soft, weak pulse; > resting head; with venous congestion and degraded blood; with dilated pupils from lightning, anæmia, or sunstroke; from fright.—Fainting on assuming upright position.—Dizziness and fainting with occipital headache.—Apoplectic convulsions: at outset of zymotic diseases; in inebriates.—Awakes in morning with headache over eyes.—Headache extending into eyes.—Dull, heavy pain and heat over eyes and in sides of nose; > walking in open air.—Severe pains in r. eye and top of head, on r. side down back of neck at intervals.—While sitting in chair, heaviness of head came on so much that head felt as if it would tumble about, as if muscles of neck were too weak to support it, and needed the help of the hands.—Dull, heavy throbbing occipital headache, faint spells; pain as from a blow in occiput.—Violent itching of scalp; eruptions, pustules; falling off of hair.

3. Eyes.—Illusions; blue colours; vanishing of sight while reading.—Blood exudes from eye.—Yellow colour of eyes.—Tearing, boring pain, as if a cut had been made round the eye, sometimes sticking, < morning and evening.

4. Ears.—Full sensation in ears.—Deafness; illusions of hearing; auditory vertigo.—Otorrhœa.—Blood oozes from ears.

5. Nose.—Epistaxis; in zymotic diseases; blood thin, dark, uncoagulable; with flushed face, vertigo or fainting.—Ozæna after exanthemata or syphilis.

6. Face.—Acne; of all varieties; of masturbation; of drunkards.—Face, puffed; yellow; red.—Neuralgia of a dull character, chronic or periodic.—Parotitis.—Lips swollen, stiff, numb.—Lockjaw.—Copious, red, itching, papular eruption on face, esp. chin, with delayed menses.

8. Mouth.—Grinding of teeth during sleep.—Tongue and all round throat during sleep feels tied tip, cannot speak a word.—Tongue very red, smooth and polished, feels swollen.—Tongue: enormously swollen; protruded; inflammation of; cancer

of, with much tendency to hæmorrhage; syphilis of.—Fetid breath; peculiar mouldy smell.—Putrid sore mouth.—Salivation, bloody or frothy.

9. Throat.—Tight constriction of throat.—Sensation of a plug to be swallowed; as if uvula swollen or stiff; as of a dry spot or tickling, esp. l. side; < on waking.—Impossible to swallow solids.—Gangrenous or diphtheritic throat with much swelling; much swelling of glands, head thrown up and backwards.

11. Stomach.—Hunger with trembling, weakness, and occipital headache.—Unquenchable burning thirst.—Eructations, sharp, sour, rancid.—Nausea on movement, bilious vomiting.—Dark green vomiting immediately on lying on r. side or back.—Black vomit.—Frequent faint sinking, hungry sensation about epigastrium with trembling and fluttering sensation lower down.—Craving for stimulants.—Agonising pain, restlessness, coldness, weak pulse.—Cannot bear clothes round stomach or hypochondria.—Hæmatemesis, blood does not coagulate.

12. Abdomen.—Stitches in region of liver on drawing a long breath, < by pressure.—Aching in liver, vomiting, coldness.—Violent pain in l. side near last ribs as if in diaphragm.—Jaundice; malignant jaundice with hæmorrhage.—Heat and tenderness of abdomen, can scarcely bear clothes on.—Swelling.—Violent pain in course of colon; in region of appendix.—Bubo.

13. Stool and Anus.—Stools: black, thin, like coffee-grounds, offensive; dark green, followed by debility; yellow, watery with stinging in abdomen; low spirits and indifference to everything.—Shuddering with diarrhœa; aphonia.—Diarrhœa from noxious effluvia; from septic matter in food or drink; from high game; summer diarrhœa.—Dysentery; septic; from foul water, food, &c.; excessive flow of dark fluid blood, or involuntary evacuations; great debility and faintness.—Constipation with congestion to head and headache.—Vomiting, purging and micturition simultaneously caused by spasmodic contractions with tenesmus and strangury.—White stools.—Hæmorrhage, dark, fluid, uncoagulable.—Hæmorrhoids: great tendency to bleed, on using paper, on straining a little at stool, or on standing; in pregnant women; with menstrual irregularities; with heart or liver disease; in inebriates.

14. Urinary Organs.—Hæmaturia.—Suppression or painful retention of urine.—Urine: scanty, dark and red with blood; jelly-like; green-yellow from much bile; copious and light-coloured.

15. Male Sexual Organs.—Sexual instinct increased with entire relaxation of penis.—Sharp cutting in glans.

16. Female Sexual Organs.—Menses a week too soon, first preceded by weight in head and ears, accompanied by pains in abdomen and back, and cold feet.—The pains last some hours longer than usual, and go off after two days with intense

frontal headache, which lasts from 10 p.m. to 1 a.m.—Five days before menses much pain in hypogastrium and down thighs; in region of heart, l. arm and shoulder-blade; with cold feet.—In evening, severe sharp shooting, rather burning pain, repeated at short intervals; apparently starting l. side of womb, passing up to region of transverse colon, there shooting or cutting across from both sides to centre; thence passing up l. side of trunk to l. side of face and temple as a sharp, cutting, intermittent, neuralgic pain; and across middle of forehead there was a heavy, dull, continuous pain; the sharp pain in temple lasted an hour; the dull pain only ceased on going to sleep.—Flushing and sinking of menopause.—Puerperal fever, or convulsions, with albuminous and septic conditions.—Offensive lochia.—Inflamed breasts.—Phlegmasia alba dolens, < from slightest touch.

17. Respiratory Organs.—Hoarseness, with weak, rough voice.—Bruised pain from larynx to chest.—Cough with stitch in l. side and bloody expectoration.—Dry cough on speaking, < in dry or cold air.—Nervous cough, esp. laryngeal; dry tickling, constant choking, as if from dry, irritating vapours, or salt or pepper, or from dry spot in larynx, < l. side; provoked by: cold or dry air; deep inspiration; speaking; by external pressure, which cannot be borne, < on waking.—Whooping-cough, with blueness or pallor which is long in passing off, attacks followed by puffiness of face and hæmorrhagic spots, bloodshot eyes, epistaxis, frothy, stringy, bloody expectorations; threatened œdema and paralysis of lungs.—Excessive oppression of chest.—Burning in chest with heat in forehead.—Pneumonia with tendency to gangrene.—Lungs seem passive.—Stitches in r. chest near sternum.

19. Heart.—Much pain in heart, through l. shoulder-blade and down l. arm.—Palpitation with sore pain in and about heart; feeling as if heart tumbled over.—Heart tender when lying on l. side.—Pulse hardly perceptible.—Phlebitis; varicosis; varicocele.

20. Neck and Back.—Tearing pains from (r.) shoulder to neck, < on moving arm.—Pain on top of shoulder and in ascending aorta.—Aching in r. kidney and in stomach.

21. Limbs.—Painful paralytic sensation.—Rheumatic and neuralgic pains.—Bruised pain in joints and bones.—Heaviness, as if bones were made of heavy wood.—Numb pain as after cramp in anterior of fingers and in toes.—Contraction of flexors.

22. Upper Limbs.—Bruised pains in bone of shoulder in paroxysms.—Large inflamed furuncle on r. upper arm near elbow.—Tight, cord-like feeling extending from front of l. elbow down front of forearm, with "round spots" of pain here and there along front of forearm.—Tubercle on wrist, near end of radius, size of large split-pea, and rather blue from sting of insect some years before, more pronounced in summer months.—Vesicular and pustular eruption about wrists.—Trembling of hands.—Hands (esp. l.) go dead on least exertion.—Violent spasmodic pains in l.

palm as from bee-sting.—Itching and heat of palms.—Oozing of blood from under nails.

23. Lower Limbs.—Starting, jerking, trembling, cramps, numbness.—Drawing suddenly from l. hip to foot.—During and after walking, feels as if a tendon was drawing from sole of r. foot through bone of leg.—Small purple spots on legs.

25. Skin.—Itching stinging all over; urticaria.—Skin dry, stiff like thin parchment; usually cold.—Yellow colour of whole body (hæmatic rather than hepatic jaundice).—Petechiæ.—Vesicles; herpes; pimples; boils; carbuncles; burns; stings; pemphigus; ulcers; gangrene; felons; anthrax.—Old cicatrices break out again.—Peliosis rheumatica.—Dropsies.

26. Sleep.—Yawning; torpor; sopor.—Drowsiness with inability to sleep.—Starting in sleep.—Dreams of travelling, of quarrels; of the dead.—Symptoms < after sleep.

27. Fever.—Surface cold, esp. extremities.—Flushes of heat all over.—Sweat: cold; coloured, esp. axillary; bloody.—Malignant scarlatina, with infiltration of tissues, esp. of throat.—Low, bilious remittents of South.—Yellow fever, hæmorrhagic, oozing of blood from every pore, vomiting and purging bloody and bilious; fainting.—Septic or purpuric fevers.—Cerebro-spinal meningitis.

Croton Chloral.

Croton Chloral-hydrate. Butyl-chloral-hydrate. $C_4 H_3 Cl_3 OH_2O$. Trituration. Solution in alcohol and glycerine.

Clinical.—Anæsthesia. Neuralgia.

Characteristics.—*Croton chloral* received its name from the supposition that it contained Crotonic acid ($C_4 H_6 O_2$). According to Hale it is said to possess the singular property of producing anæsthesia of the brain and nerves of the head without affecting the sensibility of the rest of the body. It has been given allopathically in substantial doses in cases of trifacial neuralgia. The patients who were helped by it had carious teeth and some of them anæmia. In two cases the pains were aggravated by it. In some it caused sleep; others were eased but did not sleep.

Croton Tiglium.

Tiglium. officinale. Croton oil seeds. N. O. Euphorbiaceć. Tincture of the oil from the seeds.

Clinical.—Cholera. Cholerine. Colds. Cornea, opacity of. *Cough. Diarrhśa. Ear, affections of. Eczema*. Eyes, affections of. Hypopion. Keratitis. Neuralgia. *Nipples, painful*. Ophthalmia. Proctalgia. Rheumatism. Rhus poisoning.

Characteristics.—*Croton oil* is best known in its uses as a powerful purgative, and as an irritant of the skin. The characteristic stool of *Croton* is a sudden evacuation in one gush, like a shot; followed by great prostration. Colic before stool; constant urging; < from eating and drinking and from every movement. The evacuation is yellowish or yellowish green. On the skin *Croton* produces erythema, erysipelas, eczema, herpes pustules. The antidote to *Croton* is *Ant. tart*. *Croton* antidotes *Rhus tox*. Some peculiar sensations are: produced by *Croton*: "As if the skin were hide-bound", (Also mentally hide-bound; can't think outside of himself.) "As of a string pulling from one part to another; from eyeball to back of head; from nipple to back with pain in nipple when the child nurses." "As if a plug were forcing outwards at anus." Cutting, sticking, stinging, stitching pains and burning stitches. Writhing in transverse colon. Guernsey gives the skin indications thus: "In any skin disease which itches very much, but the patient cannot bear to scratch very hard as it hurts; a very slight scratch, a mere rub suffices to allay the itching. Erysipelas that itches exceedingly." He also gives: "Otorrhśa when there is much itching." Teste, who was among the first to use *Croton* homśopathically, gives a very interesting account of it. He quotes Trousseau and Pidoux as saying that it often happens that eruptions are developed on parts not touched by the remedy, in those who have been engaged in making *Croton* inunctions on patients. The face and the scrotum especially have been thus attacked. The itching which it causes, says Teste, is at first more tingling than burning (the contrary taking place with *Rhus*). The itching changes to burning (like the itching of *Rhus*) if it is taken in large doses or applied externally. The eruptions in which he succeeded were: urticaria; large copper-coloured spots almost like liver-spots: small red blotches, not very apparent, in thighs, abdomen, and genitals, of fifteen years' standing-all accompanied with intolerable itching. Two remarkable cases are recorded by Teste. A delicate, cachectic, psoric girl of four had suffered for two years without interruption from a fetid discharge from the nose, less in winter more in summer. Before this she had a vesicular eruption on chest and neck, which disappeared of itself, being followed in three or four days by the discharge. After the failure of *Sul., Merc. sol., Calc*., on the indication of the previous eruption Teste gave *Croton*, and in less than a fortnight the disease lost three-fourths of its intensity, although it was in mid-summer. Six months completed the cure, the only other remedies given during the time being *Lob. i*., and *Kreas*. The other case was that of a man of forty, very fleshy, who for fifteen years had been subject to attacks of gout returning every

spring, except on two occasions when a most fatiguing and obstinate exanthem appeared instead. This consisted in an intense redness of the whole body, accompanied with a burning itching, especially in the hollow of the hands, at the chest, and behind the ears. These parts were the seat of a yellowish, plastic exudation, emanating from a multitude of small vesicles in close contact with each other, which were only distinctly perceived in places where they were less numerous, and where a greater degree of resistance on the part of the epidermis imparted to them a certain persistence. Each time this eruption broke out it lasted three months in spite of purgatives and the baths of Barčges and Aix les Bains. When Teste saw the patient he had neither gout nor eczema, but a dry, racking, almost convulsive and unceasing cough. Skin rather hot, thirst, a little headache, heat in chest, no dyspnśa. Sometimes, especially in the evening, but only for a few days, he showed a tendency to syncope. At the end of three weeks, having received no benefit from Teste's treatment, the patient took of his own accord three tablespoonfuls of the "Syrup of White Poppy," at bedtime. The cough ceased entirely for some hours, and then returned in its old intensity. But during the intermission the malady had come out on the skin, and at daybreak the patient found himself covered from head to foot with his old horrible eczema. He was almost unrecognisable, and in a state of the deepest anxiety and despair. He expected three or four months of it. Teste now gave *Croton*. The itching disappeared the same day. Within five or six days there remained not a trace of either cough or eruption. As the patient removed from Paris, Teste was not able to follow the case in subsequent years. Conrad Wesselhśft cured a case of proctalgia in a woman of thirty with *Crot. tig*. 3x. The attacks came on after stool, lasting half a day, and preventing her from fulfilling her duties of teacher. There were no piles, only sensitiveness of rectum to touch. He was led to the remedy by having previously had another patient who suffered from a similar pain after using *Croton* pills; pain in the rectum came on with extreme intensity after straining at stool; and the patient (also a woman) was in agony for three hours afterwards, with frequent tenesmus. The pills were stopped and *Nux v*. given, and she was well in a week. The eye symptoms of *Croton* are very strongly marked. Purulent ophthalmia, ulceration, and hypopion have been cured by it. Many of the symptoms of *Croton* spread from below upwards. Touch, pressure and motion <. < When sitting or crouching. Open air < dizziness and faintness. Drinking cold water while heated = complete loss of voice. Hot milk < colic. Diarrhśa is < in summer. Many symptoms are < at night. > After sleep.

Relations.—*Antidoted by:* Ant. t. *Antidote to:* Rhus. *Compatible:* K. bro. *Compare:* Elat., Verat., Ricin., Euphorb., Anac., Colch., Rhus, Phos.; in pains in breast, Bry., Borax., Phelland., and Sil.; in faintness during stool, scanty stools, Dulc., Ox. ac., Petrol., Sars., Sul. (stools not scanty, Apis., Nux mosch., Puls., Spi., Ver.); faintness after stool, Nux.

SYMPTOMS.

1. Mind.—Sadness, sometimes with dislike to labour; or else with anxiety, and displeasure concerning everything.—Frequent melancholy.—Agitation.—Grumbling, discontented humour.—Dislike to labour.—Nothing is desired but loitering, and to avoid all serious undertakings.—Disordered aspect, with eyes haggard, sparkling.—Weakness of memory.—Feeling as though one cannot think outside of himself, "feels all pent up" inside, and no chance for the thoughts to flow out.

2. Head.—Head confused: on rising, as if by a cloud, with dulness and pressure in the forehead in the forehead, with pressure and heaviness; with pressure in the temples in the occiput, sometimes as though it were held in a vice (on l. side), with heaviness in the head, and digging in the eyes, with fulness, cloudiness, and heaviness in the forehead, esp. on r. side, with pressure, proceeding downwards from the occiput to the part underneath the ear, with lancinations.—Giddiness in the head, as after spirituous liquors.—Vertigo with dulness of the head, pale complexion, debility and nausea; < in the open air.—Vertigo: with headache; with heaviness of the head, so as to cause falling while standing upright; hardly permitting a sitting posture, esp. on raising the eyes; with bewilderment of the head until supper-time; on walking in the open air; esp. on the r. side, with aching in the eye; in the sinciput, with draggings across the nose to the forehead.—Headache; < in the morning.—Fulness in the head, with numbness and weight in the forehead, every day, and with great heaviness, which prevents reading; with sensation of vertigo and pressure in the forehead.—Pressure in the head; in the r. temple and the side of the forehead; in the sinciput, and sometimes chiefly on the l. side; or else with violent pains, throbbings, and tension proceeding from the forehead, with bewilderment of the whole head, < after a meal.—Numbness in the orbits, < within doors and towards night; above all in the air.—Pressure at the occiput.—Tension at the sinciput, with pressure and dartings.—Squeezing in the temples.—Tearings, ascending towards the vertex; in the forehead, extending to r. temple, where they become lancinations.—Lancinations in forehead, above r. eye; in l. temple; between the occiput and the nape of the neck.—Congestion in the head, proceeding from the abdomen, with hot skin and perspiration.—Externally, pricking in the teguments of the head; tingling at the occiput; jerking of the head; burning at the temple, as by live coals; sensitiveness of the teguments of the head: the hat gives pain.

3. Eyes.—Lancinations, esp. in l. eye; jerkings and dartings in the angle of the l. eye; with frequent contractions and jerking of the whole eye; contractive pains in the l. eyelids, esp. towards the internal angle.—Sensation as of a string pulling eyeball back into head.—Stinging in the eyeball.—Itching of the eyelids.—Irritation of the conjunctiva.—Inflammatory redness of the l. conjunctiva.—Ulceration of the conjunctiva, contraction of the pupil, and profuse lachrymation and dimness of the cornea.—Hypopion.—Inflammation of the eye, in which a drop of oil has been

introduced, extending over the whole side of the face.—Burning pain in the inflamed eye, with burning in the ear, vertigo, and fainting.—Śdematous swelling of the eyelids.—Small vesicles round the eye.—Swelling of a subcutaneous gland below the inferior r. eyelid, with redness of the skin.—Much quivering of the eyelids.—Lachrymation.—Sight bedimmed, as though crossed by a fog or by smoke; cloud before the weak eye; before both; the sight is lost, sometimes as by vertigo (in a room), or else by heaviness and weakness of the eyes.

4. Ears.—Forcing pain in the l. ear; sometimes spasmodic and deeply seated.—Dull aching in the direction of the two auditory ducts.—Pressure and revolving sensation towards the orifice of the ear, with confusion of the head.—Lancinations below l. ear.—Hardness of hearing of r. ear.—Loss of hearing for a short time.—Noise in the ear.

5. Nose.—Inflammation of the nose, and of the whole face.—Burning in the nostrils.—Eruption on the septum, with redness of the part, pain on touching it, and small yellow vesicles, which, at a later period, form crusts, and at last desquamate.—Internal irritation of the nose; dryness; cessation of respiration by the nose.—Increase of nasal secretion; thin coryza.

6. Face.—Paleness and coldness of the face.—Increased heat, sometimes burning, esp. in the cheeks; or else over the whole face, remaining several days.—Inflammation of the face and of the nose; swelling of the face; eruption of pimples.—Burning in the lips; sometimes in the commissures, principally with swelling of the external edges; tension in the commissures of the lips; dryness of the lips, sometimes with chaps, or else experienced chiefly in the evening, with tension.—Dragging in the l. maxillary articulation; swelling of one gland, which is painful on being touched.

7. Teeth.—In a hollow molar, pain, as of excoriation, while eating.—Gums bleed, when cleaning the teeth; interior swelling, sometimes painful.

8. Mouth.—The interior of the mouth as if burnt; heat within; dryness, with scraping in the throat.—Accumulation of water, which sometimes escapes at the corners of the mouth.—Augmented secretion of saliva, with sensation of heat in the mouth.—Frequent salivation.—Irritation of the salivary glands, causing frequent expectoration, occasioning a sensation of burning and an acridity, with rancid taste in the throat, which cease only after experiencing symptoms in the rectum akin to those which follow an evacuation.—Tongue loaded with a white coating.—Sensitiveness of the tip of the tongue.—Swelling of the palate; tickling, scraping, and burning at the junction of the soft and solid parts.

9. Throat.—Sensation of a peg, or a morsel, in, the throat, which cannot be swallowed.—Pulling in the throat.—Scraping, disagreeable taste in the fauces.—Scraping in the throat, which provokes hawking.—Burning in the fauces

and pharynx.—Burning in the gullet and the larynx, preceded by a sensation of roughness, followed by burning; removed on taking a breath.—Burning in the throat, as by pepper; continuous, with constriction; much > after a short sleep; > during inspiration, < during expiration; heat in the throat and the śsophagus, extending into the stomach.—Uvula red and elongated.—Painful swelling of sub-maxillary glands and tonsils.—Dryness of the gullet, with irritation, as though it were inflamed; with difficulty in swallowing; with expectoration of mucus, which is acid, like vinegar.—Copious expectoration of viscid mucus, with an acid taste.

10. Appetite and Taste.—Taste: of almonds; sickly, with painful tingling at the tip of the tongue; clammy, the tongue being charged with coating; sweet-bitter, and as though the tip of the tongue were acted upon by electricity; bitter; acid, acrid, ascending from the stomach.—Appetite diminished, as well as thirst; no appetite; loathing; repugnance to beer; inability to eat, even milk porridge, because of loathing and nausea; after taking milk, great repugnance and nausea, with inclination to vomit.—After a meal, pain in the abdomen.

11. Stomach.—Risings, with nausea, sometimes to a greater extent after drinking, or else with prostration of strength; with loathing.—Regurgitations: of water; of bile, in the evening.—Hiccough.—Excessive nausea, with vanishing of sight, sweat on the forehead, distension of the abdomen, excessive gagging, vertigo; < after drinking.—Nausea, and inclination to vomit; frequently; with continuous loathing and uneasiness; with disgust; continual, with coldness, regurgitation of water with salivation; with vertigo and want of appetite; which hardly permits writing; in the abdomen, with retching; frequent efforts to vomit, with accumulation of water in the mouth.—Vomiting: with nausea; of coffee taken; of mucus, with bitterness in the mouth; of a yellowish liquid, having the smell of oil, and a smooth taste like oil; after a meal, of water, of mucus, and of bread, with continual nausea; bitter in the evening, of aliments taken at supper, preceded by nausea, fulness, and pressure of the stomach, followed by sweat upon the face; at night, of an acid liquid, of an acrid smell, preceded by nausea; violent, of aliments taken into the stomach, on walking in the open air (after great nausea), or else of water following nausea, < after a slice of bread and butter; violent, sudden, of a frothy water, yellowish white, with spasmodic efforts; vomiting of bile.—Fulness: with painful sensitiveness of the stomach; aching, sometimes with nausea and want of appetite.—Painful sensitiveness of the stomach; to the touch; with sensation of emptiness and nausea, and inclination to vomit, until the afternoon.—Pressure at the stomach: with movement in the abdomen; with tickling; with anguish; with uneasiness in the abdomen; with squeezing, anguish, and excessive uneasiness, or else accompanied by tension.—Pressure in the pit of stomach.—Contractions in the stomach, with pressure in the pit, and discharge of water from the eyes and nose; spasmodic movements as if about to vomit, with nausea; retraction of the upper part of the stomach.—Scraping in the stomach; burning, sometimes as if by hot

coals; burning and heat in the pit of the stomach; borborygmi, and weight upon the chest.

12. Abdomen.—In the spleen: lancinations; aching.—Violent pains in the abdomen and the stomach, the lower portion of the abdomen affected; and painful abdominal symptoms >, after taking milk porridge; constant pain in the abdomen, on touching the navel, with noise in the abdomen, and bellyache; pain in the umbilical region and lower part of the abdomen; the pains in the umbilical region are < by the touch, or on lying down, on which occasion they sometimes extend to the anus, which then protrudes.—Colic in the umbilical region, sometimes more particularly in the evening, and with inflation of the abdomen, followed by an evacuation.—Pain as if the intestines were twisted in the umbilical region, followed by tearings in the l. side.—Violent spasmodic pains in the abdomen, more violent when in a crouching posture (as when at stool), than when walking or standing upright.—Tension in the abdomen: between the navel and the pit of the stomach; painful and spasmodic in the upper part of the abdomen, esp. on being seated; violent, with inflation of the whole abdomen, evacuation, emission of fetid wind, and great aggravation of all the symptoms on being seated; in the umbilical region on being seated, with pressure in the anus.—Pressure in the abdomen: on going out, ascending towards the stomach, with sudden nausea, and with pinchings and tension at the navel; above the navel with squeezing.—Pinching in the abdomen: with borborygmi; in the umbilical region, sometimes more particularly while walking; with cuttings, sometimes chiefly in the umbilical region and l. side of abdomen; with pressure on the anus; violent on awaking, with rumbling in the abdomen soon after, emission of fetid wind, with great urging to go to stool, and evacuation with abdominal cuttings and spasms.—Cutting pains, with pinching, in the transverse colon, renewed after every evacuation; commencing at the navel, almost stopping respiration, and causing a lateral bending of the body; above the navel, as with knives, disappearing after an evacuation; in the umbilical region and the intestines at the same time, or else followed by an evacuation; below the stomach, in the abdomen.—Tearings in the abdomen during a meal; in the r. side of the abdomen, with incisive pains below the stomach; in the colon; in umbilical region after a meal.—Lancinations in the abdomen: above the navel; to the l. of the navel; in the cćcum; in the region of the sigmoid flexure.—Excoriating pains in the inferior part of the abdomen, while coughing.—Sensation as if tepid water were moving in the intestines, esp. on the l. side.—Sensation of coldness in abdomen.—Heaviness: in the superior part of the abdomen, with nausea; in the lower part, with retraction of the abdomen.—Fulness in the abdomen: with borborygmi and colic; with pinching; with tension and colic in the umbilical region.—Inflation of the abdomen every day, with tension and borborygmi, < while walking.—Movement in the abdomen; fluctuation as if water were there; borborygmi, sometimes on the l. side; rumbling, esp. in the small intestines.—Externally, tingling heat in the teguments of the abdomen.—Tension and pain in the groins.—Emission of wind: before a stool; with borborygmi in the abdomen; frequent, sometimes with lancinations, or else such as precede a soft stool; fetid wind.

13. Stool and Anus.—Urgent inclination to go to stool: with rumbling and pinching in the abdomen; as from heat and agitation in the abdomen; with pressure on the anus, as in diarrhśa; in the morning in bed, and after getting up, stool, followed by excoriating pain in the anus; sudden, immediately after rising or commencing exercise; so pressing that the closet cannot be reached soon enough.—Stools: soft, like pap, sometimes with burning at the anus; viscid, of good consistence, mucous, aqueous, sometimes copious and frequent, even at night, or else with lancinations in the anus; liquid, with scraping at the anus; yellow, loose, sometimes after vomiting, or else following sweat, mucous, with tenesmus; dark green, liquid, followed by long-continued debility; now firm, afterwards bilious mucous, and finally aqueous; brown, pap-like, with mucus, or else followed by borborygmi in the l. side: greyish-green, dirty brown, quick, and ejected by one effort.—Stool as soon as he drinks (the child has a stool and colic as soon as it nurses).—After taking coffee, the stools (frequent) cease.—After the stool, drawings and pressure in the upper part of the abdomen, and the umbilical region.—Ejection of ascarides, and of the tćnia solium.—Pressure and tenesmus in the rectum, with cutting pains going round it on being seated.—In the anus: burning, which sometimes does not permit the patient to remain seated, with swelling of the surrounding parts, or with pulsations and lancinations; scraping after a stool; pains of excoriation and burning after taking exercise, contractive and lancinating pains in walking; pain as if a peg were endeavouring to pass out; pain of excoriation after the stool, with prolapsus ani, and inclination to go to stool, and on compressing the abdomen, pressure on the anus extending to the genital parts and the glans; with this, much anguish, oppression, sweat on the forehead, and nausea, with loss of sight and hearing; rest soothes the pains.

14. Urinary Organs.—In the r. renal region, violent lancinations, which cut short respiration.—Inclination to urinate, sometimes immediately after having made water; increased emission, sometimes with frequency, even every half-hour.—Urine: yellow, copious; cloud in the urine, which is sometimes turbid; after the cloud has disappeared, brown crystallisations float in its place; urine pale, frothy, in the morning; pale, with white sediment, in the daytime; orange-yellow pale at night, a little turbid and fleecy at the bottom; high-coloured, fiery-red, and very fleecy; night and morning; blood-red, depositing much mucus at the bottom, which, on being disturbed, forms elongating threads; thick sediment in the urine, afterwards urine with a streaked coating.—When urinating, heat in the urethra, or in the glans.

15. Male Sexual Organs.—Penis painful, with redness of the glans, and lancinations in the urethra.—Pullings in the l. spermatic cord, hindering walking.—L. testicle retracted, the r. pendant, and flaccid.—Tetter-like eruption on the scrotum.—Erections.

16. Female Sexual Organs.—Catamenia too scanty, or altogether suppressed, with dyspnśa and palpitation of the heart, esp. on going to bed.—Pain and stitches

through the breasts into the chest, and extending to the back, as soon as the child begins to nurse.

17. Respiratory Organs.—Hoarseness.—Voice hoarse, sometimes as from a cold, or with necessity for hawking.—Tickling in the larynx.—Secretion and accumulation of rattling mucus in the larynx, sometimes increased, with tickling, or chiefly in the evening.—Bronchial catarrh.—Pressure on the larynx, esp. on l. side.—Cough: with frequent hawking; continual, sometimes with mucus in the bronchia, difficult to be detached, with expectoration of mucus, esp. in the morning, or else in the evening, and with pressure on the chest.—Mucus continuing in the lungs, with dyspnśa and wheezing on breathing deeply.—When coughing, soreness in the abdomen.

18. Chest.—Respiration impeded by aching in the abdomen: difficult, with oppression; sometimes with anguish.—Respiration laboured sometimes with fulness and anguish in the chest.—Respiration short, after a stool.—Dyspnśa aggravated on going up stairs.—Chest painful on pressing upon it.—Fulness and painful sensitiveness of the two cavities, with burning lancinations on l. side, and towards the shoulder-blades, or else with pressure and burning on r. side, and on l.—Particular uneasiness in the chest and abdomen.—Feeling of emptiness in the chest.—Pressure on the chest: in breathing deeply; violent in the evening; deep in the middle of the chest.—Lancinations in the chest: below, to r., during in inspiration; sometimes on l. side, esp. in the evening.—Pulsation, backwards from the r. side.—Burning in the chest, sometimes violent, extending to the intestines.

19. Heart.—Palpitation of the heart: sometimes violent, such as may be felt externally; during coition; after a meal, esp. on lying down; sudden throbbing in the region of the aorta.—Palpitation of the heart, with difficulty of breathing, esp. on going up stairs.—Frequent lancinations in the region of the heart, sometimes more esp. during inspiration; frequent jerkings towards the heart; the l. ventricle of the heart is chiefly affected.—Externally, pulsation, and throbbing-bubbling in (r.) side of chest; tearing pains.

20. Neck and Back.—In the cervical vertebrć, pressure and pulling.—In the lumbar region, tingling as from insects.—Lancinations in r. kidney.

22. Upper Limbs.—Aching in r. shoulder, lancinations in l.—In the arms, heaviness and lassitude; tensive, contusive pain; sensation of heaviness and weariness; tearing in r. arm.—In l. elbow, perforating sensation in the joint.—In r. forearm, pulling, tension, pressure and contusive pain; tearing in l. fore-arm; pullings in the r. hand.—In the fingers of l. hand, jerkings; pullings and tearings in the middle fingers of l. hand; digging pains in the last phalanges of the fingers.

23. Lower Limbs.—In l. coxo-femoral articulation, tensive pain, felt esp. when rising from a sitting posture; pullings and swellings in the buttocks, and in the

anus, after taking exercise.—In the legs, lassitude and heaviness.—In the thighs, tension and contusive pain; itching burning in l. leg, also sensation of paralysis.—Digging and tearing in the knees; tension and pricking; arthritic digging.—In l. leg, pricking; tearing; jerking during after-dinner sleep; hot itching of r. tibia.—Weight and aching in the articulation of the r. foot; lancinations in both feet, sometimes as if they were dislocated; jerking and tearing in the sole of the l. foot.—In the toes, lancinations and tearing, esp. in the great toes.

24. Generalities.—General lassitude and depression.—Pains in the limbs.—General uneasiness, ill-feeling, with lassitude, followed by inclination to sleep, < on lying down, with loss of sight and hearing; drops of sweat on the forehead, and a feeling of the impossibility of reaching the nearest house, with vertigo, paleness of face, lassitude and depression, striving to reach the open air, where, however, the malady is increased.—Sensation as if the body were shattered, sometimes with frequent anxiety.—Sensation of numbness over the whole body.—Great excitement throughout the whole body.—General trembling.—Weakness, sometimes attended by uneasiness, or else by depression.—Fainting fits.—Symptoms > during sleep.

25. Skin.—Heat, esp. of the hands, with swelled veins.—Itching, followed by burning pain.—The patient can't bear to scratch very hard as it hurts; a very slight scratch, a mere rub suffices to allay the itching.—Erysipelas that itches exceedingly.—Vesicular inflammation (scarlet redness) of the skin.—Redness, warmth, stinging here and there, with pustules, running into one, oozing and forming a grey-brown crust on the day following, which finally falls off.—Pustules, with inflammation, nearly general, of the teguments of the abdomen, followed by desquamation.—Herpetic eruption on the scrotum.

26. Sleep.—Frequent yawning during the morning, with a sensation of flaccidity and tenderness in the stomach.—Inclination to sleep, unconquerable in the afternoon; towards noon obliging the patient to lie down, but without the power to go to sleep, with palpitation of the heart.—Disturbed sleep during the night, in consequence of a multitude of dreams, which are sometimes painful and anxious.—At night, in bed, anxious tossing about, without power to sleep; afterwards sudden sleep, with painful dreams.—Waking at midnight from a profound sleep, with legs as heavy as lead.—On awaking, contusive pain in the limbs, and dulness and confusion of the head.—Headache, which awakens the patient.—Sudden awakening.—In sleep the patient lies on his back, and is awakened by an emission of semen.—Numerous dreams, concerning the sleeper himself, of a painful and afflicting character.

27. Fever.—Susceptibility to cold: esp. at the extremities, with corrugated skin, disappearing in bed; in the afternoon, not ceasing even in bed; chiefly in the back, above all in the abdomen; from the feet to the calves of the legs.—Coldness of the skin of the body, which becomes hot as the pulse is accelerated, with perspiration.—Heat and fever accompanying the cutaneous eruption.—Sudden

coldness and paleness of the hands (as though dead), with wrinkles on the fingers.—Chilliness, with shuddering.—At night, shivering, which passes over the whole body.—Febrile condition, sometimes painful; at first with increase of heat in body, afterwards with a sensation of coldness in the back, in the region of the lumbar vertebrć.—Increased heat throughout the body; in the abdomen.—Ascension of heat on the body.—Heat, proceeding from the lumbar vertebrć; general, with perspiration and cephalalgia; burning, smarting, afterwards coldness, proceeding from the lumbar vertebrć.—Pulse frequent and full, quick and irritable; feeble, and sometimes frequent at the same time; or else weak and small at first, becoming full and strong.—Sweat, sometimes only on the forehead.

Cubeba.

Piper cubeba. Cubeba officinalis. Cubebs. N. O. Piperaceæ. Tincture of dried unripe fruit.

Clinical.—Albuminuria. Aphthæ. Croup. Diarrhœa. Dysentery. Enuresis. Gleet Gonorrhœa. Hernia. Leucorrhœa in children. Orchitis. Prostatitis. Rheumatism. Roseola. Urticaria.

Characteristics.—*Cubeba* corresponds to catarrh. It is an old-world remedy for gonorrhœa and gleet, but it affects the mucous membrane of the nose, air passages and intestines, as well as that of the urino-genital tract. It acts well in persons of bilious temperament with tendency to constipation. Some of its most characteristic symptoms are: Burning in throat with dryness, constant need to swallow saliva; burning in stomach; in abdomen; in rectum; in urethra; in fossa navicularis. Nash defines its place in gonorrhœa thus: "After the inflammatory stage is passed under the usual remedies for that stage, if there still remains burning in the urethra after micturition, and the discharge remains thick, yellow, or pus-like (with *Puls*. the discharge is *bland*; with *Merc*. all symptoms are < at night). Thin (gleety) discharge does not correspond to any of the three." Prickling in soles of feet. There is a sensation of downward weight and pressure in region of femoral ring, < on walking, riding, or lifting. Stools and colic are < at night in bed; > getting up and walking about. Skin diseases concomitant with kidney affections. Urine foaming, albuminous, bloody. Acrid leucorrhœa in children.

Relations.—*Compare:* Copaiva (with which it is compatible). Piper methyst. Piper nigrum and Matico (botanical). Capsic; Canth. (irritable bladder in females); Tereb.; Cannab. sat.; Iod. (membranous croup).

SYMPTOMS.

1. Mind.—Exaltation of temper and of the mental faculties.—On violent agitations he was aroused for a moment; uttered some incoherent expression and sank back into a comatose sleep.

3. Eyes.—Eyes rolled upward, injected; pupils contracted to a pin-point.

6. Face.—Face red and swollen.—Veins of forehead and temples turgid.—Lips dark purple.—Lips puffed, dry and shining.—Extraordinary twist of mouth to one side every time he attempts to speak or smile.

7. Teeth.—Teeth slightly coated with brown sordes.

8. Mouth.—Mouth containing viscid frothy saliva.—Aphthæ of lips and gums.—Tongue furred and moist or very white.

9. Throat.—Constant need to swallow saliva to relieve dryness and burning in throat and larynx.

11. Stomach.—Nausea and vomiting.—Burning pain in stomach.

12. Abdomen.—Burning in abdomen.—Femoral hernia.—Colic.

13. Stool and Anus.—Diarrhœa, with rumbling and cutting in the abdomen and burning in the rectum.—Suppuration of the rectum.—Burning and itching of the anus.—Stools: blackish, yellowish, fecal; bilious; yellow transparent mucus; mingled with whitish, shining particles like rice; bloody mucous (dysenteric); involuntary; < at night in bed; > from rising from bed and moving about.

14. Urinary Organs.—Foaming urine.—Albuminous, bloody urine, with increased uroxanthine.—Burning and itching in the fossa navicularis.—Nocturnal enuresis.

15. Male Sexual Organs.—Discharge from the urethra of a dark-reddish colour (gonnorrhœa).—Inflammation of the penis.—Sensation of pressure and heaviness in the pelvis.—Testicles swollen.—Thick, yellow-green discharge, with frequent obstruction of urethra.—Prostatitis.

16. Female Sexual Organs.—Urethro-vaginitis, severe and of long standing, with acute pains and abundant discharge.—Leucorrhœa profuse, yellow, greenish, very acrid, very offensive; erythema of inner surfaces of thighs, pruritus vulvæ, intense desire for coitus; small burning pimples; womb swollen and painful; menses too early, preceded and followed by leucorrhœa, or in small quantity and consisting mostly of leucorrhœa.—Acrid leucorrhœa of children.

17. Respiratory Organs.—Respiration slow, short and gasping; hurried and noisy.—Chest feels full.—Sense of suffocation.—False membranes in larynx.—Voice harsh and wheezing.—Incessant bronchial cough; < evening, by heat, in open air; throat dry and parched; hurried, noisy respiration.—Harsh cough.—Barking, croupy cough.

19. Pulse.—Pulse very slow, moderately full, but extinguished by least pressure.

21. Limbs.—Sensation of heat in the palms of the hands and soles of the feet.—Numbness of fingers and toes.

25. Skin.—Skin warm, moist, clammy.—Feverish tingling heat over whole body.—A flush of red over whole body.—General eruption of roseolous papules without fever or itching, confluent on face, buttocks and upper limbs, more scant on lower.—Intense itching.—Severe urticaria febrilis.

27. Fever.—Heat flushes on face soles of feet and palms of hands.—Fever with heat at pit of stomach.—Cold sweat in chest and back; burning in abdomen (in croup).

Cucurbita Pepo.

Pumpkin. N. O. Cucurbitaceæ. Seeds. Tincture of fresh plant.

Clinical.—Sea-sickness. Tapeworm. Vomiting; of pregnancy.

Characteristics.—An excellent remedy for tapeworm which may be given with safety to children. The seeds are scalded. The outer skins being softened are peeled off, the green inner pulp being the part used. Two ounces of the seeds, yielding an ounce of the pulp, should be used for each patient. The pulp should be rubbed in a mortar or some other vessel to make a smooth mass. It may be mixed with milk or cream, and sweetened and taken like porridge. It should be taken in the morning after a twelve to sixteen hours' fast, and be followed in two hours by a castor-oil purge. Hale's method is as follows: The patient to eat but little of the lightest food all day, take no supper, and on going to bed eat one ounce of the peeled seeds, bruised with milk or cream. In the morning on waking, to take a tablespoonful of castor oil, mixed with half a teaspoonful of pure Sulphuric ether. No breakfast to be taken—only a cup of tea or coffee. In two or three hours the oil will operate, expelling the worm. Hansen mentions that missionaries find the mother tincture of great use in sea-sickness and vomiting of pregnancy. Bonino records that *Cucurb. p*. 3 cured salivation and vomiting in a woman in whom the menses were absent, and who was erroneously supposed to be pregnant. L. E. Griste records the following case: A woman, four months pregnant, had vomited almost from conception, and for six weeks had not retained a meal. "I am almost starved to

death," she said; was pale, haggard; tongue clean. Soon after eating or drinking anything she became intensely nauseated. The doctor got a fresh pumpkin stem, cut it into thin slices and covered them with alcohol. At the end of half an hour he poured off a little and made a ix dilution, and directed half a drachm to be put in half a teacupful of water; a teaspoonful every two hours. There was no further vomiting. Dr. Griste's indication is—"Intense nausea immediately after eating."

Culex Musca.

Mosquito. N. O. Culicidæ. Insecta. Tincture.

Clinical.—Vertigo.

Characteristics.—*Culex* was proved by Dr. Kent, but the only verification I have found is of this symptom: vertigo every time he blows his nose. W. P. Wesselhœft cured a man, forty, stout, thickset, light brunette, who had swelling on upper jaw over first right tricuspid. Slight redness of cheek. Abscess threatened, with paroxysmal throbbing, dull pain. > By warm applications. Came on after exposure to wet weather. *Merc. sol*. and *Rhus* did no good. The patient then said that whenever he blew his nose he had vertigo, with a sense of fulness in the ears. *Culex* promptly relieved the pain, and in forty-eight hours the swelling had gone. It might be well to prove a tincture of specimens of *Anopheles* well charged with malarial organisms.

Cundurango.

Gonolobus cundurango. Condor plant. (High altitudes in Ecuador, S. America.) N. O. Asclepiadaceæ. Tincture and trituration of the dried bark of the stem.

Clinical.—Anus, rhagades of. Breast, tumours of. *Cancer. Cracks*. Epithelioma. Fistula. Headache. Locomotor ataxy. Rodent ulcer. Small-pox. *Stomach, affections of*. Syphilis. Ulcers.

Characteristics.—*Cundurango* belongs to the "Milk-weed" family, and is thus related to *Asclepias Syriaca*, and *Tuberosa*, and also to *Calotropis*. The action of the latter in syphilitic conditions may be compared with the power of *Cundurango* over cancer. The Condor plant was introduced into medicine as a cancer remedy by Dr. Bliss, of Washington. Clotar Muller cured with it several cases of "old, obstinate, foul-smelling, ichorous ulcers"; one case of "carcinoma of the lips, an unclean and sinuous ulcer." Burnett, who proved it, and whose symptoms were of a severe nature, observed that it produced "a painful crack in the right corner of the mouth." These cracks he has seen produced in several patients who were taking the drug; and he has cured similar cracks with it. He regards them as a keynote indication, and has cured patients of tumours, some undoubtedly

cancerous, who had that symptom as a concomitant. In his opinion *Cundur*. is antipsoric (*Tumours of the Breast*, p. 28). Dudgeon (*H. W*., xxiv. 543) has recorded a cure with *Cundur*. 1 of an undoubted case of cancer of left breast in a woman of sixty-nine. The nipple was so retracted as to be invisible. A hard tumour the size of an egg on the outer side of the nipple was the centre of lancinating pains radiating from it, the whole breast being very tender to touch. The tumour increased steadily under *Hydrast*. and *Phytolac*., and was only checked temporarily by *Conium*. Under *Cundur*. it entirely disappeared. *Cundurango* has found its chief use as a cancer remedy, especially in cancers originating in epithelial structures. Rhagades at muco-cutaneous orifices and warty excrescences are a leading indication for it. Cutting, stinging, burning, tingling, constrictive, and piercing pains are complained of. The skin manifests much of the action of the remedy: blotches; eczema; pimples; pustules; indolent ulcers; lupus; varicose ulcers; syphilitic affections; epithelioma, and scirrhus. Burnett considers it has a very strong affinity for the tongue. He cured with it a jagged ulcer of the tongue (doubtful whether cancerous or syphilitic); tongue and lips red. One prover had a slight creeping pain along periosteum of right humerus; and I observed "a creeping sensation up the back, and headache in right temple" in a patient taking it in the 1x tincture. An old-school authority, Dr. Guyvenot (*Bull. Gén. de Thérap*. No. 32, 1890) credits *Condurangin* with causing a "veritable locomotor ataxia." It appears late, and he thinks it is due to the formation of some toxic substance by the splitting up of the alkaloid in the organism.

Relations.—*Compare:* Ant. tart. (pustular eruptions); Arum tri. (corner of mouth cracked; sore throat); Bapt. (sore throat; open cancers with very offensive discharges); Ars., Con., Hydrast., Phytol., Trifol. prat., Kreos. (cancer, especially of breast); Hydrast., Kali sul., (rodent ulcer, lupus, cancer of stomach); Thuja (epithelial cancer, fissures at muco-cutaneous outlets); Silic. (fistulous ulcers).

SYMPTOMS.

1. Mind.—Feels miserable.

2. Head.—Severe dull headache all day.—Violent pain in l. temple; cutting in l. temple and through ball of l. eye.—Sensation as if forehead were broad and high; as if l. half were bigger than r. (l. half feels heavy, r. clear).

3. Eyes.—Appearance of objects before eye.—Flat epithelioma on lower eyelid.

5. Nose.—Much glairy mucus from nose alternating with unusual dryness.—A state of nose giving a nasal sound to voice.—Stiffness in nose.—Pressive full feeling in bridge.—Flat epithelioma l. side of nose.

6. Face.—Deep crack in corner of mouth, warty growths occupying edges.—Ulcer on chin, r. side perforating to gums.

8. Mouth.—Slight pain in l. half of tongue.—Small painful pustule on r. side of tip of tongue, on upper surface towards edge.—(Cancer of tongue.)

9. Throat.—Aching in throat, extending to stomach, with great burning in stomach.—Persistent sore throat.—Sore throat with burning and aching, and a husky feeling which causes a dry, hacking cough.

11. Stomach.—Anorexia.—Slight nausea arising from r. hypochondrium.—Cancer of stomach.

12. Abdomen.—Pain in r. hypochondrium.

13. Stool and Anus.—Constipation.—Rhagades at anus; terrible pains when bowels are moved; cracks at angles of mouth.

14. Urinary Organs.—Incontinence of urine.—Urine scanty; high-coloured, loaded with phosphates.

18. Chest.—Ulcer on false ribs as large as hand, apparently carcinomatous.—On r. wall of thorax, esp. round nipple, several swellings in size from pigeon's to hen's egg, some suppurating, nipple being on a hard, painful swelling; axillary glands swollen; emaciation.—Tumours of breast on either side.

19. Heart.—Constrictive pain.—On rising in morning sharp, distinct pain in heart, followed by passage of flatus.

20. Back.—Dull, heavy, continuing pain in l. scapula.

21. Limbs.—Soreness all over body, like rheumatism, < through l. shoulder and under l. scapula (burning).—Rhagades on hips and in bends of knees.

25. Skin.—Some small congenital warty excrescences enlarge and look fresh.—Blotches, pimples, and boils in many parts.

Cuphea Viscosissima.

Lythrum. petiolatum. Waxweed. Fluxweed. Red Pennyroyal. N. O. Lythraceć (Loosestrifes). Decoction or tincture of fresh plants collected in July or August.

Clinical.—Cholera infantum. Dysentery.

Characteristics.—This is a popular remedy in some parts of U.S. for summer diarrhśa and dysentery, as one of its names, "Fluxweed," would imply. The entire

plant has a clammy, sticky feel, and contains tannin. It was first introduced to homśopathic practice by Dr. A. A. Roth, of Frederick, Maryland, who was induced to try it in his practice by a lady patient (*H. R.*, iii. 242), and his experience has been confirmed by S. G. A. Brown (*Med. Cent.*). Dr. Roth gave from 5 to 10-drop doses, according to age. The two chief forms on which it is successful are: (*1*) Cases arising from acidity of milk or food; vomiting of undigested food or curdled milk, with frequent green, watery, acid stools, varying in number from five to thirty a day; child fretful and feverish; can retain nothing on stomach; food seems to pass right through the child. (*2*) Stools decidedly dysenteric, small, frequent, bloody, with tenesmus and great pain; high fever, restlessness, and sleeplessness. Dr. Roth considers it has "tonic" properties, as children rally rapidly under it. In ordinary diarrhśas, especially diarrhśa from cold, he found it useless. Brown says: "If you have a child that is fretful and feverish; vomits curdled milk; from a hyper-acidity of the stomach; has frequent green, watery, acid stools or even if the stools are dysenteric, with great tenesmus and colic high fever and restlessness, give Cuphea." *Compare:* Ćthusa.

Cupressus Australis.

N. O. Coniferæ. Tincture of fruit and leaves.

Clinical.—Gonorrhœa. Headache. Rheumatism.

Characteristics.—*Cupress. Aust.* has had a proving, which, though not extensive, is sufficient to show the analogue of its action with that of *Thuja*. Sharp, piercing and pricking pains are prominent. General feeling of warmth.

Relations.—*Compare:* Abies, Sabina, Thuja.

SYMPTOMS.

1. Mind.—Is in much better spirits.

2. Head.—Sharp, piercing pain from l. occiput to l. temple.

11. Stomach.—Increased appetite followed by loathing of food.—Voracious appetite.—Feeling of warmth in stomach.

14. Urinary Organs.—Pricking pains from kidneys to bladder, with increased desire to urinate, stream smaller than usual.—Constriction along course of urethra, esp. towards neck of bladder.

15. Male Sexual Organs.—Itching of glans penis, and orifice of urethra.—Aching pains in perineum and spermatic vessels with feeling of weight in testes.

20. Back.—Dull, aching pain in lumbar region.

22. Upper Limbs.—Pain in shoulders, esp. on joint of r. shoulder, extending down to elbow.

23. Lower Limbs.—Pinching, drawing pain in knees and along lymphatics of legs.—Sharp, shooting pain in patellæ and in bend of knees.—Tension in calves, with occasional spasmodic twitchings and general malaise.

27. Fever.—Increased heat of body without thirst.

Cupressus Lawsoniana.

N. O. Coniferæ. Tincture of berries and leaves.

Clinical.—Keloid. Tumours. Warts.

Characteristics.—*Cupress. L*. has been proved in a fragmentary way by Burnett, who had to relinquish the proving on account of the "terrible pains it caused in the stomach." He concludes from his experience that the action is very like that of *Thuja*, and he has successfully used it as a variant of that remedy and of *Sabina* in the cure of tumours: cocks-comb growth in the mouth; lipoma of thigh; keloid.

Cuprum Aceticum.

Acetate of Copper. Verdigris. $Cu_2(C_2H_3O_2)H_2O$. Solutions.

Clinical.—Angina pectoris. Apoplexy. *Brain, affections of*. Brow ague. Cerebro-spinal meningitis. *Cholera Asiatica. Chorea*. Croup. Diarrhœa. *Eruptions. Erysipelas*. Hallucinations. Hydrocephalus. Mania. *Measles*. Paralyses. *Scarlatina*. Small-pox. Strabismus. Tapeworm. *Uræmia. Whooping-cough*.

Characteristics.—*Cupr. acet*. produces the leading features of *Cupr. met*.—cramps, griping pains, spasms, paralytic affections, and convulsions. Attacks come on suddenly and periodically. It corresponds to the results of repelled eruptions. Dr. Burnett has cured with it a case of left-sided brow ague of many years' standing. He used Rhademacher's *Tincture of Copper*. The pain was described as boring, screwing and was spoken of by the patient as "awful." Dr. Burnett is unable to say whether the cure was strictly homœopathic or "whether the *Cuprum* acted on the basis of the Paracelsic Universalia of which it is one." A man, 50, was cured with *Cupr. ac*. 5 trit. of a tonic spasm of the toes of the right foot, very painful, lasting for hours, brought on by friction, standing on cold floors, &c. There was no traceable cause, and no other derangement of health. Complete cure in five days, after months of previous suffering (*H. R*., ii. 71). Petroz recommended its use in

small-pox and verified his induction in practice. As pointed out by General Phelps (*H. W.*, October, 1896), the "Crimson Cross Ointment" used successfully by Fielden in the Gloucester epidemic of small-pox owes its virtues to the *Cupr. acet.* which it contains. In epilepsy the aura begins in the knees and ascends to hypogastrium, when patient becomes insensible. The symptoms are < by heat and by motion. The patient frequently changes, posture. It is suited to the carbo-nitrogenous constitution.

Relations.—In poisoning cases *it is antidoted by:* sugar, or white of egg, given freely. *Homœopathic antidotes:* Bell., Chi., Con., Cicut., Dulc., Hepar, Ipec., Merc., Nux v. *Complementary:* Calc., Gels. (overworked brain): Cicut. and Solanaceæ (mental symptoms); Zinc. (hydrocephalus and convulsions from suppressed exanthems).

Causation.—Overworked brain. Repelled eruptions.

SYMPTOMS.

1. Mind.—Memory weak; brain functions decreased.—Absent-minded.—Fixed ideas: he sees policemen come to seize him.—Hallucinations of all kinds of figures and grimaces, esp. in evening when going to bed and shutting eyes.—Delirium; wants to go home.—Maniacal talk; wakes screaming and scolding; tries to escape.—Fear: of falling; of persons approaching; of death.—Talkative.—Extreme anguish, with vomiting, colic, thirst, coldness of the limbs, and quick and spasmodic pulse.—Grief and dejection, with eyes sunken, tongue humid, insipid taste in the mouth, want of appetite, continual hawking, risings, with taste of copper, violent thirst, and smallness of pulse.

2. Head.—Vertigo with stupefaction; > by evacuation of bowels.—Violent cephalalgia, with thirst and violent colic.—Agonising headache at distinct intervals like paroxysms, lancinating pains, sometimes in forehead, sometimes in vertex, sometimes in temples or occiput, < least pressure.—Inflammation of brain: prostration, breathing short and anxious; face puffed and pale; when drinking, child bit glass or spoon; following disappearance of rash.—Heaviness in the head, and slight deafness.

3. Eyes.—After riding several hours in railroad car sudden indistinct and double vision (paralysis of l. abducens nerve).

5. Nose.—Discharge of blood from the nose.

6. Face.—Tetanic condition of jaws.—Neuralgia behind r. ear, in cheek-bone and upper jaw, < moving; at night; from mental exertion, > by pressure, and by wrapping up head; feeling of coldness in head.—The face wears an expression of great anguish.

8. Mouth.—Constant protrusion and retraction of tongue.

9. Throat.—Inflammation of tonsils; or, when they are enlarged will cause suppuration and favour healing.

11. Stomach.—Copper-like taste, and tongue covered with a greyish film.—Loathing of food and drink (with animals), sometimes with retching.—Risings, with copper-like taste and constant hawking.—Constant inclination to vomit, sometimes with cough and convulsive respiration, or else with frequent emission of urine.—Vomitings, sometimes very frequent, with colic and convulsions.—Vomitings, which are greenish, white, and frothy.—Frequent vomits of a bluish colour, followed by retching, dyspnœa, and irregular and frequent pulse.—Vomiting, with loose evacuations.—Bloody vomiting, following frequent retching.—Tearings in the precordial region.—Periodical contraction of the stomach.

12. Abdomen.—Abdomen retracted, slightly sensitive to pressure.—Violent colic, attended by vomiting and diarrhœa.—Nocturnal colic with vomiting.—Great inflation of the abdomen, with copious evacuation of fæcal matter.—Abdomen hard, puffed up, and painful to the touch.

13. Stools.—Stools with many worms, blackish or mixed with bloody mucus.—Stools accompanied by tenesmus and general weakness.

14. Urinary Organs.—Urine turbid, of a deep red, with yellow sediment, attended by much thirst and general uneasiness.

16. Female Sexual Organs.—Catamenia too copious and violent.

17. Respiratory Organs.—Dyspnœa.—Chest spasmodically constricted, impeding respiration, and increasing her anxiety.—Frequent violent dry cough, with tearing pains in head: cough followed by violent palpitation lasting several minutes; anxiety and pressure in chest, < sitting; cough between eleven and one at night.—Red face, blue round mouth and lips during attack; starting in sleep; fretful crying with paroxysms of cough.

19. Heart.—Deathly feeling behind ensiform cartilage.—Frequent attacks of angina pectoris coming on from exertion or excitement.

21. Limbs.—Violent drawing and tension in limbs with shuddering and chilliness though skin is not cold.—Periodic, spasmodic, painful contraction of fingers and toes, frequently so severe that the fingers could scarcely be extended by any force.—Cramps and coldness.

22. Upper Limbs.—Numbness and lameness of l. hand.

23. Lower Limbs.—Cramps in calves.—Drags l. foot in walking.

24. Generalities.—Lassitude, with trembling and want of appetite; great weakness sometimes attended by convulsions; inability to stand upright.—Insensibility and weakness; stiffness of the limbs and of the body; paralysis of the limbs.—Lying on the side (in animals), with anguish, with intestinal evacuations, greenish and frothy; the animal is stretched out, almost without respiration, with inclination to vomit (speedily followed by death).—In epilepsy aura begins in knees, ascending till it reaches hypogastric region, when unconsciousness ensues, foaming at the mouth and falling down convulsed.—As soon as patient goes into a high-ceilinged room, the head reels and she loses her senses.—Position, on the back, with the head thrown backwards; great agitation and frequent cries.—Trismus, with spasms in the palate, and dumbness; convulsive starts, with movements, as in eating and swallowing, painful vomiting and dyspnœa.—Jaundice.—Inflammation and swelling (by external applications).

25. Skin.—Cyanosis.—Scarlatina.—Measles.—Miliaria.—Small-pox.—Erysipelas.—Psoriasis.

27. Fever.—Fever, with swelling of the belly and constipation; heat, with hard pulse, cephalalgia, difficulty in swallowing, and inflation of the abdomen; pulse small and contracted.—Measles, with bronchitis.

Cuprum Arsenicosum.

Arsenite of Copper. (Scheele's Green.) Cu H As O_3. Trituration.

Clinical.—Cholera. *Cholerine*. Chorea. Diarrhœa. Enteralgia. Paralysis (left side). Uterine neuralgia. Vomiting.

Characteristics.—*Cupr. ars*. combines the characters of its two metallic components. Intense neuralgic pains in abdomen; awful distress in epigastric region; burning along œsophagus and in urethra; numbness; creeping, itching, and chilly sensations. According to J. N. Majumdar, who gives a case, the great characteristic of *Cup. ars*. in choleraic conditions is "icy-coldness of the whole body, with cramps and an obstinate hiccough." B. L. Bhaduri pointed this out to him. Salzer has shown that "cold, clammy perspiration of *intermittent nature*" is unique and characteristic. He has found it most valuable in the collapse stage of cholera, where intermittent cold, clammy sweat was noted. The skin is very sensitive to touch; and pressure < all symptoms. Rest > and motion < most symptoms; but motion > stiffness of back and tingling of hands. Damp weather = neuralgia of abdomen. Weakness and restlessness. There is a periodicity in the symptom.

Relations.—For *antidotes* see under Arsen. *Compare:* Arsenical and Copper preparations; Acon.; Act. r. (angina pectoris, numbness of left side of body, paresis of left arm); Merc. cor. (diarrhœa and tenesmus); Iris. v.

SYMPTOMS.

2. Head.—Vertigo, confusion of ideas and headache between temples.—Fulness in head, brain seems to expand and press against frontal bone.—Sharp pain in temples, < in l.—Headache between temples; the pain seems to meet in centre of forehead and pass thence down nose.—Dulness and soreness of head in morning after washing.

3. Eyes.—Dark spots before eyes; eyes very sensitive.

4. Ears.—Boring pain in r. ear; sharp pain in temple, < in l.

5. Nose.—Bones of nose very sore, esp. on pressure.

6. Face.—Face haggard; expression of great suffering.—Violent twitching and jerking of muscles of l. side of face between eye and corner of mouth.—Soreness of bones.

8. Mouth.—Mouth very dry; frequently called for something to wet his mouth.—Shooting in upper l. molars, extending upward into superior maxillary line.—Back part of tongue thickly coated.—Tongue, dry and tremulous.—Bad breath.

9. Throat.—Burning along œsophagus from stomach to mouth.

11. Stomach.—Moderate thirst; but drink of any kind increased the nausea; a few mouthfuls satisfied; desire for drink seemed rather due to dry mouth than thirst.—Intense thirst.—Nausea and vomiting, < after eating; < after study.—Obstinate hiccough.—Nausea and awful distress at epigastrium.—Burning.—Cutting in stomach while eating.—Cramp in stomach and bowels, followed by tonsillitis.

12. Abdomen.—Burning, cramping, colic pains.—Spasmodic and neuralgic pains, accompanied by screams and cramps in fingers and toes.—Cramping pains in lower bowels, with extreme vesical and rectal tenesmus; micturition frequent causing great suffering.—Attacks of excruciating pains in bowels occurring every two or three weeks.

13. Stool and Anus.—Vomiting and purging, with cramps and collapse.—Rectal tenesmus, with almost constant mucous discharges.—Chronic slimy diarrhœa during summer, with cramps in abdomen.

14. Urinary Organs.—Pain in sacral region, with frequent urging to urinate.—Dark red urine; burning pain during and after urination.—Strong smelling urine; odour of garlic.

15. Male Sexual Organs.—White purulent discharge from urethra; soreness of penis, with pain in prostate gland; tingling and burning in urethra.—Perspiration of scrotum, which is constantly moist and damp.—Boils frequently forming on scrotum.

16. Female Sexual Organs.—About close of menses, worked out of doors during a moist, drizzling day; during night agonising pains in lower abdominal region; tender spot over l. ovary; tongue heavily coated white.—During pregnancy constant nausea, rejects everything; weak, very nervous; pulse quick and feeble; spasmodic uterine pain; at one time tenesmus and dysenteric stools.

17. Respiratory Organs.—Voice altered; speech difficult.—Oppression of chest as if constricted.—Weight on chest, with difficult breathing.—Soreness of small spot in l. scapula, extending into l. lung, followed by dull, sticking pains in l. chest, between sixth and seventh ribs, < on deep inspiration; weak, Dumb feeling in l. chest, l. side of back, l. shoulder and arm.—Dull soreness in r. side of chest, with dull pains in back, < from deep inspiration.

19. Heart.—Heart's action weak and hurried; pulse small, compressible, weak, and frequent, though quite regular.—Sudden debility, with dull pain in heart, and sense of oppression; l. chest feels too small; long involuntary inspiration; empty feeling in stomach, with vertigo and confusion of ideas, and headache between temples.—Palpitation of heart, with trembling of limbs.—Palpitation moving walls of chest up and down.—Cardiac chorea: at one time heart beats very irregular and feeble, at another time violent and irregular; attacks appear in paroxysms, action being normal in intervals.

20. Neck and Back.—Soreness of glands of neck, with stiffness of neck; pain < on moving head.—Severe pains under lower angle of l. scapula < from motion or breathing.—Stiffness and lameness of back, < by motion > by rest; returns after sitting awhile.—Lameness of lumbar region.—Pain in r. lumbar region, and in anterior portion of r. thigh.

21. Limbs.—L. arm feels numb and powerless; similar feeling in l. leg.—Spasms in extremities; coldness.—Itching of arms and legs.—Pustular tumours in wrists and ankles, and excessive sensitiveness and irritability of skin.

24. Generalities.—Tremulousness of whole body, very noticeable on attempting to walk.—Quivering, impossible to control.—Great prostration; as from traumatic shock.

27. Fever.—Whole surface covered with cold moisture; skin pale like death.—Icy coldness of whole body, with cramps and obstinate hiccough.—Intermittent, cold clammy sweat (in cholera collapse).

Cuprum Metallicum.

Copper. Cu. (A. W. 63). Trituration.

Clinical.—After-pains. *Angina pectoris. Asthma*. Asthma millari. Cardialgia. Catarrh. Chlorosis. Cholera. Chorea. *Convulsions*. Cough. *Cramps. Croup*. Cyanosis. Dentition. Dyspnœa. *Emissions*. Epilepsy. Eruptions. Erysipelas. Fainting. Gastric disturbance. *Gout*. Hæmatemesis. Herpes. Hysteria. Inflammations. Larynx, spasm of. Mania. Measles. Meningitis. Neuralgia. Palpitation. *Paralysis*. Pneumonia. Psoriasis. Ringworm. Sleeplessness. Spasms. Spinal irritation. Ulcers. Whooping-cough. Yellow fever.

Characteristics.—Metallic copper is an antipsoric remedy, working from within outwards. It ranks with the most important of those which relieve states arising from the "striking inward" of diseases or the failure of eruptions or discharges to appear. It is this power to relieve internal spasm which renders it appropriate to the collapse stage of cholera, of which it is also, like *Sulphur*, a prophylactic either when worn next the skin, or when taken internally. *Cuprum* produces many skin eruptions, and also foot-sweat, and it corresponds to these, and also to the effects of suppression of eruptions, exanthems, and foot-sweat; whether these effects be internal pains or spasms or oppression of the brain and mental disturbance. Mackechnie made a brilliant cure of psoriasis in a young girl with *Cuprum*. The leading features of its symptomatology are: Cramps, convulsions, spasms of the most violent form, coming on from disappearance of pains, discharges, eruptions, mental derangement. With suppression of menses, patient screams. Tonic spasms of thumbs. Eyeballs turn up. Opisthotonos. Tonic and clonic spasms. "Convulsions during pregnancy and puerperal convulsions which begin in the fingers or toes, and spread all over the body; or where there is great restlessness between the attacks, either filling up the entire interval, or only a part of the time." Thus Guernsey. He also says that "a slimy metallic taste in the mouth" is one of the strongest indications for *Cupr*. *Rhus* is the only other remedy which has this symptom so marked. "Cramps or spasms beginning in hands and feet, extending to belly," is confirmed by J. C. McLaren. Mossa regards *Cupr*. as one of the remedies for the effects of fright, and relates the case of a girl who, after a fright, was affected by involuntary motions of left arm and leg developing into pronounced general chorea. *Cupr*. brought about slow but decided recovery. Another girl, 12, who had recovered from whooping-cough got a kind of chorea from repeated frights on seeing an epileptic. To the muscular movements was added silly behaviour: tongue heavy, speech slow, gait unwieldy. Frightened at night. Greediness in eating and

drinking. *Ign., Stram., Sul*., did little good. She became ill-natured. *Cupr*. every four days cured completely in three months. Mackechnie reports the case of a boy who became epileptic after being locked up in school. Very great improvement followed the administration of *Cupr*. Schwencke cured a case of epilepsy of forty years' standing with *Cupr*. 6 after *Bell*. and *Hyo*. had done some little good. The patient was a man aged 45. The fits began suddenly towards morning with chewing motion of lower jaw; gnashing of teeth; becomes upright and rigid in bed; shrieks; limbs convulsed. After giving way to violent anger, attacks become more severe; arms and legs were thrown outwards and trunk arched upwards. *Cupr*. was now given. For a time the attacks continued severe, but gradually improvement set in, and in less than three months they ceased altogether. The "anger" in this case and the "ill-humour" in Mossa's are noteworthy. Maliciousness is an indication for *Cupr*. In a second case cured by Schwencke, that of a man, 38, epileptic seven years, a pressive headache preceded the attacks, ascending from nape to forehead; then there was profuse salivation, head turned to left, eyes closed, tongue in active motion in open mouth, trunk arched upward, slight spasms of right arm outward. After attack, dulness of head, and feeling in body as if beaten. *Cupr*. first removed the fits and then the dulness of the head. *Cupr*. has pains like knife-thrusts, < on least motion; take away the breath, thinks he must die if they last. Speaks in a whisper. The thrusts go through to back from ensiform cartilage, from umbilicus. Restless tossing all night. Perfect stupor, with jerking of muscles. Paralysis of isolated muscles. Many unusual symptoms are produced, including maliciousness and desire to injure. Screaming, with cerebral or mental symptoms. Loquacious. Violent head pains < over left eye. Brain seems paralysed. Chlorosis from abuse of iron. Vomiting, hiccoughs, and spasms > by drink of cold water. Over-sensitiveness of skin, especially in region of stomach and fourth and fifth dorsal vertebræ. Touch and pressure <. < Before menses; from vomiting. Symptoms are < evening and night. Cold air and cold wind <; cold drinks > (colic, cough &c.). Wrapping head > headache. < At new moon. Periodicity every 15, 30, or 60 minutes; every fortnight. Getting wet = epileptic attacks. > From being mesmerised; during perspiration. Suited to fair-haired people; and the carbo-nitrogenoid constitution. Women who have borne many children (after-pains).

Relations.—*Is antidoted by:* Sugar, or white of egg mixed with milk and given freely. Hepar, or potash soap may be used after poisoning from food prepared in copper vessels. Aggravations are > by smelling Camphor. *Dynamic antidotes:* Bell., Cham., Chi., Con., Cic., Dulc., Hep., Ip., Merc., Nux v. *Antidote to:* Aur., Merc., Op. *Complementary:* Calc. *Compare:* Other Copper preparations, Calc. c., Gels. (overworked brain); Cicut. and Solaneaceæ (mental symptoms); Silic. (head pains > wrapping up head). Nux, Phos., Coloc., Camph., Secal., Verat., Arn., Apis., Zinc., Puls., Arsen. As if in a dream (Amb., Anac., Calc., Can. i., &c.) Loquacity (Hyo., Lach., Op., Stram., Ver.) Lack of reaction (Sul., Carb. v., Lauro., Val., Ambra, Caps., Pso., Op., Bell., Stram., Bry., Apis).

Causation.—Suppressions. Fright.

SYMPTOMS.

1. Mind.—Melancholy, with attacks of extreme anguish, like fear of death; restlessness, groaning, and desire to escape.—Want of moral courage.—Anxiety and tears, alternating with buffoonery.—Convulsive laughter.—Incoherent, delirious talk.—Mildness, alternating with obstinacy.—Unfitness for exertion, with fear to be idle.—Fits of abstraction, with fixed ideas of imaginary occupations at which the patient labours, or with lively songs; or else with malice and moroseness (with proud bearing, and at times interrupted by clonic spasms; craziness), and often with quick pulse, red and inflamed eyes, wandering looks, followed by sweat.—Attacks of rage (wants to bite the bystanders).—Furor.—Dementia.—Loss of sense and thought.—Delirium.

2. Head.—Vertigo on reading, and on looking into the air.—Whirling vertigo, as if the head were going to fall forward (< during motion, > when lying down).—Sensation (painful) as if the head were empty.—Pain in the parietal bone, so as to cause, crying out on putting the hand upon it.—Pain as from a bruise in the brain, and in the orbits, on moving the eyes.—Stupefying depression in the head, with tingling in the vertex.—Aching in the temples, < by the touch.—Pulling in the head, with vertigo, > by lying down.—Headache, in consequence of an epileptic attack.—External, burning shootings, in the side of the forehead, in the temples, and in the vertex.—Pains in the occiput and in the nape of the neck, on moving the head.—Swelling of the head, with redness of the face.—Distortion of the head on one side and backwards; the head is drawn to one side or falls forward; aggravated or renewed by each contact (hydrocephalus).—Purplish-red swelling of the head; face purple-red and blue lips; convulsion and twitches in the limbs; < when touched, which causes the swelling to pain.

3. Eyes.—Itching (violent) in the eyes towards evening.—Aching in the eyes and in the eyelids, < by the touch.—Eyes, red, inflamed, wandering, or fixed (staring), sunken.—Convulsions and restless movements of the eyes.—Eyes are turned upward.—Greater immobility of the pupils.—Eyes prominent and sparkling.—Eyes closed (weak and dim).—Pupils insensible.—Obscuration of the sight.—Pains resembling a bruise in the orbits on turning the eyes.

4. Ears.—Itching in the ears.—Tearing in the ears.—Pressure on the ears, as from a hard body.—Boring pain in and behind the ear.

5. Nose.—Strong congestion in the nose.—Stoppage of the nose.—Violent fluent coryza.

6. Face.—Face pale (changed features, full of anguish), with eyes downcast and surrounded by a livid circle.—Face bluish; bluish-red.—Spasmodic distortion of the muscles of the face.—Sad and anxious air.—Redness of the face.—Lips

bluish.—Excoriation of the upper lip.—Aching of the lower jaw, increased by the touch.—Spasm in the jaw.

7. Teeth.—Odontalgia, with acute pullings, extending into the temples.—Difficult dentition in children, with convulsions.

8. Mouth.—Mouth clammy in the morning.—Accumulation of water in the mouth.—Foam at the mouth.—Sweet taste in the mouth.—Burning sensation in the mouth.—Coldness of the tip of the tongue.—Tongue clammy, loaded with a white coating.—Hoarse crying like a child.—Cries, like the croaking of frogs.—Loss of speech.

9. Throat.—Inability to talk, on account of spasms in the throat.—Dryness of the throat, with thirst.—Inflammation of the pharynx, with impeded deglutition.—Singultus and spasm of the œsophagus.—Desire for warm food; eats hastily.—Audible sound of drink (gurgling) while swallowing it.—Swelling of the glands of the neck.

10. Appetite.—Taste, sweetish, or metallic, acid, or salt.—Watery taste of food.—Desire for cold things in preference to hot.

11. Stomach.—Constant risings.—Hiccough.—Singultus preceding the spasms.—Flow of water like saliva, after taking milk.—Nausea, with inclination to vomit, extending from the abdomen to the gullet; but chiefly in the epigastrium, with a feeling like intoxication, loathing, and putrid taste in the mouth.—Violent periodical vomitings, mitigated by drinking.—Vomiting is prevented by drinking cold water.—Vomiting in general, which is very severe.—Vomiting of bile, of water (containing flakes, offensive-smelling), of slimy matter, or even of blood.—Violent vomitings, with pressure in the stomach, cramps in the abdomen, diarrhœa, and convulsions.—Cramps in the stomach.—Excessively troublesome pressure on the stomach, and on the epigastrium, < by touch and by movement.—Anguish in the epigastrium.—Gnawing and corroding sensation in the stomach.

12. Abdomen.—Pain, as from a bruise, in the hypochondria, on the part being touched.—Drawing pains from l. hypochondrium to the hip.—Violent pains in the abdomen, with great anxiety.—Abdomen hard, with violent pains on its being touched.—Pressure in the abdomen, as from a hard body, aggravated by the touch.—Retraction of the abdomen.—Spasmodic colic, with convulsions and shrill cries.—Tearing and gnawing (corroding, stinging ulcers) in the intestines.

13. Stool and Anus.—Constipation, with great heat of body.—Violent diarrhœa (with flakes), sometimes sanguineous.—Bleeding of hæmorrhoidal tumours.

14. Urinary Organs.—Urgent want to make water, with scant emission.—Frequent emission of fetid (dark-red, turbid, with yellowish sediment), viscid

urine.—Burning shootings in the urethra, during and subsequent to the emission of urine.—Wetting the bed at night.

15. Male Sexual Organs.—Swelling of the penis, with inflammation of the glans.

16. Female Sexual Organs.—Before the catamenia, ebullition of blood, palpitation of the heart, and headache.—Menstruation too late; protracted; complaints before.—Menses absent for months; violent delirium.—Before, and during menses, cramps, convulsions, piercing shrieks; spasmodic dyspnœa; violent palpitation.—Menses not appearing after suppression of foot-sweat.—Torpid chlorosis.

17. Respiratory Organs.—Obstinate hoarseness, with great inclination to lie down.—Bronchial râle, as if from mucus.—Tickling in the larynx.—Dry cough, with fits of suffocation, like whooping-cough.—Spasmodic affections generally; whooping-cough where the attacks run into catalepsy; movements of the head; epilepsy.—Cough, with expectoration of whitish mucus, during fits of spasmodic asthma.—Asthma increases (at 3 a.m.) when bending the body backwards, when coughing, when laughing.—Cough, in the morning, with expectoration of putrid matter.

18. Chest.—Respiration accelerated, rattling, moaning, with convulsive efforts of the abdominal muscles. Short, difficult respiration, with spasmodic cough, and crepitation in the chest.—Cough, with wheezing respiration at each effort to breathe.—Difficulty of respiration, increased by coughing, laughing, throwing back the body, &c., as well as in the night.—Asthma when ascending or walking quickly, with necessity to breathe deeply.—Spasmodic asthma.—Fits of suffocation.—Pressure on the chest.—Painful contraction of the chest, esp. after drinking.—Cramps in the chest, which cut short the respiration and the voice (after fright and anger).

19. Heart.—Spasm of heart.—Angina pectoris.—Palpitation of the heart (before the menses).—Pulse very changeable; imperceptible; small; soft.

20. Neck and Back.—Sensation of heaviness in the axillary glands.—Swelling of the glands of the neck.—Paralysis of muscles of back up to neck. Hyperæsthesia of spinal column.—Backache top of sacrum.

21. Limbs.—Cramps of limbs; contraction of joints.

22. Upper Limbs.—Herpes in the bends of the elbows (forming yellow scales, itching, esp. in evening).—Swelling of the hand, with inflammation of a lymphatic vessel extending to the shoulder.—The arms and hands are bluish marbled.—Aching and acute pullings in the metacarpal bones.—Weakness and paralysis of the hand.—Starting of the hands, in the morning, after rising.—Torpor and shivering of

the fingers.—Convulsions in the fingers, particularly which begin in the fingers and toes, then spreading all over the body; spasms clonic.

23. Lower Limbs.—Pains in the legs, esp. in the calves of the legs during repose.—Tensive pain and cramps in the calves of the legs.—In the knee-joint weakness, pain as if broken.—Twitching of the muscles of the lower extremities.—Pressive and drawing pains in the metatarsus.—Burning sensation in the soles of the feet.—Sweat in the feet.—Suppression of sweat in the feet.—Painful weariness and stiffness in the limbs.—Convulsions in the toes.

24. Generalities.—Pressive tearings or startings in the limbs.—Pain, as from a bruise in several places, esp. in the joints and in the limbs.—Aching in the bones.—Rheumatic pains.—Many pains, esp. those which are aching, are < on being touched.—Shaking pains, which traverse the whole body.—Shocks or painful blows in different parts.—On weeping, convulsions, with want of breath, and retraction of the thighs.—Clonic spasms.—Tonic spasms with loss of consciousness, turning of the head backwards, redness of the eyes, salivation, and frequent emission of urine.—Convulsions, with piercing cries.—Epileptic convulsions.—Epileptic attacks (at night), followed by headache.—Involuntary movements of the limbs, as in St. Vitus' dance, with redness of the face, distortion of the eyes, of the face, and of the body, tears and anxiety, buffoonery and desire to hide oneself.—The convulsions begin mostly in the fingers and in the toes.—Spasmodic laughter.—Convulsive startings, at night, when sleeping.—Violent convulsions, with great display of strength.—Paralytic affections.—Symptoms which appear periodically, and in groups.—Great lassitude, and sinking of the whole body.—Obstinate weakness.—Consumption.—Excessive sensibility of all the organs.—Fainting fits.—Outward appearance of the face bluish; bluish-red.—Affections of the soles of the feet; attacks of sick feeling; blackness of outer parts; cyanosis or morbus cæruleus; bloated skin.

25. Skin.—Eruptions which resemble (dry) itch.—Tetters, with yellow scales.—Miliary eruptions, esp. on the chest and on the hands.—Old ulcers; caries.

26. Sleep.—Profound sleep, with shocks in the body, and starting in the limbs.—Lethargic sleep.—During sleep constant grumbling in the abdomen.

27. Fever.—Pulse small, weak, and slow.—Chilliness over the whole body, mostly in the extremities.—Shiverings after attacks of epilepsy.—Debilitating, hectic, internal heat.—Flushes of heat.—Slow fevers.—Cold sweat (at night).—Many attacks (epileptic attacks, attacks of mania) end with (cold) perspiration.—Violent nocturnal perspiration.

Cuprum Sulphuricum.

Sulphate of Copper. Cu SO_4 $5H_2O$. Trituration.

Clinical.—Alopecia. Diarrhœa. Dysentery. Eyes, granular lids; catarrhal and purulent conjunctivitis. Itch. Syphilis. Trachoma.

Characteristics.—Sulphate of Copper is a well-known emetic and caustic. It causes *forcible* vomiting and much nausea. Paleness of face; or jaundiced appearance; pale skin generally; a peculiar diarrhœa; enlarged liver. J. D. Tyrrell (*Med. Adv*., xix. 14) mentions the case of a lady who could not use *Cupr. sul*. for "stamping" fancywork, because it "made her face hurt and swell so she could scarcely see, and her lips became everted, "turned inside out," she said." It is a well-known application in allopathic practice for stimulating flabby granulations, and it has cured itching eruptions, and manifestations of syphilis. Rest > pains.

Relations.—*It is antidoted by:* Milk; eggs; pure yellow prussiate of potash. *Compare:* Kali bich. (cough) and Merc.

SYMPTOMS.

1. Mind.—Anxiety; or great apathy.—Remarkable disturbance of mind, every utterance distorted.

2. Head.—Bald spot over r. parietal bone, not depending on any discoverable cause.

3. Eyes.—Twitching of closed lids.—Eyes stiff and dim.

6. Face.—Lips pale, bluish, at corners and internal edges.—Face painful and swollen so she can scarcely see; lips turned inside out.

8. Mouth.—Tongue cold; coated, bluish.—Greenish tint along free border of gums.—Burning in mouth and œsophagus in morning.

11. Stomach.—Excessive nausea; forcible vomiting returning from time to time; vomits greenish-brown mucus.—Violent pain in stomach followed by faintness.

12. Abdomen.—Tearing pains in hypochondria, on inspiration, painful to touch as if bruised.—Liver enlarged.—Abdomen drawn in.

13. Stool.—Four pultaceous greenish-yellow stools, without the least trace of blood.—Stool pultaceous, brown-red, with streaks of blood and tenesmus during stool.—Constipation.

17. Respiratory Organs.—Hacking cough which impedes respiration.—Croupy cough with very tenacious mucus.

19. Heart.—Feeling as of a throbbing lump in heart internally, beating of heart seems louder; lasted five minutes and went away gradually.

21. Limbs.—Limbs cold, nearly cyanotic.—Dull aching soreness in middle of tibia, when walking; > at rest; tenderness on pressure.

25. Skin.—Pale, colourless.—Icterus.—Itching nodules on shoulders.—Itchiness; a kind of dry itch.

Curare.

Curara, Woorara. Woorali. Hoorali. Oorari. (An arrow poison used by South American Indians. Accounts differ as to its actual composition, into which the juice of different species of *Strychnos* are said to enter, or of *Cocculus toxiferos* with serpent poison. Others have said it is prepared from the venom of toads. In appearance it is something like the extract of liquorice. That used in C. Wesselhoeft's provings was obtained from Merck of Darmstadt.) N. O. Loganiaceć (?). Tincture.

Clinical.—Cancer. Catalepsy. Corns. Cough. Debility. Diabetes. Dysmenia. Dyspnśa. Ears, affections of. Eczema. Emphysema. Epilepsy. Face, paralysis of. Fainting. Headache. Hydrophobia. Liver spots. Locomotor ataxia. Nervous debility. Neuralgia. Otitis. Ozćna. Paralysis. Phthisis. Pseudo-hypertrophic paralysis. Ptosis. Scrofula. Tetanus. Ulceration. Uterus, affections of. Vaginitis. Whooping-cough.
